4. Susan Newton, thirty-eight, founded her own software firm at age fifteen and acquired her stock in an offering under Rule 505 of Regulation D. Newton grew her firm to \$20 million in revenues before EBM Corporation purchased it in exchange for EBM common stock in a private placement under Section 4(2). Newton is no longer an officer of EBM or active in the day-to-day management, but she sits on the board of directors of EBM and owns 15 percent of its outstanding common stock. She proposes to sell all of her EBM stock to the public. The stock is actively traded on the Nasdaq stock market. Are there any restrictions on her ability to sell her EBM shares?
5. In January, Arbor Corporation, a paper company with annual sales of more than \$2 billion and assets of more than \$5 billion, issued 4 million registered common shares at an average price of \$50 per share. In preparing the registration statement, Charles Controller relied on a report by Acme Appraisers, which stated that the company's woodlands were worth \$900 million. Acme's report was not included in the registration statement, and Acme was not mentioned in the prospectus. Ollie Olson, the company's newly elected outside director (and Controller's brother-in-law) questioned whether the woodland estimate might be too high. Controller reassured him that "if the numbers are good enough for our CPAs, they're good enough for me."

In February, the company discovered that the woodland appraisal was overstated by \$150 million. Management and the directors were livid about the error. To add to Arbor's problems, a major competitor shocked the industry by announcing that it will double its paper production capacity. Arbor's stock price is now \$20 per share.

Do the shareholders have a basis for a suit? Who can they sue? What problems or defenses will they likely encounter? Assuming that the suit is otherwise successful, how will damages be determined?

6. Duke Distribution, Inc. recently had a public offering of its shares. The company's attorneys, its CPAs, and the underwriter's attorneys worked diligently to meet a tight deadline that management had imposed. Unfortunately, in its haste to meet the deadline, Duke's team failed to include several items in the registration statement. The prospectus failed to mention that while Duke's inventory-to-sales ratio was constant over the past few years, most competitors' ratios had declined significantly over the same period. It also failed to mention that the company leases warehouses from

a partnership consisting of three of its directors. The leases require rent that is about 8 percent higher than the market rate for equivalent facilities. After the IPO, the company engaged in additional transactions with insiders.

Now the economy has softened and competition has increased. The price of Duke stock has fallen from \$15 to \$10. Is there a cause of action? Against whom? What are the defenses?

7. SG Ltd., a Dominican corporation, operates a website called StockGeneration. The website's "virtual stock exchange" offers "players" the opportunity to invest real money in eleven "virtual companies," one of which is called the "privileged company." The privileged company, the website proclaims, is "supported by the owners of SG, this is why its value constantly rises; on average at a rate of 10% monthly (this is approximately 215% annually)." Is SG selling securities? [*SEC v. SG Ltd.*, 265 F.3d 42 (1st Cir. 2001).]
8. The price of an IPO is set jointly by the company and the lead underwriters. For at least five decades, studies have shown that IPOs generally trade on the open market at a price significantly higher than the offering price.

Until the late 1990s, IPOs were underpriced by 5 to 20 percent, but in the "hot issues" market of 1998 to 2000, IPOs frequently surged to 100 to 200 percent of the offering price on the first day of trading. In the period from October 1982 to June 1998, the number of shares traded in the first five days after the IPO was on average equal to 85 percent of the shares offered. In the period from July 1998 to 2000, the number of shares traded in the first five days after IPOs increased to more than 350 percent of the shares issued.

Would an issuer or investors have any basis for suing the lead underwriters if post-IPO they learned that the underwriter had signaled to potential purchasers that they would be allocated shares in high-demand IPOs only if they were willing to buy additional shares in the aftermarket at prices above the IPO price or to purchase less attractive IPO shares or to pay excessive commissions? If so, how would the issuer or investors prove that they had been damaged by such an undisclosed arrangement? If the arrangement had been disclosed to the issuer, would purchasers in the aftermarket have any claims against the issuer and its officers and directors or against the lead underwriters and their officers and directors? [*Credit Suisse Securities (USA) LLC v. Billing*, 127 S. Ct. 2382 (2007); *In re Initial Public Offering Securities Litigation*, 241 F. Supp. 2d 281 (S.D.N.Y. 2003); *Xpedior Creditor Trust v. Credit Suisse First Boston (USA), Inc.*, 309 F. Supp. 2d 459 (S.D.N.Y. 2003).]

CHAPTER 23

SECURITIES FRAUD AND INSIDER TRADING

INTRODUCTION

Maintaining the Integrity of the Securities Markets

Many attribute the size and success of the U.S. capital markets to the transparency and perceived fairness of the securities markets, which is a direct result of the registration requirements imposed by the Securities Act of 1933 (the 1933 Act), the periodic reporting requirements imposed by the Securities Exchange Act of 1934 (the 1934 Act), and the antifraud provisions in both acts. But as the market turbulence in 2008 demonstrated, investors will abandon the U.S. capital markets if they lose confidence in their fairness or integrity.¹ As the U.S. Supreme Court remarked in *Basic, Inc. v. Levinson*,² no one "would knowingly roll the dice in a crooked crap game."

The meltdown in the subprime-mortgage market in 2007 and 2008 (the subject of the "Inside Story" in Chapter 24) spawned numerous investigations by the Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority to determine "who knew what when and what did they disclose to the marketplace along the way."³ Linda Chatman Thomsen, head of the SEC's enforcement division, indicated that "'tone at the top' ethical culture, call it whatever you want" would be an important factor in the ultimate outcome of the investigations including the decision whether to seek criminal sanctions.⁴ Areas of investigation

include possible manipulative rumormongering and short selling; insider trading; misrepresentations and omissions in offering circulars, prospectuses, SEC reports, and press releases; and conflicts of interest and breaches of fiduciary duty. Public company shareholders, including retirement funds and other institutional investors, have filed a raft of private suits alleging (1) securities fraud by issuers and their executives for allegedly misleading investors about the health of their firms; (2) misrepresentations by underwriters, including Deutsche Bank Securities and Bear Stearns, in offering documents; and (3) securities fraud and breach of fiduciary duty by credit rating agencies, including Standard & Poor's and Moody's, that allegedly failed to disclose that they had "assigned excessively high ratings to bonds backed by risky subprime mortgages—including bonds packaged as collateralized debt obligations—which was materially misleading to investors concerning the quality and relative risk of these investments."⁵

Each company that takes advantage of the capital markets has a legal and ethical duty to ensure the integrity of those markets. Securities fraud, in any form, erodes investor confidence and makes it more difficult and expensive for honest businesses to raise capital.

The principal antifraud provisions of the federal securities laws are Sections 11 and 12(a)(2) of the 1933 Act, discussed in Chapter 22, and Section 10(b) of the 1934 Act. As explained in Chapter 22, Section 11 applies only to registered offerings, and Section 12(a)(2) applies only to public offerings not exempt from the 1933 Act's registration

requirements. In contrast, Section 10(b) of the 1934 Act applies to all purchases and sales of securities, regardless of whether they are registered or exempt from registration.

Under Section 10(b) and Rule 10b-5, promulgated by the SEC pursuant to the 1934 Act, it is unlawful for any person to use a fraudulent, manipulative, or deceptive device in connection with the purchase or sale of any security. Rule 10b-5 also prohibits *insider trading*, that is, trading securities based on material nonpublic information in violation of a duty to the corporation or its shareholders or the source of the information. SEC Rules 10b5-1 and 10b5-2, which are excerpted in Appendix I, clarify certain aspects of insider trading.

Section 16(b) of the 1934 Act regulates “short-swing” trading by insiders of publicly traded companies. In particular, it allows a public corporation to recover the profits earned by any officer or director of the corporation or any person who owns more than 10 percent of the corporation’s securities as a result of purchases and sales, or sales and purchases, of the corporation’s securities within a six-month period.

CHAPTER OVERVIEW

This chapter focuses on Section 10(b) and Rule 10b-5. It sets forth the seven elements necessary in a Rule 10b-5 securities fraud case and the fraud-on-the-market theory of liability. We discuss the safe harbor for certain forward-looking statements as well as Section 17(a) of the 1933 Act, under which the U.S. government can bring fraud claims, and the securities fraud offense added by the Sarbanes-Oxley Act of 2002. We then identify the legal elements of an insider trading case and SEC Regulation FD’s ban on selective disclosure. Finally, we explain the rules for calculating the recoverable profits from short-swing trading and outline the requirements for reporting by insiders.

protect investors, and to deter fraud in the securities industry. Rule 10b-5 states:

It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce, or of the mails, or of any facility of any national securities exchange,

- (1) to employ any device, scheme, or artifice to defraud,
- (2) to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, or
- (3) to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person, in connection with the purchase or sale of any security.

The SEC has broad power to investigate apparent violations of Rule 10b-5, to order the violator to stop its wrongful conduct, and to recommend criminal prosecution for willful violations.

More suits are brought under Rule 10b-5 than under any other provision of securities law, including those, such as Sections 11 and 12(a)(2) of the 1933 Act, that explicitly create private rights of action. Although there is some overlap, Rule 10b-5 extends to misconduct not covered by other securities laws. Under Rule 10b-5, managers could be liable for misleading statements contained in any document—such as a press release or a letter to shareholders or posting on a website—or even a speech to a trade association, as long as the statements were made in a manner reasonably calculated to influence the investing public.

Since 1946, courts have held that Rule 10b-5 also creates an implicit private right of action, giving individual investors the right to sue a violator for damages. Although the Supreme Court in recent decisions has shown increasing hostility toward implied rights of action under other provisions of the securities laws, Congress “ratified” the implied private right of action for violations of Section 10(b) and Rule 10b-5 in the Private Securities Litigation Reform Act.⁶

AIDING AND ABETTING

In *Central Bank of Denver, N.A. v. First Interstate Bank of Denver, N.A.*,⁷ the Supreme Court ruled that a private plaintiff may not maintain an aiding and abetting suit under

6. *Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 128 S. Ct. 761 (2008) (citing the reference in 15 U.S.C. § 78u-4(b) to “any private action” arising under the 1934 Act).

7. 511 U.S. 164 (1994).

SECTION 10(B) AND 20 OF THE 1934 ACT AND RULE 10B-5

Section 10(b) gives the SEC power to prohibit individuals and companies from engaging in securities fraud by authorizing the SEC to prescribe specific rules for the protection of investors. The SEC promulgated Rule 10b-5 to encourage disclosure of information relevant to the investing public, to

Section 10(b). In that case, the plaintiff had attempted to hold the bank that was the indenture trustee for a municipal bond issue secondarily liable as an aider and abettor of the fraud perpetrated by the issuers of the bonds. In reaching its decision, the Supreme Court noted the vexatious nature of Rule 10b-5 suits and the fact that such suits require secondary actors to expend large sums for pretrial defense and the negotiation of settlements. The Court went on to state:

This uncertainty and excessive litigation can have ripple effects. For example, newer and smaller companies may find it difficult to obtain advice from professionals. A professional may fear that a newer or smaller company may not survive and that business failure would generate securities litigation against the professional, among others. In addition, the increased costs incurred by professionals because of the litigation and settlement costs under 10b-5 may be passed on to their client companies, and in turn incurred by the company's investors, the intended beneficiaries of the statute.

The SEC can still bring aider-and-abettor cases seeking injunctive relief or damages under Section 10(b). To prove that a person is an *aider and abettor*, it is necessary

to show (1) the existence of a primary violation of Section 10(b) or Rule 10b-5, (2) the defendant's knowledge of (or recklessness as to) that primary violation, and (3) substantial assistance of the violation by the defendant.

CONSPIRACY

In *Dinsmore v. Squadron, Ellenoff, Plesent, Sheinfeld & Sorkin*,⁸ the U.S. Court of Appeals for the Second Circuit applied *Central Bank*'s reasoning to a claim of conspiracy to fraudulently buy or sell securities and held that there is no implied private cause of action for conspiracy under Section 10(b).

SCHEME LIABILITY

In the following case, the U.S. Supreme Court extended *Central Bank* to bar claims against third parties that engaged in fraudulent business transactions designed to enable the issuer to artificially inflate its earnings (so-called *scheme liability*).

8. 135 F.3d 837 (2d Cir. 1998).

A CASE IN POINT

CASE 23.1

**STONERIDGE INVESTMENT
PARTNERS, LLC v.
SCIENTIFIC-ATLANTA, INC.**

SUPREME COURT OF THE
UNITED STATES
128 S. Ct. 761 (2008).

IN THE LANGUAGE OF THE COURT

FACTS Charter Communications, Inc., a cable operator, allegedly engaged in a variety of fraudulent practices so that its quarterly reports would meet Wall Street expectations for cable subscriber growth and operating cash flow. The fraud included misclassification of its customer base, delayed reporting of terminated customers, improper capitalization of costs that should have been shown as expenses, and manipulation of the company's billing cutoff dates to inflate reported revenues. In late 2000, Charter executives realized that, despite these efforts, the company would miss projected operating cash-flow numbers by \$15 to \$20 million.

To help meet the shortfall, Charter decided to alter its existing arrangements with Scientific-Atlanta and Motorola, which supplied Charter with the digital cable converter (set top) boxes that Charter furnished to its customers. Charter arranged to overpay the two suppliers \$20 for each set top box it purchased until the end of the year, with the understanding that they would return the overpayment by purchasing advertising time from Charter at inflated prices. Charter recorded the advertising purchases as revenue and capitalized its purchases of the set top boxes, thereby inflating revenue and operating cash flow by approximately \$17 million. The transactions had no economic substance, and Charter's accounting treatment violated generally accepted accounting principles.

To keep Arthur Andersen, Charter's auditor, from discovering the link between Charter's increased payments for the boxes and the advertising purchases, the companies drafted documents to make it appear that the transactions were unrelated and were conducted in the ordinary course of business. In particular, following a request from Charter, Scientific-Atlanta sent documents to Charter stating—falsely—that it faced increased production costs and was increasing the price for set top boxes, by \$20 per box, for the rest of 2000. As for Motorola, Charter entered into a written contract whereby it agreed to purchase from Motorola a specific number of set top boxes and to pay liquidated damages

CONTINUED

of \$20 for each unit it did not take. The contract was made with the expectation that Charter would fail to purchase all the units and would pay Motorola the liquidated damages.

To return the additional money from the set top box sales, Scientific-Atlanta and Motorola signed contracts with Charter to purchase advertising time for a premium. The new set top box agreements were backdated to make it appear that they were negotiated a month before the advertising agreements. The backdating was important to convey the impression that the negotiations were unconnected, a point Arthur Andersen considered necessary for separate treatment of the transactions. The inflated number was shown on financial statements filed with the SEC and reported to the public.

Scientific-Atlanta and Motorola had no role in preparing or disseminating Charter's financial statements. They booked the transactions as a wash in their own financial statements, in accordance with generally accepted accounting principles. The plaintiff purchasers of Charter stock filed a securities fraud class action under Section 10(b) of the 1934 Act and SEC Rule 10b-5, alleging that the two suppliers knew or were in reckless disregard of Charter's intention to use the transactions to inflate its revenues and knew that the resulting financial statements issued by Charter would be relied upon by research analysts and investors.

The district court dismissed the complaint, for failure to state a claim on which relief could be granted, and the U.S. Court of Appeals for the Eighth Circuit affirmed.

ISSUE PRESENTED Are customer/supplier companies that agreed to arrangements that allowed an issuer to mislead its auditor liable in a private action under Section 10(b) of the 1934 Act?

OPINION KENNEDY, J., writing on behalf of the U.S. Supreme Court:

In this suit investors sought to impose liability on entities who, acting both as customers and suppliers, agreed to arrangements that allowed the investors' company to mislead its auditor and issue a misleading financial statement affecting the stock price. We conclude the implied right of action does not reach the customer/supplier companies because the investors did not rely upon their statements or representations. We affirm the judgment of the Court of Appeals.

I

In *Central Bank*, the Court determined that § 10(b) liability did not extend to aiders and abettors. The Court found the scope of § 10(b) to be delimited by the text, which makes no mention of aiding and abetting liability.

....

The decision in *Central Bank* led to calls for Congress to create an express cause of action for aiding and abetting within the Securities Exchange Act. . . . Congress did not follow this course. Instead, in § 104 of the Private Securities Litigation Reform Act of 1995 (PSLRA)⁹ it directed prosecution of aiders and abettors by the SEC.¹⁰

....

II

A

Reliance by the plaintiff upon the defendant's deceptive acts is an essential element of the § 10(b) private cause of action. It ensures that, for liability to arise, the "requisite causal connection between a defendant's misrepresentation and a plaintiff's injury" exists as a predicate for liability. We have found a rebuttable presumption of reliance in two different circumstances. First, if there is an omission of a material fact

CONTINUED

9. 109 Stat. 757.

10. 15 U.S.C. § 78t(e).

by one with a duty to disclose, the investor to whom the duty was owed need not provide specific proof of reliance. Second, under the fraud-on-the-market doctrine, reliance is presumed when the statements at issue become public. The public information is reflected in the market price of the security. Then it can be assumed that an investor who buys or sells stock at the market price relies upon the statement.

Neither presumption applies here. Respondents [Scientific-Atlanta and Motorola] had no duty to disclose; and their deceptive acts were not communicated to the public. No member of the investing public had knowledge, either actual or presumed, of respondents' deceptive acts during the relevant times. Petitioner [the plaintiff investors], as a result, cannot show reliance upon any of respondents' actions except in an indirect chain that we find too remote for liability.

Invoking what some courts call "scheme liability," petitioner nonetheless seeks to impose liability on respondents even absent a public statement. In our view this approach does not answer the objection that petitioner did not in fact rely upon respondents' own deceptive conduct. Liability is appropriate, petitioner contends, because respondents engaged in conduct with the purpose and effect of creating a false appearance of material fact to further a scheme to misrepresent Charter's revenue. The argument is that the financial statement Charter released to the public was a natural and expected consequence of respondents' deceptive acts; had respondents not assisted Charter, Charter's auditor would not have been fooled, and the financial statement would have been a more accurate reflection of Charter's financial condition. That causal link is sufficient, petitioner argues, to apply *Basic's* presumption of reliance to respondents' acts. In effect petitioner contends that in an efficient market investors rely not only upon the public statements relating to a security but also upon the transactions those statements reflect. Were this concept of reliance to be adopted, the implied cause of action would reach the whole marketplace in which the issuing company does business; and there is no authority for this rule.

[W]e conclude respondents' deceptive acts, which were not disclosed to the investing public, are too remote to satisfy the requirement of reliance. It was Charter, not respondents, that misled its auditor and filed fraudulent financial statements; nothing respondents did made it necessary or inevitable for Charter to record the transactions as it did.

The petitioner invokes the private cause of action under § 10(b) and seeks to apply it beyond the securities markets—the realm of financing business—to purchase and supply contracts—the realm of ordinary business operations. The latter realm is governed, for the most part, by state law. It is true that if business operations were used, as alleged here, to affect securities markets, the SEC enforcement power may reach the culpable actors. It is true as well that a dynamic, free economy presupposes a high degree of integrity in all of its parts, an integrity that must be underwritten by rules enforceable in fair, independent, accessible courts. Were the implied cause of action to be extended to the practices described here, however, there would be a risk that the federal power would be used to invite litigation beyond the immediate sphere of securities litigation and in areas already governed by functioning and effective state-law guarantees. Our precedents counsel against the extension.

Petitioner's theory, moreover, would put an unsupportable interpretation on Congress' specific response to *Central Bank* in § 104 of the PSLRA. Congress amended the securities laws to provide for limited coverage of aiders and abettors. Aiding and abetting liability is authorized in actions brought by the SEC but not by private parties. See 15 U.S.C. § 78t(e). Petitioner's view of primary liability makes any aider and abettor liable under § 10(b) if he or she committed a deceptive act in the process of providing assistance. Were we to adopt this construction of § 10(b), it would revive in substance the implied cause of action against aiders and abettors except those who committed no deceptive act in the process of facilitating the fraud; and we would undermine Congress' determination that this class of defendants should be pursued by the SEC and not by private litigants.

III

Secondary actors are subject to criminal penalties, and civil enforcement by the SEC. The enforcement power is not toothless. Since September 20, 2002, SEC enforcement actions have collected over \$10 billion in disgorgement and penalties, much of it for distribution to injured investors. In addition, some state securities laws permit state authorities to seek fines and restitution from aiders and abettors. See, e.g., Del. Code Ann., Tit. 6, § 7325 (2005). All secondary actors, furthermore, are not necessarily immune from private suit. The securities statutes provide an express private right of action against accountants and underwriters in certain circumstances, and the implied right of action in § 10(b) continues to cover secondary actors who commit primary violations.

Here respondents were acting in concert with Charter in the ordinary course as suppliers and, as matters then evolved in the not so ordinary course, as customers. Unconventional as the arrangement was, it took place in the marketplace for goods and services, not in the investment sphere. Charter was free to do as it chose in preparing its books, conferring with its auditor, and preparing and then issuing its financial statements. In these circumstances the investors cannot be said to have relied upon any of the respondents' deceptive acts in the decision to purchase or sell securities; and as the requisite reliance cannot be shown, respondents have no liability to petitioner under the implied right of action. This conclusion is consistent with the narrow dimensions we must give to a right of action Congress did not authorize when it first enacted the statute and did not expand when it revisited the law.

RESULT The judgment of the court of appeals was affirmed. The Section 10(b) and Rule 10b-5 claims against Scientific-Atlanta and Motorola were subsequently dismissed.¹¹

DISSENT STEVENS, J., with whom Souter and Ginsburg, J.J., joined:¹²

The Court's conclusion that no violation of § 10(b) giving rise to a private right of action has been alleged in this case rests on two faulty premises: (1) the Court's overly broad reading of *Central Bank*, and (2) the view that reliance requires a kind of super-causation—a view contrary to both the Securities and Exchange Commission's (SEC) position . . . and our holding in *Basic Inc. v. Levinson*.

I

. . . The Court correctly explains why the statute covers nonverbal as well as verbal deceptive conduct. The allegations in this case—that respondents produced documents falsely claiming costs had risen and signed contracts they knew to be backdated in order to disguise the connection between the increase in costs and the purchase of advertising—plainly describe “deceptive devices” under any standard reading of the phrase.

What the Court fails to recognize is that this case is critically different from *Central Bank* because the bank in that case did not engage in any deceptive act and, therefore, did not itself violate § 10(b). . . . The facts of this case would parallel those of *Central Bank* if respondents had, for example, merely delayed sending invoices for set-top boxes to Charter. Conversely, the facts in *Central Bank* would mirror those in the case before us today if the bank had knowingly purchased real estate in wash transactions at above-market prices in order to facilitate the appraiser's overvaluation of the security. *Central Bank*, thus, poses no obstacle to petitioner's argument that it has alleged a cause of action under § 10(b).

II

The Court's next faulty premise is that petitioner is required to allege that Scientific-Atlanta and Motorola made it “necessary or inevitable for Charter to record the transactions in the way it did” in order to demonstrate reliance. . . . In *Basic Inc.*, we stated that “[r]eliance provides the requisite causal connection between a defendant's misrepresentation and a plaintiff's injury.” The Court's view of the causation required to demonstrate reliance is unwarranted and without precedent.

CONTINUED

11. *Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 519 F.3d 730 (8th Cir. 2008).

12. Justice Breyer took no part in the consideration or decision of this case.

... The holding in *Basic* is surely a sufficient response to the argument that a complaint alleging that deceptive acts which had a material effect on the price of a listed stock should be dismissed because the plaintiffs were not subjectively aware of the deception at the time of the securities' purchase or sale.

... Reliance is often equated with "transaction causation." Transaction causation, in turn, is often defined as requiring an allegation that but for the deceptive act, the plaintiff would not have entered into the securities transaction. Even if but-for causation, standing alone, is too weak to establish reliance, petitioner has also alleged that respondents proximately caused Charter's misstatement of income; petitioner has alleged that respondents knew their deceptive acts would be the basis for statements that would influence the market price of Charter stock on which shareholders would rely. Thus, respondents' acts had the foreseeable effect of causing petitioner to engage in the relevant securities transactions. . . .

The Court's view of reliance is unduly stringent and unmoored from authority. The Court first says that if the petitioner's concept of reliance is adopted the implied cause of action "would reach the whole marketplace in which the issuing company does business." The answer to that objection is, of course, that liability only attaches when the company doing business with the issuing company has *itself* violated § 10(b). The Court next relies on what it views as a strict division between the "realm of financing business" and the "ordinary business operations." But petitioner's position does not merge the two: A corporation engaging in a business transaction with a partner who transmits false information to the market is only liable where the corporation *itself* violates § 10(b). Such a rule does not invade the province of "ordinary" business transactions.

. . . .

Finally, the Court relies on the course of action Congress adopted after our decision in *Central Bank* to argue that siding with petitioner on reliance would run contrary to congressional intent. . . . Congress stopped short of undoing *Central Bank* entirely, instead adopting a compromise which restored the authority of the SEC to enforce aiding and abetting liability. . . . That Congress chose not to restore the aiding and abetting liability removed by *Central Bank* does not mean that Congress wanted to exempt from liability the broader range of conduct that today's opinion excludes.

The Court is concerned that such liability would deter overseas firms from doing business in the United States or "shift securities offerings away from domestic capital markets." But liability for those who violate § 10(b) "will not harm American competitiveness; in fact investor faith in the safety and integrity of our markets *is* their strength. The fact that our markets are the safest in the world has helped make them the strongest in the world."

. . . .

. . . Congress enacted § 10(b) with the understanding that federal courts respected the principle that every wrong would have a remedy. Today's decision simply cuts back further on Congress' intended remedy. I respectfully dissent.

CRITICAL THINKING QUESTIONS

1. Are there any circumstances under which secondary actors who did not themselves make an actionable omission or representation could still be liable under Section 10(b)?¹³
2. Do strict securities antifraud rules make the U.S. capital markets more or less attractive to foreign investors?

13. See James Stengel, Steven Fink & Kristen Fournier, *Stoneridge Investment v. Scientific Atlanta, Inc.*, LEXIS NEXIS EXPERT COMMENTARIES (Feb. 2008).

Image not available due to copyright restrictions

PRIMARY LIABILITY FOR SECONDARY ACTORS

Both the Supreme Court in *Stoneridge* and the Second Circuit in *Dinsmore* took pains to make it clear that secondary actors (such as an accountant, lawyer, or bank) can be liable in private suits if their conduct satisfies the requirements for primary liability. For example, the U.S. Court of Appeals for the Ninth Circuit ruled in *McGann v. Ernst & Young*¹⁴ that an auditor that produced a fraudulent audit report knowing that its client would include the audit opinion in its annual report on Form 10-K filed with the SEC committed fraudulent acts “in connection with” the trading of securities and thus was subject to primary liability under Section 10(b) of the 1934 Act. The court reasoned that *Central Bank* did not undercut *SEC v. Texas Gulf Sulphur Co.*,¹⁵ which stands for the proposition that any false and misleading assertions made “in a manner reasonably calculated to influence the investing public” are made “in connection with” the purchase or sale of securities within the meaning of Section 10(b). Section 10(b) does not limit liability to those who actually trade securities. One who “introduces fraudulent information into the securities market does no less damage to the public because that party did not trade stocks.”¹⁶ Therefore, Ernst & Young could be liable for a primary violation of Section 10(b) if the plaintiff could prove that Ernst & Young made a misleading statement in the audit opinion, knowing that the opinion would be included in its client’s Form 10-K.

McGann involved an alleged failure to disclose that caused the audit opinion to be false and misleading. Accountants are

► ETHICAL CONSIDERATION

Accountants must sign a written consent before their audited report can be included in a registration statement. Before doing so, they generally conduct an *S-1 review*, which is a review of events subsequent to the date of the certified balance sheet in the registration statement to ascertain whether any material change has occurred in the company’s financial position that should be disclosed to prevent the financial statements from being misleading. This review includes comparing recent financial statements to earlier ones, reading minutes of the shareholders’ and directors’ meetings, and investigating changes in material contracts, bad debts, and newly discovered liabilities.

Suppose that, in the course of the S-1 review, the accountants learn that the company’s earnings have dropped dramatically from earnings for the comparable periods included in the registration statement. Should the accountants refuse to sign the consent for inclusion of their opinion on the financial statements for the previous period unless the adverse results are disclosed in the prospectus?

generally not responsible for misrepresentations or omissions in other parts of a document that they did not certify.¹⁷

Similarly, the Second Circuit held that a securities broker could be held primarily liable for market manipulation in violation of Section 10(b) and Rule 10b-5 when he followed a stock promoter’s directions to execute stock trades designed to create the appearance of an actual market for a company’s shares and thereby artificially raise the stock price.¹⁸ The court stated that the broker would be liable if he knew, or was reckless in not knowing, that the trades were manipulative, even if he did not share the promoter’s specific overall purpose of manipulating the market for the stock.

LIABILITY OF CONTROLLING PERSONS

Section 20(a) imposes joint and several liability on every person who, directly or indirectly, controls any person liable under the 1934 Act, unless the controlling person acted in good faith and did not directly or indirectly induce the acts constituting the violation. This provision is generally interpreted in the same way as Section 15 of the 1933 Act, which was discussed in Chapter 22.

STATUTE OF LIMITATIONS

Suits under Section 10(b) must be brought within two years after the date the plaintiff discovered the facts constituting the violation or within five years after the violation

14. 102 F.3d 390 (9th Cir. 1996), cert. denied, 520 U.S. 1181 (1997).

15. 401 F.2d 833 (2d Cir. 1968) (Case 23.2).

16. *Id.*

17. See *Shapiro v. Cantor*, 123 F.3d 717 (2d Cir. 1997).

18. *SEC v. U.S. Envtl., Inc.*, 155 F.3d 107 (2d Cir. 1998).

occurred, whichever is earlier.¹⁹ The five-year limit has been construed as a statute of repose that “may expire before a plaintiff discovers he has been wronged or even before damages have been suffered at all.”²⁰

ELEMENTS OF A RULE 10B-5 CAUSE OF ACTION

To recover damages from a defendant under Rule 10b-5, a plaintiff must show each of the following elements:

1. The defendant used either an instrumentality of interstate commerce or the mails or a facility of a national securities exchange.
2. The defendant made a statement that either misrepresented or omitted a fact.
3. The fact was of material importance.
4. The misrepresentation or omission was made with *scienter* (culpable state of mind).
5. The statement or omission was made in connection with the purchase or sale of securities.
6. The plaintiff acted in reliance either on the defendant's misrepresentation or on the assumption that the market price of the stock accurately reflected its value.

19. 28 U.S.C. § 1658(b).

20. *In re Exxon Mobil Corp. Sec. Litig.*, 500 F.3d 189 (3d Cir. 2007).

7. The defendant's misrepresentation or omission caused the plaintiff to suffer losses.

Each of these seven elements is described in more detail next.

INTERSTATE COMMERCE

The requirement that the defendant used interstate commerce, the mails, or a national securities exchange gives Congress the power to regulate the defendant's conduct under the Commerce Clause of the U.S. Constitution. The requirement is usually easy to satisfy. Use of interstate commerce includes use of a radio broadcast heard in more than one state; use of a newspaper advertisement in a newspaper delivered to more than one state; or use of a telephone wired for interstate calls, even if no interstate calls were actually made. Use of the mails includes sending a letter within a state because the mail is an instrumentality of interstate commerce. Use of a national securities exchange includes use of any facility of such an exchange.

MISSTATEMENT OR OMISSION

A *misstatement* is a misrepresentation of a fact; in other words, a lie. An *omission* is a fact left out of a statement, such that the statement becomes misleading.

Misstatement

In the following landmark case, a company's attempts to dispel rumors were found to misrepresent the facts.

A CASE IN POINT

SUMMARY

CASE 23.2

SEC v. TEXAS GULF SULPHUR CO.

UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT
OF NEW YORK

312 F. SUPP. 77 (S.D.N.Y. 1970),
AFF'D, 446 F.2d 1301 (2d Cir.
1971), *CERT. DENIED*, 404
U.S. 1005 (1971).

FACTS Texas Gulf Sulphur Company (TGS) drilled a test hole on November 12, 1963, which indicated the possible presence of copper. TGS did not immediately disclose the results of its drill hole or undertake further drilling because it wanted to acquire property in the surrounding area and did not want to drive up the price of the property.

On April 12, 1964, in response to rumors about the copper discovery, TGS issued a press release. By this time, the company had confirmed the presence of copper. Preliminary tests indicated that the amount was significant. The press release, however, minimized the importance of the discovery. It said (in part):

For Immediate Release

TEXAS GULF SULPHUR COMMENT ON TIMMINS, ONTARIO, EXPLORATION NEW YORK, April 12—The following statement was made today by Dr. Charles F. Fogarty, executive vice president of Texas Gulf Sulphur Company, in regard to the company's drilling operations near Timmins, Ontario, Canada. Dr. Fogarty said:

During the past few days, the exploration activities of Texas Gulf Sulphur in the area of Timmins, Ontario, have been widely reported in the press, coupled with rumors of a substantial copper

CONTINUED

discovery there. These reports exaggerate the scale of operations, and mention plans and statistics of size and grade of ore that are without factual basis and have evidently originated by speculation of people not connected with TGS.

The facts are as follows. TGS has been exploring in the Timmins area for six years as part of its overall search in Canada and elsewhere for various minerals—lead, copper, zinc, etc. During the course of this work, in Timmins as well as in Eastern Canada, TGS has conducted exploration entirely on its own, without the participation by others. Numerous prospects have been investigated by geophysical means and a large number of selected ones have been core-drilled. These cores are sent to the United States for assay and detailed examination as a matter of routine and on advice of expert Canadian legal counsel. No inferences as to grade can be drawn from this procedure.

Most of the areas drilled in Eastern Canada have revealed either barren pyrite or graphite without value; a few have resulted in discoveries of small or marginal sulfide ore bodies. Recent drilling on one property near Timmins has led to preliminary indications that more drilling would be required for proper evaluation of this prospect. The drilling done to date has not been conclusive, but the statements made by many outside quarters are unreliable and include information and figures that are not available to TGS.

The work done to date has not been sufficient to reach definite conclusions and any statement as to size and grade of ore would be premature and possibly misleading. When we have progressed to the point where reasonable and logical conclusions can be made, TGS will issue a definite statement to its stockholders and to the public in order to clarify the Timmins project.

The SEC contended that TGS's April 12 release was a misstatement because it left investors with an impression that was contrary to the known facts at the time.

ISSUE PRESENTED Does a press release giving a misleading impression about the results of a drilling operation violate Rule 10b-5?

SUMMARY OF OPINION The U.S. District Court for the Southern District of New York acknowledged that the timing of disclosure is a matter for the business judgment of the corporate officers. When a company chooses to issue a press release to respond to spreading rumors regarding its activities, it must, however, describe the true picture at the time of the press release. This should include the basic facts known, or which reasonably should be known, to the drafters of the press release. Such facts are necessary to enable the investing public to make a reasonable appraisal of the existing situation.

Because the press release misled reasonable investors to believe either that there was no ore discovery or that any discovery was not a significant one, TGS violated Section 10(b) and Rule 10b-5.

RESULT TGS violated Section 10(b) and Rule 10b-5.

COMMENTS A company may have excellent reasons to attempt to dispel rumors. TGS, for example, had an interest in keeping the find quiet in order to keep down the acquisition costs of land. Or consider a company involved in merger negotiations that is asked by the press whether there is any reason for unusual trading in its stock. The company may well want to keep the negotiations under wraps for a variety of legitimate reasons. Yet, if it says that it is unaware of any corporate developments, it runs the risk of Rule 10b-5 liability. The SEC has indicated that it considers such a statement in these circumstances to be a violation of Rule 10b-5. The Supreme Court addressed this issue in *Basic, Inc. v. Levinson*, discussed further below.

A prediction about the future can be a misstatement, but only if the person making the prediction does not believe it at the time. A prediction is not a guarantee, and it does not become a misstatement simply because the facts do not develop as predicted. If there is no reasonable basis for a prediction, however, then it is a misstatement because the person who made it could not honestly have believed it.²¹ As discussed later in this chapter, the Private Securities Litigation Reform Act of 1995 (the Litigation Reform Act) contains a safe harbor for certain forward-looking statements.

Omission

It is clear that a company must be careful if it chooses to speak. What if it chooses not to speak?

The general rule is that a company has no general duty under Rule 10b-5 to reveal corporate developments unless the company or its insiders (1) trade in its securities, (2) recommend trading to someone else, or (3) disclose the information as a *tip*—that is, a disclosure made to an individual and withheld from the general public. The fact that information is material does not, in itself, give rise to a duty to disclose.²²

But the securities laws do require that certain information be disclosed in registration statements; annual, quarterly, and special reports; and proxy solicitations. In particular, Management's Discussion and Analysis of Financial Condition and Results of Operations must disclose any known material event or uncertainty that would cause reported financial information not to be necessarily indicative of future operating results or financial condition.²³ Stock exchange rules require that issuers promptly reveal material developments unless there is a business reason not to do so.

Silence or a “no comment” statement in response to rumors will not lead to liability if the company has not previously spoken on the subject and insiders are not trading or tipping. There is a caveat, however: A policy of not commenting on rumors must be adhered to in the face of both true and untrue rumors. If the company always says

21. See *Va. Bankshares v. Sandberg*, 501 U.S. 1083 (1991) (holding that a statement as to beliefs or opinions may be actionable if the opinion is known by the speaker at the time it is expressed to be untrue or to have no reasonable basis in fact).

22. *Backman v. Polaroid Corp.*, 910 F.2d 10 (1st Cir. 1990).

23. See Item 303 of SEC Regulation S-K, Management's Discussion and Analysis of Financial Condition and Results of Operations, 17 C.F.R. § 229.303(a)(3)(ii).

INTERNATIONAL SNAPSHOT

Under the London Stock Exchange rules, if a listed company's share price moves significantly on the basis of rumor and the rumor is true, the company must disclose the existence of the rumored event. For example, in January 1998, drug powerhouse SmithKline Beecham PLC was required to disclose that it was engaged in merger negotiations with American Home Products after rumors of a deal sent shares of both companies rising.^a Although there is no numerical threshold for disclosure, a rule of thumb is that a 10 percent move in the stock triggers the duty to disclose the accuracy of truthful rumors. On the other hand, if the rumors are not true, then the company can continue to say “no comment.”

a. Steven Lipin & Sara Calian, *Did U.K.'s Strict Rules Spur Deal?*, WALL ST. J., Feb. 2, 1998, at C1.

“no comment” when the rumor is true but provides facts to dispel untrue rumors, then the “no comment” acts as an admission that the rumor is true.

Although keeping silent may be safer under Rule 10b-5, in many cases that will be hard to do. If a corporation's stock is traded on rumors of some major development, silence may contribute to disorderly market activity, distrust of company management, and possible abuse by those with access to inside information. Moreover, a blanket “no comment” policy makes it impossible to dispel false but damaging rumors.

Once the company has said something about a particular topic, it has a duty to disclose enough relevant facts so that the statement is not inaccurate, incomplete, or misleading.²⁴ The statement may be an obligatory one. Or the statement may be voluntary; for example, a company may choose to publicize information about favorable new developments or to respond to unfavorable rumors. Whether the statement is obligatory or voluntary, the company's officials must tell the whole truth with respect to that topic or risk being sued later for a misleading omission.

The following case addressed the issue of whether a company has a duty to update or correct statements that have become misleading in light of subsequent events.

24. See Dale E. Barnes, Jr. & Constance E. Bagley, *Great Expectations: Risk Management Through Risk Disclosure*, 1 Stan. J.L. Bus. & Fin. 155 (1994).

A CASE IN POINT**CASE 23.3****WEINER v. QUAKER OATS Co.**UNITED STATES COURT OF APPEALS
FOR THE THIRD CIRCUIT
129 F.3d 310 (3d Cir. 1997).**IN THE LANGUAGE OF THE COURT**

FACTS On November 2, 1994, the Quaker Oats Company and Snapple Beverage Corporation announced that Quaker would acquire Snapple in a tender offer and merger transaction for \$1.7 billion in cash. The market disapproved of the deal. Subsequent to the announcement, Quaker's stock price fell \$7.375 per share—approximately 10 percent of the stock's value.

To finance the acquisition, Quaker had obtained \$2.4 billion of credit from a banking group led by NationsBank Corporation. The Snapple acquisition nearly tripled Quaker's debt, from approximately \$1 billion to approximately \$2.7 billion. The acquisition also increased Quaker's total debt-to-total capitalization ratio to approximately 80 percent.

Over the course of the year prior to its acquisition of Snapple, Quaker had announced in several public documents the company's guideline for debt-to-equity ratio and its expectations for earnings growth. The announcements formed the basis for the plaintiffs' action.

In its 1993 Annual Report (dated October 4, 1993), Quaker stated that "our debt-to-total capitalization ratio at June 30, 1993 was 59 percent, up from 49 percent in fiscal 1992. For the future, our guideline will be in the upper-60 percent range." Quaker's president reiterated this "guideline" in a letter contained in the same Annual Report. Quaker's Form 10-Q for the quarter ended September 30, 1993 (filed with the SEC in November 1993) repeated the total debt-to-total capitalization ratio guideline.

In its 1994 Annual Report (dated September 23, 1994), Quaker stated that "we are committed to achieving real earnings growth of at least 7 percent over time." In addition, the report noted that Quaker's total debt-to-total capitalization ratio was 68.8 percent, "in line with our guideline in the upper-60 percent range."

Negotiations between Quaker and Snapple apparently began in the spring of 1994. By early August 1994, Quaker had advised Snapple that it was interested in pursuing a merger of the two companies and had commenced a due diligence investigation. As noted, the merger was completed in November of that year.

The gist of the plaintiffs' complaint was that, even if Quaker's announcements about its total debt-to-total capitalization ratio and projected earnings growth were true at the time they were made, Quaker still had a duty to update or correct those statements if it knew they had become materially misleading in light of subsequent events. The plaintiffs alleged that (1) Quaker knew those statements were materially misleading as soon as it was reasonably certain the Snapple merger would be finalized, and (2) Quaker had such certainty at least sometime prior to its formal announcement of the merger on November 2, 1994.

The district court dismissed both portions of the plaintiffs' claim, on the basis that neither Quaker's statements relating to its total debt-to-total capitalization ratio nor its statements relating to its projected earnings growth were material. The plaintiffs appealed.

ISSUE PRESENTED Under what circumstances do a corporation and its officers have a duty to update, or at least not to repeat, particular projections regarding the corporation's financial condition (for example, total debt-to-total capitalization ratio or earnings growth projections)?

OPINION POLLAK, J., writing for the U.S. Court of Appeals for the Third Circuit:

Rule 10b-5, promulgated pursuant to § 10(b) of the [1934] Act, provides the framework for a private cause of action for violations involving false statements or omissions of material fact. To establish a valid claim of securities fraud under Rule 10b-5, plaintiffs must prove that the defendant: (1) made misstatements or omissions of material fact, (2) with *scienter*, (3) in connection with the purchase or sale of securities, (4) upon which plaintiffs relied, and (5) that plaintiffs' reliance was the proximate cause of their injury.

CONTINUED

In the present litigation, the plaintiffs allege that . . . they purchased shares in reliance on statements made by Quaker . . . about (1) Quaker's guideline for the ratio of total debt-to-total capitalization (in the upper 60 percent range) governing the company's financial planning and (2) Quaker's expected earnings growth in fiscal 1995.

The statements about expected earnings growth were made in August and September of 1994 . . . and it is plaintiffs' contention that, at a point when Quaker was in active pursuit of Snapple, Quaker and Smithburg [Quaker's CEO] must have known that the projections were illusory.

Plaintiffs' central complaint with respect to [the statements regarding the guideline for the ratio of total debt-to-total capitalization] is that, when the Snapple negotiations went into high gear, Quaker . . . had to have known that a . . . ratio in the high 60 percent range was no longer a realistic possibility. At that point, plaintiffs contend, defendants had a duty publicly to set the guidelines record straight.

A. The Total Debt-to-Total Capitalization Ratio Guideline

Plaintiffs' claims under this heading are claims of nondisclosure. "When an allegation of fraud under Section 10(b) is based upon a nondisclosure, there can be no fraud absent a duty to speak." In general, Section 10(b) and Rule 10b-5 do not impose a duty on defendants to correct prior statements—particularly statements of intent—so long as those statements were true when made. However, "[t]here can be no doubt that a duty exists to correct prior statements, if the prior statements were true when made but misleading if left unrevised." To avoid liability in such circumstances, "notice of a change of intent [must] be disseminated in a timely fashion." Whether an amendment is sufficiently prompt is a question that "must be determined in each case based upon the particular facts and circumstances."

1. Materiality

In *Basic*, the Court adopted in the context of § 10(b) and Rule 10b-5 the standard of materiality set forth in *TSC Industries v. Northway, Inc.*, 426 U.S. 438 (1976). The *Basic* Court approved . . . the principle that "[a]n omitted fact is material if there is a substantial likelihood that a reasonable shareholder would consider it important in deciding how to [proceed]."

Therefore, "[o]nly if the alleged misrepresentations or omissions are so obviously unimportant to an investor that reasonable minds cannot differ on the question of materiality is it appropriate for the district court to rule that the allegations are actionable as a matter of law."

In sum, in the present case, we find that a trier of fact could conclude that a reasonable investor reading the 1993 Annual Report published on October 4, 1993, and then the 1994 Annual Report published on September 23, 1994, would have no ground for anticipating that the total debt-to-total capitalization ratio would rise as significantly as it did in fiscal 1995. There was after all no abjuration of the "upper 60-percent range" guideline. The company had predicted the rise from 59 percent to the "upper 60-percent range" in the 1993 report and that rise had occurred by and was confirmed in the 1994 report. Therefore, it was reasonable for an investor to expect that the company would make another such prediction if it expected the ratio to change markedly in the ensuing year.

B. Earnings Growth Projections

Quaker's 1994 Annual Report—issued on September 23, 1994, more than five weeks prior to the November 2 merger announcement—contained the statement that "we are committed to achieving a real earnings growth of at least 7 percent over time." We conclude that the phrase "over time" in this second statement inoculates Quaker from any claims of fraud that point to a decline in earnings growth in the immediate aftermath of the Snapple acquisition. No reasonably careful investor would find material a prediction of seven-percent growth followed by the qualifier "over time." Therefore, we hold that no reasonable finder of fact could conclude that the projection influenced prudent investors.

RESULT The claim relating to Quaker's total debt-to-total capitalization ratio guideline was reinstated and remanded to the district court; the dismissal of the claim relating to Quaker's earnings growth projections was affirmed.

CRITICAL THINKING QUESTIONS

1. Given that a wealth of data compiled by market analysts demonstrates that, over the long run, stock prices follow corporate earnings, which piece of information would you find more important when deciding whether to buy or sell Quaker stock: (a) forecasts relating to the company's total debt-to-total capitalization ratio, or (b) forecasts relating to the company's real earnings growth?
2. Would an announcement by Quaker that it was contemplating increasing its total debt-to-total capitalization ratio have "tipped the market" to a pending acquisition?

An omission can occur when a company makes a statement that was true at the time it was made but becomes misleading in light of later events. There is a duty to correct when "a company makes a historical statement [of a material fact] that at the time made, the company believed to be true, but as revealed by subsequently discovered information actually was not."²⁵ In contrast, the duty to update—which may arise when a statement, reasonable at the time it is made, becomes misleading due to a subsequent event—is more limited.²⁶ There is no duty to update if the original statement was not material,²⁷ or "when the original statement was not forward looking and does not contain some factual representation that remains 'alive' in the minds of investors as a continuing representation."²⁸ On the other

hand, if investors are reasonably relying on the previous statements, the company can be held liable for failing to disclose the new information. For example, a company incurs a duty to update its financial projections when a projection changes or the company discovers that the projection was incorrect from the outset.

There is a duty to disclose the results of product safety tests, if they make previously disclosed test results false. For example, A.H. Robins Company, a pharmaceutical manufacturer, reported in 1970 that its Dalkon Shield intrauterine contraceptive device was safe and effective. In 1972, internal studies indicated that the Dalkon Shield was not as safe or effective as originally reported.²⁹ The U.S. Court of Appeals for the Second Circuit held that Robins's omission of the new information rendered its earlier statements misleading. Because investors were still relying on the statement that the Dalkon Shield was safe, the company had a duty to correct that statement once it learned that it was inaccurate.

27. *Hillson Partners Ltd. P'ship v. Adage, Inc.*, 42 F.3d 204 (4th Cir. 1994).

28. *In re Int'l Bus. Machs. Corp. Sec. Litig.*, 163 F.3d 102 (2d Cir. 1998). See also *In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410 (3d Cir. 1997).

29. *Ross v. A.H. Robins Co.*, 607 F.2d 545 (2d Cir. 1979), cert. denied, 446 U.S. 946 (1980).

In contrast, in *Oran v. Stafford*,³⁰ the U.S. Court of Appeals for the Third Circuit held that reports that the diet pill combination fen-phen (made by American Home Products Corporation) caused heart-valve abnormalities were not material because they did not definitively establish a link between the two drugs and heart-valve disorders. As a result, AHP's failure to disclose this information did not render its statements about the inconclusiveness of the relationship materially misleading. The fact that there was no adverse effect on AHP's stock price when the data were eventually released was further evidence of nonmateriality.

In *Dura Pharmaceuticals, Inc. v. Broudo*,³¹ the U.S. Supreme Court ruled that allegedly false and misleading statements about Dura Pharmaceuticals' Albuterol Spiros asthma medication delivery device could not have caused the plaintiff investor's loss because the market price of the stock did not decline after the corrective disclosure was made. As a result, the plaintiff failed to prove loss causation. The court rejected the Ninth Circuit's assertion that loss causation "merely requires pleading that the price at the time of purchase was overstated and sufficient identification of the cause."

Statements by Third Parties and Entanglement

Even if the company itself did not publish the misleading projection, make the statement, or start the rumor, it may nevertheless have a duty to reveal all of the facts regarding the issue. This is the case when the company is so entangled with the third party's statement that the statement can be attributed to the company. The company is then responsible for making sure that the statement is accurate. For example, if a company makes it a practice to review and correct drafts of analysts' forecasts, then the company implicitly represents that the corrected forecast is in accord with the company's view, and it has a duty to reveal all facts necessary to ensure that the analyst's report is not misleading.³² Similarly, a company's distribution of copies of an analyst's report to investors or other members of the public or the posting of an analyst's report on the company's website may be construed as an implied representation that the information in the report is accurate or reflects the company's views.

MATERIAL FACT

A buyer or seller of stock cannot recover damages just because an executive misrepresented or omitted a fact about the company. The fact must be material. As explained in Chapter 22, a fact is material if a reasonable investor would consider it important in deciding how to act. Materiality is judged at the time of the misstatement or omission. Materiality is not affected by the intent of the party making the statement. There can be liability even if the manager did not know that the omitted or misrepresented fact came within the legal definition of a material fact.

Although it is not always possible to predict which facts a court will consider material, certain matters are almost always considered material. For example, any statements about the earnings, distributions, or assets of a company (unless the misrepresentation is inadvertent and concerns a minor amount) are material. In August 1999, the SEC accounting staff cautioned companies and their auditors against using "rules of thumb" to determine whether errors in the financial statements are material.³³ Even if two errors net out to zero, they can still be material. For example, an overstatement of revenues can be material even if it is accompanied by an overstatement of cost of goods sold. The SEC staff also stated that any intentional misstatement of a number in the financial statements is, by definition, material.

Significant facts about a parent or a subsidiary are usually material. These include the discovery of embezzlement or falsification of financial statements, an impending tender offer, or the loss of a manufacturer's major customer. Other facts that are probably material include inability to obtain supplies, increased costs of supplies, a decision to close a plant, information regarding the outlook in the industry, an intention to market a new product or cease marketing an old one, potential liability for damages in a lawsuit, a major discovery or product development, cost overruns, a change in management or compensation of corporate officers, and an increase in real estate taxes. As this list illustrates, a material fact is any fact that is likely to affect the market value of the company's stock.

The Supreme Court has recognized that for contingent or speculative events, such as negotiations regarding a potential merger, it can be difficult to tell whether a reasonable investor would consider the omitted fact material at the time. The Court has declined to adopt a bright-line rule,

30. 226 F.3d 275 (3d Cir. 2000).

31. 544 U.S. 336 (2005).

32. See, e.g., *Stack v. Lobo*, 903 F. Supp. 1361 (N.D. Cal. 1995).

33. Staff Accounting Bulletin No. 99, 1999 WL 1123073 (SEC Aug. 12, 1999).

however; materiality is a fact-specific determination.³⁴ If a misstatement or omission concerns a future event, such as a potential merger, its materiality will depend upon a balancing of the probability that the event will occur and the anticipated magnitude of the event in light of the totality of the company's activity.

Thus, the materiality of preliminary merger discussions in any particular case depends on the facts. Generally, to assess the probability that the event will occur, a fact finder will look to indicia of interest in the transaction at the highest corporate levels. Without attempting to catalog all such possible factors, the Court has noted by way of example that board resolutions, instructions to investment bankers, and actual negotiations between principals or other intermediaries may serve as indicia of interest.³⁵ To assess the magnitude of the transaction to the issuer of the securities allegedly manipulated, a fact finder will consider such facts as the size of the two corporate entities and of the potential premiums over market value. No particular event or factor short of closing the transaction is either necessary or sufficient by itself to render merger discussions material.

Vague statements of corporate optimism that are not capable of objective verification and mere puffing are immaterial as a matter of law because reasonable investors would not rely on them in making investment decisions.³⁶ For example, the U.S. Court of Appeals for the Second Circuit characterized a statement made on October 15, 1992, by Jim Clippard, the director of investor relations of International Business Machines Corporation (IBM), that "we're not—despite your anxiety—concerned about being able to cover the dividend for quite a foreseeable time" as an immaterial expression of optimism, not a guarantee, because he qualified it by noting that "this is a relatively short-term period of economic difficulty we're going through. And we think that we can ride through this with no problem [whatsoever] as far as [the] dividend is concerned."³⁷ The court held that there was no

34. *Basic, Inc. v. Levinson*, 485 U.S. 224 (1988).

35. *Id.*

36. See, e.g., *Raab v. Gen. Physics Corp.*, 4 F.3d 286 (4th Cir. 1993) (holding that statements in annual report that company expected 10 to 30 percent growth rate over the next several years and was "poised to carry the growth and success of 1991 well into the future" were immaterial puffing); *San Leandro Emergency Med. Group Profit Sharing Plan v. Philip Morris Cos.*, 75 F.3d 801 (2d Cir. 1996) (holding that statement that company was "optimistic" about its earnings in 1993 and that it should deliver income growth consistent with its historically superior performance was mere puffery and lacked the sort of definite positive projections that might require later correction).

37. *In re Int'l Bus. Machs. Corp. Sec. Litig.*, 163 F.3d 102 (2d Cir. 1998).

► ETHICAL CONSIDERATION

Managers of companies frequently act as promoters, describing the company's products to the press and the public in an aggressive, upbeat manner. It is reasonable to expect them to engage in a certain amount of puffing and exaggeration. Are these exaggerations ethically justifiable as long as they do not violate the securities laws?

duty to *correct* the statement when the CFO concluded in late November 1992 that the dividend was likely to be cut because, at the time the statement was made (October 15, 1992), IBM did not have a plan or need to alter the dividend. The court also held that "there is no duty to *update* vague statements of optimism or expressions of opinion." (Emphasis added.) In another case, however, a prediction that the company "expects . . . a net income of approximately \$1.00 a share" for the fiscal year that would close in two months was held to be a material statement.³⁸

Bespakes Caution Doctrine

As explained in Chapter 22, under the judicially developed *bespeaks caution doctrine*, a court may determine that the inclusion of sufficient cautionary statements in a document renders immaterial any misrepresentation and omission contained therein. The doctrine applies only to projections, estimates, and other forward-looking statements that are accompanied by precise cautionary language that adequately discloses the risks involved. The cautionary language must relate to the specific information that the plaintiffs allege is misleading³⁹ and reflect what the speaker knows or strongly suspects. As one judge commented, "The doctrine of bespeaks caution provides no protection to someone who warns his hiking companion to walk slowly because there might be a ditch ahead when he knows with near certainty that the Grand Canyon lies one foot away."⁴⁰

Unlike the safe harbor provided in the Litigation Reform Act, the bespeaks caution doctrine applies to forward-looking statements in any context, including initial public offerings. The legislative history of the Litigation Reform Act makes it clear that Congress did not intend its statutory safe-harbor provisions to replace the judicial bespeaks

caution doctrine or to foreclose further development of that doctrine by the courts.

SCIENTER

Rule 10b-5 does not impose liability for innocent misstatements or omissions. The misstatements or omissions must be made with scienter, that is, a mental state embracing the intent to deceive, manipulate, or defraud. Intent to deceive means that the defendant says something he or she believes

is untrue with the expectation that others will rely on the statement, or that the defendant omits a fact in the hope that the omission will cause others to misunderstand what he or she does say. Scienter is more than mere negligence or lack of care.

The Litigation Reform Act requires the plaintiff to plead with particularity specific facts giving rise to a “strong inference” that the defendant acted with scienter. The Supreme Court clarified this pleading requirement in the following case.

A CASE IN POINT

CASE 23.4

TELLABS, INC. v. MAKOR ISSUES & RIGHTS

SUPREME COURT OF THE
UNITED STATES
127 S. Ct. 1511 (2007).

SUMMARY

FACTS After Tellabs, Inc., a fiber optics equipment manufacturer, announced that demand for its TITAN 5500 and TITAN 6500 switching systems had declined and lowered its revenue forecasts, its stock price dropped sharply. The plaintiffs sued, alleging that Tellabs's CEO had misled investors when he misrepresented that demand for its products was strong. The CEO did not sell any Tellabs's securities during the period in question. The district court dismissed the complaint, which contained allegations from twenty-seven anonymous sources. The U.S. Court of Appeals for the Seventh Circuit reversed after concluding that the complaint was sufficient to create a strong inference of scienter because a reasonable person could infer scienter from the facts alleged. Tellabs appealed.

ISSUE PRESENTED What must a plaintiff allege to meet the heightened pleading standards for scienter under the Litigation Reform Act? Can fraud be pleaded with sufficient particularity if the plaintiff relies on unnamed confidential sources?

SUMMARY OF OPINION The U.S. Supreme Court acknowledged that Congress did not clearly define what was required to create a “strong inference” of scienter, but reasoned that the phrase should be interpreted in a workable manner that would promote the Reform Act’s goal of deterring “frivolous, lawyer-driven litigation, while preserving investors’ ability to recover on meritorious claims.” After analyzing the ordinary meaning of the word “strong,” the Court concluded that a strong inference must be more than merely “reasonable” or “permissible.” It has to be “powerful,” “cogent and compelling.” Thus, a complaint will survive a motion to dismiss “only if a reasonable person would deem the inference of scienter cogent and at least as compelling as any opposing inference one could draw from the facts alleged.” The Court made it clear that no single factor is determinative and rejected the defendant CEO’s assertion that he could not have had scienter because he sold no stock during the period of alleged fraud. Instead, the significance to be ascribed to the lack of sales, or any other single fact, “depends on the entirety of the complaint.”

RESULT The Seventh Circuit’s ruling was vacated and the case remanded to the appeals court to determine whether the complaint satisfied the stricter pleading standards set forth by the Supreme Court. If it did not, then the case would be dismissed.

COMMENTS On remand, the Seventh Circuit adhered to its earlier finding that the plaintiffs had adequately pleaded a strong inference of scienter.⁴¹ In an opinion by Judge Richard Posner, the court concluded that it is “conceivable, yes, but it is exceedingly unlikely” that the false statements “were the result of merely careless mistakes at the management level based

41. Makor Issues & Rights Ltd. v. Tellabs Inc., 513 F.3d 702 (7th Cir. 2008).

on false information fed it from below, rather than of an intent to deceive or a reckless indifference to whether the statements were misleading." The court noted that the TITAN 5500 and 6500 were the company's key products, that they "were to Tellabs as Windows XP and Vista are to Microsoft." Moreover, almost all the false statements quoted in the complaint were made by the CEO, who sat at the "top of the corporate pyramid." The court found it "very hard to credit" the defendants' claim that no member of senior management involved in authorizing "the public statements knew they were false" and stated that the defendants had failed to tell a "plausible story" that might "dispel our incredulity."

In *Higginbotham v. Baxter International Inc.*,⁴² the U.S. Court of Appeals for the Seventh Circuit ruled that information from anonymous sources must be discounted when considering whether there are plausible competing inferences: "Perhaps these confidential sources have axes to grind. Perhaps they are lying. Perhaps they don't even exist." Although such statements are not to be ignored, usually the discount will be "steep."⁴³ In *South Ferry LP #2 v. Killinger*,⁴⁴ the U.S. Court of Appeals for the Ninth Circuit held that an allegation that key officials know facts critical to the company's "core operations" is "usually," but not always, insufficient in and of itself to create a strong inference of scienter.

Recklessness

The U.S. Supreme Court acknowledged in *Tellabs* that there is a split in the circuits on whether recklessness is sufficient for a finding of scienter, but it declined to resolve the issue. On remand, the Seventh Circuit equated scienter with intent to deceive or recklessness. The U.S. Court of Appeals for the Second Circuit has also made clear its view that recklessness continues to be sufficient for a showing of scienter.⁴⁵ It defined reckless conduct as

conduct which is "highly unreasonable" and which represents "an extreme departure from the standards of ordinary care . . . to the extent that the danger was either known to the defendant or so obvious that the defendant must have been aware of it." . . . "[A]n egregious refusal to see the obvious, or to investigate the doubtful, may in some cases give rise to an inference of . . . recklessness."

....

42. 495 F.3d 753 (7th Cir. 2007).

43. *Id.*

44. 2008 WL 4138237 (9th Cir. Sept. 9, 2008).

45. *Kasaks v. Novak*, 216 F.3d 300 (2d Cir. 2000).

. . . [S]ecurities fraud claims typically have sufficed to state a claim based on recklessness when they have specifically alleged defendants' knowledge of facts or access to information contradicting their public statements. . . .

Under certain circumstances, we have found allegations of recklessness to be sufficient where plaintiffs alleged facts demonstrating that defendants failed to review or check information that they had a duty to monitor, or ignored obvious signs of fraud. . . .

At the same time, however, we have identified several important limitations on the scope of liability for securities fraud based on reckless conduct. First, we have refused to allow plaintiffs to proceed with allegations of "fraud by hindsight." . . . Corporate officials need not be clairvoyant; they are only responsible for revealing those material facts reasonably available to them. . . .

Second, as long as the public statements are consistent with reasonably available data, corporate officials need not present an overly gloomy or cautious picture of current performance and future prospects. . . .

Third, there are limits to the scope of liability for failure adequately to monitor the allegedly fraudulent behavior of others.⁴⁶

The U.S. Court of Appeals for the Ninth Circuit reached a contrary conclusion in a case involving Silicon Graphics⁴⁷ and held that the Litigation Reform Act precludes liability under Section 10(b) for mere recklessness. Instead, a "heightened form of recklessness, i.e., deliberate or conscious

46. Cf. *In re Comshare, Inc. Sec. Litig.*, 183 F.3d 542 (6th Cir. 1999) (holding that allegations giving rise to a strong inference of recklessness are sufficient to pass muster but that facts showing a mere motive and opportunity to commit fraud are not). *Accord* *Greebel v. FTP Software, Inc.*, 194 F.3d 185 (1st Cir. 1999) (holding that the Litigation Reform Act did not alter preexisting scienter requirements for securities fraud cases).

47. *In re Silicon Graphics, Inc. Sec. Litig.*, 183 F.3d 970 (9th Cir. 1999).

recklessness, at a minimum, is required to establish a strong inference of intent.”

To avoid liability, officers should investigate what the facts are before making any statement. Managers should make no statement unless they in good faith believe it to be true. The investigation must be fairly thorough. At least in the Second Circuit, an officer may be liable for misrepresenting facts that he or she should have been aware of, even if the officer was not in fact aware of them. For example, directors may be deemed to have knowledge of facts in the corporate books regardless of whether they have actually examined the books.

These tough pleading requirements make it more important than ever for insiders to avoid trading while in possession of material nonpublic information. Plaintiffs can be expected to claim that insiders who sold before the announcement of bad news knew of the impending negative developments and sold their stock while the market price was artificially high, thereby “cashing in” on their alleged misrepresentations and omissions.⁴⁸ This arguably creates an inference of fraud.

For example, the U.S. Court of Appeals for the Ninth Circuit characterized Oracle CEO Larry Ellison’s sale of \$900,000 of Oracle stock approximately one month prior to the announcement of lower-than-expected sales as “suspicious” and ruled that the unusual stock sales supported a strong inference of scienter.⁴⁹ Ellison had not sold any Oracle stock in the previous five years. Although Ellison sold only 2.1 percent of his Oracle stock, the court reasoned that “where, as here, stock sales result in a truly astronomical figure, less weight should be given to the fact that they may represent a small portion of the defendant’s holdings.” Although the sales, taken alone, may not have created a strong inference of scienter, when they were coupled with (1) evidence that Oracle maintained an internal database of sales that was monitored by top executives, (2) Oracle customers’ billing and payment histories that were corroborated by a former Oracle senior manager and showed improper revenue accounting, and (3) the Oracle executives’ detail-oriented management style, the plaintiffs had made allegations that in their totality created a strong inference that Oracle and its top three executives acted with scienter. Characterizing this as “far from a cookie-cutter complaint,” the court concluded by stating: “The PSLRA was designed to eliminate frivolous or sham actions, but not actions of substance.”

48. See Dale E. Barnes, Jr. & Karen Kennard, *Greater Expectations: Risk Disclosure Under the Private Securities Litigation Reform Act of 1995—An Update*, 2 STAN. J.L. BUS. & FIN. 331, 347–48 (1996).

49. *Nursing Home Pension Fund v. Oracle Corp.*, 380 F.3d 1226 (9th Cir. 2004).

It is not yet clear how the U.S. Supreme Court will rule on this issue. Until there is a definitive ruling, managers and companies are well advised to assume that insider trading shortly before the announcement of bad news can create an inference of fraud sufficient to satisfy the Litigation Reform Act’s pleading requirements.

IN CONNECTION WITH THE PURCHASE OR SALE OF ANY SECURITY

Rule 10b-5 requires that the conduct occur “in connection with the purchase or sale of any security.” This requirement defines both those who can sue and those who can be sued under Rule 10b-5.

The U.S. Supreme Court has made it clear that only persons who actually purchase or sell securities can sue under Rule 10b-5. Persons who have not purchased (or sold) cannot sue on the theory that they would have purchased (or sold) had they known the true facts. Thus, liability under Rule 10b-5 does not extend to the whole world of potential investors but only to those who actually buy or sell stock after a misstatement or omission.

Certain states permit suits under their blue sky laws by investors who allege that they did not sell their securities because of the defendants’ fraud (*holder claims*). The Supreme Court, however, ruled that the Securities Litigation Uniform Standards Act of 1998 bars all state securities fraud class actions, including holder claims.⁵⁰ As a result, plaintiffs cannot bring holder claims as a class action in state court. They cannot be brought in federal court either because the plaintiffs did not purchase or sell securities based on the fraud.

Parties that can be sued under Rule 10b-5 are those that make or are responsible for misstatements or omissions in connection with the purchase or sale of securities. Statements are made “in connection with” the purchase or sale of securities if they were made in a manner reasonably calculated to influence the investing public or if they were of the sort upon which the investing public might reasonably rely.

For example, the U.S. Court of Appeals for the Third Circuit held that fraudulent financial statements issued by Cendant during the course of its tender offer for American Bankers Insurance Group (ABI) were misrepresentations made “in connection with” the plaintiffs’ purchase of ABI shares during Cendant’s tender offer even though the plaintiffs had neither purchased any Cendant shares nor tendered shares of ABI stock to Cendant.⁵¹ The plaintiffs had alleged that Cendant’s misrepresentations artificially inflated the

50. *Merrill Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71 (2006).

51. *Semerenko v. Cendant Corp.*, 223 F.3d 165 (3d Cir. 2000).

price at which they purchased their ABI shares, and that they suffered a loss when those misrepresentations were disclosed to the public and the merger agreement between Cendant and ABI was terminated.

In summary, a company must be careful to monitor its public statements, such as those made in periodic reports, press releases, proxy solicitations, and annual reports, and on the company's website. Even when addressing non-investors, such as creditors or labor union representatives, a manager should exercise caution if the statements can reasonably be expected to reach investors.

RELIANCE

To establish liability under Rule 10b-5, investors must show that they relied either directly or indirectly on the misrepresentation or omission. If the investors did not rely on the misstatement or omission in deciding to buy or sell stock,

then any loss they incurred cannot be blamed on the person that made the misrepresentation or omission.

Direct Reliance

A plaintiff may show reliance by showing that he or she actually read the document, such as a press release or prospectus, that contained the misstatement. In the case of an omission, the U.S. Supreme Court has ruled that the plaintiff will be presumed to have relied on the omission if it was material. That presumption of reliance can be rebutted—that is, shown to be not true—by a showing that the plaintiff would have bought (or sold) the stock even if the omitted fact had been included.

In the following case, the seller of stock in a private placement sought to avoid liability for allegedly deceptive oral statements and omissions based on a nonreliance clause in the stock purchase contract.

A CASE IN POINT

CASE 23.5

EMERGENT CAPITAL INVESTMENT MANAGEMENT, LLC v. STONEPATH GROUP, INC.

UNITED STATES COURT OF APPEALS
FOR THE SECOND CIRCUIT
343 F.3d 189 (2d Cir. 2003).

SUMMARY

FACTS Emergent Capital Investment Management, LLC invested \$2 million in Net Value Holdings, Inc. (NETV), now Stonepath Group, Inc. The investment arose out of a meeting set up by Lee Hansen, director and president of NETV and the former roommate and personal friend of Mark Waldron. Mark Waldron and Daniel Yun, the managing members of Emergent, owned 90 percent of Emergent's stock. Andrew Panzo, the chair and CEO of NETV, had a long history of collaborating with Howard Appel, who had been barred for life by the National Association of Securities Dealers from associating with any member of that organization in any capacity. In the negotiations leading up to the purchase, NETV executives represented, orally and in a brochure, that NETV's largest investment was a \$14 million purchase of a 12 percent equity interest in Brightstreet.com. In fact, the Brightstreet.com investment amounted to only \$4 million. NETV never mentioned any connection to Appel, who allegedly played a significant role in NETV's founding, financing, and control.

Emergent and NETV executed a stock purchase agreement, in which NETV made extensive warranties and representations regarding its capital structure, indebtedness, involvement in litigation, ownership and leases of real and personal property, and other matters connected with its business. Further, the agreement contained a passage stating that the agreement and accompanying documents "contained the entire understanding and agreement among the parties . . . and superseded any prior understandings or agreements" between or among any of them.

Appel and Panzo apparently engaged in a number of investment schemes whereby Appel would acquire control of a public shell corporation and subsequently install Panzo as a director or senior officer. The company would transfer substantial quantities of stock to affiliates of Appel and Panzo, and the two men would, "through extraordinarily complex corporate legal maneuvers," end up with large amounts of stock. They would then sell the stock at a high price, leaving behind a virtually worthless company.

Between January and March 2000, the price of NETV's stock hovered between \$10 and \$30 per share. The stock subsequently fell to less than \$1 per share. As the stock fell, Emergent demanded

CONTINUED

rescission of the agreement. NETV refused, prompting Emergent to sue for securities fraud under Rule 10b-5. Emergent alleged that NETV had misrepresented the size of the Brightstreet.com investment and had failed to disclose the company's connection to Appel.

ISSUE PRESENTED Does a nonreliance clause in a stock purchase agreement preclude liability in cases of misrepresentations or omissions?

SUMMARY OF OPINION The U.S. Court of Appeals for the Second Circuit first laid out the substantive law, explaining that plaintiffs in such an action must establish reasonable reliance on the alleged misrepresentations or omissions. The reasonableness of the reliance is judged in light of the entire context of the transaction, including factors such as its complexity and magnitude, the sophistication of the parties, and the content of any agreements between them.

As for the misrepresentation of the Brightstreet.com investment, the court noted that the plaintiff had secured from the defendants extensive contractual representations concerning NETV's financial condition and operations. Because Emergent was a sophisticated investor, it should have protected itself by insisting that the representation regarding the Brightstreet.com investment be included in the stock-purchase agreement. The court ruled that Emergent's failure to require such a representation in the agreement precluded a finding of reasonable reliance on the misrepresentation.

Unlike the affirmative misrepresentation, the omission of Panzo's investment history and NETV's ties to Appel was not known by Emergent. As a result, Emergent could not have protected itself against them in the agreement. The court held that the plaintiff had sufficiently alleged that, but for the omission, the purchase would not have taken place. Further, the court found that the plaintiff had sufficiently asserted that Emergent's loss was a foreseeable consequence of the defendants' omissions, particularly in light of the drastic price declines that occurred in the shares of the other companies controlled by Panzo and Appel.

RESULT The dismissal of Emergent's claim regarding the misstatement of the value of the Brightstreet.com investment was affirmed, but the dismissal of Emergent's claim regarding Panzo's investment history and NETV's connection to Appel was vacated. Emergent could pursue the latter claim.

COMMENTS Given the "sophistication of the parties," the Second Circuit expected the buyer to include every material fact in the purchase agreement. In effect, the court reasoned that if a statement was important enough to be relied upon by a sophisticated investor, then it should have been included in the agreement.

The Seventh Circuit reached a similar result in *Rissman v. Rissman*.⁵² As Judge Easterbrook noted, "Prudent people protect themselves against the limitations of memory (and the temptation to shade the truth) by limiting their dealings to those memorialized in writing, and promoting the primacy of the written word is a principal function of the federal securities laws." The court also rejected the argument that the no-reliance clause should be ignored as mere "boilerplate." Judge Easterbrook explained that "the fact that language has been used before does not make it less binding when used again. Phrases become boilerplate when many parties find that the language serves their ends. That's a reason to enforce the promises, not to disregard them."

52. 213 F.3d 381 (7th Cir. 2000).

Fraud on the Market

In the securities market, direct reliance is rare because transactions usually are not conducted on a face-to-face basis. The market is interposed between the parties, providing important information to them in the form of the market price. As the U.S. District Court for the Northern District of Texas said in the *LTV Securities Litigation*: “The market is acting as the unpaid agent of the investor, informing him that, given all the information available to it, the value of the stock is worth the market price.”

The theory underlying this view is known to economists as the *efficient-market theory*. It holds that in an open and developed securities market, the price of a company’s stock equals its true value. The market is said to evaluate information efficiently and to incorporate it into the price of a company’s securities.

Against this background, the courts have approved the *fraud-on-the-market theory*: If the information available to the market is incorrect, then the market price will not reflect the true value of the stock. Under this theory, an investor who purchases or sells a security is presumed to have relied on the market, which has in turn relied on the misstatement or omission when it set the price of the security.

The Supreme Court affirmed this theory in *Basic, Inc. v. Levinson*: “It is hard to imagine that there ever is a buyer or seller who does not rely on market integrity. Who would knowingly roll the dice in a crooked crap game?”⁵³

Thus, plaintiffs do not have to show that they read or heard a defendant’s misstatement in order to recover damages from that defendant. Instead, reliance is presumed if the investor shows that (1) the defendant made a public material misrepresentation that would have caused reasonable investors to misjudge the value of the defendant’s stock and (2) the investor traded shares of the defendant’s stock in an open securities market after the misrepresentations were made and before the truth was revealed.

A defendant can rebut the fraud-on-the-market presumption by showing that the plaintiff traded or would have traded despite knowing the statement was false. For example, an insider who is aware of nonpublic information that results in the stock being undervalued, but who sells for other reasons, cannot be said to have relied on the integrity of the market price.

Lower courts have declined to apply the fraud-on-the-market presumption in cases that do not involve an efficient, open, and developed market. The courts have identified at least five factors to consider in identifying an efficient market: (1) sufficient weekly trading volume, (2) sufficient

reports and analyses by investment professionals, (3) the presence of market makers and arbitrageurs, (4) the existence of issuers eligible to file Form S-3 short-form registration statements, and (5) a historical showing of immediate price response to unexpected events or financial releases. In short, for a market to be open and developed, it must have a large number of buyers and sellers and a relatively high level of trading activity and frequency. It also must be a market where prices rapidly reflect new information.

Truth on the Market Defendants have also used the efficient-market theory to their advantage. For example, even if the defendant makes overly optimistic sales projections for a product, there is no fraud on the market if the market makers were privy to the truth. In such a case, an investor who did not directly rely on the misrepresentation (for example, by actually reading a misleading press release) could not successfully assert a securities fraud claim based on fraud on the market.

As the U.S. Court of Appeals for the Ninth Circuit explained, in a fraud-on-the-market case, a defendant’s failure to disclose material information may be excused if that information has been made credibly available to the market by other sources: “[I]ndividuals who hear [only good news or only bad news] may receive a distorted impression . . . , and thus may have an actionable claim. But the market, and any individual who relies only on the price established by the market, will not be misled.”⁵⁴

A defendant is not relieved of its duty to disclose material information unless that information has been transmitted to the public with a degree of intensity and credibility sufficient to counterbalance any misleading impression created by the defendant. A brief mention of the omitted fact in a few poorly circulated or lightly regarded publications would be insufficient.

CAUSATION

A plaintiff must prove that the defendant’s misstatement or omission caused him or her to suffer losses. Increasingly, this is an economic question—what factors influence the price of a stock in the securities market?

In a securities case involving Nucorp Energy, for example, investors claimed that a misrepresentation by the company of the value of its oil reserves caused them to suffer losses. The claim was based on the contention that the stock price was maintained at an artificially high level as a result of the misrepresentation. The investors attributed

53. 485 U.S. at 246–47 (1988).

54. *In re Apple Computer Sec. Litig.*, 886 F.2d 1109 (9th Cir. 1989), cert. denied, 496 U.S. 943 (1990).

the subsequent drop in the stock price to the revelation of the true facts. At trial, the defendants presented the testimony of an economist that the drop in the stock price was caused by a drop in the price of oil and was not attributable to any misrepresentation of the value of the oil reserves. The jury found that the plaintiffs had failed to prove their claim. Thus, proponents of the efficient-market theory may be right when they predict that an entire Rule 10b-5 case may boil down to one question: Did the misleading statement artificially affect the market price?

In early 2005, the U.S. Court of Appeals for the Second Circuit dismissed securities fraud claims against Merrill Lynch & Co., its star analyst Henry M. Blodget, and other research analysts for allegedly issuing false and misleading analyst reports on two Internet companies—24/7 Media and Interliant.⁵⁵ Merrill Lynch had acted as lead underwriter for two public offerings by 24/7 Media and as co-lead underwriter of Interliant's initial public offering. The plaintiffs alleged that Blodget and other research analysts issued knowingly or recklessly false bullish research reports to generate investment banking business for Merrill.

The plaintiffs suing Merrill did not claim to have read Merrill's reports or to have bought 24/7 Media or Interliant shares through the firm. Instead, they asserted fraud on the market. To prevail, the plaintiffs had to show *loss causation*, that is, that "the misstatement or omission concealed something from the market that, when disclosed, negatively affected the value of the security." The plaintiffs did not allege that Merrill "doctored" the facts or hid the risks, the price volatility of the stocks, the negative earnings-per-share ratios, or the consistent quarterly losses. There was also no allegation that the market reacted negatively to a corrective disclosure regarding the falsity of Merrill's positive recommendations. The Second Circuit declared this "fatal" to the plaintiffs' case. The court also rejected the plaintiffs' efforts to characterize Merrill's actions as market manipulation in violation of Rule 10b-5(a) and (c).

An earlier investigation of analyst conflicts of interest by New York Attorney General Eliot Spitzer had led to Merrill's agreement in 2002 to pay \$100 million to settle New York's civil complaint and spawned more than 100 class-action complaints. Ultimately, ten investment banking firms paid more than \$1 billion in a global settlement reached in 2003 to settle government investigations of the incestuous relationships between the firms' research groups—which purported to provide objective research reports—and their investment banking arms, which used favorable analyst coverage to garner more investment banking business.

55. Lentell v. Merrill Lynch & Co., 396 F.3d 161 (2d Cir. 2005).

The scandal resulted in a new SEC regulation—*Regulation Analyst Certification (Regulation AC)*⁵⁶—that prohibits analysts from issuing reports that they do not personally believe to be true and requires the disclosure of any analyst compensation arrangements related to the specific recommendation or views contained in the research report.⁵⁷ The SEC has suggested that violation of Regulation AC may give rise to a private right of action under Section 10(b) and Rule 10b-5.⁵⁸ Moreover, the SEC stated, "even without Regulation AC, analysts may be found to have violated the anti-fraud provisions of the federal securities laws if they make baseless recommendations that they disbelieve."⁵⁹

The Sarbanes-Oxley Act of 2002 created a new crime, securities fraud involving a publicly traded company.⁶⁰ The Act made it a felony to knowingly execute or attempt to execute a scheme or artifice (1) to defraud any person in connection with any security of a publicly traded company or (2) to obtain, by means of false or fraudulent pretenses, representations, or promises, any money or property in connection with the purchase or sale of any security of a publicly traded company. The provision applies to any security of an issuer that has a class of securities registered under Section 12 of the 1934 Act or that is required to file reports under Section 15(d) of the 1934 Act. Congress thereby made it clear that any fake or misleading statements reasonably calculated to affect the public securities markets—such as those made by Henry Blodget of Merrill Lynch, Jack Grubman of Citigroup, and other securities analysts who touted stocks they privately called "junk" or worse—constitute securities fraud.

CALCULATION OF DAMAGES

The measure of damages in a Rule 10b-5 case is typically the out-of-pocket loss, that is, the difference between what the investor paid (or received) and the fair value of the stock on the date of the transaction. Alternatively, investors can elect to rescind the transaction, returning what they received and getting back what they gave. In the court's discretion, *prejudgment interest*—that is, interest on the amount of the award between the date the securities were purchased and

57. See Securities Exchange Act Release No. 47,384 (Feb. 20, 2003), 68 Fed. Reg. 9,482 (Feb. 27, 2003).

58. *Id.* See also Robert F. Serio & Matthew S. Kahn, *Private Rights of Action May Emerge from Sarbanes-Oxley Act*, CORP. COUNS. WKLY., Apr. 19, 2006, at 127.

59. Regulation Analyst Certification, *supra* note 56.

60. 18 U.S.C. § 1348.

the date of the judgment—may also be awarded. Punitive damages are not available.

In theory, damages must be proved with reasonable certainty. In practice, however, damages are awarded on the basis of expert testimony, which can be highly conjectural. For example, a claim that a company's failure to reveal negative information about its new product artificially inflated the price of its stock is quite difficult to evaluate with any scientific certainty because even the experts do not agree to what extent any particular piece of information affects the price of a company's securities.

In addition, the number of traders who can claim damage can only be estimated. For example, in-and-out traders' trades are included in the total volume of trading; but such traders who buy, then quickly sell, suffer no damage if they sell the securities before the price drop.

Evidence of damages is therefore often presented by comparing the stock's performance with the industry or market performance, on the assumption that the industry or the market was not subject to the same artificial inflation. This clearly remains a fertile field for argument and future litigation.

or direct participation investment program. The safe harbor also does not apply to any forward-looking statement included in (1) a financial statement prepared in accordance with generally accepted accounting principles or (2) a report of beneficial ownership on Schedule 13D.

As explained in Chapter 22, the statutory safe harbor for forward-looking statements was designed to promote market efficiency by encouraging companies to disclose projections and other information about their future prospects. Anecdotal evidence indicated that corporate counsel were advising their clients to say as little as possible due to fear that if the company failed to satisfy its announced earning projections—perhaps due to an industry downturn or the timing of a large order or release of a new product—the company would automatically be sued.

Under the first prong of the safe harbor, a person is protected from liability for a misrepresentation or omission based on a written forward-looking statement as long as the statement (1) is identified as forward-looking and (2) is accompanied by meaningful cautionary statements identifying important factors that could cause actual results to differ materially from those projected in the statement. The safe harbor also protects oral forward-looking statements if the person making the statement (1) identifies the statement as forward-looking, (2) states that results may differ materially from those projected in the statement, and (3) identifies a readily available written document (such as a document filed with the SEC) that contains factors that could cause results to differ materially.

The stated factors must be relevant to the projection and of a nature that could actually affect whether the forward-looking statement is realized. Boilerplate warnings will not suffice. Failure to include the particular factor that ultimately causes the forward-looking statement not to come true will not mean that the statement automatically is not protected by the safe harbor. The company must disclose all important factors, not all factors. In this respect, the safe harbor provides greater protection than the *bespeaks caution* doctrine.

For example, in *Harris v. Ivax Corp.*,⁶² the U.S. Court of Appeals for the Eleventh Circuit held that a generic drug manufacturer was not liable for securities fraud despite its failure to disclose the possibility of a \$104 million reduction in the carrying value of goodwill for several of its businesses. The company's cautionary language was adequate even though it did not explicitly mention the factor that ultimately belied the forward-looking statement. The court explained: "When an investor has been warned of risks of a significance similar to that actually realized, she

LITIGATION REFORM ACT SAFE HARBOR FOR FORWARD-LOOKING STATEMENTS

The Private Securities Litigation Reform Act provides issuers subject to the 1934 Act's reporting requirements and persons acting on their behalf a two-prong safe harbor for certain forward-looking statements.⁶¹ *Forward-looking statements* include (1) a statement containing a projection of revenues, income, earnings per share, capital expenditures, dividends, capital structure, or other financial items; (2) a statement of the plans and objectives of management for future operations, including plans relating to the issuer's products and services; (3) a statement of future economic performance, including any such statement in Management's Discussion and Analysis of Financial Condition and Results of Operations (MD & A) required to be included by the SEC; and (4) any statement of the assumptions underlying or relating to any such statement.

The safe harbor does not apply to forward-looking statements in connection with (1) an initial public offering; (2) an offering of securities by a blank check company; (3) a rollup or going-private transaction; (4) a tender offer; or (5) an offering by a partnership, limited liability company,

61. 15 U.S.C.S. § 77z-2.

62. 182 F.3d 799 (11th Cir. 1999).

is sufficiently on notice of the danger of the investment to make an intelligent decision about it according to her own preferences for risk and reward.”

When a court is ruling on a motion to dismiss based on this prong of the safe harbor, the state of mind of the person making the statement is not relevant. The court looks only at the cautionary language accompanying the forward-looking statement.

Even if a person cannot rely on this first prong, there is an independent prong based on the state of mind of the person making the statement. A person or business entity will not be liable in a private lawsuit involving a forward-looking statement unless the plaintiff proves that the person or business entity made a false or misleading forward-looking statement with actual knowledge that it was false or misleading. A statement by a business entity will come within the safe harbor unless it was made by or with the approval of an executive officer of the entity with actual knowledge by that officer that the statement was false or misleading.

SECTION 17(A)

Section 17(a) of the 1933 Act prohibits fraud in connection with the sale of securities. It is similar in scope to Section 10(b) of the 1934 Act, which prohibits fraud in both the sale and the purchase of securities. Unlike Section 10(b), Section 17(a) does not require proof of scienter. The SEC and the U.S. Attorney’s Office can use Section 17(a) to prosecute securities fraud, but private parties cannot sue based on it.

RESPONSIBILITY OF AUDITORS TO DETECT AND REPORT ILLEGALITIES

The Litigation Reform Act added a new Section 10A to the 1934 Act to promote disclosure by independent public accountants of illegal acts committed by their publicly traded audit clients. Each audit must include, in accordance with generally accepted auditing standards, (1) procedures designed to provide reasonable assurance of detecting illegal acts that would have a direct and material effect on the determination of financial statement amounts, (2) procedures designed to identify material related-party transactions (such as those involving officers, directors, and controlling shareholders of the company being audited), and (3) an evaluation of whether there is substantial doubt about the ability of the company to continue as a going concern during the ensuing

fiscal year. The Sarbanes–Oxley Act of 2002 also requires auditors to report on the adequacy of the company’s internal controls (see Appendix N).

If, in the course of the audit, the independent public accountant detects or otherwise becomes aware of information indicating that an illegal act has or may have occurred (regardless of whether it is perceived to have a material effect on the financial statements), then the accountant must (1) determine whether it is likely that an illegal act has occurred and, if so, determine and consider the possible effect on the financial statements; and (2) inform the appropriate level of the management of the company. The accountant must ensure that the audit committee, or the board of directors in the absence of such a committee, is adequately informed with respect to the illegal acts, unless the illegal act is clearly inconsequential. If after informing the audit committee (or board in the absence of an audit committee), the accountant concludes that (1) the illegal act has a material effect on the financial statements of the company, (2) senior management has not taken timely and appropriate remedial actions with respect to the illegal act, and (3) the failure to take remedial action is reasonably expected to warrant departure from a standard audit report or resignation, then the accountant must, as soon as practicable, directly report its conclusions to the full board of directors. The board is then required to notify the SEC within one business day after its receipt of the report. If the board fails to do so, the accountant must furnish the SEC a copy of its report (or the documentation of any oral report given).

DEFINITION OF INSIDER TRADING

Insider trading refers in general terms to trading by persons (often insiders, such as officers and directors) based on material nonpublic information. The U.S. Supreme Court has held, however, that not every trade while in possession of material nonpublic information violates Section 10(b). Because there is no statutory definition of insider trading, the law in this area has developed on a piecemeal basis. This lack of a clear definition has caused enforcement problems for the SEC and federal prosecutors. It can also make it difficult for investors to know whether their actions constitute prohibited insider trading.

The safest course is never to trade while in possession of material nonpublic information; however, such a premise is unduly restrictive. The nature of insider trading can best be understood by examining the purposes underlying the laws that prohibit it.

Two fundamental goals of the securities laws in general are to protect the investing public and to maintain fairness in the securities markets. Allowing a party who knows that the market is incorrectly pricing a security to exploit another party's ignorance of that fact is fundamentally unfair. Yet, if an efficient market is to be maintained, market professionals, such as securities analysts, must be given an incentive to ferret out the truth about companies and their prospects. There would be no incentive if the persons who expended the time and effort to piece together the truth were precluded from either trading on that information or selling it to others in the form of a tip or analyst report.

In light of this need to promote an efficient market and the language of Section 10(b), which refers to fraudulent and manipulative practices, the Supreme Court has held that a trade based on material nonpublic information is illegal only if there is a breach of duty by the person trading; or if the person trading is the recipient of a tip—a piece of inside information—there must be a breach of duty by the person who gave the tip. The person giving the tip is known as the *tipper*; the person receiving it is known as the *tippee*.

Insider trading cases focus specifically on the duty to disclose, before trading, material information that is not publicly known (that is, not commonly available to the investing public). An insider must either disclose material nonpublic information in his or her possession or refrain from trading. The fundamental question in an insider trading case is whether this obligation should be imposed on a particular trader.

For example, corporate officers and directors have specific legal duties to the corporation and the shareholders they serve, which prohibit them from engaging in insider trading. As corporate fiduciaries, these individuals are required to subordinate their self-interests to the interests of the shareholders, as discussed in Chapter 21.

In 2000, the SEC sought to clarify several aspects of insider trading by promulgating Rules 10b5–1 and 10b5–2 (which are set forth in Appendix I). Rule 10b5–1 provides that any person who purchases or sells securities of any issuer on the basis of material nonpublic information about the security or issuer violates Section 10(b) if the purchase or sale was in breach of a duty of trust or confidence owed directly, indirectly, or derivatively to (1) the issuer or its security holders or (2) any other person who is the source of the material nonpublic information. A trade is “on the basis of” material nonpublic information if the person trading was aware of the information at the time of the trade, unless the person can demonstrate that:

1. Before becoming aware of the information, he or she
 - (a) entered into a binding contract to purchase or sell,

- (b) gave instructions for the trade, or (c) adopted a written plan to trade; and
- 2. The contract, instruction, or plan either (a) specified the amount of securities to be traded and the price, or (b) included a written formula or algorithm for determining the amount and price, or (c) did not permit the person to exercise any subsequent influence over how, when, and whether to trade; and
- 3. The trade was pursuant to the contract, instruction, or plan.

Thus, Rule 10b5–1 creates a presumption that persons who trade while in possession of material nonpublic information trade on the basis of that information unless the trade is pursuant to a preexisting *10b5–1 plan*.⁶³ The rule was adopted in response to several cases in which the court held that a person who trades while in possession of inside information violates Rule 10b–5 only if he or she decided to trade based on that information.⁶⁴

The affirmative defense is designed to cover situations in which the person trading can demonstrate that the material nonpublic information was not a factor in the trading decision. It permits those who would like to plan securities transactions in advance, at a time when they are not aware of material nonpublic information, to carry out those preplanned transactions at a later time, even if they later become aware of material, nonpublic information. Rule 10b5–2, discussed further later, creates certain presumptions about the existence of a duty of trust or confidence in certain nonbusiness relationships, such as marriage.

CLASSICAL THEORY OF INSIDER TRADING

An *insider* is a person with access to confidential information and an obligation of disclosure to other traders in the marketplace. Insiders include not only traditional insiders—such as officers and directors—but also temporary insiders, such as outside counsel and financial consultants.

Traditional Insiders

Traditionally, only persons closely allied with the corporation itself were considered insiders. They are true insiders because they acquire information by performing duties within or on behalf of the issuer corporation. Persons or entities

63. Research suggests that some executives may be abusing 10b5–1 plans by canceling them when the stock price goes up and selling pursuant to them when the price drops. Barry G. Sher & Kenneth Breen, *Increased SEC Scrutiny of 10b5–1 Plans on Horizon?* N.Y. L.J. (Dec. 3, 2007).

64. See, e.g., SEC v. Adler, 137 F.3d 1325 (11th Cir. 1998).

traditionally considered insiders include (1) officers and directors, (2) employees, (3) controlling shareholders, and (4) the corporation itself. Even if an insider resigns before trading, he or she will still be liable for trading on the basis of material inside information learned while on the job.

Officers and Directors Officers and directors have a fiduciary obligation of loyalty and care to the corporate shareholders. They also have the greatest access to sensitive information regarding corporate events.

Employees As agents or servants of a corporation, employees have a duty of loyalty. They may not personally profit from confidential information that they receive in the course of their employment.

Controlling Shareholders Because of their majority stock ownership, controlling shareholders are generally in a position to control the activities of the corporation. They are therefore likely to be aware of impending corporate events.

The Corporation Often a corporation (or other issuer) will engage in the purchase or sale of its own securities. Under these circumstances, the corporation and those acting

on its behalf are insiders and must not trade while in possession of material nonpublic information.

Temporary Insiders

Outside attorneys, accountants, consultants, and investment bankers who are not directly employed by the corporation, but who acquire confidential information through the performance of professional services, are also considered insiders. The U.S. Supreme Court extended liability under Section 10(b) to such *temporary insiders* in footnote 14 to the *Dirks* case, which is presented as Case 23.6.

Tippees of Insiders

Tippees may also be subject to liability under Rule 10b-5, but only if they can be considered derivative insiders. In most cases, a tippee has no independent duty to the shareholders of the corporation, whose shares the tippee is buying or selling and with which he or she may have little or no connection. A tippee will not be held liable as a *derivative insider* unless the insider's duty of disclosure can somehow be imposed upon the tippee. This rule was established in the following landmark case.

A CASE IN POINT

CASE 23.6

DIRKS v. SEC

SUPREME COURT OF THE
UNITED STATES
463 U.S. 646 (1983).

SUMMARY

FACTS Raymond Dirks, an officer of a New York broker-dealer firm, who specialized in providing investment analysis of insurance company securities to institutional investors, was contacted by Ronald Sechrist, a former employee of Equity Funding of America. Sechrist was seeking aid in exposing fraudulent activities that had resulted in an overvaluation of Equity Funding's assets. Dirks was thus the potential tippee, with Sechrist the tipper. After corroborating Sechrist's story, Dirks advised certain clients that they should sell their shares in the company. When the corporate fraud was later revealed, the price of Equity Funding's stock went down.

The SEC brought proceedings against Dirks on the theory that he had constructively breached a fiduciary duty. In effect, the SEC maintained that anyone receiving information from an insider stands in the insider's shoes and should be held to the same standards and be subject to the same duties as that insider.

ISSUE PRESENTED Is a tippee liable when the tipper has not violated a fiduciary duty?

SUMMARY OF OPINION The U.S. Supreme Court rejected the argument that anyone receiving information from an insider should be held to the same standards as the insider. The Court held instead that a tippee is not liable unless the tippee and the tipper join in a co-venture to exploit the information. Only in such a case will the fiduciary duty of the tipper be derivatively imposed on the tippee. For the tippee to be liable, therefore, the tipper must have a duty to the corporation not to disclose the information and must breach this duty by seeking to benefit personally from the disclosure of the information. The benefit sought by the tipper can be either tangible or intangible. Intangible benefits might include an enhanced reputation or the intangible benefit received through the giving of gifts.

In this case, the insider was motivated solely by a desire to expose fraudulent conduct. He did not breach any fiduciary duties because it was in the interests of the corporation that this information be disclosed.

RESULT Without a breach of duty on the part of the insider/tipper, no derivative duty could be imposed on Dirks, the tippee. Dirks was not guilty of illegal insider trading.

The requirement that the tipper be seeking some benefit implies that the tipper must desire that the tippee trade on the information, but it is unclear whether such a showing is necessary. For example, the tipper could derive a benefit merely from impressing the tippee with his or her access to confidential information. Such a desire could stem from social or career aspirations of the tipper and could have nothing to do with the stock-trading ramifications of the information.

Breach of Fiduciary Duty In addition to seeking some benefit, the tipper must also be acting in breach of a fiduciary duty to the corporation (or to another under the misappropriation theory, discussed later in this chapter) by disclosing the information to the tippee. The information must be nonpublic at the time it is divulged, and it must be in the interests of the corporation (or the other party in a misappropriation case) to keep the information confidential.

In a classic case of illegal tipping, the former CEO of ImClone, Samuel D. Waksal, was convicted in 2003 of telling his daughter and father to sell their ImClone stock based on his nonpublic knowledge that the Food and Drug Administration (FDA) was denying approval of ImClone's anticancer drug Erbitex. In the course of sentencing Waksal to more than seven years in prison and ordering him to pay a \$3 million fine, Judge William H. Pauley III stated:

The harm that you wrought is truly incalculable. You abused your position of trust as chief executive officer of a major corporation and undermined the public's confidence in the integrity of the financial markets. Then you tried to lie your way out of it, showing a complete disregard for the firm administration of justice.⁶⁵

Judge Pauley further rebuked Waksal, saying, "Your spectacular success in building ImClone into a company worthy of inclusion in the Nasdaq 100 led you to disconnect from reality and, most importantly, from the rule of law."⁶⁶

The SEC sued Samuel Waksal's father in 2003 to recover the \$7 million in profits he earned when he sold his ImClone shares before the public announcement of the FDA's rejection of the drug application. The complaint alleged that Samuel Waksal intended to bestow a gift of illegal profits or illegal loss avoidance on his father by telling him about the impending announcement of bad news and that his father knew that he should not have traded on that information.⁶⁷

The tippee is liable only if he or she knew or should have known that the tipper's disclosure of the confidential information constituted a fiduciary breach. If the tippee has reason to know that the insider's disclosure was wrong or against the interest of the corporation, the tippee's actual knowledge will be irrelevant. For example, the U.S. Court of Appeals for the Sixth Circuit upheld the conviction of Kelly Hughes and her husband Kevin Stacy after they purchased thousands of shares of Worthington Foods, just days before its acquisition by Kellogg Company. Hughes received material nonpublic information about the acquisition from Roger Blackwell, a director of Worthington, and Blackwell's wife then shared that information with Stacy.⁶⁸ They earned profits of \$104,955. The court concluded that Hughes was a knowledgeable investor who would have known that Blackwell was breaching his duty to Worthington when he shared information about the acquisition. Hughes and Stacy were each sentenced to prison (thirty-three months for Hughes, twenty-seven for Stacy) and three years of supervised release, and each was fined \$53,443. These fines were in addition to the \$104,955 Hughes and Stacy were ordered to disgorge as a result of a civil case brought by the SEC.⁶⁹

Remote Tippees

Remote tippees—that is, the tippees of tippees—may be found to have violated Section 10(b) and Rule 10b-5 even if they are completely unacquainted with and removed from

65. Constance L. Hays, *Former Chief of ImClone Is Given 7-Year Term*, N.Y. TIMES, June 11, 2003, at C1.

66. *Id.*

67. Constance L. Hays, *Waksal's Father Named in S.E.C. Suit*, N.Y. TIMES, Oct. 11, 2003, at C3.

68. United States v. Hughes, 505 F.3d 578 (6th Cir. 2007).

69. SEC v. Blackwell, 2007 WL 1169362 (S.D. Ohio Apr. 18, 2007).

the original insider tipper. However, remote tippees are not liable unless they knew or should have known that the first-tier tipper was breaching a fiduciary duty in passing on the nonpublic information.⁷⁰ The phrase “should have known” is key to this formulation. It means that tippees cannot insulate themselves from liability merely by failing to inquire as to the source of the information. If a tippee has reason to suspect that the information was wrongfully acquired, such conscious avoidance of knowledge will not prevent a finding of scienter.

MISAPPROPRIATION THEORY OF INSIDER TRADING

From time to time, the SEC has unsuccessfully attempted to impose liability on anyone who trades while in possession of material nonpublic information. In *Chiarella v. United States*,⁷¹ the U.S. Supreme Court rejected the argument that every trade based on material nonpublic information should be held to violate the securities laws.

The Supreme Court expanded the class of possible defendants to include so-called outsiders when it embraced the misappropriation theory in *United States v. O'Hagan*.⁷² Under the *misappropriation theory*, a Rule 10b-5 violation occurs when a person breaches a fiduciary duty to the source of the nonpublic information by trading on that information after misappropriating it for his or her own use. The trader can be held liable even if he or she is not an insider of the company whose securities are traded and has

no independent duty of disclosure to the person from whom the securities were bought or sold.

The case involved James Herman O'Hagan, a partner of the law firm Dorsey & Whitney, who had purchased stock and options for stock in Pillsbury Company prior to the public announcement of a tender offer for Pillsbury's stock by Grand Met PLC. O'Hagan possessed material nonpublic information about Grand Met's intentions, which he had obtained as a partner of the law firm representing Grand Met in connection with its acquisition of Pillsbury. O'Hagan realized a profit in excess of \$4 million on his Pillsbury-related transactions.

The U.S. Supreme Court upheld O'Hagan's criminal conviction of securities fraud under Rule 14e-3(a), Section 10(b), and Rule 10b-5. Rule 14e-3 prohibits a person with nonpublic information about a pending tender offer that he or she knows or has reason to know has been acquired directly or indirectly from the offeror or the target or someone working on their behalf from trading on that information. (See Appendix J for the full text of Rule 14e-3.) The Supreme Court ruled that the SEC had not exceeded its powers under Section 14(e) when it adopted Rule 14e-3, which does not require proof that the trader breached any fiduciary duty. With respect to the Section 10(b) and Rule 10b-5 counts, the Court concluded that “it makes scant sense to hold a lawyer like O'Hagan a § 10(b) violator if he works for a law firm representing the target of a tender offer, but not if he works for a law firm representing the bidder. The text of the statute requires no such result.”

In the following case, the U.S. Court of Appeals for the Ninth Circuit applied *O'Hagan* to a director of a major shareholder of an acquisition target who traded the target's stock based on nonpublic information about the potential acquisition.

A CASE IN POINT

CASE 23.7

SEC v. TALBOT

UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT
530 F.3d 1085 (9th Cir. 2008).

IN THE LANGUAGE OF THE COURT

FACTS On April 18 or 19, 2003, LendingTree's CEO Doug Lebda told Fidelity Financial's Vice President Brent Bickett that LendingTree was negotiating a sale of the firm to a third party on terms that were favored by a majority of the LendingTree board. Fidelity owned approximately 10 percent of LendingTree's common stock. Lebda did not disclose the name of the potential acquirer, but he did tell Bickett that he “would need to keep this information confidential.” Bickett then relayed that information to Fidelity's CEO William Foley.

On April 22, 2003, Fidelity held its quarterly board meeting, which J. Thomas Talbot, an attorney and Fidelity board member, attended. Foley told the board that negotiations were proceeding for a third party to acquire LendingTree. The board then discussed whether Fidelity should agree to refrain from selling its LendingTree stock during the pendency of the transaction and/or to vote its shares in favor of the deal. According to Terry Christensen, another board member, Foley informed the board that Fidelity's stock in LendingTree “would be acquired at a very attractive

CONTINUED

70. SEC v. Musella, 678 F. Supp. 1060 (S.D.N.Y. 1988).

71. 445 U.S. 222 (1980).

72. 521 U.S. 642 (1997).

price," between \$16 and \$18, which represented a 23–29 percent increase over LendingTree's closing price of \$12.97 per share on April 22, 2003. Talbot remembered the meeting differently, declaring that, although he could "not recall the exact words spoken . . . some person or company might be interested in acquiring LendingTree, Inc. . . . and [Fidelity] would benefit if the transaction occurred."

Although Foley did not tell the board that the information was confidential, one board member, Cary Thompson, said "something to the effect that this is inside information, no one trade in the stock. Make sure you don't do anything with the stock." Thompson said this "plenty loud. It was loud enough to hear him." All board members present at the meeting, except for Talbot, considered the LendingTree information to be confidential.

Various directors testified as to their understanding of how far along the negotiations had proceeded between LendingTree and the unnamed acquirer, as conveyed by Foley: "far along, and it would be announced as a deal shortly thereafter" (Thompson); "advanced discussions" (Bickett); and that "it looked like there was going to be a transaction" (Christensen). Talbot interpreted Foley's words as far less definite, understanding the information about LendingTree to be a "rumor," not a "factual statement."

On April 24, 2003, two days after the meeting, Talbot purchased on margin 5,000 shares of LendingTree at approximately \$13.50 per share for a total of \$67,000. Talbot testified that Foley's comments at the April 22, 2003 board meeting regarding LendingTree "triggered [his] conduct on April 23rd to look into [LendingTree] more carefully." He claimed that a number of factors influenced his decision to purchase the stock: Fidelity had invested in it; it was a real estate company, which he considered to be a good buy; interest rates would likely remain low; the high-tech market was experiencing a resurgence; and, based on the "rumor" at the April 22 meeting, other people were clearly interested in it, so he should be as well. Talbot "wanted to buy before anything happened."

On April 25, 2003, LendingTree sent Fidelity a written letter agreement restricting the manner in which Fidelity could use any confidential information it received from LendingTree in connection with the proposed tender offer. The directors were not advised of the confidentiality agreement, and the court concluded that the SEC had failed to prove that Fidelity and, by extension, Talbot owed a fiduciary duty to LendingTree.

Talbot continued to monitor LendingTree's stock closely. After being satisfied that "the price was moving up . . . [a]nd the volume was solid," he purchased on margin an additional 5,000 shares at \$14.50 per share for \$72,500 on April 30, 2003.

On May 5, 2003, three major events occurred. First, Fidelity executed an agreement with the acquiring company, USA Interactive Corporation, and LendingTree to vote its shares in favor of the acquisition. Second, LendingTree and USA Interactive issued a press release announcing the acquisition. Third, LendingTree's stock rose roughly 41 percent on the news, immediately after which Talbot sold all of his LendingTree shares for a profit of \$67,881.20. LendingTree stock closed on Monday, May 5, at \$20.72, up \$6.03 from its previous closing price of \$14.69 on Friday, May 2. Talbot resigned from the Fidelity board on September 19, 2003.

On June 23, 2004, the SEC brought a civil action against Talbot alleging that he had traded on material, nonpublic information in violation of Section 10(b) of the 1934 Act and Rule 10b-5. The district court held that Talbot could not be liable under the misappropriation theory because there was no continuous chain of fiduciary relationship from LendingTree to Fidelity to Talbot. With respect to whether the information Talbot received at the Fidelity board meeting was material, the district court held that it could not make that determination one way or the other as a matter of law. There were genuine issues of material fact that a jury would have to consider to decide whether the information was material or not. The SEC appealed.

ISSUE PRESENTED Did a director of a major shareholder of an acquisition target violate Rule 10b-5 when he traded in the stock of the target while in possession of nonpublic information concerning a possible acquisition of the target?

OPINION WARDLAW, J., writing on behalf of the U.S. Court of Appeals for the Ninth Circuit:

We must decide whether Talbot can be held liable under § 10(b) of the Securities Exchange Act of 1934 ("Exchange Act"), and Rule 10b-5, promulgated thereunder, for misappropriating information from Fidelity, in the absence of a fiduciary duty of confidentiality owed to LendingTree by Fidelity or Talbot when he executed the trades. We hold that Talbot can be held liable, under the circumstances here, but that a genuine issue of material fact exists as to the issue of materiality. We therefore reverse and remand the district court's grant of summary judgment in favor of Talbot.

A. The Misappropriation Theory

Traditionally, § 10(b) and Rule 10b-5 have reached only what is termed "classical" insider trading. "Under the 'traditional' or 'classical theory' of insider trading liability, § 10(b) and Rule 10b-5 are violated when a corporate insider trades in the securities of his corporation on the basis of material, nonpublic information." Such trading qualifies as a "deceptive device" under § 10(b) because a "relationship of trust and confidence [exists] between the shareholders of a corporation and those insiders who have obtained confidential information by reason of their position with that corporation." The relationship of trust and confidence between the trader and the shareholders of the corporation in which he trades "gives rise to a duty to disclose [or to abstain from trading] because of the 'necessity of preventing a corporate insider from . . . taking unfair advantage of . . . uninformed . . . stakeholders.'"

....

... In 1997, the Supreme Court . . . recogniz[ed] a "complementary" theory of liability referred to as the "misappropriation" theory.⁷³ Under this theory, "a person commits fraud 'in connection with' a securities transaction, and thereby violates § 10(b) and Rule 10b-5, when he misappropriates confidential information."⁷⁴ The misappropriation theory reaches trading by corporate outsiders, not insiders; therefore, as a corporate outsider, the misappropriator owes no duty to the investor with whom he trades, a requirement for liability under the classical theory of insider trading. Rather, "[i]n lieu of premising liability on a fiduciary relationship between company insider and purchaser or seller of the company's stock, the misappropriation theory premises liability on a fiduciary-turned-trader's deception of those who entrusted him with access to confidential information. Under this theory, a fiduciary's undisclosed, self-serving use of a principal's information to purchase or sell securities, in breach of a duty of loyalty and confidentiality, defrauds the principal of the exclusive use of that information."⁷⁵ "Because the deception essential to the misappropriation theory involves feigning fidelity to the source of the information, if the fiduciary discloses to the source that he plans to trade on the nonpublic information, there is no 'deceptive device' and thus no § 10(b) violation. . . ."⁷⁶

B. Talbot's Liability Under the Misappropriation Theory

Because Talbot traded in LendingTree securities—a corporation in which he was not an insider—liability can attach to his conduct only under the misappropriation theory. . . . [F]or the SEC to prevail on appeal, it must demonstrate that (1) Talbot breached a fiduciary duty arising from a relationship of trust and confidence owed to the source of the information on which he traded; and (2) the information on which Talbot traded was material.

76. *Id.*

1. Breach of Duty

The SEC contends that because "Talbot had a duty to . . . Fidelity, to keep information about the LendingTree transaction confidential, and [because] he secretly breached that duty by trading securities for personal profit," he can be held liable under the misappropriation theory. We agree.

In *United States v. O'Hagan*, the leading Supreme Court decision addressing the misappropriation theory, . . . the Supreme Court . . . noted that "it [was O'Hagan's] failure to disclose his personal trading to Grand Met and Dorsey [his law firm], in breach of his duty to do so, that made his conduct 'deceptive' within the meaning of [§] 10(b)."

The district court interpreted the misappropriation theory as requiring that "the trader and the originating source of the nonpublic information [be] linked through a continuous chain of fiduciary relationships: The employee [must owe] a duty to his employer to refrain from exploiting the information, and the employer in turn [must owe] the same duty to the corporate client."

Although a continuous chain of duties existed in each of the cases relied upon by the district court, a continuous chain of duties is not a requirement for liability to attach under the misappropriation theory. In *O'Hagan*, the Supreme Court held that O'Hagan had breached two independent duties: (1) his duty to Dorsey & Whitney, his law firm; and (2) his duty to Grand Met, the corporation that his law firm represented. That a continuous chain of duties flowed from O'Hagan to Dorsey & Whitney to Grand Met is of no moment, as the Court never intimated that such a chain was necessary. Thus, O'Hagan's relationship with Dorsey & Whitney was sufficient to support liability under the misappropriation theory. The district court misinterpreted the misappropriation theory as requiring that the duty of confidentiality be owed to the "originating source" of the information. *O'Hagan* stated quite clearly that the duty must be owed only the "source"; we decline to read an "originating source" requirement into *O'Hagan*.

. . . Talbot traded on information he received from Fidelity, the immediate source and rightful owner of the information on which he traded. . . .

. . . Talbot, as a member of Fidelity's Board, owed a duty arising from a relationship of trust and confidence to Fidelity, the source of the information on which he traded. The information on which Talbot traded was confidential, as it was properly "entrusted" to him by Fidelity in his capacity as a Fidelity director. This is textbook misappropriation.

Talbot contends that "[n]o reasonable factfinder could conclude that Mr. Talbot was obligated to keep the LendingTree information confidential." We disagree. Although the Court did not define the precise contours of the fiduciary duty captured by the misappropriation theory, it is clear that Talbot falls within *O'Hagan*'s ambit. In *O'Hagan*, the Court found that a partner in a law firm is in a relationship of trust and confidence with his firm. It follows that Talbot, as a member of Fidelity's Board of Directors, was also in a relationship of trust and confidence with Fidelity. This conclusion is supported by nearly seven decades of Delaware law and common sense: Corporate officers and directors are not permitted to use their position of trust and confidence to further their private interests. While technically not trustees, they stand in a fiduciary relation to the corporation and its stockholders.

Talbot further contends that the information on which he traded was not confidential. He relies on his belief that the LendingTree information was a "rumor," and the fact that Foley did not indicate the information was confidential. We find these arguments to be unpersuasive. As a matter of law, the very nature of the information on which Talbot traded was confidential. As the SEC points out, "the information about the possible LendingTree acquisition went to the very heart of Talbot's duties to Fidelity." Talbot learned of the LendingTree information from Foley, the CEO of Fidelity, at a meeting of the Board of Directors. Foley announced it to the Board to get a reading on whether the Board would vote Fidelity's shares in favor of the transaction. Because Fidelity had a large stake in LendingTree's stock, this decision would have a big impact on Fidelity's financials, a point

that Foley made explicit by informing the Board that Fidelity could potentially make \$50 million if the deal went through. This was not a passing reference to a company in which Fidelity had no interest; rather, the weight of the evidence counsels that Foley's comments to the Board, and the Board's subsequent discussion of the transaction, would make clear to any Board member—especially an individual who has sat on boards of directors for over three decades—that the information was confidential and not to be used for personal gain. Indeed, every other director present at the meeting considered the information to be confidential.

Talbot's use of Fidelity's confidential information, in breach of his duty to disclose that he intended to use the information before doing so, was in direct contravention of the purposes of the Exchange Act. As the Court recognized in *O'Hagan*:

An animating purpose of the Exchange Act . . . [is] to insure honest securities markets and thereby promote investor confidence. Although informational disparity is inevitable in the securities markets, investors likely would hesitate to venture their capital in a market where trading based on misappropriated nonpublic information is unchecked by law. An investor's informational disadvantage vis-à-vis a misappropriator with material, nonpublic information stems from contrivance, not luck; it is a disadvantage that cannot be overcome with research or skill.

Talbot contends that . . . the SEC cannot prevail because it cannot demonstrate that Fidelity was harmed by his conduct. We cannot determine from the record before us whether Talbot's trading injured Fidelity, but it most certainly injured the trading public. The failure to hold a person in Talbot's trusted position who traded on information acquired by him in that capacity would diminish the public perception of the markets as "honest," as investors would understand that board members—those who have superior access to information about the businesses in which their companies invest—are free to profit off the informational advantages they possess by virtue of their rank.

2. Materiality

The SEC also contends that the LendingTree information on which Talbot traded was material as a matter of law. The district court found that a genuine issue of material fact exists regarding materiality. We agree with the district court.

An omitted fact is material if there is a substantial likelihood that a reasonable investor would consider it important in deciding whether to buy or sell securities.⁷⁷ "[T]o fulfill the materiality requirement 'there must be a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available.'"

....

The district court did not clearly err in determining that a genuine issue of material fact exists as to the materiality of the information on which Talbot traded. On the one hand, much of the deposition testimony would support a finding of materiality. Foley informed the Board that Fidelity stood to make a \$50 million profit on the acquisition. Thompson and Bickett testified that, based on Foley's representations to the Board, they perceived the acquisition to be in the very advanced stages. Talbot purchased LendingTree stock just two days after hearing the information, and again six days later. The stock rose roughly 41 percent upon announcement of the acquisition, immediately after which Talbot sold all of his LendingTree stock. And, perhaps most tellingly, Talbot testified that he purchased the stock on margin because he "wanted to buy before anything happened."

On the other hand, there is also evidence to support a finding that the information was immaterial. Most notable, Talbot remembers what was said at the meeting differently than some of the

77. Basic Inc. v. Levinson, 485 U.S. 224 (1988).

other directors. He recalled Foley saying, only generally, that "some person or company might be interested in acquiring LendingTree, Inc. . . . and that [Fidelity] would benefit if the transaction occurred." In contrast with those who believed that the transaction was in the advanced stages, Talbot understood the transaction to be just a "rumor," not a factual statement." Moreover, he asserted that no one discussed "when [the acquisition] would occur." This account is generally confirmed by Christensen, who testified that "Mr. Foley was indicating that it looked like [Fidelity's] stock would be sold. I mean, you know, one never knows for sure, but that's what it looked like." Both Talbot's and Christensen's deposition testimony refute the countervailing evidence that Foley communicated a detailed and definite description of the worth of the potential acquisition. Therefore, we cannot say that the district court clearly erred in determining that the information on which Talbot traded was not material as a matter of law, given the genuine issues of material fact, particularly as to what information was actually conveyed to the Fidelity Board.

For the foregoing reasons, we *reverse the district court* and hold that Talbot can be held liable under the misappropriation theory because he traded on confidential information received in his capacity as a member of Fidelity's Board, but that a genuine issue of material fact as to the materiality of the information precludes judgment as a matter of law.

RESULT The case was remanded to the district court for a determination by a jury of whether the information Talbot knew about the possible acquisition of LendingTree was material. If the jury found the information material, then Talbot engaged in illegal insider trading.

CRITICAL THINKING QUESTIONS

1. Would the misappropriation theory apply to a case in which a person defrauded a bank into giving him a loan, or embezzled cash from another, and then used the proceeds of the misdeed to purchase securities?
2. If the fiduciary disclosed to the source of the nonpublic information that she planned to trade on that information, would trading on that information constitute a Section 10(b) violation? Would it violate any other laws? Would it be ethical?

Duty of Trust or Confidence

Rule 10b5–2 sets forth a nonexclusive list of three situations in which a person has a duty of trust or confidence for purposes of the misappropriation theory of insider trading. A duty of trust or confidence exists (1) whenever a person agrees to maintain information in confidence; (2) when two people have a history, pattern, or practice of sharing confidences such that the recipient of the information knows or reasonably should know that the person communicating the material nonpublic information expects that the recipient will maintain its confidentiality; and (3) when a person receives or obtains material nonpublic information from a spouse, parent, child, or sibling unless the recipient of the information can demonstrate that, under the facts and circumstances of that family relationship, no duty of trust or confidence existed.

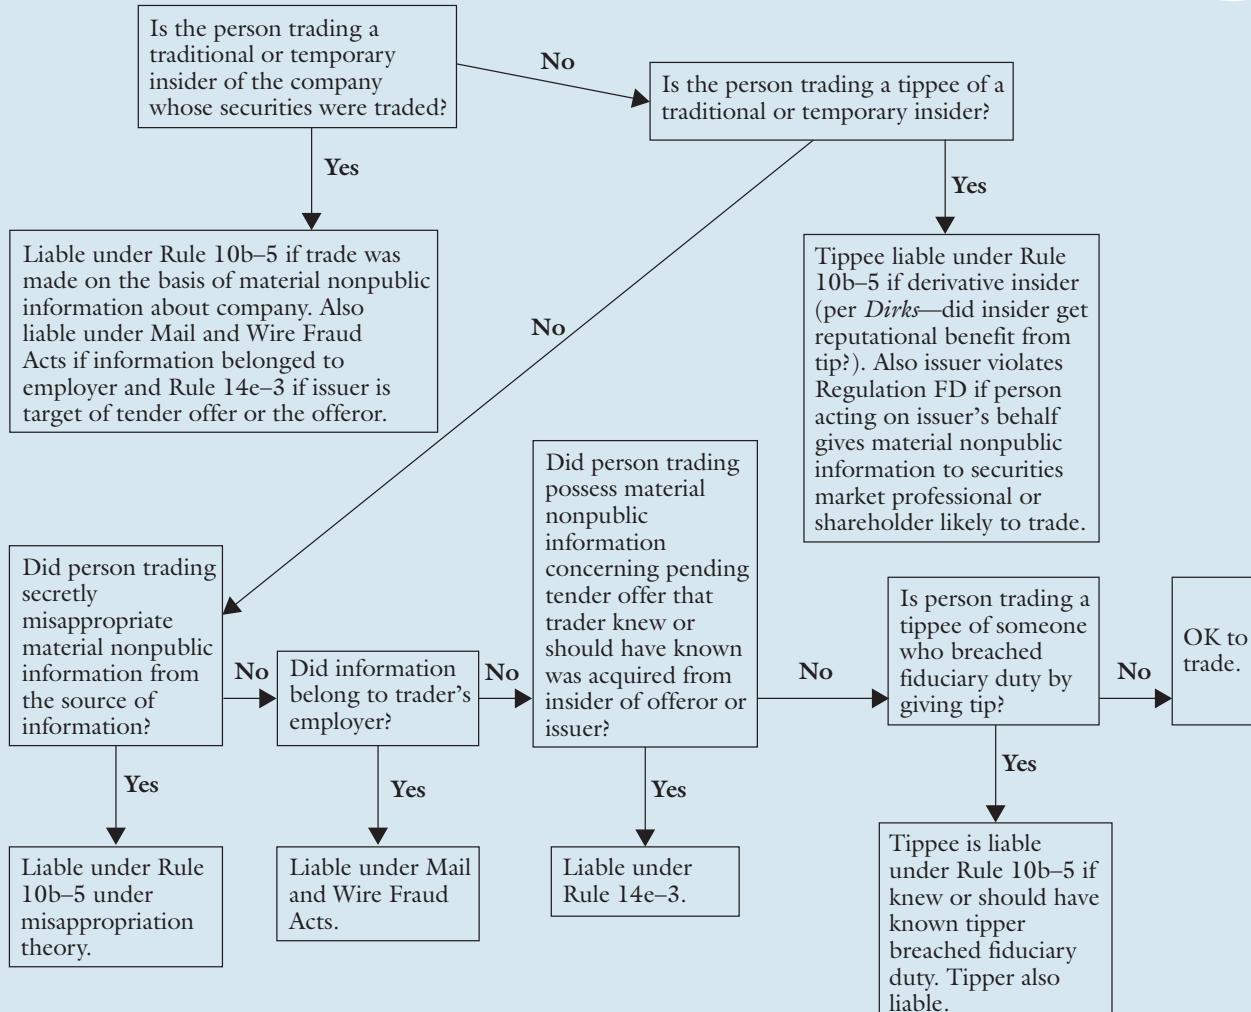

The misappropriation theory widens the class of persons who can be found liable for insider trading, but the requirement that there must be a duty of trust or confidence remains a limiting factor. For instance, an outsider who infers from the

movements of corporate executives that an event will likely take place owes no duty to the corporation or its employees.

MAIL AND WIRE FRAUD

The U.S. Supreme Court upheld the conviction of R. Foster Winans, author of the *Wall Street Journal* column "Heard on the Street," under the Mail and Wire Fraud Acts, thereby providing an additional way to prosecute insider trading.⁷⁸ Winans had misappropriated the content of his soon-to-be-published columns and tipped the information to two stockbrokers, who used the information to make trades based on the anticipated positive market response to the column's publication. The Court held that if a business generates confidential information and has the right to control the use of that information prior to public disclosure, then use of that information to trade can be prohibited under the wire and mail fraud statutes.

78. Carpenter v. United States, 484 U.S. 19 (1987).

IN BRIEF**Decision Tree Analysis of Insider Trading Laws****RICO**

A securities fraud claim cannot be used as a predicate act in a civil case under the Racketeer Influenced and Corrupt Organizations Act (RICO) (discussed in Chapter 15) unless the defendant has been criminally convicted in connection with the fraud. However, a criminal conviction under the Wire and Mail Fraud Acts for misappropriation of an employer's confidential information may, assuming other requirements are met, be the basis for a civil RICO case.

ENFORCEMENT OF ANTIFRAUD PROHIBITIONS

Persons who violate the antifraud provisions of the federal securities laws are subject to private suits for damages, civil enforcement actions by the SEC, and criminal prosecution.

PRIVATE ACTIONS

In private actions, the plaintiff must be an actual purchaser or seller of securities, and the plaintiff's loss must have

been proximately caused by the acts of the defendant. All contemporaneous traders, that is, persons who purchased or sold securities of the same class at the same time the fraud was ongoing or the insider was trading, have standing to sue. Any amounts disgorged pursuant to court order or at the instance of the SEC will offset the amount of damages recoverable by contemporaneous traders.

In what has been called “the largest settlement ever by a single corporate defendant in a securities class action,” Tyco International Ltd. agreed in 2007 to pay approximately \$3 billion to settle investor claims.⁷⁹ PricewaterhouseCoopers LLP, Tyco’s auditors, agreed to pay an additional \$225 million to investors.⁸⁰ In 2008, Ernst & Young LLP agreed to pay almost \$300 million to its former audit client Cendant Corporation for negligently failing to discover massive fraud by senior managers of a Cendant subsidiary. This was in addition to the \$335 million Ernst & Young paid to Cendant’s shareholders in 2000.⁸¹

In 2008, the European Union responded to large auditor settlements and awards by authorizing member states to permit auditors to limit their liability to their audit clients by contract.⁸² Auditors in the United States have renewed calls for limits, arguing that the growth of their clients’ market capitalization and the concentration of public company audits by the Big Four accounting firms (PricewaterhouseCoopers, Ernst & Young, KPMG, and Deloitte) could leave the markets in chaos if one of the Big Four failed as a result of a massive judgment against it.⁸³

In insider trading cases, the total amount of damages that may be recovered is limited to the amount of the profit gained or loss avoided in the unlawful transaction. Tippers and all direct and remote tippees are jointly and severally liable. That means that any individual in the chain of information can be found liable for all of the profits gained or losses avoided in every transaction within the chain.

SEC CIVIL ENFORCEMENT ACTIONS

In an SEC civil enforcement action, violators may be liable for damages and disgorgement of profits and may be subject to other penalties and injunctions prohibiting future violations. Both in deciding whether to seek corporate penalties and in determining the magnitude of the penalty, the SEC focuses principally on two considerations: (1) Did the corporation obtain a direct benefit as a result of the violation? (2) Will the penalty recompense or further harm the injured shareholders?⁸⁴ The SEC assessed a record \$750 million fine against WorldCom, prompting complaints that large fines further injure shareholders already hurt by management’s wrongdoing.

The Insider Trading and Securities Fraud Enforcement Act of 1988, passed in the wake of insider trading charges against Michael Milken and Drexel Burnham Lambert in the late 1980s (discussed more fully in this chapter’s “Inside Story”), provided strong encouragement to the brokerage industry to police itself. A brokerage house can be fined if it “knew or recklessly disregarded” information that would indicate insider trading activities on the part of its employees. Intended to force firms to police their employees, institute compliance systems, and monitor suspicious activities, the Act specifically requires registered brokers and dealers to maintain and enforce reasonably designed written policies and procedures to prevent the misuse of material nonpublic information. Although this legislation does not explicitly require it, many commentators have suggested that it is prudent for other companies not in the brokerage business to implement such policies and procedures in light of their potential liability.

CRIMINAL PROSECUTIONS

The SEC itself has no criminal enforcement power. Criminal prosecutions are brought by the Department of Justice through the U.S. Attorney’s Office, often on referral from the SEC. If criminally convicted, a defendant faces fines and/or imprisonment for willful violations. Willfulness has been interpreted as awareness by the defendant that he or she was committing a wrongful act; the defendant need not specifically know that he or she was violating a statute.

BOUNTY PAYMENTS

Individuals whose tips result in insider trading prosecutions are entitled to receive bounties, similar to the payments provided by the Internal Revenue Service in tax

84. SEC Unveils Statement of Penalty Principles with Announcement of McAfee Settlement, CORP. COUNS. WKLY., Jan. 11, 2006, at 9.

cases. These bounties can be as high as 10 percent of any revenues recovered from a defendant through penalties or settlement.

SELECTIVE DISCLOSURE AND REGULATION FD

Effective October 23, 2000, the SEC adopted a broad prohibition on the practice of *selective disclosure*, whereby issuers of publicly traded securities disclose material nonpublic information, such as advance warnings of earning results, to securities analysts or selected institutional investors before making full disclosure of the same information to the general public. Those privy to the information were able to make a profit or avoid a loss at the expense of those kept in the dark. According to the SEC, this led “to a loss of investor confidence in the integrity of our capital markets. Investors who see a security’s price change dramatically and only later are given access to the information responsible for that move rightly question whether they are on a level playing field with market insiders.”⁸⁵

Selective disclosure also threatened the integrity of the securities markets by creating “the potential for corporate management to treat material information as a commodity to be used to gain or maintain favor with particular analysts or investors.”⁸⁶ Analysts might feel pressure to report favorably about a company for fear of being excluded from calls and meetings to which other analysts are invited. Finally, the SEC reasoned, “Whereas issuers may once have had to rely on analysts to serve as information intermediaries, issuers now can use a variety of methods to communicate directly with the market.” These include Internet webcasting and teleconferencing. Accordingly, the SEC concluded: “Technological limitations no longer provide an excuse for abiding the threats to market integrity that selective disclosure represents.”⁸⁷

Regulation FD (Fair Disclosure) provides that whenever an issuer, or a person acting on its behalf, discloses material nonpublic information to securities market professionals or holders of the issuer’s securities who may well trade on the basis of the information, the issuer must publicly disclose that same information simultaneously (for

intentional disclosures) or promptly (for nonintentional disclosures). Market professionals include broker-dealers, investment advisers and investment managers, investment companies and hedge funds, and official persons thereof. A disclosure is considered intentional only if the person knows, or is reckless in not knowing, that the information he or she is communicating is both material and nonpublic. In cases of nonintentional disclosure, the issuer must disclose the information to the public as soon as practical (but no later than twenty-four hours) after a senior official learns of the disclosure and knows (or is reckless in not knowing) that the information disclosed was both material and nonpublic. No public disclosure is required for communications (1) made to a person who owes the issuer a duty of trust or confidence (such as an investment banker, accountant, or attorney); (2) made to any person who expressly agrees to maintain the information in confidence; (3) with a credit-rating agency; or (4) made in connection with most offerings of securities registered under the 1933 Act.

Information is material if there is a substantial likelihood that a reasonable shareholder would consider it important in making an investment decision. Types of information or events likely to be considered material include (1) earnings information; (2) mergers, acquisitions, tender offers, or changes in assets; (3) new products or developments involving customers or suppliers; (4) changes in control or management; (5) changes in auditors; (6) defaults on senior securities, repurchase plans, or stock splits; and (7) bankruptcies. The SEC cautioned that an official who engages in a private discussion with an analyst seeking guidance about earnings estimates “takes on a high degree of risk under Regulation FD.”⁸⁸ On the other hand, an issuer is not prohibited from disclosing nonmaterial information to an analyst even if, unbeknown to the issuer, that piece of information helps the analyst complete a “mosaic” of information that, taken together, is material.

To avoid creating a chilling effect on issuers’ willingness to communicate with outsiders, the SEC expressly provided that private parties cannot sue issuers for violations of Regulation FD. It is not an antifraud rule, and failure to make a public disclosure required solely by Regulation FD is not in and of itself a violation of Rule 10b-5. If an issuer fails to comply with Regulation FD, the SEC is empowered to bring an enforcement action and can seek an injunction and/or civil monetary penalties.

OTHER RESTRICTIONS ON TRADING BY OFFICERS, DIRECTORS, AND GREATER-THAN-10 PERCENT SHAREHOLDERS

In addition to the prohibition against trading based on material nonpublic information, Section 16 of the 1934 Act and Section 306 of the Sarbanes–Oxley Act impose several additional requirements on officers, directors, and greater-than-10 percent shareholders of publicly traded firms.

SHORT-SWING TRADING

Section 16(b) of the 1934 Act governs *short-swing trading*—the purchase and sale, or the sale and purchase, by officers, directors, and greater-than-10 percent shareholders of equity securities of a public company registered under the 1934 Act within a six-month period. Unlike Section 10(b), which requires scienter (that is, a showing of bad intent), liability is imposed under Section 16(b) regardless of the insider's state of mind.

Although the purpose of Section 16(b) is to prevent insiders of publicly held companies from exploiting information not generally available to the public in order to secure quick profits, it need not be proved that the insider actually possessed any material nonpublic information at the time the insider traded in the securities. To establish liability under Section 16(b), it is sufficient to prove that an insider purchased and then sold, or sold and then purchased, equity securities within a period of six months.

Definition of an Equity Security

An *equity security* includes (1) any stock or similar security; (2) any security that is convertible, with or without consideration, into such a security; (3) any security carrying any warrant or right to subscribe to or purchase such a security; (4) any such warrant or right; and (5) any other security that the SEC deems to be of a similar nature and that, for the protection of investors or in the public interest, the SEC considers appropriate to treat as an equity security. Thus, equity securities may include hybrids that ordinarily are not considered equity securities, such as convertible debt securities that have not been registered under the 1934 Act.

Special problems can arise in connection with the grant and exercise of stock options and other derivative securities. A set of complicated rules embodied largely in Rule 16b–3,

adopted by the SEC under Section 16(b) of the 1934 Act, governs this area. Before becoming an officer or director, a person should consult counsel to avoid inadvertent Section 16(b) liability.

Persons Covered

Section 16(b) applies to officers, directors, and greater-than-10 percent shareholders.

Officer or Director A person may be liable under Section 16(b) if he or she was an officer or director at the time of either the purchase or the sale. It is not necessary that both transactions occur during the person's tenure.

For example, if an officer purchased 100 shares of XYZ Corporation common stock at \$10 per share on January 1, resigned as an officer on February 1, then sold 100 shares of XYZ common stock at \$20 per share on March 1, she would be liable for \$1,000 of short-swing profits because she was an officer when she made the January 1 purchase. Similarly, if a person purchased 100 shares of XYZ Corporation at \$10 per share on January 1, became an officer of XYZ Corporation on February 1, and sold the shares at \$20 on March 1, that person would be liable for \$1,000 of short-swing profits because he was an officer at the time of the sale. On the other hand, if an officer who had not traded for more than six months before March 1 resigned on March 1, bought 100 shares of XYZ Corporation at \$10 on April 1, then sold them at \$20 on April 2, she would not have recoverable profits because she was not an officer or director at the time of either the purchase or the sale.

Greater-than-10 Percent Shareholder The rule is different for persons who are not officers or directors but are beneficial owners of more than 10 percent of the issuer's equity securities. Such persons are liable under Section 16(b) only if they hold more than 10 percent of the securities both at the time of the purchase and at the time of the sale. The transaction whereby the person becomes a 10 percent shareholder does not count.

For example, if a person who previously owned less than 10 percent of the shares of XYZ Corporation's stock purchased 10.5 percent of XYZ Corporation's common stock at \$10 on January 1, then sold those shares at \$20 on March 1, he would have no recoverable short-swing profits. However, if the same person had purchased another 2 percent of XYZ common stock in February, then the February purchase could be matched against the March sale because he owned more than 10 percent of the stock at the time of the February purchase and also at the time of the March sale.

Beneficial Ownership of Shares

Officers, directors, and greater-than-10 percent shareholders can be liable for purchases and sales of shares they do not own of record but are deemed to own beneficially. Under Section 16(b), a person will be considered the *beneficial owner* of any securities held by his or her immediate family—his or her spouse, any minor children, or any other relative living in his or her household. There is a rebuttable presumption that a person is the beneficial owner of any securities over which he or she has the practical power to vest title in himself or herself, or from which he or she receives economic benefits (such as sales proceeds) substantially equal to those of ownership.

Purchases and sales of securities held beneficially by an officer, director, or greater-than-10 percent shareholder will be attributed to that person in determining his or her liability for short-swing trading. For example, the purchase of securities by an officer's husband could be matched under Section 16(b) with the sale of other securities by the officer herself within six months of her husband's purchase, thereby resulting in liability for short-swing profits. Thus, any officer, director, or greater-than-10 percent shareholder planning a purchase or sale must consider not only his or her own trading record but also the record of those persons whose securities he or she is deemed to own beneficially.

Purchase and Sale Within Six Months

To result in recoverable short-swing profits, the purchase and sale, or sale and purchase, must have occurred “within any period of less than six months.” That period commences on the day on which the first purchase or sale occurred and ends at midnight two days before the corresponding date in the sixth succeeding month. For example, for a transaction on January 1, the six-month period ends at midnight on June 29, two days before July 1.

Profit Calculation

To calculate the profits recoverable under Section 16(b), the sale price is compared with the purchase price. If several purchases and sales occur within a six-month period, the lowest purchase price will be matched with the highest sale price; then the next lowest purchase price with the next highest sale price; and so on, regardless of the order in which the purchases and sales actually occurred. Matching purchases and sales in this manner maximizes the recoverable profit.

The shares that are sold need not be the same shares that were purchased. Any purchase and any sale will incur

liability if they occur less than six months apart, regardless of whether the transactions involve the same shares. For example, if on January 1, an officer of XYZ Corporation sold 100 shares of XYZ common stock that he had held for ten years, then on February 1 purchased 200 shares of XYZ common stock at a lower price, he would be liable for the short-swing profits on 100 of the shares. The January 1 sale would be matched with the February 1 purchase, even though the officer had held the securities for ten years before he sold them.

Short-swing profits cannot be offset by trading losses that were incurred in the same period. Thus, there may be recoverable profits under Section 16(b) even though the officer or director suffered a net loss on the trading transactions.

The following example illustrates the “lowest-in, highest-out” matching principle just described. Assume that an officer made purchases and sales, each of 100 shares, as follows:

Date	Transaction	Price
Jan. 1	Purchase	\$ 9
Jan. 30	Sale	10
Feb. 15	Sale	15
Feb. 28	Purchase	12
Mar. 15	Purchase	6
Mar. 30	Sale	4

These transactions will result in a recoverable short-swing profit of \$1,000, calculated as follows. The February 15 sale is matched with the March 15 purchase, for a profit of $\$15 - \$6 = \$9$ per share, or \$900. Then the January 30 sale is matched with the January 1 purchase, for a profit of $\$10 - \$9 = \$1$ per share, or \$100. Even though the March 15 purchase at \$6 per share and the subsequent sale at \$4 per share resulted in a loss of \$2 per share, or \$200, that loss will not be taken into account. The officer will have to surrender $\$900 + \$100 = \$1,000$, even though she actually realized only \$200 of net profit in the trading transactions (total sales of \$2,900 less purchases of \$2,700).

Unorthodox Transactions

If a purchase or sale by an officer, director, or greater-than-10 percent shareholder that would otherwise result in recoverable short-swing profits was involuntary and did not involve the payment of cash, and if there was no possibility of speculative abuse of inside information, then a court may hold that it was an *unorthodox transaction* to which no liability will attach. These situations generally arise in the context of exchanges in mergers and other corporate reorganizations, stock conversions, stock reclassifications, and

tender offers in which securities are sold or exchanged for consideration other than cash.⁸⁹

Embracing the judicial doctrine, the SEC exempts certain mergers, reclassifications, and consolidations under amendments to Rule 16b-7 adopted in 2005. On the other hand, in a tender offer or acquisition, an exchange of securities for cash by an officer, director, or greater-than-10 percent shareholder would almost certainly be deemed a sale for which the person receiving the cash could be liable under Section 16(b).

FILING OF BENEFICIAL-OWNERSHIP REPORTS

Section 16(a) of the 1934 Act requires officers, directors, and greater-than-10 percent shareholders of companies that have registered any class of equity securities under the 1934 Act to file beneficial-ownership reports with the SEC and with any national securities exchange on which their company's equity securities are listed. Within ten days of becoming an officer or director, a person must file an initial ownership report on Form 3, even if the person does not beneficially own any securities of the company at that time. In the case of greater-than-10 percent shareholders, a Form 3 must be filed within ten days of the date they acquire a greater-than-10 percent interest. (In addition, as noted in Chapter 22, any person who acquires more than 5 percent of the voting securities of a public company must file a Schedule 13D within ten days after the date he or she acquired the more-than-5 percent stake. An amendment to the Schedule 13D must be filed promptly after any material change in beneficial ownership or investment purpose.)

Subsequently, an officer, director, or greater-than-10 percent shareholder must file a Form 4 within two business days after any transaction resulting in any change in beneficial ownership. For example, a transaction executed on Tuesday, September 3, would have to be reported to the SEC by the close of business (5:30 P.M. Eastern time) on Thursday, September 5. In the initial Form 4, an officer or director must report all purchases or sales that occurred within the previous six months, even if those transactions were effected before the person became an officer or director. A Form 5 showing changes in beneficial ownership during the

preceding year must be filed annually within forty-five days after the issuer's fiscal year-end.

Acquisitions and dispositions of shares acquired by officers or directors pursuant to employee benefit plans must also be reported within two business days on Form 4 even if the transactions are exempt from short-swing recovery under Rule 16b-3. A person who ceases to be an officer or director must continue to report any changes in beneficial ownership that occur within six months of the last reportable transaction while he or she was an officer or director.

The SEC has brought enforcement actions to force executives to file these ownership reports within the required time frame. Publicly traded companies must disclose in their proxy statements and in their annual reports on Form 10-K whether their officers and directors have complied with their Section 16(a) reporting obligations.

PROHIBITION ON SELLING SHORT

Section 16(c) of the 1934 Act prohibits officers or directors from *selling* any of their company's equity *securities short*, that is, from selling a security that the seller does not own. If the officer or director owns the security being sold, he or she must deliver it within twenty days after the sale or deposit it in the mails or other usual channels of delivery within five days. If the officer or director fails to do this, he or she will be liable under Section 16(c) unless (1) he or she acted in good faith and was unable to make the delivery or deposit within the specified time, or (2) he or she acted in good faith and satisfying the time requirements would have caused undue inconvenience or expense.

SOX BAN ON TRADING DURING BLACKOUT PERIOD AND DISGORGEMENT AFTER RESTATEMENTS

Section 306⁹⁰ of the Sarbanes–Oxley Act (SOX)⁹¹ prohibits officers and directors from trading equity securities acquired in connection with their services as officers or directors during any retirement plan blackout period. As explained in Chapter 14, a *blackout period* is any period longer than three business days during which 50 percent or more of the participants in a retirement plan are prevented from trading. Private actions to recover any profit realized by the offender may be brought by the issuer or

89. See, e.g., At Home Corp. v. Cox Commc'ns Inc., 446 F.3d 403 (2d Cir. 2006) (finding no Section 16(b) "purchase" when insider acquired stock in At Home by acquisition of three third-party intermediaries that held warrants for At Home stock because the acquisition of the three cable systems holding At Home's stock "entail[ed] appreciable risks and opportunities independent of the risks and opportunities that inhere in the stock of the issuer," likening it to "speculating in tractors by buying a farm").

90. 15 U.S.C. § 7244.

91. Pub. L. No. 107-204, 116 Stat. 745 (2002).

derivatively on its behalf by a shareholder. As explained in Chapter 14, Section 304⁹² provides that the CEO and CFO of an issuer required to restate its financial statements “as a

92. 15 U.S.C. § 7243.

result of misconduct” must disgorge all bonuses and incentive- and equity-based compensation received in the twelve months following the filing of the faulty document as well as all profits realized from the sale of the issuer’s securities during that period.

Insider Trading in the European Union and China

The European Union (EU) Market Abuse Directive⁹³ requires member states to enact national legislation punishing primary and secondary insiders who trade publicly held securities on the basis of “inside information,” which is defined as nonpublic information “a reasonable investor would be likely to use as part of the basis of his investment decisions.”⁹⁴ Primary insiders include officers, directors, employees, and shareholders of the issuer as well as persons who have access to inside information by virtue of their professional duties. Secondary insiders are those who obtain inside information from primary insiders, that is, tippees.

Issuers are required to maintain lists of persons working for them with access to inside information, and senior managers must report changes in beneficial ownership to the appropriate national authority within five business days.⁹⁵ In addition, the principle of “equal

treatment” prohibits the selective disclosure of inside information.

Although the EU Directive does not on its face embrace the misappropriation theory, persons who obtain information as a result of their professional duties are deemed primary insiders even if they have no fiduciary duty to the issuer. Thus, trading by a person like O’Hagan⁹⁶ would violate European law.

The legislation in China banning insider trading is based in substantial part on the U.S. regulatory approach⁹⁷ and is enforced by the China Securities Regulatory Commission (CSRC). Although there are very few reported cases, research suggests that insider trading in the Chinese markets is “widespread,” “everyday,” “extensive,” and “ingrained.”⁹⁸ One interviewee remarked, “Many people do not trade shares unless they have inside information. We simply have no choice in such an environment.”⁹⁹

THE RESPONSIBLE MANAGER

PREVENTING SECURITIES FRAUD AND INSIDER TRADING

Managers have an obligation not to mislead investors in company public announcements, periodic reports, or speeches. Although a company may remain silent about material developments if neither the company nor insiders

are trading, early disclosure is often the better course. This gives all investors equal access to current information about the company. There is a trade-off here, however. Sometimes the company’s business or transactions may be in a state of

CONTINUED

flux. For example, a party with no visible source of financing may have made an offer to buy the company's assets. In this case, it may be worse to disclose the offer and get the market's hopes up than to wait and see if the offer is real. Managers, together with their lawyers, must make these judgment calls.

Another reason for early disclosure is to avoid illegal insider trading. A company must make disclosure if it knows its insiders, such as officers or directors, are trading in the company's securities.

Any forward-looking statements should be identified as such and be accompanied by meaningful cautionary language identifying important factors that could cause actual results to differ materially from those in the forward-looking statement. It is often helpful to (1) prioritize the order of risk factors, (2) state the risk in the first sentence, (3) be specific, (4) convey the magnitude of the risk, and (5) focus risk factors on the negatives without softening them by including positives.

Trading by a manager based on material nonpublic information is illegal. It violates the manager's fiduciary duty to subordinate his or her personal interests to the interests of the corporation and shareholders he or she serves. A manager is given access to nonpublic information not for the manager's own personal gain but to better enable the manager to serve his or her principal—the corporation and its shareholders. Violation of those rules erodes both shareholder confidence and the confidence of investors generally in the capital markets. It is also unethical.

A manager cannot give tips to others in exchange for money or even just to enhance his or her reputation as "someone in the know." A manager should carefully guard the information given in confidence by his or her employer or client. Managers must also instill these values in their subordinates. Everyone, from the person who empties the trash or runs the copy machine to the person who occupies the largest office in the executive suite, must be told to follow these rules or risk dismissal. This edict should be made clear in the corporation's code of ethics and in its personnel manual. All corporations, and especially brokerage firms, without adequate procedures in place to prevent illegal insider trading face potential liability for their insiders' illegal trades.

Inquiries into insider trading tend to focus on high-volume trading that occurs before major corporate announcements. Enforcement agencies generally watch organized trading rings and well-known public figures because of their high profiles. However, ordinary investors and isolated violations are also detected and prosecuted.

Surveillance groups monitor daily trading and investigate any suspicious activity.

A company cannot disclose material information only to certain favored analysts. This is unfair to the public investors and can result in liability for the company and for the manager who tips an analyst whose clients then trade based on the tip. It also violates Regulation FD.

A company's policy on insider trading¹⁰⁰ should prohibit any person associated with the company from trading in any security, regardless of whether it was issued by the company, based on material nonpublic information. The policy should also ban passing on material nonpublic information to outsiders who may trade (tipping). It should require persons who are likely to obtain material nonpublic information on a regular basis to pre-clear all purchases and sales of the company's securities. The policy should also (1) describe the legal penalties for insider trading and the company's potential liability for the insider trading violations of its employees and (2) provide that any employee who violates the policy may be terminated.

An officer or director of a public company who buys and sells securities within a six-month period has a legal and ethical responsibility to come forward and pay all profits over to the corporation. This is true even if the short-swing trade was inadvertent, as might happen if an officer sold securities not realizing that his or her spouse had bought securities less than six months before. A corporation that discovers a short-swing trade must try to persuade the insider to voluntarily turn the profits over to the corporation. If the insider refuses to do so, the corporation has an obligation to bring suit to recover the profits from the short-swing trading. If a corporation fails to bring suit, any shareholder has the right to sue on behalf of the corporation.

Officers and directors of public companies must report their security holdings and their trades in a timely manner. Disregard of these filing requirements breeds contempt for the law and encourages illegal or unethical behavior by others in the organization.

Each manager has a role to play in preventing securities fraud and insider trading. As with preventing the other types of criminal behavior described in Chapter 15, legally astute managers lead by example. If a manager permits

his or her company to engage in unlawful or unethical conduct, the manager exposes himself or herself and the company to considerable risk of civil and criminal liability. Such a manager is also likely to encourage illegal behavior by subordinates. Although many executives complained mightily about the costs of Sarbanes-Oxley, especially the requirements in Section 404¹⁰¹ that (1) management maintain a sound internal-control structure for financial reporting and assess its effectiveness and (2) the auditors attest to the soundness of management's assessment and report on the state of the overall financial control system, a number of firms ranging from PepsiCo and Iron Mountain (a \$1.8 billion records and information company) to Yankee Candle and RSA Security "approached the new law with something like gratitude."¹⁰²

Section 906 of SOX made "willful failure" to portray the true state of the company's operations and financial condition a crime, and Sections 302 and 404 require the CEO and CFO to attest personally to the effectiveness of the firm's

internal control over financial reporting.¹⁰³ Compliance with these requirements led to (1) improved job-description documentation, training, oversight, and performance evaluation at BlackRock, an investment firm with more than \$450 billion in assets under management, which survived the subprime-mortgage crisis unscathed; (2) fewer unenforceable contracts and miscalculated rent escalations at a Fortune 1000 real estate company; (3) significant gains in efficiency at Iron Mountain; and (4) standardized software at Manpower.¹⁰⁴ While acknowledging that "[f]ear can be a powerful generator of upstanding conduct," Deloitte & Touche partner Stephen Wagner and Deloitte Consulting partner Lee Dittmar point out that "business runs on discovering and creating value."¹⁰⁵ They go on to assert: "The procrastinators need to start viewing the Sarbanes-Oxley Act of 2002 as an ally in that effort."¹⁰⁶

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE When May an Accountant Look the Other Way?

In 1984, several individuals (including David Greenberg) formed seven limited partnerships to develop and operate a chain of 100 "Video USA" video rental stores. One hundred and sixteen limited partners, who had invested \$13 million in three private placements, sued accounting firm Touche Ross, among others, for securities fraud. They alleged that Touche Ross (1) had failed to disclose that David Greenberg was a convicted felon; that his twelve-year-old son was the sole officer, director, and shareholder of one of the corporations that served as a general partner; and that the principals used fraudulent invoices and made fraudulent claims against insurance companies; and (2) had prepared the materially misleading financial projections attached as exhibits to the

offering memoranda. Touche Ross did not issue an opinion or certification as to any part of the offering documents. Attached to each of the projections that Touche Ross issued was a letter stating that the projection was based on management's "knowledge and belief" and cautioning that the projection "does not include an evaluation of the support for the assumptions underlying the projections." If you were the account manager at Touche Ross and learned about Greenberg's felony conviction and the existence of fraudulent invoices, what would you have done? Is Touche Ross liable under Section 10(b) to the limited partners?¹⁰⁷

107. Shapiro v. Cantor, 123 F.3d 717 (2d Cir. 1997).

INSIDE STORY

MICHAEL MILKEN, DREXEL BURNHAM, AND THE INSIDER TRADING SCANDALS OF THE 1980s

The philosopher George Santayana once said, "Those who cannot remember the past are condemned to repeat it."¹⁰⁸ In October 2007, Linda Thomson, the SEC Enforcement Director, reported that insider trading among Wall Street professionals "appears to be rampant again."¹⁰⁹ She and others attributed the spike in cases to the fact that the younger professionals working in hedge funds and brokerage firms "were very young or not even born during the era of the high profile Dennis Levine prosecution in the 1980s."¹¹⁰

Dennis Levine and Ivan Boesky

In addition to information gained from monitoring trading, prosecutors and enforcement agencies investigating suspicious activity rely heavily on information gathered from informers and persons already under indictment. For example, the arrest and prosecution of Dennis Levine and Ivan Boesky in 1986 set off the most comprehensive investigation of securities trading practices in the history of federal regulation.

Levine, a former managing director of Drexel Burnham Lambert, was initially charged with illegal trading in approximately fifty-four stocks. An investment banker, Ira B. Sokolow, then pleaded guilty to passing stolen information to Levine. As a result of cooperation by Levine, the SEC was able to bring insider trading charges against one of Wall Street's richest and most active speculators, Ivan Boesky.

Boesky, the son of an immigrant restaurateur, made his career and fortune as a risk arbitrageur who concentrated on the purchase and sale of stock in target corporations that were the subject of tender offers. Generally, the acquiring corporation pays a premium for the stock of the target corporation; thus, people who invest prior to the announcement of the acquisition are in a position to make swift and substantial profits. The SEC alleged that Levine, who worked on mergers and acquisitions, passed on information to Boesky, who was able to purchase shares in the target prior to public announcement of the impending takeover. It is further believed that Boesky offered Levine a 5 percent commission

for any information leading to an initial stock purchase and a 1 percent commission for information pertaining to stocks already owned by Boesky.

In 1985, Levine allegedly passed to Boesky information received from Sokolow regarding the merger of Nabisco and R.J. Reynolds. Use of this information resulted in approximately \$4 million in profits for Boesky. In all, Boesky was alleged to have made approximately \$50 million through these insider trading activities. Both Levine and Boesky pleaded guilty to criminal charges. Boesky settled the SEC's civil charges by agreeing to pay \$100 million and to cooperate with the government in future prosecutions of others. Boesky was sentenced to three years in prison and ultimately served two years.

One commentator speculated on Boesky's motivation: "His need was not simply to be rich, but to be seen as richer and smarter than anyone else. He gambled less on stocks than on his ability to beat the cops."¹¹¹

Drexel Burnham Lambert

Approximately two years later, with the cooperation of Ivan Boesky, the SEC brought dramatic charges against Drexel Burnham Lambert and four of its prominent employees, including the head of its junk-bond department, Michael Milken. According to the SEC, Drexel had entered into a secret agreement with Boesky to defraud its clients and drive up the price of target-company stocks. The complaint, filed in September 1988, alleged that Drexel utilized Boesky to engage in *stock parking*—the temporary sale of shares to another entity or individual so as to hide the true ownership of the shares in order to avoid tax-reporting requirements or the net-margin requirements of the securities laws applicable to brokerage firms. Drexel, which assisted companies interested in acquisitions, was also accused of advising Boesky to purchase massive amounts of shares in certain companies in order to give the appearance of active trading in them and to drive up the takeover price.

In December 1988, Drexel agreed to plead guilty to six felony counts and to pay \$650 million in fines and restitution—"by far the largest penalty ever paid in a securities case."¹¹² It agreed

to pay an additional \$30 million to settle civil charges in April 1989. As a condition to the settlement, Drexel was required to cooperate in the investigation of Milken and to fire him.

Michael Milken

In 1990, Milken pleaded guilty to six felony counts, ranging from securities and mail fraud to tax evasion and conspiracy.¹¹³ He agreed to pay a fine of \$200 million and to put \$400 million into a fund for restitution to defrauded investors. The *Wall Street Journal* provided a vivid image of the courtroom scene when Milken pleaded guilty:

He was almost at the end of a detailed confession when his voice faltered. Michael Milken bent forward, sobbing, as two of his lawyers rushed to support him. Suddenly, under the vast ceiling of Manhattan's largest federal courtroom, the world's once-most-powerful financier, the bigger-than-life commander of the X-shaped trading desk, seemed mortal, even frail.¹¹⁴

Milken was sentenced to ten years in prison but was released after serving only twenty-two months. He was also banned for life from acting as a securities broker or dealer.

U.S. Attorney General Richard Thornburgh characterized Milken's crimes as "some of the most serious efforts undertaken to manipulate and subvert Wall Street's securities markets."¹¹⁵ But Thornburgh also observed that the case sends a strong message to those involved in "crime in the suites: those white-collar criminals are never so powerful or clever that they cannot be caught by diligent and persistent law enforcement efforts."¹¹⁶ The convictions of Samuel Waksal (former CEO of ImClone), Bernie Ebbers (former CEO of WorldCom), John Rigas (former CEO of Adelphia Communications), and others convicted of securities fraud in the early twenty-first century suggest that they failed to take this message to heart.

QUESTIONS AND CASE PROBLEMS

1. During a session with her psychiatrist, Dr. Robert Willis, Joan Weill mentioned in confidence the imminent merger of the company headed by her husband, Sanford Weill, with another company. Willis, upon hearing of the merger, communicated the information to Martin Sloate, who traded in the company's securities for his own account and for his customers' accounts.

Did Weill, Willis or Sloate engage in illegal insider trading? Was the conduct of the parties ethical? [SEC v. *Willis*, 777 F. Supp. 1165 (S.D.N.Y. 1991).]

2. The Todman & Co. accounting firm audited the financial statements of Direct Brokerage, Inc. (DBI) from 1999 through 2002. Each year Todman issued an unqualified opinion that DBI's financial statements accurately portrayed DBI's finances. In fact, DBI failed to pay its payroll taxes for 1999 or 2000, a fact that came to light in 2003. After DBI collapsed in 2004, investors sued Todman, alleging that Todman was aware of DBI's undisclosed liability and its need for an infusion of capital but failed to correct or withdraw its 2002 certified opinion or to advise DBI to withdraw its financial statements. The plaintiffs identified five red flags:

- In 1998, a Todman auditor noted a "large payroll tax payable at the end of the year" necessitating further analysis, but no analysis was ever done.
- Todman did not investigate DBI's failure to pay any payroll tax after June 1998.
- Todman knew that DBI's payroll taxes dropped from \$248,899 to zero between 1998 and 1999, but never investigated.
- Todman knew that DBI's employee compensation rose significantly in 1999 while its payroll taxes plunged, but did not investigate.
- That trend continued in 2000, and Todman knew it but did not investigate.

Did Todman violate Section 10(b) or Rule 10b-5? [*Overton v. Todman & Co.*, 478 F.3d 479 (2d Cir. 2007).]

3. Gallop, Inc. is a toy manufacturer specializing in games for boys and girls aged eight to twelve. On March 30, Gallop had predicted first-quarter earnings of \$.20 per share. On April 15, Gallop received a fax from its key distributor reporting a \$10 million claim for personal injury of a nine-year-old child who was allegedly injured by a design defect in Gallop's most popular product line, the Spartan Warriors. Gallop's outside counsel was instructed to prepare a press release describing the claim. Before the press release was sent to the copy center at Gallop's executive

office, the vice president of marketing, one director, and the outside counsel sold all of their Gallop shares at the prevailing market price of \$25.25 per share.

Collin Copier, who ran the photocopying machine at Gallop's executive office, saw the draft press release; called his broker, Barbara Broker; told her about the press release; and ordered her to sell the 500 shares of Gallop that Copier had acquired in Gallop's initial public offering. Broker then called her best client, Charleen Client, and suggested that she sell her 100,000 shares of Gallop stock but did not tell her why. Client agreed, and Broker sold Copier's and Client's stock at \$25.25 a share right before the market closed on April 17.

The press release was publicly announced and was reported on the Business Wire after the market closed on April 17. The next day, Gallop's stock dropped to \$20.75 per share. A class-action suit has been brought, and the SEC has commenced enforcement proceedings. Criminal prosecution is threatened by the U.S. Attorney's Office.

What are the bases on which each proceeding could be brought? Who is potentially liable? For how much?

4. Dow Chemical Company owned Destec Energy, Inc. (Destec), which owned Destec Engineering, Inc. (DEI). Dow decided to try to sell Destec. AES Corporation wanted to buy Destec's international assets, including DEI. DEI's sole asset was a contract to design and build a power plant in the Netherlands. Because Dow would not sell Destec's international assets alone, AES paired with NGC Corporation to make a joint bid. NGC bought all outstanding Destec stock from Dow through a merger agreement, and then AES bought all of Destec's international assets, including the DEI stock, from NGC under an asset purchase agreement. During the course of the negotiations, Dow and Destec orally represented what it would cost to build the power plant, but these representations were not reflected in the written documents.

Most of the documents in the transaction contained non-reliance clauses, that is, clauses that attempted to limit the information on which the parties to the document could legally rely. For example, the merger agreement between NGC and Dow contained two pages of representations and warranties but stated that other than those, "neither Dow nor any other person makes any other express or implied representation or warranty on behalf of Dow." Unfortunately for AES, the Netherlands plant deal proved far more costly than represented, and AES lost \$70 million on the plant.

Section 29(a) of the 1934 Act provides that "any condition, stipulation or provision binding any person to waive

compliance with any provision of this title or of any rule or regulation thereunder, or of any rule of an exchange required thereby shall be void.” Does AES have a valid claim under Section 10(b) and Rule 10b–5? [*AES Corp. v. Dow Chemical Co.*, 325 F.3d 174 (3d Cir. 2003).]

5. American Banknote Corporation (ABN) spun off its wholly owned subsidiary American Bank Note Holographics (ABNH) in an initial public offering. Morris Weissman was the founder of ABN and also the chair and CEO of both ABN and ABNH. Plaintiff purchasers of ABNH’s stock sued Weissman, among others, for securities fraud under Sections 11, 12(a)(2), and 10(b). In two press releases, Weissman stated:

Our most important goal in 1998 is to enhance shareholder value. We hope to prove to the market that inherent values of our underlying operating subsidiaries, not apparent when evaluating American Banknote on the basis of traditionally consolidated earnings per share, are indeed significant.

This IPO is a win-win for both companies. . . . ABNH can now concentrate on continuing the profitable growth of its core security holography business as well as explore business and market expansion opportunities.

In fact, ABNH was neither a valuable company nor profitable. Is Weissman liable under Section 10(b) and Rule 10b–5? What would be the best argument in his defense? [*In re American Bank Note Holographics, Inc. Securities Litigation*, 93 F. Supp. 2d 424 (S.D.N.Y. 2000).]

6. Texas International Speedway, Inc. (TIS) filed a registration statement for \$4,398,900 in securities with the proceeds to be used to construct an automobile racetrack called the Texas International Speedway. The entire issue was sold on the offering date, October 30, 1969. On November 30, 1970, TIS filed for bankruptcy.

The prospectus stated that the speedway was under construction. It also included a pro forma balance sheet showing that, upon completion of the public offering and application of the proceeds to the construction costs of the speedway, TIS would have \$93,870 in cash on hand on the speedway’s opening date.

The TIS prospectus warned that “THESE SECURITIES INVOLVE A HIGH DEGREE OF RISK” and that the construction costs might be underestimated. If the plaintiff investors present evidence from which a jury could infer that, on the effective date of the registration statement, the two officers and directors of TIS and its accountant knew that the cost of construction was understated and that consequently TIS’s working capital position would not be as

favorable as the prospectus reflected, will the plaintiffs win a suit under Section 10(b) and Rule 10b–5? What would be the result if the Litigation Reform Act applied? [*Huddleston v. Herman & MacLean*, 640 F.2d 534 (5th Cir. 1981), *rev’d in part and aff’d in part*, 456 U.S. 914 (1982).]

7. In 1998, after working at two banks for about ten years, Bryan J. Mitchell helped found MCG Capital Corporation, a venture-capital firm that invested in the media, communications, and technology sectors. MCG went public in 2001, and Mitchell served as its CEO and chair of the board. Various documents filed with the SEC stated that Mitchell “earned a B.A. in economics from Syracuse University.” In fact, he attended Syracuse for only three years and did not graduate. After being pressured by a journalist, Mitchell disclosed the misrepresentation to the MCG board. The same day, the company issued a press release correcting the statement. The board subsequently stripped Mitchell of his title as chair of the board and made him repay certain bonuses and loans.

The press responded negatively to “another CEO that lied about his résumé” and speculated about “what else might not be right.” On the day the press release was issued, MCG’s stock price dropped from \$11.85 per share to \$8.40 but fully recovered within a month.

Shareholders sued, alleging that the misrepresentation violated Section 11 of the 1933 Act, Section 10(b) of the 1934 Act, and Rule 10b–5. Was Mitchell’s lie about having a college degree material? If you had been a member of the MCG board, would you have been comfortable keeping Mitchell as CEO? [*Greenhouse v. MCG Capital Corp.*, 392 F.3d 650 (4th Cir. 2004).]

8. EchoCath was a small New Jersey research and development company engaged in developing, manufacturing, and marketing medical devices to enhance and expand the use of ultrasound technology for medical applications and procedures. EchoCath consummated its initial public offering on January 17, 1996, and issued a lengthy prospectus, which cautioned that “an investment in the securities offered . . . is speculative in nature and involves a high degree of risk.” It also set forth several pages of risk factors. In particular, EchoCath cautioned investors that the company “intended to pursue licensing, joint development and other collaborative arrangements with other strategic partners . . . but there can be no assurance . . . that the Company will be able to successfully reach agreements with any strategic partners, or that other strategic partners will ever devote sufficient resources to the Company’s technologies.”

More than six months after the public offering, MedSystems began to consider a sizable investment in EchoCath.

Frank DeBernardis, the CEO of EchoCath, orally represented to MedSystems that EchoCath had engaged in lengthy negotiations to license its products and was on the verge of signing contracts with a number of prominent medical companies, which he identified as including Uro-Health, Johnson & Johnson, Medtronic, and C.R. Bard, Inc., to develop and market EchoCath's women's health products. Throughout the negotiations and until the closing in February 1997, EchoCath's CEO continued to represent to MedSystems officials that the contracts with these companies to develop these products were "imminent." In the fifteen months after MedSystems made its investment, EchoCath failed to enter into a single contract.

MedSystems filed suit under Section 10(b) and Rule 10b-5, alleging that EchoCath intentionally or recklessly made misrepresentations to MedSystems in connection with the sale of securities in an effort to induce MedSystems to purchase its securities. MedSystems alleged that EchoCath was not on the verge of signing contracts with any company to develop its line of women's health products in August 1996, or any other time up to the closing on February 27, 1997. EchoCath moved to dismiss the complaint on the grounds that the CEO's statements were not material. Result? [*ER MedSystems v. EchoCath, Inc.*, 235 F.3d 865 (3d Cir. 2000).]

CHAPTER 24

DEBTOR-CREDITOR RELATIONS AND BANKRUPTCY

INTRODUCTION

Salvaging a Business in Financial Trouble

A business generally decides to borrow when it needs funds and believes it is in a position to pay interest for the use of such funds. Although lenders sometimes take equity positions in a borrower, whereby they receive returns based on the profits or losses of the borrower, lenders in a loan transaction are entitled only to interest at a stated rate on the amount borrowed (generally called the *principal*) and the return of the principal at the end of the term.

When a business is in trouble, it will inevitably run short of cash and fall behind in its payments. Creditors may be temporarily appeased; but those with collateral will ultimately pursue foreclosure, and others will file lawsuits in a race for the remaining assets. Defending against these actions can absorb resources and hamper management's ability to cure the company's underlying ills. Successful collection can cripple or kill the business. Even if all debts can be paid, the equity holders in the company will suffer. The collapse of a large enterprise could leave many unemployed and send disruptive waves through related industries.

The legal tools used to stem this potentially destructive tide are found mainly in the Bankruptcy Code.¹ The U.S. Constitution gives Congress the power to enact bankruptcy laws. A successful reorganization under Chapter 11 of the Bankruptcy Code results in the restructuring of financial relationships among the owners and creditors of a business and, ideally, the preservation of a viable going concern. Even when reorganization is not possible, the bankruptcy system

is designed to realize the maximum value from the available assets, provide equitable distribution among claimants, and foster fair and efficient administration through a collective or multiparty process.

The Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 (BAPCPA) was the first major revision to the Bankruptcy Code since 1978. It was intended to prevent abuse by making it more difficult for individuals to file for bankruptcy. In 2006, the first full twelve months in which the BAPCPA was in effect, nonbusiness bankruptcy filings dropped to 617,660, a 70 percent drop from the 2,039,214 nonbusiness bankruptcies filed in 2005. In fact, 2006 saw the lowest number of filings since calendar year 1988, when filings involving predominantly nonbusiness debts totaled 597,965. Business bankruptcies were also down by 50 percent: 19,695 filings in 2006 compared to 39,201 in 2005.²

In 2007, however, business bankruptcies increased dramatically, with more than 13,000 filings in the first half of the year; the final number for 2007 was expected to be at least 30,000, representing a 51 percent increase over 2006.³ This trend accelerated during 2008. Business bankruptcy filings during the first half of 2008 were up 45 percent from the same period in 2007, as the national climate for commerce continued to decline amid rising energy and food costs, increased unemployment, tighter credit, and decreased

consumer spending.⁴ The vast majority of these bankruptcy filings involved businesses with fewer than one hundred employees, but the number of public company filings was also up. Twenty-nine public companies sought bankruptcy protection during the first quarter of 2008, an increase of 81 percent over the first quarter of 2007. The size of the bankruptcies also increased. The sixteen public company bankruptcies in the first quarter of 2007 represented \$1 billion in combined assets, whereas the twenty-nine public company bankruptcies in the first quarter of 2008 represented nearly \$10 billion.⁵ The bankruptcy filing by Lehman Brothers Holdings, Inc. in September 2008, which listed more than \$613 billion of debt, was the largest bankruptcy filing in history.⁶

CHAPTER OVERVIEW

This chapter summarizes the typical terms of a loan agreement. It then categorizes commercial loans according to the type of lender, the purposes to which the loan proceeds will be applied, and whether the loan is secured or unsecured. The terms of a typical security agreement, together with methods for perfecting a security interest under Article 9 of the Uniform Commercial Code, are discussed. Equipment leasing, guaranties, subordination, and lender liability are addressed. This is followed by a discussion of business bankruptcies under Chapters 11 and 7 of the Bankruptcy Code and consumer bankruptcies under Chapters 7 and 13. The chapter also includes a discussion of workouts. We conclude with a discussion of recent efforts to coordinate insolvency proceedings with international implications.

LOAN AGREEMENTS

The basic structure of loan agreements is surprisingly standard. Lenders are concerned about the administration of the loan, their ongoing relationship with the borrowers, and the

rights they have if the borrowers breach their promises. At times, these concerns must be addressed in specially tailored documentation; generally, however, banks use a collection of standard forms, which are distributed to loan officers along with instructions for their use. This section discusses the basic features common to all loan agreements.

PARTIES TO THE AGREEMENT

The parties to a loan agreement are the lender and the borrower. There may be more than one lender and more than one borrower.

Lenders

When two or more lenders, usually banks, make a loan to a borrower together, it is called a syndicated loan. In a *syndicated loan*, the lenders enter into concurrent direct obligations with the borrower to make a loan, typically on a pro rata basis. The loan is coordinated by a lead lender that serves as agent for all of the lenders in disbursing the funds, collecting payments of interest and principal, and administering and enforcing the loan.

In a *participation loan*, the original lender sells shares to other parties, called participants. Each participant acquires an undivided interest in the loan. The sale may be made without the borrower's involvement. The purpose of either a syndicated or a participation loan is to spread the risk of the borrower's default among lenders, particularly when the transaction involves a sizable loan.

Borrowers

Multiple borrowers are usually related entities, such as a parent corporation and its subsidiaries. Corporate law recognizes each corporation as a separate entity. From the lender's perspective, the parent and its subsidiaries are one economic entity; but if each subsidiary is jointly and severally liable for the entire debt, a subsidiary's obligation may outweigh the economic benefit it receives from the loan. (To the extent the loan is used by the parent rather than the subsidiary, the transaction may be invalidated as to the subsidiary as a fraudulent transfer under state law and the Federal Bankruptcy Code, as discussed below, but that is more of a concern for the lender than the borrower.)

Additional Parties

In more complicated transactions, additional parties may become involved in the negotiations for a loan, even though they are not parties to the loan agreement. For example, in a leveraged buyout, the acquisition of a company is financed largely by debt secured by its assets. The lender will want assurances from the seller that the assets being sold to the

borrower are free and clear of all liens, and this may affect the structure of the buyout; or, if the seller is taking a note from the buyer for part of the purchase price, the lender will want to negotiate an agreement with the seller setting forth their relative rights to repayment. In a construction loan, the construction lender will advance sufficient funds to complete the construction project with the expectation of being repaid when a permanent, long-term lender steps in. In such a situation, the construction lender will negotiate with the permanent lender as well as the borrower.

In certain types of project financings, a limited partnership may be formed for the sole purpose of constructing, say, a power plant. The general partner's liability is normally unlimited; however, for tax and other reasons, a lender may agree that it will look only to the partnership's assets for repayment of a loan. In such a case, the lender will need to assure itself that the limited partnership has sufficient resources to repay the loan.

In all of these examples, the lender has a legitimate interest in seeing that the borrower's relationships with third parties will not adversely affect the loan.

COMMITMENT TO MAKE A LOAN

A loan agreement may be preceded by a *term sheet*, which is a letter outlining the terms and conditions on which the lender will lend. A commitment to make a loan generally need not be in writing to be enforceable, but an oral promise may be difficult to enforce because reasonable people may honestly have different recollections of what was said. Nevertheless, a jury may award damages for breach of an oral loan commitment.⁷

Several state legislatures have proposed, and at least one has adopted, legislation specifically requiring loan commitments that exceed a threshold dollar amount to be in writing to be enforceable. Even in the absence of such legislation, a prudent lender will use a written term sheet or commitment letter to specify the terms of a proposed loan (including the amount, the interest rate, fees, and repayment provisions) and to disclaim any obligation to lend until additional investigation is completed, additional terms and conditions are negotiated, and formal documentation is signed.

DESCRIPTION OF THE LOAN

A loan agreement contains the lender's promise to lend a specified amount of money. Frequently, this will be the only promise that the lender will make in the loan agreement.

► ETHICAL CONSIDERATION

Managers should be careful not to make oral promises that they cannot, or will not, perform. The business environment is always changing, and it is better to qualify one's statements than to make a strong commitment today that may be regretted tomorrow.

Managers should recognize that many types of oral contracts are binding. When there is no independent witness to an oral contract, a contracting party may be tempted to alter his or her version of the facts, leading to a contest of "your word against mine." This type of behavior is clearly unethical.

The loan agreement also describes the mechanics by which funds will be disbursed, the rate of interest to be charged, the manner of computing such interest, and the repayment terms.

Mechanics of Funding

The funds are usually credited to the borrower's account if the lender is a bank, or sent by wire transfer to an account specified by the borrower if the lender is another type of entity. If timing is important, the borrower will want to discuss the logistical details of the loan agreement, such as the lender's deadline for sending wire transfers. Logistics may be critical if the lender and the borrower are in different time zones or if there are multiple lenders, as in a syndicated loan.

Interest Rates

Interest rates may be fixed or *floating*, that is, fluctuating throughout the life of the loan according to the interest rate the lender would pay if it borrowed the funds in order to relend them. Fixed-rate term loans are common from insurance companies; banks generally prefer a floating rate. The floating rate may be pegged to the bank's *prime rate*, that is, the lowest published rate of interest at which the bank lends to its best and most creditworthy commercial customers. Because a bank may lend money at a rate below its so-called prime rate, banks often use the terms *base rate* or *reference rate*. Some banks include an explicit statement that the prime (or base or reference) rate is not the bank's best or lowest rate. The floating rate may be expressed either as a percentage of the prime rate (such as 110 percent of the prime rate) or, more commonly, as the sum of the prime rate and a specified number of percentage points (such as the prime rate plus 20 percentage points).

7. See, e.g., Landes Constr. Co. v. Royal Bank of Canada, 833 F.2d 1365 (9th Cir. 1987).

Alternatively, the floating rate may be pegged to the London Interbank Offered Rate (LIBOR) or to the certificate of deposit (CD) rate. These rates are based on the theoretical cost that a bank incurs to obtain, for a given period of time, the funds it will lend. A *spread* (or margin) is added to this cost to arrive at the actual interest rate. Frequently, a loan agreement will offer prime-rate, LIBOR, and CD-rate options for the borrower to select during the life of the loan.

The *London Interbank Offered Rate (LIBOR)* interest rate is based on the cost of borrowing offshore U.S. dollars in the global interbank market, which today is centered in several locations in addition to London and is published in the business sections of all major daily newspapers. Deposits made through the interbank offering market are generally for periods of one, two, three, six, nine, or twelve months; LIBOR loans are made for corresponding periods. At the end of an interest period, the borrower may elect to (1) roll over the LIBOR loan, that is, to continue it for another interest period; (2) repay the loan; or (3) convert it to a loan based on a different interest rate.

The *certificate of deposit (CD) rate* is based on the average of the bid rates quoted to the bank by dealers in the secondary market for the purchase at face value of the bank's CDs in a given amount and for a given term. CD-rate loans are commonly available for interest periods of 30, 60, 90, or 180 days.

Computation of Interest

Interest is generally computed on a daily basis according to one of several methods. Under the *365/360 method*, the nominal annual interest rate is divided by 360, and the resulting daily rate is then multiplied by the outstanding principal amount and the actual number of days in the payment period. Thus, for a year of 365 or 366 days, the actual rate of interest will be greater than the nominal annual rate.

Under the *365/365 method*, the daily rate is determined by dividing the nominal annual interest rate by 365 (or 366, in leap years); then this daily rate is multiplied by the outstanding principal amount and the actual number of days in the payment period. Under the *360/360 method*, it is assumed that all months have thirty days; thus, the monthly interest amounts are always the same.

The method used to compute interest is significant when large principal amounts are involved. It may also be significant if the lender or the loan is subject to state *usury* laws, which limit the maximum rate of interest that may be charged. National banks and other specified classes of lenders are subject to federal legislation that preempts state usury laws, and many states permit higher interest rates for exempt commercial transactions over a given dollar amount.

Unless a state or federal exemption applies, lenders and borrowers should analyze whether a loan is usurious by virtue of its terms and conditions. For example, compensation paid for a loan, such as commitment fees, expenses, and prepayment penalties, may be treated as interest.

Repayment Terms

A *revolving loan* is a line of credit that may be advanced and repaid from time to time at the borrower's discretion, subject to a final maturity date when all sums outstanding become due and payable. In a *term loan*, any advanced amounts may not be reborrowed; the lender may require the entire loan to be repaid in one lump sum upon maturity, in which case the borrower only pays interest on the loan prior to maturity, or in equal or unequal installments of principal and interest. Often a loan agreement will incorporate both a term and a revolving facility. The term loan might finance an acquisition or the buildup of a plant, and the revolving line will provide day-to-day working capital.

Agreements for term or revolving loans may also call for mandatory prepayment when certain events occur. For example, in a receivables and inventory line of credit, a prepayment will be required if the level of receivables and/or inventory supporting the outstanding borrowings drops. A sale of assets outside the ordinary course of business or financial earnings below a specified level may also mandate a prepayment.

Asset-Based Loans

In structuring a loan agreement, the fact that a loan is secured or unsecured is not particularly significant, except in certain types of asset-based financing in which the amount lent is determined according to the levels of assets available from time to time. One example of an asset-based loan is a revolving line of credit based on receivables, inventory, or both. Subject to certain criteria as to what inventory or receivables are acceptable to the lender, the borrower borrows against such assets and repays the loans on a revolving basis out of collections of the receivables generated from the sale of inventory. Sometimes payments may be made directly to the lender through such mechanisms as a locked-box or blocked account, which allows the lender to take the outstanding loan repayments out of the collected proceeds before they are distributed to the borrower.

REPRESENTATIONS AND WARRANTIES

Before committing to make a loan, a lender will investigate the potential borrower's financial condition and creditworthiness. It will also require the borrower to make certain representations and warranties, including representations about the borrower's legal status and good standing; that all necessary

actions have been taken to authorize the proposed borrowing; that regulatory and other approvals that might be required for the borrowing have been obtained; that the borrower has good and marketable title to all of its assets, including any assets that constitute collateral for the loan; that the loan agreement is legal, valid, and binding; and that no default has occurred or would result from entering into the loan agreement.

The purpose of these representations and warranties is to specify the assumptions on which the lender is willing to lend. The representations and warranties serve as a checklist of major areas of investigation by the lender. They also provide a framework for the borrower to examine its legal and financial position.

Qualifications

Often a borrower will state that a representation is true to the best of its knowledge. The borrower will want to be held accountable only for what it knows, but the lender will want the borrower to take steps to ascertain the accuracy of its representations. The risk that a representation will prove to be untrue is usually placed on the borrower rather than the lender. Any qualification based on the borrower's knowledge is therefore likely to be phrased in terms of what the borrower either knows or should know after diligent inquiry. It may include a definition of the appropriate standard of diligence.

In the loan agreement, the borrower states that the representations and warranties are true and complete as of the date of the loan agreement. Although they do not apply prospectively, the loan agreement may provide that if advances are to be made, the representations and warranties will be updated as of the time of the advances.

Truthfulness of Representations

Before a disbursement is made under the loan agreement, the lender may require an opinion of counsel and a certification by an independent public accountant, confirming the representations made by the borrower. The lender's obligation to continue to lend will likewise be conditioned upon the continuing truthfulness of the representations in the loan agreement.

CONDITIONS TO CLOSING

Authority to Approve the Loan

The lender will require evidence that the borrower's internal requirements for approving the loan have been met. Thus, the lender may ask for copies of the relevant corporate resolutions, with a certification by the corporate secretary, and certification of the incumbency of the officers authorized to execute the loan agreement.

Completion of Documents

In addition to the loan agreement, the lender will typically require a promissory note and, if the loan is secured, a security agreement and financing statements.

Payment of Fees

Some fees, such as commitment fees, must be paid before any funds are disbursed, although lenders often allow fees to be paid out of loan advances. In such instances, the lender deducts the fees from any advance and disburses the net advance.

Other Conditions

Other conditions may apply in certain circumstances. For example, in the case of a term loan to finance a merger or acquisition, the lender will condition any disbursement on the consummation of the merger or acquisition.

Regulatory approval may be required because of the nature of the borrower's business. In such cases, the particular permits and approvals that must be obtained or issued before the lender is willing to disburse funds will be listed.

As explained in Chapter 16, lenders have become increasingly concerned about the liability they may face when real property held by them, either as security or outright after a foreclosure, is required to comply with environmental cleanup laws. The lender may, therefore, require an opinion of environmental counsel, an environmental audit by qualified consultants and engineers, and indemnity agreements with the borrower and with any third parties that may be responsible for the environmental condition of the property.

CONDITIONS PRECEDENT

If the basic assumptions and facts upon which the lender has relied change materially after a commitment to lend has been made, the lender will reevaluate the loan. It may (1) refuse to advance the funds committed, (2) refuse to advance additional funds if some disbursements have already been made, or (3) accelerate the maturity of the loan. The loan agreement will specify the conditions that must be met before the lender's obligations arise under the agreement. These are known as *conditions precedent*.

COVENANTS

Covenants are the borrower's promises that it will or will not take specific actions as long as either a commitment or a loan is outstanding. If a covenant is breached, the lender can terminate the loan agreement and require the borrower to repay the loan. The list of covenants imposed upon the borrower can be quite lengthy.

The borrower's obligations may also affect nonparties to the loan agreement. For example, the lender may require that the borrower and its subsidiaries maintain a specified net worth, computed on a consolidated basis. The loan agreement cannot directly impose such an obligation on the subsidiaries because they are not parties to it, but the agreement can require the borrower to cause its subsidiaries to comply with the covenant. Such a covenant assumes that the borrower is in a position to influence the nonparties' actions.

Affirmative Covenants

Affirmative covenants state the actions that the borrower will take, for example, maintain its corporate existence, pay taxes, maintain insurance, and comply with applicable laws. The borrower is usually required to keep the lender informed of its financial condition and to submit unaudited financial reports monthly or quarterly and audited financial reports annually. Financial tests relating to income statement and balance sheet items may be imposed. A catchall covenant will require the borrower to inform the lender of any material adverse change in its operations or financial condition.

Negative Covenants

Negative covenants state the actions that the borrower cannot take; for example, the borrower cannot incur additional debt beyond a specified amount and cannot grant liens other than those specifically enumerated or arising in the ordinary course of business. (A *lien* is a claim on property that secures a debt owed by the owner of the property.)

Scope

Covenants are generally heavily negotiated. Because financial covenants are based on projections of future financial results, they require flexibility in long-term loans. The lender generally will base the covenants on financial projections that the borrower provides to it. A borrower will resist any covenants that appear to interfere with the control and operation of its business. A lender sensitive to borrowers' fears of lender control will draft its covenants carefully to impose the minimum control needed to protect its right to be repaid. For example, a provision that effectively gives the lender the right to select the borrower's management is difficult to justify. Lawsuits, some resulting in multimillion-dollar punitive judgments against unduly interfering lenders, have alerted lenders to the need for caution in drafting and enforcing such provisions.

EVENTS OF DEFAULT

A loan agreement lists the events that will trigger the lender's right to terminate (or "call") the loan, accelerate the repayment obligations, and, if the loan is secured, take possession of the property securing the loan. These events, known as the *events of default*, usually include (1) failure to pay on time the amounts due under the loan agreement, (2) making false or misleading representations or warranties in connection with the loan, (3) failure to live up to any covenant in the loan agreement, (4) insolvency, and (5) a material adverse change in the borrower's financial or other condition. A borrower is often reluctant to sign onto a loan agreement with a material adverse change clause (commonly referred to as a "MAC" clause) because it gives the lender some discretion with respect to what constitutes default, unlike the other events of default that have bright-line rules. The lender, on the other hand, wants that provision as a safeguard against the occurrence of an event that the lender did not consider at the time the loan was made.

Some events of default may be outside the borrower's control. For example, if a loan is made to a corporation on the strength of the lender's confidence in a particular individual's management ability, the death of that individual may be included as an event of default. Similarly, involuntary liens or legal judgments against the borrower, although more or less outside the borrower's control, change the fundamental bases on which a loan was originally made.

Cross-Default

A *cross-default* provision provides that any breach by the borrower under any other loan agreement constitutes an event of default. A borrower will want the provision to apply only to a serious breach of a loan agreement covering a loan larger than a specified minimum. The borrower may also want the lender to agree that the borrower's breach of another agreement will not constitute an event of default under the loan agreement unless the other lender terminates its loan on account of the breach. The lender, on the other hand, will want a broad definition of the events of default. It will want the right to join with other creditors to negotiate some form of protection for its position as soon as the borrower's financial condition deteriorates.

If the borrower does breach another agreement, the lender and borrower may renegotiate the terms and conditions on which the loan will remain outstanding. For example, the lender may agree to continue the loan in exchange for new or additional collateral, new guaranties, or a higher rate of interest. Such negotiations are a practical alternative to the more drastic measure of terminating the loan. Note, however, that if the borrower seeks bankruptcy, any efforts to

restructure the loan will be subject to the jurisdiction of the bankruptcy court.

REMEDIES FOR DEFAULT

The default section sets forth the lender's remedies for default, which are optional. A lender may waive a default or forbear from enforcing its rights because the cost of modification or forbearance may be less than the cost of calling the loan. If the lender *waives* a default (that is, relinquishes its right to call the loan based on such default) or *forbears* a default (that is, decides not to exercise any of its remedies for the forbearance period), it may exact additional consideration from the borrower in the form of an increase in the interest rate or additional security or charge the borrower a modification or forbearance fee.

Any waiver should be in writing to avoid any misunderstanding as to its scope or the terms and conditions on which it is being granted, including any additional obligations that the borrower will now be expected to satisfy. In lender liability lawsuits, express terms in a loan agreement have been found to be superseded by oral or written communications between the lender and the borrower or by the actions of the borrower or lender. Reducing understandings to writing and avoiding actions that may be inconsistent with the written documents will avoid surprises and failed expectations on both sides.

COMMERCIAL LOAN CATEGORIES

Commercial loans can be categorized by lender or by purpose.

LOANS CATEGORIZED BY LENDER

Commercial loans are most commonly made by banks, insurance companies, venture debt funds, and purchasers of *commercial paper*, that is, short-term corporate indebtedness. Both banks and insurance companies are highly regulated. Extensive federal and state legislation prescribes the types of entities that may call themselves banks, who may own them, and what they may or may not do once they open for business. Similarly, insurance companies are restricted by state legislation in connection with their business of insuring against risk. The regulatory framework within which banks, insurance companies, and other types of lenders operate affects their sources and availability of funds; these factors in turn affect the terms on which they offer to lend money. Banks generally are more flexible in

the length of the terms of their loans, their interest rate formulas, and the mechanics of their loan administration. Insurance companies typically offer medium- to long-term loans at fixed interest rates. Whether a lender is a bank or an insurance company, it may have particular expertise in the industry in which the borrower does business or in making loans for particular purposes. Venture debt funds are subject to fewer regulations and often can make loans that bank or insurance company lenders would not consider.

LOANS CATEGORIZED BY PURPOSE

A borrower may require funds to meet everyday working capital needs, to finance an acquisition of assets or a business, or to finance a real estate construction project or an engineering project. Under regulations promulgated by the Board of Governors of the Federal Reserve System, lenders and borrowers may not enter into transactions whereby secured credit will be used to acquire stock, unless certain requirements are met. Apart from these basic restrictions and additional restrictions that apply to borrowers in regulated industries, borrowers may borrow money for a wide variety of reasons. These reasons dictate whether the loan will be a term loan or a revolving loan.

Term Loans

Funds required for a specific purpose, such as an acquisition or a construction project, are generally borrowed in the form of a term loan. A specified amount is borrowed, either in a lump sum or in installments, to be repaid on a specified date (known as the *maturity date*) or *amortized* (paid off over a period of time). For example, in an acquisition the buyer may be required to pay the purchase price up front and thus will require a lump-sum loan. By contrast, the owner of a construction project will require a loan to be disbursed in installments as scheduled progress payments become due. Amounts repaid under a term loan cannot be reborrowed.

Revolving Loans

A borrower may project its working capital needs for a given period but desire flexibility as to the exact amount of money borrowed at any given time. A revolving loan or *revolving line of credit* allows the borrower to borrow the amount it requires, up to a specified maximum. The borrower may also reborrow amounts it has repaid (hence the term "revolving"). The lender requires a *commitment fee* as consideration for its promise to keep the commitment available, as it receives no interest on amounts not borrowed.

SECURED TRANSACTIONS UNDER THE UCC

In making a loan, the lender relies on the borrower's cash flow, the borrower's assets, or the proceeds of another loan as sources of repayment. If the lender relies solely on the borrower's promise to repay the loan, the lender's recourse for nonpayment is limited to suing the borrower. Even if the lender sues the borrower, it stands in no better position than other general creditors of the borrower and has no special claim to any of the borrower's specific assets as a source of repayment. Because of this risk, lenders often refuse to make loans without *collateral*, that is, property belonging to the borrower that becomes the lender's if the loan is not repaid. A loan backed by collateral is known as a *secured loan*. Unsecured loans, if they are available, are priced at a higher rate to reflect the greater risk to the lender.

If the borrower fails to repay a secured loan, the lender, in addition to suing, may *foreclose on*—that is, take constructive or actual possession of—the collateral and either sell it to repay the debt or keep it in satisfaction of the debt. Under some *antideficiency laws* and *one-form-of-action laws*, however, lenders seeking remedies against real property security may be restricted from suing the borrower personally. Where a lender has recourse to the borrower or to other property of the borrower and exercises such rights, the lender may be precluded from foreclosing on real estate mortgaged by the borrower. These laws, which date back to the Great Depression, are designed to protect borrowers from forfeiting their properties to overzealous lenders.

The mechanics of taking a security interest in personal property and fixtures, and the consequences of taking such a security interest, are governed by Article 9 of the Uniform Commercial Code (UCC), which provides a unified, comprehensive scheme for all types of *secured transactions*, that is, loans or other transactions secured by the borrower's collateral.⁸ Article 9, however, does not apply to liens on real property, and various state and federal laws preempt the UCC in the areas of ship mortgages, mechanic's liens, and aircraft liens. Notices of security interests in copyrights are commonly filed in the U.S. Copyright Office, in addition to being perfected as general intangibles under the UCC. Article 9 also does not apply to security interests subject to a landlord's lien, to a lien given by statute or other rule of law for services or materials, or to a right of setoff. (A *right of setoff* permits one party to automatically deduct amounts owed to it by the other party from the payments the first

party makes to the second party.) Security interests in securities are governed by Article 8 of the UCC.

TERMINOLOGY

Part 1 of Article 9 defines terms. In place of the various common law security devices, the UCC uses the single term *security interest* for any interest in personal property or fixtures used as collateral to secure payment or the performance of an obligation. The parties to a secured transaction are (1) the *debtor*, that is, the person who owes payment or other performance of the obligation secured, whether or not that person owns or has rights in the collateral; and (2) the *secured party*, that is, the lender, seller, or other person in whose favor there is a security interest. A *security agreement* is an agreement that creates or provides for a security interest.

FORMAL REQUIREMENTS

Part 2 of Article 9 sets forth the formal requirements to create an enforceable security interest and describes the rights of the parties to a security agreement. If the secured party takes possession of the collateral, an oral agreement is sufficient to create a security interest; otherwise, a signed security agreement containing a description of the collateral is required. For a security interest to be enforceable, value must have been given for it, and the debtor must have rights in the collateral. These requirements do not have to be fulfilled in any particular order. When all of the requirements have been met, a security interest is said to have *attached*.

RIGHTS AND REMEDIES

The remainder of Article 9 sets forth the rights of the secured party against other creditors of the debtor; the rules for *perf ecting* a security interest, that is, making it valid as against other creditors of the debtor; and the remedies available to a secured party when a debtor defaults.

SECURITY AGREEMENTS

A security agreement identifies the parties and the property to be used as collateral. It may also specify the debtor's obligations and the lender's remedies in case of default.

Parties to the Agreement

Security agreements typically use the UCC terminology to identify the parties. In a loan transaction, the secured party is the lender. The debtor is the borrower, if it owns the

8. A full-text version of UCC Article 9 is available at <http://www.law.cornell.edu/ucc/9/>.

collateral or if a third-party property owner has authorized it to use its property for collateral. If the third-party property owner acts as a guarantor of the borrower's obligation, it may also be referred to as the debtor. (Guaranties are discussed later in this chapter.)

Granting Clause

Unless the security interest is a possessory interest (traditionally called a *pledge*), the security agreement must be signed by the debtor and expressly grant a security interest in some specified property. The standard operative words are: "The debtor hereby grants to the secured party a security interest in . . ." The UCC does not require a precise form, but the collateral must be described.

Description of the Collateral

The description of the collateral does not have to be specific, as long as it reasonably identifies what is described. For example, a working capital loan may be secured by receivables and inventory, with the inventory described simply as "inventory" or, in longer documents, as "inventory and any goods held for the sale or lease." A secured party will frequently take a security interest in all of the debtor's assets—not only fixed assets, inventory, and receivables, but also intellectual property, including patents, trademarks, and copyrights. Loans to finance the purchase of specific property, such as an equipment loan, will typically be secured by the property purchased, and the security agreement will contain a description of that property.

After-Acquired Property

After-acquired property is property that the debtor acquires after it signs the security agreement. After-acquired assets may be included in the security agreement either in addition to, or as replacements of, currently owned assets. A security interest in after-acquired collateral will attach when the debtor acquires rights in the collateral, assuming that the other prerequisites for attachment have been met. Lenders will typically require the collateral to include after-acquired property.

Proceeds

The UCC provides that, unless otherwise agreed, a security agreement gives the secured party a security interest in the proceeds if the collateral is sold, exchanged, collected, or otherwise disposed of. The security interest is equally effective against cash, accounts, or whatever else is received

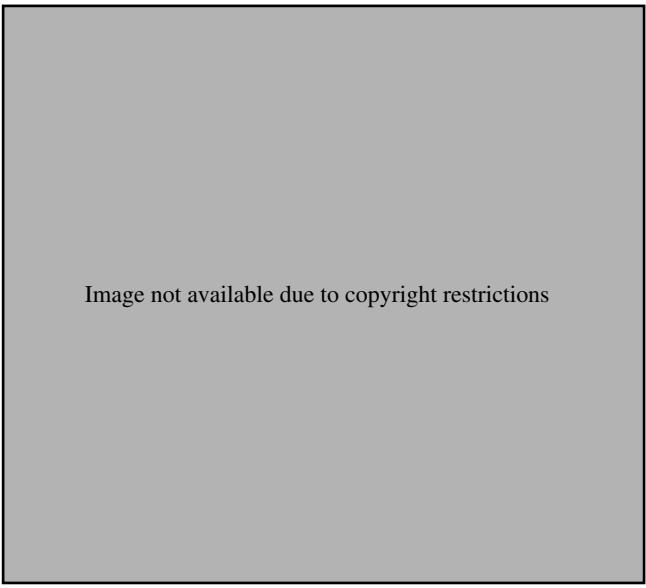

Image not available due to copyright restrictions

from the transaction. This feature makes a security interest created under Article 9 a *floating lien*.

Debtor's Obligations

The debtor is obligated to repay the debt and to pay interest and related fees, charges, and expenses. In addition, the debtor will have nonmonetary obligations, such as obligations to maintain prescribed standards of financial well-being, measured by net worth, cash flow, and debt coverage (the ratio of debt to equity). These obligations are typically set forth in detail in a loan agreement or a promissory note, although occasionally they may be found in a security agreement.

Cross-Collateralization

The collateral for one loan may be used to secure obligations under another loan. This is done by means of a *cross-collateralization* provision—sometimes called a *dragnet clause*—in the security agreement. For example, an inventory and receivables line of credit may be secured not only by inventory and receivables but also by equipment owned by the borrower and already held by the lender as collateral for an equipment loan. Thus, if the lender forecloses on the equipment, any proceeds in excess of the amounts owed under the equipment loan will be available to pay down the inventory and receivables line of credit. Similarly, if the equipment loan is cross-collateralized with collateral for the inventory and receivables line of credit, any proceeds realized from foreclosure of the inventory and receivables will be available to pay down the equipment loan.

Remedies for Default of Security Agreement

The remedies described in a security agreement track the rights and procedures set forth in Article 9. After default, the secured party has the right to take possession of the collateral without judicial process if this can be done without breach of the peace. The secured party may then dispose of the collateral at a public or private sale. If there is a surplus from the sale of the collateral, the secured party is required to return it to the debtor. If there is a deficiency, the debtor remains liable for that amount. The proceeds from the sale must be applied in this order: (1) to the reasonable expenses of foreclosure and, if provided for in the agreement, reasonable attorneys' fees and legal expenses; (2) to the satisfaction of the obligations secured; and (3) to the satisfaction of indebtedness secured by a subordinate security interest, if a written demand for such satisfaction is timely received. The secured party also has the option to retain the collateral (with the debtor's consent and after notice to, and with the consent of, any junior lienholders or other third parties claiming an interest in the collateral) in partial, as well as in full, satisfaction of the debt.

Although the UCC establishes a framework within which the lender may exercise its remedies, some details must be provided by contract. For example, the parties may agree to apply the proceeds of a foreclosure sale to attorneys' fees and legal expenses, or they may agree that the debtor will assemble the collateral and make it available to the secured party at a designated place. Such provisions are subject to the requirement that the secured party's disposition of the collateral must be commercially reasonable. This term is not defined in the UCC, but it is generally interpreted to require conformity with prevailing standards and to prevent one party from taking undue advantage of another. However, the secured party and the debtor are free to fashion a mutually acceptable standard of commercial reasonableness, and security agreements often contain a description of such standards.

PERFECTING A SECURITY INTEREST

To protect its rights in the collateral, a lender must ensure that its security interest is perfected, that is, valid against the debtor's other creditors and against the debtor's trustee in bankruptcy. The UCC does not define perfection; instead, it describes the situations in which an unperfected security interest will be subordinated to the rights of third parties. For example, a security interest is subordinated to the rights of a person who becomes a lien creditor before the security

interest is perfected. *Subordination* to lien creditors means in effect that the security interest is not valid against the debtor's trustee in bankruptcy.

METHODS OF PERFECTION

Security interests can be perfected by (1) taking possession of the collateral, (2) taking control of the collateral, (3) filing a financing statement, (4) automatically, or (5) recording with the appropriate federal office.

By Possession

A security interest in goods, instruments (other than certificated securities, which are covered by Article 8 of the UCC—see below), negotiable instruments, or tangible chattel paper may be perfected by the secured party's taking possession of the collateral. A security interest in money may be perfected only by possession. Although filing a financing statement perfects a security interest in negotiable instruments, possession is the preferred means of perfection, as a bona fide purchaser of a negotiable instrument will be senior to a secured party that perfects by filing.

By Control

A security interest in a deposit account or a letter-of-credit right may be perfected only by taking control of the collateral. In the case of a deposit account, the lender and borrower enter into an account control agreement with the borrower's bank, whereby the borrower relinquishes control of its deposit account and the bank agrees to disburse amounts in the account directly to the lender for repayment of the loan if the lender demands payment.

By Filing

For all types of personal property, including negotiable instruments such as promissory notes (but excluding money, deposit accounts, and letter-of-credit rights), perfection may be accomplished by filing a financing statement. Standard printed forms, known as *UCC-1 forms*, are widely available for this purpose.

Automatic Perfection

Some security interests require neither possession nor filing for perfection. For example, a *purchase-money security interest* in consumer goods (created when the seller of consumer goods lends the buyer the money with which to buy them) is automatically perfected. Under certain circumstances, a security interest in a certificated security or an

instrument is temporarily perfected without filing or possession. Automatic perfection is of limited duration, however, and must be followed by possession or filing if perfection is to survive for a longer period.

Federal Recording

Registered copyrights can be perfected only by federal recording with the U.S. Copyright Office. Although a security interest in patents or trademarks is perfected by a UCC filing, a prudent lender will also file its security agreement with the Patent and Trademark Office to protect its security interest against bona fide purchasers for value.

Uncertificated Securities

The once fundamental distinction between possessory and nonpossessory security interests became blurred with the introduction of uncertificated, or book-entry, securities. Article 8 of the UCC, which governs investment securities, was revised in 1977 to provide for the creation and perfection of security interests in certificated and uncertificated securities. These topics were then removed from Article 9, except for cross-references to the applicable sections of Article 8.

FILING PROCEDURE

The purpose of perfection by filing is to provide notice “to the world” that assets of one person are subject to the security interest of another. If a security interest is not perfected by possession, the collateral remains in the debtor’s possession and control. This occurs, for example, when the collateral is intangible (such as accounts), or when possession by the secured party is impractical (as in the case of inventory). A centralized system gives effective public notice that property in the possession and under the apparent control of the debtor is actually subject to the rights of another. The filing system enables a prospective creditor to determine whether in claiming its rights to such assets it will be competing with other creditors or with a trustee in bankruptcy. It also enables a purchaser of goods to determine whether the seller’s creditors have any claims against the goods. (Under certain circumstances, a purchaser of goods is protected from liens on the goods created by the seller; for example, buyers in the ordinary course of business, e.g., consumers, are protected from inventory liens on a seller’s goods.)

What to File

To perfect a nonpossessory security interest in personal property, a financing statement must be filed. The financing statement is a one-page form that tells the world that

a secured party may have a security interest in a debtor’s property. It needs to contain only the names and addresses of the debtor and the secured party and an indication of the collateral in which a security interest has been or may be granted. If a financing statement covers crops grown or to be grown or goods that are or will become fixtures, the UCC also requires a legal description of the land concerned.

Where to File

For most debtors and in most cases, the proper place to file is in the office of the secretary of state in the state where the debtor is located. Location is determined based on the jurisdiction of organization for corporate-type debtors, including corporations, limited liability companies, and limited liability partnerships. A nonregistered organization is located at its place of business if it has only one place of business, and at its chief executive’s office if it has more than one place of business. Most foreign debtors are deemed to be located in the District of Columbia. A security interest in collateral closely associated with real property, such as fixtures, growing crops, timber, or minerals, must be filed in the state where the real property is located, in the office in which a mortgage on real estate would be recorded; this is usually the county recorder’s office in the county where the real property is located.

When to File

A financing statement may be filed in advance of the transaction or the execution of the security agreement. This is important because, under the UCC, a security interest is perfected when the statement is filed. Thus, the first secured party to file has priority over other parties with security interests in the same debtor’s property, unless special priority rules apply, as in the case of purchase-money security interests.

EQUIPMENT LEASING

To conserve its working capital, a company may decide to lease needed equipment rather than purchase it. Leasing sometimes offers an attractive alternative to borrowing funds to purchase equipment because a leasing company may be willing to provide more lenient terms than a bank or other lender. A leasing company may also be willing to accept a greater credit risk than banks, but it will probably charge higher interest rates than a bank to accommodate the greater credit risk involved. A newer enterprise may sometimes be asked for a security deposit or personal guaranty in connection with an equipment lease.

When equipment is leased, three parties are involved: the seller of the equipment, the leasing company, and the user of the equipment. The user determines its needs and negotiates a purchase price for the equipment; then the user engages a leasing company to purchase the equipment and lease it to the user. The manufacturer or seller of the equipment may lease it to the user, either directly or through a leasing subsidiary, but third-party leasing companies are more frequently used.

DIFFERENCES BETWEEN FINANCE AND TRUE LEASES

An equipment lease that serves the purpose of financing is known as a *finance lease*. A finance-lease agreement differs from a true lease in several ways: (1) it gives the lessor some degree of control over the use, alteration, and location of the equipment; (2) it prohibits major changes in the user's business operations without the lessor's consent, unless the lessee first repays the lessor in full; (3) the lessee is required to keep the equipment in good repair and to insure it against loss or damage; (4) the lessor is given a security interest in the equipment and may foreclose and sell the equipment in the event of the user's default; and (5) the rights and remedies of the lessor and lessee are governed by Articles 9 and 10 of the UCC in addition to the terms of the lease agreement.

For accounting purposes, a finance lease is treated as a long-term debt of the lessee, who is deemed to own the leased equipment; the lessee may therefore enjoy tax benefits such as depreciation deductions. If the lessee has the right to purchase the equipment at the end of the lease term, the lease will often provide that the purchase price shall be the fair market value of the equipment at that time.

GUARANTIES

A *guaranty* is an undertaking by one person, the *guarantor*, to become liable for the obligation of another person, the *primary debtor*. A guaranty allows the party that is to receive payment to look to the guarantor in the event that the primary debtor fails to pay. The guarantor can be an individual, a corporation, a partnership, a limited liability company, or any other type of entity willing to lend its credit support to another's obligation. The most common form of guaranty is that indebtedness or other payment obligations of another will be paid when due. A *guaranty of performance*, a less common form, assures that specified nonpayment obligations will be performed. The type of guaranty and the duties of the guarantor are determined by the language of the guaranty instrument. The statute of frauds requires that a guaranty be in writing to be enforceable.

Lenders often require a guaranty when a credit analysis indicates that the borrower's credit is not sufficient to support the requested loan. The lender will evaluate the credit of each guarantor and decide whether to make the loan based on the combined credit of the borrower and the guarantors. A lender may also require guaranties from officers, directors, or shareholders of a borrower, especially when the borrower is a closely held corporation. To protect its position under a guaranty, a lender may require that the guarantor refrain from incurring additional debt or granting liens on its assets.

PAYMENT VERSUS COLLECTION

Under a *guaranty of payment*, the guarantor's obligation to pay the lender is triggered, immediately and automatically, when the primary debtor fails to make a payment when due. In contrast, under a *guaranty of collection*, the guarantor becomes obliged to pay only after the lender has attempted unsuccessfully to collect the amount due from the primary debtor. With a collection guaranty, the lender generally has to file a lawsuit and take other steps to collect the debt before calling on the guarantor to pay (unless the primary debtor is insolvent or otherwise clearly unable to pay). This condition makes enforcement of collection guaranties so cumbersome and expensive that lenders almost always require payment guaranties.

LIMITED VERSUS UNLIMITED

A guarantor's liability under a guaranty may be either limited or unlimited. With a *limited guaranty*, the maximum amount of the guarantor's liability is expressly stated in the guaranty instrument. This maximum liability is usually a specific dollar amount, although it can be based on other criteria, such as a percentage of the primary debtor's total indebtedness to the lender.

RESTRICTED VERSUS CONTINUING

A *restricted guaranty* is enforceable only with respect to a specified transaction or series of transactions. A guaranty that covers all future obligations of the primary debtor to the lender is referred to as a *continuing guaranty*. The objective of the continuing guaranty is to make the guarantor liable for any debt incurred at any time by the primary debtor, regardless of whether the debt was contemplated at the time the guaranty was entered into. Lenders naturally favor continuing guaranties over restricted guaranties.

In many jurisdictions, a continuing guaranty may be revoked by the guarantor during his or her lifetime. Such a revocation prevents the guarantor from becoming liable for debts incurred by the primary debtor in connection with

transactions entered into after the revocation date. The death of the guarantor also revokes a guaranty, but the guarantor's estate remains liable for debts incurred by the primary debtor prior to the guarantor's death.

DISCHARGING THE GUARANTOR

A lender that makes a guaranteed loan must avoid any actions that would have the effect of discharging the guarantor, such as altering the terms of the agreement between the lender and the primary debtor (for example, increasing the interest rate on the loan or increasing the amount of the scheduled payments), extending the time for payment of the loan or renewing the indebtedness, or releasing or impairing the lender's rights with respect to collateral pledged by the primary debtor. A well-drafted guaranty can alleviate some of these potential pitfalls through an express waiver of the guarantor's legal, equitable, and statutory rights in connection with any such modifications. The best approach, however, is for the lender to obtain the written consent of the guarantor in the form of an affirmation of the guaranty before making any material change to the arrangement between the lender and the primary debtor.

GUARANTIES VERSUS LETTERS OF CREDIT

As explained in Chapter 25, a standby letter of credit can often be used in place of a guaranty. Uniform standards for standby letters of credit can be incorporated into the letter of credit by reference to the International Chamber of Commerce's International Standby Practices (ISP98).⁹

FRAUDULENT CONVEYANCES

A guaranty may be attacked as a fraudulent conveyance under the Federal Bankruptcy Code or state fraudulent transfer statutes. Under many fraudulent transfer statutes, assets may be recovered and transfers avoided under circumstances that constitute "actual fraud" or "constructive fraud." Fraud is actual when the assets are transferred with intent to hinder, delay, or defraud creditors by putting the assets out of the creditors' reach. Fraud is constructive when an asset is transferred for less than reasonably equivalent value and other factors, such as the insolvency of the debtor, are present.

A guaranty may be a fraudulent conveyance, if without conferring a benefit on the guarantor, it makes the guarantor's assets unavailable to creditors other than the party receiving the guaranty. For example, if the guarantor did not receive fair value in exchange for giving its guaranty and was

insolvent at the time it gave its guaranty, or if the guarantor was rendered insolvent or left with unreasonably small capital as a result of giving its guaranty, the party receiving the guaranty may have an unfair advantage over other creditors of the guarantor. In such a case, the other creditors would be able to invalidate the guaranty. A lender must carefully examine these issues before accepting a guaranty.

Upstream Guaranty

With an *upstream guaranty*, subsidiaries guarantee, or pledge their assets as security for the parent's debt. An upstream guaranty may be found fraudulent if the guarantor received none of the loan proceeds or received an inadequate amount compared to the liability it incurred. Other creditors of the subsidiary (and the creditor's minority shareholders, if the subsidiary is less than wholly owned by the parent) may claim that the lender, as the beneficiary of the guaranty, received an unfair advantage at the other creditors' (or minority shareholders') expense.

Leveraged Buyouts

Leveraged buyouts, in which the acquisition of a company is financed largely through debt, may be subject to attack as fraudulent conveyances. For example, if a leveraged buyout is structured so that a newly formed corporation will acquire the stock of the target company using proceeds from a loan, the lender's source of repayment will be dividends paid from the target company to the borrower. To ensure that such a source of repayment will be available, the lender may require the target company to give a guaranty, which may or may not be secured by the target's assets. Alternatively, the lender may require a merger between the target company and the borrower. Such guaranties or mergers will be invalidated if the target company both (1) failed to receive a reasonably equivalent value and (2) was left insolvent, with assets that were unreasonably small in relation to its business, or with insufficient working capital.

VOIDABLE PREFERENCES

A transfer from a debtor to a creditor that results in a reduction in the guaranty liability of an insider may be a voidable preference if it occurs within one year of the date the debtor files for bankruptcy.¹⁰ For example, suppose that on February 1, 2007, ABC Corporation borrows \$1 million from Friendly Bank and that Henri-Claude, a major shareholder of ABC Corporation, guarantees the loan. ABC Corporation makes a \$100,000 payment to Friendly Bank on March 1,

9. ICC Publication No. 590 (1998).

10. See, e.g., *Levit v. Ingersoll Rand Fin. Corp. (In re V.N. Deprizio Constr. Co.)*, 874 F.2d 1186 (7th Cir. 1989).

2008. On October 1, 2008, ABC Corporation files bankruptcy. ABC Corporation's creditors will be able to set aside the \$100,000 payment because it reduced Henri-Claude's guarantor liability dollar for dollar and thereby preferred an insider of ABC Corporation.

SUBORDINATION

A *debt subordination* is an agreement whereby one or more creditors of a common debtor agree to defer payment of their claims until another creditor of the same debtor is fully paid. The indebtedness that is subordinated under the agreement is referred to as the subordinated or *junior debt*. The indebtedness that benefits from the subordination is called the *senior debt*.

The primary purpose of a debt subordination is to protect the senior creditor in the event of the debtor's insolvency. As long as the debtor is solvent, both the junior debt holder and the senior debt holder can expect to be paid. If the debtor becomes insolvent, there will be insufficient assets to satisfy all of its creditors. In such circumstances, creditors can expect to receive only a partial payment on their claims. In subordinating its claim, the holder of the junior debt agrees to yield its right of payment to the senior creditor until the senior creditor has been paid in full.

Corporations frequently use subordinated debt as a means of raising capital. The use of subordinated notes or subordinated debentures (long-term secured bonds) may have certain advantages over equity financing. For example, the interest payable on subordinated debt will be tax-deductible. In addition, the interest rate payable on subordinated debt is often less than the dividend rate that would have to be offered on comparable preferred stock.

INDEBTEDNESS TO INSIDERS

When a borrower seeks a short-term loan from a bank or other commercial lender, the lender will often require that the borrower's indebtedness to insiders, such as officers, directors, and shareholders, be subordinated. This is especially true when the borrower is a closely held corporation and the insider debt is significant in relation to the amount of the lender's loans.

LIEN SUBORDINATION

A *lien subordination* is an agreement between two secured creditors whose respective security interests, liens, or mortgages attach to the same property. The subordinating party agrees that the lien of the other creditor will have priority notwithstanding the relative priorities that the parties' liens

would otherwise have under applicable law. Unlike debt subordination, a lien subordination does not limit the right of the subordinating party to accept payment from the debtor. Instead, the lien subordination has the effect of limiting the subordinating party's recourse to the collateral until the prior secured party's claim has been satisfied.

EQUITABLE SUBORDINATION

A creditor's claim may be involuntarily postponed through application of the doctrine of *equitable subordination*, a doctrine developed in bankruptcy law to prevent one creditor, through fraud or other wrongful conduct, from increasing its recovery at the expense of other creditors of the same debtor. The court will order that the creditor that acted wrongfully shall receive no payment from the debtor until the claims of all other creditors have been fully paid.

LENDER LIABILITY

After a series of court decisions in the 1970s and 1980s expanded the recoveries available to borrowers against lenders, lenders became more aware of the risks of lender liability. Recently, cases have taken a more restrained approach to finding liability on the part of lenders. This section describes several theories on which lender liability claims may be based.

BREACH OF CONTRACT

A breach of contract results from a lender's failure to act or to refrain from acting as required by the terms of a loan document or other agreement. As noted earlier, a lender's failure to honor a promise to make a loan may give rise to a breach-of-contract claim. Compensatory damages may be awarded to place the borrower in the same position it would have been in if the lender had properly performed the agreement.

BREACH OF DUTY OF GOOD FAITH

Some cases have imposed an implied obligation of good faith and fair dealing on lenders. This duty requires the lender to act reasonably and fairly in dealing with the borrower and in exercising its rights and remedies under the loan documents and under applicable law.

When there is a fiduciary relationship between the lender and the borrower or when the parties are of unequal bargaining strength, punitive damages may be recoverable for breach of the implied duty of good faith and fair dealing. For example, the U.S. Court of Appeals for the Sixth Circuit

affirmed a judgment of \$1.5 million compensatory damages and punitive damages against the Irving Trust Company. The company was found to have breached an implied covenant of good faith and fair dealing when it failed to give notice to the borrower before refusing to make further advances under a discretionary line of credit.¹¹ However, other courts have held that principles of good faith could not be used to override express contract terms.¹²

FRAUDULENT MISREPRESENTATION

A lender may be liable for making false statements to a borrower if, for example, it represents that it will make a loan facility available when, in fact, it has decided not to extend any credit to the borrower. If a fiduciary relationship exists between the lender and the borrower, the lender may have an additional duty to disclose information, if nondisclosure would result in an injury to the borrower. Both compensatory and punitive damages may be recovered for fraudulent misrepresentation.

ECONOMIC DURESS

If the lender pressures the borrower into doing something that the borrower is not required to do under the loan documents, a court may find the lender's action constitutes *economic duress*, the coercion of the borrower by threatening to do an unlawful act that might injure the borrower's business or property. For example, a threat by the lender to accelerate a loan, unless the borrower provides additional collateral, may constitute economic duress if there is no default under the loan documents. Compensatory and punitive damages may be recovered for economic duress.

TORTIOUS INTERFERENCE

The lender was found liable for tortious interference with the borrower's corporate governance in *State National Bank of El Paso v. Farah Manufacturing Co.*,¹³ which set a precedent for claims of this kind. In this case, the loan agreement between the bank lenders and the borrower prohibited any change in the borrower's management "which any two Banks shall consider, for any reason whatsoever, to be adverse to the

interests of the Banks." The lenders threatened to accelerate the loan if the borrower reappointed a certain individual, as chief executive officer, of whom the lenders disapproved. In response to this threat, the borrower appointed a series of CEOs proposed by the lenders. After its financial position seriously deteriorated during the tenure of these chief executives, the borrower sued the banks for tortious interference.

The Texas Court of Appeals held that the banks had wrongfully interfered with the borrower's right to have its affairs managed by competent directors and officers who would maintain a high degree of undivided loyalty to the company. The interference compelled the election of directors and officers whose particular business judgment, inexperience, and divided loyalty proximately resulted in injury to the borrower. The banks were liable for the losses suffered by the borrower while under the bank-imposed management, resulting in a judgment in excess of \$18 million against the banks. However, most other courts have not recognized a lender's interference with a borrower's corporate governance as an independent basis of liability.¹⁴

INTENTIONAL INFILCTION OF EMOTIONAL DISTRESS

A bank was found liable for intentional infliction of emotional distress when, after deciding not to make any additional advances to the borrower, bank officials publicly ridiculed him, pointing at him, using profanities, and laughing about his financial difficulties. To recover for intentional infliction of emotional distress, the lender's conduct must be extreme and outrageous and must intentionally or recklessly cause emotional distress to the borrower. Compensatory and punitive damages may be recovered.

NEGLIGENCE AND GENERAL TORT LIABILITY

Claims that do not fall into one of the other established categories may be characterized as negligence or general tort liability. Negligence is the failure to exercise reasonable care, resulting in injury to the borrower. General tort liability arises from conduct that intentionally causes injury to a borrower.

STATUTORY BASES OF LIABILITY

A lender may be liable to the borrower if it violates a statutory standard of conduct. For example, the federal Racketeer Influenced and Corrupt Organizations Act (RICO) has been used

11. K.M.C. Co. v. Irving Trust Co., 757 F.2d 752 (6th Cir. 1985).

12. Khan & Nate's Shoes No. 2, Inc. v. First Bank, 908 F.2d 1351 (7th Cir. 1990); Taggart & Taggart Seed Inc. v. First Tenn. Bank Nat'l Ass'n, 684 F. Supp. 230 (E.D. Ark. 1988), *aff'd*, 881 F.2d 1080 (8th Cir. 1989).

13. 678 S.W.2d 661 (Tex. App. 1984), *overruled in part by* Wal-Mart Stores v. Sturges, 52 S.W.3d 711 (Tex. 2001).

14. Benjamin Mintz, *Revisiting Lender Liability Claims Under New Theory*, NAT'L L.J., July 11, 2005, at 15–16.

by private litigants in lender liability cases. Although RICO was enacted by Congress as a tool for fighting organized crime, the definition of a “pattern of racketeering activity” is arguably broad enough to encompass fraud or misrepresentation by banks or other lenders. The treble damages available under RICO provide an incentive for borrowers to claim RICO violations in their lender liability suits.

Federal antitying statutes prohibit banks and thrifts from conditioning a loan or other financial service on the borrower’s purchase of an unrelated property or service from the lender, or on the borrower’s providing to the lender a product or service unrelated to the original loan. A lender may be subject to penalties in cases brought by the Securities and Exchange Commission (SEC) for aiding or abetting a borrower in violating federal securities laws if it knew, or should have known, that a violation was taking place or if it is found to be a controlling person with respect to the borrower.

Under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA, discussed in Chapter 16) and state law counterparts, if the lender falls within the statutory definition of an owner or operator of a site contaminated by hazardous wastes and does not come within the statutory safe harbor for lenders, it may find itself liable for all the costs of cleanup even if they exceed the amount of the loan.

To protect itself from contract or tort liability in connection with a loan, the lender will include an indemnification clause in the loan agreement, whereby the borrower agrees to defend, indemnify, and hold harmless the lender and its agents from any claims and liabilities arising from the loan transaction. A separate environmental indemnity is often used in real estate transactions to insulate the lender from liability under environmental laws.

SPECIAL DEFENSES AVAILABLE TO THE FEDERAL INSURERS OF FAILED BANKS AND SAVINGS AND LOANS

When a bank or savings and loan has failed and federal banking agencies have taken control, a common law principle known as the *D’Oench, Duhme doctrine*¹⁵ has been used by the Federal Deposit Insurance Corporation (FDIC)—and during the savings and loan debacle of the 1980s by the

Resolution Trust Corporation (RTC)—to increase the value of the failed institution by easing the federal agencies’ ability to collect on loans. *D’Oench, Duhme* bars many claims and defenses against conservators and receivers that might have been valid against the failed bank itself. In particular, the doctrine bars enforcement of any agreements (including secret agreements) unless those agreements are in writing and have been approved contemporaneously by the bank’s board or loan committee and recorded in the bank’s written records. This permits federal and state bank examiners to rely exclusively on the bank’s written records in evaluating the worth of the bank’s assets.¹⁶

D’Oench, Duhme applies only to banking transactions engaged in by federally insured institutions. It does not apply to nonbanking transactions or to transactions engaged in by a bank’s nonbank subsidiaries. Congress partially codified the holding of *D’Oench, Duhme* in the Federal Deposit Insurance Act of 1950, as modified by the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA).¹⁷ As a result of this doctrine, the federal agencies are often victorious over borrowers in cases in which a borrower asserts certain common law defenses to escape a loan obligation assumed by the FDIC or RTC. It has also been used as a defense to breach-of-contract and tort claims based on oral promises or arrangements.¹⁸

Support for the common law doctrine may be eroding, however. In 1995, the U.S. Court of Appeals for the District of Columbia Circuit held that the U.S. Supreme Court’s reasoning in *O’Melveny & Myers v. FDIC*¹⁹ leads “inelectably” to the conclusion that the common law *D’Oench, Duhme* doctrine has been preempted by the FIRREA.²⁰ The U.S. Court of Appeals for the Ninth Circuit reached a similar conclusion in 1997, when it relied on the U.S. Supreme Court’s decisions in *O’Melveny & Myers* and *Atherton v. FDIC*²¹ to support its ruling that the *D’Oench, Duhme* doctrine does not protect the FDIC as a receiver of a failed bank.²² In contrast, the U.S. Court of Appeals for Eleventh Circuit held in 1997, and again in 2000, that the FDIC, acting as receiver of a federal bank, was still protected by the common law

doctrine.²³ The Eleventh Circuit discerned “no indications that *D’Oench* is ripe for overruling.”

BANKRUPTCY LAW

Modern bankruptcy law in the United States began with the Bankruptcy Act of 1898. It was amended in 1938 by the Chandler Act, which was itself completely revised by the Bankruptcy Reform Act of 1978. The 1978 Act changed—and substantially lessened—the requirements for filing bankruptcy.

The Bankruptcy Amendments and Federal Judgeship Act of 1984 made bankruptcy courts part of the federal district court system and attached a bankruptcy court to each federal district court. Bankruptcy judges, who are appointed by the President and serve for fourteen-year terms, decide *core proceedings* regarding bankruptcy cases (e.g., allowing creditor claims, deciding preferences, confirming plans of reorganization), and federal or state courts resolve *noncore proceedings* concerning the debtor (e.g., decisions on personal-injury and other civil proceedings).²⁴ Bankruptcy judges also have the power to adjudicate noncore proceedings, subject to *de novo* review by the federal district courts.

In 2005, Congress passed the Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 (BAPCPA), the largest overhaul of bankruptcy laws in more than a quarter century. While much of the media attention on the BAPCPA focused on the new income-based test to determine whether individuals who file for bankruptcy should be required to repay some or all of their debts, rather than receive a complete discharge, it also contains a number of provisions that affect business filings.

The Bankruptcy Code is divided into chapters. Chapters 1, 3, and 5 include definitions and provisions for the administration of bankruptcy proceedings that apply to all forms of bankruptcy. The most common forms of bankruptcy are liquidation under Chapter 7, reorganization under Chapter 11, and consumer debt readjustment under Chapter 13. Chapters 7 and 11 are available to individuals and most business organizations, but Chapter 13 is available only to individuals.²⁵ The BAPCPA created Chapter 15, which

24. The Bankruptcy Code was also amended in 1986 and 1994. In addition, certain sections have been revised in other amendments.

25. The Bankruptcy Code specifically authorizes the court to convert a case under Chapter 11 or 13 to a case under Chapter 7 or to dismiss a case for cause.

► ETHICAL CONSIDERATION

In many foreign countries, directors are personally liable if they allow a company to continue to conduct any business while it is insolvent. What are the reasons for imposing personal liability on the directors of an insolvent company? Although directors are not personally liable for all business conducted by an insolvent company in the United States, is it ethical for the directors of an insolvent company to allow the company to continue to transact business?

governs ancillary and other cross-border bankruptcy cases. The remaining chapters govern bankruptcies of municipalities, stockbrokers, railroads, and farmers.

MANAGEMENT DUTIES SHIFT WHEN COMPANY ENTERS INSOLVENCY ZONE

Generally, directors of a corporation owe their fiduciary duties to the shareholders (see Chapter 21). When a corporation enters the “zone of insolvency,” however, the duties of the directors shift, and they now owe fiduciary duties to the corporation’s creditors.²⁶ The majority of cases state that upon insolvency, fiduciary duties are owed to both creditors and stockholders, although certain duties to creditors may predominate under certain circumstances. Directors, as well as officers and, in most jurisdictions, those who aid, abet, or conspire with the directors or officers, may be personally liable to the bankrupt estate for breach of fiduciary duty.²⁷

Unfortunately, it is often not clear when a corporation becomes insolvent. Under fraudulent transfer law, insolvency is generally defined as an excess of liabilities over the value of assets. Under the principles of fiduciary obligations, however, insolvency is usually defined as an inability to pay debts as they mature. Even though not insolvent in the bankruptcy sense, a business is insolvent in the equity sense if its assets lack liquidity.

It is even less clear when a company enters the *zone of insolvency*. There is no test or definition for the “zone of insolvency,” although case law suggests that a company may enter the zone when there is a substantial risk that the company will be unable to pay its debts when they become due or the company is operating with unreasonably small capital that “connotes a condition of financial debility short

of insolvency (in either the bankruptcy or equity sense) but which makes insolvency reasonably foreseeable.”²⁸

It is also unclear exactly what obligations management owes to the creditors of a company that is in the zone of insolvency. Minnesota courts have adopted a narrow view that management owes no duty of care to the creditors of an insolvent corporation and that management’s fiduciary obligation consists solely of a prohibition against self-dealing and insider preferences.²⁹ New York,³⁰ Illinois,³¹ and Florida³² courts, on the other hand, have held that directors and officers owe a broader duty to creditors to minimize losses upon insolvency.

In *Credit Lyonnais Bank Nederland, N.V. v. Pathe Communications Corp.*,³³ the Delaware Court of Chancery took an even more expansive view of management’s duties to creditors when a company is in the zone of insolvency. After a leveraged buyout of MGM-Pathe Communications Company (MGM) by Giancarlo Parretti, MGM’s creditors forced MGM into bankruptcy. Credit Lyonnais, which financed MGM’s emergence from Chapter 11 with substantial new debt, required a governance contract that ceded control of MGM to a Credit Lyonnais-appointed executive committee and provided that Parretti would regain control when MGM had paid down the debt to a specified amount. When MGM emerged from bankruptcy, Parretti demanded that the MGM executive committee sell certain assets to pay down enough of the loan to Credit Lyonnais to restore control to him, but the executive committee declined because of concern about the adequacy of the price at which the assets were to be sold. Parretti alleged that the bank nominees on the executive committee had breached their fiduciary duty to the controlling shareholder, but the chancellor ruled for Credit Lyonnais, finding that the executive committee’s decisions were valid and did not represent a breach of duty, although it noted that “the MGM board or its executive committee had an obligation to the community of interest that sustained the corporation, to exercise judgment in an informed, good faith effort to maximize the corporation’s long-term wealth creating capacity.” The chancellor also emphasized the need to protect creditors: “The possibility

of insolvency can do curious things to incentives, exposing creditors to risks of opportunistic behavior, and creating complexities for directors.”

Subsequent to *Credit Lyonnais*, the Delaware Chancery Court issued a number of decisions on whether creditors could sue directors of insolvent corporations, or those in the zone of insolvency, for breach of fiduciary duty. In 2007, the Delaware Supreme Court spoke to these issues in *North American Catholic Educational Programming, Inc. v. Gheewalla*,³⁴ which involved a contract between North American Catholic Educational Programming Foundation (NACEPF) and Clearwire Holdings. Under the contract, Clearwire could obtain rights to certain radio wave spectrum licenses as then-existing leases expired if the then-current lessees failed to exercise rights of first refusal. NACEPF filed a complaint against certain directors of Clearwire as a putative creditor of Clearwire, claiming that the directors had breached their fiduciary duties while Clearwire was either insolvent or in the zone of insolvency. The Delaware Supreme Court affirmed the Chancery Court’s decision in favor of the defendants and made three key rulings: (1) creditors may not bring a direct action for breach of fiduciary duty against the directors of a corporation while the corporation is in the zone of insolvency, (2) creditors have standing to maintain derivative claims on behalf of the corporation for breach of fiduciary duty against the directors of the corporation when the corporation is in fact insolvent, but (3) creditors have no right to assert direct claims for breach of fiduciary duty against directors even when the corporation is insolvent.

DEEPENING INSOLVENCY

A number of bankruptcy and other federal courts have held that plaintiffs, often bankruptcy trustees or other bankruptcy estate representatives, could pursue a cause of action against a corporation’s directors and others for deepening insolvency. Courts define *deepening insolvency* as the “fraudulent prolongation of a corporation’s life beyond insolvency,”³⁵ resulting in “damage . . . inflicted by the diminution of its assets and income,”³⁶ and similarly as the “fraudulent expansion of corporate debt and prolongation of corporate life.”³⁷

In the following case, the Delaware Court of Chancery considered whether a cause of action for deepening insolvency exists under Delaware law.

A CASE IN POINT**CASE 24.1**

**TRENWICK AMERICA LITIGATION
TRUST v. ERNST &
YOUNG, L.L.P.**

**DELAWARE COURT OF CHANCERY
906 A.2d 164 (2006).**

IN THE LANGUAGE OF THE COURT

FACTS Trenwick Group, Inc., a publicly held holding company with five direct subsidiaries, operated a specialty insurance and reinsurance organization that issued policies around the world. In 1998, Trenwick embarked on a strategy of growth by acquisition and, within two years, had acquired three other unaffiliated insurance companies in arm's-length transactions. In connection with the last acquisition, Trenwick's successor, Trenwick Group Limited (Trenwick Group), redomiciled to Bermuda, for the disclosed reason that tax advantages would flow from the move. Consistent with this objective, Trenwick Group reorganized its subsidiaries by national line, creating lines of U.S., U.K., and Bermudan subsidiaries. As a result of the reorganization, Trenwick Group's top U.S. subsidiary, Trenwick America, became the intermediate parent of all of Trenwick's U.S. operations. Trenwick America continued and deepened its role as a guarantor of Trenwick Group's overall debt, including becoming a primary guarantor of \$260 million of a \$490 million line of credit, becoming a secondary guarantor of the remainder of that debt, and assuming Trenwick Group's responsibility for approximately \$190 million of various debt securities. After the reorganization, the financial statements of Trenwick America indicated that it had a positive asset value of more than \$200 million. Trenwick Group and Trenwick America filed for bankruptcy in 2003. The cause of the failure was that the claims made by the insureds against Trenwick Group's operating subsidiaries (including the insureds of the companies it had acquired) exceeded estimates and outstripped Trenwick Group's capacity to service the claims and its debt.

The Trenwick America reorganization plan resulted in the creation of a Litigation Trust, to which all of Trenwick America's causes of action were assigned. The Litigation Trust then filed a lawsuit against the directors of Trenwick Group and Trenwick America that accused the Trenwick America directors of "deepening insolvency" by concealing the true nature and extent of Trenwick America's financial problems when they expanded the amount of debt undertaken by the company with the knowledge that it would not be able to repay the increased debt, but fraudulently representing to the creditors and other outsiders that the debt would be repaid.

ISSUE PRESENTED Does Delaware recognize a cause of action for deepening insolvency?

OPINION STRINE, V.C., writing for the Delaware Court of Chancery:

Delaware law imposes no absolute obligation on the board of a company that is unable to pay its bills to cease operations and to liquidate. Even when the company is insolvent, the board may pursue, in good faith, strategies to maximize the value of the firm. . . . Chapter 11 of the Bankruptcy Code expresses a societal recognition that an insolvent corporation's creditors (and society as a whole) may benefit if the corporation continues to conduct operations in the hope of turning things around.

If the board of an insolvent corporation, acting with due diligence and good faith, pursues a business strategy that it believes will increase the corporation's value, but that also involves the incurrence of additional debt, it does not become a guarantor of that strategy's success. That the strategy results in continued insolvency and an even more insolvent entity does not in itself give rise to a cause of action. Rather, in such a scenario, the directors are protected by the business judgment rule. To conclude otherwise would fundamentally transform Delaware law.

....

.... [T]he fact of insolvency does not render the concept of "deepening insolvency" a more logical one than the concept of "shallowing profitability." That is, the mere fact that a business in the red gets redder when a business decision goes wrong and a business in the black gets paler does not explain why the law should recognize an independent cause of action based on the decline in enterprise value in the crimson setting and not in the darker one. If in either setting the directors remain responsible to exercise their business judgment considering the company's business context, then the appropriate tool to examine the conduct of the directors is the traditional fiduciary duty ruler. . . .

.... I reach a result consistent with a growing body of federal jurisprudence, which has recognized that those federal courts that became infatuated with the concept [of deepening insolvency], did not look closely enough at the object of their ardor.

RESULT The court found that the Litigation Trust had failed to meet its burden to plead facts stating actionable claims against the defendants and dismissed the case. On appeal, the Delaware Supreme Court issued a two-page order affirming the Chancery Court's decision "on the basis of and for the reasons assigned by" the Chancery Court in its opinion.³⁸

CRITICAL THINKING QUESTIONS

1. Did the Delaware Supreme Court's decision in *Gheewalla* foreshadow its affirmation of the *Trenwick* decision and reasoning? If so, how?
2. Does the court's decision in *Trenwick* leave plaintiffs without a cause of action against directors who approve high-risk strategies for insolvent or thinly capitalized companies?

38. 931 A.2d 438 (2007).

INITIATION OF A BANKRUPTCY PROCEEDING

Petition

A bankruptcy filing begins when the debtor (in a *voluntary proceeding*, which is initiated by the debtor) or one or more of its creditors (in an *involuntary proceeding*, which is initiated by one or more creditors) files a petition with the bankruptcy court. On the filing of a bankruptcy petition, a new entity, called the *bankruptcy estate*, is created; it consists of all of the debtor's legal and equitable rights to the debtor's property.

A voluntary petition must be signed and sworn under oath and must state that the debtor has debts; the debtor does not have to declare insolvency. The petition must include (1) a list of secured and unsecured creditors (including addresses and amount of debt); (2) a list of all property owned by the debtor, including any property claimed to be exempt; (3) a statement of the financial affairs of the debtor; and (4) a list of the debtor's current income and expenses.

An involuntary petition must allege that the debtor is not paying its debts as they come due. If the debtor has more than twelve creditors, the petition must be signed by at least three creditors. If there are twelve or fewer creditors, any creditor can sign. The signing creditor(s) must have valid unsecured claims of at least \$10,000 in the aggregate, and the debtor must file the same schedules filed by voluntary debtors.

Order for Relief

The filing of the petition constitutes an *order for relief*. If the debtor challenges an involuntary petition for bankruptcy, a trial is held to determine whether an order for relief should be granted. If the order is granted, the case is accepted for further proceedings.

A meeting of creditors must be held within a reasonable period of time after the order for relief, but in no event earlier than twenty or later than forty days after entry. The bankruptcy judge cannot attend the meeting, but the debtor must appear and answer questions.

In Chapter 7 cases, an interim trustee is appointed by the court when an order for relief is entered. A permanent trustee is elected at the first meeting of the creditors. Once appointed, the *trustee* becomes the legal representative of the debtor's estate.

In most Chapter 11 cases, the debtor is left in place to operate the business and is referred to as the *debtor-in-possession (DIP)*. The DIP has the same powers as the trustee but also has the power to operate the business during the bankruptcy proceeding. The court may appoint a trustee in a Chapter 11 proceeding only upon a showing of cause (fraud, dishonesty, or gross mismanagement by the debtor or its managers). Even if a trustee is not appointed, however, the court may appoint an examiner to investigate the Chapter 11 debtor's financial affairs.

Administration of Claims

Unsecured creditors must file a *proof of claim* stating the amount of their claim in a form provided by the court within time periods established by the jurisdiction in which the case is filed. The proof of claim requirement in a Chapter 11 bankruptcy is deemed satisfied for claims listed in the debtor's schedules as uncontested and undisputed (unless the creditor wishes to claim more than the debtor acknowledges is due).

A creditor's claim must be allowed by the court before a creditor is permitted to participate in the bankruptcy estate. Except for personal-injury or wrongful-death claims, which are triable to a jury in the district court, disputed claims are

normally resolved through a hearing before the bankruptcy judge. If a resolution would unduly delay administration of the bankruptcy case (such as when a claim is contingent upon a future event), the bankruptcy court will estimate the allowable amount of certain claims.

Some claims are limited in bankruptcy. For example, a terminated employee's damages claim may not exceed one year's compensation. Unless the estate can pay all claims in a liquidation, postpetition interest is allowed only to secured creditors that can recover it from their collateral. Perhaps most significantly, Section 502(b)(6) of the Bankruptcy Code limits the amount of damages a landlord may collect from a bankrupt tenant (who rejects the lease) to the amount of unpaid back rent equal to the greater of (1) one year's rent or (2) 15 percent of the rent for the remaining term, not to exceed three years' rent. Many debtors holding a large number of unfavorable long-term leases have filed for bankruptcy to take advantage of this provision.

In *In re El Toro Materials Company, Inc.*,³⁹ the U.S. Court of Appeals for the Ninth Circuit held that tort damages claimed by a landlord are not subject to the Section 502(b)(6) cap. El Toro leased property from Saddleback Community Church, paying \$28,000 per month in rent. When El Toro filed for bankruptcy and rejected the lease, Saddleback brought an adversary proceeding against El Toro for \$23 million in damages, alleging that El Toro left a million tons of wet clay "goo," mining equipment, and other materials on the property.

The court analyzed the key issues as follows:

The structure of the cap—measured as a fraction of the remaining term—suggests that damages other than those based on a loss of future rental income are not subject to the cap. It makes sense to cap damages for lost rental income based on the amount of expected rent. Landlords may have the ability to mitigate these damages by re-leasing or selling the premises, but will suffer injury in proportion to the value of their lost rent in the meantime. In contrast, collateral damages are likely to bear only a weak correlation to the amount of rent: A tenant may cause a lot of damage to a premises leased cheaply, or cause a little damage to premises underlying an expensive leasehold.

Bankruptcy Estate

Because the primary role of the trustee is to collect and distribute the property of the estate, it is essential to know what constitutes that property. The basic rule is set forth

in Section 541(a) of the Bankruptcy Code, which provides that the bankruptcy estate comprises "all legal or equitable interests of the debtor in property as of the commencement of the case."⁴⁰

Exempt property, which is excluded from the bankruptcy estate, is intended to provide for the debtor's future needs and generally includes, among other things, an interest up to a specified amount in equity in property used as a residence and burial plots (the homestead exemption); one motor vehicle; certain household goods and personal items; some special deposits or cash; tools or books used in the debtor's trade; any unmatured life insurance policy; professionally prescribed health aids; a number of government benefits, including Social Security, veteran's, disability, unemployment compensation, and public assistance benefits; alimony or support payments; and personal-injury awards.

Subject to a cap on homestead exemptions in limited circumstances, which was added by the BAPCPA (discussed later in this chapter), the Bankruptcy Code also allows states to enact their own exemptions. Some states give debtors the option to choose between federal and state exemptions, while others require debtors to follow state law. State exemptions are frequently higher than under the federal exemption scheme. For example, Florida, Iowa, Kansas, South Dakota, Texas, and the District of Columbia have unlimited homestead exemptions.

The Bankruptcy Code permits debtors to nullify involuntary liens that impair their allowable exemptions. They can even invalidate consensual liens on most household items, tools of the trade, or health aids, unless the secured creditor financed the debtor's purchase of the property or was given possession of it. To take full advantage of the exemptions, debtors often convert assets from nonexempt to exempt forms before filing their bankruptcy cases. They must be careful not to take steps that could be considered fraudulent, however, because fraudulent conduct could jeopardize their right to discharge existing debts.

Distribution of Property

A secured creditor's claim to the debtor's estate has priority over unsecured creditors' claims to the extent that the property of the estate consists of the creditor's collateral. The statutory priority of unsecured claims is as follows:

1. Alimony and child support.
2. Fees and expenses of administering the estate, including court costs, trustee fees, attorneys' fees, appraisal fees, and other administrative costs.

39. Saddleback Valley Community Church v. El Toro Materials Company, Inc. (*In re El Toro Materials Company, Inc.*), 504 F.3d 978 (9th Cir. 2007).

40. 11 U.S.C. § 541(a)(1).

3. Claims arising in the ordinary course of business after the date of the filing of the petition but before the earlier of (a) the appointment of the trustee or (b) the issuance of the order for relief.
4. Unsecured claims for a specified amount per employee in wages, salary, or commissions earned by each employee of the debtor within the 180 days immediately preceding the filing of the petition (all other salary claims are treated as a claim of a general unsecured creditor).
5. Unsecured claims for up to a specified amount per employee for contributions to employee benefit plans based on services performed within 180 days immediately preceding the filing of the petition.
6. Claims up to a specified amount for each farmer or fisher against debtors who operate or own facilities for storing grain or processing fish.
7. Consumer claims up to a specified amount for deposits with or prepayments to the debtor for undelivered property or the purchase of services that were not delivered or provided by the debtor.
8. Certain tax obligations owed by the debtor.
9. Claims of general unsecured creditors.

Each class must be paid in full before any lower class is paid. If a class cannot be paid in full, the claims of that class are paid proportionately. If anything is left after all of the creditors above are paid in full, the balance is returned to the debtor.

PRINCIPLES APPLICABLE TO ALL BANKRUPTCIES

GOOD FAITH REQUIREMENT

A debtor does not have to show it is insolvent to file for bankruptcy. Some debtors may face a liquidity crisis that cannot be untangled without judicial intervention. A notable example of this is the bankruptcy filing by Texaco after a jury in Texas awarded Pennzoil more than \$10 billion (see the “Inside Story” in Chapter 7).

On the other hand, courts have resisted the use of bankruptcy when they perceive that it is being used in bad faith. For example, in *In re Integrated Telecom Express, Inc.*,⁴¹ the board of directors of Integrated Telecom authorized commencement of a Chapter 11 proceeding if the company’s negotiations with its landlord to reduce its long-term lease obligations proved unsuccessful. The board then instructed

management to send the landlord a letter threatening that the company would file a Chapter 11 bankruptcy case and avail itself of the landlord cap if the landlord refused to settle. When the landlord refused to settle, Integrated Telecom filed a Chapter 11 petition and moved to reject the lease. According to its schedules, Integrated Telecom had \$105.4 million in cash, \$20 million of insurance to cover any liability associated with a pending class-action securities lawsuit, and other assets valued at \$1.5 million. On the liability side, the landlord filed a proof of claim asserting that the present value of the company’s remaining lease obligations (without applying the landlord cap) was approximately \$26 million; Integrated Telecom’s bankruptcy schedule listed other liabilities totaling approximately \$430,000 (the class-action plaintiffs in the securities litigation sought a total of \$93.24 million in damages, but Integrated Telecom disputed those claims and amounts).

Although the U.S. Court of Appeals for the Third Circuit noted that the bankruptcy court and the district court had concluded that Integrated Telecom faced financial distress, it did not see how bankruptcy offered Integrated Telecom any relief from this distress because it could not identify any value for Integrated Telecom’s assets that was threatened outside of bankruptcy by the collapse of Integrated Telecom’s business model, but that could be preserved or maximized in an orderly liquidation under Chapter 11. The court then found that although Integrated Telecom’s desire to take advantage of the cap on landlord claims provided by Section 502(b)(6) did not establish bad faith, it also did not, in and of itself, establish good faith. As a result, the court reversed the district court’s denial of the landlord’s motion to dismiss and remanded the case to the bankruptcy court with instructions to dismiss Integrated Telecom’s Chapter 11 petition.

AUTOMATIC STAY

The most immediate and dramatic advantage of any bankruptcy filing is the *automatic stay*, which instantly suspends most litigation and collection activities against the debtor, its property, or that of the bankruptcy estate. Many debtors file for bankruptcy on the eve of foreclosure to forestall the loss of crucial assets; others file primarily to stave off litigation or collection activities. The latter group includes such notable bankruptcy refugees as Dow Corning (facing 19,000 lawsuits involving 400,000 women claiming immune-system illness caused by silicon breast implants), Johns-Manville (sued for thousands of asbestos-related injuries), and Texaco (unable to post a bond while appealing the multibillion-dollar judgment against it for interfering with Pennzoil’s efforts to acquire Getty Oil).

41. 384 F.3d 108 (3d Cir. 2004), cert. denied, 545 U.S. 1110 (2005).

There are only a few exceptions to the automatic stay. Three of these are the most notable. First, several types of securities and similar financial transactions are not stayed. Second, the automatic stay does not stay the commencement or continuation of a criminal action against the debtor. Third, it does not stay any action to enforce a government's police or regulatory power. These exceptions are narrowly interpreted.

The U.S. Supreme Court has ruled that a bank could, without violating the automatic stay, put a temporary administrative hold on the portion of the bankrupt debtor's checking account that the bank claimed was subject to setoff.⁴² The bank refused to pay withdrawals from the bankrupt's account that would reduce the balance below the sum the bank claimed was due on its loan to the bankrupt party. The bank then filed a motion for relief from the automatic stay in the bankruptcy court. The Court acknowledged that the bankruptcy filing gives rise to an automatic stay of various types of activities by creditors, including "the setoff of any debt owing to the debtor that arose before the commencement of the [bankruptcy case] against any claim against the debtor." The Court held that a setoff has not occurred, however, until three steps have been taken: (1) a decision to effectuate a setoff, (2) some action accomplishing the set-off, and (3) a recording of the setoff. Thus, there is no setoff unless the creditor intends to permanently settle accounts.

The Court reasoned that a bank account is not money belonging to the depositor but rather represents a promise by a bank to pay the depositor an amount equal to the money in the account. Therefore, by imposing an administrative hold, the bank does not exercise dominion over the bankrupt's property. Rather, the hold represents a temporary refusal of a creditor to pay a debt that is subject to setoff against a debt owed by the bankrupt entity.

The automatic stay prevents creditors from enforcing a clause in their agreements, referred to as an *ipso facto clause*, that expressly permits termination in the event of a bankruptcy filing. For example, in *In re Computer Communications, Inc.*,⁴³ Codex Corporation had entered into a joint

42. *Citizens Bank of Md. v. Strumpf*, 516 U.S. 16 (1995).

43. 824 F.2d 725 (9th Cir. 1987).

► ETHICAL CONSIDERATION

In *In re Computer Communications, Inc.*, CCI extended its agreement with Codex only two days before filing for bankruptcy. It seems clear that Codex would not have renewed the agreement if it had known that CCI was going to declare bankruptcy. The managers of CCI locked in a favorable contract by concealing their intentions from Codex. Was the CCI managers' conduct unethical or just good business?

marketing and development agreement with Computer Communications, Inc. (CCI), pursuant to which Codex agreed to make minimum quarterly purchases of equipment and software from CCI. After CCI filed a Chapter 11 petition, Codex notified CCI that it was terminating the agreement pursuant to an *ipso facto* clause in the agreement. CCI sued in bankruptcy court, alleging that Codex's termination of the agreement violated the Bankruptcy Code's automatic stay provision. The bankruptcy court held that Codex had willfully violated the automatic stay and awarded general damages of \$4,750,000 (apparently based on loss of projected profits), plus \$250,000 in punitive damages, and the U.S. Court of Appeals for the Ninth Circuit affirmed.

By stopping creditors in their tracks, the automatic stay provides a breathing spell that can enable a Chapter 11 debtor to focus on operating the business and reorganizing its financial affairs. The stay is not a permanent shield, however. The court may authorize creditors to resume collection efforts, most often foreclosure on collateral, for cause—that is, if there is inadequate protection of the creditors' property interests, such as when the value of the collateral declines with use and no replacement security is provided. Relief from the stay will also be granted if the debtor has no equity in property and a stay is not necessary for effective reorganization. Such relief from the automatic stay becomes more likely as time passes without progress toward reorganization. The automatic stay is rarely lifted to permit garden-variety litigation against the debtor, however.

When economic conditions worsen, workouts in the shadow of foreclosure become more common. Generally, bankruptcy courts are wary of enforcing prepetition waivers of the automatic stay for the benefit of one secured creditor on the basis that the debtor's other creditors have a right to be heard and to object to a grant of such relief. In the following case, the bankruptcy court considered whether to enforce a prebankruptcy waiver of the automatic stay that was included in a forbearance agreement related to a real estate workout.

► ETHICAL CONSIDERATION

Would it be ethical for the manager of a company about to file bankruptcy to withdraw all company funds from accounts at banks to which the company owes money to avoid having an administrative hold imposed on the accounts?

A CASE IN POINT**CASE 24.2*****IN RE BRYAN ROAD***

UNITED STATES BANKRUPTCY COURT
FOR THE SOUTHERN DISTRICT
OF FLORIDA

389 B.R. 297 (BANKR.
S.D. Fla. 2008).

SUMMARY

FACTS The lender, who had commenced a judicial foreclosure proceeding against its borrower, the owner of a 210 "dray stack" boat storage facility, was awarded final judgment setting a date for the foreclosure sale. On the morning of the foreclosure sale, however, the lender agreed to continue the foreclosure sale for two months in order to give the owner time to refinance and save the project. In exchange, the lender required the owner to include a provision in the forbearance agreement whereby the lender would be relieved from the automatic stay in the event of bankruptcy. When the hoped-for financing fell through, the owner filed a Chapter 11 bankruptcy just before the rescheduled foreclosure sale. The lender filed a motion for relief from the stay, asking the bankruptcy court to enforce the prebankruptcy relief from stay waiver in the forbearance agreement. The motion was appealed by the owner as well as the official committee of unsecured creditors and junior lienholders.

ISSUE PRESENTED Is a prebankruptcy waiver of the automatic stay in a prepetition work-out enforceable?

SUMMARY OF OPINION In its decision on the lender's relief of stay motion, the bankruptcy court noted that prepetition waivers of the automatic stay will be given "no particular effect as part of initial loan documents," but will be given "the greatest effect if entered into during the course of prior (and subsequently aborted) Chapter 11 proceedings." In considering whether stay relief should be granted based on a prepetition waiver, the court looked at four nonexclusive factors: (1) the sophistication of the party making the waiver; (2) the consideration for the waiver, including the creditor's risk and the length of time the waiver covers; (3) whether other parties are affected, including unsecured creditors and junior lienholders; and (4) the feasibility of the debtor's plan. The court found that the first two factors had been met. It also noted the existence of junior lienholders and approximately \$1 million of disputed unsecured claims. However, because the court also found that the debtor's plan was not feasible, it concluded that there was likely no value for the unsecured creditors in the boat storage project and that the junior lienholders could protect their interests under state law. Putting these factors together, the bankruptcy court concluded that the forbearance agreement, including the prebankruptcy waiver of the automatic stay, should be enforced.

RESULT The bankruptcy court lifted the automatic stay.

EXECUTORY CONTRACTS AND LEASES

Sections 365(a) and 365(f) give the trustee (or debtor-in-possession in the case of a Chapter 11 reorganization) the option of assuming, assigning, or rejecting most prebankruptcy *executory contracts*—that is, contracts that have not yet been fully performed—or unexpired leases. Assumption preserves the debtor's rights and duties under the existing relationship, whereas rejection terminates them. Even if a contract or lease contains contractual restrictions barring assignment, any assumed contract or lease can be sold and assigned intact if the prospective assignee's future performance is adequately assured.

In general, debtors will reject unfavorable contracts and assume favorable ones. For example, if an executory contract or unexpired lease is a valuable asset, the DIP will want to assume it so that it can be preserved for the reorganizing

business or sold at a profit. Assumption is advantageous when it allows the debtor to sell or buy goods at a favorable price or to lease space or equipment at better-than-market rents. Even a contract or lease in default can be assumed, provided that the debtor cures and compensates for the breach and gives adequate assurance of future performance. Once assumed, the contract or lease obligations are allowable as administrative expenses, as with other authorized postpetition transactions.

On the other hand, by rejecting a disadvantageous contract or lease, the debtor can escape burdensome performance obligations. The nondebtor party to the contract or lease will be deemed to have a prepetition damages claim for breach and thus will be treated like others whose claims arose from prebankruptcy transactions. If a DIP does not include an executory contract in its reorganization plan, the contract is deemed to have been rejected.

Section 365(c) provides an exception to the debtor's usual right to assume, assign, or reject executory contracts and unexpired leases. It provides that the debtor may not assume or assign an executory contract or unexpired lease if "applicable laws excuse a party . . . to such contract or lease from accepting performance from or rendering performance to an entity other than the debtor" unless the other party consents to the assignment or assumption.

Intellectual Property Licenses

Bankruptcy courts have taken different approaches to the question of whether intellectual property (IP) licenses are executory contracts that are assumable under Section 365(a) and assignable to a third party under Section 365(f) even if the IP license expressly prohibits assignment without the licensor's consent. The issue arises in the context of nonexclusive and exclusive copyright, patent, trademark, and know-how licenses. Certain, but not all, courts treat a debtor's election to assume a license and perform it itself differently from an election to assume a license and then assign it to a third party.

In the early cases, courts tended to permit assumption and assignment of both exclusive and nonexclusive IP licenses. In more recent decisions, however, certain courts have invoked Section 365(c) to limit the ability of debtors to assign or even assume IP licenses without the licensor's consent.

Assumption of Licenses The U.S. Courts of Appeals for the First and Fifth Circuits allow a debtor to assume an IP license that is subject to Section 365(c), even over the objection of a nondebtor licensor, where the debtor licensee does not actually intend to assign the license to a third party. This approach is called the "actual test."⁴⁴ On the other hand, the U.S. Courts of Appeals for the Third, Fourth, and Ninth Circuits have held that a debtor may not assume an IP license subject to Section 365(c) where applicable nonbankruptcy law prohibits assignment without consent, even if the debtor has no actual intention to assign its license. Once the license is assumed, these courts create a "hypothetical" third party to whom the license will be assigned. For this reason, the analysis is referred to as the "hypothetical test."

Despite this predominantly licensor-favorable backdrop, the courts in several recent decisions have sided with Chapter 11 debtors. This emerging trend is particularly

noteworthy because two of the decisions came from the Southern District of New York, where many of the largest Chapter 11 bankruptcy cases (including Enron, WorldCom, Delphi, Dana, Northwest Airlines, and Delta Airlines) have been filed. In *In re Footstar, Inc.*,⁴⁵ a case that did not involve IP licenses, the bankruptcy court for the Southern District of New York adopted a new "literal" reading of Section 365(c). Noting that the section's use of the word "trustee" does not include the debtor or the DIP, the court held that the right of the nondebtor party to object to assignment does not by itself affect the right of the DIP (as opposed to a trustee) to assume an executory contract. In January 2007, the bankruptcy court, faced with the same issue, expressly rejected the "hypothetical test" and embraced the *Footstar* decision as "consistent in outcome with the decisions of" those courts following the "actual" theory.⁴⁶

Assignment of Copyright Licenses At least one bankruptcy court has held that a nonexclusive copyright license is nonassignable in a bankruptcy proceeding in the absence of consent by the licensor or express contractual provisions to the contrary.⁴⁷ Authorities differ on the assignability of exclusive copyright licenses. One school of thought holds that exclusive copyright licenses are freely assignable; this would suggest that assignment is generally appropriate even if the copyright license expressly prohibits assignment.⁴⁸ At least one court has held that an exclusive copyright license is freely assignable without the licensor's consent, notwithstanding a nonassignability provision, even though applicable nonbankruptcy law is unsettled with respect to the assignability of exclusive copyright licenses.⁴⁹ In contrast, the highly regarded treatise *Nimmer on Copyright* concludes that a copyright licensor may restrict assignment of even an exclusive copyright license by express contractual restrictions; this approach would suggest that assignment is appropriate unless there is an express contractual restriction to the contrary.⁵⁰ A third school of thought holds that Congress did not grant exclusive licensees the right to freely transfer their licenses. This approach would suggest that assignment should be prohibited unless consent is first obtained. As a result, how a bankruptcy court will rule if a

Mirant Corp.*, 440 F.3d 238 (5th Cir. 2006).

debtor seeks to assume and assign an exclusive copyright license will depend on which authority the court chooses to follow.

Assignment of Patent Licenses At least one bankruptcy court has held that nonexclusive patent licenses are not assignable under Section 365(c) without the consent of the licensor.⁵¹ Section 365(c) has not yet been applied to an exclusive patent license, so it is difficult to predict how a bankruptcy court will rule when presented with a debtor licensee who seeks to assume and assign an exclusive patent license.

Assignment of Trademark Licenses Case law appears to support the proposition that trademark licenses are assignable without consent, although there have been no recent opinions offering substantive analysis regarding this issue.⁵² In 2005, however, Billy Blanks of the Billy Blanks® Tae Bo® fitness program successfully moved the U.S. District Court for the District of Nevada to compel rejection of its trademark license on the basis that contracts that cannot be assigned by the debtor without the nondebtor party's consent under the hypothetical test cannot be assumed by the debtor either.⁵³ Although the decision was appealed to the U.S. Court of Appeals for the Ninth Circuit, the debtor, N.C.P. Marketing, reached a settlement of the case prior to the oral argument. However, N.C.P. Marketing and certain other parties filed an objection to the trustee's motion for approval of the settlement, and in February 2008, the bankruptcy court denied the motion for approval and instead approved a sale of the appeal rights and certain other assets to the objecting parties. As a result, there may soon be a Ninth Circuit decision addressing whether trademark licenses can be assumed in bankruptcy.

Assignment of Know-How Licenses There do not appear to be any cases that have applied Section 365 to the assignability of know-how licenses.⁵⁴

SALE OF PROPERTY

Bankruptcy can facilitate favorable sales of assets other than contracts or leases. For example, if partition or division of property jointly owned by the debtor and another is impractical and a separate sale of the debtor's undivided interest would yield significantly less for the estate, the debtor can

sell both interests and disburse the net proceeds proportionately, as long as the resulting benefit would outweigh the detriment to the other owner. Similarly, the debtor may sell property free and clear of liens or other interests (which normally will be shifted to the proceeds) if the price will exceed all encumbrances or if the nondebtor's interest is in bona fide dispute. Thus, although the debtor's sale before bankruptcy might be stymied, a bankruptcy proceeding can sometimes break the logjam and allow the debtor to pass clear title.

This cleansing power of bankruptcy extends beyond specific property. It can be the key to successful reorganization through the sale of the entire business or through new capital infusions. When a business is troubled and its future is in doubt, potential investors may shy away, despite the venture's intrinsic worth. Similarly, the price a prospective going-concern purchaser will pay may be seriously depressed by the fear that acquiring all of the assets will subject the buyer to the debtor's obligations under doctrines of successor liability (discussed in Chapter 10). The same investors or buyers are more willing to recognize the true value of the debtor's business if the transaction proceeds under a confirmed plan or other court order that quantifies or cuts off preexisting claims. Subject to possible constitutional due process protections for unknown future claimants, bankruptcy can dispel uncertainties that would otherwise prevent the debtor from realizing the equity in its business.

AVOIDING POWERS

The Bankruptcy Code provides trustees with certain *avoiding powers* that they can use to invalidate or reverse certain prebankruptcy transactions that would unfairly benefit the debtor or certain creditors.

FRAUDULENT CONVEYANCES

Section 548 of the Bankruptcy Code gives the court the power to avoid *fraudulent conveyances*. In general, these arise from transactions that occurred within a year before bankruptcy that (1) are actually intended to hinder, delay, or defraud creditors or (2) provide less than reasonably equivalent value in exchange and leave the debtor insolvent or without sufficient capital to engage in business or to pay expected debts. Thus, a leveraged buyout that leaves a company with insufficient capital and high debt leverage after the payouts to equity holders may be voidable as a fraudulent conveyance.⁵⁵ Most states have roughly parallel fraudulent transfer laws, but the

Bankruptcy Code's version may be broader. For example, the state laws may be inapplicable to distressed foreclosure sales that are noncollusive and procedurally proper; bankruptcy law has been applied to invalidate such sales if the proceeds are less than 70 percent of the collateral's fair market value. Thus, although a good faith buyer should have a lien for the value given (which is usually the amount of the secured debt), the bankruptcy trustee may be able to reverse the foreclosure and recapture equity. However, in *BFP v. Resolution Trust Corp.*,⁵⁶ the U.S. Supreme Court affirmed the dismissal of a fraudulent transfer proceeding by a Chapter 11 debtor, holding that the price received at a mortgage foreclosure sale conclusively established the "reasonably equivalent value" of the mortgage property as long as the requirements of the state's foreclosure law were met.

Preferences

Preferences are transfers to (or for the benefit of) creditors on account of antecedent (that is preexisting) debts that are made from an insolvent debtor's property within ninety days before bankruptcy and that enable the creditors to receive more than they would through a Chapter 7 liquidation. (The preference window is enlarged to a year before bankruptcy if the benefited creditor is an *insider*—that is, someone in a position to control the debtor's conduct, such as a relative, partner, director, officer, or substantial shareholder.) Preferences are avoidable in bankruptcy to discourage creditors from dismembering a troubled business in their race for its assets and to foster equal distribution among similarly situated claimants. Subject to limited exceptions, the bankruptcy court can recover voluntary or involuntary preferential payments and strip away preferential security interests or collection liens, all for the benefit of the bankruptcy estate.

A payment is a preference only if it is for an antecedent debt. To avoid penalizing creditors that continue to deal in a customary fashion with the debtor during its slide into bankruptcy, current payments in the ordinary course of business cannot be recovered as preferences.⁵⁷ In *Union Bank v. Wolas*,⁵⁸ the U.S. Supreme Court held that payments on long-term debt, as well as payments on short-term debt, may qualify for the ordinary course of business exception to the trustee's power to avoid preferential transfers if (1) the loan was incurred in the ordinary course of the debtor's business and of the bank's business, (2) the payments were made in the ordinary course of business, and (3) the payments were made according to ordinary business terms.

56. 511 U.S. 531 (1994).

57. 11 U.S.C. § 547(c)(2).

58. 502 U.S. 151 (1991).

In a 2007 decision, the U.S. Court of Appeals for the Ninth Circuit held that even a first-time transaction can qualify for the ordinary course of business defense to preferences. The Ninth Circuit set forth the following special rule when a first-time debt is involved:

[W]hen we have no past debt between the parties with which to compare the challenged one, the instant debt should be compared to the debt agreements into which we would expect the debtor and creditor to enter as a part of their ordinary business operations. . . . [A] first-time debt must be ordinary in relation to this debtor's and this creditor's past practices when dealing with other, similarly situated parties. Only if a party has never engaged in similar transactions would we consider more generally whether the debt is similar to what we would expect of similarly situated parties, where the debtor is not sliding into bankruptcy.

Having established the new test, the court reversed the grant of summary judgment to the defendant in this case because it found the proof presented was inadequate.⁵⁹

The *earmarking doctrine*, whereby a payment to a pre-existing creditor may not be recoverable as a preference if the funds for the repayment were provided by some other creditor and not by the debtor, can sometimes be asserted as a defense to preference claims. For example, the U.S. Court of Appeals for the Ninth Circuit has held that the earmarking defense applies when a lender agrees to pay a specific creditor, even when the lender does not pay the creditor directly, but instead advances the funds to the debtor for payment to the selected creditor.⁶⁰

Setoff Rights

A creditor exercising a setoff right automatically deducts what the debtor owes the creditor from what the creditor owes the debtor. By analogy to the preference provision, creditors who exercise setoff rights within ninety days before bankruptcy can be required to disgorge such offsets to the extent that they decreased their obligations to the debtor within the ninety-day period.

Statutory Liens

The bankruptcy court can avoid certain statutory liens, including those that first arise upon insolvency or that would not have been enforceable against a bona fide purchaser of the encumbered property when the bankruptcy was filed.

59. *In re Ahaza Sys., Inc.*, 482 F.3d 1118 (9th Cir. 2007).

60. *In re Superior Stamp & Coin Co.*, 223 F.3d 1004 (9th Cir. 2000).

This prevents state law from creating hidden priorities that would distort the federal bankruptcy distribution scheme.

Collective Bargaining Agreements

The rules for avoiding collective bargaining agreements (CBAs) changed after Frank Lorenzo, then CEO of Continental Airlines, used Chapter 11 to avoid the company's CBAs. In the early 1980s, when labor rejected his demands for sizable wage concessions, Lorenzo took Continental into a Chapter 11 proceeding and repudiated its CBAs. Continental emerged from bankruptcy as a nonunion carrier with a reduced wage structure.

Organized labor protested the use of the Bankruptcy Code by Lorenzo (and, increasingly, others) to break unions. In 1984, Congress responded by enacting Section 1113 to the Bankruptcy Code, which sets forth the following procedural prerequisites to a debtor's rejection of a CBA: (1) the debtor must make a proposal to the union to modify the CBA that incorporates changes necessary to permit reorganization; (2) the proposal must be based on the most complete and reliable information available at the time; (3) the debtor must provide the union with such relevant information as is necessary to evaluate the proposal; (4) the debtor must meet at reasonable times with the union between the time of making the proposal and the time of the hearing on rejection; and (5) at the meetings, the debtor must confer in good faith in attempting to reach mutually satisfactory modifications of the CBA.

Steps 1 through 3 must be completed prior to filing a motion to reject the CBA, but steps 4 and 5 can take place after the motion is filed. If the procedural steps are satisfied, the bankruptcy court will consider the following substantive elements in deciding whether to reject the CBA: (1) the proposed modifications must be necessary to allow the debtor to reorganize and must be submitted in good faith; (2) the proposed modifications must assure that all creditors, the debtor, and all affected parties are treated fairly and equitably; (3) the union must have refused to accept the proposal without good cause; and (4) the balance of the equities must favor rejection.

The Section 1113 requirements have been applied differently by different courts. For example, the U.S. Court of Appeals for the Third Circuit has held that the standard to measure "necessary modifications" to the CBA encompasses only the modifications necessary for the debtor's short-term survival or to prevent liquidation.⁶¹ The U.S. Court of Appeals for the Second Circuit, however, has held that satisfaction of the necessity requirement requires

61. *Wheeling-Pittsburgh Steel v. United Steelworkers*, 791 F.2d 1074 (3d Cir. 1986).

proof that the modifications sought are "necessary, but not absolutely minimal, changes that will enable the debtor to complete its reorganization successfully."⁶²

In a case involving Northwest Airlines, the bankruptcy court for the Southern District of New York found that Northwest had satisfied all of the procedural requirements of Section 1113 for rejection of the CBA. Turning to the substantive elements, the court found the CBA could be rejected because (1) the necessity for change was evidenced by the undisputed fact that Northwest could not reorganize if its labor costs remained unchanged, (2) the union lacked good cause because the union had voted down the debtor's proposal despite its acceptance by union leadership, and (3) the balance of the equities favored rejection of the CBA.⁶³ In a case involving Delta Air Lines, another bankruptcy court in the Second Circuit also approved the rejection of a CBA.⁶⁴

CHAPTER 11 REORGANIZATIONS

Chapter 11 is designed for reorganizing troubled businesses, from single-asset limited partnerships and joint ventures, such as Dow Corning, the manufacturer of silicon breast implants, to huge publicly held corporations, such as the oil giant Texaco, the pharmaceutical manufacturer A.H. Robins, the retailer Kmart, and the investment bank Lehman Brothers. Chapter 11 has two primary objectives: (1) to rehabilitate a troubled debtor and (2) to maximize the return to creditors. It has the added benefit of maintaining jobs and preserving other economic benefits to the community. The goal of Chapter 11 is to reorganize the debtor with a new capital structure so that it can emerge from bankruptcy as a viable concern. Chapter 11 is available to individuals, partnerships, corporations, unincorporated associations, and railroads. It is not available to banks, savings and loan associations, credit unions, insurance companies, stockbrokers, or commodity brokers. The majority of Chapter 11 proceedings are filed by corporations.

The treatment of a Chapter 11 debtor's creditors and owners and the future of its business are set forth in a plan

developed by one or more of the parties. If the plan meets the statutory requirements and is confirmed by the court, it becomes a master contract that redefines the legal relationships among all who have claims against (or interests in) the debtor; it binds even those who do not consent to its terms.

OBTAINING CREDIT

Often the DIP's first priority is to stay in business and continue (or resume) providing goods and services to customers at a profit. Yet, as observed at the outset, poor cash flow often paves the way to Chapter 11. Although the bankruptcy system does not manufacture money, it may enhance or create some funding possibilities.

Customers' Payments

The debtor's liquidity crisis sometimes stems from a secured lender's insistence that all encumbered customer payments be applied to the loan, leaving little or no cash for operations. If a bankruptcy petition is filed, customer payments on prebankruptcy accounts will remain the lender's cash collateral, but the court may authorize the DIP to use the funds if the lender's position is adequately protected. Such protection might be found in surplus collateral that gives the lender an ample equity cushion or by granting the lender a substitute lien on postpetition inventory and receivables. Of course, the court may underestimate the need for protection, and this risk may prod an otherwise recalcitrant lender to negotiate terms for use of its cash collateral.

Extension of Unsecured Credit

Filing for reorganization may encourage suppliers (and perhaps other lenders) to extend unsecured credit. During the debtor's prebankruptcy decline, conventional trade terms (such as payment due thirty days after invoice) often become unavailable as the debtor falls behind on accounts payable and word of its shaky condition spreads. Fearful that they may recover only pennies on the dollar from credit sales if the debtor collapses, vendors begin requiring cash on delivery or even in advance, which aggravates the debtor's problems. The same suppliers, particularly those that are sophisticated and value the debtor's patronage most, may be willing to resume regular credit transactions with the DIP.

Flexibility returns because postpetition debts incurred in the ordinary course of doing business are allowable as administrative expenses, which are accorded priority over virtually all other unsecured claims. Thus, vendors that extend post-petition credit expect full payment on those transactions. In so doing, they may strengthen the debtor's business and promote a greater recovery on their prepetition claims.

Secured Borrowings

The debtor's ability to borrow on a secured basis can be similarly enhanced in a Chapter 11 reorganization, mainly because collateral may be more available. For example, assets acquired after the bankruptcy petition is filed (other than those derived directly from prebankruptcy collateral) will not be subject to prepetition security agreements designed to cover such after-acquired property. Therefore, a debtor that can produce inventory or generate accounts receivable after the bankruptcy filing may have enough unencumbered property to support new secured loans. Moreover, if credit is not otherwise available, the court can authorize borrowing that is secured by a *priming lien*—a lien that is senior to a previously granted security interest—provided that the preexisting lienholder is adequately protected. Thus, for example, a first mortgage on raw land might be involuntarily subordinated to a new lien that will secure a DIP-developer's construction financing.

Court Oversight

On occasion, the bankruptcy court's oversight alone may help the debtor arrange new secured loans. By obtaining court approval after giving appropriate notice to other creditors, lenders can virtually immunize their repayment rights and security interests from the attacks by other creditors that sometimes undermine prebankruptcy loans.

Turnover of Debtor's Property

Though usually less expeditious than borrowing, other bankruptcy tools can also help the DIP obtain funds for operations and enhance the value of the estate. Almost anyone can be compelled to turn over property of the estate that could be used by the DIP. Thus, if adequate protection is provided, a lender that has frozen the debtor's deposit accounts at the banking institution or a taxing authority that has seized them may be required to relinquish these funds.

THE PLAN

The debtor has the exclusive right to file a plan of reorganization with the bankruptcy court within the first 120 days after the date of the order for relief. The debtor also has the right to obtain creditor approval of the plan within the first 180 days after the date of the order. The court has discretion to extend these time periods in complex cases. After that, any party may propose a plan.

All plans divide claims and equity interests into separate classes according to their legal attributes. For example, lienholders' claims are classified by collateral and rank (often resulting in one claim per class, because each lien confers distinct rights and usually secures only one claim). Relevant

priority claims (such as wages or consumer deposits) are put into discrete classes, separate from general unsecured claims. Holders of preferred shares are grouped separately from common shareholders.

A plan must also prescribe treatment for the claims and interests in each class. Some plans simply extend the time for repaying debts; others reduce the amounts payable. A reduction in the amount payable is known as a *composition*. In many cases, creditors exchange all or part of their claims for preferred or common stock or other ownership interests in the business, thereby diluting or extinguishing the rights of the prebankruptcy shareholders. Sometimes the entire business will be sold free of claims, with creditors dividing the sale proceeds. A plan can even call for liquidation and distribution comparable to the Chapter 7 process (to be discussed later in this chapter). Unless they agree otherwise, priority claimants usually are entitled to full payment when the plan becomes effective, except that prepetition unsecured taxes may be paid in installments over six years from the assessment date, with interest at the market rate.

In addition, the plan must explain the intended means for its execution. Plans often provide for payments from cash on hand, future earnings, asset sales, new capital contributions, or some combination of sources.

CONFIRMATION

To be confirmed, a plan must meet numerous statutory requirements. If these requirements are met and all impaired classes accept the plan, the plan should be confirmed. Under certain circumstances, a plan can be confirmed over the objection of creditors.

General Requirements

Some of the less technical requirements are discussed below.

Feasibility The plan must be feasible. There is no point in replacing the debtor's existing obligations with a new set of obligations that the debtor cannot meet.

Best Interests of Creditors Unless accepted unanimously, the plan must pass the *best interests of creditors test*. Dissenters must be given a bundle of rights with a current value at least as great as the distribution they would receive through a Chapter 7 liquidation.

Disclosure Statement Before deciding whether to accept the plan, creditors and shareholders are entitled to receive a disclosure statement that the court has found contains adequate information to enable them to make an informed

judgment. This disclosure process largely displaces otherwise applicable laws and regulations governing the issuance and sale of securities, including the requirements of the Securities Act of 1933, described in Chapter 22.

Impaired Claims If a plan impairs any class of claims, it cannot be confirmed unless at least one impaired class accepts it (excluding favorable votes cast by insiders). Claims are considered *impaired* if the plan does not provide for full cash payment on its effective date and if it alters the creditors' legal, equitable, or contractual rights in any way (except by curing defaults and reinstating the maturity of the claim).

Acceptance A creditor class accepts the plan if the affirmative ballots constitute a simple majority and represent two-thirds of the total claim amounts of those voting. An equity class accepts if the favorable ballots represent two-thirds of the voted interests.

Cramdown Confirmation

Even though it is rejected by a class, the plan can still be confirmed by a *cramdown*, that is, confirmed over the objections of creditors. A cramdown can occur only if the court finds that the plan does not discriminate unfairly and that it is fair and equitable, and if at least one noninsider, impaired class has voted to accept the plan. Although the phrases "does not discriminate unfairly" and "fair and equitable" both have technical meanings that are open to interpretation, the phrase "fair and equitable" is more frequently the subject of debate. If the rejecting class consists of secured claims, the plan ordinarily can be found fair and equitable only if creditors will retain their liens until they receive full payment in cash of the secured claims. The cash payments must have a present value at least as great as the present value of the collateral. If the debtor elects to retain and use the creditor's collateral, the value of the collateral (and thus the secured claim) is the replacement value, that is, what the debtor would have to pay for comparable property.⁶⁵ For other creditors and equity holders, the plan will be considered fair and equitable only if no class junior to the naysayers will receive anything under the plan or if the rejecting class is to receive value equivalent to immediate payment in full.

Thus, to cramdown a plan that would distribute stock in satisfaction of claims, the proponent must show that the stock will neither overpay nor underpay those who receive it. The value of the stock turns on the going-concern value

65. Assocs. Commercial Corp. v. Rash, 520 U.S. 953 (1997).

of the business, which is often a controversial issue. When classes have not accepted a debt-for-stock plan, the confirmation hearing can easily become a battle among expert witnesses arguing over whether higher or lower multiples or multipliers should be used to capitalize the reorganized debtor's expected earnings, which are themselves subject to competing projections.

Plan Negotiations

Because confirmation by cramdown is both difficult and uncertain, plan proponents frequently try to draft terms that will encourage broad acceptance. For the first 120 days (or for a longer or shorter time that the court may fix), only the debtor can propose a plan. After this exclusivity period expires, any party may propose a plan. Thus, a debtor that does not bargain reasonably may be faced with a competing plan that might be threatened or proposed by a major secured creditor or by the official committee that is appointed in Chapter 11 cases to represent the interests of unsecured creditors. Even if the debtor is the only party proposing a plan, an endorsement from the creditors' committee can be essential to obtain the creditor support necessary to achieve confirmation without a cramdown. Taken together, these dynamics promote negotiation and accommodation among the interested parties. Most successful plans in large Chapter 11 cases reflect such compromises.

DISCHARGE

Confirmation under Chapter 11 can give reorganized debtors a new financial beginning under the plan. Because entities such as corporations or partnerships are not eligible for a discharge under Chapter 7, they will similarly not be discharged under Chapter 11 in the event of a liquidation. If the business is rehabilitated, however, then the debtor entity is liable for preconfirmation claims only insofar as they are expressly preserved by the plan. No bankruptcy discharge, whether under Chapter 11 or otherwise, protects the debtor's co-obligors, such as guarantors or joint tortfeasors. Increasingly, however, courts are enjoining collecting actions against nondebtor parties under the court's general equitable powers pursuant to Section 105(a) of the Bankruptcy Code in order to facilitate the debtor's reorganization. The most frequent example of this occurs in the mass tort bankruptcy.⁶⁶

66. See, e.g., Am. Imaging Servs., Inc. v. Eagle-Picher Indus. Inc., 963 F.2d 855 (6th Cir. 1992); A.H. Robins v. Piccinin, 788 F.2d 994 (4th Cir. 1986); Johns-Manville Corp. v. Asbestos Litig. Group, 40 B.R. 219 (S.D.N.Y. 1984); W.R. Grace & Co. v. Chakarian, 42 Bankr. Ct. Dec. 270 (Bankr. D. Del. 2004).

The use of these Section 105(a) injunctions is the subject of much controversy. The U.S. Courts of Appeals for the Second, Third, Fourth, Sixth, and Seventh Circuits have held that bankruptcy courts have power under Section 105(a) to issue permanent injunctions or third-party releases under certain factual circumstances, while the U.S. Courts of Appeals for the Ninth and Tenth Circuits have not allowed permanent third-party releases under a plan pursuant to Section 105(a). The Fifth Circuit has approved the issuance of third-party injunctions, but only in the case of temporary injunctions.⁶⁷ In addition, Section 524(g) affords the bankruptcy court the power to issue a channeling injunction in asbestos bankruptcies to provide similar injunctive relief to certain third parties, including insurance carriers, whose liability is derivative from the debtor's liability.

WORKOUTS AND PREPACKAGED AND PRENEGOTIATED CHAPTER 11 CASES

Workouts

The high transaction costs and adverse publicity of a Chapter 11 bankruptcy can be disadvantageous for debtors and creditors alike. As a result, the parties often try to negotiate an out-of-court settlement. Such an agreement, called a *workout*, restructures the debtor's financial affairs in much the same way that a confirmed plan would, but it binds only those who expressly consent.

The foundation of any successful workout is trust. Creditors will not sign an agreement that leaves the business in the hands of managers they consider to be dishonest or incompetent. If the debtor has lost credibility by misleading creditors or evading their reasonable inquiries (a common problem), its management may need to recruit and defer to a turnaround specialist in order to restore confidence. Full disclosure and candor are especially important when creditors are agreeing to accept partial payment in full satisfaction of undisputed debts. The debtor's misrepresentation or concealment of material facts probably would invalidate an otherwise binding release.

Workouts are forged in the shadow of bankruptcy, and the parties measure their concessions against the obvious alternative. The debtor and major creditors may be willing to accept something less than unanimity (for example, to preclude dissenters from extorting preferred treatment), but the deal will unravel if there are too many holdouts. When this risk is apparent from the outset, the workout agreement can

67. Theodore L. Freeman & Deanna D. Boll, *Outline of Key Issues for Channeling Injunctions in Favor of Nondebtor Third Parties*, available at <http://www.abiworld.org/committees/newsletters/masstorts/vol4num1/thirdcircuitcourt.pdf>.

be drafted in the form of a Chapter 11 plan. If necessary, and provided the information disclosed in soliciting assent to the agreement was adequate, the debtor can then file for reorganization and use the prepetition votes to transform the work-out into a prepackaged Chapter 11 bankruptcy (discussed below).

Regardless of its terms, a workout agreement cannot stop the debtor from taking refuge in Chapter 11 if the restructured obligations prove too great. The right to file bankruptcy cannot be waived. Sometimes, however, creditors have strategic reasons to defer the debtor's filing, perhaps to buttress their positions with new guarantees or to season transfers against the avoiding powers. In any event, if the debtor has broken faith with the workout pact, the court may consider previous creditor concessions in deciding whether to lift the stay, allow creditors to propose a plan at the outset, appoint a trustee, or convert the case to a Chapter 7 liquidation.

Prepackaged Chapter 11 Cases

A prepackaged Chapter 11 case is a popular method for restructuring a troubled company. In a *prepackaged bankruptcy*, the company solicits votes on its plan of

reorganization before filing for bankruptcy. It files for Chapter 11 protection only after obtaining the required votes in favor of the plan. If the debtor is a publicly held company, the vote solicitation and the SEC filing are made promptly after the company and its creditors have agreed on the terms.

Although companies use prepackaged bankruptcies to implement many strategies, a company most commonly files a prepackaged Chapter 11 bankruptcy when it believes that the sale of its assets will exceed the costs of the bankruptcy, because the Chapter 11 filing will allow it to sell the assets free and clear of liens. One of the reasons that buyers like these bankruptcy sales is that after competitive bidding and notice to all creditors, the sales are approved by the bankruptcy court. As a result, it is unlikely that the buyer of the assets of a company that has filed a prepackaged Chapter 11 case will be sued later for fraudulent conveyance.

In the following case, the U.S. Court of Appeals for the Third Circuit considered a corporate defendant's bid to resolve all of its outstanding asbestos claims in a prepackaged Chapter 11 filing.

A CASE IN POINT

CASE 24.3

IN RE COMBUSTION ENGINEERING

UNITED STATES COURT OF APPEALS
FOR THE THIRD CIRCUIT

391 F.3d 190 (3d Cir. 2004),
AS AMENDED (FEB. 23, 2005).

SUMMARY

FACTS Combustion Engineering defended asbestos-related litigation for nearly four decades, until growing personal-injury claims eventually brought it to the brink of insolvency. In 2002, Combustion attempted a final resolution of its asbestos problems through a prepackaged Chapter 11 bankruptcy reorganization. Combustion contributed half of its assets to a prepetition trust to pay asbestos claimants with pending lawsuits part of the amount of their claims. The remaining, unpaid portion of these claims (the "stub claims") provided prepetition trust participants with creditor status under the Bankruptcy Code. Combustion then filed a prepackaged Chapter 11 plan of reorganization, which included an injunction in favor of Combustion that would channel all of its asbestos claims into a postconfirmation trust created under Section 524(g) of the Bankruptcy Code, which was enacted in 1994, to codify the manner in which asbestos personal-injury claims were resolved in an earlier bankruptcy proceeding involving Johns-Manville. The law allows for the establishment of a trust to pay present and future asbestos claims, enjoins such claims from being asserted against the debtor, and discharges the debtor from all such liabilities.

The Combustion trust procedures split the pending asbestos claims into three categories based on the status of each claim as either settled (in which case, the trust paid 95 percent of the agreed value of the claim); resolved but without a documented settlement agreement (in which case, the trust paid 85 percent of the claim value); and all other claims (for which, the trust paid 75 percent of the claim value). As a result, each claimant was left with an unsecured stub claim that ultimately was impaired under Combustion's soon-to-be-filed bankruptcy plan. The plan was advanced with the support of the claimants' representative, who was appointed as required by Section 524(g). Under the plan, the trust was established to satisfy the stub claims from the prepetition settlement trust and all future asbestos claims. The plan met with significant opposition from a group of insurers and certain asbestos personal-injury claimants, but the bankruptcy court and the district court overruled their objections and approved the plan.

CONTINUED

ISSUE PRESENTED Was the process used to confirm the debtor's prepackaged Chapter 11 bankruptcy unfair?

SUMMARY OF OPINION The U.S. Court of Appeals for the Third Circuit concluded that the process used to confirm the plan may have been unfair, because it was approved by a group of asbestos claimants who had already been paid 95 percent of their claims, although the plan would provide as little as 18 percent recovery to some other claimants. The court found that Combustion "made a pre-petition side arrangement with a privileged group of asbestos claimants, who as a consequence represented a voting majority despite holding, in many cases, only slightly impaired 'stub claims.'" By winning approval from a group of creditors who had only a fragment of their claim remaining, the court held that Combustion may have violated Section 524(g) of the Bankruptcy Code. The court observed that "[t]his type of manipulation is especially problematic in the asbestos context, where a voting majority can be made to consist of nonmalignant claimants whose interests may be adverse to those of claimants with more severe injuries." However, the court reversed the confirmation on narrower grounds, saying that it lacked both (1) the jurisdiction to adjudicate nonderivative liabilities of certain nondebtor entities and (2) the power to issue a channeling injunction under Section 524(g) of the Bankruptcy Code to protect nondebtor entities from their own separate and independent asbestos liabilities.

RESULT Although the appellate court did not close the door on possible future approval of the plan, it ordered extensive hearings and fact-finding on issues related to the plan's fairness.

Prenegotiated Chapter 11 Cases

A prenegotiated Chapter 11 case combines the advantages of a prebankruptcy negotiation with creditors with the benefits of a postbankruptcy solicitation of votes on the plan of reorganization. In a *prenegotiated bankruptcy*, the debtor files its Chapter 11 petition as soon as it can after reaching agreement on the terms of the restructuring with its key creditors. Votes on the plan are not solicited until after the bankruptcy case is filed, however.

Companies and creditors may prefer a prenegotiated Chapter 11 to a prepackaged Chapter 11 for several reasons. First, complying with federal securities laws is easier in a prenegotiated Chapter 11 due to various provisions in the Bankruptcy Code and the federal securities laws. Second, a company filing a prenegotiated Chapter 11 does not have to publicly disclose its financial condition prior to the filing, which allows the company to run its operations as smoothly as possible during the prefiling period.

A prenegotiated Chapter 11 has one major disadvantage, however. If the debtor is a public company, the earliest the vote solicitation can begin is usually a month after the debtor files for bankruptcy. This means that creditors with nonpublic knowledge of the debtor's financial condition are unable to trade in the debtor's stock during this gap period.⁶⁸

Another possible disadvantage of a prenegotiated Chapter 11 is that the debtor may not be able to obtain a binding postpetition commitment by the participating creditors to support a plan with certain specified terms. This commitment most often takes the form of a lockup.

CHAPTER 7 LIQUIDATIONS

In a Chapter 7 bankruptcy, sometimes called a *straight bankruptcy*, the trustee liquidates the estate and distributes the proceeds, first to secured creditors (to the extent of their collateral) and then in the prescribed order discussed earlier in the chapter and pro rata within each level.

Any persons, including individuals, partnerships, and corporations, may be debtors in a Chapter 7 proceeding, although certain types of businesses (including banks, savings and loan associations, credit unions, insurance companies, and railroads) cannot file a Chapter 7 proceeding.

INDIVIDUAL DEBTORS

Individual debtors normally are *discharged*—that is, relieved—from bankruptcy (that is, prepetition) obligations, except for certain nondischargeable debts such as (1) taxes, (2) educational loans (unless repayment would constitute an undue hardship), (3) spousal or child support, (4) fines or penalties, (5) drunk-driving liabilities, and (6) claims

68. Neil Cummings, *Smoothing the Way*, DAILY DEAL, Mar. 7, 2003.

arising from “willful and malicious injury by the debtor” under Section 523(a)(6) of the Bankruptcy Code. Punitive damages awarded on account of the debtor’s fraudulent acquisition of money, property, services, or credit are also nondischargeable.⁶⁹

In *Kawaauhau v. Geiger*,⁷⁰ the U.S. Supreme Court found that a medical malpractice claim was discharged because there was no proof that the debtor’s tortious conduct was intended to cause psychological or economic harm. Several bankruptcy courts subsequently have applied *Geiger* to Title VII discrimination cases, finding that sexual harassment claims were also dischargeable.⁷¹ More recently, however, the U.S. Bankruptcy Appellate Panel for the Eighth Circuit ruled that a Title VII judgment for retaliation in a sexual harassment case was not dischargeable. The panel held that the issues in the Title VII case were essentially the same—whether the defendant had acted willfully and maliciously—and that the jury’s finding of retaliation foreclosed the defendant from relitigating the issues of willfulness and malice in bankruptcy court.⁷² This ruling is particularly significant since it comes from the same panel that decided *Kawaauhau v. Geiger*.

In assessing whether a student loan is dischargeable on the basis that repayment would constitute an undue hardship, the most widely used criteria are whether the debtor, for most of the loan repayment period, can maintain a minimal standard of living on current income and expenses; whether the debtor has made good faith repayment efforts; the amount of the debt; the accumulation of interest; and the debtor’s claimed expenses and current standard of living. A bankruptcy court may partially discharge student loans when full repayment would impose undue hardship on a debtor.

A Chapter 7 discharge is not available to debtors who have received a discharge in a Chapter 7 bankruptcy filed in the preceding eight years or in a Chapter 13 case filed in the preceding six years. It will also be denied if the debtor has mistreated his or her creditors or abused the system, such as by fraudulently transferring or concealing property, destroying or falsifying financial information, or disobeying lawful court orders. (Unlike in Chapter 7, a debtor’s prior misconduct or discharge within the past six years will not bar a Chapter 13 discharge.) The same debts that are nondischargeable under Chapter 7 are also excluded from a Chapter 11 discharge. Also, a Chapter 11 plan that calls for the liquidation and cessation of a business will only afford

a discharge to individuals who would have been eligible for one in Chapter 7.

An individual who has filed under Chapter 7 can enter into a contract with a creditor (a *reaffirmation agreement*) whereby the debtor agrees to repay a debt even though the debt would otherwise be discharged in the debtor’s bankruptcy case. The creditor must file the reaffirmation agreement with the bankruptcy court, which has the power to disapprove the agreement if the court finds that it is not in the debtor’s best interests.

From 1985 to 1997, Sears, Roebuck & Co. unlawfully dunned more than 200,000 consumers who had outstanding debt on Sears credit cards and had filed for bankruptcy protection. Sears persuaded them to sign reaffirmation agreements but failed to file the agreements with the bankruptcy courts. In June 1997, Sears entered into a settlement with the Federal Trade Commission whereby it agreed to refund \$100 million to consumers for its improper credit card collection practices.⁷³ Sears also agreed to write off the unpaid portion of the balances on the invalid reaffirmation agreements.⁷⁴

Prior to the BAPCPA, there was a split in the circuit courts of appeals as to whether an individual debtor who had filed for protection under Chapter 7 could retain property that secures a loan without having to reaffirm the debt if the debtor remained current on the loan payments. The U.S. Courts of Appeals for the Fifth, Seventh, and Eleventh Circuits held there were only three alternatives for a debtor holding property encumbered by consumer debt: the debtor could claim an exemption, redeem the property by paying off the debt, or reaffirm the debt. The U.S. Courts of Appeals for the Second, Fourth, Ninth, and Tenth Circuits held that debtors had a fourth option: they could return the collateral and continue to make monthly payments without redeeming or reaffirming the debt, provided they were not in default on the contract. The BAPCPA attempted to eliminate this fourth option by providing that an individual Chapter 7 debtor cannot retain possession of personal property in which a creditor has a purchase-money security interest unless the debtor, no later than forty-five days after the first meeting of creditors, either enters into a reaffirmation agreement or redeems the property. If the debtor fails to take action within forty-five days, the automatic stay is terminated with respect to such property, and the property

is no longer estate property, thereby allowing the creditor to exercise its nonbankruptcy law remedies.⁷⁵

BANKRUPTCY ABUSE PREVENTION AND CONSUMER PROTECTION ACT OF 2005

Prior to the BAPCPA, a bankruptcy judge had discretion to determine whether Chapter 7 or Chapter 13 of the Bankruptcy Code was most appropriate for an individual seeking bankruptcy relief. The BAPCPA, however, established an objective income test that bankruptcy judges must use to determine a debtor's ability to pay. A debtor with income above his or her state's median income who can pay at least \$6,000 over five years (\$100 per month) is no longer eligible for Chapter 7 and will instead be forced into Chapter 13. (Chapter 13 bankruptcies are discussed below.) The BAPCPA also requires individuals who file for bankruptcy to pay for credit counseling; gives top priority to a spouse's claims for child support among creditors' claims against a debtor; provides special accommodations in the application of the income test for active-duty members of the armed services, low-income veterans, and those with serious medical conditions; and restricts the homestead exemption to \$125,000 if the debtor bought his or her residence within three years and four months before filing. Wealthy individuals who file for bankruptcy may still keep their mansions if they bought them at least three years and four months before filing.

NONINDIVIDUAL DEBTORS

Chapter 7 does not provide a discharge for corporations, partnerships, or similar business entities. Once their assets are sold, these debtors essentially become defunct shells whose unpaid obligations have no significance. Thus, from the vantage point of the debtor firm's management, the only virtue of a liquidation may be that the task of selling property and paying creditors falls to a trustee. The principals of closely held companies are often better advised to avoid bankruptcy and to handle these chores themselves. Rather than adhering to the pro rata distribution model, they may wish to prefer some creditors by channeling funds first to those who are most likely to pursue them personally (such as holders of guaranties). Also, they may not want to expose earlier transactions (such as preferential payments) to scrutiny by a trustee, who can become a more troublesome foe than any of the company's creditors by invoking the avoiding powers discussed above.

75. Philip R. Principe, *Did BAPCPA Eliminate the "Fourth Option" for Individual Debtors' Secured Property?*, Oct. 1, 2005, available at <http://www.abiworld.org/AM/Template.cfm?Section=Home&TEMPLATE=/CM/ContentDisplay.cfm&CONTENTID=52516>.

INTERNATIONAL SNAPSHOT

Winding-up proceedings in Australia are essentially *ex parte*: only the creditors appear before the court. As a result, debtors do not have the same recourse as under U.S. bankruptcy rules. Other countries, such as Germany, do not provide for the complete discharge of debts in bankruptcy; instead, they only arrange for the debts to be paid over time.

CONSUMER BANKRUPTCY UNDER CHAPTER 13

Chapter 13 (consumer bankruptcy) of the Bankruptcy Code deals with adjustments to the debt of an individual or a married couple with regular income. Although an individual may also be the subject of a Chapter 7 liquidation or a Chapter 11 reorganization, only individuals and small proprietorships are eligible under Chapter 13.

CHAPTER 13 REQUIREMENTS

Individuals with regular income, including wage earners and individuals engaged in business, may qualify for Chapter 13 status if their unsecured debts do not exceed \$336,900 and their secured debts do not exceed \$1,010,650.⁷⁶ Chapter 13 is similar to a reorganization in that it provides for a plan for repaying creditors.

Chapter 13 plans can be proposed only by debtors and usually are quite simple. The plan ordinarily allows the debtor to retain all of his or her assets, not just those that would be exempt (exempt property was defined earlier in the chapter). However, his or her future disposable income (which would be the debtor's to keep in a Chapter 7 or Chapter 11 bankruptcy) must be paid to a disbursing trustee for the next three to five years. Creditors holding claims secured by a mortgage, deed of trust, or security interest are entitled to the equivalent of the present value of their lien rights, except that Chapter 13 plans cannot modify home mortgage loans unless they provide for payments to cure default. Unlike under Chapter 11, creditors do not vote on Chapter 13 plans. They can, however, object to confirmation

76. These are the dollar limits as of April 1, 2007; the limits are adjusted every three years. Debtors with debts in excess of these limits who wish to reorganize rather than liquidate must consider Chapter 11.

Historical

PERSPECTIVE

From Mosaic Law to Vulture Capitalists

The principle that debtors should be permitted to discharge certain debts has ancient roots. As early as 1400 B.C., Mosaic law required unconditional forgiveness of debts every seven years to encourage a proper focus on social relationships. The word "bankruptcy" is believed to have evolved from the Latin words "banca" and "rupta," referring to the broken bench or moneychangers' table left behind by failed merchants fleeing from their creditors. In A.D. 1542, during the reign of King Henry VIII, English lawmakers passed a Bankruptcy Act to regulate failing English merchants. Under this law, debtors were considered quasi criminals. Over the centuries, strong sanctions for insolvency, including imprisonment, generally made bankruptcy a remedy for creditors rather than a relief for debtors. For example, a 1604 amendment to the Bankruptcy Act permitted the debtor's ear to be cut off.

The roots of the American bankruptcy system can be traced to the experiences of colonists who were refugees from debtors' prisons in Europe. The drafters of the U.S. Constitution, recognizing the importance of debtor relief, gave Congress the exclusive right to establish national bankruptcy laws and thereby override the states' treatment of debtors and creditors.

During the nineteenth century, debtors' prisons fell out of favor for humanitarian reasons—and for the more practical reason that imprisoned debtors could not repay their debts. Starting around 1800, Congress would

enact bankruptcy protection laws to ease the pain of an economic crisis and then repeal them when the financial situation improved. In 1898, when a severe depression forced many railroads into receivership, Congress used its bankruptcy power to enact the laws that became the foundation for the current U.S. bankruptcy system. The Bankruptcy Act of 1898 enabled failing railroads and other businesses to continue operating while reorganizing, generally stripping shareholders of their interests. In 1915, the U.S. Supreme Court declared that one of the law's purposes was to protect honest debtors. In 1934, the Supreme Court held that a man who had pledged his future wages to repay a \$300 loan could not be forced to turn over his wages after he declared bankruptcy.^a

The Bankruptcy Act of 1898 was overhauled in 1938, when Congress created the Chapter 13 consumer debt adjustment process. In 1978, Congress enacted the Bankruptcy Reform Act, which created the Bankruptcy Code that exists today. That legislation, the result of nearly a decade of intensive study and debate about problems in the bankruptcy system and proposed reforms, made sweeping changes in the law, most of them favorable to debtors.

In light of the massive defaults on junk bonds in 1989 and the early 1990s, some began to question whether Congress had given debtors too much relief under the Bankruptcy Code. The lead-in to a 1990 *Forbes* article on the

subject expressed this concern: "In the old days, a debt was an obligation and bankruptcy was a disgrace. Nowadays bond issuers concoct ever more ways to stiff investors."^b

The BAPCPA was first drafted in 1997 in order to correct this perceived bias toward debtors. The House of Representatives approved a version of the Act in 1999, and the Senate approved a slightly different version in 2000. President Clinton, however, employed a "pocket veto," waiting for the congressional session to adjourn without signing the bill.^c The Act was introduced into each Congress subsequent to 2000, but was repeatedly shelved because of opposition from numerous groups, including consumer advocates, legal scholars, retired bankruptcy judges, and others, on the basis that it was too favorable to creditors. Nevertheless, the increase in the Republican majorities in Congress after the 2004 elections breathed new life into the bill, leading to its enactment in 2005.^d

c. *Clinton Vetoes Bankruptcy Bill*, CNN.com, Dec. 20, 2000, <http://archives.cnn.com/2000/ALLPOLITICS/stories/12/20/clinton.bankruptcy.ap/index.html>.

d. Mark Neis, *History of BAPCPA: Special Interest Legislation at Its Worst*, available at <http://www.bankruptcykansas.info/2008/06/04/bapcpa-special-interest-legislation-at-its-worst/> (last accessed Sept. 17, 2008).

if the plan is proposed in bad faith, is not feasible, or offers them less than they would get in a Chapter 7 liquidation.

A Chapter 13 plan may be either a composition plan or an extension plan. In a *composition plan*, creditors receive a

percentage of the indebtedness, and the debtor is discharged of the remaining obligation. In an *extension plan*, creditors receive the entire indebtedness, but the period for payment is extended beyond the original due date.

After completing all plan payments, the debtor obtains a Chapter 13 discharge. An earlier discharge may be granted in hardship cases if the creditors have at least as much as they would have under Chapter 7. Apart from the hardship situation, this fresh start (sometimes called *super discharge*) will extinguish otherwise nondischargeable debts (such as claims for fraud, theft, willful and malicious injury, or drunk driving), but not spousal or child support.

stop foreclosure proceedings, allowing the cure of mortgage arrears over time—typically five years. In addition, unlike in a Chapter 7 liquidation, a Chapter 13 debtor does not surrender any assets. A good faith effort to pay creditors can preserve goodwill and future credit prospects. Unfortunately, Chapter 13 debtors are often unable to make the payments outlined in their plan and eventually convert from Chapter 13 to Chapter 7.⁷⁷ After conversion, the debtor's nonexempt property is liquidated, and the debtor receives a Chapter 7 discharge.

ADVANTAGES OF CHAPTER 13

Chapter 13 has many advantages for overextended consumers. For example, the filing of a bankruptcy petition stops all creditor collection activity other than the filing of a claim in the bankruptcy proceeding. As a result, it is often used by homeowners who fall behind on mortgage payments to

77. It is not clear whether a debtor who converts from Chapter 13 to Chapter 7 must complete the “means test.” The U.S. Bankruptcy Court for the District of Rhode Island concluded that a converting debtor must complete the means test (*In re Perfetto*, 361 B.R. 27 (Bankr. D.R.I. 2007)), but the U.S. Bankruptcy Court for the District of New Jersey held that a converting debtor is not subject to the means test (*In re Fox*, 2007 Bankr. LEXIS 1865 (Bankr. D.N.J. June 1, 2007)).

Harmonization of Insolvency Laws

As a result of globalization, transnational insolvencies are becoming more common. High-profile international insolvency cases, such as *In re Maxwell Communications Corp.*,⁷⁸ which involved a media empire headquartered and managed in England with corporate entities and assets in the United Kingdom, the United States, and Canada, have highlighted the need for international harmonization of insolvency laws.⁷⁹ In addition to dealing with failed and failing companies, international insolvency law is also an important consideration in international investment and the extension of international credit.

Cross-border insolvency problems are not limited to major multinational corporations. In its simplest form, a *transnational insolvency* involves an insolvency proceeding in one country, with a creditor located in a second country. More complex cases may involve subsidiaries, assets, creditors, and operations in many countries. In the absence of international laws to coordinate insolvency proceedings with transborder implications, multinational insolvency issues are addressed one nation at a time by applying the domestic insolvency laws of each affected country.

The two prevalent domestic models for addressing international insolvency problems are *universality* and *territoriality*. U.S. law is moving toward universality, which tracks international insolvency proceedings as a single case and treats the creditors equally, no matter where they are located. Under territoriality, each nation conducts its own proceeding with respect to the assets located in its jurisdiction and ignores any parallel proceedings in a foreign country.

The coordination of insolvency proceedings with international implications may be governed by at least four sources of international law. These sources represent only

modest first steps to coordinate the administration of transnational insolvency proceedings. They do not attempt to harmonize domestic insolvency laws around the world, although efforts at such harmonization have also begun.⁸⁰

Cross-Border Insolvency Concordat

The Council of the International Bar Association adopted the Cross-Border Insolvency Concordat in 1996. The Concordat is a collection of general principles that are intended to assist courts and attorneys in coordinating and harmonizing insolvency proceedings that are pending in more than two countries. The Concordat is intended as an interim measure to be used by courts and counsel to guide transnational insolvencies until treaties or statutes are adopted by commercial nations. Because it is not binding law, courts may decide which Concordat principles to apply on a case-by-case basis.

The Concordat envisions that a single administrative forum will be the main forum for a transnational insolvency proceeding and that cases in other country's courts will be subsidiary to the main case. The main forum should coordinate the collection and administration of assets and receive all assets (after payment of secured and priority claims) from the other forums. If there is no main proceeding, the Concordat recommends using its protocol to coordinate the proceedings in the various countries. The Concordat also provides that all creditors in any forum should be able to appear in the other forums without being subject to personal jurisdiction in those forums on unrelated matters. Public information should be shared among creditors in all forums, and nonpublic information should be provided to the official representatives in each forum.

UNCITRAL Model Law on Cross-Border Insolvencies

The United Nations Commission on International Trade Law (UNCITRAL) a major United Nations organization headquartered in Vienna, Austria, has promulgated a Model Law on Cross-Border Insolvencies, which was approved by the UN General Assembly in 1997 but must

[CONTINUED](#)

78. 93 F.3d 1036 (2d Cir. 1996). A detailed discussion of the *Maxwell* case is provided in Jay L. Westbrook, *The Lessons of Maxwell Communications*, 64 FORDHAM L. REV. 2531, 2534–40 (1996).

79. Samuel L. Bufford et al., *International Insolvency*, Fed. Jud. Center (2001). The U.S. bankruptcy judge in *Maxwell* crafted a creative solution to these problems. He appointed an examiner to harmonize the British and U.S. proceedings to permit a reorganization under U.S. law that would maximize the return to creditors. The examiner succeeded in negotiating a joint plan of reorganization under U.S. law and a scheme of administration under British law that provided for the partial reorganization and partial liquidation of the *Maxwell* companies.

80. *Id.*

be enacted by each country.⁸¹ The primary goals of the model law are to facilitate domestic recognition of foreign insolvency cases and to increase international cases. The model law divides foreign insolvency proceedings into two categories: (1) main proceedings, which take place in the country where the debtor has its main operations; and (2) non-main proceedings. If the foreign proceeding is recognized as a main proceeding, the model law provides an automatic stay of proceedings by creditors against the debtor's assets and the suspension of the debtor's right to transfer, encumber, or otherwise dispose of its assets.

Since 1997, several countries, including Japan, Mexico, Poland, Romania, South Africa, the United Kingdom, and Eritrea, have enacted or authorized legislation modeled after the law. As a part of the Bankruptcy Abuse Prevention and Consumer Protection Act of 2005, a new Chapter 15, which incorporates the model law, was added to the U.S. Bankruptcy Code. Chapter 15's basic procedure is straightforward: a case is commenced when a foreign representative files a petition for recognition of a foreign proceeding. As long as recognition would not be manifestly contrary to U.S. public policy, the court must enter an order recognizing the foreign proceeding. If recognition is granted as a foreign main proceeding, the debtor receives protection and rights similar to those of U.S.-based debtors, including the automatic stay.

The model law provides for more timely and effective procedures for recognizing foreign insolvency proceedings. It also authorizes each accredited representative to participate in foreign courts in countries that have enacted the model law and mandates the cooperation of courts and estate representatives in all countries that have adopted the law.

Several features of the model law are beneficial for U.S. debtors who seek protection in other countries that have adopted the model law. First, it recognizes debtors-in-possession as proper estate representatives. The domestic insolvency laws of many countries require the appointment of a trustee to represent a bankrupt estate and do not recognize the U.S. concept of DIP. The model law also contains an automatic stay that, as in U.S. bankruptcy law, applies to both unsecured and secured creditors even though the domestic insolvency laws of many countries have automatic stays that apply only to unsecured creditors. Finally, the model law promotes reorganization as a fundamental goal even though many foreign countries currently provide only for liquidation.

81. Model Law on Cross-Border Insolvencies, May 30, 1997, 36 I.L.M. 1386 (1997).

EU Regulation on Insolvency Proceedings

The European Union (EU) Council adopted a Regulation on Insolvency Proceedings effective May 2002. Unlike an EU directive, which must be implemented by the member states, a Regulation has direct effect and there is no need to pass legislation implementing a Regulation. The purpose of the EU Regulation is to improve the efficiency and effectiveness of insolvency proceedings that have cross-border dimensions by simplifying or removing formalities related to recognition and enforcement.

Instead of defining "insolvency," the EU Regulation lists the national laws of the corresponding member states. To promote a more efficient system of legal cooperation on insolvency matters within the EU, the EU Regulation focuses on the jurisdiction for opening and issuing binding judgments in a proceeding by recognizing both a main proceeding, which may affect all creditors and property of a debtor, and secondary proceedings, which will affect only creditors and property of a debtor located in a country other than the country in which the main proceeding is conducted. It also attempts to deal with forum shopping by requiring that the main proceeding be opened in the member state where "the centre of main interests" of the debtor is located. The EU Regulation explains this concept as follows: "In the case of a company or legal person, the place of the registered office shall be presumed to be the centre of its main interests in the absence of proof to the contrary."⁸² A main proceeding is generally governed by the internal laws of the member state where the proceeding is initiated. After the opening of the main insolvency proceeding, secondary proceedings may be brought by the liquidator in the main insolvency proceeding or by any party with standing under local law. In addition to protecting local creditors, a secondary proceeding may be useful if a case is too complex to be administered as a single unit. Although the EU Regulation governs the coordination of proceedings only within the EU, its underlying principles and approaches have been influential in the international community.

ALI Transnational Insolvency Project

The American Law Institute (ALI) is a prestigious organization of senior and respected judges, lawyers, and academics from more than twenty countries. The Transnational Insolvency Project, the ALI's first private international law project, began in 1994 as a means of seeking common ground and shared principles among the laws of the three

CONTINUED

82. See EU Reg., pmbl. art. 3(1), O.J. (L 160) (June 30, 2000).

North American Free Trade Agreement (NAFTA) countries (the United States, Canada, and Mexico) with regard to the conduct of cross-border bankruptcies by providing guidance to courts and lawyers within the multijurisdictional legal environment of NAFTA. During the first phase of the project, ALI advisory committees prepared a concise International Statement of each country's insolvency laws as applicable to international cases. These statements were translated into the official languages of each of the NAFTA member states and published in 2003. The second phase of the project built upon the insights obtained during the first phase and culminated in the publication of the Principles of Cooperation among the NAFTA Countries.

The Principles recognize that an essential element in cross-border cases is communication among the administering authorities of the countries involved. The intent of the ALI was that a court intending to employ the Principles should adopt them. To facilitate the application of the Principles, Appendix B to the Principles sets out a code of practice in the form of Guidelines Applicable to Court-to-Court Communications in Cross-Border Cases, which are

intended to be adopted by a court before applying them. The court might make its adoption of the Guidelines contingent upon the corresponding adoption by other courts concerned with the matter. The Guidelines have been relied upon by courts in a number of situations.

Perceiving the relevance of the Guidelines for use in countries other than the NAFTA countries, the International Insolvency Institute (III) arranged for the Guidelines to be translated into a number of other languages and circulated the Guidelines to virtually every significant commercial or bankruptcy court in the major world economies. Recognizing that a more active process would be required in order for courts outside the NAFTA countries to embrace the Guidelines and the Principles of which they are a part, the III partnered with the ALI to create the Global Principles Project in 2006 to work toward achieving worldwide acceptance of the Principles and to explore the possibilities for devising global standards to regulate transnational insolvency itself, while taking into account the considerable work that has already been carried out in this field by numerous organizations.

THE RESPONSIBLE MANAGER

MANAGING DEBTOR–CREDITOR RELATIONS

A responsible manager must understand lender liability risks. The following steps will help lenders minimize those risks.

In negotiating loan terms, the lender should indicate clearly that any commitment must be in writing and approved by the loan committee or other appropriate officials of the lender. The lender's written communications to the borrower should disclaim any commitment if none is intended.

The lender should avoid provisions in loan documents giving it a broad right to control the borrower's management decisions or day-to-day business activities. The lender should refrain from using its financial leverage to influence such activities as the selection of management, the hiring or firing of employees, or the payment of other creditors.

The loan documents should contain a merger clause stating that the written loan documents supersede any prior oral understandings and that the borrower is not relying on any prior oral promise or representation by the lender. The loan documents should provide that any amendment, modification, or waiver of the terms of the

documents or of the rights of the parties must be in writing and signed by both the lender and the borrower.

The lender may ask the borrower to insert in the loan documents a waiver of its right to a jury trial. Juries are often perceived as sympathetic to borrowers; a judge may be less likely to award large compensatory or punitive damages to the borrower.⁸³ The lender may want to specify in the loan documents that any legal action by the borrower must be brought in a court in a specific state or city to avoid the possible disadvantage the lender may have as a defendant in a court in the borrower's home territory. The lender may want to add an arbitration clause to the loan documents, stating that any disputes arising under the loan documents will be resolved through binding arbitration instead of litigation in a court.

CONTINUED

83. Note, however, that the California Supreme Court has held that a waiver of a jury trial is unenforceable. Grafton Partners LP v. Superior Court, 116 P.3d 479 (2005).

The lender should maintain accurate and complete credit files supporting all the actions it takes. Virtually all of the documents in the lender's files may be subject to legal discovery; it is wise to assume that any entry in the credit files may someday be read to a judge or jury in a lender liability case.

The lender should not threaten to take actions that are not yet authorized or that it does not actually intend to take. The lender should give reasonable warning and, if possible, written notice to the borrower before terminating a line of credit, changing an established course of conduct, accelerating a loan, or exercising any remedies. In a work-out situation, when the borrower is trying to renegotiate a loan it cannot pay, or when it becomes apparent that the borrower may be preparing a lender liability suit, the lender should consult with legal counsel.

Except when acting as a trustee or other fiduciary, the lender should refrain from giving any legal, financial, or investment advice to the borrower that might create a fiduciary relationship between the lender and the borrower. The lender should be cautious about giving other creditors the borrower's financial history or opinions as to the borrower's creditworthiness.

At all times the lender's loan officers should behave professionally, regardless of their level of frustration with the borrower. Any personality conflicts with the borrower should be avoided. If a personality conflict does develop, the matter should be transferred to other loan officers.

It has become fashionable in some circles to view Chapter 11 as a strategic option for creative business planning. Apart from the fresh start granted to individual debtors, however, the bankruptcy system generally respects a debtor's obligations existing under state or other federal law; it merely provides a forum for dealing fairly, efficiently, and flexibly with the rights of all the creditors and equity holders. Thus, although insolvency is not a prerequisite for relief, a bankruptcy filing is generally not appropriate unless the business is in serious financial difficulties.

If those difficulties are present, the bankruptcy system can be an effective mechanism for overcoming them while preserving a productive enterprise. Yet for each celebrated success, there are countless failed Chapter 11 cases, in which no plan is confirmed and creditors are left with less than they would have received through prompt liquidation. This is partly the price of giving depressed businesses the chance to rebound, but it also reflects fundamental problems.

Many debtors, most of them single-asset or other small businesses, file Chapter 11 cases without any realistic prospect for reorganization. In some instances, the prin-

pals refuse to recognize and deal with financial ills until the business is too weak to survive. Continuing their ostrichlike pattern, they then file a Chapter 11 petition, awash in a sort of terminal euphoria and not recognizing that liquidation is inevitable. Other debtors see the writing on the wall but file to buy time, hoping for a miracle cure. Still others file merely to postpone management's impending unemployment.

Congress gave creditors the means to protect their interests, however. If management acts improperly, a trustee can be appointed; if reorganization is improbable, the case can be dismissed or converted to a Chapter 7 liquidation. Unfortunately, these remedies are rarely invoked before the creditors' interests are seriously prejudiced. Not surprisingly, individual unsecured creditors tend to be reluctant to throw good money after bad by policing the debtor's conduct. For the same reason (though with less justification), they frequently decline to serve or participate actively on the official creditors' committee, so this watchdog may be somnolent or nonexistent in smaller cases. Thus, unless a secured creditor is motivated to overcome this inertia, a Chapter 11 case may have a bleak outcome.

Unless prompted by an interested party, the bankruptcy judge ordinarily will not intervene until the situation becomes egregious, as when the DIP does not comply with the rules, such as those requiring regular financial and tax reporting. Because the court is not well equipped to investigate the progress of each Chapter 11 debtor, an abusive case can languish for a considerable time before the court itself initiates corrective action.

The effectiveness of the bankruptcy system depends largely upon knowledgeable and responsible conduct by the interested parties. In general, both debtors and creditors benefit by addressing financial problems early and pursuing a constructive workout. Because the charged emotional climate often makes this difficult, it is important to obtain objective and practical advice from counsel. If a workout is not possible, the debtor's management should consider whether a reorganization is plausible before filing for relief under Chapter 11. If the case is filed, creditors must recognize that meaningful participation, ideally through the official creditors' committee, is usually necessary to protect their interests.

Directors of a corporation in financial trouble assume new responsibilities to protect not only shareholders but the entire community of interests represented by creditors, employees, and other parties with a stake in the continued viability of the corporation. Once a corporation enters the zone of insolvency, the directors owe a fiduciary duty to creditors as well as shareholders.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

When Is a Dividend an Unlawful Preference?

MNVA was a Minnesota corporation engaged in operating a short-line freight railroad. Larry and Diane Wood were officers and directors and major shareholders of MNVA, and DMVW was a wholly owned subsidiary of MNVA. In August 1994, MNVA agreed in principle to the terms of a letter of intent with Pioneer Railcorp under which Pioneer agreed to acquire MNVA's operating assets by purchasing MNVA's stock. MNVA decided to spin off DMVW to MNVA shareholders as part of the reorganization of MNVA in connection with the sale to Pioneer. In October 1994, the deal between MNVA and Pioneer was restructured as a sale of assets. On November 21, 1994, the MNVA board of directors determined that it would be able to pay its debts in the ordinary course of business after the proposed distribution of DMVW stock to MNVA shareholders and approved the distribution of DMVW stock to the existing MNVA shareholders in proportion to the percentage of stock they owned in MNVA. No consideration was paid to MNVA for the distribution of DMVW stock. DMVW became an independently operated entity after the distribution. In December 1994, MNVA sold its assets to Pioneer in exchange for \$1 and the assumption of certain secured debts; it thereafter ceased operations.

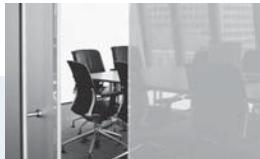

In May 1996, Helm Financial obtained a state court judgment against MNVA for railcar leasing fees in the amount of \$96,028, plus interest and attorneys' fees and costs, but MNVA had insufficient assets to pay them. According to MNVA, during the course of winding up its affairs, it was unable to pay

all of its creditors in full because it experienced an "unexpected shortfall" after losing several substantial claims, including one against the Minnesota Department of Transportation for reimbursement of track rehabilitation expenses.

In June 1997, Helm sued MNVA, DMVW, and the individual officers and directors of MNVA, alleging that the distribution of DMVW stock to the MNVA shareholders defrauded MNVA's creditors in violation of the Minnesota Uniform Fraudulent Transfer Act and constituted an unlawful preference of the defendant officers, directors, and shareholders over MNVA's creditors in breach of their fiduciary duty to the creditors. Helm alleged that the spinoff left MNVA insolvent because DMVW was MNVA's most valuable asset.

Was the distribution of the DMVW stock a fraudulent transfer? Did the Woods violate their fiduciary duty to creditors, such as Helm? Under the Minnesota corporation law, a distribution to shareholders is permitted only when "the corporation will be able to pay its debts in the ordinary course of business after making the distribution and the board does not know before the distribution is made that the determination was or has become erroneous." Did the Woods and their fellow officers and directors act ethically? Would your answer be different if instead of distributing shares of a subsidiary as a dividend, the board had voted to repay preexisting loans from the Woods to MNVA?⁸⁴

INSIDE STORY

THE SUBPRIME-MORTGAGE CRISIS: LAISSEZ-FAIRE LENDING PRACTICES WREAK HAVOC ON THE U.S. ECONOMY

In 2001, the U.S. economy was reeling from a recession induced by the Internet bubble of the late 1990s and the attacks on the World Trade Center and the Pentagon. In response, the Federal Reserve began cutting interest rates dramatically in order to expand the money supply and encourage borrowing. The idea was that spending was patriotic, and everyone, from President George W. Bush on down, encouraged Americans to go shopping and to buy, buy, buy.

Lenders responded by approving *subprime-mortgage loans*, loans that carry above-market interest rates to compensate for the added risk of default, to borrowers with poor credit. As a result, the number of homes sold, and the prices they sold for, increased dramatically in 2002. Subprime originations also grew rapidly—from \$173 billion in 2001 to a record high of \$665 billion in 2005. At the same time, lenders were able to sell off their mortgages in the secondary market and collect

CONTINUED

origination fees that freed them up for more lending. The investors that bought these mortgages securitized them into bonds that they sold to investors through *collateralized debt obligations*, or *CDOs*. The global CDO market rose from \$125 billion in 2004 to \$475 billion in 2006. Credit rating agencies such as Moody's and Standard & Poor's were willing to put their "AAA" or "A+" credit rating on many of these securities, signaling their relative safety as an investment, even though some have argued that the agencies should have foreseen the high default rates for subprime borrowers and given the CDOs much lower ratings. Nevertheless, as a result of the favorable ratings, investors were willing to purchase the CDOs at low premiums over Treasury bonds, which in turn led to a huge demand for subprime loans.⁸⁵

Lenders and mortgage brokers also created risky, new nontraditional mortgages, such as *2-28 loans*, which offer a low initial interest rate that stays fixed for two years, after which the loan resets to a higher adjustable rate for the remaining twenty-eight years of the loan; *negative amortization loans*, under which the debtor pays only the interest every month but owes a huge balloon payment at the end of the term; and *adjustable-rate mortgages (ARMs)* that start out with a low rate and usually adjust upward within two to five years as the rate resets. Faced with increased competition for subprime borrowers, the lenders may have given the impression that there was little risk associated with these debt instruments and that the costs were not that high. Consumers used these nontraditional mortgages to buy houses they could barely afford, betting that price appreciation would allow them to refinance their mortgages at lower rates and take equity out of their house for use in other spending. Record low interest rates, combined with loosening lending standards, pushed real estate prices to record highs during 2005.⁸⁶

By the middle of 2006, however, interest rates began to rise, new home sales stalled, and median prices halted their climb. Homeowners were not able to refinance their subprime mortgages and were unable to pay the higher rates when their loans were adjusted upward. This led to increased mortgage foreclosures. As increasing numbers of consumers filed for bankruptcy protection, lenders lost money on defaulted mortgages and were left with property that was worth less than the amount originally owed. In many cases, the losses were large enough to result in lender bankruptcies.

85. Eric Petroff, *Who Is to Blame for the Subprime Crisis?* Investopedia.com, <http://investopedia.com/printable.asp?a=/articles/07/subprime-blame.asp> (last accessed Sept. 15, 2008).

86. *Id.*

Despite mounting evidence, the federal government resisted calls for the government to get involved. In March 2007, Treasury Secretary Henry Paulson stated that economic growth was healthy and that the housing market was nearing a turnaround. In June 2007, Ben Bernanke, Chair of the Board of Governors of the Federal Reserve, declared that "fundamental factors—including solid growth in incomes and relatively low mortgage rates—should ultimately support the demand for housing, and at this point, the troubles in the sub-prime sector seem unlikely to seriously spill over to the broader economy or the financial system." He also stated, "It is not the responsibility of the Federal Reserve . . . to protect lenders and investors from the consequences of their financial decisions."⁸⁷ Paulson cautioned against a "rush" to regulation, and two Treasury undersecretaries, writing in *The Financial Times* in September 2007, criticized calls for "immediate regulation."⁸⁸

By December 2007, however, the Federal Reserve acknowledged that a number of home mortgage lenders had aggressively sold deceptive loans to borrowers who had little chance of repaying them and proposed a broad set of restrictions on exotic mortgages and high-cost loans for people with weak credit.⁸⁹ Also in December, Morgan Stanley became the first major Wall Street firm to predict that the U.S. economy would fall into recession. During the first half of 2008, market conditions continued to deteriorate. By July 2008, when the final regulations were published by the Federal Reserve, seven banks had failed, including Independent National Mortgage Bank, the largest savings and loan association in Los Angeles and the seventh largest mortgage originator in the United States.⁹⁰ Home prices were down about 16 percent from August 2007 and showed no sign of stabilizing.⁹¹

90. IndyMac was founded as Countrywide Mortgage Investment in 1985, as a means of collateralizing Countrywide Financial loans too big to be sold to Freddie Mac and Fannie Mae. Countrywide spun off Countrywide Mortgage as an independent company in 1997. According to the Office of Tariff Supervision, in the nine months before it went into receivership, IndyMac incurred significant losses because its mortgage operation focused on Alt-A single-family mortgages that it was unable to securitize and sell in late 2007, because of the overall decline in the secondary market for nonagency mortgage loans.
91. Paul Krugman, *A Slow-Mo Meltdown*, N.Y. TIMES, Aug. 4, 2008, at A21.

The Federal Reserve's final regulations are significantly stiffer than the proposals issued in December, reflecting the Federal Reserve's increasing concern about the continuing fallout from the subprime-mortgage crisis. The regulations are prospective only and do nothing to address the plight of the hundreds of thousands of homeowners who have defaulted or are at risk of defaulting on their existing subprime mortgages. And, despite the urgent nature of the crisis, the regulations do not become effective until October 1, 2009, at the earliest. Among other things, the regulations require lenders to verify a borrower's income and assets, bar lenders from levying prepayment penalties for the first four years of any subprime ARM and for the first two years of any other subprime mortgages, and prohibit lenders from running advertisements that compare different loans unless all payments and rates are also disclosed.⁹² Critics of the regulations argued that they do not go far enough to address the problems that brought about the current mortgage crisis.⁹³

Also in July 2008, Congress passed the Housing and Economic Recovery Act to provide some relief for families struggling to make their mortgage payments and to bolster the Federal National Mortgage Association (Fannie Mae), the leading market-maker in the U.S. secondary mortgage market, and the Federal Home Loan Mortgage Corporation (Freddie Mac), which buys mortgages on the secondary market, pools them, and sells them as mortgage-backed securities to investors on the open market. (Fannie Mae and Freddie Mac own or guarantee about half of the United States' \$12 trillion mortgage market.) The Act allowed the Federal Housing Administration (FHA) to insure up to \$300 billion in new thirty-year fixed-rate mortgages for at-risk borrowers in owner-occupied homes, if their lenders agree to write down loan balances to 90 percent of the homes' current appraised value. The Act provided that the cost of the new FHA program would be funded by fees paid by Fannie Mae and Freddie Mac, along with fees paid by both lenders and borrowers. A controversial addition to the

92. *Highlights of New Mortgage Lender Rules*, July 15, 2008, L.A. TIMES, available at <http://www.latimes.com/news/nationworld/washingtondc/la-fi-fedbox15-2008jul15,0,6637726.story>.

93. For example, the regulations apply only to subprime-mortgage loans, not to other risky loans that fall within the definition of higher-priced mortgage loans established by the regulations. The regulations also do not prevent consumers from being steered into higher-cost loans by brokers who receive kickbacks in the form of yield spread premiums for promoting more expensive loans, and they do not impose fiduciary obligations for mortgage brokers to act in the best interest of their clients rather than themselves. *New Fed Rules on Subprime Mortgages Provide Important Protections but More Safeguards Are Needed to Curb Unfair Lending Practices*, Consumers Union.org, July 23, 2008, <http://www.consumersunion.org/pub/2008/07/005868print.html>.

Act provided temporary authority for the Treasury to lend a financial hand to Fannie Mae and Freddie Mac, if the Treasury deemed it necessary to help stabilize markets.⁹⁴ Finally, the Act included a number of tax relief provisions aimed at shoring up the ailing housing market.

Although the Bush administration hoped it would not have to use its authority under the Act to rescue Fannie Mae and Freddie Mac from insolvency, the companies reported worse-than-expected quarterly results in August 2008 and warned of more pain to come. In September 2008, the government seized control of Fannie Mae and Freddie Mac to try to stabilize the troubled housing and financial market. Under the Treasury Department plan, both companies were placed into a government conservatorship to be run by the Federal Housing Finance Agency. The companies will be allowed to expand their support of the mortgage market from a combined \$1.5 trillion to \$1.7 trillion, but will be required to drop their holding by 10 percent annually, starting in 2010, until they reach a combined \$500 billion. The Treasury Department was issued \$1 billion in senior preferred stock paying 10 percent interest, from each company, as well as warrants representing ownership stakes of 79.9 percent in each company, but could be required to put up as much as \$100 billion for each, if funds are required to keep the companies afloat as losses mount. "This is a shareholder bailout financed by the U.S. taxpayers," said Armando Falcon, Jr., formerly the chief regulator of Fannie Mae and Freddie Mac.⁹⁵

A week later, Lehman Brothers, the fourth largest investment bank in the United States, saddled with \$60 billion bad real estate debt, was forced to file for Chapter 11 and Merrill Lynch, the nation's largest brokerage and one of the country's top issuers of mortgage-backed securities, sold itself to Bank of America in order to avoid bankruptcy after it reported it

The Act also provided billions of dollars in additional funding for the Community Development Block Grants that states and local communities can use to buy foreclosed properties from lenders that they can then resell or lease to families. The goal of these grants is to reduce the number of vacant homes in a neighborhood in order to stabilize or increase the property values of existing homeowners. In an attempt to prevent a repetition of the current mortgage crisis, the Act also improves the disclosure of information that must be given to borrowers when they receive a mortgage or refinance, which should enable them to make more informed decisions about their loans.

95. Neil Irwin & Zachary A. Goldfarb, *Feds Take Over Mortgage Giants*, S.J. MERCURY NEWS, Sept. 8, 2008, at A1.

had lost more than \$45 billion on its mortgage-backed investments.⁹⁶ As the fates of Lehman and Merrill were reported, insurance giant American International Group (AIG), staggered by losses stemming from the credit crisis, sought \$40 billion from the Federal Reserve. Although the government initially announced that it would not bail out the company or provide any guarantees, in the face of worries that a collapse of AIG could cause far-reaching damage to the global financial system, it quickly agreed to provide up to \$85 billion in loans in a move that would give the Federal Reserve an 80 percent stake in AIG.⁹⁷

QUESTIONS AND CASE PROBLEMS

1. ABC Food Corporation, a food company with annual sales of more than \$1 billion, operated a paper division that supplied ABC with packaging for its food products. ABC's management determined that the company should concentrate on its core business of manufacturing food products and recommended to the board of directors that the assets of the paper division be sold.

Newcorp, Inc. is a newly formed corporation with two shareholders who have experience in the timber industry. Those two shareholders also jointly own Lumber Corporation, which operates two lumber mills in the state of Washington. Newcorp was formed specifically to acquire the assets of ABC's paper division.

On February 1, 2008, ABC and Newcorp signed a letter of intent specifying a closing no later than July 1, 2008, subject to Newcorp obtaining satisfactory financing. The letter of intent provided that ABC and Newcorp would enter into a long-term contract whereby Newcorp would supply specified quantities of paper packaging to ABC.

On February 15, 2008, Newcorp approached the Bank of Hope to request a term loan to acquire the assets of ABC's paper division and a revolving line of credit to meet its day-to-day working capital requirements. On March 31, 2008, the Bank of Hope delivered to Newcorp a letter stating that it would agree to extend a credit facility to Newcorp on the terms and conditions described in a term sheet attached to the letter.

Bank of Hope required, as a condition to its credit facility, that the credit be secured by all fixed and current assets of Newcorp. Carlos Banker, the account officer for the bank, took all steps necessary to give the bank a valid first-priority lien on all collateral.

A major source of revenue for Newcorp will be the long-term supply contract with ABC. The Bank of Hope is requiring an assignment of the supply contract that prohibits ABC and Newcorp from making any amendments to the contract without the bank's consent. One of the terms of the Bank of Hope's loan is a guaranty from each shareholder and from Lumber Corporation.

- a. You are a manager of Newcorp. What objections would you have to such an assignment?
 - b. You are a manager of ABC. Any objections?
 - c. You are the president of Newcorp. As president, you will be involved in the day-to-day operations of Newcorp. What arguments might you make against giving such a guaranty?
 - d. You own 51 percent of the stock of Newcorp, and you made loans to Newcorp during the initial stages of its existence. You have since left the running of Newcorp to the president and other managers. What arguments could you make against giving such a guaranty?
 - e. You are the Bank of Hope's attorney. What advice would you give the bank about taking a guaranty from Lumber Corporation?
2. Assume the facts in Question 1. On June 1, 2008, Revolving Credit Bank takes over the revolving line of credit from Bank of Hope and acquires Bank of Hope's security interest in Newcorp's accounts receivable and inventory. Beginning in early 2009, due to a combination of internal and external conditions, Newcorp's business failed to generate sufficient revenue to meet its debt obligations. The loan agreement between Newcorp and Revolving Credit Bank contains an advance clause, which states that Revolving Credit Bank may, at its discretion, advance up to \$2 million based on eligible accounts receivable and inventory. Revolving Credit Bank informed Newcorp that Newcorp has failed to maintain certain financial covenants contained in their credit agreement. Without declaring a default, Revolving Credit Bank then required Newcorp to establish a locked-box arrangement with the bank so that all payments made to Newcorp could be used first to repay any advances outstanding. On March 1, 2009, Newcorp's treasurer called Revolving Credit Bank's account officer and asked for a \$350,000 advance to cover checks that would be presented to the bank that day. Revolving Credit Bank refused to lend the full amount requested but did advance \$200,000 to pay certain suppliers.
- a. You are the manager of one of Newcorp's trade creditors that has not been paid. Do you have any rights against Revolving Credit Bank?

In April 2009, Newcorp began to have difficulty meeting its monthly repayment obligations on the term loan from the Bank of Hope. Although Newcorp never missed a payment, the payments were all a few days late. In May 2009, Carlos Banker called the treasurer at Newcorp, assuring him that the Bank of Hope "would stand by the company" and that Newcorp should do whatever it could to keep the payments current. In September 2009, Revolving Credit Bank, concerned about continuing deteriorating

conditions, decided to initiate foreclosure proceedings. The Bank of Hope followed suit only after Revolving Credit Bank began foreclosure proceedings.

- b. You are a manager of Newcorp. What defenses would you raise against Revolving Credit Bank's foreclosure? Against the Bank of Hope's foreclosure?
- c. You are a manager of Revolving Credit Bank. How would you respond to Newcorp's arguments?
- d. You are a manager of the Bank of Hope. How would you respond to Newcorp's arguments? Should the Bank of Hope proceed to foreclose against the plant? What recourse does the Bank of Hope have against Newcorp if it does not foreclose? Does it have any recourse against any other party?
- e. You are a manager of ABC and hold a junior deed of trust on the property. How would you react to the Bank of Hope's latest action?

3. Optimistic Enterprises, Inc. (OEI) has developed and patented a product for the home entertainment industry. Some industry experts predict that in two to five years the market for this technology could grow to \$200 million in annual sales. Unfortunately, due to a series of mistakes by management, the product has failed to gain traction in the marketplace. OEI is also being sued for patent infringement by its chief competitor. OEI has operated at a loss, and its current expenses exceed revenues by \$250,000 on a quarterly basis. OEI has a revolving line of credit with BankOne; the credit facility is secured by a lien against all of the company's assets. OEI's balance sheet is as follows:

Assets	
Cash	\$1,000,000
Accounts receivable	5,000,000
Inventory	2,000,000
Equipment	1,000,000
Total assets	<u>\$9,000,000</u>

Liabilities and Equity	
Accounts payable	\$5,000,000
Note payable to BankOne	1,000,000
Other liabilities	1,000,000
Total liabilities	<u>\$7,000,000</u>
Shareholders' equity	2,000,000
Total liabilities and equity	<u>\$9,000,000</u>

OEI has exhausted all efforts to cut its operating expenses, including two rounds of employee layoffs. The

company has stretched its accounts payables to ninety days or longer, except for key suppliers, and resorted to making partial rent payments for its manufacturing facility. Included within OEI's "other" liabilities are accrued, but unpaid, employee withholding taxes in the amount of \$250,000.

Antonio Pardelli, a significant shareholder and director of OEI, has formed Pardelli Acquisitions Corporation (PAC) to acquire OEI's technology, inventory, and manufacturing equipment. He has presented OEI's board with PAC's offer to buy these assets for \$3 million in cash. As part of the offer, PAC will acquire OEI's key engineers and attempt to renegotiate the lease to continue operating at the same location. PAC has also agreed to fund separate severance packages for OEI's senior executives upon closing of the sale. PAC will not assume any of OEI's debts. OEI will retain its cash and accounts receivables. PAC has waived any due diligence or other contingencies to the sale, provided that the sale closes in ten days. Is OEI in the zone of insolvency? Should the OEI board accept PAC's offer? What actions, if any, should OEI's board undertake before considering or accepting the offer? What actions, if any, could creditors take to challenge or threaten the sale? Should OEI consider filing for bankruptcy?

4. Venito, Inc. has just filed a voluntary petition under Chapter 11. Its primary asset was an unexpired lease for 9,000 square feet of office space in New York City at a rent of \$27.50 per square foot (market rate in 2009). The lease was signed on January 31, 2005, and expires on January 31, 2013. Concurrent with execution of the lease Venito paid a \$1 million security deposit (\$500,000 in cash and \$500,000 in the form of a letter of credit). The lease includes a provision stating that it terminates upon the lessee's insolvency or on the filing of either a voluntary or an involuntary petition in bankruptcy by the lessee. The lease also prohibits assignment or subletting without the landlord's consent. Venito had not paid rent for three months prior to the petition date, and it is currently in default on the lease. Prior to the petition date, the landlord had started eviction proceedings by serving a three-day notice to quit, but it had not yet retaken physical possession of the building.

Venito has a license from Langhorn, Inc. to make, use, and sell a patented product. The license provides that it terminates upon the licensee's insolvency or on the filing of a voluntary or involuntary bankruptcy proceeding by the licensee. It also provides that the license cannot be assigned without Langhorn's consent. At the time that Venito filed its petition, it had not paid license fees for three months, but Langhorn had not yet sent a notice of

default as required by the license. Subsequent to filing the petition, Venito filed a motion to assume the license and assign it to Radical Media.

- a. Assume that rental rates have increased to \$50 per square foot. Venito has filed a motion with the bankruptcy court to approve assumption of the lease and assignment of it to Radical Media. Venito proposes to keep the \$350,000 profit it will make on assignment of the lease. Is the lease an executory contract? Can Venito assume and assign the lease without the landlord's consent? Can the landlord file a motion to dismiss Venito's case for bad faith? Who will keep the profit on the lease assignment?
- b. Assume that rental rates have fallen to \$10 per square foot, Venito does not pay the rent for two months after the petition date, and Venito files a motion to reject the lease. What rights/claims does the landlord have regarding the unpaid rent? Can Venito reject the lease? What are the landlord's rights to the cash and letter-of-credit security deposits?
- c. Does the license from Langhorn terminate upon the filing of the bankruptcy petition? Can it be assumed and/or assigned without Langhorn's consent? Can Langhorn terminate the license after the bankruptcy filing? What must Venito do to assume and assign the license?

5. Filene's Basement, Inc. hired Kathleen Mason as president of Filene's Basement Division and chief merchandising officer in May 1999. Mason left a high-paying position as president of Home Goods, Inc. to join Filene's at a time when it was already experiencing financial difficulty. The parties signed an employment agreement that provided, among other things, that Mason would receive three years' salary and other fringe benefits in the event she was terminated without cause. Filene's filed for relief under Chapter 11 in August 1999. After the filing, Mason continued to provide services pursuant to the prepetition employment agreement and received the salary and benefits specified in the agreement. According to Mason, she was induced to remain with the company by the DIP's postpetition promise that her employment agreement was in effect and would be honored. She also spoke with her attorney about the status of the agreement, and he recommended that the DIP seek formal bankruptcy approval of the agreement.

Meanwhile, Filene's operations were quickly downsized: thirty-five of its fifty-five stores were closed shortly after the petition date, and on November 9, 1999, Mason was notified that she was being put on "administrative leave," with pay, pending a motion by the DIP to reject her

employment agreement. In February 2000, the bankruptcy court granted the motion to reject the employment agreement; Mason was terminated four days later. Mason then filed a “Request for Payment of Chapter 11 Expenses,” in which she claimed that her termination benefits specified in the employment agreement were entitled to first priority as administrative expenses because she was terminated after rendering postpetition services. The Official Committee of Unsecured Creditors opposed the request. What will Mason argue in support of her claim for termination benefits? What will the committee argue in opposition? Who wins and on what basis? What, if anything, could have been done to avoid this dispute? [*In re FBI Distribution Corp. v. Mason*, 330 F.3d 36 (1st Cir. 2003).]

6. After Marvel Entertainment Group filed for bankruptcy protection under Chapter 11, tensions arose between several of the creditors. Eventually, one creditor acquired control of Marvel, thereby assuming the roles of DIP and creditor. The new DIP and the other creditors attempted to settle their claims against the estate, but negotiations broke down. The new DIP then commenced adverse litigation against the other creditors. The other creditors petitioned for the appointment of a trustee, arguing that the new DIP was incapable of neutrality. The district court appointed a trustee, and the new DIP appealed. Is acrimony between the DIP and certain creditors sufficient cause to justify appointment of a trustee? [*In re Marvel Entertainment Group, Inc.*, 140 F.3d 463 (3d Cir. 1998).]
7. Southmark, a Texas corporation, sold the Double Diamond Ranch in Nevada to the Double Diamond Ranch Limited Partnership (Double Diamond), retaining an option to buy back part of the ranch. Southmark later filed for bankruptcy in Texas. As part of its Chapter 11 reorganization plan, it assumed various executory contracts by filing a notice of assumption. The plan provided that all executory contracts not listed were deemed rejected. The notice did not list the option to buy back the ranch.

Double Diamond then itself filed for bankruptcy in Nevada. The committee administering the Double Diamond bankruptcy decided to sell the ranch to South Meadows Properties Limited Partnership. The committee asked the bankruptcy court to allow sale of the ranch free and

clear of Southmark’s option. A free-and-clear sale was appropriate only if the option was no longer valid because it had been stripped away in the Texas bankruptcy proceeding. The Nevada bankruptcy court held that the option was an executory contract that had been rejected in Southmark’s bankruptcy. Therefore, it allowed Double Diamond to sell the ranch to South Meadows free and clear of Southmark’s option. Southmark appealed.

If Southmark had given written notice of its intent to exercise the option, but had not yet paid the purchase price before filing for bankruptcy, would the option have been an executory contract? The option agreement expressly provided that the option was for a period of fifteen years “provided, however, that the option granted herein shall terminate in the event Southmark files for protection under Chapter 11 for the Bankruptcy Code.” Is an option to buy property an executory contract? Why wasn’t the option automatically terminated when Southmark filed under Chapter 11? [*Unsecured Creditors Committee of Robert L. Helms Construction and Development Co. v. Southmark Corp.*, 139 F.3d 702 (9th Cir. 1998).]

8. Bank of America National Trust and Savings Association was the major creditor of the debtor, 203 North LaSalle Street Partnership, an Illinois real estate limited partnership. The value of the partnership property mortgaged to the bank was less than the balance due, leaving the bank with an unsecured deficiency of \$38.5 million. The partnership sought to cramdown over the bank’s objection a plan whereby (1) the bank’s \$38.5 million unsecured deficiency claim would be discharged for an estimated 16 percent of its present value, and (2) certain former partners of the partnership would contribute \$6.125 million in new capital over the course of five years, in exchange for the partnership’s entire ownership of the reorganized debtor. The old equity holders were the only ones given the right to contribute new capital in exchange for equity. A senior class of impaired creditors objected. What arguments will the impaired creditors make in opposition to the plan? What arguments will the equity holders make in support of the plan? Should the plan be approved? [*Bank of America National Trust & Savings Ass’n v. 2003 North La Salle Street Partnership*, 526 U.S. 434 (1999).]

INTERNATIONAL BUSINESS

Chapter 25 International Law and Transactions 986

CHAPTER 25

INTERNATIONAL LAW AND TRANSACTIONS

INTRODUCTION

Managing in a Global Economy

Total U.S. trade in goods and services reached \$3.9 trillion in 2007, representing \$1.6 trillion in exports and \$2.3 trillion in imports.¹ Firms of all sizes are taking advantage of the global markets. In addition, there is a growing internationalization of production and service delivery. Whereas in the past U.S. companies mostly outsourced production jobs, now many service-sector jobs are also being moved overseas. Estimates of the number of jobs affected vary wildly. A 2005 study by the Information Technology Association of America (ITAA) suggests that offshore outsourcing may help the U.S. economy by lowering production costs, which will lead to the creation of 337,000 new jobs in the United States by 2010, while Forrester Research predicts that 3.3 million white-collar jobs may be relocated overseas by 2015.²

International treaties and trade regimes, ranging from bilateral friendship, navigation, and commerce agreements to the regional North American Free Trade Agreement (NAFTA) and the multilateral World Trade Organization, form a major part of the legal and economic environment in which multi-national businesses operate. The most comprehensive effort to achieve regional integration is the European Union, which

has an ultimate objective of complete economic, monetary, and political integration of its expanding number of member states.

Managers in today's global economy can expect to engage in many types of international business transactions, including the sale and leasing of goods and services, transfers and licensing of technology, equity investments, and international lending. These transactions create a wealth of issues and risks, but they also provide opportunities that may not be seen in many domestic transactions. Because of the many overlapping laws and regimes, companies engaging in cross-border transactions rely heavily on contractual arrangements to address issues. In particular, contracts between companies located in different countries should address choice of law, choice of jurisdiction, and choice of a dispute resolution mechanism.

The U.S. subprime-mortgage crisis and its impact on the rest of the world underscore the existence of a global economy and the importance of international trade. According to Michael Carney, director of the Real Estate Research Council and a finance professor at California State Polytechnic University, "Falling prices are the sources of all the credit problems the world is currently experiencing. The world is going through a real credit crunch; all of this rests on U.S. home prices having precipitated this entire crash."³

CHAPTER OVERVIEW

This chapter begins with a discussion of the most common legal systems used by the world's countries. It discusses the various sources of international law, including treaties, customary practices, and decisions of international, national, and regional courts. We then discuss how national laws of both home and host countries are used to regulate the activities of multinational companies. The chapter then outlines the U.S. trade regime and certain international trade regimes such as NAFTA and the World Trade Organization. It outlines the various types of regional trading alliances, focusing on the European Union, which is the most visible example of an economic union. We then shift to a review of some of the legal issues involved in international business transactions, as well as the laws that govern doing business with and litigating against foreign governments.

NATIONAL LEGAL SYSTEMS

The legal systems used by the world's countries vary dramatically. A domestic company must follow the laws of its home country. A multinational company must obey the laws of its home country, but it also must follow the laws of all of the host countries in which it operates, as well as a variety of international treaties, customs, and trade practices. Unfortunately, these laws sometimes are in conflict with each other.

Understanding and applying these laws becomes more difficult if the countries involved use different legal systems. The United Kingdom and most of its former colonies, including the United States, use a common law system, which is based primarily on a collection of decisions rendered by judges in individual cases. Most other countries have adopted civil law systems, which are primarily based on comprehensive legal codes, often developed from a single drafting event. A few countries have adopted other legal systems such as religious law systems or combinations or derivatives of the aforementioned legal systems.

The laws of the host countries in which a multinational company operates affect these companies in a variety of ways. Some of the laws, such as labor, securities, banking, consumer protection, environmental, and intellectual property laws, are primarily designed to regulate the company's conduct within the host country and have been addressed in other chapters of this book.

A host country may also enact laws that are intended to regulate foreign-owned firms that are operating within the jurisdiction of the host country. On occasion, host countries have nationalized certain foreign-owned businesses. Some countries also regulate the percentage of foreign ownership of businesses that are incorporated within their borders. Many countries impose restraints on the ability of a multinational business to *repatriate*, or return to its home country, profits earned in the host country.

The laws of a multinational company's home country govern activities that occur within that country's borders. The home country may also have laws that attempt to regulate business activities of the company that are conducted outside the home country's borders. For example, U.S. antitrust, foreign corrupt practices, and product safety laws purport to regulate certain offshore business activities of companies. Other laws and measures, including export law, sanctions, and embargoes, are designed to regulate the international trade activities of these companies.

COMMON LAW

Common law legal systems are used in countries that are or were British territories or colonies (with the exception of a few British colonies that had adopted civil law systems before they were taken over by the British). *Common law legal systems* primarily rely on case law and precedents. As a result, common law judges use accumulated past judicial decisions on a particular kind of dispute to form general rules (*precedents*) to serve as guidelines for similar cases in the future. A judge can depart from precedent and establish a new rule, however, if the case presents different or new considerations and facts. This new rule may itself become a precedent if it is accepted and subsequently used in other cases by different judges.

An important, but not a distinguishing, aspect of common law systems is the existence of different levels of courts to define and further refine the law, starting with the trial courts that normally consist of a single judge and a jury. To reach a judgment or verdict, the jury in a jury trial or the judge in a bench trial determines the facts in accordance with the law set forth by the judge. Appellate courts form the next level in the judicial common law system. Appellate courts, which consist of judges, do not deal with the factual determinations made by the jury; instead, they only review whether the judge of the trial court applied the correct principles of law.

Statutes and codes exist in common law systems. They are created either through *codification*, a process in which existing common law positions are restated and laid down in a statute, or by enacting new *statutory law* that is not based

on existing common law rules. Courts can declare statutory law unconstitutional in common law systems.

The principle of equity is unique to common law legal systems. The very formal character of the traditional English common law system, especially with regard to remedies, made exceptions necessary. As a result, the English common law system incorporated the royal prerogative to grant these exceptions, referred to as *equity*, in individual cases in the interest of justice. Initially, common law and equity were separate systems, each with its own courts. Later, these two systems were merged, but, even today, the distinction between common law and equity remains important. For example, the Seventh Amendment to the U.S. Constitution guarantees the right to a jury trial “in suits at common law,” but no similar right is guaranteed in equity proceedings. As a result, it is necessary to ascertain whether a claim is legal or equitable in order to determine whether a jury trial is constitutionally guaranteed.

Although the U.S. legal system is undeniably rooted in the English common law legal system,⁴ there are a number of differences between the current British and U.S. common law systems. Unlike the U.S. system, the British common law system does not use juries in civil cases. It allows for only limited *discovery* (the phase in a civil lawsuit before the trial, when each party can request documents and other evidence from the other party); has no *class-action lawsuits*,⁵ prohibits the payment of lawyers on a *contingency fee* basis (in which the attorney receives a percentage of the judgment awarded to his or her client); and requires the losing party in a lawsuit to pay both its own attorneys’ fees and those of the prevailing party. The British system has two types of lawyers: solicitors and barristers. A *solicitor* is allowed to perform legal services outside the court, but only *barristers* may argue in court.

CIVIL LAW

Civil law legal systems are based on Roman law as consolidated in the *Corpus Juris Civilis* (also called Justinian’s Code after Justinian, the Roman emperor who initiated the consolidation) between A.D. 529 and 534. In the eighteenth century, strong national systems were established all over Europe,

4. The state of Louisiana, which was once a French, and later a Spanish, colony, is the only U.S. state that has a civil law system for matters that are not criminal in nature.
5. The British common law system has two types of suits that are similar to class-action lawsuits: (1) representative suits in which a claim is made on behalf of a potentially affected group, and (2) the concept of a group legal order (GLO), which is a procedure whereby a judge hears related cases together.

and this led to the creation of separate national codes. The most prominent example was the French Napoleonic Code (*Code Napoléon*), which influenced the development of other national civil codes, especially in countries that were once under French control.

Today, civil law systems are found in other areas besides Europe; several Asian countries have adopted civil law systems based on or modeled after European civil law systems. For example, Japan, South Korea, and Taiwan used the German Civil Code as the basis of their respective civil law regimes.

Civil law relies primarily on statutory laws that are embodied in a unified code. Lower courts usually cannot declare these statutes unconstitutional. Civil law systems generally draw a strong distinction between *private law* (the area of the law in which the sole function of government is the recognition and enforcement of private rights, e.g., civil and commercial codes) and *public law* (the area of the law that focuses on the effectuation of the public interest by state action, e.g., constitutional law, administrative law, and criminal law). Some civil law countries have different courts for private and public law, and some also separate criminal courts from administrative courts within their court system.

Traditionally, civil law statutes and codes tend to be more abstract than codified common law to cover a wider range of facts. Civil law judges use analogies to apply the existing statutes and codes to new cases and discuss the underlying general principles at length. Judges also often use the work of legal scholars in reasoning and deciding the case at hand. Far less frequently, civil law judges use decisions in prior cases to further refine their decisions.

Judges play a different role in civil law systems than in common law systems. Common law judges are expected to be more creative when applying the law than civil law judges are. In addition to applying the law, common law judges also create law to balance the power of the legislature. In contrast, a civil law judge is bound by the existing statutes and codes as they were created by the legislature. In common law systems, the judge is a neutral party in the proceedings, whereas a civil law judge assumes many of the roles of a lawyer in a common law system, such as deciding what evidence needs to be developed or produced. Civil law systems make only very limited use of juries, if at all, and if so, only in criminal courts.

This discussion has focused on how common law and civil law systems differ, but increasingly there are also similarities. As case law has become more important in civil law systems and statutory law has become more important in common law systems, the differences between the two legal systems have become less distinct.

OTHER FAMILIES OF LAW

Although common law and civil law systems predominate, some countries have adopted other forms of legal systems, many of which are rooted in or based on religious principles and orders.

Islamic

The traditional Islamic rules and laws that regulate Muslim life are called *Sharia* (also *Shari'a* or *Shariah*). Civil law in Islamic countries is interpreted in harmony with the *Sharia*. To honor agreements and observe good faith in commercial dealings is a central premise of Islamic law. Islamic trade and commerce is governed by the concepts of *Zakat*, *Riba* (or *Ribaa*), and *Gharar*. *Zakat* is the allocations of certain taxes to deprived and poor people as a welfare contribution. *Riba* prohibits unearned or unjustified (illicit) profits and can therefore lead to problems when interest is charged on loans. *Gharar* refers to an event whose outcomes are unknown. Islamic law forbids excessive *Gharar* if it will

lead to exploitation and injustice, as might occur, for example, in connection with an open-ended contract or a contract under which one party does not know what it will receive or has to provide. Gambling contracts have excessive *Gharar* that usually renders them void.

Hindu

Classical Hindu law contained a set of rules, customs, and usages to guide the life and beliefs of Hindus. In today's India, Hindu law is applied only to very personal matters, namely marriage, divorce, and inheritance-succession questions, and is therefore referred to as "Personal law." Most other legal issues in India are governed by codified Indian law, which is a secular law based on English common law but tailored to the needs of Indian society.

Socialist

The term "Socialist law" is used for the legal systems in Socialist and Communist states. Socialist law systems are based on civil law systems with changes and additions from

IN BRIEF

Comparison of Common Law and Civil Law

Common Law

Developed in England during 12th and 13th centuries
Adversarial
Case-based
Inductive (specific to general)
Relies on precedent
Little distinction between public and private law
Equity courts/theories
Judicial system is usually drawn as a pyramid with the "highest" court at the top.
Jury system (at least in criminal cases)
Strict rules of evidence
Pretrial discovery
Integrated court system with courts of general jurisdiction to adjudicate criminal and most types of civil cases

Single event trial

Judges act as managers or referees of the lawyers, who play adversarial roles, and are secondary to the lawyers.
Judges search creatively for an answer to a question or issue among many potentially applicable judicial precedents.
Judges are selected as part of the political process for a specific judicial post that they hold for life or for a specified term, with no system of advancement to higher courts as a reward for services.

Civil Law

Origins in Roman Republic
Inquisitional
Code-based
Deductive (general to specific)
Little reliance on precedent
Distinguishes between public and private law
Equitable doctrines, if any, must be written into the code
Judicial system divided between private law courts and public law courts.
No or limited jury system
Looser rules of evidence
Limited pretrial discovery
Specialty court systems and specialty courts to deal with different areas of law (constitutional, criminal, administrative, commercial, and civil or private law)
Trials involve an extended process with a series of successive hearings and consultations
Judges use inquisitorial process with judge as principal interrogator of witnesses.
Judges are appliers of the law.

Judges are usually part of the civil service of the country.

the respective ideological background (mostly Marxist-Leninist). One of the most important aspects of a Socialist system is public ownership of property and the means of production. Today, only a very small number of states still have Socialist law systems. Some of them, such as China, have adapted their legal system to account for the market-oriented changes in their economic system.

SOURCES OF INTERNATIONAL LAW

The term “international law” does not stand for a specific body of law or a set of rules or regulations, but refers to different legal principles that together constitute the laws of the international community. International law is often divided between public international law and private international law.⁶ *Public international law* governs the relationships among nation-states, whereas *private international law* governs the relationships between private parties engaged in transactions across national borders.

National law is normally enacted by the legislative body of a country, but there is no similar legislative body that creates international law. Therefore, in most cases,⁷ at least two nations are involved in creating the legal rules that will be applied as international law.

TREATIES

Most international rules of law are set forth in written agreements between or among two or more countries, called treaties, although they may also be referred to as conventions, pacts, protocols, or accords.⁸ The Vienna Convention on the Law of Treaties defines a *treaty* as “an international agreement concluded between states in written form and governed by international law.”⁹ This Convention, which was signed but not ratified by the United States, sets the rules for all phases of a treaty, including negotiation, signature, ratification, entry into force, and termination.

The sheer quantity of treaties—now more than 30,000—demonstrates their usefulness in defining international relations.¹⁰ Each country must determine who is authorized to enter into a treaty on its behalf; in most countries, the authorization is granted in the constitution. For example, the U.S. Constitution grants the president the power to enter into treaties “by and with the Advice and Consent of the Senate, [. . .] provided two-thirds of the Senators present concur.”¹¹ Often the president delegates this constitutional power to negotiate treaties to other parts of the executive branch.

The U.S. Constitution prohibits states from entering “into any Treaty, Alliance or Confederation,”¹² but the U.S. Supreme Court has allowed the states to enter into treaties that do not “encroach upon or impair the supremacy of the United States.”¹³ In *Crosby v. National Foreign Trade Council*,¹⁴ the Supreme Court made it clear that the authority of states and localities in this area is very limited. In 1996, the Commonwealth of Massachusetts had passed a law that barred governmental entities in Massachusetts from buying goods or services from companies doing business with Burma (Myanmar). The Massachusetts law was inconsistent with federal legislation that was subsequently enacted that imposed mandatory and conditional sanctions on Burma. The National Foreign Trade Council sued on behalf of its members, claiming that the Massachusetts law unconstitutionally infringed on federal foreign affairs power, violated the Foreign Commerce Clause of the U.S. Constitution, and was preempted by the subsequent federal legislation. The U.S. Supreme Court upheld the district and appeals courts’ decision in favor of the Council, noting that “[i]n this case, the state Act is an obstacle to the federal Act’s delegation of discretion to the President of the United States to control economic sanctions against Burma.”

The Supremacy Clause of the U.S. Constitution states that “all treaties . . . which shall be made . . . under the Authority of the United States shall be the supreme Law of the land; and the Judges in every State shall be bound thereby.” In the following case, the U.S. Supreme Court considered whether a decision of the International Court of Justice (ICJ) that flows from treaties for which the United States submitted to ICJ jurisdiction was directly enforceable as domestic law in U.S. state courts.

- 6. *Supranational law* is another legal principle of international law, under which nations submit their decision-making authority to a common organization or institution.
- 7. In some instances, unilateral actions, like declarations of a state, can also be regarded as creating binding legal effects.
- 8. Treaties can bind two states bilaterally or more than two states multilaterally.
- 9. Vienna Convention, art. 2(1)(a), 1155 U.N.T.S. at 331.

- 10. While all treaties between 1648 and 1919 could be stored in 226 books, the treaties between 1920 and 1946 fill another 205 books, and those between 1946 and 1999 an additional 2,039 volumes. MARK W. JANIS, *AN INTRODUCTION TO INTERNATIONAL LAW* 11 (3d ed. 1999).
- 11. U.S. CONST., art. II, § 2.
- 12. U.S. CONST., art. I, § 10.
- 13. *Virginia v. Tennessee*, 148 U.S. 503, 518 (1893).
- 14. 530 U.S. 363 (2000).

A CASE IN POINT**CASE 25.1****MEDELLÍN V. TEXAS**

SUPREME COURT OF THE
UNITED STATES
552 U.S. __ (2008).

IN THE LANGUAGE OF THE COURT

FACTS The International Court of Justice, located in The Hague, is a tribunal established pursuant to the United Nations Charter to adjudicate disputes between member states. The ICJ Statute, which is annexed to the Charter, provides the organizational framework and governing procedures for cases brought before the ICJ.¹⁵ In 1969, the United States ratified the Vienna Convention on Consular Relations of April 24, 1963, and the Optional Protocol Concerning the Compulsory Settlement of Disputes to the Vienna Convention. Article 36 of the Vienna Convention requires that foreign nationals who are arrested or detained must be given notice “without delay” of their right to have their embassy or consulate notified of their arrest. The Optional Protocol provides that disputes arising out of the interpretation or application of the Vienna Convention “shall lie within the compulsory jurisdiction of the International Court of Justice.” The United States originally consented to the general jurisdiction of the ICJ when it filed a declaration recognizing compulsory jurisdiction under the ICJ Statute. By ratifying the Optional Protocol, the United States consented to the specific jurisdiction of the ICJ with respect to claims arising out of the Vienna Convention.¹⁶

In 1997, José Ernest Medellín, a Mexican national, was convicted of capital murder and sentenced to death in Texas for the gang rape and brutal murders of two Houston teenagers on June 24, 1993. When Medellín was arrested, he was given *Miranda* warnings, and a few hours later he gave a detailed written confession. Local law enforcement officers did not inform him of his Vienna Convention right to notify the Mexican consulate of his detention. He first raised his Vienna Convention claim in his first application for state postconviction relief, but both the trial court and the Texas Court of Criminal Appeals rejected the claim, finding that he had failed to show that the non-notification had affected the validity of his conviction or punishment.

In 2004, in the *Case Concerning Avena and Other Mexican Nationals*¹⁷ brought by Mexico against the United States, the ICJ held that, because of violations of the Vienna Convention, fifty-one named Mexican nationals (including Medellín) were entitled to review and reconsideration of their state court convictions and sentences in the United States. When Medellín’s appeal found its way to the U.S. Court of Appeals for the Fifth Circuit, he raised the ICJ’s ruling in *Avena*, but the Fifth Circuit denied relief.¹⁸ Medellín appealed to the U.S. Supreme Court, which granted certiorari. Before the Supreme Court heard the case, President Bush issued a Memorandum to the United States Attorney General in which he asserted that the United States would “discharge its international obligations” under *Avena* “by having State courts give effect to the decision.” As Medellín’s second appeal was under consideration in Texas, the Supreme Court decided *Sanchez-Llamas v. Oregon*,¹⁹ in which it held, in a decision that did not involve the individuals named in the *Avena* judgment, that, contrary to the ICJ’s determination, the Vienna Convention did not preclude the application of state default rules. The Texas Court of Criminal Appeals subsequently dismissed Medellín’s second appeal, holding that neither the *Avena* decision nor the Memorandum was “binding federal law” that could displace the State’s limitations on the filing of successive habeas applications. The U.S. Supreme Court granted certiorari for a second time.

ISSUE PRESENTED Is the ICJ’s judgment in *Avena* directly enforceable as domestic law in a state court in the United States? Does the President’s Memorandum independently require

CONTINUED

15. The ICJ Statute sets forth two ways for a nation to consent to ICJ jurisdiction: (1) it may consent generally to jurisdiction on any question arising under a treaty or general international law, or (2) it may consent specifically to jurisdiction over a particular category of cases or disputes pursuant to a separate treaty.
16. The United States withdrew from general ICJ jurisdiction in October 1985. In 2005, the United States withdrew from the Optional Protocol.
17. 2004 I.C.J. 12.
18. *Medellín v. Dretke*, 371 F.3d 270 (5th Cir. 2004).
19. 548 U.S. 331 (2006).

the states to provide review and reconsideration of the claims of the fifty-one Mexican nationals named in *Avena* without regard to state procedural default rules?

OPINION ROBERTS, C.J., writing for the U.S. Supreme Court:

No one disputes that the *Avena* decision . . . constitutes an *international* law obligation on the part of the United States. But not all international law obligations automatically constitute binding federal law enforceable in United States courts. The question we confront here is whether the *Avena* judgment has automatic *domestic* legal effect such that the judgment of its own force applies in state and federal courts.

This Court has long recognized the distinction between treaties that automatically have effect as domestic law, and those that—while they constitute international law commitments—do not by themselves function as binding federal law. . . . [W]hile treaties “may comprise international commitments . . . they are not domestic law unless Congress has either enacted implementing statutes or the treaty itself conveys an intention that it be ‘self-executing’ and is ratified on these terms.”

A treaty is, of course, “primarily a compact between independent nations.” . . . Only “if the treaty contains stipulations which are self-executing, that is, require no legislation to make them operative, [will] they have the force and effect of a legislative enactment.”

Medellín . . . contend[s] that the Optional Protocol, United Nations Charter, and ICJ Statute supply the “relevant obligation” to give the *Avena* judgment binding effect in the domestic courts of the United States. Because none of these treaty sources creates binding federal law in the absence of implementing legislation, and because it is uncontested that no such legislation exists, we conclude that the *Avena* judgment is not automatically binding domestic law.

The most natural reading of the Optional Protocol is a bare grant of jurisdiction. . . . The Protocol says nothing about the effect of an ICJ decision and does not itself commit signatories to comply with an ICJ judgment. The Protocol is similarly silent as to any enforcement mechanism.

The obligation on the part of signatory nations to comply with ICJ judgments derives . . . from Article 94 of the United Nations Charter. . . .

. . . The Article is not a directive to domestic courts. It does not provide that the United States “shall” or “must” comply with an ICJ decision, nor indicate that the Senate that ratified the U.N. Charter intended to vest ICJ decisions with immediate legal effect in domestic courts. . . .

The pertinent international agreements, therefore, do not provide for implementation of ICJ judgments through direct enforcement in domestic courts, and “where a treaty does not provide a particular remedy, either expressly or implicitly, it is not for the federal courts to impose one on the States through lawmaking of their own.” . . .

Our conclusion that *Avena* does not by itself constitute binding federal law is confirmed by the “postratification understanding” of signatory nations. There are currently 47 nations that are parties to the Optional Protocol and 171 nations that are parties to the Vienna Convention. Yet neither Medellín nor his *amici* have identified a single nation that treats ICJ judgments as binding in domestic courts. . . .

[*Eds. Note:* The Court then rejected Medellín’s argument that the ICJ judgment is binding on state courts by virtue of the President’s Memorandum.]

The President has an array of political and diplomatic means available to enforce international obligations, but unilaterally converting a non-self-executing treaty into a self-executing one is not

CONTINUED

among them. The responsibility for transforming an international obligation arising from a non-self-executing treaty into domestic law falls to Congress. . . .

The requirement that Congress, rather than the President, implement a non-self-executing treaty derives from the text of the Constitution, which divides the treaty-making power between the President and the Senate. The Constitution vests the President with the authority to “make” a treaty. . . .

Once a treaty is ratified without provisions clearly according it domestic effect, however, whether the treaty will ever have such effect is governed by the fundamental constitutional principle that “[t]he power to make the necessary laws is in Congress; the power to execute in the President.” As already noted, the terms of a non-self-executing treaty can become domestic law only in the same way as any other law—through passage of legislation by both Houses of Congress, combined with either the President’s signature or a congressional override of a Presidential veto. Indeed, “the President’s power to see that the laws are faithfully executed refutes the idea that he is to be a lawmaker.”

RESULT The Court affirmed the judgment of the Texas Court of Criminal Appeals that the ICJ judgment was not directly enforceable as domestic law in a state court in the United States and that the President’s Memorandum did not require the states to provide review and reconsideration of the claims of the Mexican nationals named in *Avena* without regard to state procedural default rules.

COMMENT Justice Breyer wrote in his dissent that the ICJ treaty was “self-executing,” based on a reading of other treaties that had gone into effect without additional congressional action. He observed that the decision could have the effect of “diminishing our nation’s reputation abroad as a result of our failure to follow the ‘rule of law’ principles that we preach.”

Critical Thinking Questions

1. Justice Breyer appended a list of seventy treaties that the United States has ratified with ICJ dispute resolution provisions similar to those contained in the Optional Protocol, many of which relate to property rights, contract and commercial rights, trademarks, civil liability for personal injury, rights of foreign diplomats, taxation, domestic-court jurisdiction, and similar matters. Will uncertainty about the enforceability of ICJ judgments rendered under these treaties in the United States undermine efforts by the signatories of these treaties to create effective international dispute resolution procedures in a world where commerce, trade, and travel have become more international? Will this decision make it more difficult for the United States to convince other countries to come to the table to negotiate treaties related to business, the environment, intellectual property protection, and other important international issues?
2. To provide consistency in the interpretation of contracts for the sales of goods that involve companies located in different countries, the Convention on the International Sales of Goods (CISG) sets forth a set of contract principles that are supposed to bind all companies located in countries that are signatories to the CISG (the CISG is discussed in more detail in Chapter 8). The United States is a signatory to the CISG. Given the *Medellín* decision, will the CISG still be binding on U.S. businesses that enter into contracts with companies located in other signatory countries?

The consent of a nation to enter into a treaty is expressed not by signing the treaty, but through the process of ratification or accession.²⁰ *Ratification* is a twofold process that occurs both on the national level, where it is governed by the laws of the nation that has to ratify the treaty, and on the international level, where it is often governed by the treaty

itself. Only a nation that is an original party to the treaty can ratify it, but, through the process of *accession*, a nation that was not an original party can elect to participate in the treaty at a later time.

Treaties can be breached by one or more countries, and disputes can arise from these breaches or alleged breaches. These disputes can lead to adjudication in international courts, but more often these disputes are decided by national courts.

20. Vienna Convention, art. 11.

VIEW FROM CYBERSPACE

International Privacy Laws

Today's online world offers unprecedented possibilities with respect to the global exchange of information and data, including the exchange and transfer of personally identifiable information and data (personal information). The risks and problems that come with the unregulated exchange of personal information have led to privacy laws, regulations, and rules in many jurisdictions around the world that deal with the collection, processing, storage, disclosure, and use of such information. Although the definitions and understanding of the term "privacy" vary from jurisdiction to jurisdiction, common elements of the definition include the freedom or protection of individuals and sometimes groups (including selective freedom or protection of individuals and groups) from unauthorized or unwanted intrusion, observation, and violation of the integrity of their information. Often, the concept of data protection is seen as being part of privacy or existing in close connection with it.^a

The type and concept of legal regulations, as well as the speed, level of completeness, and depth of regulation and implementation, vary from country to country. Only recently have countries begun to address the issue of the cross-border transfer of personal information and taken steps to prevent the circumvention of existing national laws governing the storage, processing, and disclosure of such information through "off-shoring" of such activities. As of 2008, there is no common international privacy law in existence, and the landscape of privacy laws and regulations is still dominated by

national laws. Nevertheless, an increasing number of groups of countries (such as the European Union and the Asia-Pacific Economic Cooperation) are beginning to address privacy issues that go beyond national boundaries.

It is not always easy for multinational companies to determine which privacy laws and regulations apply to their activities, or might apply, if they do business outside their home country, especially when they are offering products or services on the Internet. Although the answer to this question will always depend on the specific privacy-related practices of the company, a multinational company that collects personal information from residents of a foreign country is likely to fall under the privacy laws and regulations in that country because most national privacy laws and regulations are intended to protect the citizens and/or residents of the country in which the law or regulation was enacted.

U.S. privacy laws are described in Chapter 9. The following provides a brief overview of the status of privacy laws and regulations in several other key jurisdictions.

European Union

The Directive 95/46/EC (EU Data Protection Directive) on the protection of individuals with regard to the processing of their personal data and the free movement of such data was implemented in the EU in 1995. Like other EU directives, the EU Data Protection Directive had to be transposed to national law in the EU's member

states to become binding law within those states. Consequently, there is some variation in the privacy laws on the member state level.

The Data Protection Directive obligates a company that processes personal information (or "personal data," the term used by the Directive) to register with the respective data protection supervisory authority before it starts collecting personal information. One of the main principles of the Directive is that personal information generally should not be collected, unless the collection is (1) proportional (meaning adequate and not excessive relative to its purpose), (2) transparent (meaning that the affected individual has to be informed as to the circumstances of the collection and consent to it), and (3) for a legitimate purpose. The EU Commission, which implemented the Data Protection Directive, had potential problems with the off-shoring of data collection, storage, and processing in mind, when it created the rules relating to the transfer of personal information. The Directive only allows the transfer of personal information into third countries (meaning countries outside the EU), if the respective third country provides an adequate level of protection for the information. The United States is not regarded as providing such adequate protection.^b

Since the EU does not regard the United States as a third country with adequate data protection, the EU and the U.S. Department of Commerce negotiated a safe-harbor arrangement to allow the transfer of personal information from any EU member state to the United States.^c The safe-harbor

CONTINUED

arrangement requires U.S. companies to adhere to seven principles set forth in the EU Data Protection Directive: notice, choice, onward transfer, security, data integrity, access, and enforcement, as determined by self-assessment or assessment of a third party, with re-certification each year.^d

After the attacks of September 11, 2001, the United States began to push for an increased data exchange (including fingerprints, DNA files, and data related to race, ethnic origin, political and religious beliefs, and sexual orientation) with many countries, including EU member states, in its fight against terrorism. It is negotiating agreements under which such personal data can be exchanged. The United States has made such agreements a condition for allowing citizens of a country to enter the United States without a visa (the so-called Visa Waiver Program, or VWP). In 2007, the United States and the EU entered into the Passenger Name Record Agreement, but the United States also continues to enter into additional bilateral agreements with EU member states (such as the memorandum of understanding with the Czech Republic in February 2008) with respect to the exchange of personal data. The EU, however, is concerned that the protection of personal data under the bilateral agreements will not be adequate.^e

Canada

Canada is generally regarded as having relatively strict privacy laws. The Canadian Privacy Act that regulates

the collection, processing, and use of personal information by government authorities came into effect in 1983; the (Federal) Personal Information Protection and Electronic Documents Act (PIPEDA) that governs the collection of personal information by private organizations and companies was passed in 1999; these were followed by the (Provincial) Personal Information Protection Act (PIPA) enacted in 2004. The Privacy Commissioner of Canada, a special authority that can audit collecting authorities and entities and investigate complaints, also performs privacy-related research and publishes privacy-related information to increase the awareness of the general public.^f The EU regards Canada as a third country with adequate protection of personal information under the EU Data Protection Directive.

Asia-Pacific Economic Cooperation

The twenty-one countries of the Asia-Pacific Economic Cooperation (APEC) have created the APEC Privacy Framework, which was endorsed by the APEC ministers in 2005. The Framework addresses the issue of the cross-border transfer of personal information and is aimed at providing guidance to businesses in APEC member countries on common privacy issues by setting up nine principles: preventing harm, integrity of personal information, notice, security safeguards, collection limitations, access and correction, use of personal information, accountability, and choice.^g The Framework has

not been ratified in any of the APEC countries, and it is not clear that the Framework will be sufficient for APEC members to be considered third countries with adequate protection of personal information under the EU Data Protection Directive.

OTHER SOURCES OF INTERNATIONAL LAW

Customary International Law

Another form of international law, *customary international law*, is created by *customary practice*. Whereas treaties between nations are comparable to contracts between

private parties in national legal systems, customary international law is analogous to “established practice” and “commercial usage” as they are known in the commercial laws of many nations. Customary practice arises from continuous practice, not from a legislative action. Thus, a state must give its express consent to be bound by a treaty, but it

implicitly consents to customary practice through continuous observation of the practice.

Treaties and customary practice often complement each other. Customary practices are sometimes used to interpret treaties, and treaties often codify, clarify, or modify existing customary practices.

Decisions of International, National, and Regional Courts

Although there are a number of international courts, these courts do not have exclusive jurisdiction over international disputes. For example, Article 34 of the statute creating the International Court of Justice states that “[o]nly States may be parties in cases before the Court.”²¹ The European Court of Justice at Luxembourg deals with cases brought by member states of the European Union (EU), cases brought by EU institutions, and cases brought by individuals or corporations against EU institutions and member states. Similarly, the European Court of Human Rights is authorized to hear complaints filed by states or by individuals about violations of the human rights protected by the Human Rights Convention. Because of the limited authority of these international courts to hear disputes involving private parties, many international disputes must be resolved by national courts. As a result, courts on a national as well as an international level are also a source of international law.

reverse situation in which property ownership is transferred from a nation to a private entity is called *privatization*.

The Overseas Private Investment Corporation (OPIC), a U.S. governmental agency, specializes in providing insurance for eligible U.S. investors against certain defined risks, including political risks such as expropriation. To be eligible for OPIC insurance, an investor must be (1) a U.S. citizen, (2) a U.S. partnership or corporation substantially owned by U.S. citizens, or (3) a foreign business at least 95 percent owned by a U.S. citizen or by a U.S. partnership or corporation. OPIC insures U.S. investors’ interests only in “friendly” countries—that is, those that have investment-protection agreements (bilateral treaties of friendship, and navigation and commerce, or FNCs, or bilateral investment treaties, or BITs) with the United States. Coverage is also available for inconvertibility of foreign-currency remittances and losses due to hostile action during civil unrest.²²

Constraints on Foreign Ownership

Some governments try to protect what they regard as the key industries of their country, such as the energy and media industries, by limiting the allowed percentage of foreign ownership. Another constraint on foreign ownership is to restrict the profits that can be returned by a multinational company to its home country (*repatriation*).

NATIONAL LAWS DIRECTED AT INTERNATIONAL BUSINESS ACTIVITIES

Other national laws are designed to regulate international business activities.

Sanctions

Sanctions may be imposed by one country (or a group of countries) against the commerce of another country (*economic sanction*)²³ in an effort to influence that country’s behavior. Sanctions can take very different forms and can include boycotts of goods, refusal to maintain commercial relationships, tariffs, quotas, and other penalties. Sanctions may lead to so-called trade wars, when a country retaliates by imposing tariffs on the goods of the country that imposed sanctions on it.

NATIONAL LAWS

NATIONAL LAWS DIRECTED AT FOREIGN-OWNED BUSINESSES

Some national laws are designed to limit foreign-owned businesses.

Nationalization, Expropriation, Confiscation, and Privatization

Host countries sometimes pass laws that directly affect foreign-owned business operations in their country. If a host country decides to assert ownership over some or all of a company’s assets, *nationalization* takes place. If the host country compensates the company for its lost assets, this process of nationalization is referred to as *expropriation*; if no compensation is provided, it is called *confiscation*. The

21. Statute of the International Court of Justice, as annexed to the Charter of the United Nations, June 26, 1945, 59 Stat. 1031, T.S. No. 993, 3 Bevans 1153 (entered into force Oct. 24, 1945).

22. OPIC publishes a number of handbooks that describe its programs and services. They are available from the Information Officer, Overseas Private Investment Corporation, Office of External Affairs, 1100 New York Avenue NW, Washington D.C. 20527.

23. Other forms of sanctions are *diplomatic sanctions* (removal or reduction of a diplomatic relationship) or *military sanctions* (military blockades or interventions).

Embargoes

An *embargo* is a special kind of sanction against all commerce of one country that is declared by a country or, more frequently, a group of countries. As with other sanctions, the goal is to force the embargoed country to change its behavior or policies. An embargo often isolates the affected country and is intended to create economic suffering. Well-known examples of international embargoes are the embargo against goods coming out of or going into South Africa, which was imposed during the 1980s because of the country's apartheid politics, and the United Nations embargo imposed on Iraq after the invasion of Kuwait in 1990 that lasted until the invasion of Iraq in 2003 by the United States and its allies.

Export Laws

Export laws are another important form of sanction. Almost every country has its own export laws.²⁴ Forty countries, among them the United States and most Western European countries, participate in the Wassenaar Arrangement.²⁵ The Wassenaar Arrangement was established in 1996 to promote greater transparency and responsibility regarding the transfer of armaments and sensitive *dual-use* goods and technologies that have both military and nonmilitary applications. In December 2001, the Arrangement was extended in an effort to prevent terrorists and terrorist groups and organizations from acquiring armaments and sensitive dual-use items. The Arrangement facilitates the voluntary exchange of information among member states and creates a forum to assess the scope of coordination of national export control policies.

NATIONAL LAWS WITH EXTRATERRITORIAL APPLICATION

Increasingly, countries are asserting the right to regulate activities that occur beyond their borders, a practice known as *extraterritoriality*. For example, both the United States and the European Union have asserted the right to apply their antitrust laws to Microsoft's activities, on the basis that the company's activities have adversely affected competition within their respective markets. See the "Inside Story" in Chapter 17 for a discussion of the U.S. and EU antitrust actions against Microsoft.

Some product safety standards also have extraterritorial application. For example, pharmaceutical products exported

to the United States must be produced in facilities that adhere to the manufacturing practices established by the U.S. Food and Drug Administration (FDA), and airplanes built overseas for use in U.S. airspace must be built according to Federal Aviation Administration (FAA) standards in FAA-certified facilities. Investment contracts for such export projects need to reflect the production standards required by U.S. law.

Foreign Corrupt Practices Act

Another example of a national law with extraterritorial application is the U.S. Foreign Corrupt Practices Act. Following the discovery that more than 400 American corporations had paid bribes or made questionable payments abroad, the U.S. Congress enacted the Foreign Corrupt Practices Act (FCPA)²⁶ in 1977 as an amendment to the Securities Exchange Act of 1934 (the 1934 Act).

The FCPA prohibits any payment by a company, its employees, or its agents directly or indirectly to a foreign government official or a foreign political party for the purpose of improperly influencing government decisions in order to obtain business abroad. The statute is violated even if the bribe is only offered but never paid. It is also violated if the payment is made to a private company or individual with the knowledge that it will be funneled to the foreign government.

An exception is made for payments to low-ranking officials who merely expedite the nondiscretionary granting of a permit or license (*facilitating payments*). A second exception is made for payments to foreign businesses, as long as they are not acting as conduits for the money to pass to the foreign government.

Directors, officers, employees, or agents of the corporation who willfully violate the prohibited payments portion of the FCPA are subject to a \$100,000 fine and up to five years in prison; the corporation can be fined up to \$2 million or, if greater, twice its profits from the illegal activity.

The FCPA also imposes record-keeping requirements on all public companies that file periodic reports with the Securities and Exchange Commission under the 1934 Act. A purely domestic public company that is not engaged in foreign trade must still comply with the FCPA's record-keeping requirements.

Under these requirements, each corporation must keep records that accurately reflect the dispositions of its assets and must implement internal controls to ensure that its transactions are completed as authorized by management. Periodic reports must be filed. Failure to maintain the appropriate records and procedures is a violation, whether

24. Sometimes the participation of a country in different international conventions may lead to various layers of export controls in the country.

25. The Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies was adopted in 1996 and updated in 2007.

26. 15 U.S.C. §§ 78a–78LLL.

or not there is payment of a bribe. This portion of the FCPA was designed to prevent companies from developing a slush fund and then accounting for questionable payments as legitimate business expenses. The record-keeping provisions of the FCPA do not contain any specific penalties.

Since 1977, when the United States became the first major industrial country to ban bribes, it has encouraged other countries to adopt similar prohibitions. The United States scored a major victory when it helped persuade the Organization for Economic Co-operation and Development (OECD) and its members to adopt the international convention on bribery (further discussed in Chapter 2).

U.S. TRADE REGIME

U.S. trade laws are enacted by Congress pursuant to the Commerce Clause of the U.S. Constitution, and they are administered by the federal government and its administrative agencies.

THE ROLE OF GOVERNMENT BRANCHES AND AGENCIES IN TRADE RELATIONS

Congress

Congress has the power to regulate all aspects of foreign commerce, including imports and exports, foreign investment, licensing of technology, and other commercial activities. International trade laws govern imports and exports. The trade laws may affect other aspects of foreign commerce as well.

Trade laws are generally designed to restrict or to facilitate imports and exports. Imports are restricted primarily by means of tariffs and quantitative limitations such as *quotas*. Conversely, imports may be facilitated through exemption from U.S. tariffs. Exports are controlled by means of *export licenses*. Exports may be facilitated by federal subsidies, tax breaks, and other legislation, including Section 301 of the Trade Act of 1974 (Trade Act) (discussed later in this chapter).

The Role of the President

The president administers U.S. trade laws pursuant to the authority delegated to the president by Congress. As chief executive, the president has broad power to negotiate trade agreements, but the president cannot regulate trade without congressional delegation or approval.

The President's Power to Restrict Trade Over the years, Congress has authorized the president to regulate or restrict trade and other economic activity when necessary to protect

U.S. national security, foreign policy, or economy. The International Emergency Economic Powers Act of 1977²⁷ limited the president's authority to restrict trade and other commercial transactions to instances when a national emergency has been declared in response to an "unusual and extraordinary threat, which has its source in whole or substantial part outside the United States, to the national security, foreign policy or economy of the United States."

The economic sanctions imposed under these laws are administered by the Office of Foreign Assets Control in the Department of the Treasury, which issues appropriate regulations. To varying degrees, the regulations apply not only to transactions in the United States, but also to transactions by foreign affiliates of U.S. companies and to transactions abroad involving U.S. property. The application of the regulations to foreign subsidiaries or operations of U.S. companies has caused considerable difficulty, particularly for companies subjected to conflicting requirements imposed by foreign governments on their foreign affiliates.²⁸

Trade Promotion Authority Another way for the president to influence U.S. international trade is the so-called Trade Promotion Authority or *fast-track negotiating authority*. *Trade Promotion Authority* allows the president to negotiate trade agreements and then submit them for an up or down vote by Congress with no amendments permitted. This authority includes mechanisms for the negotiation, consideration, and implementation of trade agreements.

Trade Promotion Authority played an important role in negotiating NAFTA. After this authority lapsed in 1994, however, Congress denied it to President Clinton in 1997. Many observers saw this denial as a direct result of the loss of many jobs in the United States that is often attributed to the increase in cheap imports from Mexico.

Since the denial of Trade Promotion Authority weakens the president's ability to create a Free Trade Area of the Americas (FTAA), one of the first steps of the George W. Bush administration was to try to reenact Trade Promotion Authority in order to be able to meet the 2005 target of the FTAA. The Trade Act of 2002, or U.S. Trade Promotion Authority Act, granted the president this authority in 2002, but the Act expired in July 2007, leaving the president without this important authority.

27. 50 U.S.C. §§ 1701–06.

28. See, e.g., Dresser Indus. v. Baldridge, 549 F. Supp. 108 (D.D.C. 1982) (French subsidiary of U.S. company unsuccessful in enjoining application of sanctions by U.S. Department of Commerce for failure to honor U.S. prohibition on exports of certain types of equipment to the Soviet Union even though French subsidiaries had been ordered by the French government to honor prior contractual commitments to ship the equipment).

Administrative Agencies

The agencies primarily responsible for administration of the trade laws are the U.S. Trade Representative (USTR), the Department of Commerce, the Department of State, the Department of the Treasury, the U.S. International Trade Commission, and U.S. Customs and Border Protection (which is part of the U.S. Department of Homeland Security).

The USTR is responsible for the development of U.S. trade policy and the negotiation of trade agreements with other countries, with the assistance of the other agencies. The USTR makes all policy decisions concerning the operation of these agreements. The Department of Commerce is generally responsible for implementing U.S. trade policy, enforcing certain import relief laws and export controls, and promoting U.S. exports. The Department of State administers controls on munitions exports and defends U.S. economic interests through U.S. embassies abroad.

The Department of the Treasury administers embargoes imposed on U.S. trade with countries such as Iran, Cuba, and North Korea. The International Trade Commission is an independent agency with a variety of responsibilities, including investigating the effect of imports on U.S. industries. U.S. Customs and Border Protection enforces all U.S. customs laws and import restrictions, and collects U.S. tariffs. Other agencies, such as the U.S. Department of Agriculture, administer restrictions on U.S. trade falling in their particular areas of responsibility, with the assistance of U.S. Customs and Border Protection.

The Interagency Committee

The president makes trade policy decisions based on the recommendations of an interagency committee, headed by the USTR. In addition to the agencies listed above, the committee includes members from the Department of Labor, the Council of Economic Advisers, and other agencies interested in trade policy. Private interests are typically given the opportunity to express their views to any of these agencies or to the interagency committee directly. For example, tariffs on a particular product are rarely changed without first consulting the affected industry. Government officials at all the agencies are generally receptive to requests and comments from U.S. companies. In many cases, public hearings are held before decisions are made.

Export-Import Bank

The Export-Import Bank of the United States (Ex-Im Bank) was created to provide financing for the purchase of U.S. exports. The Ex-Im Bank is the U.S. government's response

to foreign governments' export subsidies. By offering financing at below-market interest rates, the Ex-Im Bank allows U.S. exporters to compete with foreign companies.

LAWS AFFECTING EXPORTS

Several U.S. laws serve to facilitate or, in some cases control, exports.

Export Administration Act

The Export Administration Act of 1979²⁹ (EAA) was the primary restriction on U.S. exports. It authorized the secretary of commerce to prohibit exports when necessary to protect national security, carry out U.S. foreign policy, enforce U.S. nuclear nonproliferation policy, or prevent the export of goods that are in short supply. Some controls were imposed unilaterally by the United States. The EAA expired in 1989, but was periodically reauthorized for short periods of time and last expired in August 2001.³⁰ A new version of the EAA was passed by the Senate in 2001, but the House blocked it because of concern that the new version weakened controls on potentially dangerous technologies. However, the export licensing system created under the authority of the EAA has been continued under the International Emergency Economic Powers Act (IEEPA), pursuant to a presidential executive order.

The most significant export restrictions are those that control high technology and its products. These restrictions have had serious adverse consequences for U.S. exporters competing for business abroad. The Omnibus Trade and Competitiveness Act of 1988, reflecting the importance attached to the trade deficit and the need to promote U.S. exports, removed many controls on exports, particularly to friendly countries.

U.S. export controls are enforced by a system of export licenses. Certain categories of commodities and technical data may not be exported without an export license from the Commerce Department's Bureau of Export Administration. The Bureau decides whether to grant an export license based on a number of factors, including the nature of the item to be exported, the country to which it is to be shipped, the foreign consignee, and the use to which the item will be put.

U.S. export restrictions apply to exports of technology (referred to as technical data) as well as goods. The restrictions apply not only to exports from the United States but also to many reexports of U.S.-origin goods and technology

29. 50 U.S.C.A. app. § 2401 *et seq.*

30. Congressional Research Service, *Export Authorization Act: Evolution, Provision, and Debate*, CSR REPORT FOR CONGRESS (last updated Jan. 9, 2008), available at <http://fas.org/sgp/crs/secrecy/RL31832.pdf>.

to third countries by other countries and to exports from other countries of certain foreign-made articles that are direct products of U.S. technology. In addition, the transfer of technical data to a foreign citizen in the United States is generally considered to be an export, which means that an export license is required. Such transfers include verbal exchanges of technology on U.S. soil and visits by foreign nationals to U.S. plants.

Export Administration Regulations (EARs)

The Bureau of Industry and Security (BIS) in the Department of Commerce issues Export Administration Regulations (EARs) that apply to shipments of nonmilitary and dual-use goods and technology.³¹

The Arms Export Control Act

The Arms Export Control Act,³² which authorizes the U.S. secretary of state to prohibit exports of munitions and munitions technology from the United States, is administered by the Office of Munitions Control of the State Department, which issues the International Traffic in Arms Regulations (ITARs) and operates a licensing system similar to that of the Commerce Department, based on the United States Munitions List.³³ The Commerce and State Departments both issue advisory opinions to exporters concerning the applicability of export controls to specific transactions.

Penalties for Violations of Export Regulations

There are substantial criminal and civil penalties for the violation of U.S. export regulations. For a violation, the penalty can be the greater of five times the value of the exports involved or \$50,000, and up to five years in prison. If the violations are willful, the penalties can be even higher. Furthermore, a company that violates export regulations may be denied exporting privileges. The government can also impose sanctions or penalties under other legal regimes as well. In 2001, the Department of Commerce imposed a \$2.12 million penalty against McDonnell Douglas. This resulted from an investigation into exports of machine tools to China between 1994 and 1995. The Commerce Department claimed McDonnell Douglas submitted license applications containing false and misleading statements about the end use and end user of the machine tools and that the

exports violated the terms of the U.S. export license issued to the company. The Commerce Department also imposed a \$1.32 million civil penalty on the Chinese government-owned companies and their U.S. affiliates that received the machine tools and denied their export privileges.

In 2007, ITT Corporation was fined \$100 million for violating the Arms Export Control Act in connection with the transfer of classified materials (including information about night vision goggles) without proper authority to engineers in China, Singapore, and the United Kingdom as part of ITT's outsourcing program. ITT was given the option of spending half of the fine on the development of advanced night vision technology, in which case the U.S. government will receive the rights to all technology that is developed and will even be allowed to share this technology with ITT's competitors.³⁴

Section 301

Section 301 of the Trade Act of 1974 (*Section 301*)³⁵ is the principal U.S. statute addressing unfair foreign practices affecting U.S. exports of goods or services. It may be used to enforce U.S. rights under international trade agreements and to respond to unreasonable, unjustifiable, or discriminatory foreign government practices that burden or restrict U.S. commerce. Specifically, Section 301 authorizes the USTR to investigate alleged unfair practices of foreign governments that impede U.S. exports of goods and services. Subject to certain exceptions, the USTR must take action in response to foreign government practices that (1) violate trade agreements with the United States or (2) are unjustifiable (that is, in violation of the international legal rights of the United States) and burden or restrict U.S. commerce. The USTR has discretionary authority to take action if he or she determines that an act or policy of a foreign country is unreasonable or discriminatory and burdens or restricts U.S. commerce.

The Omnibus Trade and Competitiveness Act of 1988 created a program known as *Super 301*, which required the USTR to draw up a list of the foreign governments whose practices pose the most significant barriers to U.S. exports and to immediately commence Section 301 investigations with respect to these practices. Similarly, under the *Special 301 provisions* in U.S. trade law, the USTR identifies those countries that deny adequate and effective protection for intellectual property rights or deny fair and equitable market access for persons that rely on intellectual

property protection. Countries that have the most onerous or egregious practices and whose practices have the greatest adverse impact on the relevant U.S. products are designated as “priority foreign countries” and are subject to Section 301 investigations. Other countries with less severe problems protecting intellectual property rights are placed on a “watch list” or “priority watch list” and are monitored closely.³⁶

LAWS AFFECTING IMPORTS

The United States has several laws limiting or otherwise regulating imports.

Tariffs

Tariffs are the basic tool for limiting imports to protect domestic industries. Today, most tariffs are *ad valorem tariffs*, meaning that the importer must pay a percentage of the value of the imported merchandise. For instance, a 10 percent tariff on a shipment of imports valued at \$10,000 will result in a *duty*, that is, a required payment, of \$1,000.

U.S. tariffs are established by federal law and can be changed only by statute or by administrative action authorized by statute. Congress frequently changes U.S. tariffs. In addition, Congress has periodically delegated to the president the authority to reduce U.S. tariffs in exchange for tariff concessions by other nations. Congress has also delegated to the president the power to increase tariffs temporarily in order to protect domestic industries in certain specified situations.

The Harmonized Tariff Schedule The United States has accepted an internationally harmonized tariff system. Current tariffs are found in a document entitled the *Harmonized Tariff Schedule of the United States (HTS)*.³⁷ The HTS lists the tariffs on goods imposed by Congress and by the president, based on their country of origin.

For each product category, there are two basic rates of duty. One column applies to most countries (column 1), and the second applies to several less favored countries, such as Cuba and North Korea (column 2). These columns reflect tariffs imposed by Congress or negotiated by the president. U.S. tariffs vary not only by the country of origin but also by the article’s *tariff classification*, that is, where it is best described in the HTS.

The duty paid on an imported article depends on the value assigned to it by U.S. Customs and Border Protection, that is, on the *customs valuation* of the article. The lower the valuation, the lower the duty. The general rule of customs valuation in the United States is that the value of an article

for customs purposes is the *transaction value*, which is the price indicated on the sales invoice.

U.S. customs laws are administered by U.S. Customs and Border Protection. Its headquarters are in Washington, D.C., but the agency has a district office at every U.S. port of entry. Tariff rulings by the district offices can be appealed to headquarters and then to the U.S. Court of International Trade. Appeals from this court are to the U.S. Court of Appeals for the Federal Circuit and then to the U.S. Supreme Court.

Tariff Preferences Pursuant to authority delegated by Congress, the president has established preferential tariffs for imports from certain developing countries. The most important are embodied in the *Generalized System of Preferences (GSP)*.

The GSP, which was agreed to multilaterally, is a program developed by the industrialized countries to assist developing nations by improving their ability to export. The GSP has been used to integrate developing countries into the international trade system and to encourage beneficiary countries to eliminate or reduce barriers to trade and to enforce intellectual property rights. Under the GSP, the president has designated certain products as eligible for duty-free treatment if they are produced in developing countries designated as eligible beneficiaries of the program.³⁸

An eligible product receives duty-free treatment only if 35 percent or more of the value of the product was added in an eligible country. There are also limitations on the volume of eligible articles that may be imported from a single country. If the volume limitation is exceeded, the product is automatically removed from the category of eligible imports from that country.

If a country is found to be sufficiently competitive, the president can remove it from the program, either entirely or with respect to individual products. This process is referred to as “graduation.” For example, the Republic of Trinidad and Tobago was graduated from the program effective 2010 because, as of 2007, the World Bank classified it as a “high income” country. Countries can also be removed from the GSP program for policy reasons, such as failure to protect intellectual property rights.³⁹ The program is reviewed annually to determine which countries and products should be removed from or added to the program. The program is administered for the president by the USTR.

Import Relief Laws

In a series of laws, known collectively as the *import relief laws*, Congress has authorized the president to raise U.S. tariffs on specified products and to provide other forms of import protection to U.S. industries. These laws vary as to the nature of the unfair practice (if any) to which they are directed, the degree of injury required in order to obtain relief, the nature of the relief authorized, the agencies authorized to provide the relief, and the amount of discretion given to the president in determining whether to grant relief.

Section 201 Section 201 of the Trade Act of 1974 (*Section 201*)⁴⁰ provides for temporary relief to domestic industries seriously injured by increasing imports, regardless of whether unfair practices are involved. It is sometimes called the *fair trade law*. The relief is designed to give the U.S. industry a few years (normally no more than five) to adjust to import competition.

The U.S. International Trade Commission (ITC) investigates petitions filed by U.S. industries. If the ITC makes an affirmative finding of injury from imports, it recommends specific import relief, such as higher duties or quantitative limits on imports. The president must provide the recommended relief unless he or she finds that it would not be in the national economic interest, as defined in the law. Because import relief always has economic costs, such as inflationary effects, the president may decide not to provide relief.

The Omnibus Trade and Competitiveness Act of 1988⁴¹ encourages petitioning industries to submit plans illustrating how they would use Section 201 relief to adjust to import competition. It further provides that the ITC should recommend relief that not only addresses the injury caused by imports but also facilitates the domestic industry's adjustment to import competition. As a complement to that, the law provides that the president can grant either import relief or other appropriate relief within his or her legal authority. Thus, the law encourages making relief conditional on the ability of the domestic industry to meet the competition or to transfer its resources elsewhere.

Relationship Between WTO Dispute Settlement Process and U.S. Trade Laws Whether U.S. trade laws like Sections 201 and 301 of the Trade Act of 1974 give the president (acting through the USTR) the ability to take unilateral action to penalize countries with trade practices that threaten American interests, without going through the dispute settlement process established by the World Trade

Organization (WTO), is a matter of some debate. (The WTO, which will be discussed in detail later in the chapter, is an international institution that regulates global trade.) On their face, the U.S. laws seem to allow for this result, and the legislative history of the U.S. statute implementing the Uruguay Round and creating the WTO suggests that Congress did not intend for the WTO dispute resolution process to displace the powers vested in the USTR. The implementing legislation includes the following language:

Sec. 102(a) RELATIONSHIP OF AGREEMENTS TO UNITED STATES LAW—(1) UNITED STATES LAW TO PREVAIL IN CONFLICT—No provision of any of the Uruguay Round Agreements, nor the application of any such provision to any person or circumstance, that is inconsistent with any law of the United States shall have effect. (2) CONSTRUCTION.—Nothing in this Act shall be construed—(A) to amend or modify any law of the United States . . . (B) to limit any authority conferred under any law of the United States.

On the other hand, the United States has generally attempted to use Trade Act powers after the WTO has authorized such actions. For example, the President's Statement of Administrative Action, issued by President Clinton, provided that the United States will use Section 301 only in a WTO "compliant manner."

Nonetheless, the United States has not always awaited WTO authorization before taking action under the Trade Act. For example, President George W. Bush was strongly criticized when he announced in January 2002 that he would use his authority under Section 201 to impose tariffs of up to 30 percent on foreign steel imports for three years to protect the U.S. steel sector. The tariffs were crafted to be in accord with the 1994 General Agreement on Tariffs and Trade, or GATT (GATT was the predecessor of the WTO and is discussed later in the chapter). The EU, however, responded that the tariffs protected inefficient U.S. steel producers from fair foreign competition, in clear breach of trade agreements. The tariffs were declared illegal by the WTO's Dispute Settlement Body and its Appellate Body in November 2003. The EU announced that it would impose \$2.2 billion of sanctions on imports of U.S. textiles, shoes, fruit, and vegetables if the United States failed to lift its tariffs by December 15, 2003. Under the gun to remove the tariffs before the WTO formally approved the decision and the EU imposed sanctions, the White House averted a trade war by announcing that the tariffs had "now achieved their purpose and, as a result of changed economic circumstances, it is time to lift them."⁴²

40. 19 U.S.C. § 2251.

41. 15 U.S.C. §§ 78dd-1, 78dd-2, 78ff.

42. *Bush Lifts Steel Import Tariffs*, BOSTON GLOBE, Dec. 5, 2003, available at http://www.boston.com/business/articles/2003/12/05/bush_lifts_steel_import_tariffs/.

The Antidumping Law The antidumping law, codified in the Tariff Act of 1930, as amended,⁴³ is the most frequently used import relief law. If a U.S. industry is materially injured by imports of a product being *dumped* in the United States (that is, sold below the current selling price in the exporter's home market or below the exporter's cost of production), then the law imposes an antidumping duty on the dumped product. The amount of the duty is equal to the amount of the *dumping margin*, that is, the difference between the U.S. price and the price in the exporting country. If the ITC determines that dumping has occurred and caused material injury, the Commerce Department is required to impose duties on the imports sold at less than fair value.

The Countervailing Duty Law The countervailing duty law⁴⁴ provides that, if a U.S. industry is materially injured by imports of a product benefiting from a foreign subsidy, a *countervailing duty* (an import duty that offsets the amount of the benefit conferred by the subsidy) must be imposed on those imports.

Section 337 Section 337 of the Tariff Act of 1930 (*Section 337*)⁴⁵ provides that if a U.S. industry is injured (or there is a restraint or monopolization of trade in the United States) by reason of unfair acts in the importation of articles into the United States, an order must be issued requiring the exporters and importers to cease the unfair acts or, if necessary, excluding imports of the offending articles from all sources. This law applies to unfair competition of all kinds not covered in other import relief laws, but it is most commonly used in cases involving patent or trademark infringement. Relief is mandatory unless the president disapproves the ITC decision, which seldom happens.

The Omnibus Trade and Competitiveness Act of 1988 eliminated the requirement to show economic injury in cases involving intellectual property rights (infringement of patents, trademarks, and copyrights). The Act affected most Section 337 cases and made it significantly easier for U.S. companies to obtain relief under this statute.

The Buy American Act Under the Buy American Act,⁴⁶ federal agencies, in their procurement of supplies and equipment, must give a preference to products made in the United States unless their price is a certain percentage higher than the price of the equivalent foreign product. Products are deemed to be American made, and therefore eligible for the preference, if they are manufactured in the

United States and at least 50 percent of the components are American made.

As explained later in this chapter, preferences to domestic industry in government procurement are a common form of nontariff barrier to imports that was addressed in one of the GATT codes. Pursuant to that code (the Agreement on Government Procurement),⁴⁷ many U.S. agencies have joined foreign agencies in eliminating this preference. Defense-related articles are not subject to the agreement, however, and still receive the Buy American Act preference.

INTERNATIONAL TRADE REGIMES

In order to achieve its trade goals, both with respect to the regulation of imports and the facilitation of exports, the United States engages its trade partners in a wide array of bilateral, regional, and multilateral trade agreements. Bilateral agreements tend to be limited in subject matter, covering matters such as tariffs, taxes, and intellectual property rights. Several of the regional and multilateral agreements, such as the North American Free Trade Agreement and the World Trade Organization, have their own dispute settlement mechanisms, which were negotiated as part of each agreement.

NORTH AMERICAN FREE TRADE AGREEMENT

The trilateral North American Free Trade Agreement (NAFTA)⁴⁸ provides for the gradual elimination of all barriers to trade between the United States, Canada, and Mexico and for the free cross-border movement of goods and services between the territories of the three signatories. Designed to improve all three countries' economies and to benefit 390 million consumers with lower-priced goods and increased investment opportunities, NAFTA established the world's largest free trade zone by covered area. Congress approved the agreement on November 17, 1993, and it went into effect on January 1, 1994.

Under NAFTA, Mexico eliminated tariffs on U.S. capital goods in stages based on three categories: "A," "B," and "C." Tariffs on Category A goods, which include automobiles, were eliminated in January 1994. Category B goods, which include textile and apparel goods, became duty-free in 1998. Category C goods, which include the majority of capital goods, have been duty-free since 2003. The United

45. 19 U.S.C. § 1337.

46. 41 U.S.C. §§ 10a–d.

47. 18 I.L.M. 1052 (1979).

48. North American Free Trade Agreement, Dec. 17, 1992, 32 I.L.M. 605 (1993).

States eliminated the majority of its tariffs on Mexican goods on January 1, 1994.

In addition to eliminating its custom duties, each country is required to accord national treatment to the goods of the other nations in accordance with Article III of GATT (discussed below). The agreement also substantially reduced the barriers to government procurement and has effectively resulted in totally open procurement.

NAFTA prohibits new restrictions on investment and on trade in services among the three countries. It includes major provisions relating to specific industries, such as agriculture, telecommunications, and energy. In addition, it established special rules of origin to ensure that only products originating in the United States, Canada, or Mexico enjoy duty-free treatment. Certificates of origin are required on all goods being exported between the three countries to certify that the good qualifies as an “originating” good.

The pact also provides for the adequate protection and enforcement of intellectual property rights and attempts to ensure that these rights do not become barriers to trade. Each country was required to implement several international agreements regarding intellectual property rights, such as the Berne Convention for the Protection of Literary and Artistic Works (dealing with copyrights) and the Paris Convention for the Protection of Industrial Property Rights (dealing with patents).

NAFTA explicitly protects the continued enforceability of U.S. environmental regulations and includes a mechanism for sanctions if Mexico fails to enforce its own environmental laws. In addition, a side agreement set up a three-nation mechanism, the Commission on Environmental Cooperation, to address environmental disputes. Any country or private interest group that believes that a nation is not enforcing its environmental laws may complain. If the Commission determines that a violation has occurred, it can impose a fine up to \$20 million or impose trade sanctions on the offending country. Through August 2004, sixty-four citizen submissions had been filed.⁴⁹ Since 1992, Mexico has enacted a number of major environmental statutes and numerous regulations (often modeled on U.S. environmental laws) and has dramatically improved its environmental enforcement regime.⁵⁰ Even so, some environmentalists have faulted the Commission for not demanding more, especially in the area of transboundary cleanup and remediation.⁵¹

51. Joel Millman, *Nafta's Do-Gooder Side Deals Disappoint*, WALL ST. J., Oct. 15, 1997, at A19.

The North American Agreement on Labor Cooperation, a side agreement that established National Administrative Offices (NAOs) in the United States, Mexico, and Canada to hear complaints about worker abuse, has had little impact.⁵² Although NAOs are restricted to reviewing and issuing a report on the complaint,⁵³ they can request the establishment of an Evaluation Committee of Experts (ECE) to further analyze the matter. If a matter is not resolved by the ECE, the disputing parties can request consultations and the formation of arbitration panels.⁵⁴ Human rights organizations and U.S. unions have argued that violations relating to freedom of association, collective bargaining, and strikes should also give rise to fines and trade sanctions, not just the high-level ministerial consultations called for in the side agreement.⁵⁵ Primarily to protect fruit, vegetable, and sugarcane growers in Florida, NAFTA phases out U.S. agricultural tariffs over fifteen years. In addition, during that period, any dramatic increases in Mexican fruit and vegetable imports will trigger temporary “snap-back” tariffs to protect U.S. growers. Efforts to build on NAFTA by creating a Free Trade Area of the Americas (FTAA) have been stalled since 2005.

THE WORLD TRADE ORGANIZATION AND THE GATT

Besides negotiating bilateral and regional preferential agreements, the United States participates in the World Trade Organization (WTO), the successor to the General Agreement on Tariffs and Trade (GATT), entered into in 1994 (GATT 1994). The WTO came into existence on January 1, 1995,⁵⁶ after the conclusion of the Uruguay Round of GATT multilateral trade negotiations.

The WTO oversees all of the agreements reached in the Uruguay Round,⁵⁷ and it is the principal multilateral mechanism devoted to the regulation of international trade. As of 2008, the WTO had 153 members with at least another thirty countries (including Russia) waiting to join.

The WTO is especially notable as an emerging international institution similar to, albeit less well funded than, the World Bank and the International Monetary Fund. It is this institutional aspect of the WTO, along with its large membership and broad scope, that draws attention to the organization, both positive and negative.

The GATT has had a profound effect on world trade.⁵⁸ Tariffs today are, on average, a small fraction of what they were when the GATT was formed in 1947. The Uruguay Round, the eighth in the history of the GATT, was the most ambitious GATT round ever held. The 117 nations represented at the Uruguay Round agreed to reduce their tariffs by an average of one-third over six years. In addition, agricultural tariffs were reduced by 36 percent in industrial nations and by 24 percent in developing nations. For the first time, agriculture, services, textiles, and investment services were covered by international rules of fair trade, as was the protection of intellectual property rights. The agreement, also for the first time, protected the right of service-sector companies to operate on foreign soil free of discriminatory laws.

The WTO agreement requires member states to participate in the Multilateral Trade Agreements, including (1) fourteen Agreements on Trade in Goods (including GATT 1994), (2) the General Agreement on Trade in Services (GATS), (3) the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIP), (4) the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU), and (5) the Trade Policy Review Mechanism (TPRM). These agreements are binding on all members of the WTO.

The WTO initiated the Doha Round in 2001, the next round of negotiations after the Uruguay Round. The Doha Round is discussed in the “Political Perspective” in this chapter.

BASIC PRINCIPLES OF THE WTO

Six basic principles undergird the GATT and its successor, the WTO: (1) most favored nation treatment, (2) bound tariffs, (3) national treatment, (4) gradual freer trade through negotiation, (5) fair competition, and (6) encouragement of development and economic reform.⁵⁹

Most Favored Nation Treatment

The *most favored nation (MFN)* principle is the foundation of the current world trading system. Each WTO member

must accord to all other member countries tariff treatment no less favorable than it provides to any other country. In other words, if the United States agrees to lower its tariff on imports of a product from a certain country, it must grant the same treatment to all other WTO members. (The Generalized System of Preferences and other preferential agreements discussed above are exceptions to the MFN principle and are authorized by the GATT.) The theory behind the MFN principle is that world trade will be enhanced if countries avoid discriminating among themselves and creating trading blocs that expand trade within the blocs but restrict trade between them.

The GATT encourages regional economic integration and participation in free trade areas and customs unions, however. A *free trade area* is created when a group of states reduce or eliminate tariffs between themselves but maintain their own individual tariffs as to other states. A *customs union* is similar but involves the establishment of a common tariff for all other states.

Once a free trade area or customs union is established, GATT rules apply to the area or union as a whole and not to the constituent states. Members of the WTO may participate in free trade areas or customs unions, only if the area or union does not establish higher duties or more restrictive commercial regulations for other WTO countries.

Bound Tariffs

A second basic principle of the GATT is the concept of *bound tariffs*. Each time tariffs are reduced, they become bound; that is, they may not be raised again. If any country raises its bound tariffs, it must compensate the other WTO members, normally through other tariff concessions.

National Treatment

A third basic principle is *national treatment*. WTO members may not discriminate against imported products in favor of domestically produced “like products.” Thus, for example, special taxes on imported goods are illegal if not applied equally to domestic products. The determination of what is a “like product” is done on a case-by-case basis by examining such factors as (1) the product’s end uses in a given market; (2) consumers’ tastes and habits, which vary from country to country; and (3) the product’s properties, nature, and quality.⁶⁰

Political PERSPECTIVE

The Road to the Breakdown of the WTO Doha Development Round

The Doha Development Round is the current trade-negotiation round of the World Trade Organization (WTO). Its objective is to lower trade barriers around the world, thereby allowing countries to increase trade globally. The Doha Round began with a ministerial-level meeting (a "Ministerial") in Doha, Qatar, in 2001. Subsequent Ministerials took place in Cancún, Mexico, in 2003; in Hong Kong in 2005; and in Geneva, Switzerland, in 2008.

Before the Doha Ministerial, negotiations had already been under way on trade in agriculture and trade in services. These ongoing negotiations had been required under the Uruguay Round, the preceding round of multilateral WTO trade negotiations, which lasted from 1986 until 1994. The first WTO Ministerial Conference, held in Singapore in 1996, established permanent working groups on four issues: trade and investment, competition policy, transparency in government, and ways to simplify trade procedures (also referred to as trade facilitation). These issues, known as the Singapore Issues, were pushed at successive Ministerials by the developed countries and opposed by most developing countries.^a As no agreement was reached, the developed nations insisted that any new trade negotiations must include the Singapore Issues. Negotiations over the Singapore Issues were intended to begin at the Ministerial Conference in Seattle in 1999, but were postponed due to several events at the Seattle conference, including massive street protests. As a result, the negotiations were postponed until the Doha Ministerial in 2001.

Ministerial Conference in Doha

The Doha Ministerial led to a new trade agenda, the "Doha Development Agenda," that covered negotiations related to the opening of agricultural and manufacturing markets, intellectual property regulations (TRIPS), and trade in services (GATS). The Doha Round was set to be concluded in December 2005, after two more Ministerials would have produced a final draft declaration.^b

The 2003 Cancún Ministerial was intended to forge concrete agreement on the Doha Round objectives, but it quickly collapsed when members were unable to agree on a framework to continue negotiations. Differences over the Singapore Issues seemed irresolvable. The European Union (EU) and the United States, on the one side, and a trade bloc of developing and industrialized nations led by India, the Republic of China, Brazil, and South Africa (the so-called G4), on the other side, had very different ideas about special and differential treatment (see below), and a strong division between the two groups on agricultural questions, and farming subsidies in particular, became apparent. The collapse of the Cancún Ministerial put the 2005 deadline for the Doha Round in jeopardy, and further WTO negotiations for the Doha Round were suspended for the remainder of 2003.

In July 2004, WTO members met in Geneva, Switzerland, to continue negotiations. Prior to these meetings, the Singapore Issues were taken off the agenda to avoid a further standstill, and the EU made concessions regarding the elimination of agricultural

subsidies. With the Singapore Issues tabled, the negotiators were able to concentrate on moving forward with the Doha Round, and they reached what has become known as the Framework Agreement, which provided broad guidelines for completing the Doha Round negotiations, with four annexes covering agriculture, nonagricultural market access, services, and trade facilitation. The Framework Agreement also provided guidelines for completing the Doha Round, abandoned the January 1, 2005 deadline for the negotiations, and set December 2005 as the date for the next Ministerial to be held in Hong Kong.

In preparation for the Hong Kong Ministerial, trade negotiators met in Paris in May 2005, but negotiations stalled again over agricultural questions. During the Hong Kong Ministerial, however, trade ministers representing most of the world's governments agreed to set a deadline of 2013 for eliminating subsidies of agricultural exports. The final declaration from the talks, which resolved several issues that stood in the way of a global trade agreement, also required industrialized countries to open their markets to goods from the world's poorest nations. The Hong Kong Ministerial pushed back the expected completion of the Doha Round until the end of 2006, but negotiators were optimistic that it would be possible to finish a comprehensive set of global free trade rules within the extended timeframe.

The Hong Kong Ministerial was followed by a round of talks in Geneva in July 2006, during which negotiators were unable to reach agreement about reducing farm subsidies and

CONTINUED

lowering import taxes. Their failure to reach agreement made a successful outcome of the Doha Round unlikely, especially when coupled with the 2007 expiration of the fast-track negotiating authority granted to U.S. President George W. Bush under the Trade Act of 2002. Without this authority, trade pacts of the United States must be approved by the U.S. Congress with the possibility of amendments, which makes other countries less willing to participate in negotiations due to the uncertain outcome.

Negotiations resumed in June 2007 in Potsdam, Germany, but quickly broke down. The main disagreements concerned opening up agricultural and industrial markets in various countries and how to cut rich nations' farm subsidies.

Collapse in Geneva

Prior to commencement of the Geneva Ministerial on July 21, 2008, Pascal Lamy, WTO Director-General, predicted that the odds of success were better than 50 percent. During the first several days, a number of agreements were reached. On July 29, however, the negotiations collapsed over issues of agricultural trade between the United States, India, and China. In particular, there was an irresolvable conflict between India and the United States over the special safeguard mechanism (SSM), a measure designed to protect poor farmers by allowing a country to protect its farmers by imposing special tariffs on agricultural imports in the event of a surge of these imports. While the United States claimed that the SSM had been set too low, India and China refused to agree to a higher threshold.^c

Although disagreements over agricultural production, exports, and the related subsidies and tariffs were the main issues that led to the collapse of the Geneva Ministerial, other unresolved issues included provisions giving special and differential treatment to developing countries and problems that developing countries are having in implementing current trade obligations.^d

The trade ministers had agreed in 2001 in the declaration of the Doha Ministerial to review, strengthen, and make the special and differential treatment provisions more precise, effective and operational.^e The concept of "special and differential treatment" refers to provisions that give developing countries (and the least developed countries) special rights and developed countries the possibility to treat developing countries more favorably than other WTO members. During the negotiations of the Doha Round, the developed countries accused the developing countries of being unreasonable in their proposals, while the developing countries claimed that the developed countries were not negotiating in good faith.

Another issue involved the implementation of the agreements of the Uruguay Round by the developing countries. These countries argued that they could not implement the agreements because they did not receive the necessary technical assistance and lacked capacity. Although some of the implementation-related issues were successfully addressed in the course of the Doha Round, others, such as investment measures, subsidies, countervailing measures, and market access, remain unresolved.

The failure of the WTO member countries to reach agreement at the Geneva Ministerial appeared to end, at least for the near term, any hope of a global deal to further open global markets. "It is a massive blow to confidence in the global economy," said Peter Power, spokesman for the European Commission. "The confidence shot in the arm that we needed badly will not now happen." The failure also delivered a blow to the credibility of the WTO and could set back efforts to work out other multilateral agreements, including those intended to reduce global warming.^f

Gradual Free Trade Through Negotiation

The WTO lists lowering trade barriers as one of the most obvious means of encouraging trade, but recognizes that adjustments are required. Countries are allowed to introduce changes gradually through “progressive liberalization,” and developing countries are allowed more time to fulfill their obligations.

Fair Competition

The WTO recognizes that “free trade” cannot be free of all regulations and allows tariffs and other forms of protection, but within a system of rules dedicated to open, fair, and undistorted competition.

Encouragement of Development and Economic Reform

The WTO aims at encouraging members that are developing countries to implement trade liberalization programs and to take on obligations that are required of developed countries.

OTHER GATT AND WTO PRINCIPLES

Tariffs are not the only barrier to trade.

Nontariff Barriers

In some cases, countries have replaced tariffs with *nontariff barriers (NTBs)* as a means of protecting domestic industries threatened by import competition. For example, the preference often given to domestic products in government procurement can reduce the volume of imports. International codes designed to reduce nontariff barriers were negotiated during the Tokyo Round of the GATT (which occurred from 1973 to 1979). Further efforts to reduce NTBs, specifically those arising from regulatory measures that explicitly or effectively protect domestic industries, are reflected in the Agreement on Technical Barriers to Trade and the Agreement on the Application of Sanitary and Phytosanitary Measures.

Environmental and Health Exceptions and the SPS Agreement

The GATT gives member states the right to adopt and enforce measures “relating to the conservation of exhaustible natural resources” as well as measures “necessary to protect human, animal or plant life or health.” Such measures cannot be applied in an arbitrary or unjustifiably discriminatory manner, however; nor may they be used as a disguised restriction on trade.

► ETHICAL CONSIDERATION

France and other European countries have typically required a majority of television programming to be of European origin, thereby limiting American-made programs to less than 50 percent of the total television broadcasts. France imposes a tax on movie tickets for American movies, and uses the money generated from the taxes to underwrite French films.^a

For years, Canada has been concerned that the U.S. media would turn the country into a mini–United States. In April 1998, federal regulators in Ottawa adopted a requirement that at least 35 percent of music played by commercial radio stations on weekdays between 6 A.M. and 6 P.M. must be Canadian selections played in their entirety.^b In June 1999, similar restrictions were imposed on the distribution of movies in Canada by U.S. movie companies, as well as on ads in publications in order to bolster local Canadian magazines.^c Liza Frulla, the Minister of Canadian Heritage, claimed that these measures were necessary because “Canadians must be able to find their own reflection in the music, films, television programs and literature created by our artists and distributed in our country.”^d Cultural policies were exempted in part from NAFTA.

An earlier attempt by Canada to impose an 80 percent excise tax on advertisements in split-run editions of periodicals was struck down by the WTO as a violation of Article III’s requirement of national treatment.^e A split-run edition of a magazine is one in which the publisher who is located in a foreign country inserts some domestic content as well as domestic advertising in the magazine that is originally targeted at the readership of the foreign country.

To what extent should media companies worry about protecting local culture? Should popular tastes prevail, or is it acceptable for governments to protect expressions of local culture by minimizing foreign competition through quotas?

e. World Trade Organization: Report of the Appellate Body in Canada—Certain Measures Concerning Periodicals, WTO Doc. WT/DS31/AB/R, 1997 BDIEL AD LEXIS 12 (June 30, 1997).

This exception to national treatment has been construed very narrowly.⁶¹ A WTO appellate body upheld a ruling of a dispute settlement panel that France's ban on white asbestos was justified to protect the health of French workers under Article XX(b) of GATT; this was the first case in which the WTO upheld national public-health protections.⁶² In contrast, the U.S. reformulated gasoline standards (adopted as part of the Clean Air Act Amendments in 1990), which imposed tougher baselines for foreign producers and refiners, were successfully challenged by Venezuela and Brazil.⁶³ The Committee on Trade and Environment, established under the auspices of the WTO to make recommendations on the need for rules to enhance the positive interaction between trade and environmental measures for the promotion of sustainable development, has done little to date.

The Agreement on the Application of Sanitary and Phytosanitary Measures (SPS Agreement), adopted as part of the Uruguay Round, deals with additives, contaminants,

toxins, and disease-carrying organisms in food. The SPS Agreement gives WTO member states the right to take sanitary and phytosanitary measures that are "necessary" for the protection of human, animal, or plant life and health. In addition to not being discriminatory or used as disguised restrictions on trade, the measures cannot be "more trade restrictive than required" to achieve their appropriate level of protection. A measure is more trade restrictive than required if there is a reasonably available and feasible alternative that would accomplish the same result.

The United States, Canada, and Argentina successfully challenged what they regarded as an EU moratorium on the approval of biotech products based on insufficient scientific evidence in the following case. The case highlights the different approaches of the EU and the United States with respect to the regulation of biotech products and genetically modified organisms (GMOs). Until 2004, when this case was initiated, the EU had followed a "precautionary approach" under which precaution is seen as a temporary measure until further risk assessment is possible ("harmful until proven safe"). The U.S. approach is diametrically different ("safe until proven otherwise") and had been criticized as deregulatory and "laissez-faire" by the EU. As a result of the United States' successful challenge of the EU approach, the EU was required to adopt changes to its regulatory regime to make it similar to the U.S. regime.

A CASE IN POINT

CASE 25.2

EC—MEASURES AFFECTING THE APPROVAL AND MARKETING OF BIOTECH PRODUCTS

WORLD TRADE ORGANIZATION
DISPUTE SETTLEMENT BODY
WTO Docs. WT/DS291,
WT/DS292, & WT/DS293
(ADOPTION Nov. 21, 2006).

SUMMARY

FACTS In June 1999, five European Community (EC) member states declared that they would not approve biotech products for commercialization until new EC legislation (Directive 2001/18) concerning the labeling and traceability (ability to document each step in food and animal feed production from the farm to the consumer) of genetically modified organisms (GMOs) had been adopted by member states. This declaration triggered U.S. charges that the EC was engaging in a de facto moratorium of agricultural biotechnology products.

In May 2003, the United States informed the EC that it would seek WTO consultations to end the alleged moratorium on the basis, among others, that it violated the WTO Agreement on the Application of Sanitary and Phytosanitary Measures (the SPS Agreement). The United States appended to its complaint a list of biotech product applications for commercialization that had been submitted to EC member states from April 1999 through July 2001, all of which were either pending approval or had been withdrawn. As of 2003, the U.S. State Department claimed at least \$300 million in lost sales of genetically modified corn and soy products.

The EC argued that the filing of the complaint was "legally unwarranted, economically unfounded and politically unhelpful." Several weeks later, President George W. Bush asserted that the alleged moratorium was hindering efforts to reduce hunger in Africa. Because the EC consultation did not result in the ending of the alleged moratorium, in August 2003 the WTO Dispute Settlement Body (DSB) announced the formation of a single panel to rule on the case.

CONTINUED

The EC argued that Article 5.7 of the SPS Agreement allowed WTO members to establish a provisional SPS measure without a risk assessment because of the insufficiency of scientific evidence and uncertainty about risks that make it impossible to carry out a full risk assessment. Regulatory review delays resulting from requests by regulators to obtain sufficient relevant scientific evidence to perform a risk assessment, design risk management measures, and formulate risk communication measures should not, therefore, be characterized as “undue delay” in violation of the SPS Agreement. As an example of the delay required for thorough regulatory review, the EC noted the three-year delay before Canada approved Monsanto’s application to commercialize genetically engineered wheat.

The United States, on the other hand, argued that the EC could not defend its moratorium as provisional measures resulting from insufficient evidence. The earlier rendering of a positive scientific assessment by an EC scientific committee was sufficient to require final approval of the biotech products.

The United States cited the following passage in the appellate body’s ruling in the Japan-apples case as support for its argument:

[T]he application of Article 5.7 [of the SPS Agreement] is triggered not by the existence of scientific uncertainty, but rather by the insufficiency of scientific evidence. The text of Article 5.7 is clear: it refers to “cases where relevant scientific evidence is insufficient,” not to “scientific uncertainty.” The two concepts are not interchangeable. Therefore, we are unable to endorse Japan’s approach of interpreting Article 5.7 through the prism of “scientific uncertainty.”⁶⁴

[Eds. Note: The Japan-Apple case dealt with a complaint by the United States brought before the WTO concerning certain requirements and prohibitions imposed by Japan with respect to the importation of Apple fruit from the United States.]

ISSUE PRESENTED What level of scientific evidence is sufficient to allow WTO member states to take precautionary measures in connection with biotech products and GMOs?

SUMMARY OF OPINION The final ruling of the panel was issued in May 2006 after the panel sought expert advice, and the DSB adopted the panel reports in November 2006. The panel found that a de facto moratorium on approvals of biotech products was in effect when the panel was established. The panel further found that the EC had violated its obligations under the SPS Agreement by applying this moratorium because the moratorium had led to “undue delays” in approval processes for biotech products. The panel concluded that the EC had prevented approvals through its acts and omissions and that these procedural decisions to delay final substantive approval decisions violated Articles 5.1 or 2.2 of the SPS Agreement. The approval procedures therefore led to “undue delay,” which is inconsistent with the SPS Agreement.

With regard to EC member states’ safeguard measures, the panel found that the EC also violated the SPS Agreement because these safeguard measures were not based on risk assessments that satisfied the SPS Agreement and were maintained without sufficient scientific evidence in violation of Articles 5.1 and 2.2 of the SPS Agreement.

The panel rejected the EC’s argument that its measures in connection with biotech products were measures to preserve biodiversity under the competence of the Cartagena Protocol on Biosafety and outside the WTO’s competence. (*Eds. Note:* The Cartagena Protocol is not recognized by the WTO as containing presumptively authoritative standards.)

RESULT The DSB found that the EC’s de facto moratorium, the EC’s approval measures, and the EC member states’ safeguard measures violated the requirements of the SPS Agreement. No damages were awarded to the plaintiff. The EC announced its intention to implement the recommendations and rulings of the DSB in a manner consistent with its WTO obligations. Due to the

CONTINUED

64. WT/DS245/AB/R, ¶ 179.

complexity and sensitivity of the issues involved, the parties agreed that the EC would have until June 2008 to implement the decision.

COMMENTS Since the EU ended its de facto moratorium and introduced more permissive rules for the approval of biotech products, the DSB's final ruling mainly affects the way in which the EC will deal with biotech products going forward. The WTO ruling will likely become a precedent for future WTO panels that deal with food safety, the environmental impact of food production, and related topics. This will likely influence how newly developing countries shape their regulatory regimes.

WTO DISPUTE SETTLEMENT PROCEDURES

The United States has used the WTO dispute settlement process both as a means of vindicating rights in particular cases and as a way to communicate to its trading partners that the United States expects them to take seriously compliance with the WTO rules. In fact, according to U.S. government figures, the United States has been an active user of the WTO dispute settlement process, having used it in eighty-six cases from January 1995 to June 2008.⁶⁵

Although the United States has for the most part been successful in pursuing these matters, both by prevailing in cases it has brought and by negotiating settlement agreements, the United States has also lost its share of cases. The United States lost its first case before the WTO in December 1997, when the WTO rejected Eastman Kodak Company's claims that Fuji Photo Film and the Japanese government had erected internal barriers to trade in Japan. Until then, the United States had won outright or obtained concessions in all fourteen of the previous cases it had brought at the WTO. The Kodak ruling sparked criticism of the WTO. In the words of then Senator John Ashcroft (R-Missouri), the ruling raised "serious questions about the credibility of this international body and of the U.S. trade representative's capacity to secure and defend free-trade agreements."⁶⁶

As of June 2008, the United States had lost 34 of the 121 proceedings initiated by other WTO member countries. In addition to the *Kodak* ruling, the losses included WTO decisions concerning reformulated gasoline, provisions of the U.S. tax code giving preferred treatment to U.S. foreign

sales corporations (FSCs),⁶⁷ the operation of the U.S. Revenue Act of 1916,⁶⁸ the U.S. imposition of tariffs on foreign steel imports discussed earlier in this chapter,⁶⁹ and the U.S. final affirmative determinations of sales at less than fair value (dumping) with respect to shrimp from Ecuador.⁷⁰

A significant concern of the United States, as reflected in executive branch testimony before Congress and writings of academics and trade professionals,⁷¹ involved the implementation of WTO decisions. Before the establishment of the WTO, the defendant in a GATT dispute could, in effect, block dispute settlement procedures because the GATT Council could only adopt a panel report unanimously. The

67. FSCs are offshore corporations possessing special tax attributes allowing them to exempt from U.S. income taxation a portion of revenue earned on sales of U.S.-origin goods outside the United States. The WTO ruled in February 2000 that these exemption provisions constituted an illegal export subsidy under WTO rules. United States—Tax Treatment for "Foreign Sales Corporations," WTO Docs. WT/DS108/AB/R (WTO App. Body Feb. 24, 2000). The WTO Appellate Body affirmed this decision in 2002 and approved the EU's request for over \$4 billion in retaliatory tariffs.

68. In August 2000, a WTO Appellate Body upheld a dispute settlement panel finding that the U.S. Revenue Act of 1916 is inconsistent with WTO antidumping rules. The Appellate Body upheld the panel's findings that WTO antidumping rules are applicable to the 1916 Act and that the 1916 Act is inconsistent with these rules because the Act allows for treble damages and criminal penalties against importers of products sold below market value. In addition, according to the WTO, the 1916 Act impermissibly allows duties to be imposed against imports without first requiring a finding of material injury with respect to the import competing industry. The United States had argued that the 1916 Act was more akin to U.S. antitrust laws and, as such, should not be considered subject to WTO antidumping rules. The WTO ruling did not affect the antidumping law contained in the Tariff Act of 1930, which is consistent with the WTO Antidumping Agreement.

66. Robert S. Greenberger et al., *WTO's Kodak Ruling Heightens Trade Tensions*, WALL ST. J., Dec. 8, 1997, at A3.

WTO's Understanding on Rules and Procedures Governing the Settlement of Disputes improved that process. Under the WTO, a panel of experts will be established at the request of a complaining party. Panel reports will be adopted virtually automatically unless they are rejected by consensus of the WTO members (including the member-complainant that filed the case in question).

The nature of the WTO as an international institution raises issues that do not arise in the context of implementing domestic judicial decisions. In the domestic setting, a court order has the force of law, and compliance with such orders is ultimately backed by the physical power of governmental authorities. By contrast, a WTO member can respond to losing a case before a panel or appellate body of the WTO by (1) implementing the recommendations and rulings, (2) providing compensation, or (3) accepting suspension of concessions by the winning party or parties. To date, the express preference of the United States has been for members to comply with WTO rulings and implement such changes to national law and policy as are necessary to achieve compliance with the applicable WTO agreement.

This strong preference—and the United States' willingness to act on it—helps explain why the United States moved expeditiously to implement a February 2000 WTO decision, compliance with which required a change in U.S. tax law relating to foreign sales corporations.⁷² It also helps explain the strong trade tensions that erupted between the United States and the European Union over the EU's implementation of WTO decisions in the so-called bananas case in which the United States, along with Ecuador, Guatemala, Honduras, and Mexico, successfully challenged the EU banana regime in WTO dispute settlement proceedings.⁷³ The WTO panel found that the regime was designed, among other things, to take away a major part of the banana distribution business of U.S. companies. Nonetheless, on January 1, 1999, the EU adopted a regime that, from the U.S. perspective, perpetuated the WTO violations identified by the panel and the appellate body. Consequently, the United States sought WTO authorization to suspend concessions (that is, retaliate) with respect to certain products from the EU, equivalent in value to the trade damage sustained by the United States. WTO arbitrators determined the level of damage to be \$191.4 million. On April 19, 1999, the WTO authorized the United States to suspend concessions,

72. See Press Release, U.S.T.R. (Sept. 30, 2000) (announcing that the United States and the European Union had reached an agreement regarding procedures for reviewing whether replacement legislation for the then current FSC regime was WTO consistent and urging Congress to complete this action as expeditiously as possible).

73. European Communities—Regime for the Importation, Sale and Distribution of Bananas, WTO Doc. WT/DS27/15 (Jan. 7, 1998).

and the United States imposed 100 percent *ad valorem* duties on a list of EU products with an annual trade value of \$191.4 million.

Timetable

The WTO Understanding on Rules and Procedures Governing the Settlement of Disputes sets forth the procedures and the timetable for resolving disputes. The agreed limits are flexible, but normally a case should not take more than one year (fifteen months if the case is appealed) to run the full course from consultation among the countries involved in the dispute (with mediation by the WTO director-general if the parties cannot resolve the dispute themselves) to a ruling by the Dispute Settlement Body. Exhibit 25.1 presents the timetable for resolution of the reformulated gasoline cases brought by Venezuela and Brazil against the United States.

REGIONAL ECONOMIC INTEGRATION

Regional alliances play an important role in the promotion of international trade. More than one hundred regional alliance agreements are in existence. These regional trading alliances vary significantly, but they all achieve some amount of economic integration among the members. Regional alliances can be divided into five groups: free trade areas, customs unions, common markets, economic unions, and political unions. As explained earlier, a free trade area encourages trade among its members by eliminating trade barriers. NAFTA, which reduces tariffs and nontariff barriers among Canada, Mexico, and the United States, is an example of a free trade area.

A customs union not only eliminates internal trade barriers among its members but also adopts common external trade policies toward countries that are not members. The Mercosur (or Mercosul) Accord, an agreement among Argentina, Brazil, Paraguay, and Uruguay, is an example of a customs union.

A *common market* has the features of a customs union, but goes a step further by eliminating barriers that restrict the movement of labor, capital, and technology among the member nations. The European Economic Area, an agreement by EU members and several other European countries to promote the free movement of factors of production among them, is an example of a common market.

In an *economic union*, internal trade barriers are abolished, restrictions on mobility of factors of production among members are eliminated, and the economic policies of the member states (monetary, fiscal, taxation, and social welfare programs) are fully integrated so as to blend the member states' economies into a single entity. The European

EXHIBIT 25.1

Timetable for WTO Dispute Settlement Process in Practice: Reformulated Gasoline Decision

On January 23, 1995, Venezuela complained to the WTO Dispute Settlement Body that, pursuant to amendments to the U.S. Clean Air Act adopted in 1990, the United States applied stricter rules on the chemical characteristics of imported gasoline than it did for domestically refined gasoline. Brazil joined the case in April 1996. The following chart shows the actual timetable for resolution of the dispute.^a

Time (0 = start of case)	Target/Actual Period	Date	Action
-5 years		1990	U.S. Clean Air Act amended.
-4 months		September 1994	U.S. restricts gasoline imports under Clean Air Act.
0	"60 days"	23 January 1995	Venezuela complains to Dispute Settlement Body, asks for consultation with U.S.
+1 month		24 February 1995	Consultations take place. Fail.
+2 months		25 March 1995	Venezuela asks Dispute Settlement Body for a panel.
+2½ months	"30 days"	10 April 1995	Dispute Settlement Body agrees to appoint panel. U.S. does not block. (Brazil starts complaint, requests consultation with U.S.)
+3 months		28 April 1995	Panel appointed. (31 May, panel assigned to Brazilian complaint as well.)
+6 months	9 months (target is 6–9)	10–12 July and 13–15 July 1995	Panel meets.
+11 months		11 December 1995	Panel gives interim report to U.S., Venezuela, and Brazil for comment.
+1 year		29 January 1996	Panel circulates final report to Dispute Settlement Body.
+1 year, 1 month		21 February 1996	U.S. appeals.
+1 year, 3 months	"60 days"	29 April 1996	Appellate body submits report.
+1 year, 4 months	"30 days"	20 May 1996	Dispute Settlement Body adopts panel and appeal reports.
+1 year, 10½ months		3 December 1996	U.S. and Venezuela agree on what U.S. should do (implementation period is 15 months from 20 May).
+1 year, 11½ months		9 January 1997	U.S. makes first of monthly reports to Dispute Settlement Body on status of implementation.
+2 years, 7 months		19–20 August 1997	U.S. signs new regulation (19th). End of agreed implementation period (20th).

a. *Settling Disputes; Case Study: The Timetable in Practice*, WTO, available at http://www.wto.org/english/thewto_e/whatis_e/tif_e/disp3_e.htm (last accessed Aug. 2008).

Union, discussed below, is the most visible example of an economic union.

A *political union* represents the complete political and economic integration of the member states. The integration of the thirteen separate colonies under the Articles of Confederation for the United States is an example of a political union.

THE EUROPEAN UNION

The European Union, formerly known as and still often referred to as the European Community, is an intergovernmental organization of twenty-seven European states. The EC/EU was established through the following treaties: the

European Coal and Steel Community (established in 1951); the European Atomic Energy Commission (Euratom, established in 1957); the Treaty of Rome, which established the European Economic Community (EEC) in 1957;⁷⁴ the Single European Act (1987); and the Treaty on European Union⁷⁵ (also known as the Maastricht Treaty), which established the European Union in 1993. In 2004, the Treaty establishing a Constitution for Europe was signed, but by

74. Treaty Establishing the European Economic Community, Mar. 25, 1957, 298 U.N.T.S. 11.

75. Treaty on European Union, Feb. 7, 1992, 1992 O.J. (C 224) 1, 31 I.L.M. 247 (1992).

2007, it was clear that it would not obtain the necessary votes for ratification. The Treaty of Lisbon (also known as the Reform Treaty), which includes a revised version of the original constitutional text of the Treaty establishing a Constitution for Europe as well as a number of changes to the structure of the EU,⁷⁶ was signed in December 2007 in Lisbon, Portugal, with the plan to ratify it in all member states before the European elections in 2009. However, the future of the Treaty of Lisbon, which was rejected by a referendum in Ireland in June 2008, is unclear, as its ratification in many other member states has been placed on hold as of August of 2008. The struggle for a European constitution is described in more detail in the “Inside Story” in this chapter.

From the beginning, the intention was to create a common market, which was formally established in 1993 and is now well down the path to economic, monetary, and political union. As of 2008, the twenty-seven EU member states are Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, The Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. Croatia, the Republic of Macedonia, and Turkey are official membership candidate countries; Albania, Bosnia and Herzegovina, Kosovo, Montenegro, and Serbia are potential membership candidates.

Goods, services, people, and capital can move almost as freely within the EU as within one country. There are no tariff barriers between the states, and all states apply a single set of tariffs (called the *common customs tariff*) on goods imported from outside the EU.

The creation of the single EU market has had profound effects on U.S. businesses. It has facilitated the formation of larger European companies with a bigger home market and has increased large-scale research and development in Europe. At the same time, the single market has created a larger market for American goods and has made the EU a more attractive place in which to invest.

The EU negotiates international trade agreements on behalf of the member states, but all agreements (including negotiations with the WTO) must be approved by the individual states. The EU has the exclusive power to take action against dumping in the EU by companies in non-member countries. Agriculture is centrally coordinated through the Common Agricultural Policy, which supports prices of agricultural products and promotes the modernization of agriculture throughout the EU.

76. See below under “Principal EU Institutions” for more information on the institutional changes of the Treaty of Lisbon.

EU competition law, based on U.S. antitrust principles, has been used to prevent companies from engaging in private restraints of trade affecting the member states. For example, in 2004, the European Commission found that the bundling of the Windows operating system with the Microsoft Windows Media Player abused Microsoft’s dominant position in the market; Microsoft was required to offer a version of the operating system without the media player installed. In 2006, the European Court of First Instance annulled the Commission’s decision to allow the merger of Bertelsmann Music Group and Sony Music Entertainment to form Sony BMG.

Principal EU Institutions

Five main institutions have the responsibility for governing the EU: (1) the European Commission, (2) the Council of Ministers, (3) the European Parliament, (4) the European Court of Justice, and (5) the European Court of Auditors. The Treaty of Lisbon, whose status remains unclear, would add the European Council and the European Central Bank to the existing five EU institutions.

The European Commission The European Commission is the executive branch of the EU and comprises twenty-seven individuals appointed by the governments of the member states (with each member state appointing one member). Commissioners are expected to act independently of their national governments. With a staff of more than 25,000 civil servants, the Commission is at the heart of the EU’s policy-making process.

The Commission formulates recommendations, addresses opinions to members, and may bring member states before the European Court of Justice for failure to carry out their obligations under the Maastricht and Rome Treaties.

The Council of Ministers The Council of Ministers, officially known as the Council of the European Union, is the legislative body of the EU, and enacts legislation based on proposals referred to it by the European Commission. Members of the Council are appointed by the governments of the member states, but unlike the Commission members, they represent the interests of their respective states.

EU legislation may be in the form of *regulations*, which are directly applicable in the member states without the need for national measures to implement them. Legislation may also take two other forms. One is the *directive*, which is a law directing member states to enact certain laws or regulations. Directives are binding with respect to the objective to be achieved but allow national authorities to choose the form and means of implementation. The other form of legislation is the *decision*, which is an order directed at a specific person or member state.

The European Parliament The 785 members of the European Parliament (EP) are the only EU policymakers elected directly by the citizens of the member states, generally in proportion to the population of each state. The Parliament must be consulted twice on each legislative proposal. First, it considers the proposed law at the committee level; then it expresses its opinion by a vote in plenary session. If the EP rejects a proposal, the law can be enacted only by a unanimous vote of the Council of Ministers. The EP can also amend European Commission proposals. If the Commission supports the EP amendment, the amended proposal can be defeated only by a unanimous vote of the Council of Ministers. Finally, the Parliament has the power to dismiss the Commission with a two-thirds vote and to reject the Commission's annual budget.

The European Court of Justice The European Court of Justice (ECJ) is the judicial branch of the EU. Its role is to interpret the treaties establishing the EU and to determine whether national laws, as applied by the national courts, are consistent with those obligations. The ECJ has been a major force in affirming the powers of community institutions and the development of a single market.

The ECJ comprises up to fifteen judges and nine advocates general appointed by the national governments. In 2007, a total of 580 new cases came before the ECJ, bringing the number of pending cases to a total of 741. Of these, the ECJ decided 570. There are five primary avenues to the ECJ:⁷⁷

1. *Failure to comply.* The Commission advises a company or a country that it has failed to comply with a directive or regulation. If the company or country contests the Commission's ruling, then the matter is brought before the ECJ.
2. *Annulment.* Any member state or EU institution (that is, Commission, Council, or Parliament) may ask the ECJ to annul an EU decision as contrary to the Rome Treaty.
3. *Failure to act.* Member states or EU institutions may ask the ECJ to declare that a country, the Council of Ministers, or the Commission has failed to take a required action. Individuals who are personally and directly concerned may intercede in the proceeding.
4. *Civil liabilities.* National courts and individuals may ask the ECJ for a ruling that the EU or a national government is liable for damages for an act or failure to act.
5. *Preliminary rulings.* National courts can ask for an opinion as to whether a national law conflicts with one or more articles of the Rome or Maastricht Treaties and request guidance as to how EU law should be interpreted and applied to the matter at hand. Most of the ECJ's cases fall into this category.

77. The authors gratefully acknowledge the assistance of Professor Claude Mosseri-Marlio in the preparation of this discussion of the ECJ.

In an effort to reduce a backlog, a junior court—the Court of First Instance—was created in 1989. It hears administrative cases, competition cases, dumping suits involving countries outside the EU, and intellectual property cases. Appeals from the Court of First Instance to the ECJ can be made only on matters of law, not matters of fact.

The European Court of Auditors The European Court of Auditors is composed of one member from each European member state. The Court has no judicial functions, but acts as an external independent investigatory audit agency, monitoring and inspecting the EU budget to determine whether it has been correctly implemented. The European Court of Auditors reports any problems it finds and prepares annual reports for the European Parliament.

European Council Under the Treaty of Lisbon, the European Council would become an EU institution. The European Council, which has no legislative or executive powers, would consist of the heads of the member states of the EU and the President of the European Commission and would constitute the highest political body of the EU.

The European Central Bank Under the Treaty of Lisbon, the status of the European Central Bank (ECB) would also change to that of an EU institution. The ECB is based in Frankfurt, Germany, and came onstream on July 1, 1998. Its primary duty is to maintain price stability, usually by lowering or raising interest rates. The Maastricht Treaty required all member states to converge their economic and monetary policies with the goal of creating a single European currency, the *euro*. The convergence criteria called for the member states to harmonize their budget deficits, inflation levels, public-sector debt, and long-term interest rates at specific target levels and to achieve exchange rate stability. These efforts culminated in the creation of the European Monetary Union (EMU) on January 1, 1999.

Eleven EU members qualified for initial participation in the euro: Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, The Netherlands, Portugal, and Spain. Greece was permitted to adopt the euro in 2001 after lowering its budget deficits and inflation, Slovenia adopted it in 2007, and Cyprus and Malta adopted it in 2008. Slovakia is scheduled to adopt the euro in 2009. The United Kingdom, Sweden, and Denmark are eligible to adopt the euro, but have taken a wait-and-see approach. By giving up their national currencies, members of the EMU have relinquished control of their exchange rates and monetary policies to the ECB. On January 1, 1999, all currencies of participating member states were irrevocably locked together at a specified conversion rate, and the euro became the official currency for the participating member states.

Challenges

Notwithstanding the tremendous progress toward European integration, challenges remain. There is no European citizenship—a nonnational can vote in local but not national elections. There is no European company law or Europe-wide insurance. Rules for pension plans are not coordinated, and plans cannot hold nonnational shares of stock. There is still no tax harmonization; national varieties include value-added, income, company, capital gains, wealth, and inheritance taxes. In addition, the EU administrative structure is top-heavy and became even more unwieldy with the addition of ten new members in 2004 and two more—Bulgaria and Romania—in 2007. Several of the new members and the candidates for membership are regarded by critics of the continuous enlargement of the EU as too different from the existing (or core) EU countries in social, cultural, and economic terms. These differences may be one of the reasons that public opinion is mixed regarding the EU's planned course of continuous growth and adoption of an EU-wide constitution.⁷⁸ See the “Inside Story” in this chapter for more information about the EU's efforts to adopt a constitution.

INTERNATIONAL TRANSACTIONS

OVERSEAS OFFICES AND SUBSIDIARIES

U.S. businesses can establish a presence in a foreign country to supervise or manage sales with little or no investment by setting up a liaison, representative, or branch office in the host country. The scope of permissible activities, capital requirements, and tax liabilities of each of these forms of representation varies with the legal scheme of the host jurisdiction.

Typically, the greater the scope of permissible activities, the more stringent the capitalization and taxation rules. Thus, representative and liaison offices are generally limited to providing services on behalf of a home office. They cannot engage in manufacturing operations, and the nature of the sales support and marketing activities they can conduct

Luskin, James S. Fishkin, Stephen Boucher & Henri Monceau, *Considered Opinions on Further EU Enlargement: Evidence from an EU-Wide Deliberative Poll* (research paper, July 9, 2008), available at <http://cdd.stanford.edu/polls/eu/>; What “Non” Means, BBC News (Sunday), May 29, 2005, available at <http://news.bbc.co.uk/2/hi/europe/4552937.stm>.

typically is limited. In countries with very limited or no provision for such operations, companies may be forced to choose between use of an agent or distributor on the one hand and a branch or subsidiary on the other.

A branch office can perform certain kinds of services, such as import and export, provided it is formally capitalized, registers with local government authorities, and pays income and other required taxes. Legally, the lack of local limited liability protection is one reason not to use a branch office. Many companies have subsidiaries that are entirely separate legal entities, with their own capital structure, boards of directors, and officers. Different tax treatment is a second reason to favor a subsidiary rather than a foreign office when establishing an overseas presence. Another issue that should not be overlooked is the burden of disclosing and possibly restating company financials under local regulations.

CONTRACTING IN AN INTERNATIONAL ENVIRONMENT

An international contract, like a domestic one, may reallocate rights, obligations, and risks in a way different from what they would be in the absence of the contract under applicable law. In an international context, however, the practices common to the parties may be fewer, their assumptions and expectations more divergent, and the risks greater. There is, in short, more ground to be covered to ensure a true meeting of the minds—and more risk and uncertainty in proceeding without one.

PAYMENT AND LETTERS OF CREDIT

Because the parties to an international transaction may not be well known to each other, a very common payment mechanism for international transactions is the opening (that is, the establishment) of a documentary credit, commonly known as a *letter of credit*. The buyer or borrower (the *applicant*) enters into a contract with the issuing bank, which is usually in the buyer's or borrower's jurisdiction. The issuing bank issues a letter of credit in favor of the seller or lender (the *beneficiary*). The *documentary letter of credit (L/C)* provides for payment by the issuing bank to the beneficiary upon tender by the beneficiary (or its agent or assignee) of specified documents. The nature of these specified documents is based on the terms of the contract between the applicant and the beneficiary.

Two sets of rules can apply to L/Cs in international transactions. The first is Article 5 of the U.S. Uniform Commercial Code (UCC), which varies slightly from state to state. The second set of rules is set forth in the International

Chamber of Commerce's Uniform Customs and Practice for Documentary Credits (UCP), the most recent version of which is contained in a document often cited in bank L/C forms as Uniform Customs and Practice for Documentary Credits.⁷⁹

There are significant differences between UCC Article 5 and the UCP. For example, UCC Article 5, as interpreted by most U.S. courts, provides that, once established, an L/C is irrevocable unless otherwise agreed. The UCP, by its terms, establishes the opposite presumption: an L/C is revocable at the issuing bank's option and without prior notice to or agreement of the beneficiary, unless the contract and the L/C expressly state that the L/C is irrevocable. These rules, as much as the terms of the underlying sales contract, can determine the outcome of a payment dispute.

The parties can elect to have their L/C governed by UCC Article 5 or by the UCP, and they should be specific about their choice.⁸⁰ It is also prudent to expressly specify in the L/C whether it is revocable or irrevocable.

GUARANTIES AND STANDBY LETTERS OF CREDIT IN FINANCING TRANSACTIONS

Guarantees and standby letters of credit are also often used to provide security for those providing financing for a major construction project in another country. If the political or credit risks of a country are perceived to be especially great, an entity in the host country, often an instrumentality of the host country government, may be called upon to act as the guarantor. Under a *guaranty* arrangement, a local financial institution guarantees, for the benefit of the project owners, that the lender will be repaid if the project principals are unable to pay, as long as the parties to the project have adhered to the contracts.

U.S. law prohibits U.S. banks from issuing guarantees, so a standby letter of credit is sometimes used to provide payment or repayment comfort. Under a *standby letter of credit*, payment is usually conditioned upon a brief statement, in language previously agreed upon by the applicant and the beneficiary, that the applicant is in default or has failed to perform an obligation to the beneficiary under the construction or similar project and the beneficiary is therefore entitled to payment from the issuing bank. Unlike the common form of guaranty, the creditor only has to tender the specified document and is not required to establish that the debtor breached

its obligations in the underlying contract. This means that a guarantor can raise any defenses that the primary debtor could have raised, while a bank that issued a standby letter of credit cannot inquire into the underlying transaction or assert the defenses that the applicant has.

Although letters of credit are therefore more secure, they cost money, and, in an ongoing relationship, the buyer usually presses for more favorable payment terms. In the multinational-corporation context, having a well-known parent company guarantee a local affiliate's obligations is a fairly common cost-saving alternative to an L/C.

INVESTMENT ABROAD

Before investing outside the United States, U.S. firms should (1) assess their investment goals; (2) consider the economic, political, geographic, legal, and labor conditions in the host country; and (3) address any financial issues, such as currency considerations, project capitalization, and taxation.

Investment Goals

A business plan for investing abroad must begin with an assessment of the investor's goals. The attractiveness of a prospective investment in a given host country can vary greatly, depending on these goals.

Local Market Penetration

For legal or business reasons, some markets are almost inaccessible to U.S. manufacturers wishing to sell their products. Developing countries may lack hard currency—that is, convertible foreign exchange—and these shortages may limit their purchase of imports. Applicable laws may restrict imports of certain products but grant benefits to foreign investors wishing to manufacture those products locally. To penetrate these types of markets, the only practical approach may be to invest in a local manufacturing facility. Certain Asian countries permit only local companies to establish retail businesses—another example of how foreign companies may be prevented from competing in certain markets.

Regional Base

U.S. businesses that wish to compete in Europe or Asia may need to establish manufacturing, marketing, and/or service centers in the relevant region to gain credibility with local customers. U.S. businesses may also need to be on-site to sustain their local sources of supplies for operations elsewhere. Regional bases can reduce transportation costs, enhance time-to-market responses, help avoid cultural difficulties,

79. ICC Publication No. 600, Revision 2006, which formally commenced on July 1, 2007.

80. Certain provisions in revised UCC Article 5 cannot be varied by agreement; as a practical matter, however, the nonvariable rules are unlikely to conflict with any UCP rule.

and generally help the home office monitor the business pulse of the region. They also avoid potential problems with distributors or agents not wholly committed to the products or not aligned with the foreign parent. The challenge of integrating an expatriate with the local business environment is the corollary of this issue of aligning locally hired managers with the overall corporate mission and goals.

Cheaper Production Costs

Developing countries typically offer cheaper labor and raw materials than more industrialized countries. These lower costs are often the primary reason for U.S. business investment in foreign manufacturing operations. As discussed below, however, the assessment of true production costs is not limited to a line item comparison of the costs of each element of production. Intangible issues such as labor efficiency, reliability of supplies, local labor law requirements, and political stability can affect the true costs of production.

HOST COUNTRY CONDITIONS

Prospective investors need to consider the economic, political, geographic, legal, and labor conditions in the host country.

Economic Conditions

The host country's economic condition is usually a high-profile issue in the investment evaluation process. Per capita income, for example, may determine whether a particular country is a realistic market for a particular product or whether it is a likely source of inexpensive labor. Economic growth trends can suggest both a growing consumer market and increasing labor costs. The monetary system is also important because the existence of a readily convertible currency and the nature of the currency-exchange laws will determine whether profits can be easily repatriated (that is, transferred abroad). In a country with a high inflation rate, local suppliers may be reluctant to perform on long-term contracts, and capital and working loans may be more expensive.

The U.S. Department of Commerce, the U.S. Foreign Commercial Service, and the U.S. Department of State regularly publish reports on the economic conditions of various countries. These agencies can offer a good introduction for a prospective foreign investor. The U.S. Foreign Commercial Service has a wide-ranging network of commercial officers stationed at U.S. embassies and consulates throughout the world. They collect and analyze economic data and are available on-site to U.S. businesses to interpret how that data may be relevant to an investment project.

Political Conditions

Political instability inevitably leads to some degree of legal and economic instability. Generally, investors are mainly concerned with the reliability and stability of the local legal institutions that enforce contracts and protect property rights. Changes of government in Western democracies can lead to changes in the legal and policy environment that dramatically affect the economic results of foreign investments but do not undermine the rule of law. Other political systems may have a stable regime, but with a corrupt judicial and legislative system that does not offer effective legal recourse for investors. At the outer extreme, violent political or civil divisions can lead to the complete collapse of the rule of law. Business can still be done in such an environment, but written contractual terms become insignificant next to practical considerations of power, possession, and protection.

A prospective foreign investor must, therefore, look beyond the reasonableness of the contract, the competence of its foreign business counterpart, and the desirability of the site to determine whether the existing government and its policies are aligned with the needs of the project and whether that government or its policies are likely to change in adverse ways. Managers should analyze both (1) political risks, such as expropriation, partial nationalization, and serious operational restrictions, which often stem from a change in the overall political orientation; and (2) legal risks, such as changes in tax, customs, employment, and other laws that do not represent an inherent shift against private ownership or foreign investment.

Geographic Conditions

Climatic and geographic conditions can directly affect the production and transportation of products. Severe weather in certain seasons can affect delivery schedules. Consequently, it is important to ascertain the breadth and reliability of the transportation system and other infrastructure available.

The nature, cost, and development status of a prospective site are major considerations. In some countries (such as Vietnam or the Philippines where foreign nationals can only purchase condominiums or townhouses), foreign investors are not permitted to own land but can, often with the assistance of a local partner, obtain long-term land-use rights. If the capital investment will be large relative to the parent company's assets, a foreign investor may want to consider investing only in countries that offer guarantees concerning expropriation or in friendly developing countries where U.S. investors are eligible for OPIC insurance (discussed earlier in the chapter). Sometimes a country may seek to attract

investment to certain areas by offering attractive land-use terms and new infrastructure.

Mistaken assumptions about issues such as land rights and use, flood control, power supply, fire protection, utility service, legal and informal employee protections, and the like can present the most significant hidden operational hazard in foreign direct investment. It is critical for the investor and its legal and business advisers to probe these areas aggressively in their due diligence.

Legal Conditions

Managers should ask whether local laws and courts offer predictability, uniformity, and evenhanded enforcement. Also, is the judicial system speedy, efficient, and inexpensive? Beyond the letter of the laws, their effectiveness depends on political conditions and the nature of the legal and administrative organs that interpret and enforce them. A reliable court system or comparable dispute resolution forum (such as an established arbitration system) is essential; without it, the investor will have little leverage to enforce contracts or invoke commercial laws.

Sources of necessary supplies should be secure, and their transportation and storage not subject to rampant theft. The existence of a reasonably diligent and fair law enforcement network is a factor to be considered in this regard.

Foreign investors must develop a working knowledge of the applicable host country laws and acceptable forums for dispute resolution, and they should obtain professional advice from local attorneys. These professionals can also assist in providing accurate contract translations where required. It is not uncommon for a country to require that the definitive text of a contract be in the local language (for example, consumer contracts in the Canadian province of Quebec must be drawn up in French, unless the parties expressly agree otherwise), but an accurate English version is critical.

Many countries offer a variety of vehicles for foreign investment. A foreign investor can select the investment format most appropriate to its project in a foreign country, just as a U.S. business can choose to operate domestically as a sole proprietorship; a general, limited, or limited liability partnership; a limited liability company; or a corporation. Each form is subject to its own set of laws, which affect management structure, equity investment requirements, limitation of investor liabilities, and taxation.

Often, though, businesses have less structural flexibility in foreign jurisdictions. In contrast to the United States, in some countries more prestige is attached to specific forms (for example, in some European countries, the private

limited company form may be perceived as a less serious commitment than the public limited company form). Country handbooks published by international accounting firms, local law firms, and the U.S. government contain useful information on such issues.

The licensing or contribution of technology by the U.S. business to the foreign business is often a component of an equity investment project. For example, some countries' investment laws or policies may limit the portion of the foreign party's equity investment that can be attributable to intellectual property, as compared with cash or equipment. Certain restrictions on technology use also may be invalid under local technology licensing laws.

A would-be investor should check for bilateral tax or investment treaties that grant reciprocal rights to businesses from the host and investor countries. These treaties may offer significant benefits, such as avoidance of double taxation (that is, taxation by both the host and investor countries) and guarantees against uncompensated expropriation by the host government. The U.S. State Department compiles records of ratified treaties and their signatories. A quick review of this information can provide a sense of the relative involvement of various nations in international conventions that affect foreign investment.

Labor Conditions

A leading reason for investing abroad is to take advantage of relatively low labor costs in a foreign country. The true cost of labor, however, is more than the hourly or daily wage. It includes labor efficiency, trainability, reliability, and adherence to quality control standards. In addition, the labor and foreign investment laws of some countries, particularly those with socialist economies, require employers to fund a wide range of employee benefits that are not expected by U.S. investors. These benefits include housing, travel, education, and food subsidies, as well as the more common retirement, health insurance, and maternity benefits. Many nations do not permit employers to terminate an employee without just cause, which can make it difficult to terminate inefficient or redundant workers. Local labor laws may limit the degree to which employees may be treated differently, thus restricting flexibility in incentive compensation.

Financial Issues

Several common financial concerns for an equity investor in a foreign project include currency considerations, project funding and capitalization, and taxation.

IN BRIEF

Thinking Internationally

Market Conditions and Competition

- Product/service market fundamentals
- Distribution/operational realities
- Personnel and management
- Location
- Currency
- Competitors
- Achieving “local touch”

Legal Mores of Foreign Country

- Rule of law
- Corruption
- Judicial integrity

Substantive Foreign Law

- Exchange controls
- Import/export costs and controls
- Employment law
- Taxes, both foreign and domestic
- Securities
- Antitrust
- Formation, governance, and dissolution of a foreign entity

Sociopolitical and Economic Climate of Host Country

- Long-term economic stability
- Stable pro-market consensus
- Attitude toward foreign investors

Currency Considerations The currency in which the foreign entity does business and in which its assets and obligations are denominated can be a major concern for a U.S. investor in many developing countries. The ideal is an open economy (1) without currency and other monetary restrictions and (2) with a currency tied directly to the dollar or at least to another stable major currency such as the euro. This minimizes the fluctuations in investment results due solely to currency issues relative to those inherent in the fundamental economics of the business. In the second-best case, the prices of inputs and outputs are primarily denominated in hard currency, even though the local currency is the unit of account (a common requirement). This is most typical in export and processing operations. Often, however, the investor will find

that local currency controls and financing restrictions are a significant issue. In that case, hedging contract commitments and planning capital allocation across currencies and in view of governmental restrictions will be an integral part of establishing and implementing a successful financial plan.

Local financial institutions are often restricted in offering foreign-currency loans. At the same time, foreign banks outside the host country may be reluctant to offer capital loans if local currency profits may not be freely convertible for loan repayment. Project proceeds, or even host country project properties, may not offer sufficient security for a loan from a foreign financial institution. Consequently, the foreign investor may be required to obtain and provide security entirely outside the host jurisdiction for any loans it desires.

The availability and cost of hard currency can be a major issue when the host country currency is not freely convertible. It may be of less concern to a foreign investor that expects to earn hard currency through exports of either the project’s products or other local products purchased with its local currency profits. This latter arrangement is known as *countertrade*.

Cash-flow hedging methods are increasingly common in countries that maintain restrictive controls on foreign exchange. For example, a company with both import and export activities might structure import payments to match hard-currency inflows in order to reduce potential exchange rate losses. If the local currency is depreciating rapidly, inflows of hard-currency earnings may lag behind offsetting import payments. As a currency is devalued, import costs rise. Potential exchange rate losses can be avoided by delaying the conversion of export receivables into local currency until imported goods are paid for.

The currency denomination also affects the capitalization of an investment project. For example, a foreign partner in a joint venture may agree to contribute a specified amount of U.S. dollars over time, with the host country partner making an equal contribution in the local currency. If the local currency depreciates against the U.S. dollar, the foreign partner will end up making a greater than 50 percent contribution to the joint venture in local currency terms. Some reconciliation of paid-in capital and share pricing may be needed under local law. Unequal contributions may also arise where local law requires foreign-currency capital contributions to be valued at an official exchange rate that fails to reflect the local currency’s true value. These currency risks can be addressed by careful contract drafting and, where possible, through currency swaps and hedging.

Project Capitalization The foreign business to which the investor is committing an investment typically requires fixed capital (often for construction costs) and working capital for daily operations. Local laws and practices may not permit the flexibility in capital structure available in the United States.

The reliability and attractiveness of a host nation in this regard may be affected by factors such as political risk, currency-convertibility laws, profit-repatriation restrictions, local banking laws and practices, and the enforceability of guaranties or security agreements. As noted earlier, the lenders will usually require the borrower to secure its repayment obligations by providing a standby letter of credit or guaranty.

Taxation Careful tax planning can minimize the risk of withholding taxes and double income taxation and can enable the investor to take advantage of local tax benefits. One simple way of addressing tax risks is a *gross-up clause*, whereby the local party is obligated to pay all taxes other than those specifically allocated to the foreign party. In this way, the foreign party avoids the risk of tax increases or unknown taxes. Some countries prohibit such reallocation of responsibility for the payment of certain taxes, however, and will not recognize gross-ups. As a result, a gross-up, though simple in concept, often is not the most efficient way of addressing certain tax issues.

The United States has bilateral tax treaties with more than fifty countries. The treaties seek to avoid double taxation of U.S.-based businesses and individuals. Some treaties also impose tax ceilings on certain types of income; for example, one treaty imposes a 10 percent tax ceiling on passive income such as royalties from technology licenses or rental income. Bilateral tax treaties may not affect all the taxes applicable to a foreign investment project or to an individual expatriate employee's income; when a tax treaty provision is applicable, however, and offers more favorable tax treatment than the comparable domestic tax rule, the treaty rule will generally apply.

Tax credits may be available to U.S. businesses engaged in foreign projects that are taxed by the host country. Such credits are available for the amount of foreign taxes paid up to a certain limit, which is derived by dividing the foreign-source taxable income by the total taxable income (which includes all foreign- and domestic-source income) and multiplying that fraction by the U.S. tax liability on the total taxable income. (Thus, if foreign tax rates exceed U.S. rates, no credit is available for the excess in the current year.) Foreign tax credits for any one year cannot exceed the amount of foreign income taxes that have been paid or accrued, but taxes in excess of the limitation can be carried back two years and forward five years, subject to each year's tax credit limit.

Operational Concerns

Many noncommercial issues can affect the desirability of operating a business abroad. Knowledge of the language and customs of the host country, or the use of proficient

interpreters, is essential to the success of a business venture abroad. Stories abound concerning the gaffes of U.S. investors who, because of language difficulties or cultural misunderstandings, offended their foreign partners, misinterpreted contract negotiations, miscalculated the effect of their business operations, or simply could not maintain effective working relationships with their foreign counterparts. Contract terms, both legal and technical, require accurate translation to ensure effective implementation.

The business customs of a host country can have a substantial impact on local business operations on very basic levels. A frank and direct management style may be welcomed in some countries; in others, it may be viewed as arrogant and gauche. Gift giving may be appropriate, even expected, behavior in certain circumstances; in other situations, it may be regarded as unethical and possibly illegal.

International direct-dial land phones, cellular phones, fax machines, and electronic mail are common business tools in some regions but may not be available in some developing countries. Even postal or courier services may be unreliable. Such infrastructural deficiencies need to be reflected in contract provisions requiring timely notice or delivery of documents.

Developing countries may also lack reliable transportation, which can affect the delivery of raw materials within a host country. Inadequate port facilities can lead to delayed shipments abroad and lost sales. Inefficient or corrupt customs officials can have similar effects in delaying business transactions and increasing their cost.

In many developing countries, an expatriate manager and staff may be essential to provide needed skills and to proselytize the corporate culture and goals to local staff. To attract qualified personnel to hardship posts, a company usually must offer a compensation package that includes income premiums and benefits. If expatriate staff must pay considerable income tax to the host country, further additional compensation may have to be paid to counteract this disadvantage. Local managers may resent the higher compensation of their expatriate counterparts, however, and local laws may require that local managers receive comparable compensation.

Personal safety may be an issue in some countries, effectively precluding the assignment of personnel with families. It may also be difficult to extend comparable company health and life insurance benefits to expatriate employees.

DISPUTE RESOLUTION IN INTERNATIONAL BUSINESS

As in domestic trade and transactions, disputes may arise in international trade and transactions, but the international environment often makes the resolution of disputes more difficult.

Dispute Resolution Mechanisms

International law provides several possible methods for the resolution of disputes: negotiation, good offices, mediation, inquiry, conciliation, arbitration, and litigation.

Negotiation is a very informal process in which the goal is to reach a compromise. Often the parties try negotiation before resorting to other means of dispute resolution.

Good offices is a process used mainly in the area of public international law. A third party (often a disinterested government) brings the parties together by establishing communication and providing a site where the parties can meet, often in secret. Increasingly, international organizations are taking the role of the disinterested third party.

Mediation is very similar to good offices and often is used in private international law disputes. In mediation, the third (disinterested) party is called the mediator and plays a more active role than the third party in good offices. The mediator facilitates the communications of the parties and may also intervene in a constructive way (for example, to propose a settlement). A mediator works to reconcile the opposing claims and to appease the feelings of resentment that may have arisen between the parties. Like good offices, mediation is generally nonbinding.

Inquiry is done by a commission of inquiry that is established ad hoc, often after a violation of international law. Two contending governments review the finding of the commission with the goal of achieving an acceptable solution to the dispute at hand.

Conciliation is a more formalized method of dispute resolution. It is similar to inquiry but adds a “cooling-off” period. In addition, the parties agree in advance to accept the finding of the commission.

In arbitration, a legal process is carried out by a tribunal that is often very similar to a court. The parties must decide in advance whether the arbitration decision will be final and binding and not subject to review by any courts. Unless such a stipulation is made, the dispute may be reviewed by a court without reference to the arbitration (*de novo review*), rendering the arbitration decision unenforceable.

Litigation, which is a legal proceeding conducted in the court system of a state or nation, is the most structured method of dispute resolution.

Arbitration can be preferable to litigation for several reasons. First, arbitration is potentially more flexible and allows the structure, formalities, and proceedings to be tailored to the specific case at hand. Second, international arbitral bodies often have more experience in dealing with international commercial disputes than their judicial counterparts. Another benefit is that arbitral bodies, unlike courts, can keep the nature and the outcome of the dispute confidential, and they may provide a more level playing field than

some judicial systems. Finally, as discussed below, arbitral awards in many cases are enforceable in countries where a foreign court’s judgment would not be.

Choice of Law and Choice of Forum

Since most international transactions are conducted on a contract basis, most disputes involving international transactions relate to an alleged past or future contractual relationship. Crucial considerations in any dispute will be which law applies to the contract and which country’s courts have jurisdiction over the dispute.

The substantive terms of a contract are typically subject to the laws of a single jurisdiction, which will clarify, modify, or even void the provisions of the contract. If a contract leaves an issue open, the applicable law may fill the gap, disregarding the parties’ unwritten intentions. Certain provisions may be included to address requirements of laws of other jurisdictions (for example, U.S. export controls may affect non-U.S. contracts). Even if the written contract addresses an issue, that provision may be affected by what is allowed or required under the relevant local law. It is important, therefore, to understand not only what the parties wish to do but also what they are permitted to do. Achieving this understanding can be difficult. Familiar legal terms in one jurisdiction may have a different meaning and effect in another. Hence, it is often of utmost importance to have advisers in each jurisdiction who understand the relevant differences between that jurisdiction and others and can fully address the intricacies of cross-border transactions.

International contracts should generally include explicit choice-of-law and choice-of-forum provisions to avoid later disputes over which law applies and which country’s courts (or other dispute resolution tribunal) have jurisdiction. It is important to remember, however, that under certain circumstances a court will not honor the parties’ choice-of law provision. As explained further in Chapter 3, this is most likely to occur when application of the chosen law would violate the public policy of the jurisdiction in which the lawsuit is brought. For example, an Indian court will not enforce a postemployment covenant not to compete against an Indian employee living in India, even if the employer is based in Massachusetts and the employment contract specifies that the law of the Commonwealth of Massachusetts (which will enforce reasonable covenants not to compete) will govern the employment relationship. To enforce the covenant would violate India’s strong public policy in favor of employees’ right to ply their trade.

When jurisdiction and choice of law are not specified in the contract and are disputed, the court in which the suit is filed will apply *conflict-of-laws rules*, which usually focus on the significance of each country’s relationship to the

contract. These principles (sometimes referred to as principles of private international law) vary in some respects from country to country, and the process of litigating them can be extended and expensive. Consequently, it is prudent to address these issues in advance.

As explained in Chapter 8, if both parties to an international contract are nationals of countries that are signatories to the United Nations Convention on Contracts for the International Sale of Goods (CISG), the rules of that convention may apply, unless the parties opt out of the CISG rules. CISG rules also apply if the country whose law applies (as determined by the contract or by conflict-of-laws principles) is a signatory to CISG.

A contract party may be willing to accept the substantive law of the other party's country but prefer that any disputes be submitted to a neutral forum. In such a case, an international arbitral organization is commonly specified.

Commonly selected international arbitral forums include the International Chamber of Commerce (ICC) in Paris, the International Center for the Settlement of Investment Disputes (ICSID), the London Court of International Arbitration (LCIA), the Arbitration Institute of the Stockholm Chamber of Commerce, and the Arbitration Institute of the Zurich Chamber of Commerce. Each international arbitral body has its own procedural rules. Internationally accepted arbitration rules, such as those adopted by the United Nations Commission on International Trade Law (UNCITRAL), may also be used in conjunction with the parties' own methods of selecting an arbitral panel. This latter type of arrangement is referred to as ad hoc arbitration. If there is no mutually convenient venue for the arbitration, the parties will often designate a place that is comparably distant and inconvenient for both parties.

Enforcement of Awards

After a dispute has ended, the awards must be enforced, but enforcement across national borders can present additional problems. Under the principle of *comity*, a court will enforce another country's judgments under certain conditions. Usually, three conditions must be met: (1) reciprocity must be extended between the countries (that is, the countries have agreed to mutually honor each other's court decisions, usually by way of a treaty), (2) proper notice is given to the defendant, and (3) the foreign court's judgment does not violate domestic statutes or treaty obligations. U.S. courts, however, generally do not require reciprocity in order to honor foreign judgments.⁸¹

81. See RESTATEMENT (SECOND) OF CONFLICT OF LAWS § 6 cmt. k, § 98 cmt. e (1971).

Since 1979, sixty-nine countries, including the United States, have become parties to the Convention on Jurisdiction and Foreign Judgments in Civil and Commercial Matters⁸² under the auspices of the Hague Conference on Private International Law.

As of August 2008, 142 countries, including the United States and most of the major trading nations, are parties to the 1958 United Nations Convention on the Recognition and Enforcement of Foreign Arbitral Awards (often referred to as the New York Convention).⁸³ Its purpose is "to unify standards by which agreements to arbitrate are observed and arbitral awards are enforced in signatory countries." The New York Convention requires signatory countries to recognize and enforce foreign arbitration awards except in very limited circumstances. As a result, arbitration awards of another country can often be enforced more readily in a foreign court than foreign judgments.

Forum Non Conveniens

Defendants in international disputes often invoke the doctrine of *forum non conveniens*, claiming that the forum chosen by the plaintiff is not convenient. To prevail on a motion to dismiss a case under this doctrine, the defendant must first show that an adequate alternative forum exists. On "rare occasions," the remedy available in the alternative forum may be so unsatisfactory that the forum is inadequate, but the "mere fact that the foreign and home fora have different laws does not ordinarily make the foreign forum inadequate."⁸⁴ Indeed, the U.S. Court of Appeals for the Second Circuit has explained:

Even if particular causes of action or certain desirable remedies are not available in the foreign forum, that forum will usually be adequate so long as it permits litigation of the subject matter of the dispute, provides adequate procedural safeguards and the remedy available in the alternative forum is not so inadequate as to amount to no remedy at all.⁸⁵

Thus, for example, England was deemed an adequate forum even though the Sherman Act and certain common law claims were not available and English courts had never

85. *Id.* at 57.

awarded money damages in an antitrust case.⁸⁶ Trinidad was deemed adequate even though the plaintiff, who potentially could recover \$8 million in the United States, was likely limited to \$570,000 in Trinidad.⁸⁷

After showing the adequacy of the alternative forum, the defendant must demonstrate that the ordinarily strong presumption favoring the plaintiff's chosen forum is countered by public and private interest factors identified by the U.S. Supreme Court in *Gulf Oil Corp. v. Gilbert*.⁸⁸ In *Gilbert*, the

86. Capital Currency Exch., N.V. v. Nat'l Westminster Bank PLC, 155 F.3d 603 (2d Cir. 1998), *cert. denied*, 526 U.S. 1067 (1999).

87. Alcoa S.S. Co. v. M/V Nordic Regent, 654 F.2d 147 (2d Cir. 1980) (*en banc*).

88. 330 U.S. 501 (1947).

Supreme Court outlined four public interest factors for courts to weigh: (1) administrative difficulties associated with court congestion, (2) the unfairness of imposing jury duty on a community with no relation to the litigation, (3) the "local interest in having localized controversies decided at home," and (4) the interest in avoiding difficult problems in resolving conflict-of-law issues and applying foreign law. The private interest factors enumerated in *Gilbert* include (1) ease of access to evidence; (2) the availability of compulsory process to compel the attendance of unwilling witnesses; (3) the cost of willing witnesses' attendance; (4) if relevant, the possibility of a view of premises; and (5) all other factors that might make a trial quicker or less expensive.

In the following U.S. Supreme Court case, the court had to apply the doctrine of *forum non conveniens*.

A CASE IN POINT

CASE 25.3

BIGIO V. COCA-COLA CO.

UNITED STATES COURT OF
APPEALS FOR THE SECOND CIRCUIT
448 F.3D 176 (2D CIR. 2006).

SUMMARY

FACTS The Bigio family had large commercial holdings in Egypt that were wrongfully seized during the Nasser regime because the Bigio family was Jewish. The Bigio family subsequently fled to Canada, and after Nasser died in 1970, the Egyptian government ordered the property returned to the Bigios. However, the state-owned entity holding the Bigios' property refused to comply and instead leased the bottling plant at issue here to a joint venture in which a substantial interest was purchased by the Bigios' former tenant, Coca-Cola Company, which rejected the Bigios' claims to ownership. Unable to obtain relief in the Egyptian courts, several members of the Bigio family and their Egyptian corporation sued the Coca-Cola Company, a Delaware corporation, in the U.S. District Court for the Southern District of New York. Plaintiffs claimed, among other things, that Coca-Cola's actions violated the Alien Tort Claims Act and also constituted common law conversion. The district court dismissed the plaintiffs' claim under the Alien Tort Claims Act and the common law claims pursuant to the act-of-state doctrine, and the plaintiffs appealed. The U.S. Court of Appeals for the Second Circuit affirmed the district court's dismissal of the claim under the Alien Tort Claims Act, but reversed its dismissal of the common law claims. The appeals court found the act-of-state doctrine inapplicable because "the resolution of the case by United States courts will not likely impact on international relations or embarrass or hinder the executive in the realm of foreign relations." On remand, however, the district court again dismissed the remaining claims, this time on the ground of international comity or, in the alternative, on the ground of *forum non conveniens*, and the plaintiffs appealed.

ISSUE PRESENTED Under what circumstances can a lawsuit by foreign plaintiffs against a U.S. entity based on alleged acts by the U.S. entity that affected the property of the plaintiffs in a foreign country be dismissed on grounds of international comity or *forum non conveniens*?

SUMMARY OF OPINION The U.S. Court of Appeals for the Second Circuit noted that application of the comity doctrine lies within the discretion of the district court, but found that the district court in this case had applied the wrong legal standard. The district court applied a seven-factor test articulated in an earlier decision by the U.S. Court of Appeals for the Ninth Circuit,⁸⁹ which was inapplicable to the case because it is used to determine whether a court should apply U.S. law extraterritorially. In this case, however, the issue was whether adjudication of the case by a U.S. court would offend "amicable working relationships" with Egypt. The appeals court determined that the resolution of the case by a U.S. court would not be likely to have an impact on international relations

CONTINUED

89. Timberlane Lumber Co. v. Bank of Am. Nat'l Trust & Savings Ass'n, 749 F.2d 1378 (9th Cir. 1984).

with Egypt. The Egyptian government had not raised “the slightest objection” to adjudication of this controversy by a U.S. court, and the case was essentially a common law suit for damages between Canadian citizens and a U.S. company, which would focus on Coca-Cola’s knowledge about the plaintiffs’ ownership right before it acquired its present interest in the Egyptian bottling plant.

The appeals court found that the district court had also misapplied the relevant legal standards for *forum non conveniens*. While it recited the principle that even a foreign plaintiff’s decision to sue in a U.S. court is entitled to some weight, the district court did not appear to give the Bigios’ choice of forum any weight at all. The appellate court pointed out that the district court overlooked “legitimate and substantial reasons for plaintiffs choosing to bring this suit in defendants’ own country . . . rather than in Egypt, after plaintiffs’ efforts to seek relief from Egyptian authorities proved abortive.” The appellate court further noted that the key witnesses to this issue either reside in the United States or Canada or are readily producible in these countries, and any witnesses abroad could testify through depositions.

Finally, the appellate court also found that the district court, in evaluating the “public interest” factors, had again failed to take into account the deference due to the plaintiffs’ legitimate choice of forum. After carefully reviewing the record, the court was convinced that none of the alleged private or public inconveniences referenced by the district court overcame the preference that should be reasonably accorded to the plaintiffs in their choice of a U.S. forum.

RESULT The Second Circuit held that the dismissal of this case on the grounds of international comity and *forum non conveniens* was erroneous as a matter of law and remanded the proceedings to the district court for further proceedings consistent with its decision.

Suing Foreign Governments

Sovereign immunity and the act-of-state doctrine are international legal principles that affect the rights of private commercial parties when a government becomes involved in or interferes with an international commercial transaction.

Sovereign Immunity The doctrine of *sovereign immunity* prevents the courts of one country from hearing suits against the governments of other countries. The rationale underlying this rule is that all sovereign states are equal, and none may subject others to their laws.

The needs of commerce have gradually tempered this rule. Because private entities often enter into commercial transactions with foreign governments, it became apparent that allowing a government to have complete immunity from all suits was not desirable. Thus, the concept of absolute immunity has yielded to the restrictive theory of sovereign immunity, which allows immunity for a government’s public activities but not for its commercial activities.

The Foreign Sovereign Immunities Act of 1976 (FSIA) is the U.S. codification of the restrictive theory of immunity. FSIA was designed to eliminate the inconsistencies associated with politically initiated decisions to grant or withhold

sovereign immunity in particular cases. It empowered the courts to determine when sovereign immunity applies, “by reference to the nature of the course of conduct or particular transaction or act.” The U.S. Supreme Court held in *Republic of Austria v. Altmann*⁹⁰ that FSIA even applies retroactively.

FSIA is the sole basis for obtaining jurisdiction over a foreign government in U.S. courts. FSIA grants a blanket immunity to foreign states except in cases in which (1) the foreign state expressly or impliedly waives its immunity; (2) the foreign state engages in commercial activities; (3) the foreign state expropriates property in violation of international law (that is, seizes it without proper compensation); (4) property in the United States that is immovable or was acquired by gift or succession is at issue; (5) the foreign state commits certain noncommercial torts; (6) suit is brought to enforce a maritime lien under admiralty (maritime) law; or (7) the defendant wishes to file a counterclaim in a suit initiated by the foreign state.

The *commercial activity exception* to sovereign immunity provides that a foreign sovereign or its agencies and

90. 541 U.S. 677 (2004).

instrumentalities shall not be immune from the jurisdiction of the courts of the United States or of the states in any case in which the action is based upon an act (1) that takes place outside the territory of the United States in connection with a commercial activity of the foreign sovereign elsewhere and (2) that causes a direct effect in the United States. As the U.S. Court of Appeals for the Second Circuit explained: "If the sovereign's activity is commercial in nature and has a direct effect in the United States, then the jurisdictional nexus is met, no immunity attaches, and a district court has the authority to adjudicate disputes based on that activity."⁹¹ For example, in *Argentina v. Weltover*,⁹² the U.S. Supreme Court held that Argentina's unilateral rescheduling of bond payments had a "direct effect" in the United States because New York was the place of payment.

FSIA is particularly relevant to U.S. companies that do or intend to do business with state-owned or state-managed enterprises, such as those in China and Vietnam. The exception from immunity for the commercial activities of these entities may not always be clear, however. In addition, if the contract is between a foreign, wholly owned subsidiary of a U.S. company and a foreign, state-owned enterprise, the fact that the U.S. parent is affected by a breach of the contract may not give rise to any remedial rights under U.S. law. If

91. Commercial Bank of Kuwait v. Rafidain Bank, 15 F.3d 238 (2d Cir. 1994).

92. 504 U.S. 607 (1992).

the nature of the foreign party to a contract or the subject matter of a contract is not clearly commercial, it may be advisable to require the foreign government to waive sovereign immunity in the contract.

Act-of-State Doctrine

The *act-of-state doctrine* applies to the noncommercial acts of a government that affect foreign business interests within that government's territory. The doctrine was most clearly expressed by the U.S. Supreme Court in *Underhill v. Hernandez*,⁹³ when it stated that "the courts of one country will not sit in judgment on the acts of the government of another, done within its own territory." Pursuant to this doctrine, U.S. courts are extremely reluctant to provide a legal remedy under U.S. law for the public acts of a foreign government. As a result, U.S. businesses generally cannot look to the U.S. courts for protection from or compensation for acts such as expropriation, unless there is a bilateral treaty between the United States and the foreign country that specifies the procedural and substantive rights of a U.S. investor in that country. As mentioned earlier, however, OPIC (the Overseas Private Investment Corporation) will insure U.S. businesses against certain host government acts, such as expropriation or restrictions on the conversion of local currency earnings.

93. 168 U.S. 250, 252 (1897).

THE RESPONSIBLE MANAGER

EXPANDING INTO INTERNATIONAL MARKETS

Before expanding into international markets, a firm must take into consideration not only market conditions but also the laws and mores of the foreign country. Examples of substantive laws that may affect a foreign business are import/export regulations, employment law, tax law, securities law, and antitrust law. A company that follows the correct form of doing business but fails to recognize or understand local law may reduce its profitability. A company considering foreign investments should therefore carefully analyze the sociopolitical and economic climate

of the prospective host country, in addition to obtaining a clear understanding of the legal, regulatory, and administrative regimes and the foreseeable future changes to these.

One way in which companies typically expand into the international marketplace is through direct sales to customers. Direct sales may pose several problems for the company, however, including export regulations, international contract law, letters of credit, import regulations, and the use of local representatives.

CONTINUED

If costs do not justify opening a local office, a firm will often retain a local representative to oversee the sale of its products. If the transaction is not correctly structured, however, the company may find that it has a dependent agent in the foreign country—that it has, under local law, opened an office in the foreign country. Transactions thought to be tax-free will, in fact, be subject to corporate tax, and the local agent may have acquired additional rights and protections under local employment law.

A company can also conduct business in a foreign country by acquiring an existing company. Such transactions are governed by the laws regulating foreign investment in the country. Tax issues will play a predominant role in determining the form of the acquisition and the method of future operation.

A firm may also choose to create a new entity distinct from the parent corporation. This entity could be a corporation with 100 percent foreign ownership or a joint venture in the form of a corporation or partnership. Local law will define the regulations and restrictions to be imposed on the firm. Common restrictions include requiring majority local ownership or that a majority of the board be resident directors. In many countries, investors may specify whether the entity is to be treated as a partnership or a corporation for U.S. tax purposes. Every jurisdiction seems to have some unique wrinkles in the areas of formation and administration; matters taken for granted by locals may occasion surprise and delays for foreign investors.

Local advisers experienced in dealing with foreign investors can help smooth the process and minimize surprises on both practical issues and matters of substantive and procedural law. Special attention should be paid to coordinating tax/accounting and legal advice within the context of the investor's business goals. The investor must recognize, though, that sometimes foreign lawyers and accountants take a compartmentalized rather than interdisciplinary approach—they may be accustomed to performing only a technical role and may not wish to act as general business advisers. It is important that the investor's point person, the transaction manager, actively set expectations and coordinate the advisory process.

This is perhaps nowhere more important than in the tax area. Even similar tax systems will differ in significant

respects, and only rarely can one find a single individual who is thoroughly versed in the laws of two jurisdictions and their interrelations. It is important to coordinate carefully and start early in the planning stage to uncover potential problem areas. Obtaining tax credits is a relatively obvious issue. More subtle issues can appear in many contexts. An agreement, exchange of assets, or other transaction that creates no tax liability or is not deemed a tax event in one country may create income tax liability in another. For example, stock dividends and splits are not taxable in the United States and other major economies because there is no change of economic substance. Thus, it might not occur to a U.S. manager, tax lawyer, or accountant to inquire and discover that they may be taxable in other countries.

Corporate laws also vary by jurisdiction. The U.S. system of corporate law and procedure is relatively flexible. Most other jurisdictions have less permissive rules regarding capital structure, dissolution, corporate formalities, and officers and directors, as well as different penalties for noncompliance. An investor may not be able to form, operate, and close down the entity how and when it wants, and achieving the desired management structure may prove impossible or impractical.

If the company employs workers in the host country, it is subject to a system of employment laws, regulations, and customs that is, in most cases, more restrictive and more protective of workers than U.S. law. Employment laws are highly politicized and seek to protect local workers, particularly against foreign "exploitation." They need not make sense to U.S. managers. Restricted use of foreign personnel, required proportions of local workers, prescribed terms of employment, and difficulty in terminating unsatisfactory employees are all common issues. The foreign investor may have to compromise its employment policies to satisfy local requirements.

In some areas, such as environmental law, many developing countries are far less regulated than the United States, but the investor should expect to see these countries' legal regimes eventually catch up. Legal advantages, like business advantages, are often transitory. The investor needs to evaluate and understand both areas to develop the knowledge of and sensitivity to local conditions needed to make the right investment decision.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

Should U.S. Companies Sell Products Banned in the United States in Other Countries?

Domingo Castro Alfaro, a Costa Rican resident and employee of Standard Fruit Company, and eighty-one other Costa Rican employees and their wives brought suit against Dow Chemical Company and Shell Oil Company. The employees claimed that while they were working on a banana plantation in Costa Rica for Standard Fruit Company, they suffered personal injuries as a result of exposure to Dibromochloropropane (DBCP). DBCP is a pesticide manufactured by Dow and Shell, which allegedly was furnished to Standard Fruit, an American subsidiary of Dole Fresh Fruit Company, headquartered in Boca Raton, Florida. The employees exposed to DBCP allegedly suffered several medical problems, including sterility.

After the U.S. Environmental Protection Agency (EPA) banned DBCP in the United States, Shell and Dow apparently shipped several hundred thousand gallons of the pesticide to Costa Rica for use by Standard Fruit. Alfaro sued Dow and Shell in Texas in April 1984, alleging that handling DBCP caused the

employees serious personal injuries for which Shell and Dow were liable under the theories of product liability, strict liability, and breach of warranty. Under the doctrine of *forum non conveniens*, the defendants argued that Texas was not a convenient forum in which to litigate this case. Should the court grant the defendants' motion to dismiss? Was the conduct of Dow Chemical and Shell Oil ethical? Was Standard Fruit's use of the U.S.-banned pesticide ethical? Were the defendants arguing inconvenient forum to avoid a jury trial and Texas laws regarding personal injury and wrongful death? If so, is that ethical? If goods are not consistent with some sets of standards but are basically okay, is it ethical to sell them? If they are dangerous, how dangerous is too dangerous? Should it matter whether consumers in a developing country cannot afford products meeting higher but more expensive Western standards?⁹⁴

94. Dow Chemical Co. v. Alfaro, 786 S.W.2d 674 (Tex. 1990).

INSIDE STORY

UNITED IN DIVERSITY? THE BATTLE FOR A EUROPEAN CONSTITUTION CONTINUES

The 2004 draft European Union constitution established an official "motto" for the EU: "United in Diversity." This motto, like the proposed constitution itself, recognized the equally prominent values of unity and diversity that exist among the member states of the EU and suggested the delicate balance between these two values that the states were attempting to strike. As one author put it, "The EU constitution is a compromise between the demands of those who want more integration and those who want to preserve the rights of the nation states."⁹⁵ The draft constitution was not just a constitution; it was also an international treaty (the Treaty establishing a Constitution for Europe) and a Charter of Fundamental Rights. Because the national states were not to disappear, there would

still have been a need for an international treaty. On the other hand, many members of the EU community recognized a need to create an entity above the member states by enacting a constitution that recognizes such an entity.

In addition, like the Bill of Rights in the U.S. Constitution, the proposed Charter of Fundamental Rights included in the EU constitution would have guaranteed that citizens of the EU have certain rights that every EU member nation must respect. These rights, freedoms, and general principles included respect for human dignity; the right to life; the right to be free of torture and inhuman or degrading treatment; the right to liberty and security; respect for private and family life; freedom of thought, conscience, and religion; freedom of expression; the right to an education; freedom to conduct a business; the right to property; equality before the law; respect for cultural,

95. Paul Reynolds, *Q&A: EU—Myths and Realities*, BBC News, July 8, 2004, available at <http://newsvote.bbc.co.uk/2/hi/europe/3825521.stm>.

CONTINUED

religious, and linguistic diversity; equality between men and women; the integration of persons with disabilities; the right to access to justice and a fair trial; and the presumption of innocence and the right to a defense.

The Treaty establishing a Constitution for Europe was overwhelmingly approved by the European Parliament (although a majority of Parliament members from three member states, including the United Kingdom, voted against it) and signed in October 2004 in Rome. Approval by the EP was only the first step, however: the treaty provided that the constitution would not become effective unless all member states ratified it. The process of ratification of treaties varies from member state to member state. While some countries, such as Ireland, had to hold a *referendum*—an election by the people to approve or reject the treaty—in connection with the treaty, the majority of member states could have ratified the treaty through a process that did not require any vote by the people of the respective member state. Although Spain, the first country to hold a referendum, approved the treaty, the next countries to hold referenda were France and The Netherlands. The voters in both countries rejected the treaty. The results of the referenda in these two countries provoked a crisis in the EU that could not be averted by either the treaty's subsequent acceptance in a referendum in Luxembourg or its acceptance by fifteen other member states through parliamentary or other political processes. A number of member states canceled the referenda that had already been planned for their countries, and a "period of reflection" ensued until 2007, when the member states adopted the Berlin Declaration, a nonbinding document in which the signatories stated their intention to agree on a new treaty setting forth a revised constitution.

Critics of the constitution set forth in the Treaty establishing a Constitution for Europe had pointed out that it was very long, with about 265 pages and 63,000 words in 448 articles in the English text.⁹⁶ Already before the signing of the Berlin

96. The U.S. Constitution contains 4,600 words. Additional documents and analyses of the text of the different versions of the EU constitution can be found at <http://www.statewatch.org/euconstitution.htm>.

Declaration, a group of European politicians under the leadership of former Prime Minister of Italy, Giuliano Amato, and backed by the Barroso Commission, started working unofficially on a revised version of the text of the constitution. This so-called Amato Group considerably shortened the text of the constitution to around 12,800 words in seventy articles.⁹⁷ The European summit in June 2007 decided to replace the rejected constitution with the revised version of the constitutional text as part of the Treaty of Lisbon, also called the Reform Treaty, and agreed on a new timetable that aimed for a ratification of the Treaty of Lisbon by all member states in 2008, in time for the EU elections in 2009. The Treaty of Lisbon was signed on December 13, 2007, and the ratification process in the member states was initiated thereafter.⁹⁸

Like the Treaty establishing a Constitution for Europe, the Treaty of Lisbon could be ratified in most of the member states by parliamentary or other political process, but Ireland, under its constitution, was required to hold a referendum on the Treaty of Lisbon. In June 2008, 53 percent of the participating Irish voters rejected the Treaty of Lisbon. This rejection once again paralyzed the ratification process of the Treaty of Lisbon in all member states. As of August 2008, it was not clear whether the EU would try to continue the ratification process and, if so, how this could be done. Suggestions have been made on ways to solve the crisis and move forward, including revising the constitutional text, repeating the referendum in Ireland, or ratifying the Treaty of Lisbon in the remaining twenty-six member states while leaving Ireland behind,⁹⁹ but it now appears that more is necessary to unite Europe in diversity.

QUESTIONS AND CASE PROBLEMS

1. A fast-growing U.S. beverage company wishes to import mineral water and has asked you, its vice president for purchasing, to recommend foreign sources. You know that sources exist in France, Canada, and Australia. What U.S. trade laws should you consider in choosing among these sources?
Suppose that you determine that the best source of mineral water for your purposes is France, but a tariff makes imports from that country noncompetitive. How could you seek a reduction in this tariff?
2. The New England Petroleum Corporation (NEPCO), a U.S. corporation, obtained refined oil from its wholly owned Bahamas subsidiary refinery, PETCO. In 1968, PETCO entered into a long-term contract to purchase crude oil from Chevron Oil Trading (Chevron), a branch of a petroleum company that held 50 percent of an oil concession in Libya. In 1973, Libya nationalized several foreign-owned oil concessions, including Chevron's. As a result, Chevron terminated its contract with PETCO.

PETCO then entered into a new contract with the National Oil Corporation, which was wholly owned by the Libyan government. One month after execution of the contract, Libya imposed an oil embargo on the United States, and National canceled its contract with PETCO. Three months later, after a dramatic increase in oil prices, PETCO executed a new contract with National. National allegedly breached that contract as well.

PETCO's assignee, Carey, brought suit against National, seeking to recover damages for National's breach of the two contracts. National raised the defense of sovereign immunity. Carey claimed that there was no sovereign immunity under the Foreign Sovereign Immunities Act because the breach of contract was an act outside the territory of the United States in connection with a commercial activity that caused a direct effect in the United States. Who should prevail? [*Carey v. National Oil Corp.*, 592 F.2d 673 (2d Cir. 1979).]

3. Optomagic, Inc. is a U.S. corporation that produces optomagic gizmos. Production of optomagic gizmos involves a confidential gizmo-processing technique (which is described in printed confidential Optomagic manuals), labor-intensive processing, and inclusion of an optomagic component for which Optomagic was granted a U.S. patent six months ago. The optomagic component has widespread uses in the space, aviation, and medical industries.

Eight months ago, in the African country of Varoom, a relatively peaceful popular uprising resulted in the removal of the "old guard" leaders, who had favored a strong, centrally planned economy. The new provisional government called for free elections in one year, began taking immediate steps to reform the economy, and promised to liberalize foreign investment laws to attract foreign investors.

Because the government bureaucracy is still in some disarray, it is extremely helpful, as a practical matter, to have close contacts with a government official who can speed the review and approval process for applications for foreign investment. In a recent official tour of the United States, Dr. Segun Ayantuga, the minister of health and welfare of Varoom, visited Optomagic's manufacturing facility in Boston, Massachusetts. Ayantuga is an eminent surgeon and a strong proponent of bringing advanced medical technology to his developing country so that the best medical care can be made available to the public. In addition, to earn badly needed foreign exchange for Varoom, he is interested in finding labor-intensive U.S. industries that may be able to produce products in Varoom for export to the more developed countries. Optomagic is very interested in the newly emerging markets of Africa, and in

Varoom in particular. Optomagic would also like to obtain gizmonium, a raw material necessary for the production of optomagic gizmos, which is found in great abundance in the mountains of Varoom, but which, under Varoomian law, is available only to Varoomian enterprises.

Two weeks after his visit to Optomagic, Ayantuga wrote to the CEO of Optomagic to make the following proposal. Ayantuga and a state-owned medical clinic, Varoom Medical, are interested in establishing a joint venture in Varoom with Optomagic. Current Varoomian law limits foreign investment interests in Varoomian enterprises to 50 percent of the total investment. Ayantuga states that, although under local law the Varoomian partners share equal responsibility for the management of the venture, they will in fact defer to Optomagic in all material matters related to the operation of the manufacturing facility. In addition, Ayantuga assures Optomagic that the foreign investment law is likely to be liberalized within the year. As his investment in the venture, Ayantuga offers to contribute his lease interest in certain property in Varoom and to ensure that all the necessary government permits for the construction and licensing of the facility are obtained. Ayantuga expresses his confidence in being able to obtain all the government approvals for the proposed project because "our government has recently issued a decree emphasizing the national importance of upgrading our health-care industries."

The father of Optomagic's CEO emigrated from Varoom sixty years ago. He is excited about the developments in Varoom and finds Ayantuga to be a delightful, dynamic man. He is convinced that Optomagic should move into Varoom now, before its competitors do.

Your assignment is to put together a business plan for the proposed joint venture, assuming that it's going to cost something up front but will be worth the expense in the long run. The CEO wants a preliminary report in two weeks to take to the board of directors, which will be considering establishing a wholly owned subsidiary in Cairo, Egypt to operate prospective sales and manufacturing facilities in Africa. He also wants a comprehensive report to follow in another four weeks.

- a. You have full access to your expert in-house legal counsel, who has experience in international projects. How can you best use her to assist in putting your plan together? What issues of particular importance should be addressed by counsel for inclusion in the preliminary report?
- b. Given the uncertainty in the development of Varoom's foreign investment laws (and its government), what types of terms or conditions do you think should be included in the contract for the proposed joint venture

to protect against unexpected changes in the laws or government policies? What is your evaluation of the desirability of other forms of protection?

- c. Are there any legal problems with including Ayantuga as an investor in the project? As a paid consultant?
4. Upon further general inquiry on behalf of Optomagic, you learn the following facts in addition to those set forth in Question 3. First, Varoom has a patent law and a trademark-registration law and is a signatory of the Paris and Madrid Conventions, but it has no copyright law. Second, Varoomian law provides that licenses of foreign technology cannot (1) unreasonably restrict the geographic market for such exports, (2) require that the Varoomian party purchase components or raw materials from the foreign party, or (3) restrict use of the technology by the Varoomian licensee beyond a term of ten years without approval from the supervising ministry (which in this case is the Ministry of Health).
What other information do you need to determine how best to protect Optomagic's intellectual property rights in the proposed venture? Based on what you do know, what steps should be taken to maximize the protection of Optomagic's intellectual property rights? What U.S. laws will apply to the contribution, licensing, or other transfer of optomagic gizmo components by Optomagic to the joint venture? What license and joint venture contract terms are important to obtain?
Varoom Medical is prepared to invest 950 million baninis (U.S. \$1 = 1,000 baninis) over the first five years of the project. Its commitment will be backed by a standby letter of credit to be issued by the National People's Bank of Varoom, a state-owned bank. What more do you need to know about the proposed capital contribution to be made by Varoom Medical and the standby letter of credit from the bank? Would you impose any additional conditions or requirements on the proposed contribution and the letter of credit? What do you suggest that Optomagic contribute as its share of capital to the proposed joint venture? What factors do you need to consider to make that decision?
5. Assume the facts in Question 3. You begin to consider the labor force that the joint venture will need. Ayantuga suggests that the venture technicians should make regular technical training visits to Optomagic's facility in Boston, Massachusetts. Ayantuga also suggests that he can arrange to select the Varoomian technicians for the joint venture. Monthly salaries in Varoom for the relevant types of workers are 70 percent lower than in the United States. However, Varoom's labor laws require that all enterprises (1) provide employees with housing and health insurance subsidies equal to 50 percent of their salaries; (2) engage in mandatory arbitration with the local labor bureau prior to termination of any employee for any reason; and (3) in the case of foreign-invested enterprises, pay local managers salaries and benefits that are comparable to those of the expatriate management personnel of the foreign-invested enterprise.
 - a. How would you assess the legal and economic advantages and disadvantages of the employees that Ayantuga has proposed be hired?
 - b. Is there another way to structure the workforce?
 - c. What U.S. laws may apply to the training of joint venture technicians at Optomagic's U.S. facilities?
 - d. Would you recommend that resident expatriate management personnel, or just visiting technicians, be assigned to the prospective project? Why? What qualities do you think an expatriate employee in Varoom should have?
6. In addition to the facts covered in Questions 3 through 5, you learn that the banini is not freely convertible into dollars. The Varoom foreign-exchange and tax laws provide that a foreign-invested joint venture can repatriate up to 50 percent of its foreign-exchange earnings, subject to a repatriation tax of 15 percent (in addition to the tax imposed on the joint venture's income). Banini profits can be exchanged only upon prior approval by the supervising ministry (each ministry is allocated a quota of baninis for which it can approve an exchange into foreign currencies). In addition, Varoom's foreign investment law requires that foreign-invested enterprises export a minimum of 50 percent of their products.
 - a. What alternatives exist to repatriating foreign-currency earnings in the prospective venture?
 - b. What U.S. laws, if any, might apply to exports of optomagic gizmos to the United States from Varoom?
7. Adidas Promotional Retail Operations, Inc., Sports Chalet, and Offside Soccer (Adidas) are California retailers that sell athletic shoes made from the hides of the red kangaroo, the eastern grey kangaroo, and the western grey kangaroo. Viva! International Voice for Animals, an international nonprofit organization devoted to protecting animals, sued Adidas for violating California Penal Code Section 653o, which was enacted to prevent the extinction of species that the California legislature deems threatened and provides in relevant part: "It is unlawful to import into this state for commercial purposes, to possess with intent to sell, or to sell within the state, the dead body, or any part thereof, of any . . . kangaroo."
The Federal Endangered Species Act of 1973 (ESA) was enacted to halt and reverse the trend toward species extinction. Section 6(f) of the Act states:

Any state law . . . which applies with respect to the importation or exportation of, or interstate or foreign commerce in, endangered species or threatened species is void to the extent that it may . . . effectively (1) permit what is prohibited by this Act or by any regulation which implements this chapter, or (2) prohibit what is authorized pursuant to an exemption or permit provided for in this Act or in any regulation which implements this Act.

The ESA also includes a saving provision that states that the Act should not be construed to void any more restrictive state law.

During the twentieth century, a commercial market developed in Australia for kangaroo hides and meat. By the early 1970s, the kangaroo population had dropped to the point that the Australian state and federal governments instituted protective measures, including a ban on exports and species-specific quotas on the killing of kangaroos for commercial use.

In 1974, the U.S. Fish and Wildlife Service listed the red, eastern grey, and western grey kangaroos as threatened species under the ESA, which carries a prohibition on importation subject to exemptions and permits issued under the ESA. The Fish and Wildlife Service subsequently banned commercial import of these species until the Australian states harvesting them could assure the United States that their taking would not be detrimental to their survival. In 1981, the Service issued a special final rule lifting the ban on commercial import of these species. In 1995, the Service removed the three kangaroo species from the ESA's list of endangered or threatened species on the basis of their successful recovery. Since the three

species have been deleted under the ESA, their import into the United States is not prohibited by federal law.

In its defense, Adidas argued that California Penal Code Section 653o was preempted by the Endangered Species Act because the California law undermined federal actions taken under the ESA to influence the Australian state and federal governments to preserve threatened kangaroo species. How will Adidas support this argument? What arguments will Viva! make in support of Penal Code Section 653o? Which party will prevail? [*Viva! International Voice for Animals v. Adidas Promotional Retail Operations, Inc.*, 162 P.3d 569 (2007).]

8. The Drug Enforcement Administration (DEA) approved using Mexican nationals to abduct Alvarez-Machain, also a Mexican national, from Mexico to stand trial in the United States for a DEA agent's torture and murder. After his acquittal, Alvarez sued the United States for false arrest under the Federal Tort Claims Act (FTCA), which waives the sovereign immunity of the United States in suits "for . . . personal injury . . . caused by the negligent or wrongful act or omission of any [government] employees while acting within the scope of his office or employment." However, the Act limits its waiver of sovereign immunity in a number of ways, including an exception for "[a]ny claim arising in a foreign country." The U.S. district court dismissed the FTCA claim against the DEA, but the U.S. Court of Appeals for the Ninth Circuit reversed the district court's dismissal. What arguments can Alvarez-Machain make to support his FTCA claim against the U.S. government? What arguments can the United States make to support the dismissal of Alvarez-Machain's suit? Which party will prevail? [*Sosa v. Alvarez-Machain*, 542 U.S. 692 (2004).]

APPENDICES

APPENDIX A : The Constitution of the United States of America

Preamble

We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

Article I

Section 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons. The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to

hold and enjoy any Office of honor, Trust, or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment, and Punishment, according to Law.

Section 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Section 5. Each House shall be the Judge of the Elections, Returns, and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and, with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section 6. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section 7. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to the House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by Yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and post Roads;

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offenses against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

To provide and maintain a Navy;

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

To provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress;

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

Article II

Section 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have

such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greater Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

No person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation or Inability to discharge the Powers and Duties of the said Office, the same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation: "I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Article III

Section 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times, receive for their Services a Compensation, which shall not be diminished during their Continuance in Office.

Section 2. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another

State;—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be a Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3. Treason against the United States, shall consist only in levying War against them, or, in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

Article IV

Section 1. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section 2. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section 3. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

Article V

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

Article VI

All Debts contracted and Engagements entered into, before the Adoption of this Constitution shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

Article VII

The Ratification of the Conventions of nine States shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Amendment I [1791]

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

Amendment II [1791]

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

Amendment III [1791]

No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

Amendment IV [1791]

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Amendment V [1791]

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Amendment VI [1791]

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

Amendment VII [1791]

In Suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by jury, shall be otherwise

re-examined in any Court of the United States, than according to the rules of the common law.

Amendment VIII [1791]

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Amendment IX [1791]

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

Amendment X [1791]

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Amendment XI [1798]

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

Amendment XII [1804]

The Electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;— The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right

of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.—The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

Amendment XIII [1865]

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment XIV [1868]

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any State, who having previously taken an oath, as

a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

Amendment XV [1870]

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment XVI [1913]

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

Amendment XVII [1913]

Section 1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

Section 2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, That the legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

Section 3. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

Amendment XVIII [1919]

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

Amendment XIX [1920]

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment XX [1933]

Section 1. The terms of the President and Vice President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If the President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the

Senate may choose a Vice President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.

Amendment XXI [1933]

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

Amendment XXII [1951]

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of President more than once. But this Article shall not apply to any person holding the office of President when this Article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress.

Amendment XXIII [1961]

Section 1. The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous state; they shall be in addition to those appointed by the states, but

they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a state; and they shall meet in the District and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment XXIV [1964]

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States, or any State by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment XXV [1967]

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2. Whenever there is a vacancy in the office of the Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both Houses of Congress.

Section 3. Whenever the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President as Acting President.

Section 4. Whenever the Vice President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that

the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as Acting President.

Thereafter, when the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive department or of such other body as Congress may by law provide, transmit within four days to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration and the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both Houses that the President is unable to discharge the powers and duties of his office, the Vice President shall continue to discharge the same as Acting President; otherwise, the President shall resume the powers and duties of his office.

Amendment XXVI [1971]

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any State on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment XXVII [1992]

No law, varying the compensation for the services of the Senators and Representatives, shall take effect, until an election of Representatives shall have intervened.

APPENDIX B : Title VII of the Civil Rights Act of 1964 [Excerpts]

Title VII of the Civil Rights Act of 1964—The Employment Discrimination Section

Section 703. Unlawful Employment Practices. (a) It shall be an unlawful employment practice for an employer—

(1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with

respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or

(2) to limit, segregate, or classify his employees or applicants for employment in any way which would deprive or tend to deprive any individual of employment opportunities

or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin.

(b) It shall be an unlawful employment practice for an employment agency to fail or refuse to refer for employment, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin, or to classify or refer for employment any individual on the basis of his race, color, religion, sex, or national origin.

(c) It shall be an unlawful employment practice for a labor organization—

(1) to exclude or to expel from its membership, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin;

(2) to limit, segregate, or classify its membership or applicants for membership, or to classify or fail or refuse to refer for employment any individual, in any way which would deprive or tend to deprive any individual of employment opportunities, or would limit such employment opportunities or otherwise adversely affect his status as an employee or as an applicant for employment, because of such individual's race, color, religion, sex, or national origin; or

(3) to cause or attempt to cause an employer to discriminate against an individual in violation of this section.

(d) It shall be an unlawful employment practice for any employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining, including on-the-job training programs to discriminate against any individual because of his race, color, religion, sex, or national origin in admission to, or employment in, any program established to provide apprenticeship or other training.

(e) Notwithstanding any other provision of this subchapter—

(1) it shall not be an unlawful employment practice for an employer to hire and employ employees, for an employment agency to classify, or refer for employment any individual, for a labor organization to classify its membership or to classify or refer for employment any individual, or for an employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining programs to admit or employ any individual in any such program, on the basis of his religion, sex, or national origin in those certain instances where religion, sex, or national origin is a bona fide occupational qualification reasonably necessary to the normal operation of that particular business or enterprise, and

(2) it shall not be an unlawful employment practice for a school, college, university, or other educational institution or institution of learning to hire and employ employees of a particular religion if such school, college, university, or

other educational institution or institution of learning is, in whole or in substantial part, owned, supported, controlled, or managed by a particular religion or by a particular religious corporation, association, or society, or if the curriculum of such school, college, university, or other educational institution or institution of learning is directed toward the propagation of a particular religion.

(f) As used in this subchapter, the phrase "unlawful employment practice" shall not be deemed to include any action or measure taken by an employer, labor organization, joint labor-management committee, or employment agency with respect to an individual who is a member of the Communist Party of the United States or of any other organization required to register as a Communist-action or Communist-front organization. . . .

(g) Notwithstanding any other provision of this subchapter, it shall not be an unlawful employment practice for an employer to fail or refuse to hire and employ any individual for any position, for an employer to discharge any individual from any position, or for an employment agency to fail or refuse to refer any individual for employment in any position, or for a labor organization to fail or refuse to refer any individual for employment in any position, if—

(1) the occupancy of such position, or access to the premises in or upon which any part of the duties of such position is performed or is to be performed, is subject to any requirement imposed in the interest of the national security of the United States . . . and

(2) such individual has not fulfilled or has ceased to fulfill that requirement.

(h) Notwithstanding any other provision of this subchapter, it shall not be an unlawful employment practice for an employer to apply different standards of compensation, or different terms, conditions, or privileges of employment pursuant to a bona fide seniority or merit system, or a system which measures earnings by quantity or quality of production or to employees who work in different locations, provided that such differences are not the result of an intention to discriminate because of race, color, religion, sex, or national origin, nor shall it be an unlawful employment practice for an employer to give and act upon the results of any professionally developed ability test provided that such test, its administration or action upon the results is not designed, intended or used to discriminate because of race, color, religion, sex, or national origin. . . .

(j) Nothing contained in this subchapter shall be interpreted to require any employer, employment agency, labor organization, or joint labor-management committee subject to this subchapter to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on

account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex, or national origin employed by any employer, referred or classified for employment by any employment agency or labor organization, or admitted to, or employed in, any apprenticeship or other training program, in comparison with the total number or percentage of persons of such race, color, religion, sex, or national origin in any community, State, section, or other area, or in the available work force in any community, State, section, or other area.

Section 704. Other Unlawful Employment Practices.

(a) It shall be an unlawful employment practice for an employer to discriminate against any of his employees or applicants for employment, for an employment agency, or joint labor-management committee controlling apprenticeship or other training or retraining, including on-the-job training programs, to discriminate against any individual, or for a labor organization to discriminate against any member thereof or applicant for membership, because he has opposed any practice made an unlawful employment practice by this subchapter, or because he has made a charge,

testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this subchapter.

(b) It shall be an unlawful employment practice for an employer, labor organization, employment agency, or joint labor-management committee controlling apprenticeship or other training or retraining, including on-the-job training programs, to print or publish or cause to be printed or published any notice or advertisement relating to employment by such an employer or membership or any classification or referral for employment by such a labor organization, or relating to any classification or referral for employment by such an employment agency, or relating to admission to, or employment in, any program established to provide apprenticeship or other training by such a joint-labor-management committee, indicating any preference, limitation, specification, or discrimination, based on race, color, religion, sex, or national origin, except that such a notice or advertisement may indicate a preference, limitation, specification, or discrimination based on religion, sex or national origin when religion, sex, or national origin is a bona fide occupational qualification for employment.

A P P E N D I X C : Americans with Disabilities Act of 1990 [Excerpts] and ADA Amendments Act of 2008 [Excerpts]

Americans with Disabilities Act of 1990 [Excerpts]

Title 1—Employment

Sec. 101. Definitions

As used in this title: . . .

(8) Qualified individual with a disability. The term “qualified individual with a disability” means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires. For the purposes of this title, consideration shall be given to the employer’s judgment as to what functions of a job are essential, and if an employer has prepared a written description before advertising or interviewing applicants for the job, this description shall be considered evidence of the essential functions of the job.

(9) Reasonable accommodation. The term “reasonable accommodation” may include

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and (B) job restructuring, part-time or modified work schedules, reassignment to a vacant position, acquisition or

modification of equipment or devices, appropriate adjustment or modifications of examinations, training materials or policies, the provision of qualified readers or interpreters, and other similar accommodations for individuals with disabilities.

(10) Undue Hardship.

(A) In general. The term “undue hardship” means an action requiring significant difficulty or expense, when considered in light of the factors set forth in subparagraph(B).

(B) Factors to be considered. In determining whether an accommodation would impose an undue hardship on a covered entity, factors to be considered include

(i) the nature and cost of accommodation needed under this Act;

(ii) the overall financial resources of the facility or facilities involved in the provision of the reasonable accommodation; the number of persons employed at such facility; the effect on expenses and resources, or the impact otherwise of such accommodation upon the operation of the facility;

(iii) the overall financial resources of the covered entity; the overall size of the business of a covered entity with

respect to the number of its employees; the number, type, and location of its facilities; and

(iv) the type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity; the geographic separateness, administrative, or fiscal relationship of the facility or facilities in question to the covered entity.

Sec. 102. Discrimination

(a) General Rule. No covered entity shall discriminate against a qualified individual with a disability because of the disability of such individual in regard to job application procedures, the hiring, advancement, or discharge of employees, employee compensation, job training, and other terms, conditions, and privileges of employment.

(b) Construction. As used in subsection (a), the term "discriminate" includes

(1) limiting, segregating, or classifying a job applicant or employee in a way that adversely affects the opportunities or status of such applicant or employee because of the disability of such applicant or employee;

(2) participating in a contractual or other arrangement or relationship that has the effect of subjecting a covered entity's qualified applicant or employee with a disability to the discrimination prohibited by this title (such relationship includes a relationship with an employment or referral agency, labor union, an organization providing fringe benefits to an employee of the covered entity, or an organization providing training and apprenticeship programs);

(3) utilizing standards, criteria, or methods of administration

(A) that have the effect of discrimination on the basis of disability; or

(B) that perpetuate the discrimination of others who are subject to common administrative control;

(4) excluding or otherwise denying equal jobs or benefits to a qualified individual because of the known disability of an individual with whom the qualified individual is known to have a relationship or association;

(5)(A) not making reasonable accommodations to the known physical or mental limitations of an otherwise qualified individual with a disability who is an applicant or employee, unless such covered entity can demonstrate that the accommodation would impose an undue hardship on the operation of the business of such covered entity; or

(B) denying employment opportunities to a job applicant or employee who is an otherwise qualified individual with a disability, if such denial is based on the need of such covered entity to make reasonable accommodation to the physical or mental impairments of the employee or applicant;

(6) using qualification standards, employment tests or other selection criteria that screen out or tend to screen out an individual with a disability or a class of individuals with disabilities unless the standard, test or other selection criteria, as used by the covered entity, is shown to be job-related for the position in question and is consistent with business necessity; and

(7) failing to select and administer tests concerning employment in the most effective manner to ensure that, when such test is administered to a job applicant or employee who has a disability that impairs sensory, manual, or speaking skills, such test results accurately reflect the skills, aptitude, or whatever other factor of such applicant or employee that such test purports to measure, rather than reflecting the impaired sensory, manual, or speaking skills of such employee or applicant (except where such skills are the factors that the test purports to measure). . . .

Sec. 104. Illegal Use of Drugs and Alcohol

(b) Rules of Construction. Nothing in subsection (a) shall be construed to exclude as a qualified individual with a disability an individual who

(1) has successfully completed a supervised drug rehabilitation program and is no longer engaging in the illegal use of drugs, or has otherwise been rehabilitated successfully and is no longer engaging in such use;

(2) is participating in a supervised rehabilitation program and is no longer engaging in such use; or

(3) is erroneously regarded as engaging in such use, but is not engaging in such use; except that it shall not be a violation of this Act for a covered entity to adopt or administer reasonable policies or procedures, including but not limited to drug testing, designed to ensure that an individual described in paragraph (1) or (2) is no longer engaging in the illegal use of drugs. . . .

Sec. 107. Enforcement.

(a) Powers, Remedies, and Procedures. The powers, remedies, and procedures set forth in sections 705, 706, 707, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-4, 2000e-5, 2000e-6, 2000e-8, and 2000e-9) shall be the powers, remedies, and procedures this title provides to the Commission, to the Attorney General, or to any person alleging discrimination on the basis of disability in violation of any provision of this Act, or regulations promulgated under section 106, concerning employment.

(b) Coordination. The agencies with enforcement authority for actions which allege employment discrimination under this title and under the Rehabilitation Act of 1973 shall develop procedures to ensure that administrative complaints filed under this title and under the Rehabilitation Act

of 1973 are dealt with in a manner that avoids duplication of effort and prevents imposition of inconsistent or conflicting standards for the same requirements under this title and the Rehabilitation Act of 1973. The Commission, the Attorney General, and the Office of Federal Contract Compliance Programs shall establish such coordinating mechanisms (similar to provisions contained in the joint regulations promulgated by the Commission and the Attorney General at part 42 of title 28 and part 1691 of title 29, Code of Federal Regulations, and the Memorandum of Understanding between the Commission and the Office of Federal Contract Compliance Programs dated January 16, 1981 (46 Fed. Reg. 7435, January 23, 1981)) in regulations implementing this title and Rehabilitation Act of 1973 not later than 18 months after the date of enactment of this Act.

Sec. 108. Effective Date.

This title shall become effective 24 months after the date of enactment.

ADA Amendments Act of 2008 [Excerpts]

Sec. 2. Findings and Purposes

(a) Findings. Congress finds that

(1) in enacting the Americans with Disabilities Act of 1990 (ADA), Congress intended that the Act “provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities” and provide broad coverage;

(2) in enacting the ADA, Congress recognized that physical and mental disabilities in no way diminish a person’s right to fully participate in all aspects of society, but that people with physical or mental disabilities are frequently precluded from doing so because of prejudice, antiquated attitudes, or the failure to remove societal and institutional barriers;

(3) while Congress expected that the definition of disability under the ADA would be interpreted consistently with how courts had applied the definition of a handicapped individual under the Rehabilitation Act of 1973, that expectation has not been fulfilled;

(4) the holdings of the Supreme Court in *Sutton v. United Air Lines, Inc.*, 527 U.S. 471 (1999) and its companion cases have narrowed the broad scope of protection intended to be afforded by the ADA, thus eliminating protection for many individuals whom Congress intended to protect;

(5) the holding of the Supreme Court in *Toyota Motor Manufacturing, Kentucky, Inc., v. Williams*, 534 U.S. 184 (2002) further narrowed the broad scope of protection intended to be afforded by the ADA;

(6) as a result of these Supreme Court cases, lower courts have incorrectly found in individual cases that people with a range of substantially limiting impairments are not people with disabilities;

(7) in particular, the Supreme Court, in the case of *Toyota Motor Manufacturing, Kentucky, Inc., v. Williams*, 534 U.S. 184 (2002), interpreted the term “substantially limits” to require a greater degree of limitation than was intended by Congress; and

(8) Congress finds that the current Equal Employment Opportunity Commission ADA regulations defining the term “substantially limits” as “significantly restricted” are inconsistent with congressional intent, by expressing too high a standard. . . .

Sec. 4 Disability Defined and Rules of Construction

(a) Definition of Disability. Section 3 of the Americans with Disabilities Act of 1990 (42 U.S.C. 12102) is amended to read as follows:

“Sec. 3. Definition of Disability.

“As used in this Act:

“Disability. The term ‘disability’ means, with respect to an individual

“(A) A physical or mental impairment that substantially limits one or more major life activities of an individual;

“(B) a record of such an impairment; or

“(C) being regarded as having such an impairment (as described in paragraph (3)).

“(2) Major Life Activities.

“(A) In General. For purposes of paragraph (1), major life activities include, but are not limited to, caring for oneself, performing manual tasks, seeing, hearing, eating, sleeping, walking, standing, lifting, bending, speaking, breathing, learning, reading, concentrating, thinking, communicating, and working.

“(B) Major Bodily Functions. For purposes of paragraph (1), a major life activity also includes the operation of a major bodily function, including but not limited to, functions of the immune system, normal cell growth, digestive, bowel, bladder, neurological, brain, respiratory, circulatory, endocrine, and reproductive functions.

“(3) Regarded As Having Such An Impairment. For purposes of paragraph (1)(C):

“(A) An individual meets the requirement of ‘being regarded as having such an impairment’ if the individual establishes that he or she has been subjected to an action prohibited under this Act because of an actual or perceived physical or mental impairment whether or not the impairment limits or is perceived to limit a major life activity.

(B) Paragraph (1)(C) shall not apply to impairments that are transitory and minor. A transitory impairment is an impairment with an actual or expected duration of 6 months or less.

“(4) Rules Of Construction Regarding The Definition Of Disability. The definition of ‘disability’ in paragraph (1) shall be construed in accordance with the following:

(A) The definition of disability in this Act shall be construed in favor of broad coverage of individuals under this Act, to the maximum extent permitted by the terms of this Act.

(B) The term ‘substantially limits’ shall be interpreted consistently with the findings and purposes of the ADA Amendments Act of 2008.

(C) An impairment that substantially limits one major life activity need not limit other major life activities in order to be considered a disability.

(D) An impairment that is episodic or in remission is a disability if it would substantially limit a major life activity when active.

(E) (i) The determination of whether an impairment substantially limits a major life activity shall be made without regard to the ameliorative effects of mitigating measures such as—

“(I) medication, medical supplies, equipment, or appliances, low-vision devices (which do not include ordinary eyeglasses or contact lenses), prosthetics including limbs and devices, hearing aids and cochlear implants or other implantable hearing devices, mobility devices, or oxygen therapy equipment and supplies;

“(II) use of assistive technology;

“(III) reasonable accommodations or auxiliary aids or services; or

“(IV) learned behavioral or adaptive neurological modifications.

“(ii) The ameliorative effects of the mitigating measures of ordinary eyeglasses or contact lenses shall be considered in determining whether an impairment substantially limits a major life activity.

“(iii) As used in this subparagraph

“(I) the term ‘ordinary eyeglasses or contact lenses’ means lenses that are intended to fully correct visual acuity or eliminate refractive error; and

“(II) the term ‘low-vision devices’ means devices that magnify, enhance, or otherwise augment a visual image. . . .”

A P P E N D I X D : Sherman Antitrust Act [Excerpts]

Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal. Every person who shall make any contract or engage in any such combination or conspiracy shall be deemed guilty of a felony, and, on conviction thereof, shall be punished by fine not exceeding \$10,000,000 if a corporation, or, if any other person, \$350,000 or by imprisonment not exceeding three years, or by both said punishments in the discretion of the court.

Section 2. Every person who shall monopolize, or attempt to monopolize, or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a felony, and, on conviction thereof, shall be punished by fine not exceeding \$10,000,000 if a corporation, or, if any other person, \$350,000 or by imprisonment not exceeding three years, or by both said punishments, in the discretion of the court.

A P P E N D I X E : Clayton Act of 1914 [Excerpts]

Section 3. That it shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies, or other commodities, whether patented or unpatented, for use, consumption, or resale within the United States or . . . other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement, or

understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement, or understanding may be to substantially lessen competition to tend to create a monopoly in any line of commerce.

Section 4. That any person who shall be injured in his business or property by reason of anything forbidden in the anti-trust laws may sue therefor in any district court of the United States in the district in which the defendant resides or is found, or has an agent, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee.

Section 4A. Whenever the United States is hereafter injured in its business or property by reason of anything forbidden in the antitrust laws it may sue therefor in the United States district court for the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover actual damages by it sustained and the cost of suit.

Section 4B. Any action to enforce any cause of action under sections 4 or 4A shall be forever barred unless commenced within four years after the cause of action accrued. No cause of action barred under existing law on the effective date of this act shall be revived by this Act.

Section 6. That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws.

Section 7. That no person engaged in commerce shall acquire, directly or indirectly, the whole or any part of the

stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

No person shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

This section shall not apply to persons purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition

Section 8. . . . No person shall, at the same time, serve as a director or officer in any two or more corporations (other than banks, banking associations, and trust companies) that are—

(A) engaged in whole or in part in commerce; and

(B) by virtue of their business and location of operation, competitors, so that the elimination of competition by agreement between them would constitute a violation of any of the antitrust laws; if each of the corporations has capital, surplus, and undivided profits aggregating more than \$10,000,000 as adjusted pursuant to paragraph (5) of this subsection.

APPENDIX F : Federal Trade Commission Act of 1914 [Excerpts]

Unfair Methods of Competition Prohibited

Section 5. Unfair methods of competition unlawful; prevention by Commission—declaration. Declaration of unlawfulness; power to prohibit unfair practices.

(a) (1) Unfair methods of competition in or affecting commerce, and unfair or deceptive acts or practices in or affecting commerce, are declared unlawful.

...

(b) Any person, partnership, or corporation who violates an order of the Commission to cease and desist after it has

become final, and while such order is in effect, shall forfeit and pay to the United States a civil penalty of not more than \$10,000 for each violation, which shall accrue to the United States and may be recovered in a civil action brought by the Attorney General of the United States. Each separate violation of such an order shall be a separate offense, except that in the case of a violation through continuing failure or neglect to obey a final order of the Commission, each day of continuance of such failure or neglect shall be deemed a separate offense.

A P P E N D I X G : Securities Act of 1933 [Excerpts]

Prohibitions Relating to Interstate Commerce and the Mails

Sec. 5. (a) Unless a registration statement is in effect as to a security, it shall be unlawful for any person, directly or indirectly—

(1) to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to sell such security through the use or medium of any prospectus or otherwise; or

(2) to carry or cause to be carried through the mails or in interstate commerce, by any means or instruments of transportation, any such security for the purpose of sale or for delivery after sale.

[Prospectus Requirements]

(b) It shall be unlawful for any person, directly or indirectly—

(1) to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to carry or transmit any prospectus relating to any security with respect to which a registration statement has been filed under this title, unless such prospectus meets the requirements of section 10, or

(2) to carry or cause to be carried through the mails or in interstate commerce any such security for the purpose of sale or for delivery after sale, unless accompanied or preceded by a prospectus that meets the requirements of subsection (a) of section 10.

[Prohibition Against Offers Prior to Registration]

(c) It shall be unlawful for any person, directly or indirectly, to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to offer to sell or offer to buy through the use or medium of any prospectus or otherwise any security, unless a registration statement has been filed as to such security, or while the registration statement is the subject of a refusal order or stop order or (prior to the effective date of the registration statement) any public proceeding or examination under section 8.

Civil Liabilities on Account of False Registration Statement

Sec. 11. (a) In case any part of the registration statement, when such part became effective, contained an untrue statement of a material fact or omitted to state a material fact required to be stated therein or necessary to make

the statements therein not misleading, any person acquiring such security (unless it is proved that at the time of such acquisition he knew of such untruth or omission) may, either at law or in equity, in any court of competent jurisdiction, sue—

[Signers of Registration Statement]

(1) every person who signed the registration statement;

[Directors and Partners]

(2) every person who was a director of (or person performing similar functions), or partner in, the issuer at the time of the filing of the part of the registration statement with respect to which his liability is asserted;

[Persons Named as Being, or About to Become, Directors or Partners]

(3) every person who, with his consent, is named in the registration statement as being or about to become a director, person performing similar functions, or partner;

[Accountants, Engineers, Appraisers, and Other Professional Persons]

(4) every accountant engineer, or appraiser, or any person whose profession gives authority to a statement made by him, who has with his consent been named as having prepared or certified any part of the registration statement, or as having prepared or certified any report or valuation which is used in connection with the registration statement, with respect to the statement in such registration statement, report, or valuation, which purports to have been prepared or certified by him;

[Underwriters]

(5) every underwriter with respect to such security.

[Purchase after Publication of Earning Statement]

If such person acquired the security after the issuer has made generally available to its security holders an earning statement covering a period of at least twelve months beginning after the effective date of the registration statement, then the right of recovery under this subsection shall be conditioned on proof that such person acquired the securities relying on such untrue statement in the registration statement or relying upon the registration statement and not knowing of such

omission, but such reliance may be established without proof of the reading of the registration statement by such person.

[Defenses of Persons Other than Issuer]

(b) Notwithstanding the provisions of subsection (a) no person, other than the issuer, shall be liable as provided therein who shall sustain the burden of proof—

[Resignation before Effective Date]

(1) that before the effective date of the part of the registration statement with respect to which his liability is asserted (A) he had resigned from or had taken such steps as are permitted by law to resign from, or ceased or refused to act in, every office, capacity or relationship in which he was described in the registration statement as acting or agreeing to act, and (B) he had advised the Commission and the issuer in writing, that he had taken such action and that he would not be responsible for such part of the registration statement; or

[Statements Becoming Effective without Defendants Knowledge]

(2) that if such part of the registration statement became effective without his knowledge, upon becoming aware of such fact he forthwith acted and advised the Commission, in accordance with paragraph (1), and, in addition, gave reasonable public notice that such part of the registration statement had become effective without his knowledge; or

[Belief on Reasonable Grounds that Statements Were True]

(3) that (A) as regards any part of the registration statement not purporting to be made on the authority of an expert, and not purporting to be a copy of or extract from a report or valuation of an expert and not purporting to be made on the authority of a public official document or statement, he had, after reasonable investigation, reasonable ground to believe and did believe, at the time such part of the registration statement became effective, that the statements therein were true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading; and

[Statement Made on Authority of Defendant as Expert]

(B) as regards any part of the registration statement purporting to be made upon his authority as an expert or purporting to be a copy of or extract from a report or valuation of himself as an expert, (i) he had, after reasonable investigation, reasonable ground to believe and did believe, at the time such part of the registration statement became effective, that

the statements therein were true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading, or (ii) such part of the registration statement did not fairly represent his statement as an expert or was not a fair copy of or extract from his report or valuation as an expert; and

[Statement Made on Authority of Expert Other than Defendant]

(C) as regards any part of the registration statement purporting to be made on the authority of an expert (other than himself) or purporting to be a copy of or extract from a report or valuation of an expert (other than himself), he had no reasonable ground to believe and did not believe, at the time such part of the registration statement became effective, that the statements therein were untrue or that there was an omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading, or that such part of the registration statement did not fairly represent the statement of the expert or was not a fair copy of or extract from the report or valuation of the expert; and

[Statement Made by Official Person; Copy of Public Official Document]

(D) as regards any part of the registration statement purporting to be a statement made by an official person or purporting to be a copy of or extract from a public official document, he had no reasonable ground to believe and did not believe, at the time such part of the registration statement became effective, that the statements therein were untrue, or that there was an omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading, or that such part of the registration statement did not fairly represent the statement made by the official person or was not a fair copy of or extract from the public official document.

[“Reasonable” Investigation and “Reasonable” Grounds for Belief]

(c) In determining, for the purpose of paragraph (3) of subsection (b) of this section, what constitutes reasonable investigation and reasonable ground for belief, the standard of reasonableness shall be that required of a prudent man in the management of his own property.

[Person Becoming Underwriter after Effectiveness of Registration Statement]

(d) If any person becomes an underwriter with respect to the security after the part of the registration statement with respect to which his liability is asserted has become effective,

then for the purposes of paragraph (3) of subsection (b) of this section such part of the registration statement shall be considered as having become effective with respect to such person as of the time when he became an underwriter.

[Amount of Damages; Bond for Costs of Suit]

(e) The suit authorized under subsection (a) may be to recover such damages as shall represent the difference between the amount paid for the security (not exceeding the price at which the security was offered to the public) and (1) the value thereof as of the time such suit was brought, or (2) the price at which such security shall have been disposed of in the market before suit, or (3) the price at which such security shall have been disposed of after suit but before judgment if such damages shall be less than the damages representing the difference between the amount paid for the security (not exceeding the price at which the security was offered to the public) and the value thereof as of the time such suit was brought: Provided, that if the defendant proves that any portion or all of such damages represents other than the depreciation in value of such security resulting from such part of the registration statement, with respect to which his liability is asserted, not being true or omitting to state a material fact required to be stated therein or necessary to make the statements therein not misleading, such portion of or all such damages shall not be recoverable. In no event shall any underwriter (unless such underwriter shall have knowingly received from the issuer for acting as an underwriter some benefit, directly or indirectly in which all other underwriters similarly situated did not share in proportion to their respective interests in the underwriting) be liable in any suit or as a consequence of suits authorized under subsection (a) of this section for damages in excess of the total price at which the securities underwritten by him and distributed to the public were offered to the public. In any suit under this or any other section of this title the court may, in its discretion, require an undertaking for the payment of the costs of such suit, including reasonable attorney's fees, and if judgment shall be rendered against a party litigant, upon the motion of the other party litigant, such costs may be assessed in favor of such party litigant (whether or not such undertaking has been required) if the court believes the suit or the defense to have been without merit, in an amount sufficient to reimburse him for the reasonable expenses incurred by him, in connection with such suit, such costs to be taxed in the manner usually provided for taxing of costs in the court in which the suit was heard.

[Joint and Several Liability]

(f) (1) Except as provided in paragraph (2), All or any one or more of the persons specified in subsection (a) shall be jointly and severally liable, and every person who becomes liable to make any payment under this section may recover

contribution as in cases of contract from any person who, if sued separately, would have been liable to make the same payment, unless the person who had become liable was, and the other was not, guilty of fraudulent misrepresentation.

(2)(A) The liability of an outside director under subsection (e) shall be determined in accordance with Section 21D(f) of the Securities Exchange Act of 1934.

[*Ed.*: Section 21D(f) provides that any person found liable shall be jointly and severally liable for all damages awarded the plaintiff only if the trier of fact specifically determines that the person knowingly committed a violation of the securities laws. Otherwise (except for uncollectible amounts, as described below), a person is liable solely for the portion of the judgment that corresponds to that person's percentage of responsibility (such percentage to be determined by considering both the nature of the person's conduct and the nature and extent of the causal relationship between the person's conduct and the damages incurred by the plaintiff). If part of the judgment owed by all defendants remains uncollectible, then each defendant has joint and several liability for the uncollectible share if the plaintiff is an individual with a net worth less than \$200,000 and the recoverable damages represent more than 10 percent of that net worth. Otherwise, each defendant is liable for the uncollectible share in proportion to his or her percentage of responsibility up to a maximum of 50 percent of that person's proportionate share of liability.]

(B) For purpose of this paragraph, the term "outside director" shall have the meaning given such term by rule or regulation of the commission.

[Limitation on Amount of Damages]

(g) In no case shall the amount recoverable under this section exceed the price at which the security was offered to the public.

Civil Liabilities Arising in Connection with Prospectuses and Communications

Sec. 12. (a) *In General*—Any person who—

(1) offers or sells a security in violation of section 5, or

Offers or Sells by Use of Interstate Communications or Transportation

(2) offers or sells a security (whether or not exempted by the provisions of section 3, other than paragraph (2) of subsection (a) thereof), by the use of any means or instruments of transportation or communication in interstate commerce or of the mails, by means of a prospectus or oral communication, which includes an untrue statement of a material fact or omits to state a material fact necessary in order to make the statements, in the light of the circumstances under

which they were made, not misleading (the purchaser not knowing of such untruth or omission), and who shall not sustain the burden of proof that he did not know, and in the exercise of reasonable care could not have known, of such untruth or omission, shall be liable, subject to subsection (b), to the person purchasing such security from him, who may sue either at law or in equity in any court of competent jurisdiction, to recover the consideration paid for such security with interest thereon, less the amount of any income received thereon, upon the tender of such security, or for damages if he no longer owns the security.

(b) *Loss Causation.*—In an action described in subsection (a)(2), if the person who offered or sold such security proves that any portion or all of the amount recoverable under subsection (a)(2) represents other than the depreciation in value of the subject security resulting from such part of the prospectus or oral communication, with respect to which the liability of that person is asserted, not being true or omitting to state a material fact required to be stated therein or necessary to make the statement not misleading, then such portion or amount, as the case may be, shall not be recoverable.

A P P E N D I X H : Securities Exchange Act of 1934 [Excerpts]

Regulation of the Use of Manipulative and Deceptive Devices

Sec. 10. It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce or of the mails, or of any facility of any national securities exchange—

...

[Use or Employment of Manipulative or Deceptive Devices]

(b) To use or employ, in connection with the purchase or sale of any security registered on a national securities exchange or any security not so registered, any manipulative or deceptive device or contrivance in contravention of such rules and regulations as the commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.

...

[Directors, Officers, and Principal Stockholders]

Sec. 16. (a) Every person who is directly or indirectly the beneficial owner of more than 10 per centum of any class of any equity security (other than exempted security) which is registered pursuant to section 12 of this title, or who is a director or an officer of the issuer of such security, shall file, at the time of the registration of such security on a national securities exchange or by the effective date of a registration statement filed pursuant to section 12(g) of this title, or within ten days after he becomes such beneficial owner, director, or officer, a statement with the Commission (and, if such security is registered on a national securities exchange, also with the exchange) of the amount of all

equity securities of such issuer of which he is the beneficial owner, and within ten days after the close of each calendar month thereafter, if there has been a change in such ownership during such month, shall file with the Commission (and if such security is registered on a national securities exchange, shall also file with the exchange), a statement indicating his ownership at the close of the calendar month and such changes in his ownership as have occurred during such calendar month.

[Profits Realized from Purchase and Sales within Period of Less than Six Months]

(b) For the purpose of preventing the unfair use of information which may have been obtained by such beneficial owner, director, or officer by reason of his relationship to the issuer, any profit realized by him from any purchase and sale, or any sale and purchase, of any equity security of such issuer (other than an exempted security) within any period of less than six months, unless such security was acquired in good faith in connection with a debt previously contracted, shall inure to and be recoverable by the issuer, irrespective of any intention on the part of such beneficial owner, director, or officer in entering into such transaction of holding the security purchased or of not repurchasing the security sold for a period exceeding six months. Suit to recover such profit may be instituted at law or in equity in any court of competent jurisdiction by the issuer, or by the owner of any security of the issuer in the name and in behalf of the issuer if the issuer shall fail or refuse to bring such suit within sixty days after request or shall fail diligently to prosecute the same thereafter; but no such suit shall be brought more than two years after the date such profit was realized. This subsection shall not be construed to cover any transaction where such beneficial owner was not such both at the time

of the purchase and sale, or the sale and purchase, of the security involved, or any transaction or transactions which

the Commission by rules and regulations may exempt as not comprehended within the purpose of this subsection.

APPENDIX I: Rules 10b-5, 10b5-1, and 10b5-2 from Code of Federal Regulations

Regulations adopted by the Securities and Exchange Commission Pursuant to Section 10(b) of the Securities Exchange Act of 1934

§ 240.10b-5 Employment of manipulative and deceptive devices.

It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce, or of the mails or of any facility of any national securities exchange,

- (1) to employ any device, scheme, or artifice to defraud;
- (2) to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in light of the circumstances under which they were made, not misleading, or
- (3) to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person, in connection with the purchase or sale of any security.

[13 Fed. Reg. 8, 183 (Dec. 22, 1948), as amended at 16 Fed. Reg. 7,928 (Aug. 11, 1951)]

§ 240.10b5-1 Trading “on the basis of” material nonpublic information in insider trading cases.

Preliminary Note to § 240.10b5-1: This provision defines when a purchase or sale constitutes trading “on the basis of” material nonpublic information in insider trading cases brought under Section 10(b) of the Act and Rule 10b-5 thereunder. The law of insider trading is otherwise defined by judicial opinions construing Rule 10b-5, and Rule 10b5-1 does not modify the scope of insider trading law in any other respect.

(a) General. The “manipulative and deceptive devices” prohibited by Section 10(b) of the Act (15 U.S.C. 78j) and § 240.10b-5 thereunder include, among other things, the purchase or sale of a security of any issuer, on the basis of material nonpublic information about that security or issuer, in breach of a duty of trust or confidence that is owed directly, indirectly, or derivatively, to the issuer of that security or the shareholders of that issuer, or to any other person who is the source of the material nonpublic information.

(b) Definition of “on the basis of.” Subject to the affirmative defenses in paragraph (c) of this section, a purchase or sale of a security of an issuer is “on the basis of” material nonpublic information about that security or issuer if the person making the purchase or sale was aware of the material nonpublic information when the person made the purchase or sale.

(c) Affirmative defenses. (1)(i) Subject to paragraph (c) (1) (ii) of this section, a person’s purchase or sale is not “on the basis of” material nonpublic information if the person making the purchase or sale demonstrates that:

(A) Before becoming aware of the information, the person had:

(1) Entered into a binding contract to purchase or sell the security,

(2) Instructed another person to purchase or sell the security for the instructing person’s account, or

(3) Adopted a written plan for trading securities;

(B) The contract, instruction, or plan described in paragraph (c) (1) (i) (A) of this Section:

(1) Specified the amount of securities to be purchased or sold and the price at which and the date on which the securities were to be purchased or sold;

(2) Included a written formula or algorithm, or computer program, for determining the amount of securities to be purchased or sold and the price at which and the date on which the securities were to be purchased or sold; or

(3) Did not permit the person to exercise any subsequent influence over how, when, or whether to effect purchases or sales; provided, in addition, that any other person who, pursuant to the contract, instruction, or plan, did exercise such influence must not have been aware of the material nonpublic information when doing so; and

(C) The purchase or sale that occurred was pursuant to the contract, instruction, or plan. A purchase or sale is not “pursuant to a contract, instruction, or plan” if, among other things, the person who entered into the contract, instruction, or plan altered or deviated from the contract, instruction, or plan to purchase or sell securities (whether by changing the amount, price, or timing of the purchase or sale), or entered into or altered a corresponding

or hedging transaction or position with respect to those securities.

(ii) Paragraph (c) (1) (i) of this section is applicable only when the contract, instruction, or plan to purchase or sell securities was given or entered into in good faith and not as part of a plan or scheme to evade the prohibitions of this section.

(iii) This paragraph (c) (1) (iii) defines certain terms as used in paragraph (c) of this Section.

(A) Amount. “Amount” means either a specified number of shares or other securities or a specified dollar value of securities.

(B) Price. “Price” means the market price on a particular date or a limit price, or a particular dollar price.

(C) Date. “Date” means, in the case of a market order, the specific day of the year on which the order is to be executed (or as soon thereafter as is practicable under ordinary principles of best execution). “Date” means, in the case of a limit order, a day of the year on which the limit order is in force.

(2) A person other than a natural person also may demonstrate that a purchase or sale of securities is not “on the basis of” material nonpublic information if the person demonstrates that:

(i) The individual making the investment decision on behalf of the person to purchase or sell the securities was not aware of the information; and

(ii) The person had implemented reasonable policies and procedures, taking into consideration the nature of the person’s business, to ensure that individuals making investment decisions would not violate the laws prohibiting trading on the basis of material nonpublic information. These policies and procedures may include those that restrict any purchase, sale, and causing any purchase or sale of any security as to which the person has material nonpublic information, or those that prevent such individuals from becoming aware of such information.

[65 Fed. Reg. 51,716, 51,737 (Aug. 24, 2000)]

§ 240.10b5–2 Duties of trust or confidence in misappropriation insider trading cases.

A P P E N D I X J : Rule 14e–3 from Code of Federal Regulations

§ 240.14e-3 Transactions in securities on the basis of material, nonpublic information in the context of tender offers.

(a) If any person has taken a substantial step or steps to commence, or has commenced, a tender offer (the “offering person”), it shall constitute a fraudulent, deceptive or manipulative act or practice within the meaning of

Preliminary Note to § 240.10b5–2: This section provides a non-exclusive definition of circumstances in which a person has a duty of trust or confidence for purposes of the “misappropriation” theory of insider trading under Section 10(b) of the Act and Rule 10b–5. The law of insider trading is otherwise defined by judicial opinions construing Rule 10b–5, and Rule 10b5–2 does not modify the scope of insider trading law in any other respect.

(a) Scope of Rule. This section shall apply to any violation of Section 10(b) of the Act (15 U.S.C. 78j(b)) and § 240.10b–5 thereunder that is based on the purchase or sale of securities on the basis of, or the communication of, material nonpublic information misappropriated in breach of a duty of trust or confidence.

(b) Enumerated “duties of trust or confidence.” For purposes of this section, a “duty of trust or confidence” exists in the following circumstances, among others:

(1) Whenever a person agrees to maintain information in confidence;

(2) Whenever the person communicating the material nonpublic information and the person to whom it is communicated have a history, pattern, or practice of sharing confidences, such that the recipient of the information knows or reasonably should know that the person communicating the material nonpublic information expects that the recipient will maintain its confidentiality; or

(3) Whenever a person receives or obtains material nonpublic information from his or her spouse, parent, child, or sibling; provided, however, that the person receiving or obtaining the information may demonstrate that no duty of trust or confidence existed with respect to the information, by establishing that he or she neither knew nor reasonably should have known that the person who was the source of the information expected that the person would keep the information confidential, because of the parties’ history, pattern, or practice of sharing and maintaining confidences, and because there was no agreement or understanding to maintain the confidentiality of the information.

[65 Fed. Reg. 51,716, 51,738 (Aug. 24, 2000)]

section 14(e) of the Act for any other person who is in possession of material information relating to such tender offer which information he knows or has reason to know is non-public and which he knows or has reason to know has been acquired directly or indirectly from:

(1) The offering person,

(2) The issuer of the securities sought or to be sought by such tender offer, or

(3) Any officer, director, partner or employee or any other person acting on behalf of the offering person or such issuer, to purchase or sell or cause to be purchased or sold any of such securities or any securities convertible into or exchangeable for any such securities or any option or right to obtain or dispose of any of the foregoing securities, unless within a reasonable time prior to any purchase or sale such information and its source are publicly disclosed by press release or otherwise.

(b) A person other than a natural person shall not violate paragraph (a) of this section if such person shows that:

(1) The individual(s) making the investment decision on behalf of such person to purchase or sell any security described in paragraph (a) of this section or to cause any such security to be purchased or sold by or on behalf of others did not know the material, nonpublic information; and

(2) Such person had implemented one or a combination of policies and procedures, reasonable under the circumstances, taking into consideration the nature of the person's business, to ensure that individual(s) making investment decision(s) would not violate paragraph (a) of this section, which policies and procedures may include, but are not limited to, (i) those which restrict any purchase, sale and causing any purchase and sale of any such security or (ii) those which prevent such individual(s) from knowing such information.

(c) Notwithstanding anything in paragraph (a) of this section to contrary, the following transactions shall not be violations of paragraph (a) of this section:

(1) Purchase(s) of any security described in paragraph (a) of this section by a broker or by another agent on behalf of an offering person; or

(2) Sale(s) by any person of any security described in paragraph (a) of this section to the offering person.

(d)(1) As a means reasonably designed to prevent fraudulent, deceptive or manipulative acts or practices within the

meaning of section 14(e) of the Act, it shall be unlawful for any person described in paragraph (d)(2)) of this section to communicate material, nonpublic information relating to a tender offer to any other person under circumstances in which it is reasonably foreseeable that such communication is likely to result in a violation of this section except that this paragraph shall not apply to a communication made in good faith:

(i) To the officers, directors, partners or employees of the offering person, to its advisors or to other persons, involved in the planning, financing, preparation or execution of such tender offer;

(ii) To the issuer whose securities are sought or to be sought by such tender offer, to its officers, directors, partners, employees or advisors or to other persons, involved in the planning, financing, preparation or execution of the activities of the issuer with respect to such tender offer; or

(iii) To any person pursuant to a requirement of any statute or rule or regulation promulgated thereunder.

(2) The persons referred to in paragraph (d)(1) of this section are:

(i) The offering person or its officers, directors, partners, employees or advisors;

(ii) The issuer of the securities sought or to be sought by such tender offer or its officers, directors, partners, employees or advisors;

(iii) Anyone acting on behalf of the persons in paragraph (d)(2)(i) of this section or the issuer or persons in paragraph (d)(2)(ii) of this section; and

(iv) Any person in possession of material information relating to a tender offer which information he knows or has reason to know is nonpublic and which he knows or has reason to know has been acquired directly or indirectly from any of the above.

[46 FR 60418 (Sept. 12, 1980)]

APPENDIX K : Sarbanes-Oxley Act of 2002 [Excerpts]

Sec. 201. Services Outside the Scope of Practice of Auditors.

(g) **Prohibited Activities.** Except as provided in subsection (h), it shall be unlawful for a registered public accounting firm (and any associated person of that firm, to the extent determined appropriate by the [Securities and Exchange] Commission) that performs for any issuer any audit required by this title or the rules of the Commission under this title or . . . Board, the rules of the Public Company Accounting Oversight Board, to provide to

that issuer, contemporaneously with the audit, any non-audit service, including—

(1) bookkeeping or other services related to the accounting records or financial statements of the audit client;

(2) financial information systems design and implementation;

(3) appraisal or valuation services, fairness opinions, or contribution-in-kind reports;

(4) actuarial services;

(5) internal audit outsourcing services;

- (6) management functions or human resources;
 - (7) broker or dealer, investment adviser, or investment banking services;
 - (8) legal services and expert services unrelated to the audit; and
 - (9) any other service that the Board determines, by regulation, is impermissible.
- (h) ***Preapproval Required for Non-Audit Services.*** A registered public accounting firm may engage in any non-audit service, including tax services, that is not described in any of paragraphs (1) through (9) of subsection (g) for an audit client, only if the activity is approved in advance by the audit committee of the issuer, in accordance with subsection (i).
- [Codified at 15 U.S.C. § 78j-1.]

Sec. 302. Corporate Responsibility for Financial Reports.

(a) ***Regulations Required.*** The Commission shall, by rule, require, for each company filing periodic reports under section 13(a) or 15(d) of the Securities Exchange Act of 1934, that the principal executive officer or officers and the principal financial officer or officers, or persons performing similar functions, certify in each annual or quarterly report filed or submitted under either such section of such Act that—

- (1) the signing officer has reviewed the report;
- (2) based on the officer's knowledge, the report does not contain any untrue statement of a material fact or omit to state a material fact necessary in order to make the statements made, in light of the circumstances under which such statements were made, not misleading;
- (3) based on such officer's knowledge, the financial statements, and other financial information included in the report, fairly present in all material respects the financial condition and results of operations of the issuer as of, and for, the periods presented in the report;
- (4) the signing officers—

(A) are responsible for establishing and maintaining internal controls;

(B) have designed such internal controls to ensure that material information relating to the issuer and its consolidated subsidiaries is made known to such officers by others within those entities, particularly during the period in which the periodic reports are being prepared;

(C) have evaluated the effectiveness of the issuer's internal controls as of a date within 90 days prior to the report; and

(D) have presented in the report their conclusions about the effectiveness of their internal controls based on their evaluation as of that date;

(5) the signing officers have disclosed to the issuer's auditors and the audit committee of the board of directors (or persons fulfilling the equivalent function)—

(A) all significant deficiencies in the design or operation of internal controls which could adversely affect the issuer's ability to record, process, summarize, and report financial data and have identified for the issuer's auditors any material weaknesses in internal controls; and

(B) any fraud, whether or not material, that involves management or other employees who have a significant role in the issuer's internal controls; and

(6) the signing officers have indicated in the report whether or not there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of their evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.

[Codified at 15 U.S.C. § 7241.]

Sec. 404. Management Assessment of Internal Controls.

(a) ***Rules Required.*** The Commission shall prescribe rules requiring each annual report required by section 13(a) or 15(d) of the Securities Exchange Act of 1934 to contain an internal control report, which shall—

(1) state the responsibility of management for establishing and maintaining an adequate internal control structure and procedures for financial reporting; and

(2) contain an assessment, as of the end of the most recent fiscal year of the issuer, of the effectiveness of the internal control structure and procedures of the issuer for financial reporting.

(b) ***Internal Control Evaluation and Reporting.*** With respect to the internal control assessment required by subsection (a), each registered public accounting firm that prepares or issues the audit report for the issuer shall attest to, and report on, the assessment made by the management of the issuer. An attestation made under this subsection shall be made in accordance with standards for attestation engagements issued or adopted by the Board. Any such attestation shall not be the subject of a separate engagement.

[Codified at 15 U.S.C. § 7262.]

Sec. 802. Criminal Penalties for Altering Documents.

Whoever knowingly alters, destroys, mutilates, conceals, covers up, falsifies, or makes a false entry in any record, document, or tangible object with the intent to impede, obstruct, or influence the investigation or proper administration of any matter within the jurisdiction of any department or agency of the United States or any [bankruptcy] case filed under title 11, or in relation to or contemplation of any such matter or case, shall be fined under this title, imprisoned not more than 20 years, or both.

[Codified at U.S.C. § 1519.]

G L O S S A R Y

A

abandonment (of a trademark) The failure to use a mark after acquiring legal protection may result in the loss of rights, and such loss is known as abandonment.

abrogate To annul the states' Eleventh Amendment immunity.

absolute privilege In defamation cases, the right of the defendant to publish with impunity a statement known by the defendant to be false.

acceptance An agreement to the amount offered for certain services or products. Acceptance may be verbal, written, or implied by action.

accession A process whereby a nation that was not an original party to a treaty can elect to participate in the treaty at a later time.

accord *See Accord and Satisfaction.*

accord and satisfaction An agreement to accept performance that is different from what is called for in the contract.

act-of-state doctrine The doctrine that states that the courts of one country will not sit in judgment on the acts of the government of another done within its own territory.

actual abandonment Loss of trademark rights that occurs when a trademark owner discontinues use of a mark with the intent not to resume use.

actual authority The express or implied power of an agent to act for and bind a principal to agreements entered into by an agent.

actual cause Proof that but for the defendant's negligent conduct the plaintiff would not have been harmed.

actual damages The amount required to repair or to replace an item or the decrease in market value caused by tortious conduct. Actual damages restore the injured party to the position it was in prior to the injury. Also called *compensatory damages*.

actual intent The subjective desire to cause the consequences of an act, or the belief that the consequences are substantially certain to result from it.

actual malice A statement made with the knowledge that it is false or with a reckless disregard for the truth.

actus reus (guilty deed) A crime; a criminal act.

ad valorem A condition of a tariff whereby the importer must pay a percentage of the value of the imported merchandise.

ad valorem tariffs Tariffs for which the importer must pay a percentage of the value of the imported merchandise.

additive Anything not inherent in a food product—including pesticide residues, unintended environmental contaminants, and unavoidably added substances from packaging.

adhesion contract An unfair type of contract by which sellers offer goods or services on a take-it-or-leave-it basis, with no chance for consumers to negotiate for goods except by agreeing to the terms of said contract.

adjustable-rate loan Loans that allow lenders to avoid the risk of fluctuating interest rates. The rate of interest is often set at a fixed number of percentage points over a specified standard.

adjustable-rate mortgages (ARMs) Mortgages that start out with a low fixed rate and usually adjust upward within two to five years as the rate resets.

administrative employee An employee whose primary duty consists of nonmanual work directly related either to management policies or to the general business operations of the employer or the employer's customers.

administrative law judge (ALJ) The presiding official at an administrative proceeding who has the power to issue an order resolving the legal dispute.

adoption Process by which a securities issuer explicitly or implicitly endorses or approves third-party information.

adulterated Consisting in whole or in part of any filthy, putrid, or decomposed substance, or otherwise unfit for food.

adverse employment action Action by an employer that materially affects the terms and conditions of employment, such as employee compensation or job responsibilities.

adverse possession Ownership of property that is not occupied by its owner for a certain period of time may be transferred to those who have been unlawfully occupying it and openly exercising rights of ownership. Such a transfer is usually not reflected in the official land records. Also called *squatter's rights*.

affidavit A written or printed declaration or statement of facts, made voluntarily, and confirmed by the oath or affirmation of the party making it, taken before a person having authority to administer such oath or affirmation.

affiliate Any person who controls an issuer of securities, or is controlled by the issuer, or is under common control. Includes officers, directors, and major shareholders of a corporation.

affirmative covenant The borrower's promise to do certain things under the loan agreement.

affirmative defense The admission in an answer to a complaint that defendant has acted as plaintiff alleges, but denies that defendant's conduct was the real or legal cause of harm to plaintiff.

after-acquired property The property a debtor acquires after the execution of a security agreement.

after-acquired title If, at the date of execution of a grant deed, the grantor does not have title to the real property referred to in the grant deed but subsequently acquires it, such after-acquired title is deemed automatically transferred to the grantee.

agency A relationship in which one person (the agent) acts for or represents another person (the principal).

agency by estoppel When the principal leads a third party to believe that a person is his or her agent, the principal is estopped (prevented) from denying that the person is his or her agent.

agency by ratification An agency formed when a principal approves or accepts the benefits of the actions of an otherwise unauthorized agent.

agent A person who manages a task delegated by another (the principal) and exercises whatever discretion is given to the agent by the principal.

aided-in-the-agency doctrine See Aided-in-the-Agency-Relation Doctrine.

aided-in-the-agency-relation doctrine An agency principle whereby the principal may be held vicariously liable for the wrongful acts of an agent acting outside of the scope of authority because the principal provided the instrumentality or created the circumstances that made it possible for the agent to commit the wrongful act.

aided-in the agency relation theory An employee is aided in accomplishing a tort by the existence of the agency relationship.

aider and abettor A person with knowledge of (or recklessness as to) a primary criminal violation who provides substantial assistance to the primary violation.

allocative efficiency An equilibrium in which scarce societal resources are allocated to the production of various goods and services up to the point where the cost of the resources equals the benefit society reaps from their use.

alter ego theory When owners have so mingled their own affairs with those of a corporation that the corporation does not exist as a distinct entity, it is an alter ego (second self) of its owners, permitting the piercing of the corporate veil.

alternative dispute resolution (ADR) Alternative techniques, such as negotiation, mediation, arbitration, med-arb, arb-med, minitrials, and summary jury trials, to resolve disputes without litigation.

alternative minimum tax (AMT) A tax law that was passed to prevent higher income taxpayers from paying too little tax because they were able to take advantage of a variety of tax deductions or exclusions, including the spread on exercise of an incentive stock option. Taxpayers who may be subject to AMT must calculate their taxable income in two ways and pay whichever formula yields the higher tax.

amici curiae brief An appellate brief filed by interested parties (literally, “friends of the court”) who are not themselves parties to the case on appeal.

amortize To pay the principal of a loan over a period of time.

angels Wealthy individual investors to whom entrepreneurs often turn for equity capital after exhausting the funds available from family and friends.

answer The instrument by which defendant admits or denies the various allegations stated in the complaint against the defendant.

anticipatory repudiation If a party indicates before performance is due that it will breach the contract, there is an anticipatory repudiation of the contract.

antideficiency laws Statutes that restrict lenders seeking remedies against real property security from suing the borrower personally. If a lender has recourse to the borrower or to other property of the borrower, and exercises such rights, the lender may be precluded from foreclosing on real estate mortgaged by the borrower.

Alternatively, if the holder of a mortgage or deed of trust secured by real property forecloses on the property, the lender may be precluded from suing the borrower personally to recover whatever is still owing after a foreclosure sale. Also called *one-form-of-action laws*.

antitrust injury The damages sustained by a plaintiff in an antitrust suit as a result of the defendant's anticompetitive conduct.

antitrust laws The laws that seek to identify and forbid business practices that are anticompetitive. Also called *competition laws*.

apartheid Prior to its abolition in the 1980s, an official policy of racial segregation in South Africa that relegated its black citizens to a second-class status in employment, housing, and opportunity.

apparent authority A principal, by words or actions, causes a third party to reasonably believe that an agent has authority to act for or bind the principal.

appellant The person who is appealing a judgment or seeking a writ of certiorari. Also called a *petitioner*.

appellate jurisdiction The power of the Supreme Court and other courts of appeal to decide cases that have been tried in a lower court and appealed.

appellee The party in a case against whom an appeal is taken; that is, the party who has an interest adverse to setting aside or reversing the judgment. Also called *respondent*.

applicant Person (the buyer in a sales transaction) requesting an issuing bank to provide a letter of credit in favor of another party called the beneficiary (the seller in a sales transaction).

appraisal rights In a merger or sale of assets, shareholders who voted against the transaction have appraisal rights, that is, the right to receive the fair cash value of the shares they were forced to give up as a result of the transaction.

appropriate collective bargaining unit A collective bargaining unit in which the employees share a community of interest; that is, they have similar compensation, working conditions, and supervision, and they work under the same general employer policies.

appropriation of a person's name or likeness Unauthorized use of a person's name or likeness for financial gain.

arbitrary and capricious standard If an agency has a choice between several courses of action, the court will presume that the chosen course is valid unless the person challenging it shows that it lacks any rational basis.

arbitrary marks A real word whose ordinary meaning has nothing to do with the trademarked product.

arbitration The resolution of a dispute by a neutral third party.

arbitration clause A clause that specifies that in the event of a dispute arising out of a contract, the parties will arbitrate specific issues in a stated manner.

arbitrator The neutral third party who conducts an arbitration to resolve a dispute.

arb-med A shortened form of arbitration/mediation, a procedure whereby parties present their case to an arbitrator who makes an award but keeps it secret while the parties try to resolve the dispute through mediation. If the mediation fails, then the arbitrator's award is unsealed and becomes binding on the parties.

area plan A planning document that usually encompasses just a portion of the city's geographic area.

arrest To deprive a person of his or her liberty by legal authority. Taking, under real or assumed authority, custody of another for the purpose of holding or detaining him or her to answer a criminal charge or civil demand.

articles of incorporation The basic document filed with the appropriate governmental agency upon the incorporation of a business. The contents are prescribed in the general corporation statutes but generally include the name, purpose, agent for service of process, authorized number of shares, and classes of stock of a corporation. It is executed by the incorporator(s). Also called the *charter* or the *certificate of incorporation*.

articles of organization The charter document for a limited liability company. Also called *certificate of formation*.

assault An intent to create a well-grounded apprehension of an immediate harmful or offensive contact. Generally, assault also requires some act (such as a threatening gesture) and the ability to follow through immediately with the battery.

asset lock-up option A lock-up option relating to assets of the target company.

assignment The transfer by a tenant of all or a portion of rented premises.

association claim A claim under the Americans with Disabilities Act that an employer discriminated against an employee because of his or her “association” with someone (such as a relative) with a disability.

assumption of risk The expressed or implied consent by plaintiff to defendant to take the chance of injury from a known and appreciated risk.

asymmetric information A problem that arises during discovery because each party has information not possessed by the other party.

at-will contract An employment relationship of indefinite duration.

attach If the three basic prerequisites of a security interest exist (agreement, value, and collateral), the security interest becomes enforceable between the parties and is said to attach. Also called *attachment*.

attorney-client privilege The common law rule that a court cannot force the disclosure of confidential communications between client and client’s attorney.

attractive nuisance Artificial conditions on land for which an owner is liable for physical injury to child trespassers if (1) the owner knew or should have known that children were likely to trespass; (2) the condition is one the owner would reasonably know involved an unreasonable risk of injury to such children; (3) the children, because of their youth, did not discover the condition or realize the risk involved; (4) the utility to the owner of maintaining the condition is not great; (5) the burden of eliminating the risk is slight compared with the magnitude of the risk to the children; and (6) the owner fails to exercise reasonable care to protect the children.

authoritative decision A court decision that must be followed regardless of its persuasive power, by virtue of relationship between the court that made decision and the court to which decision is cited.

automatic shelf registration offerings Securities offerings by well-seasoned large publicly traded companies registered pursuant to short-form registration statements filed with the Securities and Exchange Commission.

automatic stay Feature of bankruptcy filing that instantly suspends most litigation and collection activities against the debtor, its property, or property of the bankruptcy estate.

avoiding powers The powers bankruptcy trustees can use to invalidate or reverse certain prebankruptcy transactions.

B

backdating The intentional setting of a grant date that precedes the actual date of the corporate action that effected the grant of a stock option, in order to achieve a lower option exercise price and hence a higher value to the recipient.

back pay A damage remedy in an employment discrimination case to compensate the plaintiff for lost salary and benefits.

bad faith A breach of the duty to act in good faith.

bail The amount of money a defendant must post as a bond to guarantee his or her appearance at trial.

bait and switch advertising An area of deceptive pricing in which an advertiser refuses to show an advertised item, fails to have a reasonable quantity of the item in stock, fails to promise to deliver the item within a reasonable time, or discourages employees from selling the item.

bankruptcy estate Virtually all of a debtor’s existing assets, less exempt property.

barristers A type of lawyer in the British system who may argue in court.

base rate The lowest rate of interest publicly offered by major lending institutions to their most creditworthy customers. Also called *reference rate* or *prime rate*.

battle of the forms A conflict between an offer and acceptance for the purchase of goods. Occurs when the parties negotiate the essential terms of the contract (for example, quantity, quality, and delivery date) but exchange standard preprinted forms that contain conflicting terms instead of executing a single, fully integrated contract.

baseline assessment The appraisal performed by a tenant that establishes the environmental condition of leased property at the commencement and termination of the lease.

battery The intentional, non-consensual harmful or offensive contact with an individual’s body or with those things in contact with or closely connected with it.

bench trial A trial in which a judge, not a jury, decides all issues.

beneficial owner A person is considered to be a beneficial owner of any securities held by his or her immediate family, spouse, any minor children, and any other relative living in his or her household.

beneficiary An individual who is benefited by a trust or a will.

bespeaks caution doctrine A doctrine whereby a court may determine that the inclusion of sufficient cautionary statements in a prospectus or other document renders immaterial any misrepresentations and omissions contained therein.

best-efforts underwriting A situation wherein the underwriters do not agree to purchase the securities being offered but instead agree to use their best efforts to find buyers at an agreed-on price. These underwritings are often used for initial public offerings or for companies that are unseasoned.

best interests of creditors test In a Chapter 11 bankruptcy case, dissenters must be given a bundle of rights the current value of which is at least as great as the distribution they would receive through a Chapter 7 liquidation.

best mode The best way the inventor knows of making an invention at the time of filing the patent application.

BFOQ defense An affirmative defense wherein an employer may lawfully hire an individual on the basis of religion, sex, or national origin if religion, sex, or national origin is a bona fide occupational qualification (BFOQ).

bicameralism The state of being composed of two legislative chambers; in the case of the United States, the Congress consists of the House of Representatives and the Senate.

bidder The party who makes a tender offer.

bilateral contract A promise given in exchange for another promise.

bills of attainder A law enacted to punish individuals or an easily ascertainable member of a group and prohibited by Article I, Section 9, of the U.S. Constitution.

Bill of Rights The first ten amendments to the Constitution.

binding arbitration When arbitration parties agree on a resolution and are bound by the arbitrator's decision.

blackout period Any period longer than three business days during which 50 percent or more of the participants in a retirement plan are prevented from trading the employer's securities.

blank check company A development-stage company that has no specific business plan or whose business plan is to acquire a presently unknown business.

blue sky laws A popular name for the state statutes that regulate and supervise offerings and sales of securities to persons in that state.

blurring Dilution of a famous trademark that occurs when a non-famous mark reduces the strong association between the owner of the famous mark and its products.

board of directors The individuals elected by the shareholders of a corporation who by law are responsible for the overall management of a corporation.

bona fide occupational qualification (BFOQ) A requirement that an employer places on certain jobs that actually requires that the person in that job has a certain gender, religion, or national origin.

bona fide prospective purchaser (BFPP) A buyer who must do the following: (1) conduct a diligent investigation of the property and report any contamination to the appropriate governmental authorities; (2) exercise appropriate care concerning the contamination to stop future or continuing release of contaminants; (3) cooperate with any authorized group, including the federal government, to conduct a cleanup of the property; and (4) obey any land-use restrictions on the property.

booked Having criminal charges against someone who has been arrested written in a register at a police station.

bound tariffs The WTO principle that holds that each time tariffs are reduced, they may not be raised again.

breakthrough rule A provision in Article 11 of the European Union Directive on Takeover Bids that permits a hostile bidder to weaken a target company's prebid differential voting structures to ensure that a bidder that acquires a majority of the target's equity can successfully mount a takeover.

break-up fee An amount agreed to in a merger agreement to be paid to a friendly suitor company if the agreement with the target company is not consummated through no fault of the friendly suitor company.

brownfields Property contaminated with hazardous waste that can be acquired and used without assumption of liability for the cleanup of all the legacy contamination.

browse-wrap license An online license agreement that appears on a website but does not require the user to take any action to express his or her consent to the agreement.

bullet dodging Occurs when employee stock options are issued after a negative public announcement that the issuing company believes may temporarily reduce the market value of the stock.

burden of proof The requirement of a prosecutor in a criminal case to establish a defendant's guilt beyond a reasonable doubt.

business judgment rule In a case challenging a board decision, this rule holds that as long as directors have made an informed decision and are not interested in the transaction being considered, a court will not question whether the directors' action was wise or whether they made an error of judgment or a business mistake.

bust-up takeover An acquisition in which the acquired corporation is taken apart and its assets are sold piecemeal.

bylaws The internal rules governing a corporation.

C

C corporation A business organization that is taxed at both the entity level and the owner level.

call To demand repayment of fixed-rate loans or securities after a specified period, often after five, ten, or fifteen years.

capacity The ability (requisite presence of mind) to enter into a binding contract.

cap-and-trade system A system whereby allowable emissions are capped by law, and facilities that emit more than their allotments are required to buy credits from plants with emissions below the specified levels.

carbon footprint The amount of carbon dioxide and other greenhouse gases released into the air by a person or facility.

card-check election A method of certifying a labor union whereby employers are required to recognize a union after being presented with union authorization cards signed by a majority of eligible workers on the payrolls as long as there is no evidence of illegal coercion.

cartel A group of competitors that agrees to set prices.

cash-settled SAR A stock appreciation right (SAR) payable in cash.

caveat emptor (let the buyer beware) This maxim summarizes the rule that a purchaser must examine, judge, and test for himself or herself. It does not apply where strict liability, warranty, or other consumer protection laws protect consumer-buyers.

cease and desist order An order of an administrative agency or court prohibiting a person or business firm from continuing a particular course of conduct.

cert. denied Indicates that a writ of certiorari was sought but denied by the Supreme Court.

certificate of deposit (CD) rate The CD rate is based on the average of the bid rates quoted to the bank by dealers in the secondary market for the purchase at face value of certificates of deposit of the bank in a given amount and for a given term.

certificate of formation The charter document for a limited liability company. Also called *articles of organization*.

certificate of incorporation See Articles of Incorporation.

certification mark A mark placed on a product or used in connection with a service that indicates that the product or service in question has met the standards of safety or quality that have been created and advertised by the certifier.

charging period A specific period of time in which an employee challenging an employment practice must file a complaint with the Equal Employment Opportunity Commission (EEOC).

choice-of-forum clause or provision The clause in a contract wherein the parties agree in advance to the jurisdiction in which a dispute arising out of their agreement must be litigated.

choice-of-law provision A provision in a contract that specifies which state's or country's laws will govern matters such as contract interpretation, performance, and remedies. Can also include a statute or treaty specifying which jurisdiction's laws govern disputes involving parties from more than one state or country.

circumstantial evidence The indirect (not based on personal knowledge or observation) evidence of certain facts that, taken alone, do not prove a particular conclusion but, if taken as a whole, give a trier of fact a reasonable basis for asserting a certain conclusion is true.

cite The citation of the court's decision in a case.

civil law legal system Legal system based on the Roman law as consolidated by the Corpus Juris Civilis in A.D. 533 and 534.

civil procedure The methods, procedures, and practices that govern the processing of a civil lawsuit from start to finish.

claims (under patent law) The description of those elements of an invention that will be protected by the patent.

class action If the conduct of the defendant affected numerous persons in a common way, litigation or arbitration may be brought as a class action by a representative of the class of persons affected.

classified board A board on which directors serve for specified terms, usually three years, with only a fraction of them up for reelection at any one time. Also called *staggered board*.

clawback provision The right for an employer to recoup some or all of the employee's stock option gain if the employee goes to work for a competitor within a certain period of time following exercise of the option in violation of a covenant not to compete.

clear and present danger test A phrase used to describe the circumstances under which the government may restrict or prohibit the constitutional guarantees of free speech and free press.

click-wrap agreement A prominent feature of electronic commerce whereby users assent by clicking on an acceptance box.

click-wrap license An online license agreement that presents the user with a notice on his or her computer screen that requires the user to agree to the terms of the license by clicking on an icon.

cliff vesting A common vesting schedule that provides that if a person granted stock options leaves within a certain period of time after employment (usually six months or a year), he or she forfeits all rights to any stock.

close To consummate a transaction.

close corporation A corporation owned by a limited number of shareholders, usually thirty, most of whom are actively involved in the management of the corporation, that elects close corporation status in its charter.

closed-end credit Credit that involves only one transaction, such as a car or house loan.

closely held corporation A corporation characterized by the absence of a market for its stock, though it may have any number of shareholders.

closing package The set of lending documents (including electronic documents) necessary to consummate a financing.

Code of Federal Regulations (CFR) A multi-volume codification of federal regulations and rules.

codification The process by which existing common law principles are restated and laid down in a statute.

codified To collect and arrange items, such as statutes or regulations, systematically.

collaborative law A quickly expanding breed of law that attempts to combine mediation and negotiation into a more efficient, more satisfying, and ultimately more successful form of dispute resolution.

collateral The property belonging to a borrower that will become the lender's if the loan is not repaid.

collateralized debt obligations (CDOs) Mortgages packaged together and securitized into bonds and other debt securities. Often sold in tranches.

collective entity doctrine Under this doctrine, the custodian of records for a collective entity (such as a corporation) may not resist a subpoena for such records on the ground that the act of production will incriminate him or her.

comfort letter Letter that describes the review the accountant has conducted of unaudited interim financial statements and of certain numbers in the prospectus.

comity A situation whereby a court will enforce another country's judgments under certain conditions.

Commerce Clause The constitutional clause that gives Congress the power to regulate commerce with other nations, with Indian tribes, and between states.

commercial activity exception An exception to the blanket immunity from suits provided by the Foreign Sovereign Immunity Act for cases in which the foreign state was engaged in commercial activities.

commercial facilities (under Americans with Disabilities Act) All structures and facilities except those intended for residential use.

commercial impracticability Provision in Section 2-615 of the Uniform Commercial Code that excuses a failure to perform if performance is made impractical by an event unforeseen by the contract.

commercial lease A contract that conveys an interest in real property from the landlord to the tenant and governs the respective rights and obligations of the parties during the lease term.

commercial paper Short-term corporate indebtedness.

commitment fee The fee payable to a lender in connection with a revolving loan as consideration for its promise to keep the commitment available.

common customs tariff A single set of tariffs applied by all European Union (EU) member states on goods imported from outside the EU.

common law Also known as *case law*, or the legal rules made by judges when they decide a case where no constitution, statute, or regulation exists to resolve the dispute.

common law legal system A legal system that primarily relies on case law and precedents and is used in most countries that are or were British territories or colonies.

common market The customs union in which there are no tariffs on trade among its members, and a single set of tariffs applies to goods imported from outside the union.

community plan *See* Specific Plan.

community property The property acquired during marriage with assets earned by either spouse during the marriage.

comp (compensatory) time Extra paid vacation time granted instead of extra pay for overtime work.

comparative fault Reduced recovery for an injured party because of misuse or abuse of manufacturer's product.

comparative negligence The doctrine by which courts decide amount of award to be given a plaintiff based on the amount (percentage) of negligence plaintiff demonstrated when injured by defendant.

compensatory damages In an action for breach of contract, the amount necessary to make up for the economic loss caused by the breach.

compensatory justice Aims at compensating people for the harm done by another.

complaint The statement of plaintiff's grievance that makes allegations of the particular facts giving rise to dispute and states the legal reason why plaintiff is entitled to a remedy, the request for relief, the explanation why the court applied to has jurisdiction over the dispute, and whether plaintiff requests a jury trial.

composition A reduction in the amount payable to creditors pursuant to a composition plan.

composition plan A composition plan in a Chapter 13 proceeding is a plan in which creditors receive a percentage of the indebtedness, and the debtor is discharged of the remaining obligation.

computer employee A computer systems analyst, computer programmer, software engineer, and similarly skilled worker in the computer field.

computer fraud The unauthorized access of a computer used by the federal government, by various types of financial institutions, or in interstate commerce with the intent to alter, damage, or destroy information or to prevent authorized use of the such computers.

computer piracy The theft or misuse of computer software or hardware.

computer virus A computer program that can replicate itself into other programs without any subsequent instruction, human or mechanical.

concerted activity Under the National Labor Relations Act, the exercise by employees of their rights to band together for mutual aid and protection that is engaged in with or on the authority of other employees and not solely by and on behalf of one employee.

conciliation A more formalized method of dispute resolution that is similar to inquiry but adds the element of acceptance in advance of the result of the commission by the parties and a "cooling-off" period.

condition An event or state of facts.

condition precedent A condition that must be met before a party's obligations to perform arise under a contract.

condition subsequent In contracts, a provision giving one party the right to divest itself of liability and obligation to perform further if the other party fails to meet the condition.

conditional-use permit A method of relief from the strict terms of a zoning ordinance that provides for other uses of real property that are not permitted as a matter of right, but for which a use permit must be obtained.

conditions concurrent Conditions that are mutually dependent and are to be performed at the same time or simultaneously.

confidentiality agreement A way to avoid future claims by settling a case where the parties agree not to disclose the terms of the settlement.

confiscation The process of nationalization when the host country does not compensate the company for its lost assets.

conflict-of-laws rules When choice of law is disputed, the court in which the suit is filed will apply conflict of laws principles to determine which state's or country's laws should govern the dispute. They usually focus on the significance of each state's or country's relationship to the parties and the contract.

Confrontation Clause Clause in the U.S. Constitution that limits the prosecution's ability to introduce prior statements by witnesses not subject to cross-examination at trial.

conglomerate merger A combination of firms that were not competitors at the time of the acquisition, but that may, absent the merger, have become competitors.

congruence-and-proportionality test The federal laws enacted pursuant to Section 5 will be upheld only if they are congruent with the injury to be prevented or remedied by the Fourteenth Amendment and proportionate to the wrong they are intended to prevent or remedy.

conscious parallelism In business, the act of consistently setting prices at the same levels and changing prices at the same time as competitors.

consent decree A judgment entered by the consent of the parties whereby the defendant agrees to stop the alleged illegal activity without admitting guilt or wrongdoing. Also called *consent order*.

consent order An agreement to stop the activity that a regulatory agency has found unlawful.

consequential damages Compensation for losses that occur as a foreseeable result of a breach of contract. Actual damages represent the damage, loss, or injury that flows directly and immediately from the act of the other party; in contrast, consequential damages refer to damage, loss, or injury flowing from some of the consequences or results of such act.

consideration A thing of value (money, services, an object, a promise, forbearance, or giving up the right to do something) exchanged in a contract.

construction (of a statute) Interpretation of a statute within that agency's area of expertise.

constructive abandonment Loss of trademark rights that occurs when a trademark owner does something, or fails to do something, that causes the mark to lose its distinctiveness.

constructive notice Notice attributed by the existence of a properly recorded deed.

constructive trust A trust imposed on profits derived from an agent's breach of fiduciary duty.

contingency fee A fee that is a percentage of the judgment awarded to the party that is represented by the attorney.

continuation application A patent application filed after the final office action on an earlier filed application that consists of the same disclosure; the claims may be the same or there may be a new set of claims directed to the same invention claimed in the prior application. Continuation applications must be filed before the earlier application is abandoned and must contain no new matter. A continuation application has the same filing date as the earlier filed application.

continuing guaranty A guaranty that covers all future obligations of the primary debtor to the lender.

continuity of enterprise approach See Substantial Continuity Test.

contract A legally enforceable promise or set of promises.

contract of adhesion See adhesion contract.

contribution The doctrine that provides for the distribution of loss among several defendants by requiring each to pay its proportionate share to one who has discharged the joint liability of the group.

contributory copyright infringement Inducing, causing, or materially contributing to the infringing conduct of another with knowledge of the infringing activity.

contributory patent infringement One party knowingly sells an item that has one specific use that will result in the infringement of another's patent.

contributory negligence Plaintiff was negligent in some manner when injured by defendant.

control group test The privilege only to communications between counsel and upper-echelon employees who are in a position to control, or at least take a substantial role in making, the decision about the action the corporation might take based on the corporate attorney's advice.

control securities The sale of securities to the public by a controlling shareholder or other affiliate of the issuer is a transaction involving an underwriter.

controlling-person liability A person (or other entity), usually an officer or director of a company, responsible and liable for a securities violation.

controlling shareholder A shareholder who owns sufficient shares to outvote the other shareholders, and thus to control the corporation.

Convention on Cybercrime The first international treaty to address various types of criminal behavior directed against computer systems, networks, or data, including computer-related fraud and forgery.

conversion The exercise of dominion and control over the personal property, rather than the real property (land), of another. Term includes any unauthorized act that deprives an owner of his or her personal property permanently or for an indefinite time.

conveyance An instrument transferring an interest in real estate, such as a deed or lease.

cookies Bits of code sent by websites that identify the user to the site at a future visit.

copyright The legal right to prevent others from copying the expression embodied in a protected work.

core proceedings Proceedings of bankruptcy cases such as allowing creditor claims, deciding preferences, and confirming plans of reorganization.

corporate charter The document issued by a state agency or authority granting a corporation legal existence and the right to

function as a corporation. Also called the *articles or certificate of incorporation*.

corporate domicile The state under whose laws a corporation is formed.

corporate opportunity doctrine The doctrine that holds that a business opportunity cannot legally be taken advantage of by an officer, director, or controlling shareholder if it is in the corporation's line of business.

corporation An organization authorized by state law to act as a legal entity distinct from its owners.

corporation by estoppel When a third party, in all its transactions with an enterprise, acts as if it were doing business with a corporation, the third party is prevented or estopped from claiming that the enterprise is not a corporation.

counterclaim A legal claim by defendant in opposition to or as a deduction from claim of plaintiff.

counterfeit mark A spurious trademark (1) that is used in combination with trafficking in goods or services, (2) that is identical to, or substantially indistinguishable from, a registered trademark, and (3) the use of which is likely to cause confusion or mistake or to deceive; or a spurious designation that is identical with, or substantially indistinguishable from, the holder of the right to use the designation.

counteroffer A new offer by the initial offeree that rejects and modifies the terms originally proposed by the offeror.

countertrade A foreign investor uses its local currency profits to purchase local products for sale abroad.

countervailing duty The law that provides that if a U.S. industry is materially injured by imports of a product benefiting from a foreign subsidy, an import duty that offsets the amount of the benefit must be imposed on those imports.

covenant The borrower's promise to the lender that it will or will not take specific actions as long as either a commitment or a loan is outstanding.

covenant not to compete An agreement, generally part of a contract of employment or a contract to sell a business, in which the covenantor agrees for a specific period of time and within a particular area to refrain from competition with the covenantee. Also called a *noncompete agreement*.

cover A buyer's obligation to buy substitute goods elsewhere after the seller has defaulted.

cramdown A bankruptcy relief plan confirmed over the objections of creditors.

creative professional Under the Fair Labor Standards Act, a professional employee whose primary duty of performance of work requires invention, imagination, originality, or talent in a recognized field of artistic or creative endeavor.

credit default swaps A financial derivative contract used by lenders to hedge against a default by the borrower. Also used by hedge funds and other traders betting on how close a firm is to insolvency.

creditor beneficiary Third party to a contract that the promisee enters into in order to discharge a duty to said third party.

crime An offense against the public at large; an act that violates the duties owed to the community, for which the offender must make satisfaction to the public.

criminal An individual or entity that has been convicted of a crime.

cross-collateralization A provision in a loan agreement whereby the collateral for one loan may be used to secure obligations under another loan.

cross-default Any breach by the borrower under any other loan agreement will constitute an event of default under the subject loan agreement.

crown jewels The most valuable assets or divisions of a target company in a takeover battle.

cumulative voting The process by which a shareholder can cast all its votes for one director nominee or allocate them among nominees as it sees fit.

customary authority The authority that agents of that type would normally have.

customary international law A form of international law analogous to established practice and commercial usage as they are known in the commercial laws of many nations.

customary practice A form of international law whereby treaties between nations can be compared to “established practice” or “commercial usage” as they are known in the commercial laws of many nations.

customer restrictions Restrictions that prevent a dealer or distributor from selling to a certain class of customer.

customs union A group of countries that reduce or eliminate tariffs between themselves, but establish a common tariff for trading with all other states.

customs valuation The value assigned to an imported article by the U.S. Customs Service.

cybersquatting The registration of a domain name that is confusingly similar or identical to a protected trademark, where the person registering the domain name has no legitimate interest in that particular domain name and registers and uses it in bad faith.

D

D’Oench, Duhme doctrine A doctrine that bars many claims and defenses against conservators and receivers that might have been valid against the failed bank or savings and loan itself. It bars enforcement of agreements unless those agreements are in writing and have been approved contemporaneously by the bank’s board or loan committee and recorded in the bank’s written records.

deceit Requires the proof of several elements, including knowledge by the seller that the misrepresentation is false.

deepening insolvency The fraudulent continuation of a corporation’s life resulting in damages inflicted by the diminution of its assets and income.

de facto (in fact) corporation When incorporators cannot show substantial compliance with incorporation requirements, a court may find a corporation is a *de facto* corporation (corporation in fact), even though it is not technically a corporation by law, if the incorporators demonstrate that they were unaware of the defect and that they made a good faith effort to incorporate correctly.

de jure (by law) corporation When incorporators have substantially complied with incorporation requirements, the entity is a *de jure* corporation (a corporation by right).

de novo Anew; a *de novo* proceeding takes place when a case has been successfully appealed and will be litigated again from the beginning.

de novo review A review of a dispute by a court as if it had not been heard before and no prior decision had been rendered.

dead-hand pill A type of poison pill anti-takeover device that can be redeemed only by the directors of the target who initially adopted it. It violates the directors’ duty of loyalty; applicable to defensive tactics touching upon issues of control because it purposefully disenfranchised the company’s shareholders without any compelling justification.

deal protection devices These devices dissuade other bidders and thereby protect the consummation of the friendly merger transaction favored by the target.

dealer Under the Securities Act of 1933, any person who engages either for all or part of his or her time, directly or indirectly, as agent, broker, or principal, in the business of offering, buying, selling, or otherwise dealing or trading in securities issued by another person.

debt subordination An agreement whereby one or more creditors of a common debtor agree to defer payment of their claims until another creditor of the same debtor is fully paid.

debtor Under the Uniform Commercial Code, the person who owes payment or other performance of the obligation secured, whether or not that person owns or has rights in the collateral.

debtor-in-possession (DIP) In most Chapter 11 bankruptcy cases the debtor is left in place to operate the business and is referred to as the debtor-in-possession (DIP). The DIP has the same powers as a trustee in bankruptcy, but also has the power to operate the debtor’s business during the bankruptcy proceeding.

deceit See Fraudulent Misrepresentation.

decision A form of European Union legislation in which an order is directed at a specific person or member state.

declaration by the inventor Part of a patent application, the declaration by the inventor states that the inventor has reviewed the application and that he or she believes that he or she is the first inventor of the invention.

deed A written document transferring an interest in real estate that is recorded at a public office where title documents are filed.

deed of trust A document evidencing a loan to buy real property secured by a lien on the real property. Also called a *mortgage*.

deepening insolvency The fraudulent continuation of a corporation’s life after it has become unable to meet its obligations, resulting in damages inflicted by the diminution of its assets and income.

defamation The intentional communication to a third party of an untrue statement of fact that injures the plaintiff’s reputation or good name by exposing the plaintiff to hatred, ridicule, or contempt.

default judgment A judgment that may be entered in favor of the plaintiff if the defendant does not file an answer within the time required.

defendant The person defending or denying; the party against whom relief or recovery is sought in an action or suit. The accused in a criminal case.

defined benefit pension plan A plan in which an employee’s retirement benefit is expressed as a monthly annuity, the exact amount of which is calculated based on variables such as (1) number of years of service, (2) average compensation, (3) marital status, and (4) age at which benefits begin.

defined contribution pension plan A plan in which an employer agrees only to make specific contributions, usually a percentage of salary, so the payout is dependent on both the total contributions and the plan's investment performance.

Delaware carve-out Permits shareholders to bring a state law class-action suit against a corporation and its directors for breach of preexisting common law fiduciary disclosure obligations.

denial-of-service attacks Computer viruses that prevent user access to an Internet site.

deontological theory of ethics An ethical theory that focuses on the motivation behind an action rather than the consequences of an action.

depeçage A choice-of-law doctrine under which the court is permitted to apply the laws of different states to different issues when more than one state has an interest in the outcome of a case.

deposition The oral questioning of any person who may have helpful information about the facts of a case.

derivative insider A person, such as a tippee, upon whom the insider's duty of disclosure is imposed.

derivative works Works based upon a copyrighted work.

descriptive mark The identifying marks that directly describe (size, color, use of) the goods sold under the mark.

design defect A type of product defect that occurs when the product is manufactured according to specifications, but its inadequate design or poor choice of materials causes it to be defective.

design patent A patent that protects any novel, original, and ornamental design for an article of manufacture.

detrimental reliance Occurs when an offeree has changed his or her position because of justifiable reliance on an offer.

development loans Loans used for the acquisition, subdivision, improvement, and sale of residential properties.

diplomatic sanctions The removal or reduction of a diplomatic relationship.

direct copyright infringement Occurs when one party is alleged to have violated at least one of the five exclusive rights of the copyright holder by its own actions.

direct damages The difference between the market price at the time the buyer or seller learned of the other party's breach and the contract price for goods.

direct patent infringement The making, use, or sale of any patented invention in the jurisdiction where it is patented during the term of the patent.

direct representation Rules that apply for an agent acting in the name of a principal pursuant to express, implied, or apparent authority, whether or not the principal's identity is revealed at the time the agent acts or is to be revealed later.

directed verdict After the presentation of evidence in a trial before jury, either party may assert that other side has not produced enough evidence to support the legal claim or defense alleged. The moving party then requests that the judge take the case away from the jury and direct that a verdict be entered in favor of the moving party.

directive A form of European Union legislation that is a law directing member states to enact certain laws or regulations.

disappearing corporation In a merger of two corporations, the corporation that no longer maintains its separate corporate existence is the disappearing corporation.

discharge Relieve.

discovery The process through which parties to a lawsuit collect evidence to support their claims.

discovery-of-injury statutes Statutes that provide that the statute of limitations does not begin to run until the person discovers the injury.

discretionary review The Supreme Court can decide which cases within its jurisdiction it will adjudicate.

dismissed with prejudice The plaintiff is precluded from asserting the same claims in another case.

dismissed without prejudice The plaintiff is permitted to refile the complaint (or an amended version thereof) and recommence litigation of the same claims.

disparagement Untrue statements derogatory to the quality or ownership of a plaintiff's goods or services, that the defendant knows are false, or to the truth of which the defendant is consciously indifferent.

disparate impact The systematic exclusion of women, ethnic groups, or others in a protected class from employment through testing and other selection procedures.

disparate treatment Intentional discrimination against a person by employer by denying the person employment or a benefit or privilege of employment because of race, religion, sex, national origin, age, or disability.

Disposal Rule This regulation applies to individuals and organizations of any size that obtain information from consumer reporting agencies. These recipients are required to take reasonable measures to protect against unauthorized access to or use of sensitive consumer information (such as names, addresses, and Social Security numbers) in connection with its disposal.

dispute negotiation Backward-looking negotiation that addresses past events that have caused disagreement.

disqualified disposition A sale of stock originally acquired pursuant to an incentive stock option that causes the recipient of the option to lose tax-favored treatment.

dissenting shareholder A shareholder who voted against a merger, sale of assets, or other reorganization.

dissolution The designation of the point in time when partners no longer carry on their business together.

distributive justice A theory of justice that looks to how the burden and benefits of a particular situation of a system are distributed.

distributive negotiations Negotiations in which the only issue is the distribution of the fixed pie. Also called *zero-sum negotiations*.

diversity jurisdiction The power of U.S. district courts to decide lawsuits between citizens of two different states when amount in controversy, exclusive of interest and all costs, exceeds \$75,000.

doctrine of equivalents The doctrine that holds that a direct infringement of a patent has occurred when a patent is not literally copied, but is replicated to the extent that the infringer has created a product or process that works in substantially the same way and accomplishes substantially the same result as the patented invention.

doctrine of first sale See First Sale Doctrine.

doctrine of self-publication A doctrine that provides that a defamatory communication by an employer to an employee may constitute publication if the employer could foresee that the

employee would be required to repeat the communication, for instance, to a prospective employer.

documentary letter of credit (L/C) A letter of credit issued by a bank that provides for payment by the bank to the beneficiary upon tender by the beneficiary (or its agent or assignee) of specified documents; frequently used to secure payment for goods and repayment of loans in international transactions.

domain name The unique name that identifies an Internet site. Domain names always have two or more parts, separated by dots. The part on the left is the most specific, and the part on the right is the most general.

donee beneficiary Third party to a contract to whom promisee does not owe an obligation, but rather wishes to confer a gift or a right of performance.

dormant commerce clause An implied constitutional limitation on state action affecting interstate commerce even in the absence of preempting federal legislation.

double jeopardy A law that forbids being tried twice for the same crime.

Double Jeopardy Clause A clause of the Fifth Amendment of the U.S. Constitution that protects criminal defendants from multiple prosecutions for the same offense.

dragnet clause In a security agreement, a provision giving the secured party a security interest in all the debtor's property and in the proceeds from the sale of such property.

drawings The drawings (except in chemical cases) must show the claimed invention in a patent application in graphic form.

drug Defined by the Food, Drug and Cosmetic Act to include (1) articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease; and (2) articles (other than food) intended to affect the structure or any function of the body.

dual agency In a real estate transaction, a broker acts for both the buyer and the seller.

dual distributor A manufacturer that sells its goods both at wholesale and at retail.

dual use The state of goods and technologies that have both military and nonmilitary applications.

due diligence The identification and characterization of risks associated with property and operations involved in various business transactions. A defense available to a defendant (other than the issuer) in a securities violation case concerning a registration statement who (1) conducted a reasonable investigation, and (2) reasonably believed that (a) the statements made were true, and (b) that there were no omissions that made those statements misleading.

Due Process Clauses A clause in the Fifth and Fourteenth Amendments of the U.S. Constitution that provides that the government (federal or state) shall not "deprive any person of life, liberty, or property without due process of law." Among other things, it prohibits the government from using involuntary confessions, even if the *Miranda* warnings were given, when the conduct of the law enforcement officials in obtaining a confession is deemed outrageous or shocking, among other things.

dumping Sale of imported products in the United States below the current selling price in the exporter's home market or below the exporter's cost of production.

dumping margin The difference between the U.S. price for foreign goods and the price of those goods in their country of origin.

duress Coercion.

duty (1) The obligation to act as a reasonably prudent person would act under the circumstances to prevent an unreasonable risk of harm to others. (2) The required payment on imports.

duty of care The fiduciary duty of agents, officers, and directors to act with the same care that a reasonably prudent person would exercise under similar circumstances. Sometimes expressed as the duty to use the same level of care a reasonably prudent person would use in the conduct of his or her own affairs.

duty of loyalty The fiduciary duty of agents, officers, and directors to act in good faith and in what they believe to be the best interest of the principal or the corporation.

duty of obedience The fiduciary duty of agents, officers, and directors to obey all reasonable orders of his or her principal.

E

early termination clause An out clause or provision that would allow the lessor or lessee to cancel the lease without completing the full term or paying the complete value of the lease.

earmarking doctrine A bankruptcy doctrine whereby a payment to a preexisting creditor may not be recoverable as a preference if the funds for the repayment were provided by some other creditor and not by the debtor.

economic duress The coercion of the borrower, threatening to do an unlawful act that might injure the borrower's business or property.

economic loss rule A common law doctrine that bars a plaintiff who is in privity of contract with the defendant or who has entered into a commercial transaction involving the defendant from bringing a lawsuit for negligence based solely on economic losses.

economic sanction A sanction imposed by one country (or a group of countries) against the commerce of another country in an effort to influence that country's behavior.

economic strike A union strikes employers when they are unable to extract acceptable terms and conditions of employment through collective bargaining.

economic union A union within which internal trade barriers are abolished, restrictions on mobility of factors of production among members are eliminated, and the economic policies of the member states (monetary, fiscal, taxation, and social welfare programs) are fully integrated in order to blend the member state economics into a single entity.

efficient-market theory The theory that holds that in an open and developed securities market, the price of a company's stock equals its true value.

electronic agents Autonomous computer programs that can be dispatched by the user to execute certain tasks.

electronically supplied services The electronic supply of software, music, films, and games, as well as other electronic content, web-hosting, distance maintenance of software and equipment, distance teaching, and the like.

embargo A special kind of sanction against all commerce of one country that is declared by a country, or more frequently, a group of countries.

embezzlement The acquisition by an employee of money or property by reason of some office or position, which money or property the employee takes for personal use.

eminent domain The power of state and federal governments to take private property for government uses for which property owners are entitled to just compensation.

employee stock ownership plan (ESOP) A type of qualified retirement plan that is governed by the tax qualification requirements of Internal Revenue Code Sections 401(a), 408 and 4975(e)(7) and which is invested primarily in stock of the employer.

employee stock purchase plan (ESPP) A plan structured under Internal Revenue Code Section 423 under which a company allows its employees to purchase stock at up to a 15 percent discount, and the employee-purchasers receive a favorable tax treatment.

en banc hearing A hearing at which all the judges of a court of appeals sit together to hear and decide a particularly important or close case.

encroachment Occurs when a franchisor sells a franchisee an outlet and later sells another outlet nearby to another franchisee.

encumbrance A claim against real property.

enterprise Any individual, partnership, corporation, association, or other legal entity, and any union or group of individuals associated in fact although not a legal entity.

environmental assessment (EA) A document that identifies any significant impact of a development on the environment.

environmental impact statement (EIS) A required document for any proposal for legislation or other major governmental action that may significantly affect the quality of the environment.

environmental justice The notion that decisions with environmental consequences (such as where to locate incinerators, dumps, factories, and other sources of pollution) should not discriminate against poor and minority communities.

environmental laws The numerous federal, state, and local laws with the common objective of protecting human health and the environment.

Environmental Protection Agency (EPA) Federal agency that administers all of the federal laws that set national goals and policies for environmental protection, except for the National Environmental Policy Act, which is administered by the Council on Environmental Quality.

equal dignities rule Under this rule if an agent acts on behalf of another (its principal) in signing an agreement of the type that must under the statute of frauds be in writing, the authority of the agent to act on behalf of the principal must also be in writing.

equitable relief An injunction issued by the court to prohibit a defendant from continuing in a certain course of activity or to require a defendant to perform a certain activity.

equitable subordination The doctrine that prevents one creditor, through fraud or other wrongful conduct, from increasing its recovery at the expense of other creditors of the same debtor.

equity The value of real property that exceeds the liens against it.

equity capital The cash or property contributed to an enterprise in exchange for an ownership interest.

equity security An equity security includes (1) any stock or similar security; (2) any security that is convertible, with or without consideration, into such a security; (3) any security carrying any warrant or right to purchase such a security; (4) any such warrant or right; and (5) any other security that the Securities and Exchange Commission (SEC) deems to be of a similar nature and that, for the protection of investors or in the public interest, the SEC considers appropriate to treat as an equity security.

Erie doctrine In a diversity action in federal court, except as to matters governed by the U.S. Constitution and acts of Congress, the law to be applied in any case is the law of the state in which the federal court is situated.

escrow The system by which a neutral stakeholder (escrow agent) allows parties to a real property transaction to fulfill the various conditions of the closing of the transaction without the physical difficulties of passing instruments and funds between the parties.

escrow agent A neutral stakeholder who facilitates the transfer of real property between interested parties.

essential facility Under antitrust law, a resource necessary to a company's rivals' survival that they cannot economically or feasibly duplicate.

Establishment Clause A clause in the First Amendment that prohibits the establishment of a religion by the federal government.

estopped A defendant is legally barred from alleging or denying a certain fact when the defendant's words and/or actions have been to the contrary.

Ethical Business Leader's Decision Tree A guide for managers to use when deciding how to act.

euro The common currency used in those members of the European Union that have agreed to accept it in lieu of their former national currency. For example, France has abandoned use of the French franc in favor of the euro.

events of default The events contained in a loan agreement that will trigger the lender's right to terminate the loan, accelerate the repayment obligations, and, if the loan is secured, take possession of the property securing the loan.

ex post facto clause (after the fact) Clause in the U.S. Constitution prohibiting laws that punish actions that were not illegal when performed.

ex post facto laws Laws that punish actions that were not illegal when performed; prohibited by Article I, Section 9, and Article I, Section 10.

exclusionary rule The evidence obtained in an unlawful search or interrogation cannot be introduced into evidence at trial against a defendant.

exclusive distributorship An agreement in which a manufacturer limits itself to a single dealer or distributor in a given territory.

exclusive listing A listing that grants the real estate broker the right to sell the property; any sale of the property during the term of the listing will entitle the broker to a commission.

executive An employee whose primary duty consists of the management of the enterprise where he or she is employed or of a customarily recognized department or subdivision of the enterprise.

executive privilege The type of immunity granted the president against the forced disclosure of presidential communications made in the exercise of executive power.

executory contract Contracts that have not yet been performed and involve an exchange of promises.

exemplary damages Damages awarded to a plaintiff over and above what will fairly compensate it for its loss. They are intended to punish the defendant and deter others from engaging in similar conduct. Also called *punitive damages*.

exempt employee An employee who is exempt from the minimum-wage and overtime requirements of the Federal Labor Standards Act; such an employee is generally paid a salary instead of an hourly wage.

exempt securities Securities listed in Section 3 of the Securities Act of 1933, including any security (1) issued or guaranteed by the United States or any state of the United States, (2) issued or guaranteed by any national bank, (3) issued by a charitable organization, and (4) that is part of an issue offered and sold only to persons residing within a single state or territory, if the issuer is a resident of the same state or territory.

exempt transactions Transactions described in Section 4 of the 1933 Act that include those (1) by any person other than an issuer, underwriter or dealer and (2) by an issuer not involving any public offering.

exercise period The fixed period during which a stock option may be exercised by the optionee, which is usually no longer than ten years.

exercise price The price at which the recipient of an option (the optionee) can exercise the option by purchasing the underlying stock. It is usually the market price of the stock at the time the option was granted. Also called *strike price*.

exhaustion of administrative remedies A court will not entertain an appeal from the administrative process until an agency has had a chance to act and all possible avenues of relief before the agency have been fully pursued.

expectation damages In the case of breach of contract, refers to remuneration that puts a plaintiff into the cash position the plaintiff would have been in if the contract had been fulfilled.

export license The control of exports.

express authority The power of an agent to act for a principal based on that agent's justifiable belief that the principal has authorized him or her to do so; may be given by the principal's actual words or by an action that indicates the principal's consent.

express ratification Express ratification occurs when the principal, through words or behavior, manifests an intent to be bound by the agent's act.

express warranty An explicit guarantee by the seller that the goods purchased by a buyer will have certain qualities.

expropriation The process of nationalization when the host country compensates the company for its lost assets.

extension plan A plan in a Chapter 13 bankruptcy proceeding in which creditors receive the entire indebtedness, but the period for payment is extended beyond the original due date.

extortionate extension of credit Making a loan for which violence is understood by the parties as likely to occur in the event of nonpayment.

extraterritoriality A practice whereby countries assert the right to regulate activities that occur beyond their borders.

F

facilitating payments Under the Foreign Corrupt Payments Act, payments to low-ranking officials who merely expedite the nondiscretionary granting of a permit or license or performance of an administrative act.

failure to warn Failure of a product to carry adequate warnings of the risks involved in the normal use of the product.

fair lending laws Laws that prohibit discrimination in lending practices.

fair trade law A federal law providing for temporary relief to domestic industries seriously injured by increasing imports, regardless of whether unfair practices are involved.

fair use doctrine The doctrine that protects from liability a defendant who has infringed a copyright owner's exclusive rights when countervailing public policies predominate. Activities such as literary criticism, social comment, news reporting, educational activities, scholarship, or research are traditional fair use domains.

false imprisonment The confinement of an individual without that individual's consent and without lawful authority.

family resemblance test A test for determining whether an instrument is a security by asking whether it bears a family resemblance to any nonsecurity.

family responsibility discrimination (FRD) Employment discrimination based on stereotypes of parental roles and responsibilities. Also referred to as *maternal wall discrimination*.

fanciful mark A coined term having no prior meaning until used as a trademark in connection with a particular product.

fast-track negotiating authority Congressional legislation allowing the president to negotiate trade agreements and then submit them for an up or down vote by Congress with no amendments permitted.

Federal Arbitration Act (FAA) The federal law requiring courts to honor agreements to arbitrate and arbitration awards.

federal question When a dispute concerns federal law, namely, a legal right arising under the U.S. Constitution, a federal statute, an administrative regulation issued by a federal government agency, federal common law, or a treaty of the United States, it is said to raise a federal question.

Federal Rules of Civil Procedure (FRCP) The procedural rules that govern civil litigation.

Federal Rules of Evidence (FRE) Federal rules governing the admissibility of evidence in litigation in federal court.

fee simple Title to property that grants owner full right of disposition during his or her lifetime that may be passed on to owner's heirs and assigns forever.

felony An offense punishable by death or prison term exceeding one year.

fetal-protection policy A company policy that bars a woman from certain jobs unless her inability to bear children is medically documented.

fictitious business name The name of a business that is other than that of the owner.

fiduciary A person having a duty to act primarily for the benefit of another in matters connected with undertaking fiduciary responsibilities.

fiduciary duty The obligation of a trustee or other fiduciary to act for the benefit of the other party.

fiduciary out A clause allowing the board of directors to negotiate with other bidders or to terminate a merger agreement.

file-wrapper estoppel The doctrine that prevents a patent owner involved in infringement from introducing any evidence at odds with the information contained in the owner's application on file with the U.S. Patent and Trademark Office.

final-offer arbitration A form of arbitration used most notably in baseball salary disputes; each side submits its "best and final" offer to the arbitrator, who must choose one of the two proposals.

financing lease Under a financing lease (commonly used to finance the acquisition of expensive capital equipment and vehicles such as airplanes, locomotives, and ships), the parties expect the lessee to purchase the leased equipment at the end of the lease term at an agreed-upon residual value.

firm commitment underwriting The underwriters agree to purchase the entire offering, thus effectively shifting the risk of the offering from the issuer to the underwriters.

firm offer Under the Uniform Commercial Code, an offer signed by a merchant that indicates that the offer will be kept open and is not revocable, for lack of consideration, during the time stated, or for a reasonable period of time if none is stated, but in no event longer than three months.

first sale doctrine (copyrights and trademarks) A U.S. doctrine that states that once the copyright or trademark owner places a copyrighted or trademarked item in the stream of commerce by selling it, the owner has exhausted its exclusive statutory right to control its distribution.

five forces According to Professor Michael Porter, the following five forces determine the attractiveness of an industry: buyer power, supplier power, the competitive threat posed by current rivals, the availability of substitutes, and the threat of new entrants.

fixtures The items of personal property that are attached to real property and that cannot be removed without substantial damage to the item.

floating Interest rates that fluctuate throughout the life of the loan according to the interest rate that the lender would pay if it borrowed the funds in order to lend them.

floating lien In a security interest, if the collateral is sold, exchanged, collected, or otherwise disposed of, the security interest is equally effective against cash, account, or whatever else is received from the transaction.

food Defined by the Food, Drug and Cosmetic Act as (1) articles used for food or drink; (2) chewing gum; and (3) articles used for components of either.

forbears A lender does not exercise any of its remedies for the forbearance period.

foreclose To take constructive or actual possession of collateral or real property subject to a mortgage or deed of trust.

foreclosure The legal process by which a mortgagee may put up a piece of property for sale in the public arena to raise cash in order to pay off a debt owed by the mortgagor to the mortgagee.

foreign corporation A corporation doing business in one state though chartered or incorporated in another state is a foreign corporation as to the first state.

foreseeable A condition that a reasonable person could have anticipated would result from his or her actions.

forgotten founder A problem that can arise when several persons work together on an informal basis with a common business objective, and then one leaves. The person who left (the forgotten founder) may have ownership rights in the enterprise.

Form S-1 The registration statement used in an initial public offering of securities.

Form S-3 An abbreviated form of registration statement that is available to companies that have filed periodic reports under the Securities Exchange Act of 1934 for at least three years and have a widespread following in the marketplace.

Form S-4 A combined securities registration statement and proxy statement.

forum non conveniens A doctrine whereby a suit is dismissed because an alternate, more convenient forum is available.

forum shopping A party to a lawsuit attempts to have a case tried in a particular court or jurisdiction where the party believes the most favorable judgment or verdict will be received.

forward-looking statement A statement by a publicly traded company (1) containing a projection of revenues, income, earnings per share, capital expenditures, dividends, capital structure, or other financial items; (2) of management's plans and objectives for future operations, including plans relating to the issuer's products and services; (3) of future economic performance, including any such statement in management's discussion and analysis of financial condition or in the results of operations required to be included by the SEC; and (4) of the assumptions underlying or relating to any such statement.

401(k) plan A defined contribution pension plan funded with contributions by the participants or a combination of participant and employer contributions.

franchise A business relationship in which one party (the franchisor) grants to another party (the franchisee) the right to use the franchisor's name and logo and to distribute the franchisor's products from a specified locale.

franchising An arrangement whereby the franchisor receives cash up front, followed by monthly payments based on a reseller's gross receipts, in exchange for granting the franchisee the right to use the franchisor's trademarks and marketing plan.

fraud Any intentional deception that has the purpose of inducing another in reliance upon the deception to part with some property or money. Fraud may involve false representations of fact, whether by words or conduct; false allegations; omission (especially by fiduciary); or concealment of something that should have been disclosed.

fraud in the factum A type of fraud that occurs when a party is persuaded to sign one document thinking that it is another.

fraud in the inducement A type of fraud that occurs when a party makes a false statement to persuade the other party to enter into an agreement.

fraud-on-the-market theory The theory that holds that if the information about a company available to the market is incorrect, then the market price will not reflect the true value of the stock.

fraudulent conveyance The direct or indirect transfer of assets to a third party with actual intent to defraud or have inadequate consideration in circumstances when the transferor is insolvent.

fraudulent misrepresentation Deceit; intentionally misleading by making material misrepresentations of fact that the plaintiff relied on that cause injury to the plaintiff.

Free Exercise Clause A clause in the First Amendment that prohibits certain, but not all, restrictions on the practice of religion.

free trade area A free trade area is created when a group of countries reduce or eliminate tariffs among themselves, but maintain their own individual tariffs as to other states.

free writing prospectus Any written offer under Section 2(a)(10) of the 1933 Act and subject to liability under Section 12(a)(2).

freeze out The majority forces the minority shareholders to convert their shares into cash, as long as the transaction is fair.

freeze-out merger In a merger with a controlling shareholder, some shareholders (usually the public shareholders) are required to surrender their shares in the disappearing corporation for cash.

front pay A damage remedy in an employment discrimination case that is generally equal to the compensation the employee would have received had he or she not been unlawfully discharged.

fruit of the poisonous tree Evidence acquired directly or indirectly as a result of an illegal search or arrest is generally inadmissible.

frustration of purpose Frustration of purpose occurs when performance is possible, but changed circumstances have made the contract useless to one or both of the parties.

full-service lease A lease that requires the lessor to maintain the property that a company is occupying, which means, in turn, that the tenant's responsibilities may be limited to seeing that the services provided are adequate.

full warranty The warranty that gives the consumer the right to free repair or replacement of a defective product.

G

gap financing Financing that a developer obtains to pay off a construction loan when it becomes due before the permanent financing is available. Also called *interim financing*.

garnishment The legal procedure by which a creditor may collect a debt by attaching a portion of a debtor's weekly wages.

general partners Partners of a general or limited partnership responsible for managing the partnership. They are jointly and severally liable for partnership obligations.

general partnership A form of business organization between two or more persons in which the partners share in the profits or losses of a common business enterprise.

general plan A long-range planning document that addresses the physical development and redevelopment of a city.

general release An agreement by person engaging in a dangerous activity to assume all risks and hold the party offering access to said dangerous activity free of all liability.

Generalized System of Preferences (GSP) A tariff program developed by industrialized countries to assist developing nations by improving their ability to export.

genericism The use of a trademark as a generic name for the product, for example, "a Kleenex" for "tissue."

Gharar A tenet of Islamic trade and commerce that refers to an event where the outcomes are unknown.

going effective Culmination of the securities registration process with the Securities and Exchange Commission. Sales can be legally consummated as of this date and time.

going private A corporation that has fewer than 300 shareholders (or 500 if the corporation's assets total less than \$10 million) and ceases to be required to file public periodic reports under the Securities Exchange Act of 1934.

good faith exception An exception to the exclusionary rule that provides that evidence obtained by police in good faith will not be excluded from trial, even if it was obtained in violation of the Fourth Amendment.

good faith subsequent purchaser A person who acquires real property for fair value without being aware of a disputed claim to the property.

good offices A process mainly used in the area of public international law, by which a third party (often a disinterested government) brings the parties together through establishing communication and providing a site where the parties can meet, often in secrecy.

goods As defined in Article 2 of the Uniform Commercial Code, all things (including specially manufactured goods) that are movable at the time of identification to the contract for sale.

government-contractor defense The limited immunity available for manufacturers that produce products to the specifications of government contracts.

grant deed A deed that contains implied warranties that the grantor has not previously conveyed the same property or any interest in it to another person and that the title is marketable.

grantee A person to whom real property is conveyed.

grantor A person conveying real property.

gray market A market where products are sold outside the normal channel of distribution, often at a discounted price.

greenmail Payment by a target company to buy back shares owned by a potential acquirer at a premium over market. The acquirer in exchange agrees not to pursue its hostile takeover bid.

gross-up clause The clause in foreign investment contracts by which local partner or licensee is obligated to pay all taxes other than those specifically allocated to the foreign partner.

ground lease A lease for land on which a building will be built.

group boycott An agreement among competitors to refuse to deal with another competitor.

guarantor The person who agrees to be liable for the obligation of another person.

guaranty An undertaking by one person to become liable for the obligation of another person.

guaranty of collection Under a guaranty of collection, the guarantor becomes obliged to pay only after the lender has attempted unsuccessfully to collect the amount due from the primary debtor.

guaranty of payment A provision that holds guarantor's obligation to pay the lender is triggered, immediately and automatically, if the primary debtor fails to make a payment when due.

guaranty of performance A guaranty that specified nonpayment obligations will be performed.

guardian ad litem (guardian for the suit) A person authorized to bring suit for a minor.

gun-jumping A violation of the securities laws that occurs when an issuer or underwriter conditions the market with a news article, press release, or speech about a company engaged in the registration of its securities.

H

H-1B visa A work authorization issued by the U.S. Citizenship and Immigration Services that is available only for foreign workers in professional and specialty occupations (generally those involving a bachelor's degree or its equivalent), such as computer programmers, engineers, doctors, or fashion models, where the employer can show an inability to recruit qualified workers in the United States.

Harmonized Tariff Schedule (HTS) A U.S. government document that lists the tariffs on goods imposed by Congress and by the president pursuant to the Trade Agreements Program, based on the country of origin.

hazard ranking score The Environmental Protection Agency ranking that represents the risks presented by certain sites to the environment and public health.

Hazardous Substance Superfund Finances federal activity to investigate and take remedial action in response to a release or threatened release of hazardous substances to the environment.

hearing The phase of arbitration that is similar to a trial.

Herfindahl-Hirschman Index (HHI) An aid to the interpretation of market data when determining the anticompetitive effect of a merger; the HHI of market concentration is calculated by summing the squares of the individual market shares of all the firms in the market.

holder claims Lawsuits pursuant to certain state blue sky laws by investors who allege that they did not sell their securities because of the defendants' fraud. Not available in federal court.

horizontal agreement A conspiracy agreement between firms that compete with each other on the same level of production or distribution.

horizontal market division An agreement among competitors to divide a market according to class of customer or geographic territory; it violates antitrust law.

horizontal merger A corporate combination of actual or prospective competitors.

horizontal price-fixing An agreement between competitors at the same level of distribution to set a common price for a product; it violates antitrust law.

hostile environment harassment The creation of a hostile working environment, such as continually subjecting an employee to ridicule and racial slurs, or unwanted sexual advances.

hot issues Shares of high-demand initial public offerings.

hot news exception A state law misappropriation claim that applies in cases where (a) the plaintiff generates or gathers information at its cost; (b) the information is time-sensitive; (c) the defendant's use of the information amounts to free-riding on the plaintiff's efforts; (d) the defendant is in direct competition with the plaintiff; and (e) the availability of other parties to free ride on the plaintiff's efforts would reduce the plaintiff's incentive to provide the product or service such that plaintiff's existence would be threatened.

I

I-9 The Employment Eligibility and Verification Form that the U.S. government requires all employers to complete and keep on file to identify the identity and employment eligibility of all persons they hire.

identification to the contract Setting aside or otherwise designating the particular goods for sale under a contract.

identity theft Taking an individual's information (such as Social Security number and mother's maiden name) and using that information to fraudulently obtain credit or commit other financial crimes.

illegal contract A contract is illegal if its formation or performance is expressly forbidden by a civil or criminal statute, or if a penalty is imposed for doing the act agreed upon.

illegal per se A practice that is illegal regardless of its impact on the market or its procompetitive justifications.

illusory promise A promise that either does not in fact confer any benefit on the promisee or subject the promisor to any detriment.

impaired A characteristic of a claim when the plan does not provide for full cash payment on its effective date and if it alters the creditors' legal, equitable, or contractual rights in any way.

implied authority The power of an agent to do whatever is reasonable to complete the task he or she has been instructed to undertake.

implied contract An employment agreement—implied from such facts as long-term employment; receipt of raises, bonuses and promotions; and assurance from management that the employee was doing a good job—that the employee would not be terminated except for good cause.

implied covenant of good faith and fair dealing An implied covenant in every contract that imposes on each party a duty not to do anything that will deprive the other party of the benefits of the agreement.

implied ratification Implied ratification occurs when the principal, by his or her silence or failure to repudiate the agent's act, acquiesces in it.

implied warranties Representations about the quality or suitability of a product that are implied, not explicitly stated. *See also* Implied Warranty of Fitness for a Particular Purpose and Implied Warranty of Merchantability.

implied warranty of fitness for a particular purpose The warranty whereby goods involving the following elements are judged satisfactory for the buyer's purpose: (1) the buyer must have a particular purpose for the goods; (2) the seller must have known or have had reason to know of that purpose; (3) the seller must have known or had reason to know that the buyer was relying on the seller's expertise; and (4) the buyer must have relied upon the seller.

implied warranty of habitability A warranty made by a commercial seller of houses in which the seller warrants that the house is in reasonable working order and is of reasonably sound construction.

implied warranty of merchantability The warranty by which all goods sold by merchants in the normal course of business must meet following criteria: (1) pass without objection in the trade under the contract description; (2) be fit for the ordinary purposes for which such goods are used; (3) be within the variations permitted by the agreement, of even kind, quality and quantity within each unit and among all units involved; (4) be adequately contained, packaged,

and labeled as the agreement may require; and (5) conform to the promises or affirmations of fact made on the container or label, if any.

import relief laws A series of laws through which Congress has authorized the president to raise U.S. tariffs on specified products and to provide other forms of import protection to U.S. industries.

impossibility An excuse for nonperformance based on the destruction of something vital to the performance of the contract or another unforeseen event that makes performance of the contract impossible.

impossibility defense A defense to strict liability in which a corporate officer might not be held strictly (and vicariously) liable if he or she did everything possible to ensure legal compliance to applicable standards, even though the company was still unable to comply.

impracticability A situation in which performance of a contract is possible but commercially impractical.

improper means Deceitful actions through which party obtains trade secrets of another.

imputed liability The imposition of civil or criminal liability on one party for the wrongful acts of another. Also called *vicarious liability*.

in loco parentis (in place of the parent) Refers to actions of a custodian, guardian, or other person acting in the parent's place.

in personam jurisdiction Personal jurisdiction based upon the residence or activities of the person being sued. It is the power that a court has over the defendant itself, in contrast to the court's power over the defendant's interest in property (*quasi in rem* jurisdiction) or power over the property itself (*in rem* jurisdiction).

in rem jurisdiction Jurisdiction over property based upon the location of the property at issue in the lawsuit.

incentive stock option (ISO) A stock option that qualifies for favorable tax treatment Internal Revenue Code Section 422, granted to an employee of a corporation to buy stock at a specified price (at least 100% of fair market value on the date of grant) for a specified period of time (no more than ten years).

incidental damages In an action for breach of contract, the lesser and relatively minor damages that a nonbreaching party incurs in mitigating damages resulting from the breach, such as the charges, expenses, and commissions incurred in stopping delivery; the cost of the transportation, care, and custody of goods after a breach; and the expenses incurred in connection with the return or subsequent disposition of goods that are the subject of the contract.

incorporation The process by which a corporation is formed.

indemnification The doctrine that allows a defendant to recover its individual loss from a co-defendant whose relative blame is greater or who has contractually agreed to assume liability.

indemnity A right to reimbursement for loss.

independent contractor A person is deemed to be an independent contractor only if the employer neither exercises control over the means of performing the work nor the end result of that work.

indictment Formal charges filed by a grand jury.

indirect patent infringement One party's active inducement of another party to infringe a patent.

indirect representation Rules that apply when an intermediary acts on instructions and on behalf of, but not in the name of, a principal, or when the third party does not know or have reason to know that the intermediary is acting as an agent.

inducement to infringe A party's active encouragement of another party to infringe a patent or copyright. Applies to those who supply a product or service that has substantial non-infringing uses if the supplier also encourages that product or service to be used in an infringing fashion.

industrial ecology A concept that advocates a systems approach to ecoefficiency and applies it to groups of corporations working together.

inevitable disclosure doctrine A doctrine that permits a former employer to prevent an employee from working for a competitor when the new position will require the employee to disclose or use the trade secrets of the former employer.

inevitable discovery exception An exception to the exclusionary rule that provides that illegally obtained evidence can lawfully be introduced at trial if it can be shown that the evidence would inevitably have been found by other legal means.

infomercial An advertisement generally presented in the format of half-hour television talk shows or news programs.

informal discretionary action The administrative agencies' decision-making process for repetitive actions that are inappropriate to litigate in courts.

information The formal charges filed with the court in a criminal case.

injunction A remedy granted by the court that requires defendant to perform or cease from performing some activity.

injurious falsehood False statements knowingly made that lead to economic loss for a plaintiff.

in loco parentis (in place of the parents) Obligations to ensure the safety of children and to serve as role models.

innocent landowner defense In a case under the Comprehensive Environmental Responsibility, Contribution, and Liability Act, a potentially responsible current owner can assert this defense if the release or disposal of hazardous materials was by a third party who was not an employee and with whom the current owner had no contractual relationship. Also called the *third-party defense*.

innovation offsets Technological advantages gained by companies that met the challenge of environmental regulations and discovered lower costs and better quality products as a result.

inquiry Done by a commission of inquiry that is established ad hoc, often after a violation of international law, it consists of two contending governments reviewing the finding of the commission with the goal to come to an acceptable solution for the dispute at hand.

inside director A member of a board who is also an officer.

insider A person with access to confidential information and an obligation of disclosure to other traders in the marketplace.

insider trading Trading securities based on material nonpublic information, in violation of a duty to the corporation or its shareholders or others.

integrate When an issuer makes successive sales of securities within a limited period of time, the Securities and Exchange Commission may integrate the successive sales; that is, it may deem them to be part of a single sale for purposes of deciding whether there was an exemption from registration.

integrative negotiations Negotiations in which mutual gains are possible as parties trade lower valued resources for higher valued ones. Also called *variable-sum negotiations*.

intellectual property Any product or result of a mental process that is given legal protection against unauthorized use.

intent The actual, subjective desire to cause the consequences of an act, or the belief that the consequences are substantially certain to result from it.

intent to be bound An oral or written statement or an action signaling that a party intended to enter into a contract.

intention to do wrong Subjective intent or desire to do wrong or intent to take action substantially certain to cause a wrong to occur.

intentional infliction of emotional distress Outrageous conduct by the individual inflicting the distress; intention to cause, or reckless disregard of the probability of causing, emotional distress; severe emotional suffering; and actual and proximate (or legal) causation of the emotional distress.

interbrand competition The price competition between a company and its competitors that sell a different brand of the same product.

interference with contractual relations A defendant intentionally induces another to breach a contract with a plaintiff.

interference with prospective business advantage Intentional interference by the defendant with a business relationship the plaintiff seeks to develop, which interference causes loss to the plaintiff.

interim financing Financing that a developer obtains to pay off a construction loan when it becomes due before the permanent financing is available. Also called *gap financing*.

interrogatory Written question to a party to a lawsuit and its attorney.

intrabrand competition The price competition among the different dealers selling products produced by the same company.

intrusion Objectionable prying, such as eavesdropping or unauthorized rifling through files. It includes the act of wrongfully entering upon or taking possession of property of another.

invasion of privacy Prying or intrusion that would be objectionable or offensive to a reasonable person, including eavesdropping, rifling through files one has no authorization to see, public disclosure of private facts, or unauthorized use of an individual's picture in an advertisement or article with which that person has no connection.

inverse condemnation The taking of private real property for a public use; requires payment of just compensation.

investigative consumer reporting Report that contains information on character and reputation, not just credit history.

investment contract A type of security created by an investment of money in a common enterprise with profits to come solely from the efforts of others.

investors Persons putting up cash or property in exchange for an equity interest in an enterprise.

invitee A business visitor who enters premises for the purposes of the possessor's business.

involuntary proceeding An involuntary proceeding in bankruptcy that is initiated when one or more of the debtor's creditors files a bankruptcy petition with the bankruptcy court.

ipso facto clause A clause in a contract that expressly permits termination of the contract in the event of a bankruptcy filing by one or both parties to the contract.

irrevocable letter of credit A letter of credit that cannot be amended or canceled without the consent of the beneficiary and the issuing bank.

irrevocable offer An offer that cannot be revoked. Arises (1) when an option contract has been entered into or (2) when an offeree has relied on an offer to its detriment.

issuer A company that offers or sells any security.

J

joint and several liability In a case in which the court determines that multiple defendants are at fault; the doctrine whereby a plaintiff may collect the entire judgment from any single defendant, regardless of the degree of that defendant's fault.

joint tenancy A specialized form of co-ownership involving real property owned in equal shares by two or more persons who have a right of survivorship if one joint tenant dies.

joint venture A one-time group of two or more persons in a single specific business enterprise or transaction.

judgment n.o.v. (j.n.o.v.) The attorney can make a motion to reverse the jury verdict on the grounds that the evidence of the prevailing party was so weak that no reasonable jury could have resolved the dispute in that party's favor.

judgment notwithstanding the verdict (judgment n.o.v.)

Reverses the jury verdict on the grounds that the evidence of the prevailing party was so weak that no reasonable jury could have resolved the dispute in that party's favor. Also called *judgment n.o.v. (non obstante veredicto, notwithstanding the verdict)*.

judicial review The power of federal courts to review acts of the legislative and executive branches of government to determine whether they violate the Constitution.

junior debt Indebtedness that is subordinated under a debt subordination agreement.

junk bond A form of high yield, high risk unsecured corporate indebtedness that is not investment grade.

K

Kantian theory An ethical theory that looks to the form of an action, rather than the intended result, in examining the ethical worth.

know-how Detailed information on how to make or do something.

knowingly Knowledge by a defendant of the facts that constitute an offense. Defendant is generally deemed to knowingly violate a statute even if he or she was not aware that the conduct at issue was unlawful, unless the text of the statute dictates a different result. Contrast with *willful*.

L

larceny Theft. The taking of property without the owner's consent.

learned professional A professional employee whose primary duty is the performance of work requiring advanced knowledge (defined as (1) work that is predominantly intellectual in character and

(2) that includes work requiring the consistent exercise of discretion and judgment) in a field of science or learning customarily acquired by a prolonged course of intellectual instruction.

legal astuteness The ability of a manager to communicate effectively with counsel and to work together to solve complex problems.

legal duty The requirement to act reasonably under the circumstances to avoid harming another person.

lemon laws Laws designed to protect consumers from defective products that cannot be adequately fixed, such as new cars and new mobile homes.

lessee A tenant or one to whom an interest in real property is conveyed.

lessor A landlord or one who conveys an interest in real property.

letter of credit (L/C) A payment mechanism for international sales transactions involving a bank in the buyer's jurisdiction that commits to pay the seller. Also called a *documentary credit*.

letter of intent An instrument entered into by the parties to a real estate or other transaction for the purpose of setting forth the general terms and conditions of a purchase and sale agreement until a formal legal commitment can be made through the execution of a formal acquisition agreement.

leveraged buyout (LBO) A takeover financed with loans secured by the acquired company's assets, in which groups of investors, often including management, use borrowed money along with some of their own money to buy back the company's stock from its current shareholders.

libel A written communication to a third party by a defendant of an untrue statement of fact that injures a plaintiff's reputation.

licensee Anyone who is privileged to enter upon land of another because the possessor has given expressed or implied consent.

lien A claim on a property that secures a debt owed by the owner of the property.

lien subordination An agreement between two secured creditors whose respective security interest, liens, or mortgages attach to the same property. The subordinating party agrees that the lien of the other creditor shall have priority notwithstanding the relative priorities that the parties' liens would otherwise have under applicable law.

limited fund class action A class action in which the total of the aggregated liquidated claims exceeds the fund available to satisfy them.

limited guaranty A guaranty in which the maximum amount of the guarantor's liability is expressly stated in the guaranty instrument.

limited liability company (LLC) A form of business entity authorized by state law that is taxed like a limited partnership and provides its members with limited liability, but like a corporation gives its members the right to participate in management without incurring unlimited liability.

limited liability partnership (LLP) A form of limited partnership designed primarily for professionals who typically do business as a partnership that insulates its partners from vicarious liability for certain partnership obligations.

limited partners The participants in a limited partnership whose liability for partnership business is limited to their capital contribution.

limited partnership A form of business organization in which limited partners must refrain from actively participating in the management of the partnership but are liable for the debts of the partnership only up to the amount they personally contributed to the partnership.

limited warranty The warranty that limits the remedies available to the consumer for a defective product.

line-item veto Allowed the president to sign a bill into law and then cancel any dollar amounts that he or she believed to be fiscally irresponsible. Declared unconstitutional by the U.S. Supreme Court.

line-of-business test If an officer, director, or controlling shareholder learns of an opportunity in the course of business for the corporation, and if the opportunity is in the corporation's line of business, a court will not permit that person to keep the opportunity for personal gain.

liquidated damages The amount of money stipulated in a contract to be paid to non-breaching party should one of the parties breach the agreement.

London Interbank Offered Rate (LIBOR) An interest rate based on the cost of borrowing offshore U.S. dollars in the global interbank market, centered in several locations in addition to London.

long-arm statute A state statute that subjects an out-of-state defendant to jurisdiction when the defendant is doing business or commits a civil wrong in the state.

loss causation The misstatement or omission concealed something from the market that, when disclosed, negatively affected the value of the security.

lost volume seller A seller that can be put in as good a position as performance would have only by permitting the seller to recover the profit (including reasonable overhead) that it would have made from full performance by the buyer.

M

mail fraud A scheme intended to defraud or to obtain money or property by fraudulent means through use of the mails.

major life activity Under the Americans with Disabilities Act, an activity that an average person can perform with little or no difficulty, such as walking, seeing, hearing, and speaking.

majority voting A requirement that a nominee for the board of directors of a corporation must receive a majority of the shares voted to be elected. Contrast with *plurality voting*.

malicious defense A tort committed when a defendant creates false material evidence and gives false testimony advancing the evidence.

malicious prosecution A plaintiff can successfully sue for the tort of malicious prosecution if he or she shows that a prior proceeding was instituted against him or her maliciously and without probable cause or factual basis.

malpractice A claim of professional negligence.

managers Persons elected by the members (owners) of a limited liability company who, like a board of directors in a corporation, are responsible for managing the business, property, and affairs of the company.

mandatory arbitration One party will not do business with the other unless it agrees to arbitrate any future claims.

mandatory bid provision Prohibits coercive two-tier hostile tender offers and market purchases by requiring any person who acquires 30 percent or more of a target company's stock to offer to buy all remaining shares at the highest price paid to acquire the 30 percent block.

manufacturing defect A flaw in a product that occurs during production, such as a failure to meet the design specifications.

mark-to-market accounting When a business books the entire value of a contract on the day it is signed, rather than as cash is collected.

market power The power to control market prices or exclude competition in the relevant market. Also called *monopoly power*.

market-share liability The liability for damages caused by a manufacturer's products assessed based on a manufacturer's national market share.

marketable title Title to property that is fee simple and is free of liens or encumbrances.

materially breach A failure to perform a significant obligation under a contract, such as by not performing a service after receiving payment. A material breach discharges the nonbreaching party from its obligations and provides grounds to sue for damages.

material fact A fact that a reasonable investor would most likely have considered important in deciding whether to buy or sell his or her stock.

maturity date The date a term loan becomes due and payable.

McNulty Memorandum Memorandum issued by U.S. Department of Justice setting forth the determinants to be used in deciding whether to prosecute a company. Superseded in 2008 by amendments to U.S. Attorney Handbook.

med-arb A form of dispute resolution whereby the parties to a dispute enter mediation with the commitment to submit the dispute to binding arbitration if mediation fails to resolve the conflict.

mediation A form of dispute resolution whereby the parties agree to try to reach a solution themselves with the assistance of a neutral third party who helps them find a mutually satisfactory solution.

mediator The third party who helps the parties in mediation find a mutually satisfactory solution.

members The owners of a limited liability company.

mens rea (guilty state of mind) Criminal intent.

merchant As defined in Article 2 of the Uniform Commercial Code, a person who deals in goods of the kind or otherwise by its occupation holds itself out as having knowledge or skill peculiar to the practices or goods involved in the transaction.

mere continuation (identity) A doctrine of successor liability whereby a firm that acquires the assets of a target firm is liable for the debts of the target firm when, after the asset purchase, there is a single corporation with the same shareholders and directors as the target firm prior to the asset purchase.

merger The combination of two or more corporations into one.

merger agreement An agreement between two companies to combine those companies into one.

merger doctrine If an idea and its expression are inseparable, the merger doctrine dictates that the expression is not copyrightable.

merit review A review by a state securities commissioner to determine whether the issuer's plan of business and the proposed issuance of securities are fair, just, and equitable.

military sanctions Military blockades or interventions.

minimum contacts As long as the person has sufficient minimum contacts with a state, such that it is fair to require him or her to appear in a court of that state, the state has personal jurisdiction over that person.

mintrial A cross between arbitration and negotiation, truncated presentation of evidence conducted by lawyers, usually with business persons present.

Miranda warnings Once a person is placed in custody, he or she cannot be questioned by the police unless first advised of his or her constitutional rights to remain silent and to have counsel present.

mirror image rule A common law contract rule that requires acceptance to contain the exact same terms as the offer.

misappropriation theory A basis for an insider trading claim under SEC Rule 10b-5 when a person breaches a fiduciary duty to the source of the nonpublic information by trading on that information after misappropriating it for his or her own use.

misbranding False or misleading labeling prohibited by federal and state statutes. Includes claiming unsubstantiated medicinal benefits for a food, inadequate labeling for a drug, or selling over-the-counter a drug for which a prescription is required.

misdemeanor An offense lower than a felony, punishable by fine or imprisonment for less than one year (not in a penitentiary).

misrepresentation A misleading or false representation of the facts intended to deceive another party.

misstatement (Rule 10b-5) A misrepresentation of a fact; a lie.

mistake of fact A mistake about an underlying fact that may make a contract voidable.

mistake of judgment A mistake of judgment occurs when the parties make an erroneous assessment about the value of what is bargained for.

mitigate Lessen.

Model Panel Code A set of criminal law statutes that were proposed by the National Conference of Commissioners on Uniform State Laws for adoption by the states.

money laundering The transfer of funds derived from unlawful activities with the intent of concealing or disguising the location, source, ownership, or control of said funds.

monopoly power The power to control market prices or exclude competition in the relevant market. Also called *market power*.

mortgage A loan to buy real property secured by a lien on the real property. Also called *deed of trust*.

mortgagee The recipient of a mortgage, usually the lender.

mortgagor The party granting a mortgage, usually the owner of the real property securing a loan.

most favored nation (MFN) The principle that holds that each member country of the World Trade Organization (WTO) must accord to all other WTO members tariff treatment no less favorable than it provides to any other country.

motion Formally requests the court to take some action.

motion for judgment on the pleadings A motion filed immediately after the complaint and answer have been filed. One party, usually the defendant, argues that the pleadings alone demonstrate that the action is futile.

motion for summary judgment A motion requesting the trial judge to decide a case as a matter of law, without a trial, when there are no material facts in dispute.

motion to dismiss The formal request that the court terminate lawsuit on the ground that plaintiff's claim is technically inadequate.

multiple-brand product market A market made up of product or service offerings by different manufacturers or sellers that are economically interchangeable and may therefore be said to compete.

mutual rescission An agreement by both parties to a contract to terminate the contract. A mutual rescission is itself a type of contract.

mutuality of obligation Both parties in a bilateral contract are obligated to perform their side of the bargain.

shows that the defendant violated a statute and the violation caused an injury.

negligent-hiring theory An employer is negligent if the employer hires an employee who endangers the health and safety of other employees.

negligent infliction of emotional distress A tort committed when the defendant negligently inflicts emotional distress that causes the plaintiff some form of physical injury.

negotiation The give and take people engage in when coming to terms with each other.

nerve center test One of three tests that the Federal courts usually apply to determine where a company engaged in multistate operations has its principal place of business. The courts consider where (1) the executive and administrative offices are located, (2) the income tax return is filed, and (3) the directors and shareholders meet.

net listing A real estate listing in which the broker receives any sales proceeds in excess of the net listing amount specified by the seller.

neutrality rule Requires the target's board of directors to remain neutral when faced with a hostile takeover bid and stipulates that once a takeover bid has been launched, the target's board cannot adopt any antitakeover devices, such as poison pills, without first obtaining the specific approval of shareholders. Applicable in certain member states of the European Union.

nexus The legally required relationship between a condition to a land-use approval and the impacts of the development being approved.

1933 Act (Securities Act of 1933) Principal federal act that regulates offerings and sales of securities by generally requiring the registration of securities with the SEC and the delivery of a prospectus.

1934 Act (Securities Exchange Act of 1934) Principal federal act that prohibits securities fraud and requires companies of a certain size and with a certain number of shareholders or whose stock is traded on a national securities exchange to file periodic reports with the SEC.

no-hand pill A poison pill antitakeover device that cannot be redeemed for six months even if the insurgent's slate of directors is elected and votes to redeem it. Contrast with *dead-hand pill*.

nolo contendere (I will not contest it) A plea that means the accused does not contest the charges.

nominative use A fair-use defense to a trademark infringement action that permits use of a trademark when necessary for purposes of identifying another producer's product, not the user's own product.

non obstante veredicto Latin for "notwithstanding the verdict."

nonbinding arbitration Arbitration in which the parties are not bound by the arbitrator's decision.

nonconforming use An existing land use that was lawful but that does not comply with a later-enacted zoning ordinance.

noncore proceedings In bankruptcy cases, noncore proceedings are related actions concerning the debtor, such as decisions on personal injury and other civil proceedings. Federal or state courts have the power to adjudicate noncore proceedings. Bankruptcy judges may also adjudicate noncore proceedings, subject to *de novo* review by the federal district courts.

N

narrow restraint doctrine A doctrine that permits restrictions on post-employment competition as long as they are limited and leave a substantial portion of the market available to the former employee.

national ambient air quality standards (NAAQS) The permissible levels of pollutants in the ambient or outdoor air that, with adequate margins of safety, are required to protect public health; set forth in the Clean Air Act.

National Pollutant Discharge Elimination System (NPDES) The principal regulatory program established by the Clean Water Act; requires permits for the discharge of pollutants from any point source to navigable waters.

national treatment The World Trade Organization principle that holds that WTO members must not discriminate against imported products in favor of domestically produced products.

nationalization When a host country decides to assert ownership over some or all of a company's assets.

natural resource law The laws that govern wilderness protection, wildlife protection, coastal zone management, energy conservation, and national park designation.

navigable waters The waters of the United States and the territorial seas, as well as lakes and streams that are capable of being used for purposes of navigation.

negative amortization loans Under which the debtor pays only the interest every month but owes a huge balloon payment at the end of the term.

negative Commerce Clause See Dormant Commerce Clause.

negative covenant The borrower's promise of what it undertakes not to do under the loan agreement.

negative equity An outstanding mortgage balance in excess of the value of the house or other property securing the loan.

negligence A breach of the requirement that a person act with the care a reasonable person would use in the same circumstances.

negligence *per se* Violation of a statute that shifts the burden to the defendant to prove the defendant was not negligent once the plaintiff

nonexempt employee An employee that is not exempt from the minimum wage and overtime requirements of the Federal Labor Standards Act; such an employee is often paid an hourly wage.

noninfringement In a patent dispute, the defense of noninfringement asserts that the allegedly infringing matter does not fall within the claims of the issued patent.

nonqualified deferred compensation arrangements (NQDCs) Non-tax favored employee and other compensation arrangements, including elective income deferral arrangements, supplemental employee retirement plans, stock appreciation rights, discounted stock options, and severance and change-in-control plans (“golden parachutes”).

nonqualified stock option (NSO) A stock option that does not qualify for favorable tax treatment under Internal Revenue Code sections 422 or 423.

nontariff barriers (NTBs) Barriers to trade other than tariffs that have in some cases replaced tariffs as a means of protecting domestic industries threatened by import competition.

no-shop agreement An agreement whereby the target agrees not to actively solicit other bidders but retains the right to negotiate with parties who submit unsolicited bids to the target.

no-talk clause A clause permitting a corporation to engage in discussions with and provide information to other bidders only if the board has concluded, based on the written opinion of outside legal counsel, that engaging in discussions or providing information was required to prevent the board from breaching its fiduciary duties to its stockholders.

not an underwriter Under Rule 144, an affiliate or a person selling restricted securities is not an underwriter if certain conditions (e.g., holding period, volume limitations, manner of sale, filing of Form 144, and available public information) are met.

novation The method of contract modification by which the original contract is canceled and a new one is written with perhaps only one change, such as substitution of a new party.

novel (patents) An invention is novel if it was not anticipated; i.e., if it was not previously known or used by others in the United States and was not previously patented or described in a printed publication in any country.

nuisance A thing or activity that unreasonably and substantially interferes with an owner’s use and enjoyment of owner’s property.

O

obvious risk If the use of a product carries an obvious risk, the manufacturer will not be held liable for injuries that result from ignoring the risk.

offer (contracts) A proposal to enter into a contract. Proposal may be verbal, written, or implied by action.

offer (securities) Every attempt or offer to dispose of, or solicitation of an offer to buy, a security or interest in a security, for value.

offeree A person to whom an offer is made.

offering circular Also known as a private placement memorandum, this circular is the private offering counterpart to the prospectus and is both a selling document and a disclosure document.

offeror A person making an offer.

offshore transaction A security transaction in which no offer is made to a person in the United States and either (1) at the time the buy order is originated, the buyer is outside the United States; or (2) the transaction is one executed in, on, or through the facilities of a designated offshore securities market.

ombudsperson A person who hears complaints, engages in fact finding, and generally promotes dispute resolution through information methods such as counseling or mediation.

omission (Rule 10b-5) A company or its managers fail to tell the whole truth about a material fact, causing reasonable investors to take away an impression contrary to the true facts.

one-form-of-action laws *See* Antideficiency Laws.

open-end credit Credit in which the creditor makes repeated extensions of credit (for example, Visa or MasterCard).

open listing A real estate listing in which the broker receives a commission only if he or she procures a ready, willing, and able buyer.

operating agreement A contract that sets forth the rights, obligations, and powers of the owners, managers, and officers of a limited liability company.

operating lease Typically a short-term lease that does not appear on the balance sheet.

oppression An inequality of bargaining power that results in no real negotiation and an absence of meaningful choice for one party to the contract.

option contract A contract in which the offeror promises to hold an offer open for a certain amount of time.

optionee The recipient of a stock option.

order for relief The filing of a bankruptcy petition constitutes an order for relief. If the debtor challenges an involuntary petition for bankruptcy, a trial is held to determine whether an order for relief should be granted.

ordinary comparative negligence In an ordinary comparative negligence jurisdiction, the plaintiff may recover only if it is less culpable than the defendant.

original jurisdiction The power of the U.S. Supreme Court to take cognizance of a case at its inception, try it, and pass judgment upon the law and facts. Distinguished from appellate jurisdiction.

out clause A provision that would allow the lessor or lessee to cancel the lease without completing the full term or paying the complete value of the lease.

output contract A contract under which a buyer promises to buy all the products that the seller produces.

outside director A member of a board who is not also an officer.

outside sales employee An employee that has the primary duty of either making sales or obtaining orders or contracts for services or for the use of facilities and who is customarily and regularly engaged away from the employer’s place of business in performing such duty.

override (of a president’s veto) The ability of Congress to annul a president’s veto by a two-thirds vote of both the House of Representatives and the Senate.

P

parens patriae (parent of the country) action Antitrust suits brought by state attorneys general for injuries sustained by residents of their respective states.

parol evidence rule If there is a written contract that the parties intended would encompass their entire agreement, oral evidence of prior or contemporaneous statements will not be permitted to vary or alter the terms of the contract.

partial summary judgment A summary judgment granted on some issues of a case while other issues proceed to trial.

participation in a breach of fiduciary duty A tort committed when the defendant induces another party to breach its fiduciary duty to the plaintiff.

participation loan A loan in which the original lender sells shares to other parties, called participants.

pass-through entity A business organization that is not a separate taxpayer; all its income and losses are passed through and taxed to its owner. S Corporations, partnerships, and limited liability companies are pass-through entities.

patent A government-granted right to exclude others for a stated period of time (usually 20 years) from making, using, or selling within the government's jurisdiction an invention that is the subject of the patent.

patent misuse In a patent dispute, a defense asserting that although the defendant has infringed a valid patent, the patent holder has abused its patent rights and therefore has lost, at least temporarily, its right to enforce them.

pattern An involvement in racketeering activity demonstrated by at least two predicate acts occurring within a ten-year period.

penumbra The peripheral rights that are implied by the specifically enumerated rights in the Bill of Rights.

pension plan An employee retirement benefit plan established, and usually funded at least in part, by an employer.

per se analysis A form of antitrust analysis that condemns practices that are completely void of redeeming competitive rationales.

percentage rent clause A clause frequently contained in retail leases that requires the tenant to pay, in addition to a base monthly rent, a percentage of its gross sales to the landlord.

perfect tender rule A Uniform Commercial Code rule that gives the buyer an absolute right to reject any goods not meeting all the contract requirements, including time of delivery.

perfecting (under the UCC) In connection with security interests, perfection refers to making the security interest valid as against other creditors of the debtor.

perjury An act by a person who takes an oath to tell the truth yet willingly and contrary to such oath states a material matter that he or she does not believe to be true.

permanent loan Usually a long-term loan used to acquire property that is repaid over five, ten, or sometimes up to twenty years.

personal jurisdiction The power of state court to hear (decide) a civil case based upon residence or location of activities of the person being sued.

persuasive A legal rule that reasonably and fairly resolves the dispute.

persuasive decision A well-reasoned court decision that another court, not bound by the first decision, would, when confronted with a similar dispute, probably follow.

petitioner The person who is appealing a judgment or seeking a writ of certiorari. Also called *appellant*.

phantom stock Promise to pay a bonus in the form of the equivalent of the value of company shares or the increase in value of the company shares over a period of time.

phishing Process by which individuals attempt to obtain personal information, including credit card numbers, using fake e-mails or websites that appear to come from a legitimate company.

pierce the corporate veil When a court denies limited liability to a corporation and holds shareholders personally responsible for claims against the corporation, the court has pierced the corporate veil.

plaintiff A person who brings an action; the party who complains or sues in a civil action and is so named on the record. The prosecution in a criminal case (i.e., the state or the United States in a federal case).

planned unit development (PUD) The land use regulations for a given piece of property that reflect the proposed development plans for that property. PUD allows for mixture of uses for property not possible under traditional zoning regulations.

plant patent A patent issued for new strains of asexually reproducing plants.

plea The response by a defendant in criminal case of guilty, not guilty, or *nolo contendere*.

plea bargaining The process by which the prosecutor agrees to reduce the charges in exchange for a guilty plea from the accused.

pleadings The formal allegations by the parties to a lawsuit of their respective claims and defenses.

pledge A type of security interest whereby the creditor or secured party takes possession of the collateral owned by the debtor.

plenary Complete, sufficient, unqualified.

plurality standard A process whereby a nominee for the board of directors can be elected as long as he or she receives a plurality of the votes cast for any nominee, without regard to the number of votes withheld. Contrast with *majority voting*.

plus factors (antitrust) Parallel behavior that would appear to be contrary to the economic interests of the defendants, were they acting independently; supports an inference of conspiracy.

points A one-time charge to a borrower buying real property (in addition to interest) computed by a lender by multiplying the amount funded by a fixed percentage.

poison pill A plan that would make any takeover of a corporation prohibitively expensive. Also called *shareholder rights plan*.

police power The general power granted state and city governments to protect the health, safety, welfare, or morals of its residents.

political question A conflict that should be decided by one of the political branches of government or by the electorate. A court will refuse to decide questions of a purely political character.

political union A union that represents the complete political and economic integration of the member states.

posthearing The final phase of arbitration in which the arbitrator renders his or her award after considering all the evidence presented in the prehearing and the hearing.

potentially responsible parties (PRPs) Parties potentially responsible for damages that include the present owner or operator of a facility, the owner or operator at the time of disposal of a hazardous substance, any person who arranged for treatment or disposal of hazardous substances at a facility, and any person who transported hazardous substances to or selected the facility.

power of attorney A written instrument that authorizes a person, called an attorney-in-fact (who need not be a lawyer), to sign documents or perform certain specific acts on behalf of another person.

prayer The request for relief in a complaint.

precautionary principle Provides guidance for protecting public health and the environment in the face of uncertain risks and stipulates that the absence of full scientific certainty shall not be used as a reason to postpone measures where there is a risk of serious or irreversible harm to public health or the environment.

precedents General rules that are to be used as guidelines for similar cases in the future.

precontractual liability The claims by the disappointed party if contract negotiations fail before a contract has been finalized.

predatory lending Involves mortgage loans secured by the borrower's house that are made at subprime interest rates to borrowers who often lack the ability to repay them. Also includes certain payday loans at exorbitant but legal interest rates.

predatory pricing The act of pricing below the producer's actual cost with the intent of driving other competitors out of the market, thus enabling the person engaging in predatory pricing to raise prices later.

preempt A federal law takes precedence when state law conflicts with federal law.

preemption defense (product liability) The immunity granted manufacturers if they meet minimum standards of conduct under certain regulatory schemes.

preferences Transfers to (or for the benefit of) creditors on account of antecedent debts that are made from an insolvent debtor's property within ninety days before bankruptcy (one year if creditor is insider) and that enable the creditors to receive more than they would through a Chapter 7 liquidation.

prehearing The first stage in arbitration in which parties may submit trial-like briefs, supporting documents, and other written statements making their case.

prejudgment interest The interest on the amount of an award from the date of the injury to the date of judgment.

preliminary hearing A hearing in which the prosecutor presents evidence demonstrating probable cause that the defendant committed the crime.

premises liability A theory under which a building owner may be found liable for violating its general duty to manage the premises and warn of dangers, such as asbestos.

prenegotiated bankruptcy In a prenegotiated bankruptcy, the debtor files its Chapter 11 bankruptcy petition as soon as it can after

it has reached agreement on the terms of the restructuring with its key creditors, but votes on the plan are not solicited until after the bankruptcy case is filed.

prenuptial agreement An agreement entered into before marriage that sets forth the manner in which the parties' assets will be distributed and the support to which each party will be entitled, in the event the parties get divorced.

prepackaged bankruptcy A workout plan approved by key creditors and the debtor before the debtor files bankruptcy; it becomes the plan of reorganization in a Chapter 11 bankruptcy.

prepayment penalty A clause whereby a lender imposes a penalty if the loan is paid off early.

preponderance of the evidence The evidence offered in a civil trial that is more convincing than the evidence presented in opposition to it.

price discrimination Sellers charge different prices to purchasers in interstate sales for commodities of like grade and quality.

primary debtor The person with an obligation for which the guarantor becomes liable.

primary line violation Under the Robinson-Patman Act, a primary line violation occurs where the discriminating seller's price impacts competition with the seller's competitors.

prime rate The lowest rate of interest publicly offered by major lending institutions to their most creditworthy customers. Better practice dictates using the terms "base rate" or "reference rate" because sometimes lenders offer a loan below prime.

priming lien A lien that is senior to a previously granted security interest.

principal A person who delegates a portion of his or her tasks to another person who represents the principal as an agent.

prior art Developments or pre-existing art that relates to a claimed invention.

prior restraints Prohibitions barring speech before it occurs.

private international law Law that governs the relationships between private parties engaged in transactions across national borders.

private law The area of the law in which the sole function of government is recognition and enforcement of private rights, e.g., civil and commercial codes.

private nuisance Interference with a person's use and enjoyment of his or her land and water.

private offering An offering to selected individuals or entities who have the ability to evaluate and bear the risk of the investment; that is, they have the ability to fend for themselves. Also called *private placement*.

private placement See *Private Offering*.

private-placement memorandum A booklet offered by entrepreneurs seeking financing from private individual investors that furnishes information about themselves and their enterprise.

privatization The transfer of property ownership from a nation to a private entity.

Privileges and Immunities Clause (Fourteenth Amendment)

Provides that no state "shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States."

privity of contract The relationship which exists between the parties to a contract.

probable cause As applied to an arrest or a search warrant, a reasonable belief that the suspect has committed a crime or is about to commit a crime. Mere suspicion or belief, unsupported by facts or circumstances, is insufficient.

procedural due process The parties whose rights are to be affected are entitled to be heard and, in order that they may enjoy that right, they must be notified before adverse action is taken.

product A tangible item, as opposed to a service.

product liability The liability of a manufacturer or seller of a product that because of a defect, causes injury to a purchaser, user, or bystander.

product line theory A theory of successor liability whereby a corporation purchasing the assets of another is liable for the target company's debts where the purchaser continues to manufacture the same product line as the target company, under the same name and with no outward indication of any change of ownership, even if the particular item was manufactured and sold by the target company prior to the acquisition. Usually applied only in product-liability cases.

productive efficiency An equilibrium in which only the lowest cost producers of goods and services survive.

professional employee Under Fair Labor Standards Act, an employee who holds a position requiring advanced knowledge in a field of science or learning customarily acquired by a prolonged course of specialized intellectual instruction and study.

promisee In contract law, the promisee is the person to whom the promise (contract) was made.

promisor In contract law, the promisor is the person who made the promise.

promissory estoppel A promise that the promisor should reasonably expect to induce action or forbearance on the part of the promisee or a third person and that does induce such action or forbearance can create liability for reliance damages if injustice can be avoided only by providing some relief when promise is broken.

promissory fraud A type of fraud that occurs when one party induces another to enter into a contract by promising to do something without having the intention to carry out the promise.

proof of claim A claim filed by creditors on uncontingent and undisputed debt.

prospectus Any document that is designed to produce orders for a security, whether or not the document purports on its face to offer the security for sale or otherwise to dispose of it for value. The descriptive document that an issuer of securities provides to prospective purchasers.

protected computer A computer used in interstate or foreign commerce.

protected expression The part of a work that is subject to copyright protection.

proximate cause A reasonably foreseeable consequence of the defendant's negligence, without which no injury would have occurred.

proxy A written authorization by a shareholder to another person to vote on the shareholder's behalf.

proxy contest A battle for corporate control whereby someone wishing to replace the board with its own candidates seeks to acquire a sufficient number of shareholder votes to do so.

public accommodation Under Americans with Disabilities Act, includes any place of public accommodation, such as a restaurant, place of lodging, place of entertainment, place of public gathering, and place of exercise or recreation.

public disclosure of private facts The publication of a private fact that is not newsworthy. The matter must be private, such that a reasonable person would find publication objectionable. Unlike in a defamation case, truth is not a defense.

public figures Individuals, who, by reason of their achievements or the vigor and success with which they seek the public's attention, are injected into the public eye.

public international law Law that governs the relationships between and the interactions of nations.

public law The area of the law that focuses on effectuation of the public interest by state action, e.g., constitutional law, administrative law, and criminal law.

public officials Include legislators, judges, and police officers.

public nuisance Unreasonable and substantial interference with the public health, safety, peace, comfort, convenience, or utilization of land.

public policy exception An exception to the general employment at will doctrine that prohibits an employer from discharging an employee for a reason that violates public policy.

publication Communication to a third party.

publicly owned sewage treatment works (POTWs) General and specific industry pretreatment standards are set for discharges to publicly owned sewage treatment works (POTWs).

puffing The expression of opinion by a seller regarding goods; not a warranty.

pump and dump A term used to refer to situations where executives fraudulently manipulate their company's earnings in an attempt to keep stock prices high while they exercise their options and sell their stock at inflated prices.

punitive damages Damages awarded to a plaintiff over and above what will fairly compensate it for its loss. They are intended to punish the defendant and deter others from engaging in similar conduct. Also called *exemplary damages*.

purchase-money security interest A security interest created when a seller lends the buyer the money to buy the seller's goods.

pure comparative negligence A tort system in which the plaintiff may recover for the part of the injury due to the defendant's negligence, even if the plaintiff was the more negligent party.

pure notice statutes Under these statutes, a person who has notice that someone else has already bought the real property cannot validate his or her deed by recording it first.

pyramid selling A scheme whereby a consumer is recruited as a product "distributor" and receives commissions based on the products he or she sells and on the recruitment of additional sellers.

Q

qualified disposition The sale of stock that occurs more than two years after an incentive stock option was granted and more than one year after the stock was purchased.

qualified institutional buyer Institutional investors holding and managing \$100 million or more of securities.

quantum meruit A basis for equitable relief by a court when there was no contract between the parties, but one party has received a benefit for which it has not paid.

quasi-foreign corporation A corporation incorporated outside of California, for example, but with more than 50 percent of its stock owned by California residents and with more than 50 percent of its sales, payroll, and property tax derived from activities in California.

qui tam plaintiff A plaintiff suing on the government's behalf, often entitled to a share of the amount recovered.

"quick look" rule of reason The "quick look" rule of reason is used whenever the practice has obvious anticompetitive effects but is not illegal per se; it allows for immediate inquiry into procompetitive justifications.

quid-pro-quo (this for that) harassment The specific, job-related adverse action, such as denial of a promotion, in retaliation for a worker's refusal to respond to a supervisor's sexual advances.

quiet period The time between filing of securities registration statement and the date the registration statement becomes effective. Also called the *waiting period*.

quitclaim deed A deed that contains no warranties; the grantor conveys only any right, title, and interest held by the grantor, if any, at the time of execution.

quorum The holders of more than 50 percent of the outstanding shares of a corporation.

quotas Tariffs and quantitative limitations that place restrictions on imports.

R

race statutes Under these statutes, recording is a race—the rule is "first in time is first in right." The first to record a deed has superior rights, regardless of whether he or she knew that someone else had already bought or claimed an interest in the real property.

race-notice statutes These statutes protect only a good faith subsequent purchaser who recorded its deed before the prior purchaser recorded its deed.

racketeering activity The state and federal offenses involving a pattern of illegal acts, including mail and wire fraud.

raider In a hostile takeover, a third party who seeks to obtain control of a corporation, called the target, over the objections of its management.

ratification A principal affirms through words or actions a prior act of an agent that did not bind the principal.

ratify An agreement by an individual, after the individual becomes competent or reaches the age of majority, to be bound by contracts entered into while the person was incompetent or a minor; a principal's agreement to be bound by the acts of an agent.

rational basis test A test under which a discriminatory classification will be held valid if there is any conceivable basis upon which the classification might relate to a legitimate governmental interest; applies to all classifications that relate to matters of economics or social welfare.

Rawlsian moral theory A deontological line of thought that aims to maximize the utility of the worst off person in society.

reaffirmation agreement A contract with a creditor whereby an individual who has filed bankruptcy under Chapter 7 agrees to repay a debt even though the debt would otherwise be discharged in the debtor's bankruptcy case.

real estate investment trust (REIT) A tax-advantaged pool of real property.

reasonable accommodation (employment) A requirement that an employer takes steps necessary to reasonably accommodate an employee's disability or religious practices.

reasonable-alternative-design-requirement A requirement in a product liability case that the plaintiff prove that defendant acted wrongly or negligently in choosing an unsafe design.

reasonable care under the circumstances A standard requiring landowners to act in a reasonable manner with respect to entrants on their land, with liability hinging on the foreseeability of harm.

reasonable factor other than age (RFOA) defense In an age discrimination case, an employer's affirmative defense that its actions were based on reasonable factors other than age. Contrast with *business necessity*.

recklessness In the criminal context, conscious disregard of a substantial risk that an individual's actions would result in the harm prohibited by a statute.

recognitional picketing Picketing that strives to force the employer to recognize a labor union as a collective bargaining agent for its employees.

recognized hazard Under the Occupational Safety and Health Act, a workplace condition that is obviously dangerous or is regarded by an employer or other employers in the industry as dangerous.

record The oral and written evidence presented at an administrative hearing.

recordable form The requirements established by the state regarding how title to real estate is filed and recorded. Requirements generally include legibility and notarization.

recording statutes Statutes that establish an orderly process by which claims to interests in real property can be recorded as part of the public record and resolved.

red-herring prospectus Preliminary prospectus; incomplete version of the final prospectus.

reference rate The lowest rate of interest publicly offered by major lending institutions to their most creditworthy customers.

referendum A vote by the electorate to approve or reject a treaty or other governmental action.

referral sale The seller offers the buyer a commission, rebate, or discount for furnishing the seller with a list of additional prospective customers.

registered mask work Highly detailed transparencies that represent the topological layout of semiconductor chips.

registration statement The registration statement consists of filing forms and the prospectus, the disclosure document that an issuer of securities provides to prospective purchasers.

Regulation A A regulation whereby \$5 million of securities can be offered and sold in a twelve-month period, of which up to \$1.5 million may be sold by the selling security holders.

Regulation Analyst Certification (Regulation AC) An SEC regulation that prohibits analysts from issuing reports that they do not personally believe to be true and requires the disclosure of any analyst compensation arrangements related to the specific recommendation or views contained in the research report.

Regulation D An SEC regulation that offers a safe harbor for those seeking exemption from securities registration under the Securities Act of 1933. An issuer that fails to comply with all of the requirements of the applicable rule may still be able to rely on the private-offering exemption in Section 4(2).

Regulation FD (Fair Disclosure) An SEC regulation that provides that whenever an issuer, or a person acting on its behalf, discloses material nonpublic information to securities market professionals or holders of the issuer's securities who may well trade on the basis of the information, the issuer must publicly disclose that same information simultaneously or promptly.

Regulation S An SEC regulation that has clarified the general rule that any offer or sale outside the United States is not subject to the federal registration requirements.

Regulation Z Regulations issued by the Federal Reserve Board to interpret and enforce the federal Truth-in-Lending Act.

regulations The rules of order prescribed by superior or competent authority relating to action of those under its control.

regulatory negotiations (reg-neg) A style of administrative rulemaking in which representatives of major groups convene with an administrative agency and work out a compromise through negotiation on the substance of new regulations.

regulatory taking The taking by the government of private real property for a public use; requires payment of just compensation.

reliance damages The awards made to a plaintiff for any expenditures made in reliance on a contract that was subsequently breached.

remand The power of a court of appeal to send a case back to a lower court for reconsideration.

remote tippee Recipient of a tip from another tippee other than the original tippee.

repatriate The act of a multinational business returning profits earned in a host country to its home country.

repatriation A constraint on foreign ownership to restrict the profits that can be returned by a multinational company to its home country.

reporter The published volumes of case decisions by a particular court or group of courts.

reporting company A company registered under Section 12 of the Securities Exchange Act of 1934 that subjects issuers to various reporting requirements and to certain rules and regulations concerning proxies, tender offers, and insider trading.

reporting issuer An issuer that has been subject to the reporting requirements of Section 13 or 15(d) of the 1934 Act for at least ninety days before a Rule 144 sale.

representation and warranties Highly negotiated provisions in a purchase-and-sale contract concerning the parties and the stock, goods, or other assets being sold.

representation election An election among employees to decide whether they want a union to represent them for collective bargaining.

requests for production of documents Requests for documents such as medical records and personal files to be produced as part of the discovery process before a trial.

requirements contract A contract under which the buyer agrees to buy all of a specified commodity the buyer needs from the seller and the seller agrees to provide that amount.

res ipsa loquitur (the thing speaks for itself) The doctrine that allows a plaintiff to prove breach and causation indirectly.

resale price maintenance An agreement on minimum price between firms at different levels of production or distribution that violates antitrust law.

resource-based view (RBV) A firm's resources can be a source of sustained competitive advantage if they are valuable, rare, and imperfectly imitable by competitors and have no strategically equivalent substitutes.

respondeat superior (let the master answer) The doctrine under which an employer may be held vicariously or secondarily liable for the negligent or intentional conduct of the employee that is committed in the scope of the employee's employment.

respondent The party in a case against whom an appeal is taken; the party who has an interest adverse to setting aside or reversing the judgment.

responsible corporate officer doctrine A criminal law doctrine that, under certain circumstances, imposes vicarious liability on an officer responsible for compliance based on the actions of subordinates.

restatement Former common law rules in a particular subject area (e.g., contracts, torts) integrated into formal collections that a judge or legislature is free to adopt.

restitution An award made to a plaintiff of a benefit improperly obtained by the defendant.

restricted guaranty A guaranty in which the guarantor's liability is enforceable only with respect to a specified transaction or series of transactions.

restricted securities Securities issued in a private placement; they cannot be resold or transferred unless they are either registered or exempt from registration. The most common exemption is pursuant to Securities and Exchange Commission Rule 144.

restricted stock A conditional grant of shares of a company's stock, with vesting contingent upon continued employment for a specified period of time.

restricted stock unit (RSU) A promise to pay a bonus in the future in the form of shares of a company's stock. An RSU is usually subject to vesting conditions so that it is not paid unless the vesting conditions are satisfied.

retributive justice A theory that states that every crime demands payment in the form of punishment.

reverse piercing A doctrine whereby a corporation (including a subsidiary) may be held liable for the debts of a shareholder (including a parent corporation).

reversibility An ethical theory that looks to whether one would want a rule applied to one's self.

revival statutes State and federal statutes that allow plaintiffs to file lawsuits that have been barred by the running of the statute of limitations.

Revlon mode A company is said to be in *Revlon mode* when a change of control or breakup of the company has become inevitable.

revoke To annul an offer by rescission.

revolving line of credit A line of credit that allows a borrower to borrow whatever sums it requires up to a specified maximum amount and reborrow amounts it has repaid.

revolving loan A loan that allows a borrower to borrow whatever sums it requires up to a specified maximum amount and to reborrow amounts it has repaid.

Riba A tenet of Islamic trade and commerce that prohibits unearned or unjustified (illicit) profits and can therefore lead to problems in the area of interest on loans.

right of first negotiation Gives the holder the right to negotiate the purchase of the property before the seller enters negotiations with another party.

right of first refusal A contract that provides the holder with the right to purchase property on the same terms and conditions offered by or to a third party.

right of redemption Gives the mortgagor and certain other categories of interested persons the right to redeem or get back foreclosed property within a statutorily limited period.

right of rescission A right to cancel a contract.

right of setoff Permits Party A to deduct automatically from payments due Party B amounts that are due from Party B to Party A.

ripeness A court will not hear agency cases if they are not ripe for decision, for example, after a rule is adopted but before the agency seeks to apply it to a particular case.

roadshow Oral presentations to large institutional investors in key cities in the United States, Europe, and Asia.

rule of impossibility The rule under which claims of predation are rejected because the marketplace in question cannot be successfully monopolized.

rule of reason The rule that takes into account a defendant's actions as well as the structure of the market to determine whether an activity promotes or restrains competition.

Rule 10b-5 An SEC regulation adopted pursuant to Section 10(b) of the Securities Exchange Act of 1934 that prohibits individuals and companies from engaging in fraudulent, manipulative, or deceptive practices in connection with the offer or sale of securities.

Rule 144 A safe harbor designed to reduce the uncertainty associated with the definition of the term "underwriter," this SEC rule permits nonissuers to sell restricted and control securities publicly without registration as long as the Rule's requirements are met.

S

S-1 review A review by the auditor of events subsequent to the date of the certified financial statements included in the securities registration statement to ascertain whether any material change has occurred in the company's financial position that should be disclosed in the final prospectus to prevent the financial statements from being materially misleading.

S Corporation A corporation meeting certain requirements that is taxed only at the owner level.

Safeguard Rule Requires financial services firms to protect consumer privacy by (1) promulgating a written information security plan, (2) designating at least one employee to coordinate the plan, (3) identifying and assessing the risks to customer financial information, and (4) evaluating the safeguards for controlling these risks.

sale (securities) Includes "every contract of sale or disposition of a security or interest in a security, for value."

sale and leaseback A simultaneous two-step transaction, whereby an institutional lender purchases real property from a company, and the property is leased back to the company for its use.

sanctions Laws imposed by one country (or a group of countries) against the commerce of another country as an effort to influence that country's behavior, for example with regard to international law.

satisfaction See Accord and Satisfaction.

Say on Pay proposal Annual shareholder advisory votes on a company's executive pay policies and practices.

scheme liability Fraudulent business transactions designed to enable the issuer to artificially inflate its earnings.

scienter An intent to deceive.

second-step back-end merger The second step in a corporate takeover whereby the shareholders who did not tender their shares receive cash or securities in a subsequent merger.

secondary boycott A strike against an employer with whom a union has no quarrel in order to encourage it to stop doing business with an employer with whom it does have a dispute.

secondary line violation Typically involves a "disfavored" purchaser that brings a suit against a seller, or the seller's "favored" purchaser, for giving the favored purchaser better pricing.

secondary meaning A descriptive trademark becomes protectable by acquiring secondary meaning, or sufficient consumer recognition through sufficient use and/or advertising of the goods under the mark.

secondary offering A securities offering by a person other than the issuer.

Section 4(11/2) exemption An exemption for a private offering of securities by an affiliate that would qualify as a private placement under Section 4(2) of the Securities Act of 1933 if made by the issuer.

Section 83(b) election When filed, the employee elects to pay tax at the time restricted stock is purchased in an amount equal to what would be due if the stock were not subject to vesting.

Section 201 Provides for temporary relief to U.S. industries seriously injured by increasing imports, regardless of whether unfair practices are involved. It is sometimes called the fair trade law.

Section 301 Authorizes the U.S. Trade Representative to investigate alleged unfair practices of foreign governments that impede U.S. exports of both goods and services.

Section 337 Provides that if a U.S. industry is injured (or there is a restraint or monopolization of trade in the United States) by reason of unfair acts in the importation of articles into the United States, an order must be issued requiring the exporters and importers to cease

the unfair acts or, if necessary, excluding imports of the offending articles from all sources.

Section 423 plan An employee stock purchase plan (ESPP) satisfying Internal Revenue Code Section 423, which permits an employee to defer paying tax on the discount from the fair market value of stock purchased via the plan until the employee sells the stock.

secured loan A loan backed up by collateral.

secured party The lender, seller, or other person in whose favor there is a security interest.

secured transaction A loan or other transaction secured by collateral put up by the borrower.

security Any note, stock, treasury stock, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, collateral trust certificate, pre-organization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, fractional undivided interest in oil, gas, or other mineral rights; any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof); or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency; or, in general, any interest or instrument commonly known as a "security," or any certificate of interest or participation in temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing.

security agreement An agreement that creates or provides for a security interest.

security interest Any interest in personal property, fixtures or letters of credit and accounts that is used as collateral to secure payment or the performance of an obligation.

selective disclosure A practice whereby issuers of publicly traded securities disclose material nonpublic information, such as advance warnings of earnings results, to securities analysts or selected institutional investors before making full disclosure of the same information to the general public.

self-publication A doctrine giving an employee a claim for defamation when the employer makes a false assertion in firing an employee, which the employer could reasonably expect the employee to repeat to a prospective employer.

self-tender An offer by a corporation to buy back its stock or shareholder rights for a fair price.

selling securities short The sale of securities the seller does not own.

senior debt Indebtedness that benefits from a debt subordination agreement.

separate property Property that belongs solely to the spouse who acquired it before marriage or received it by gift or inheritance.

separation of powers The distinct authority of governance granted the three branches of U.S. government (executive, legislative, and judicial) by the U.S. Constitution.

sequestration order A governmental order that requires spending levels to be reduced below the levels provided in the budget.

service mark A legally protected identifying mark connected with services.

service of process Notifying a defendant of a claim.

settlement conference A conference a judge may hold to give each side a candid assessment of the strengths and weaknesses of its case and the likely outcome if the case goes to trial.

sexual stereotyping Discrimination against employees because they are not "manly" enough men or "womanly" enough women. Illegal under Title VII of Civil Rights Act.

share sterilization An order precluding the defendants from voting their shares.

shareholder A holder of equity securities of a corporation. Also called *stockholder*.

shareholder derivative suit A lawsuit brought against directors or officers of a corporation by a shareholder on behalf of the corporation.

shareholder of record The persons whose names appear on a corporation's shareholder list on a specified date who are entitled to vote.

shareholder primacy Maximization of shareholder wealth, not legally mandated.

shareholder rights plan See Poison Pill.

Sharia The traditional Islamic rules and body of laws that regulate Muslim life.

shelf registration The registration of a number of securities at one time for issuance later.

short-swing trading The purchase and sale or sale and purchase by an officer, director, or greater-than-10 percent shareholders of securities of a public company within a six-month period.

show-how Nonsecret information used to teach someone how to make or do something; generally not legally protectable.

shrink-wrap license A license that customers cannot read when they purchase software but are deemed to have accepted when they open the wrapping around the envelope containing the discs.

signing statement A document attached to a bill at its execution describing the president's interpretation of that law.

SIMPLE Plan Retirement plans for employers with fewer than one hundred employees that are similar to 401(k) plans, but have stricter rules and simpler administration, that allow employees to defer a portion of their salaries on a pretax basis into an investment fund set up by the employer.

slander A spoken communication to a third party by a defendant of an untrue statement of fact that injures a plaintiff's reputation.

slander per se Words that are slanderous in and of themselves. Only statements that a person has committed a serious crime, has a loathsome disease, is guilty of sexual misconduct, or is not fit to conduct business are slanderous *per se*.

sole proprietorship One person owns all the assets of the business, has complete control of the business, and is solely liable for all the debts of the business.

solicitor A type of lawyer in the British system who is allowed to perform legal services outside the court.

sophisticated user defense An affirmative defense in a product liability case based on failure to warn whereby a manufacturer is not liable to a sophisticated user of its product for failure to warn of a risk, harm, or danger, if the sophisticated user knew or should have known of that risk, harm, or danger.

sovereign acts doctrine The government cannot be held liable for breach of contract due to legislative or executive acts of general application.

sovereign immunity The doctrine that prevents the courts of one country from hearing a suit against the government of another country.

spam Unsolicited e-mails.

Special 301 Provisions Provisions in U.S. trade law under which the U.S. Trade Representative identifies countries that deny adequate and effective protection for intellectual property rights or deny fair and equitable market access for persons who rely on intellectual property protection.

special plan *See* Specific Plan.

specific performance A court order to a breaching party to complete the contract as promised.

specific plan A planning document in addition to a general plan that usually encompasses just a portion of a city's geographic area; typically more detailed than the general plan.

specifications The description of an invention in a patent application in its best mode and the manner and process of making and using the invention so that a person skilled in the relevant field may make and use the invention.

spinning The practice whereby underwriters would distribute IPO shares to a corporate executive in exchange for the investment banking business of the executive's corporation.

split in the circuits When different courts of appeals disagree on a legal issue.

spoliation inference Inference, as instructed to a jury, that missing or altered evidence should be presumed to have been unfavorable to the party causing its destruction or loss.

spread (1) A margin which is added to the cost that a bank incurs to obtain, for a given period of time, the funds it will lend, in order to arrive at the actual interest rate for a loan. (2) The difference between the strike price of a stock option and the fair market value of the stock at the time the optionee exercises the option.

spring-loading Issuing employee stock options in advance of a positive public announcement that the issuing company believes will drive up the market value of its stock.

squatter's rights *See* Adverse Possession.

staggered board A board on which directors serve for specified terms, usually three years, with only a fraction of them up for reelection at any one time. Also called *classified board*.

standby letter of credit A method of securing a party's performance, whereby an issuing bank undertakes to pay a sum of money to the person (the beneficiary) to which performance is due on presentation of certain documents specified in the letter of credit, usually a brief statement (in language agreed on by the two parties) that the other party is in default and the beneficiary is entitled to payment from the issuing bank.

standing A party to a lawsuit has standing if the person seeking relief is the proper party to advance the litigation, has a personal interest in the outcome of the suit, and will benefit from a favorable ruling.

standstill agreement An agreement whereby the shareholder agrees not to commence a tender offer or proxy contest or to buy additional shares of the issuer for a period of time, often ten years.

stare decisis (to abide by) The doctrine that holds that once a court resolves a particular issue, other courts addressing a similar legal problem generally follow the initial court's decision.

state-of-the-art defense A defense against claims based on a manufacturer's compliance with the best available technology (that may or may not be synonymous with the custom and practice of the industry).

state secrets doctrine A doctrine that bars the discovery or admission of evidence that would expose confidential matters which, in the interest of national security, should not be divulged.

statute of frauds A statute that requires that certain contracts, such as contracts conveying an interest in real property, must be in a signed writing to be enforceable in a court.

statute of limitations A time limit, defined by the statute, within which a lawsuit must be brought.

statute of repose A time limit that cuts off the right to assert a cause of action after a specified period of time from the date the product is sold.

statutory bar An inventor is denied patent protection in the event that prior to one year before the inventor's filing, the invention was (1) patented; (2) publicly used or sold in the United States; or (3) described in a printed publication in the United States or a foreign country.

statutory law Law that is based on statutes, not on existing common law rules.

statutory prospectus A prospectus for a registered offering of securities meeting the requirements of Section 10 of the Securities Act of 1933.

statutory stock options Another term for incentive stock options (ISOs) and options granted pursuant to employee stock purchase plans (ESPPs).

stock appreciation right (SAR) A contractual right to receive an amount equal to the appreciation in stock price that occurs between the date the SAR is granted and the date of exercise. Payments of appreciation may be in the form of cash, stock, or both.

stock option A contract that allows an individual to buy a certain number of shares of a company's stock at a certain price (typically the fair market value of the stock at the time the option is granted) within a certain timeframe (typically five to ten years), but ending upon termination of employment.

stock parking The temporary sale of shares to another entity or individual to avoid tax reporting requirements or the net margin requirements of the securities laws applicable to brokerage firms.

stock-settled SAR A stock appreciation right (SAR) paid in company stock, not cash.

stockholder A holder of equity securities of a corporation. Also called *shareholder*.

straight bankruptcy A Chapter 7 bankruptcy in which the trustee liquidates the estate and distributes the proceeds first to secured creditors (to the extent of their collateral) and then in a prescribed order, pro rata within each level.

straight voting A voting process whereby a shareholder can cast one vote for each share the shareholder owns for each nominee.

strategic compliance management Term coined by Professor Constance E. Bagley to describe a legally astute top management team's ability to go beyond mere compliance with law to seek

opportunities to increase a firm's realizable value. Includes ability to frame the cost of complying with government regulations as an investment, not an expense.

strategic environmental management A concept that advocates placing environmental management on the profit side of the corporation rather than on the cost side. An example of strategic compliance management.

strict liability Liability without fault. The concept that sellers are liable for all defective products. Also imposed for abnormally dangerous (or ultrahazardous) activities and toxic torts.

strict scrutiny test Under this test, a discriminatory classification will be held valid only if it is necessary to promote a compelling state interest and narrowly tailored; applies to classifications based on race or religion.

strike price The price (which is generally the market price of the stock at the time the stock option is granted) at which an optionee can exercise his or her stock option by purchasing the stock. Also referred to as the *grant price*.

subdivision A division of land into separate parcels for development purposes.

subject matter jurisdiction The specific types of cases enumerated under Article III of the U.S. Constitution to be decided by the Supreme Court and lower courts established by Congress.

subject matter test The privilege that protects the communications or discussions of any company employee with counsel as long as the subject matter of the communication relates to that employee's duties and the communication is made at the direction of a corporate superior.

sublease An act by a tenant of renting out all or a portion of property the tenant has rented from a landlord.

subordination Relegation to a lesser position, usually in respect to a right or security.

subprime Debt issued by a lender that (1) predominantly refinances rather than makes or purchases loans and (2) does not sell a significant portion of its portfolio to the two government sponsored housing financing agencies.

subprime mortgage loans Loans that carry above-market interest rates to compensate for the added risk of default, to borrowers with poor credit.

subsequent remedial measures A manufacturer's later fix of a dangerous condition or improvement of a design in a product that has been found to be inherently defective.

substantial continuity test A test that imposes successor liability when the purchaser of assets maintains the same business, with the same employees doing the same jobs, under the same supervisors, working conditions, and production process, and produces the same products for the same customers as the seller corporation. Also known as the *continuity of enterprise approach*.

substantial evidence standard Under this standard, the courts defer to an administrative agency's factual determinations in formal adjudications even if the record would support other factual conclusions.

substantial factor test An actual-cause test whereby the plaintiff or prosecutor seeks to hold liable multiple defendants, including any person who played a substantial role in causing the harm or violation.

substantial risk of forfeiture Stock is subject to a substantial risk of forfeiture if the recipient's right to full enjoyment of the stock is conditional upon the future performance of substantial service.

substantially related test A test under which a discriminatory classification will be held valid if it furthers a governmental interest that is "important" or "substantial" and it prevents real, not conjectural, harm "in a direct and material way"; applies to classifications such as gender and legitimacy of birth.

substantive coercion A threat that shareholders may agree to sell their shares in an otherwise noncoercive tender offer out of ignorance about the target company's true value. Also occurs when management structures a deal in such a way that deprives shareholders of a meaningful choice.

substantive due process The constitutional guarantee that no person shall be arbitrarily deprived of life, liberty, or property; the essence of substantive due process is protection from arbitrary and unreasonable action.

successor liability Individuals or entities who acquire an interest in a business or in real property may be held liable for personal injury and property or environmental damage resulting from acts (including sale of products) of the predecessor entity or previous owner.

suggestive mark A trademark that suggests something about a product without directly describing it.

summary judgment A procedural device available for disposition of a controversy without trial. A judge will grant summary judgment only if all of the written evidence before the court clearly establishes that there are no disputed issues of material fact and the party who requested the summary judgment is entitled to prevail as a matter of law.

summary jury trial (SJT) Parties to a dispute put their cases before a real jury, which renders a nonbinding decision.

summons The official notice to a defendant that a lawsuit is pending against the defendant in a particular court.

Super 301 A provision of the Omnibus Trade Act of 1988 that required the U.S. Trade Representative to draw up a list of the foreign governments whose practices pose the most significant barriers to U.S. exports, and to immediately commence Section 301 investigations with respect to these practices.

super discharge After completing all payments in accordance with a Chapter 13 bankruptcy plan, the debtor obtains a Chapter 13 discharge (sometimes called a super discharge), which extinguishes otherwise nondischargeable debts (such as claims for fraud, theft, willful and malicious injury, or drunk driving), but not spousal or child support.

superlien An instrument that secures recovery of environmental cleanup response costs incurred by state agencies.

supervisor Anyone possessing specified personnel functions if the exercise of that authority is not of a merely routine or clerical nature, but requires the use of independent judgment.

suppress To prevent the prosecution from introducing evidence.

supranational law A principle of international law, under which nations submit their decision-making authority to a common organization or institution.

surprise The extent to which the supposedly agreed on terms of the bargain are hidden in a densely printed form drafted by the party seeking to enforce the disputed terms.

surviving corporation In a merger of two corporations, the corporation that maintains its corporate existence is the surviving corporation.

syndicate An underwriting group in a public offering; each member agrees to purchase a certain number of the securities of the issuer once the offering is declared effective by the Securities and Exchange Commission.

syndicated loan In a syndicated loan, the lenders enter into concurrent direct obligations with the borrower to make a loan, typically on a pro rata basis. The loan is coordinated by a lead lender that serves as agent for all the lenders in disbursing the funds, collecting payments of interest and principal, and administering and enforcing the loan.

synthetic lease A lease that is treated as a conventional operating lease for accounting purposes (so does not appear on the lessee's balance sheet) but is treated as if the lessee had purchased the property and obtained a loan from the seller for tax purposes.

systems approach to business and society The descriptive framework that integrates legal and societal considerations with mainstream theories of competitive advantage and social responsibility.

T

take-out commitment An agreement by a lender to replace the construction loan with a permanent loan, usually after certain conditions, such as the timely completion of the project, have been met.

takeover A bidder acquires sufficient stock from a corporation's shareholders to obtain control of the corporation.

target The subject of a tender offer or hostile corporate takeover attempt. Also a company that another firm controls after acquiring it via merger, a sale of stock by the target's shareholders, or a sale of substantially all the assets of the target.

tariff classification The tariff on articles imported to the United States is determined by their description on the Harmonized Tariff Schedule.

tariffs The basic tool for limiting imports to protect domestic industries.

tarnishment Dilution of a famous trademark that occurs when use of the famous mark in connection with a particular category of goods or goods of an inferior quality reduces the positive image associated with the products bearing the famous mark.

tax-deferred exchange A transfer of real property for an alternative piece of real property meeting certain requirements.

tax evasion The illegal practice whereby a person intentionally does not pay his or her tax liability.

teleological theory of ethics An ethical theory concerned with the consequences of something. The good of an action is to be judged by the effect of the action on others.

10b5-1 plan A securities trading plan meeting the requirements of SEC Rule 10b5-1. There is a presumption that persons who trade while in possession of material nonpublic information trade on the basis of that information unless the trade is pursuant to a preexisting 10b5-1 plan.

tenancy by the entirety A special type of co-ownership of real property between husband and wife; like joint tenancy, it includes a right of survivorship.

tenants in common The individuals who own undivided interests in a parcel of real property.

tender of delivery Under Article 2 of the Uniform Commercial Code, when the seller notifies the buyer that it has the goods ready for delivery.

tender offer A public offer to all the shareholders of a corporation to buy their shares at a stated price, usually higher than the market price.

term loan A loan for a specified amount funded in a lump sum or in installments to be repaid on a specified maturity date or paid off over a period of time.

term sheet A letter that outlines the terms and conditions on which a lender will lend.

termination The point after the dissolution of a partnership when all the partnership affairs are wound up and partners' authority to act for the partnership is completely extinguished.

termination fee See Breakup Fee.

territorial restrictions Restrictions that prevent a dealer or distributor from selling outside a certain territory.

territoriality One of the two prevalent domestic models for addressing international insolvency problems, pursuant to which each nation conducts its own proceeding with respect to the assets located in its jurisdiction and ignores any parallel proceedings in a foreign country.

third-party beneficiary One who does not give consideration for a promise yet has legal rights to enforce the contract. A person is a third-party beneficiary with legal rights when the contracting parties intended to benefit that person.

third-party defense In a case under the Comprehensive Environmental Responsibility, Contribution, and Liability Act, a potentially responsible current owner can assert this defense if the release or disposal of hazardous materials was by a third party who was not an employee and with whom the current owner had no contractual relationship. Also called the *innocent landowner defense*.

Thompson Memorandum The revised "Principles of Federal Prosecution of Business Organizations" issued by Attorney General Larry D. Thompson to establish determinants of whether to prosecute a company. Superseded by principles codified in 2008 in the U.S. Attorney Manual.

360/360 method A method for calculating interest whereby it is assumed that all months have 30 days; thus the monthly interest amounts are always the same.

365/360 method A method for calculating interest whereby the nominal annual interest rate is divided by 360, and the resulting daily rate is then multiplied by the outstanding principal amount and the actual number of days in the payment period.

365/365 method A method for calculating interest whereby the daily rate is determined by dividing the nominal annual interest rate by 365 (or 366, in leap years), then this daily rate is multiplied by the outstanding principal amount and the actual number of days in the payment period.

tip Disclosure of a fact made to an individual and withheld from the general public.

tippee A person who receives inside information.

tipper A person who gives inside information.

tombstone ad A newspaper advertisement surrounded by bold black lines identifying the existence of a public offering and indicating where a prospectus may be obtained.

tort A civil wrong causing injury to a person, his or her property, or certain economic relationships.

total-activity test A combination of tests used to determine where a company engaged in multistate operations is domiciled; considers all aspects of the corporate entity, including the nature and scope of the company's activities.

total cost Variable cost plus fixed costs, such as rent and overhead.

total return equity swap A type of derivative security whereby two counterparties agree to exchange cash flows on two financial instruments over a specific period of time. One counterparty generally buys the equity securities underlying the swap.

trade dress A manifestation of trademark law, the concept of trade dress is to protect the overall look of a product as opposed to just a particular design.

trade name A trade name or a corporate name identifies and symbolizes a business as a whole, as opposed to a trademark, which is used to identify and distinguish the various products and services sold by the business.

Trade Promotion Authority A law that allows the president to negotiate trade agreements and then submit them for an up or down vote by Congress with no amendments permitted.

trade secret Information that derives independent economic value from not being generally known and that is subject to reasonable efforts to maintain its secrecy.

trademark A word or symbol used on goods or with services that indicates their origin.

traditional shelf offerings The registration of (1) securities offered pursuant to employee benefit plans; (2) securities offered or sold pursuant to dividend or interest reinvestment plans; (3) warrants, rights, or securities to be issued upon conversion of other outstanding securities; (4) mortgage-related securities; and (5) securities issued in connection with business combination transactions.

transaction value The price of an imported article indicated on a sales invoice.

transactional immunity The prohibition from prosecution granted a witness that relates to any matter discussed in that person's testimony.

transactional negotiation Negotiation that is forward looking with concern for desired relationships.

transnational insolvency In its simplest form, an insolvency proceeding in one country, with a creditor located in a second country. More complex cases may involve subsidiaries, assets, creditors, and operations in many countries.

treaty An international agreement concluded between states in written form and governed by international law.

trespass to chattels When personal property is interfered with but not taken, destroyed, or substantially altered (i.e., not converted), there is a trespass to chattels. Also called *trespass to personal property*.

trespass to land The intentional invasion of real property (below the surface or in the airspace above) without consent of the owner.

trespass to personal property When personal property is interfered with but not taken, destroyed, or substantially altered (i.e., not converted), there is said to be a trespass to personal property. Also called *trespass to chattels*.

triple net lease A type of industrial lease that requires the tenant to pay all taxes, insurance, and maintenance expenses.

trust (1) A combination of competitors who act together to fix prices, thereby stifling competition. (2) A manner of holding property that is controlled by a trustee for the benefit of a beneficiary.

trustee The legal representative of a bankrupt debtor's estate.

2-28 loans Loans with a low initial interest rate that stays fixed for two years, after which the loan resets to a higher adjustable rate for the remaining twenty-eight years of the loan.

tying arrangement A business arrangement whereby a seller will sell product A (the tying or desired product) to the customer only if the customer purchases product B (the tied product) from the seller.

U

UCC-1 Form In most states, this is the form a secured creditor uses for a financing statement under the Uniform Commercial Code.

ultrahazardous Under tort law, an activity of a defendant is deemed ultrahazardous when it (1) necessarily involves a risk of serious harm to persons or property that cannot be eliminated by the exercise of utmost care and (2) is not a matter of common usage. Also called *abnormally dangerous*.

unavoidably unsafe product A product, such as a vaccine, that is generally beneficial but is known to have harmful side effects in some cases.

unconscionable A contract term that is oppressive or fundamentally unfair.

unconscionability As under common law, unconscionability can be either procedural (relating to the bargaining process) or substantive (relating to the provisions of the contract).

undercapitalization theory A corporation is a separate entity, but its lack of adequate capital may constitute a fraud on the public. May be a basis for piercing corporate veil.

underwriter Any person who has purchased any security from an issuer with a view to, or offers or sells for an issuer in connection with, the distribution of any security.

undisclosed principal Use of an agent so that the third party to an agreement does not know or have reason to know of a principal's identity or existence.

undue hardship An affirmative defense under the Americans with Disabilities Act that relieves an employer of the obligation to make reasonable accommodations for an employee's disability because doing so would constitute an undue hardship for the employer.

undue influence Sufficient influence and power over another as to make genuine assent impossible.

unfair labor practice strike A union strikes an employer for the employer's failure to bargain in good faith.

unfair labor practices Unlawful misconduct by an employer to employees exercising union rights.

unilateral contract A promise given in exchange for an act. Offer can be accepted only by performing the act.

universality A domestic model for addressing international insolvency problems that tracks these proceedings as a single case and treats creditors equally, no matter where they are located.

universalizability An ethical theory that asks whether one would want everyone to perform in this manner.

unjust enrichment The unfair appropriation of the benefits of negotiation of contracts for the party's own use.

unorthodox transaction The purchase or sale by an officer, director, or greater-than-10 percent shareholder that would otherwise result in recoverable short-swing profits but is involuntary and does not involve the payment of cash, and there is no possibility of speculative abuse of insider information.

upstream guaranty A guaranty whereby subsidiaries guarantee the parent corporation's debt, or pledge their assets as security for the parent corporation's debt.

use immunity The prohibition on the use of the testimony of a witness against that witness in connection with the case in which that person is testifying or another case.

useful article doctrine The doctrine that holds that copyrightable pictorial, graphic, and sculptural works include works of artistic craftsmanship insofar as their form but not their mechanical or utilitarian aspects are concerned.

useful life statutes Statutes that provide manufacturers and sellers protection from product liability claims after a specified period of time has elapsed since the product was sold.

usual authority The authority that the agent has been allowed to exercise in the past.

usury Charging an amount of interest on a loan that is in excess of the maximum specified by applicable law.

usury laws State statutes that set legal caps on what interest rates lenders may charge.

usury statutes Laws that limit the interest rate on loans and usually provide that any loan agreement in violation of the statute is unenforceable.

utilitarianism A major teleological system of ethics that stands for the proposition that the ideal is to maximize the total benefit for everyone involved.

utility patent A patent that protects any novel, useful, and nonobvious process, machine, manufacture, or composition of matter; or any novel, useful, and nonobvious improvement of such process, machine, manufacture, or composition of matter.

utility requirement A requirement that an invention must have a practical or real-world benefit in order for a utility patent to be issued.

V

vacate The power of a court of appeal to nullify a previous court's ruling.

value Cash, property, or compensation for past services.

variable cost The cost of producing the next incremental unit.

variable-sum negotiations Negotiations in which mutual gains are possible as parties trade lower valued resources for higher valued ones. Also called *integrative negotiations*.

variance A method of relief from the strict terms of a zoning ordinance that allows a landowner to construct a structure or carry on an activity not otherwise permitted under zoning regulations.

venditur emptor A phrase commonly associated with consumer transactions that means "let the seller beware."

venture capital Money managed by professional investors for investment in new enterprises.

venue The particular county or geographical area in which a court with jurisdiction may hear and determine a case.

vertical agreement An agreement between firms that operate at different levels of production or distribution.

vertical market division An agreement between a company and a dealer or distributor that prevents the dealer or the distributor from selling outside a certain territory or to a certain class of customer.

vertical merger A combination between firms at different points along the chain of distribution.

vertical restraint Unlawful restraint between firms at different levels in the chain of distribution, including price-fixing, market division, tying arrangements, and some franchise agreements.

vested right The right of a developer to develop property sometimes, but not always, obtained when a building permit is issued, substantial work is done, and substantial liabilities are incurred in reliance of that permit.

vesting restrictions Restrictions set by the company that grants a stock option on when the option can be exercised.

veto power The power of the president to prevent permanently or temporarily the enactment of a law created by Congress that does not meet his or her approval.

vicarious copyright infringement A doctrine that imposes liability on a third party for a direct copyright infringer's actions if the third party (a) has the right and ability to control the infringer's acts and (b) receives a direct financial benefit from the infringement.

vicarious liability The imposition of civil or criminal liability on one party (e.g., an employer) for the wrongful acts of another (e.g., an employee). Also called *imputed liability*.

voidable Unenforceable at the option of one party.

voir dire Questioning of potential jurors to determine possible bias.

voluntary conversion The exchange by a holder of preferred stock for common stock on the occurrence of certain events.

voluntary proceeding A voluntary proceeding in bankruptcy filing begins when the debtor files a petition with the bankruptcy court.

W

waiting period The period between the filing of the registration statement and the date the registration statement becomes effective with the SEC. Also called the *quiet period*.

waive To refrain from exercising certain rights.

warranty deed A warranty deed is similar to a grant deed. In addition to the implied warranties contained in a grant deed, the

grantor of a warranty deed also expressly warrants the title to and the quiet possession of the grantee.

web robots Software programs that search and index the Internet for specific content by visiting websites, requesting documents based on certain criteria, and following up with requests for documents referenced in the documents already retrieved to identify illegal copying.

welfare benefit plans Employee medical, dental, and disability plans that are subject to ERISA's rules on reporting, disclosure, and fiduciary responsibility.

well-known seasoned issuers Firms eligible to use Form S-3 with \$700 million of public common equity float and permitted to make unrestricted oral and written offers before the registration statement is filed without violating the gun-jumping provisions.

whistleblowing When an employee reports an employer's unlawful or wrongful conduct to a supervisor, inside counsel or ombudsman, the board of directors, the government, or the public.

white-collar crime Nonviolent violations of the law by companies or their managers.

willful A defendant acting with knowledge that his conduct is unlawful. Contrast with *knowingly*.

winding up The process of settling partnership affairs after dissolution.

wire fraud A scheme intended to defraud or to obtain money or property by fraudulent means through use of telephone systems.

work made for hire A copyrightable work created by an employee within the scope of his or her employment, or a work in one of nine listed categories that is specially commissioned through a signed writing that states that the work is a "work made for hire."

work-product doctrine Protects information, including the private memoranda and personal thoughts of the attorney, created by the attorney while preparing a case for trial.

workout An out-of-court settlement between debtors and creditors that restructures the debtor's financial affairs in much the same way that a confirmed bankruptcy plan would, but it only binds those who expressly consent.

wraparound financing The transaction in which a new lender lends the owner of mortgaged real property additional funds and agrees to take over the servicing of the first loan. In exchange, the owner executes a deed of trust or mortgage and an all-inclusive note, covering the combined amount of the first and new loans.

writ An order in writing issued under seal in the name of a court or judicial officer commanding the person to whom it is directed to perform or refrain from performing an act specified therein.

writ of certiorari An order written by the U.S. Supreme Court when it decides to hear a case, ordering the lower court to certify the record of proceedings below and send it up to the U.S. Supreme Court.

wrongful discharge An employee termination without good cause that (1) violates public policy; (2) breaches an implied contract; or (3) violates the implied covenant of good faith and fair dealing.

Z

Zakat A tenet of Islamic trade and commerce that allocates certain taxes to deprived and poor people as a welfare contribution.

zero-sum negotiations Negotiations in which the only issue is the distribution of the fixed pie. Also called *distributive negotiations*.

zone of danger The area in which an individual is physically close enough to a victim of an accident as to also be in personal danger.

zone of insolvency There is no test or definition. The law suggests that a company may enter the zone when there is a substantial risk that the company will be unable to pay its debts.

zoning The division of a city into districts and the application of specific land use regulations in each district.
