Due to these differences in state laws, disputes can arise regarding which law to apply to noncompete agreements. For example, an employee working in Ohio signed a noncompete with his employer, Convergys, which included an

21. Lazar v. Rykoff-Sexton, Inc., 909 P.2d 981 (Cal. 1996).

22. Smalley v. Dreyfus Corp., 882 N.E.2d 882 (N.Y. 2008).

Ohio choice-of-law provision. When the employee resigned to work for a competitor in Georgia, he filed a lawsuit in Georgia seeking a declaration that the noncompete was unenforceable. The district court concluded that it could not follow “a contractual selection of law of a foreign state where such chosen law would contravene the public policy of Georgia,” declared the noncompete void, and granted an injunction against Convergys that prohibited the company from seeking to enforce the noncompete in any court nationwide. On appeal, the U.S. Court of Appeals for the Eleventh Circuit found that although Georgia was entitled to enforce its public policy interests within its borders, “Georgia cannot in effect apply its public policy decisions nationwide—the public policy of Georgia is not that everywhere [sic]. To permit a nationwide injunction would in effect interfere both with parties’ ability to contract and their ability to enforce appropriately derived expectations.” As a result, the court modified the injunction to preclude Convergys only from enforcing the noncompete in Georgia.²³

Even if an employment agreement does not contain an express noncompete, provisions having a similar effect will be unenforceable in a jurisdiction that bans noncompetes. In a recent case, an employee who worked for Pac-West Labels, was asked by Impaxx, which acquired Pac-West Labels, to sign the following covenant: “For a period of one (1) year following the termination of employment, I will not (1) call on, solicit or take away any of Pac-West Label’s customers or potential customers with whom I have had any dealings as a result of my employment by Pac-West Labels.” When the employee refused, Impaxx fired him, and he sued for wrongful termination under the rule that termination of an employee for refusal to sign an unenforceable covenant not to compete violates public policy. The employee also alleged that the identity of Pac-West’s customers was not a trade secret. Impaxx moved for judg-

23. Keener v. Convergys Corp., 342 F.3d 1264 (11th Cir. 2003).

ment on the pleadings on the ground that the covenant was not a “true” covenant not to compete, but a mere limited restrictive covenant not to solicit. The California Court of Appeal disagreed, stating:

This clause is less restrictive, and less anti-competitive, than the broad, traditional anti-competitive clauses . . . It is nevertheless anti-competitive—why else would they ask employees to sign it? More to the point, “Anti-solicitation covenants are void as unlawful business restraints except where their enforcement is necessary to protect trade secrets.”²⁴

Even in states that permit noncompetes, courts will enforce only reasonable restrictions on competition. Unreasonableness can be found on many grounds, including duration of limitation, geographic extent, scope of activities prohibited, and the employer’s relation to the interests being protected. For example, the Nevada Supreme Court invalidated a noncompete agreement that restricted a lighting-retrofitting employee from competing with his former employer within a 100-mile radius of the former employer’s site for five years.²⁵ The duration placed a great hardship on the employee and was not necessary to protect the former employer’s interests.

The majority of states recognize an employer’s investment of time and money to develop customer and client relationships as a legitimate employer interest that can justify a noncompete agreement. Prior to 2006, there was a split among Texas courts as to whether an employer’s promise to provide specialized training or confidential information in the course of employment could support enforcement of a covenant not to compete. This issue was resolved by the Supreme Court of Texas in the following case.

24. Thompson v. Impaxx, Inc., 7 Cal. Rptr. 3d 427 (Cal. App. 2003).

25. Jones v. Deeter, 913 P.2d 1272 (Nev. 1996). See also Rollins Burdick Hunter of Wis., Inc. v. Hamilton, 304 N.W.2d 752 (Wis. 1981).

A CASE IN POINT

CASE 12.2

**ALEX SHESHUNOFF
MANAGEMENT SERVICES,
L.P. v. JOHNSON**

SUPREME COURT OF TEXAS
209 S.W.3d 644 (TEX. 2006).

IN THE LANGUAGE OF THE COURT

FACTS Alex Sheshunoff Management Services (ASM) provides consulting services to banks and other financial institutions. ASM hired Kenneth Johnson as an at-will employee in 1993. In September 1997, ASM promoted Johnson to director of its “Affiliation Program,” a program designed to maintain relationships with clients and prospective clients. A few months later, ASM presented Johnson with an employment agreement that provided that “[e]ither party may elect to terminate this Agreement at any time for any reason,” subject to employer and employee notice provisions. The employer notice provision stated that ASM would give notice of termination to Johnson, unless the termination stemmed from employee misconduct, but also allowed ASM to immediately terminate Johnson so long as ASM paid him a specified fee.

CONTINUED

The Agreement required ASM to provide Johnson with training as follows:

To assist Employee in the performance of his/her duties, Employer agrees to provide to Employee, special training regarding Employer's business methods and access to certain confidential and proprietary information and materials belonging to Employer, its affiliates, and to third parties, including but not limited to, customers and prospects of the Employer who have furnished such information and materials to Employer under obligations of confidentiality.

The Agreement also provided that for one year after his termination, Johnson would not provide consulting services to any ASM clients for whom Johnson had "provided fee based services in excess of 40 hours within the last year of employment," and would not "solicit or aid any other party in soliciting any affiliation member or previously identified prospective client or affiliation member."

After Johnson signed the Agreement, ASM provided him with confidential information and paid for him to receive training. In early 2001, Johnson participated in confidential meetings regarding ASM's plans to introduce a bank overdraft protection product. The market leader for such products, Strunk & Associates, contacted Johnson in early 2002 about hiring him. In March 2002, Johnson told ASM he was leaving to work for Strunk.

ASM sued Johnson, alleging breach of the covenant not to compete in the Agreement and seeking injunctive relief and damages. Strunk intervened. The court granted a temporary injunction, and Strunk and Johnson moved for summary judgment, arguing that the covenant not to compete was unenforceable, because ASM had provided no consideration in exchange for it. The district court granted the summary judgment motions, and the court of appeals affirmed.

ISSUE PRESENTED Can an employer's promise to an at-will employee to provide special training and access to confidential information support enforcement of a covenant not to compete under Texas law?

OPINION WILLETT, J., writing for the Texas Supreme Court:

The Covenants Not to Compete Act (Act) states:

[A] covenant not to compete is enforceable if it is ancillary to or part of an otherwise enforceable agreement at the time the agreement is made to the extent that it contains limitations as to time, geographical area, and scope of activity to be restrained that are reasonable and do not impose a greater restraint than is necessary to protect the goodwill or other business interest of the promisee.

....
In the pending case, ASM promised to disclose confidential information and to provide specialized training under the Agreement, and Johnson promised not to disclose confidential information. The covenant was ancillary to or part of the agreement

....
In the pending case, the court of appeals correctly held that . . . the agreement was illusory insofar as it required ASM to provide confidential information and specialized training. . . . There was no promise to provide such training and access after the employee had been terminated. . . . Under the notice provision applicable to the employer, ASM could terminate Johnson immediately and without notice so long as it paid a specified sum to Johnson. The promises to provide confidential information and training to Johnson were therefore illusory at the time the agreement was executed. . . .

.... [W]e hold that a covenant not to compete is not unenforceable under the Covenants Not to Compete Act solely because the employer's promise is executory when made. If the agreement becomes

enforceable after the agreement is made because the employer performs his promise under the agreement and a unilateral contract is formed, the covenant is enforceable if all other requirements under the Act are met. In the pending case, these other requirements were met and, by the time Johnson left ASM, the agreement had become an enforceable unilateral contract because ASM had provided confidential information and specialized training as promised to Johnson, and Johnson had promised in return to preserve the confidences of his employer.

RESULT The Texas Supreme Court reversed the judgment of the court of appeals that ASM should take nothing against Johnson and Strunk and remanded the case to the trial court for further proceedings.

Critical Thinking Questions

1. How would this court have decided this case if ASM had not shared any confidential information or provided any training to Johnson until after he announced his departure and then had quickly shared such information in an attempt to ensure the enforceability of the noncompete?
2. The court held that ASM's agreement to either provide notice of termination or pay an agreed-on sum in lieu of notice was not adequate consideration for the noncompete, because a prior decision interpreted the Covenants Not to Compete Act as requiring that "the consideration given by the employer in the otherwise enforceable agreement must give rise to the employer's interest in restraining the employee from competing," and the noncompete "must be designed to enforce the employee's consideration or return promise." Do you agree with the court's interpretation of the Covenants Not to Compete Act? For example, should an employer be able to extract a binding noncompete in consideration for payment of a bonus? A promotion? A salary increase? If not, why not?

Employers may attempt to prevent other companies from poaching employees. In *Reeves v. Hanlon*,²⁶ the California Supreme Court held that although competition between companies for at-will employees is encouraged, inducing the termination of an at-will employment relationship may be tortious intentional interference with prospective economic advantage, if the new employer engages in "independently wrongful acts" when inducing the employee to join its ranks. The court defined "independently wrongful acts" as acts "proscribed by constitutional, statutory, regulatory, common law, or other determinable legal standard." When the defendants left their former employer, an immigration law firm, they induced six other employees to leave to join their new law practice. The court found that the defendants were liable for damages suffered by Reeves because they had also mounted "a campaign to deliberately disrupt plaintiff's business," including having employees resign without notice, leaving no status reports of outstanding matters or deadlines, destroying the firm's computer files and forms, taking confidential information, and improperly soliciting Reeves's clients.

26. 33 Cal. 4th 1140 (2004).

► ETHICAL CONSIDERATION

Chambers & Owen, Inc. terminated an at-will employee who refused to sign a noncompete that provided he would not work for one of the company's competitors for a period of six months after termination of employment.^a The Supreme Court of Wisconsin dismissed the employee's claim for wrongful discharge after concluding that the company's requirement that he sign the noncompete did not violate public policy. The court noted that signing the agreement would not have prevented Tatge from arguing that its terms were unreasonable if the company tried to enforce it. California courts have reached a different outcome, finding that termination of an employee for refusing to sign an unenforceable noncompete agreement constitutes a wrongful termination in violation of public policy.^b Although it was legal for a Wisconsin employer to fire Tatge for failing to sign the noncompete, was it ethical? Does it matter whether the employer knows the agreement is overbroad?

RECOMMENDATIONS FOR FORMER EMPLOYEES

Employers are often asked to give references regarding former employees to prospective employers. If the employer's reference is not fair and the employer has impugned the individual's reputation, he or she can sue the employer for defamation.

In *Deutsch v. Chesapeake Center*,²⁷ a reverend who was hired as director of an overnight lodging and meeting facility for church groups was terminated as a result of accusations of racism and sexual harassment. When he applied for a position as a church pastor in another community, his former employer told the prospective employer of the charges that had resulted in his termination. The reverend sued his former employer for defamation, but the U.S. District Court for the District of Maryland dismissed his claim, finding that the former employer's statements were protected by a conditional privilege to communicate information concerning a former employee to a prospective employer.

In contrast, in *MacCord v. Christian Academy*,²⁸ the U.S. District Court for the Eastern District of Pennsylvania concluded that a principal's comments regarding a teacher's poor performance during a faculty meeting were not protected by the privilege. The principal had abused the privilege by publishing the defamatory statements to the entire faculty and including allegedly defamatory matter not reasonably believed to be necessary for the purpose of informing the faculty that some teachers' contracts would not be renewed.

Traditionally, defamation law requires publication, meaning that the communicator of the defamatory information must disclose the information to a third party, such as a prospective employer. A few jurisdictions, however, recognize an exception in the employment context. Under the *doctrine of self-publication*, a defamatory communication by an employer to the employee may constitute publication, if the employer could foresee that the employee would be required to repeat the communication, for instance, to a prospective employer. The doctrine is designed to provide a cause of action to the job-seeking employee who is forced to self-publicize a former employer's defamatory statement. Only four states continue to recognize a cause of action for self-publication, and only two states, Iowa and Kansas, have done so in an employment context.²⁹ The majority of the other states have rejected the doctrine for various reasons. First, a number of courts have found that the tort would "encourage employers to curtail communications with employees, and the employees' prospective employers,

for fear of liability." Second, courts have reasoned that the recognition of compelled self-publication defamation could discourage plaintiffs from mitigating damages, by providing them with too much control over the cause of action. Other courts have reasoned that the doctrine of compelled self-defamation conflicts with the employment-at-will doctrine.³⁰

An employer may be protected against liability for defamation claims by a former employee, if the employee signs a waiver and release form releasing potential claims. In *Bardin v. Lockheed Aeronaautical Systems Co.*,³¹ Bethany Bardin had worked for Lockheed from 1987 until 1993. After she was laid off by the company, she applied for a job as a police officer with the Los Angeles Police Department. As part of the application process, she signed a "Release and Waiver" form, which authorized a background investigation and provided that former employers were cleared "from any and all liability for damage of whatever kind." The police department notified Bardin that her application was suspended because she had failed to disclose employment problems at Lockheed, including a complaint related to her drinking. Bardin sued Lockheed, but the court found that the language in the waiver and release form protected Lockheed from liability.

There is a growing trend toward statutory protection for employers that disclose information about a former employee's performance. The most basic statutes provide that an employer is immune from suit if it provides information about an existing or former employee to a prospective employer, although some statutes limit immunity to the disclosure of "job performance information."³²

Nevertheless, employers should be cautious when giving recommendations for former employees. A growing number of job applicants are hiring third-party companies to investigate what their former employers are saying about them.³³ Companies should have a written policy outlining who may provide references and what information can be provided to companies seeking a reference. Some companies obtain a standard release, giving express permission to provide references, from all departing employees. Although fear of a defamation claim may tempt an employer to give an overly positive recommendation, this is not prudent. An employer giving an untrue assessment of a former employee may be liable to the new employer who relies

on the recommendation and also to third parties physically harmed as a foreseeable result of the recommendation.³⁴

EMPLOYER TESTING AND SURVEILLANCE

Employers often administer tests to employees in an effort to increase productivity, manage legal risks, and cut costs. Such testing and surveillance activities, however, may conflict with an employee's right to privacy.

DRUG TESTING

Many employers have adopted drug-screening programs for their employees and applicants to avoid the decreased productivity, quality control problems, absenteeism, on-the-job accidents, and employee theft that can result from drug and alcohol abuse. According to the American Management Association, 62 percent of companies in the United States test their employees for drugs.³⁵ Some employers use drug testing in conjunction with a comprehensive drug program that provides education and assistance to an employee with a drug or an alcohol problem.

The issue of drug testing generally comes before the courts in the context of discipline or discharge of an employee for refusing to take a test. An employee may challenge a drug test in many ways. The employee may claim that (1) the test breached his or her employment contract; (2) there was no justification for the test; (3) it violated the public policy that protects privacy; (4) he or she was defamed by false accusations of drug use based on an erroneous test; (5) he or she suffered emotional distress, especially if the test result was in error; or (6) the testing disproportionately affected employees of one race or gender and therefore was discriminatory.

Whether testing will be deemed permissible in a particular situation depends on four factors: (1) the scope of the testing program, (2) whether the employer is a public or private employer, (3) any state constitutional guarantees of a right to privacy, and (4) any state statutes regulating drug testing.

Scope of Testing Program

The first major factor, scope, concerns who is being tested: all employees (random testing); only employees in a specific job where the employer believes there is a legitimate job-related

need (for example, nuclear power plant employees); groups of employees (for example, all employees in one facility because there is a general suspicion of drug use within that group); or specific individuals who are believed to be using drugs. The smaller the group to be tested and the more specific the reason for testing, the more likely it is that a court will uphold the test. Random testing is the most difficult to defend.

Public Employees

Because public employees are protected by the U.S. Constitution's Fourth Amendment prohibition against unreasonable searches and seizures, and by the right to privacy, there are greater limits on testing public employees than on testing private-sector employees. It has long been recognized that urine tests and blood tests are a substantial intrusion upon bodily privacy and are therefore searches subject to regulation when imposed on public employees. With some exceptions, there is no federal constitutional limitation on drug testing in the private sector.

In *Skinner v. Railway Labor Executives' Association*,³⁶ the U.S. Supreme Court held that railroads can be required to test public employees involved in a major train accident and have the authority to test employees who violate certain safety rules. The Court reasoned that any intrusion upon individual privacy rights in the railroad context was outweighed by the government's compelling interest in public and employee safety.

The Supreme Court also upheld mandatory drug testing of U.S. Customs Service employees in line for transfer or promotion to certain sensitive positions involving drug interdiction or the handling of firearms.³⁷ Although there was no perceived drug problem among Customs employees, the Court held that the need for national security and the extraordinary safety hazards attendant to the positions involved justified the program.

In *Knox County Education Association v. Knox County Board of Education*,³⁸ the U.S. Court of Appeals for the Sixth Circuit held that subjecting public school teachers to drug and alcohol testing did not violate their constitutional right to privacy. Of primary importance in the court's decision was the unique role teachers play by accepting *in loco parentis* (in place of the parents) obligations to ensure the safety of children and to serve as role models. The court commented that "teachers must expect with this extraordinary responsibility, they will be subject to scrutiny to which other civil servants or professionals might not be subjected, including drug testing."³⁹

Constitutional Protection

The right to privacy guaranteed by the U.S. Constitution protects against invasions of privacy by public actors (i.e., state and federal governments or agencies), but does not protect against invasions by private (i.e., nongovernmental) actors. Similarly, the Fourth Amendment ban on unreasonable searches and seizures applies only to governmental activity. Many state constitutions also guarantee the right to privacy, however, and some states extend this right to private invasions of privacy.

In *Luedtke v. Nabors Alaska Drilling, Inc.*,⁴⁰ the Alaska Supreme Court held that the right to privacy in the state constitution applied only to governmental intrusions, not to alleged violations by private entities. Therefore, the state constitution did not shield its citizens from drug tests by a private employer. Moreover, even if a right to privacy existed, the company's interest in maintaining the health, safety, and welfare of its workers would outweigh that privacy interest.

In contrast, the California Court of Appeal held that a pupillary-reaction test given to all employees of Kerr-McGee Corporation at its chemical plant in Trono, California, might violate the California Constitution's right to privacy, depending on the intrusiveness of the test and the employer's safety needs.⁴¹ The test consisted of shining a light in the person's eye and observing how much the pupil contracted. Although the court acknowledged that the pupillary test was less intrusive than urine, blood, or breath tests, it held that the trial court needed more facts to determine just how intrusive the test was.

Statutory Regulation

Many states have enacted legislation regarding drug testing of private employees. Such legislation often sets forth the notice procedures an employer must follow before asking an employee to submit to a drug test. In Vermont, for example, before administering the test, the employer must give the employee a copy of a written policy describing the circumstances under which persons may be tested, the drugs that will be screened, the procedures involved, and the consequences of a positive result.

A number of states have comprehensive drug- and alcohol-testing laws that require reasonable suspicion or probable cause before an employer may test. The requirements for establishing reasonable suspicion or probable cause vary from state to state. For instance, Connecticut's law permits testing when "the employer has reasonable suspicion that the employee is under the influence of drugs or alcohol

which adversely affects or could adversely affect such employee's job performance."⁴² Other states take the opposite approach and encourage fair and consistent testing in order to promote drug-free workplaces. For example, Alabama permits discounted workers' compensation insurance premiums for employers that follow fair testing procedures, including random testing.⁴³

Although private employers, as well as public employers, may face some limits on implementing a drug-testing program, it should be noted that employers have the right to make and enforce rules prohibiting drug use or possession on work premises, as well as rules prohibiting employees from being under the influence of drugs while at work. When an employee exhibits visible signs of intoxication or impairment, or inadequate performance, the employer may take disciplinary action. Because of the inadequacy of drug tests and the uncertainty about the scope of employees' rights, the employer may wish instead to develop programs that provide assistance and drug education, and to counsel employees about the performance problems that drug abuse can cause.

HEALTH SCREENING AND GENETIC TESTING

Health screening and genetic testing have become important issues and raise many of the same questions that arise in the context of drug testing. Genetic testing predicts whether a person has a genetic predisposition for developing a certain disease, although the accuracy of such tests is unproven.⁴⁴ Employers may be motivated to perform genetic tests to avoid hiring workers they believe are likely to take sick leave, resign, or retire early because of health reasons, or to reduce costs by lowering absenteeism rates and health insurance premiums kept high by unhealthy workers.⁴⁵ A survey of U.S. companies found that 15 percent of the surveyed companies inquired into their employees' family medical history.⁴⁶

In February 2000, President Bill Clinton signed an executive order prohibiting the federal government from using

genetic testing in hiring or promotion decisions.⁴⁷ Public employees may also be able to sue for violation of their constitutional right to privacy, if a public employer tests them for medical conditions without their knowledge or consent.⁴⁸

In May 2008, Congress passed the Genetic Information Nondiscrimination Act, which among other things, prohibits employers from using genetic information to make decisions about hiring, firing, or compensation. Employers who violate the Act can be fined as much as \$300,000 for each violation. The Act also prohibits health insurance companies from using genetic information to deny benefits or raise premiums for individual policies (it is already illegal to exclude individuals from a group plan because of their genetic profile). The employment measure will become effective in 2010, and the health insurance measure will become effective in 2009. Although Nancy Wexler, president of the Hereditary Disease Foundation, praised the Act for giving people with hereditary diseases a weapon and a tool, she also noted, "It's very hard to prove why somebody is firing you."⁴⁹

Genetic testing may violate Title VII when employees or applicants are singled out for testing based on race or gender.⁵⁰ The Americans with Disabilities Act (ADA) may also provide employees with a cause of action for genetic testing. A person is protected by the ADA only if he or she has a disability. The ADA defines "disability" as "(A) a physical or mental impairment that substantially limits one or more of the major life activities . . . ; (B) a record of such an impairment; or (C) being regarded as having such an impairment."⁵¹ Since 1995, the Equal Employment Opportunity Commission (EEOC) has argued that genetically predisposed individuals possess an "impairment" under section C and thereby qualify for ADA protection.⁵²

At least thirty-four states have enacted laws outlawing genetic discrimination in the workplace.⁵³ These laws generally fit within one of three types of legislation: (1) laws prohibiting discrimination in employment based on genetic characteristics, (2) laws prohibiting employers from requir-

ing applicants or employees to undergo genetic testing, and (3) laws banning discrimination based on genetic test results or the refusal to take a genetic test.⁵⁴ Private employers may also have liability under state constitutions that provide employees protection from invasions of privacy.

Although efforts to conduct genetic testing may lead to suits for invasion of privacy, an employer may also be concerned that its failure to use genetic testing could result in possible tort liability under theories of employer negligence. Because employers have a duty of good faith and due care to prevent unnecessary work-related injuries, an employer could be sued by a third party who is injured by an employee with an undiscovered genetic condition that caused a lapse of consciousness or incapacity. An employee who is injured as a result of an undiscovered genetic condition might also sue his or her employer for failure to implement genetic testing.

Where employees are exposed to dangerous chemicals or conditions as part of their jobs, regular health monitoring is encouraged, and in some instances, it is required in standards adopted by the Occupational Safety and Health Administration.⁵⁵ Presumably, even where regulations do not require monitoring, an employer may choose to require participation in the health monitoring program as a condition of employment in positions affected by hazardous exposure.

POLYGRAPH TESTING OF EMPLOYEES

Polygraph testing is another area where an employee's right to privacy may limit an employer's investigative rights. The Employee Polygraph Protection Act of 1988 (EPPA)⁵⁶ generally makes it unlawful for employers to (1) ask an applicant or employee to take a polygraph exam or other lie detector test, (2) rely on or inquire about the results of a lie detector test that an applicant or employee has taken, (3) take or threaten to take any adverse action against an applicant or employee because of a refusal to take a lie detector test or on the basis of the results of such a test, or (4) take or threaten to take any adverse action against an employee or applicant who has filed a complaint or participated in a proceeding relating to the polygraph law.

These rights cannot be waived by the employee in advance. For example, a federal district court held that a bartender could still sue for violation of the EPPA, even though she had signed a release form stating that her employer had reasonable suspicion of theft before the employer requested

that she take a polygraph test.⁵⁷ The court held that an employee can waive rights or procedures under the EPPA, only pursuant to a written settlement of a pending lawsuit.

The EPPA does not completely ban the use of polygraph exams. Employers may test employees who are reasonably suspected of conduct injurious to the business, as well as applicants or employees in certain businesses involving security services or the handling of drugs. In addition, the EPPA does not restrict federal, state, or local government employers from administering polygraph exams.

A majority of states, however, have laws that restrict the use of polygraph examinations and require additional safeguards when these tests are administered. For example, twenty-five states and the District of Columbia have statutes that prevent employers from requesting that an applicant or employee take a lie detector test as a condition of employment.⁵⁸ Even when lie detector tests are permitted, no question should be asked during the test that could not lawfully be asked on an application form or during an interview.

EMPLOYEE SURVEILLANCE

Companies check up on their employees by using a variety of strategies, including listening in on cellphones, inspecting computer files, reading e-mails, and conducting video surveillance (see “View from Cyberspace” for a discussion of electronic surveillance by companies). Companies monitor their employees for several reasons. Regulated industries, such as telemarketing, may conduct surveillance to show their compliance with regulations. Another

reason companies monitor is to limit their legal liability (for example, employees unwittingly exposed to offensive material in a colleague’s e-mail may sue the employer for allowing a hostile workplace environment). Employers also use surveillance to promote security, including to protect trade secrets. Finally, employers monitor employees out of concern that misuse of e-mail and Internet access can lead to lost productivity.

Employers have a legitimate interest in monitoring their employees, but under certain circumstances, surveillance may transgress the employees’ privacy rights. The watershed case in this area was *O’Connor v. Ortega*.⁵⁹ In that case, the U.S. Supreme Court ruled that a public employee may, in certain circumstances, enjoy a reasonable expectation of privacy in the workplace. The employee’s privacy interest, however, must be balanced by the “operational realities” of the workplace. Since *Ortega*, lower courts have looked to (1) whether the employee was provided an exclusive working space, (2) the nature of the employment, and (3) whether the employee was on notice that parts of the workplace were subject to employer intrusions. For example, in *Vega-Rodriguez v. Puerto Rico Telephone Co.*,⁶⁰ the U.S. Court of Appeals for the First Circuit held that governmental security operators, sitting in an open, undifferentiated work area, who monitored computer banks to detect alarm-system signals, had no reasonable expectation of privacy. As a result, the public employer’s soundless video surveillance of the workplace did not violate the employees’ Fourth Amendment rights.

In the following case, the court considered whether an employer may consent to a search of a company-owned computer used by an employee, despite the employee’s expectation of privacy in his office.

A CASE IN POINT

CASE 12.3

UNITED STATES V. ZIEGLER

UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT
474 F.3d 1184 (9th Cir. 2007).

SUMMARY

FACTS Frontline Processing’s Internet service provider tipped off the FBI that a Frontline employee had accessed child pornography from a work computer, and the FBI immediately contacted Frontline’s information technology (IT) department, which investigated further. The IT employees determined that Jeffrey Ziegler, Frontline’s director of operations, had searched for and accessed child pornography from his work computer, and they started monitoring his Internet activity through his browser’s cache files, where they found evidence of child pornography. Frontline routinely monitored workplace computers, and its employees were aware of its monitoring capabilities.

Members of the Frontline IT department obtained a key to Ziegler’s office from the chief financial officer, entered the office, and made two copies of Ziegler’s computer hard drive (there was some

CONTINUED

dispute over whether the FBI directed the Frontline employees to act, or whether they did so on their own or at the direction of the CFO). Frontline's corporate counsel turned over all the materials to the FBI and indicated that the company would comply fully with the investigation.

In his pretrial motions, Ziegler argued that the FBI obtained the materials without a warrant and, thus, conducted an illegal search that violated the Fourth Amendment. Even though the district court found that the FBI had directed the company to enter Ziegler's office and make the copies, it denied his motions, explaining that Ziegler had no expectation of privacy in "the files he accessed on the Internet."

Ziegler entered into a plea agreement, but reserved his right to appeal the district court's denial of his pretrial motions.

ISSUES PRESENTED Does an employee have an expectation of privacy in his workplace computer sufficient to suppress images of child pornography sought to be admitted into evidence in a criminal prosecution? If so, could the employer provide valid consent to a search of the employee's computer?

SUMMARY OF OPINION On appeal, Ziegler argued that the district court had erred in finding that he did not have a legitimate expectation of privacy in his office and computer. He compared the workplace computer to the desk drawer or file cabinet given Fourth Amendment protection in cases such as *O'Connor v. Ortega*. The government argued that Ziegler did not have an objectively reasonable expectation of privacy.

The U.S. Court of Appeals for the Ninth Circuit began its analysis by noting that the Fourth Amendment protects people, not places, and a criminal defendant may invoke the protections of the Fourth Amendment only if he can show that he had a legitimate expectation of privacy in the place searched or the item seized. A legitimate expectation of privacy is established where there is "(1) a subjective expectation of privacy; and (2) an objectively reasonable expectation of privacy." The first element was established in this case because Ziegler locked his office door and used a password on his computer. The court concluded that the second element was also established, because employees of private-sector employers have some expectation of privacy in their offices.

Since Ziegler had an expectation of privacy in his office, the remaining question was whether the search of his office and the copying of his hard drive were "unreasonable" within the meaning of the Fourth Amendment. Since this search was conducted without a warrant, it was "unreasonable" unless it fell within one of the narrow exceptions to the warrant requirement. Although a search of private property without a warrant is generally unreasonable, if a third party with "common authority over or other sufficient relationship to the premises or effects sought to be inspected" provides consent, a warrant may not be necessary.

In this case, the court found that even where an employee believes that his private office will not be subject to a search without his consent, the employer may provide the necessary consent to search the employee's office. Furthermore, the court found that the computer was not personal property, despite Ziegler's password, because company administrators retained "complete administrative access," regularly monitored Internet traffic from company computers, and informed employees of the company's monitoring efforts. Thus, Frontline could consent to a search of Ziegler's office and work computer, and the search did not violate the Fourth Amendment.

RESULT The U.S. Court of Appeals for the Ninth Circuit affirmed the lower court's decision denying Ziegler's pretrial suppression motion. The computer files were admissible.

VIEW FROM CYBERSPACE

Big Brother Is Reading Your E-Mail and Monitoring Your Actions

Employee use of the Internet, e-mail, instant messaging (IM), and employee blogs raises a number of issues for employers. From a productivity standpoint, employers are concerned that employees waste company time by using the Internet for personal reasons during working hours. In addition, employees' use of the Internet, e-mail, IM, and blogs may subject their employers to liability, such as potential discrimination claims resulting from sexually explicit statements or ethnic slurs in e-mails and blogs, and copyright and trademark violations due to unauthorized downloading of third-party content. Employees' personal use of the employer's computers may also disrupt and endanger the employer's business by allowing for easy, instantaneous, and unauthorized transfer of trade secrets.^a

As a result of these concerns, 84 percent of companies surveyed by the American Management Association (AMA) have formal written policies regulating the use of their e-mail systems by employees,^b 66 percent monitor employee Internet use, 43 percent monitor employee e-mails, and 58 percent have fired an employee for improper use of the Internet or e-mail while at work.^c In 2008, nine Washington, D.C. government employees were fired and thirty-two were disciplined for viewing a pornographic website thousands of time over the course of a year.^d In 2004, PNC Bank in New Jersey fired two women for sending sexually explicit jokes by e-mail at work.^e

Although the AMA survey found that less than 25 percent of participating companies had a written policy regarding corporate or personal blogs,

a number of companies, including Delta Airlines, Google, Microsoft, Wells Fargo, and Starbucks, have also fired employees for inappropriate blogging. In most of these cases, the employer was concerned about the widespread circulation of company information, whether it be corporate trade secrets or the e-mail addresses of top executives. Because the employees were employed at will, posting statements that were critical of their company or coworkers in a personal blog was enough to get them fired.^f As a result, some employees who blog about work-related items do so anonymously under a pseudonym. Even that may not prevent termination in some cases, however, as Nintendo employee Jessica Zenner learned, when she was terminated after her bosses linked her to an "anonymous" blog criticizing several of her coworkers.^g

The AMA survey also indicates that employer surveillance goes well beyond employee use of the Internet. Fully 45 percent of employers monitor time spent on the telephone and track phone numbers called, while 16 percent actually record employees' phone conversations. Employers have recently begun to use global positioning system (GPS) technology to track company vehicles, cellphones, and employee identification cards. Surveillance of this sort is still in its infancy, but 8 percent of participating employers track the location of company vehicles and 3 percent monitor employees movements through their cellphones.^h Employer surveillance of the Internet and e-mail is more common in office settings, whereas GPS is used more frequently in service industries where

employers want to verify that employees are going directly to the customer without detours that waste company resources.ⁱ

Most courts have upheld an employer's right to monitor and regulate employees' workplace movements, e-mail, and use of computers on the grounds that the employees could not prove that they had a reasonable expectation of privacy when using company-owned equipment.^j In most states, the employer is not even required to notify employees that they are being monitored.^k In 2004, the U.S. Court of Appeals for the Third Circuit ruled that an employer may read and access employees' e-mails without violating the Electronic Communications Privacy Act, which bars the interception of any electronic communication or the unauthorized access of stored communications, as long as the employer reads only e-mail messages that were already sent and stored on the company's own e-mail system.^l In 2005, a New Jersey appellate court went even further by holding that an employer was negligent, when it failed to monitor the Internet sites an employee was visiting after supervisors became aware that the employee had a history of visiting pornographic websites on the job.^m

To avoid problems and resolve conflicts with employees, companies should establish policies related to employees' use of the Internet, e-mail, IM, and blogs and the employer's monitoring of employees' computers, cellphones, and other work equipment; employees should also be trained in the proper use of this equipment. The policies should prohibit the sending of unlawful,

CONTINUED

offensive, or defamatory statements, and unauthorized disclosures of trade secrets, via the corporate e-mail system. Employees should also be informed that they have no expectations of privacy when using the employer's electronic resources, vehicles, and other equipment and that the company has the right to monitor use and content without notice. In addition, companies should establish security measures and educate their employees about the policies and the manner in which the employer will enforce them.

RESPONSIBILITY FOR WORKER SAFETY

Both federal and state laws require employers to provide a reasonably safe workplace.

OCCUPATIONAL SAFETY AND HEALTH ACT

The Occupational Safety and Health Act of 1970 (the OSH Act)⁶¹ was enacted to require employers to establish safe and healthful working environments. The federal agency responsible for enforcing the provisions of the OSH Act is the Occupational Safety and Health Administration (OSHA). This agency is also authorized by Congress to regulate additional workplace issues, including exposure to hazardous chemicals, protective gear, fire protection, and workplace temperatures and ventilation. About half of the states have enacted similar legislation and established enforcement agencies at the state level. Typically, in states with approved employment health and safety programs, OSHA defers to the state agency for enforcement activities.

An employer governed by the OSH Act has a general duty to provide a safe workplace, which includes the obligation

to abate workplace hazards that are causing or are likely to cause death or serious physical harm to employees.⁶² Conditions that are obviously dangerous or are regarded by the employer or other employers in the industry as dangerous are considered to be *recognized hazards*. What constitutes a recognized hazard is not entirely clear. The term's reach is broad and includes anything from sharp objects, to radiation, to repetitive stress injuries.⁶³

In March 2008, OSHA announced that it had sent letters to approximately 14,000 employers that needed to correct workplace safety and health hazards.⁶⁴ The letters directed the employers to various resources available through OSHA, including assistance from OSHA's free on-site consultation program for employers with 250 or fewer employees. OSHA identified the employers based on data reported in a 2006 OSHA survey of injuries resulting in lost workdays and

63. Employers have an obligation under the General Duty Clause, 29 U.S.C. § 654 (Section 5(a)(1)), to keep a workplace free from recognized serious hazards, including ergonomic hazards; see <http://www.osha.gov/SLTC/ergonomics/faqs.html>. OSHA also produces Safety and Health Information Bulletins (SHIBs) to help identify hazards associated with specific industries or practices; see <http://www.osha.gov/dts/shib/index.html>.

64. OSHA, *14,000 High Rate Workplaces Receiving OSHA Letters* (Mar. 2008), available at <http://www.osha.gov/as/opa/foia/hot-14.html>.

61. Pub. L. No. 91-596, 84 Stat. 1590 (1970) (codified as amended at 29 U.S.C. §§ 651–678).

illness rates at 80,000 workplaces. The identified employers had 5.4 or more injuries and illnesses resulting in lost workdays for every 100 workers, substantially higher than the national average of 2.3 incidents per 100 workers.

In general, OSHA inspectors are allowed to enter and inspect a workplace at any reasonable time, without prior notice. During the inspection, the OSHA investigator may review company records, check for compliance with the relevant OSHA standards, inspect fire-protection and other safety equipment, examine the company's safety and health-management programs, interview employees, walk through the facility, and employ other reasonable investigative techniques. The inspection should not unreasonably disrupt the operations of the employer's establishment.

When the inspection has been completed, the inspector meets with the employer and the employee representative, if any, to review the results of the inspection and, if appropriate, issue a written citation for violations. There are five types of violations: (1) willful or repeated violations, which are deliberate or intentional, for which a fine of at least \$5,000 and up to \$70,000 may be imposed for each violation; (2) serious violations, which have a substantial likelihood of resulting in death or serious bodily harm, for which a penalty of up to \$7,000 per violation must be imposed; (3) nonserious violations, which present hazards that are not likely to cause death or serious bodily harm, for which a fine of up to \$7,000 per violation may be imposed; (4) "failure to correct" violations, for which civil penalties of up to \$7,000 may be assessed for each day a violation continues beyond the prescribed abatement date; and (5) *de minimis* (that is, unimportant) violations, for which no notice is posted and no penalty is imposed. Also, when a willful violation causes the death of an employee, or an employer provides false information to OSHA, inspectors may decide to criminally prosecute the employer by sending the case to the Department of Justice (see Chapter 15).

For purposes of issuing violations, the U.S. Court of Appeals for the Fifth Circuit has held that the hazardous condition is the proper unit of prosecution, rather than the number of employees exposed to the hazardous condition.⁶⁵ Thus, if eighty-seven employees are threatened by a chemical explosion, one violation (the explosion), rather than eighty-seven (the number of individuals exposed to the risk of heat, burns, and flying debris as a result of the explosion), may be cited. An individual employee, however, can

be a unit of prosecution when the violation is unique to the employee, such as a failure to train the employee.⁶⁶

If OSHA finds a violation, the employer is required to remedy the problem immediately. If remedial action is not taken, OSHA will seek a court order to ensure compliance. The employer may either settle the violation or seek review of the OSHA decision by the Occupational Safety and Health Review Commission. OSHA may penalize egregious violations by imposing a separate fine for each violation, rather than an overall fine for a group of violations. Additionally, evidence that shows a clear violation of OSHA standards can sometimes support punitive damages.⁶⁷

The aggregation of multiple serious violations can result in significant fines. In 2005, OSHA issued a record fine of more than \$21 million against BP Products North America, Inc., almost twice the next largest OSHA fine ever issued. The citation included 301 willful violations of worker safety laws arising out of an explosion at a giant BP oil refinery in Texas City, Texas, that killed 15 workers and injured 180 others.⁶⁸

In August 2007, OSHA imposed a fine of \$2.78 million against Cintas Corporation, the nation's largest supplier of uniforms.⁶⁹ The penalty, which was more than four times any previous safety penalty leveled against a service-sector company, was imposed as a result of an accident in the company's Tulsa plant, where a worker died after being pulled into an industrial dryer by a conveyor belt. In an investigation following the accident, OSHA found forty-six violations at the plant, including a lack of proper procedures to shut down equipment when clearing jammed clothing and failure to protect employees from being pinned by the conveyor belt.

OSHA also requires employers to maintain certain records, including the OSHA Form 300, which lists and summarizes all work-related injuries and illnesses. (Certain industries, such as retail, finance, and insurance, are exempt from this record-keeping requirement.) A summary of these records must be posted annually at the job site. In addition, employers must post in a conspicuous place (1) OSHA's official Job Safety Poster; (2) any OSHA citations for violations; and

(3) notices of imminent danger to employees, including exposure to toxic substances.

State Analogues to OSHA

The OSH Act encourages states to create their own job safety and health programs. As a state program meets various OSHA benchmarks, the state can gain more control over its own health and safety regulation. When a state program has met all of OSHA's requirements, OSHA may give "final approval" and relinquish its authority to regulate occupational safety and health matters covered by that program. Only a state program that is "at least as effective" as comparable federal standards will gain this final approval from OSHA. The state program may also govern hazards not addressed by federal standards. Currently, OSHA has relinquished its authority to regulate occupational safety and health matters covered by fifteen states, and ten other states have some form of occupational health and safety program.⁷⁰

Where state regulatory programs exist, employees may file formal complaints regarding workplace safety with either the OSHA regional administrator or the appropriate state program. In addition, anyone finding deficiencies with the state program itself may file a complaint with the regional administrator. OSHA will investigate any such complaints and will require the state to take corrective actions when necessary.

Federal Criminal Penalties

OSHA can impose criminal penalties in a limited number of circumstances, including when a willful violation of safety laws causes the death of an employee.⁷¹ Under the OSH Act, this is a misdemeanor that is punishable by a maximum penalty of six months in jail and a \$10,000 fine. In this context, "willful" means that the employer demonstrated either "intentional disregard" of or "plain indifference" toward safety laws. Providing OSHA with false information is also a misdemeanor punishable by a maximum of six months in jail and a \$10,000 fine.⁷²

OSHA has been criticized for rarely seeking these federal criminal penalties. According to a study by the *New York Times*, between 1982 and 2002 more than 170,000 American workers were killed on the job, but fewer than 25 percent

70. OSHA, *Frequently Asked Questions About State Occupational Safety and Health Plans*, available at <http://www.osha.gov/dcsp/osp/faq.html>.

71. See 29 U.S.C. § 666.

72. The OSH Act also makes it a crime for anyone to provide advance notice of a surprise OSHA inspection. This is punishable by a maximum of six months in jail and a \$1,000 fine.

of these deaths were investigated. Federal and state regulators found that 2,197 of the investigated deaths were caused by "willful" safety violations and that 1,798 of those willful violations were eligible for prosecution. Of those 1,798 willful violations, however, only 104 were prosecuted.⁷³

In recent years, OSHA has attempted to address this criticism. In a response to a critical *New York Times* editorial, the Assistant Secretary of Labor for Occupational Safety and Health in the Bush administration reported that OSHA has proposed more than \$750 million in penalties and made fifty-six criminal referrals to the Justice Department since 2003—"more than any other administration in history."⁷⁴ Critics note, however, that OSHA has issued fewer significant standards under George W. Bush than under any previous president and has killed dozens of existing and proposed regulations, as well as delayed the adoption of others. The only significant health standard it has issued was ordered by a federal court.⁷⁵

State Criminal Penalties

Along with the federal criminal penalties under the OSH Act, many states enforce workplace safety laws independently of OSHA by empowering state prosecutors to charge employers with a broad range of crimes, including manslaughter or reckless homicide, when a violation results in an employee's death. In addition, some states have increased the severity of penalties for workplace safety violations. Recent California legislation, for example, provides increased penalties and prison terms for willful violations causing an employee's death or prolonged bodily impairment. Under this law, workplace safety violations can be prosecuted as felonies with fines of up to \$1.5 million for a corporation or \$250,000 for an individual.⁷⁶

In April 2006, a California employer pleaded guilty to two misdemeanors and two felonies associated with the death of an employee. The employee had been killed after being pulled into an improperly guarded portion of factory machinery. As a result of the guilty plea, the employer was fined \$130,000, required to pay \$120,000

for worker safety training, and sentenced to thirty-six months on probation.

Voluntary Compliance Measures

Along with concerns about the small number of criminal prosecutions, some have criticized OSHA for recent policies that favor voluntary employer compliance over new mandatory regulations.⁷⁷ These voluntary compliance measures reflect OSHA's vow to limit new rules and roll back what it considered cumbersome regulations that imposed unnecessary costs on businesses and consumers.⁷⁸ Some industries have applauded these efforts, but critics say the voluntary focus and reduced regulatory guidance have made OSHA less effective. In response, Congress has made several attempts to change OSHA's current policies. For example, in April 2008, the House Education and Labor Committee approved proposed legislation that would require OSHA to issue new regulations on combustible dust, a recommendation made by the U.S. Chemical Safety Board more than a year earlier.

LIABILITY FOR TERRORIST ATTACKS

As a result of the terrorist attack on the World Trade Center on September 11, 2001, OSHA has encouraged employers to implement emergency action plans to ensure employee safety in the event of another terrorist attack.⁷⁹ OSHA recommends that employers have plans for evacuation, anthrax risk management, and tightened security at building entrances and exits. As of 2004, 43 percent of the businesses surveyed by the American Management Association had implemented such a plan.⁸⁰ Some employers, such as the U.S. military, have terminated employees for refusing to cooperate with such plans.⁸¹

TORT LIABILITY FOR VIOLENCE IN THE WORKPLACE

Employers also face potential liability for violence in the workplace perpetrated by employees or their former lovers or spouses. A survey of security professionals for *Fortune*

1000 companies revealed that workplace violence was the most significant security concern for U.S. businesses.⁸² Workplace violence is the third leading cause of fatal occupational injuries in the United States,⁸³ resulting in three deaths daily and thousands of injuries yearly, as well as costing employers \$36 billion annually.⁸⁴

A survey of workplace violence prevention, conducted in 2005, found that over 70 percent of businesses surveyed had a crisis program or policy to address workplace violence; 72 percent of the establishments, employing 91 percent of workers, had at least one form of security—either security staff, physical security (such as locked entries), or electronic security.⁸⁵ To help prevent domestic violence from spilling over into the workplace, some companies hold seminars on domestic-violence issues on company time, provide a twenty-four-hour telephone counseling service for employees and their partners, and tap the phones of women who fear an attack and provide them with escorts to and from parking lots. Sometimes, the employer seeks restraining orders in its name to keep alleged abusers from potential victims' work sites.⁸⁶

Once an employer is informed about the risk of violence or takes an interest in the case, it exposes itself to liability for negligence if it fails to take reasonable steps to prevent injury. For example, in 1995, both the employer of a woman killed in her Houston office by a former boyfriend and the office-building manager agreed to pay more than \$350,000 to settle a case brought by the woman's family. The woman had told them that the former boyfriend was subject to a restraining order and that she feared he would kill her. According to her mother, "They didn't believe her story."⁸⁷

In contrast, in *Jarrell v. Englefield*,⁸⁸ the Ohio Court of Appeals did not hold a gas station/convenience store operator responsible when a cashier was murdered at one of its stores. The court found that the company did not know of the

existence of a dangerous condition or of a high probability that an employee would be injured there, because there was no history of violence at the store. In addition, the store contained security devices (including a closed-circuit camera, a silent alarm, and signs indicating there was a camera), and the employee had been trained in handling himself during a robbery. Thus, the court concluded that the employer had taken adequate measures to protect its employees.

WORKERS' COMPENSATION

State workers' compensation statutes provide coverage of income and medical expenses for employees⁸⁹ who suffer work-related accidents or illnesses.⁹⁰ The statutes are based on the principle that the risks of injury in the workplace should be borne by industry. The system is no-fault, and an employee is entitled to monetary benefits from the employer, regardless of the level of safety in the work environment and the degree to which the employee's carelessness contributed to the incident. Workers receive medical treatment and benefits sooner and with more certainty, as a trade-off for receiving smaller total compensation than civil litigation might bring.

The amount of workers' compensation received by an employee is determined by a definite schedule, based on the employee's loss of earning power. The usual provision is for payment of a specified amount at regular intervals over a definite period of time. In most cases, benefits include medical, surgical, hospital, nursing, and burial services in addition to payment of compensation.⁹¹ Workers' compensation can be provided through (1) self-insurance, (2) insurance purchased through a state fund, or (3) insurance purchased through a private company.

Generally, workers' compensation benefits paid by the employer are the employee's sole remedy for workplace injuries. Some courts have recognized exceptions to this general rule, however, and allow employees to sue employers in tort for their injuries, in addition to collecting workers' compensation, for the following: (1) non-physical injuries resulting from the tort of intentional infliction of emotional distress; (2) mental distress, indignity, or loss of wages or promotion opportunities due to sexual harassment; (3) injury to reputation caused by an employer's defamatory statements; and (4) both physical

and nonphysical injuries as a result of an employer's intentional tort or misconduct.⁹²

For example, the New Jersey Supreme Court held that an employer's intentional removal of a safety device from a machine was an intentional wrong that would remove the employer's immunity from a tort suit.⁹³ In contrast, a New Jersey appellate court dismissed a suit brought on behalf of a security guard killed during a robbery, holding that the dangers faced by security guards did not amount to a "substantial certainty" that injury would occur, so as to satisfy the intentional tort exception to the workers' compensation exclusive remedy.⁹⁴

MINIMUM WAGE, OVERTIME, AND CHILD LABOR

The Federal Fair Labor Standards Act (FLSA),⁹⁵ enacted in 1938 and amended many times thereafter, was established primarily to regulate the minimum wage, overtime pay, and the use of child labor. Many, if not all, states have established wage and hour regulations as well. In general, when federal and state laws vary, employers must abide by the stricter law. Because of the wide variance in state laws, this discussion focuses on federal law.

WHO IS COVERED

The FLSA applies to employees who individually are engaged in interstate commerce, or in the production of goods for interstate commerce, or who are employed by employers of any size that participate in interstate commerce, or in the production of goods for interstate commerce.

The FLSA does not apply to independent contractors. Proper characterization of workers as employees or independent contractors can be hotly contested. Chapter 5 outlines the factors that courts use in deciding whether a worker is an employee or an independent contractor.

Who Is Liable for Violations

Individuals as well as corporations may be held liable for violations under the FLSA. In *Herman v. RSR Security Services*,⁹⁶ the U.S. Court of Appeals for the Second Circuit

89. 82 AM. JUR. 2D *Workers' Compensation* §§ 62, 58, 73, 74 (2008).

90. *Laidlow v. Hariton Mach. Co.*, 170 N.J. 602 (2002).

91. Fisher v. Sears, Roebuck & Co., 363 N.J. Super. 457 (App. Div. 2003).

92. 29 U.S.C. §§ 201–219.

93. 172 F.3d 132 (2d Cir. 1999).

ruled that Murray Portnoy, a principal in a labor relations firm, exercised enough control over a security company's employees to be held liable as an employer for violations of the FLSA's minimum-wage, overtime, and record-keeping requirements. Portnoy partially owned the security company, funded its start-up costs, and chaired its board of directors. The court affirmed a judgment of \$160,000 against Portnoy.

In contrast, in *Luder v. Endicott*,⁹⁷ the U.S. Court of Appeals for the Seventh Circuit held that individual employees of a state government could not be liable under the FLSA in an action brought by hourly employees at a Wisconsin state penitentiary alleging that the warden and other supervisors violated the FLSA by altering time sheets and not compensating them for their work. The court ruled that the plaintiffs, who were suing the supervisors in their individual capacities, because a suit against the state of Wisconsin was barred by the Eleventh Amendment, could not bring a suit against the supervisors, because the effect of suing the supervisors was the same as suing the state.

HOURS WORKED

The FLSA does not limit the number of hours that an employee may work in a workweek or workday, as long as the employee is paid appropriate overtime. (But, as noted in Chapter 9, if an employer forces an employee to work too many hours, the employer may be liable under common law negligence for injury to a third party resulting from the employee's fatigue.) The FLSA requires that, with some exceptions, every employee be paid one and one-half times

97. 253 F.3d 1020 (7th Cir. 2001).

the regular rate of pay for hours worked in excess of forty hours in a workweek. The "regular rate" is not necessarily the hourly wage, but includes all cash compensation for the workweek. In most cases, employers can exclude profits from certain employer-provided stock options, stock appreciation rights, and bona fide stock purchases from the calculation of regular pay rates when calculating overtime pay.⁹⁸

In 1985, Congress amended the FLSA to permit state and local governments to comply with the statute's overtime provisions by giving employees compensatory time (comp time) in lieu of overtime pay. *Comp time* is extra paid vacation time granted instead of extra pay for overtime work.

COMPENSATION

The FLSA requires that employees be compensated for all hours worked. In general, the hours that an employer knows or has reason to know that an employee has worked, even though the employee has not been requested to work, are deemed hours worked. If an employee is asked to be on standby—that is, available to return to work while off duty—the hours spent on standby will not be counted as hours worked if the employee is generally free to use the time for his or her own purposes.

In the following case, the U.S. Supreme Court considered whether production employees were entitled to be compensated for time spent waiting to put on required protective gear, donning and doffing the gear, and walking to and from the locker room to the production floor.

A CASE IN POINT

CASE 12.4

IBP, INC. v. ALVAREZ

SUPREME COURT OF THE
UNITED STATES
546 U.S. 21 (2005).

SUMMARY

FACTS IBP is a large producer of fresh beef, pork, and related products. Production workers at its Washington plant are required to wear protective gear and to store the gear in company locker rooms, where most of the employees don the gear at the beginning of their workday. Production workers' pay begins with the first piece of meat and ends with the last piece of meat that they cut or bag. IBP employees filed a class-action lawsuit to recover compensation for preproduction and postproduction work, including the time spent donning and doffing protective gear and walking between the locker room and the production floor before and after their assigned shifts. In a case that was consolidated with the IBP case, plaintiffs also sought to recover compensation for the time that they spent waiting to don their protective gear.

After a lengthy bench trial, the U.S. District Court for the Eastern District of Washington held that the IBP employees were entitled to compensation for the time required to don and doff their protective

CONTINUED

gear, as well as for the walking time between the locker room and the production floor, and the U.S. Court of Appeals for the Ninth Circuit affirmed.

ISSUES PRESENTED Is the time spent by employees walking between the area where they don required protective gear and the production area where they work compensable under the FLSA? Is the time employees spend waiting to put on the protective gear compensable?

SUMMARY OF OPINION The U.S. Supreme Court noted that the Fair Labor Standards Act, as amended, does not require employers to compensate employees for the following activities:

- (1) walking, riding, or traveling to and from the actual place of performance of the principal activity . . . which such employee is employed to perform, and
- (2) activities which are preliminary to or postliminary to said principal activity . . . which occur[s] either prior to the time on any particular workday at which such employee commences, or subsequent to the time on any particular workday at which he ceases, such principal activity . . .

The Court concluded that the donning of the protective gear was a "principal activity" that started the employees' workday and the doffing of the gear was a "principal activity" that ended the workday. Therefore, the employees were also entitled to be compensated for the walking that occurred immediately after donning, and immediately before doffing, the gear. In the consolidated case, however, the Court held that the employees were not entitled to compensation for the time spent before obtaining their clothing and equipment, as such time was a noncompensable "preliminary activity" excluded from the FLSA.

RESULT The Court affirmed the holding of the U.S. Court of Appeals for the Ninth Circuit that IBP was required to compensate the employees for time spent donning and doffing required protective gear, and walking between the changing room and the production floor. The Court also affirmed the holding of the U.S. Court of Appeals for the First Circuit that the time spent waiting to put on protective gear is not compensable under the FLSA.

MINIMUM WAGE

In 1938, the FLSA established the first minimum wage at 25 cents per hour. Under legislation enacted by Congress in 2007, the minimum wage in 2009 is \$7.25 per hour (the legislation increased the minimum wage from \$5.15 to \$5.85 per hour in 2007 and to \$6.55 per hour in 2008). States often impose higher minimum wages.

During the 1990s, various localities around the country began requiring employers to provide wages and employee benefits higher than either federal or state minimum wages.⁹⁹ Called *living wage ordinances*, these programs require employers to pay their employees wages approximating the real cost of living in the locality, which is often significantly higher than the applicable state or federal minimum wage.

Such living wage ordinances, unlike state and federal minimum-wage laws, often target only certain businesses, such as recipients of city contracts or lessees of city property,

or larger businesses with more employees and higher earnings. For example, RUI One Corporation, which owned and operated a restaurant located on an open space preserve held in public trust by the City of Berkeley, California, challenged Berkeley's living wage ordinance, arguing that it violated the Equal Protection Clause of the U.S. and California Constitutions. The ordinance applied only to five employers that (1) were located on the open space preserve, (2) had a minimum number of employees, and (3) earned an annual revenue of more than \$350,000.¹⁰⁰ The U.S. Court of Appeals for the Ninth Circuit determined that RUI was not unfairly targeted by the ordinance because RUI operated its restaurant on the highly desirable open space preserve under a privilege granted by the City. The court also stated that, ultimately, cities should be allowed leeway to approach the problem of their working poor by implementing their living wage ordinances incrementally. As of 2008, 122 living wage ordinances had been adopted in cities across the country, including

99. RUI One Corp. v. City of Berkeley, 371 F.3d 1137 (9th Cir. 2004).

Baltimore, Detroit, Milwaukee, Minneapolis, Oakland, Portland (Oregon), and St. Louis.¹⁰¹

OVERTIME

Certain types of employees are exempt from the FLSA minimum-wage and overtime requirements, including executive, administrative, professional, computer, and outside sales employees. In August 2004, regulations of the Wage and Hour Division of the Department of Labor that define the characteristics of these exempt employees in terms of salary and work duties were updated, for the first time in decades, to more accurately reflect the realities of the contemporary workplace.¹⁰²

To qualify as an *exempt employee*, the employee must (1) be paid a minimum salary amount, (2) be paid on a “salary basis,” and (3) meet the “duties test” for the particular exemption. All other employees are *nonexempt employees* and must be paid both the minimum wage and the overtime required by the FLSA. The regulations also provide that certain types of jobs do not qualify for the exemptions from the FLSA minimum-wage and overtime requirements; these workers include manual laborers and other blue-collar workers, as well as police officers, firefighters, paramedics, and other public safety “first responders.”

Minimum Salary

Employees who earn less than \$455 per week (\$23,660 annualized) are automatically considered nonexempt. The Labor Department has also adopted a “bright-line” test for highly paid employees—those employees who earn an annual salary of at least \$100,000 per year (including commissions and nondiscretionary bonuses). Highly paid employees are considered exempt as long as the employer can show that they regularly perform at least one of the exempt duties or responsibilities of an executive, administrative, or professional employee. For employees earning between \$23,660 and \$100,000, the FLSA provides a test based on the types of duties the employee performs to determine whether the employee is exempt.

Salary Basis Test

The salary basis test requires that an employee regularly receive a predetermined amount of compensation for each pay period in which work is performed, without reduction

because of variations in the quality or quantity of work performed. Thus, an employee must be paid his or her full weekly salary for any week within which he or she performs work and is ready, willing, and able to perform additional work, subject to certain exceptions. Employers may make deductions from an exempt employee’s pay for personal or sick days off, or for certain disciplinary suspensions, without violating the salary basis test. Also, certain computer employees paid on an hourly basis will still qualify for exemption if they are paid at a rate not less than \$27.63 per hour.

An employer that has an actual practice of making improper deductions will lose the exemption during the time period in which the deductions were made for all employees in the same job classification who are working for the manager responsible for the improper deductions. Inadvertent or isolated improper deductions will not result in a loss of the exemption, however, if the employer reimburses the employee for the improper deductions. The regulations also provide a safe harbor that allows an employer to retain the exemption despite improper deductions, if it complies with the safe-harbor requirements.

Duties Test

For each exemption category, the FLSA sets forth the “primary duty,” the performance of which will qualify the employee as exempt. The amount of time spent performing exempt duties may indicate whether the exempt work is the employee’s primary duty, but there is no requirement that the employee spend more than 50 percent of his or her time in exempt work.

An exempt *executive* must (1) have the primary duty of management of the enterprise or a customarily recognized department or subdivision; (2) customarily and regularly direct the work of two or more other employees; and (3) have authority to hire or fire other employees or be an employee whose suggestions and recommendations as to the hiring, firing, advancement, promotion, or any other change of status of other employees are given particular weight. The executive exemption also includes an employee who owns at least a 20 percent interest in the business, if the employee is actively engaged in the management of the business.

To qualify as an *administrative employee*, an employee must have (1) the primary duty of the performance of office or nonmanual work directly related to the management or general business operations of the employer or the employer’s customers, and (2) a primary duty that includes the exercise of discretion and independent judgment with respect to matters of significance. For example, the U.S. Court of Appeals for the First Circuit held that insurance company marketing representatives qualify as administrative employees. Rejecting the Department of Labor’s argument that the representatives

102. See generally 29 C.F.R. pt. 541 (2004).

were not given discretion in “matters of consequence,”¹⁰³ the court looked to the nature of the work and held that the discretion and independent judgment involved, in addition to its substantial economic consequences, satisfied the requirements of an administrative employee.

To qualify as a *professional employee*, the employee must be either a “learned” professional or a “creative” professional. The test for a *learned professional* requires that the employee’s primary duty be the performance of work requiring advanced knowledge in a field of science or learning customarily acquired by a prolonged course of specialized intellectual instruction; “work requiring advanced knowledge” is defined as work that (1) is predominantly intellectual in character and (2) includes work requiring the consistent exercise of discretion and judgment. The FLSA permits some of the advanced knowledge to be acquired through a combination of work experience and intellectual instruction. A *creative professional*, on the other hand, must have the primary duty of performance of work requiring invention, imagination, originality, or talent in a recognized field of artistic or creative endeavor.

The *computer employee* exemption is available to computer systems analysts, computer programmers, software engineers, and other similarly skilled workers in the computer field. This exemption does not cover employees who are engaged in the manufacture or repair of computer hardware or related equipment, nor does it cover employees whose work is highly dependent upon computers or computer software (such as engineers, drafters, and employees who work with computer-aided design), but who are not primarily engaged in systems analysis and programming or similarly skilled jobs.

103. Reich v. John Alden Life Ins. Co., 126 F.3d 1 (1st Cir. 1997).

► ETHICAL CONSIDERATION

Is it ethical for a company to shield itself from liability for violations of the Fair Labor Standards Act by employing workers indirectly through contractors rather than directly? For example, would it be ethical for Wal-Mart to attempt to shield itself from liability for paying overtime by hiring corporate contractors, to whom Wal-Mart is not required to pay overtime, when the contractors would then hire janitors to clean Wal-Mart stores and fail to pay them the required overtime of time and a half for hours worked over a forty-hour workweek?^a

a. Steven Greenhouse, *Suit by Wal-Mart Cleaners Asserts Rackets Violation*, N.Y. TIMES, Nov. 11, 2003, at A12.

The *outside sales employee* exemption requires that the employee have the primary duty of either making sales or obtaining orders or contracts for services or for the use of facilities. In addition, the employee must be customarily and regularly engaged away from the employer’s place of business in performing such duty.

Child Labor

The FLSA child-labor provisions were enacted to stop the early twentieth-century abuses of many employers who employed children at minimal wages. It is illegal to employ anyone under the age of fourteen, except in specified agricultural occupations. Children aged fourteen or fifteen may work in some occupations, but only if the employment occurs outside school hours and does not exceed daily and weekly hour limits. Individuals aged sixteen to eighteen may work in manufacturing occupations, but not in jobs that the Secretary of Labor has declared to be particularly hazardous, such as jobs entailing exposure to radioactive materials or operation of a power-driven woodworking machine, a hoisting apparatus, a metal-forming machine, or a circular or band saw.

MODERN-DAY SLAVERY

Trafficking in persons, which often involves the recruitment and smuggling of foreign nationals into the United States to force them to work in factories, fields, or homes, amounts to “modern-day slavery.” Human Rights Watch estimates that every year 800,000 to 900,000 men, women, and children are trafficked across international borders into forced labor or slavery-like conditions.¹⁰⁴ The Victims of Trafficking and Violence Protection Act of 2000 (TVPA) amended the slavery statute to make prosecution of human trafficking in the United States more effective and to increase the statutory maximum sentences that traffickers face. Between 2001 and 2005, U.S. attorneys investigated 555 violations of federal human-trafficking statutes, and over half of these were for offenses created under the TVPA, including forced labor (24 percent), sex trafficking of children (23 percent), and trafficking of slaves (9 percent).¹⁰⁵ Prosecutions of human-trafficking cases increased sevenfold from 2000 to 2007.¹⁰⁶

OTHER FEDERAL LAWS AFFECTING THE EMPLOYMENT RELATIONSHIP

Federal legislation concerning employee benefits and layoffs indirectly affects employee relations. These laws, which apply regardless of whether employees belong to a union, are discussed below.

CONSOLIDATED OMNIBUS BUDGET RECONCILIATION ACT

The Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA)¹⁰⁷ was enacted in 1986 to allow group health, dental, and visual benefits to continue for employees who are terminated voluntarily or involuntarily (unless the discharge was for gross misconduct), and for employees whose hours are reduced to the point at which coverage would normally cease. COBRA applies to employers of twenty or more workers that sponsor a group health plan.¹⁰⁸ Employers must notify employees of their rights when they begin participation in a group health plan or when coverage has been threatened by an event such as termination or reduced hours. Employers who fail to comply with COBRA's requirements are subject to adverse tax consequences.¹⁰⁹

Eligible employees must be given at least sixty days from the date their coverage ceases to elect to have their coverage continued for them and their covered spouse and dependents. If coverage continuation is elected, the employer is required to extend, for up to eighteen months, coverage identical to that provided under the plan for similarly situated employees. The eligible employee electing COBRA coverage must pay the entire premium, plus an administrative fee of up to an additional 2 percent of the cost of coverage. If the employee declines to continue coverage, the employer has no further coverage obligations.

An employer may discontinue coverage for any one of five reasons: (1) the employer ceases to provide group health coverage to any of its employees; (2) the premium for the coverage is not paid; (3) the employee, or former employee, becomes insured under another group plan;

107. Pub. L. No. 99-272, 100 Stat. 82 (1986) (codified as amended in scattered sections of 29 U.S.C.).

108. Churches and federal government agencies are exempt from COBRA.

109. Pub. L. No. 100-647, 102 Stat. 3342 (1988) (codified as amended in scattered sections of 26 U.S.C.).

(4) the employee, or former employee, becomes eligible for Medicare; or (5) a spouse of the employee, or former employee, is divorced, remarries, and becomes covered under the new spouse's plan.

HEALTH INSURANCE PORTABILITY AND ACCOUNTABILITY ACT (HIPAA)

The principal provisions of the Health Insurance Portability and Accountability Act of 1996 (HIPAA),¹¹⁰ an employee health-care reform law that provides special protection for individuals with lifelong illnesses who change jobs, cover all companies with fifty or more employees.

HIPAA requires that new employees and their dependents be eligible for health insurance coverage by the new employer without an exclusion (or higher premiums) for preexisting conditions, if they had health insurance for at least eighteen months provided by the previous employer and joined the new company within sixty-three days of leaving the previous employer. The previous employer must provide a certificate to a leaving employee documenting the previous coverage.

HIPAA also provides that the duration of an employee's previous coverage may be applied to fulfilling a new employer's waiting period. It also extended COBRA for up to twenty-nine months for individuals who leave work as a result of illness or disability, provided that they apply within sixty days of leaving. In addition, HIPAA requires companies to offer the same health coverage whether the illness is physical or mental; it also provides greater health-related tax deductions for self-employed individuals.

Despite its multiple provisions, HIPAA has not resolved all issues related to health insurance reform. For example, HIPAA did not include insurance pools for small businesses, nor did it raise the lifetime caps on insurance benefits.

WORKER ADJUSTMENT AND RETRAINING NOTIFICATION ACT

The Worker Adjustment and Retraining Notification Act of 1988 (WARN Act)¹¹¹ requires an employer to provide timely notice to its employees of a proposal to close a plant or to reduce its workforce permanently. The Act applies to employers with 100 or more employees, either all working

110. Pub. L. No. 104-191, 110 Stat. 1936 (1996) (codified in scattered sections of 18, 26, 29, 42 U.S.C.).

111. Pub. L. No. 100-379, 102 Stat. 890 (1988) (codified at 29 U.S.C. §§ 2101–2109).

Economic PERSPECTIVE

Employer-Sponsored Health Insurance

In contrast to most other developed nations, which have national health-care systems financed by their respective governments, the United States has had an employer-sponsored health-care system since World War II. During the war, the U.S. government imposed price and wage controls, at the same time that employers were faced with a shortage of qualified employees. Therefore, to attract workers, employers began to offer health insurance and other nonwage benefits. In addition, U.S. tax law encouraged employer-based health coverage, because it did not treat employer payments for health coverage as compensation; thus, these payments were (and still are) exempt from payroll and income taxes. This combination of wage controls and tax benefits led to a dramatic growth in employer-based insurance coverage, from 1.7 million people in 1940 to 32 million in 1945.^a

Today, the United States has a more privatized health-care system than any other advanced country.^b Nonelderly (that is, under age sixty-five), nonpoor Americans rely almost exclusively on employer-based insurance programs.^c Unfortunately, the number of nonelderly persons who are excluded from the U.S. employer-based system is growing: as recently as 2000, 67.7 percent of persons under sixty-five were covered by employer-based health insurance, but that percentage had fallen to 63.1 percent by 2004.^d This means that an estimated 47 million people have no insurance coverage at all: they must either pay for health care out of their own pockets or do without it.^e

Employer-based insurance can be good for covered employees. Acting

as an agent for its employees, the employer may have the expertise and resources to address the nuances of health-care delivery. An employer that represents a large group of employees also has leverage to negotiate for better coverage and lower premiums. The natural risk pooling of employer-based groups is also well adapted for an insurance model. Many of these advantages, however, are not available to small employers.^f

At the same time, employer-based insurance, by its very nature, excludes certain sectors of the population. Examples of coverage gaps include retirees under the age of sixty-five, individuals who are not currently employed, individuals employed by businesses that do not provide employment-based medical coverage or are not eligible for their employer's plan (such as part-time employees and new hires), employees who opt out of employer-provided coverage because they cannot or choose not to pay their portion of the cost, and independent contractors or other types of mobile employees who move from employer to employer.^g

The United States spends more on health care than any other advanced country. In 2002, the United States spent \$5,267 per person on health care, while Britain spent \$2,160, Canada spent \$2,931, and Germany spent \$2,817. Despite this spending, the United States has lower life expectancy and higher infant mortality rates than any of these other countries.^h

As insurance costs have increased, larger employers have reduced the insurance benefits they offer, and smaller employers have ceased to provide them. In 2004, 1.6 million

workers at companies with more than 100 employees were uninsured compared with 1.2 million in 1999, a 33 percent increase. Rising health-care costs have also ended the ability of employer-based plans to avoid the problem of adverse selection. There is anecdotal evidence that workers who know they have health problems are actively seeking jobs with companies that still offer generous insurance benefits. And employers appear to be making business decisions based on anticipated health-care costs. For example, the *New York Times* reported in October 2005 that an internal Wal-Mart memorandum suggested adding tasks requiring physical exertion to jobs that do not really require it, as a way to screen out applicants with potential health risks.ⁱ

For lower-income working Americans, lack of health insurance is becoming the new norm. In 1996, 22 percent of low-wage workers were uninsured compared with 6 percent of higher-wage workers. By 2003, nearly 33 percent of low-wage workers were uninsured.^j Forty-one percent of nonelderly American adults with incomes between \$20,000 and \$40,000 a year were without health insurance for all or part of 2005.^k

By 2008, health-care reform ranked as the second-biggest domestic issue after the economy in most national polls.^l For the first time since the collapse of the Hillary Clinton-led reform in 1994, health care became a prominent political issue. During the 2008 presidential campaign, the Democratic candidate Barack Obama favored universal health coverage by keeping the employer-based system, but expanding government involvement

CONTINUED

in a hybrid public-private system. Republican nominee John McCain, on the other hand, proposed to use tax credits to shift from employer-based insurance coverage to an open market system in which people could purchase their own insurance from competing offerings. While McCain called Obama's plan a "big government" solution that limits choice, Democrats argued that the Republican plan reduced the incentive for employers to offer coverage and put more workers at risk of losing coverage—especially those with preexisting conditions that insurance companies will not cover.

"There is no question that there are fundamental, Grand Canyon-like differences on health care between the two parties," said Drew Altman, president of the Kaiser Family Foundation,

a nonpartisan health policy group. "I now believe the biggest obstacle to health care reform is this ideological divide—is there any way to bridge these differences?"^m

full-time or working an aggregate of at least 4,000 hours per week.

The WARN Act requires employers to give employees sixty days' advance notice of any plant closing that will result in a loss of employment during any thirty-day period for fifty or more employees. A shutdown of a product line or operation within a plant is included within the Act's definition of a plant closing. The Act also requires sixty days' notice for a layoff during any thirty-day period that affects at least 500 employees or, at least 50 employees if they comprise one-third of the workforce. Employers must give written notice of the plant closing or layoff to each representative of the affected employees or, if there is no representative, to each affected employee, as well as to the state and local governments where the layoff or plant closing will occur.

The WARN Act permits an employer to order the shutdown of a plant before the conclusion of the sixty-day notice period if (1) at the time notice would have been required, the employer was actively seeking capital or business that would enable it to avoid or postpone the shutdown, and the employer reasonably and in good faith believed that giving the required notice would preclude it from obtaining the needed business or capital; or (2) the plant closing or mass layoff was caused by a natural disaster or by business

circumstances that were not reasonably foreseeable at the time notice would have been required.

The WARN Act does not apply to the closing of a temporary facility; to a closing or mass layoff that results from the completion of a particular project, if the affected employees were hired with the understanding that their employment would not continue beyond the duration of the project; or to a closing or layoff that results from a strike or lockout that is not intended to evade the requirements of the Act.

Aggrieved employees are entitled to receive back wages and benefits for each day that the employer is in violation of the WARN Act. The court has discretion to award the prevailing party reasonable attorneys' fees. In addition, an employer who violates the Act may be subject to a civil penalty of up to \$30,000, to be paid to the affected communities.

IMMIGRATION LAW

Under the Immigration and Reform and Control Act of 1986,¹¹² employers may hire only persons who may legally work in the United States, that is, citizens and nationals

112. 8 U.S.C. § 1101.

of the United States and aliens authorized to work in the United States. Employers that violate this rule are subject to penalties.

At a press conference in April 2006, U.S. Immigration and Customs Enforcement (ICE), the investigation and enforcement branch of the Department of Homeland Security, announced its largest nationwide worksite raid to date, against IFCO, the largest pallet services company in the United States. ICE arrested close to 1,200 undocumented workers in twenty-six states, eliminating more than half of IFCO's workforce.¹¹³ Since then, seven IFCO managers have pleaded guilty to felony and misdemeanor charges related to the unlawful employment of illegal aliens, and a New York grand jury has returned a six-count felony indictment against five managers. The charges carry a ten-year maximum term of imprisonment and a maximum fine of \$250,000.¹¹⁴ During 2007, ICE secured immigration-related fines and judgments against employers totaling approximately \$30 million, coupled with 850 arrests. Both were record highs.¹¹⁵

In 2007, the Department of Homeland Security (DHS) issued new regulations that would require all U.S. employers to either fire employees who do not resolve Social Security discrepancies or face liability for employing unauthorized workers. The American Federation of Labor–Congress of Industrial Organizations (AFL-CIO), the American Civil Liberties Union, and other organizations, however, challenged these regulations in a lawsuit filed in August 2007, and the U.S. District Court for the Northern District of California issued a preliminary injunction against the implementation of the new regulations.¹¹⁶ The judge subsequently granted the DHS's motion for additional time to revise the regulations to address the court's concerns, but the plaintiffs in the lawsuit have assured the court that they are ready to seek a permanent injunction no matter what changes the DHS makes to the regulations.¹¹⁷

OBTAINING AUTHORIZATION

The primary way by which aliens become authorized to work in the United States is by obtaining a work visa. The U.S. government offers a number of visas based on different classifications including, for example, as (1) a student, (2) an educational or cultural exchange visitor, (3) a professional worker from Canada or Mexico authorized to work in the United States under the North American Free Trade Agreement, or (4) a foreign employee of an overseas company who is temporarily transferred to the United States.

Many U.S. employers rely on the employment of foreign workers with an *H-1B* visa, which is available only for workers in professional and specialty occupations (generally those requiring a bachelor's degree or its equivalent) such as computer programmers, engineers, doctors, or fashion models,¹¹⁸ where the employer can show an inability to recruit qualified workers in the United States. Employers generally apply for the visa on behalf of the foreign worker; it authorizes the worker to work in the United States for up to six years (with some exceptions). During a worker's tenure, he or she is entitled to the same wages, benefits, and working conditions as other similarly situated employees. The U.S. government caps the number of H1-B visas granted each year in the United States. For 2009, this cap was set at 65,000 workers, with an exemption from the cap for up to 20,000 master's and Ph.D. graduates from U.S. universities.¹¹⁹

VERIFYING AUTHORIZATION

The U.S. government requires that all employers verify the identity and employment eligibility of all persons they hire.¹²⁰ This includes completing the Employment Eligibility Verification Form, also called the *I-9*, which must be kept on file by the employer for at least three years for purposes of government audits. Employers may also ask a potential employee questions regarding his or her work status. The questions should not identify a candidate by his or her national origin or citizenship status, however, because

doing so could expose the employer to an employment-discrimination claim.¹²¹ Questions that may be asked include “Can you, if hired, show that you are legally authorized to work in the United States?”

LEGISLATIVE SOLUTIONS

There are about 11.6 million illegal immigrants living in the United States¹²² and about 6.9 million illegal workers,¹²³ even though an employer can be fined up to \$16,000¹²⁴ and imprisoned for up to six months for each illegal alien it has knowingly hired.¹²⁵ Under a compromise proposed by President George W. Bush in 2007, illegal aliens who entered the country before 2007 would have been allowed to stay in the country, as long as they met certain rules and conditions. The proposal also included a temporary worker program that would have created two-year work visas and a new system for green card applications. Although this proposal was far-reaching, it ended in failure in 2007 due to lack of sufficient congressional support.

With federal legislation stalled, the states rushed to fill the void. Forty-six states enacted 194 new immigration-related laws in 2007,¹²⁶ and as of March 2008, twenty-six states had enacted an additional 44 laws on the subject.¹²⁷ Arizona passed the toughest of these laws. It provides that as of January 1, 2008, an Arizona employer that is caught more than once hiring undocumented workers is liable to have its business license revoked, effectively shutting down the business. Several other states provide for revocation of an employer’s business license after the federal government has determined that the employer hired illegal

aliens, but the Arizona law is the first to empower the state to act alone.¹²⁸

LABOR-MANAGEMENT RELATIONS

Before the mid-1930s, attempts by employees to band together and demand better wages and working conditions were largely ineffective. Organized economic actions, such as strikes and picketing, were enjoined as unlawful conspiracies. Employers squelched attempts to organize by lawfully discharging union organizers. Starting in the 1930s, Congress attempted to equitably balance the economic power of employers, individual employees, and unions by comprehensively regulating labor-management relations. In recent decades, however, union membership has been declining. The percentage of organized workers in the private sector fell from 7.8 percent in 2005 to 7.4 percent in 2006¹²⁹—the lowest percentage in seventy-five years and less than a quarter of the rate in the 1950s.¹³⁰

NATIONAL LABOR RELATIONS ACT

Since 1932, Congress has enacted a series of legislation aimed at both providing employees with greater economic bargaining power and curbing union excess and corruption.¹³¹ The central statute governing labor relations in most private industries is the National Labor Relations Act (NLRA). An earlier similar law governing railroads, and later airlines, is the Railway Labor Act.¹³² Public-sector employees have since been granted similar rights under both federal and state laws.

Section 7 of the NLRA grants rights only to employees. It does not grant rights to independent contractors or to supervisors. The NLRA defines *supervisor* to mean:

Any individual having authority, in the interest of the employer, to hire, transfer, suspend, lay off, recall, promote, discharge, assign, reward or discipline other employees, or responsibility to direct them, or to

adjust their grievances, or effectively to recommend such action, if in connection with the foregoing the exercise of such authority is not of a merely routine or clerical nature, but requires the use of independent judgment.

UNION REPRESENTATION

The five-member National Labor Relations Board (NLRB) oversees *representation elections*, that is, elections among employees to decide whether they want a union to represent them for collective bargaining. The procedure for conducting a representation election is initiated by filing a petition with a regional office of the NLRB. The NLRB will hold an election only in an *appropriate collective bargaining unit* of employees. To form such a unit, the group of employees must share a community of interest, meaning that they have similar compensation, working conditions, and supervision, and work under the same general employer policies.

Under current labor law, the NLRB will certify a union as the exclusive representative of employees if it is elected by either a majority signature drive, the card-check process, or by secret NLRB election, which is held if more than 30 percent of employees in a bargaining unit sign statements asking for representation by a union. A company can demand a secret ballot election supervised by the NLRB after being presented with the requisite number of union cards.

The Employee Free Choice Act (H.R. 800), a top priority for organized labor, would amend the National Labor Relations Act to authorize *card-check elections*, whereby employers would be required to recognize unions after being presented with union authorization cards signed by a majority of eligible workers on their payrolls if there is no evidence of illegal coercion. The proposed law would also provide for liquidated damages of three times back pay if employers were found to have unlawfully terminated pro-union employees. Although the House of Representatives passed the bill in 2007, it was filibustered by Republicans in the Senate. Senator Obama expressed support for the bill during the 2008 presidential campaign, but Senator McCain opposed it.

The party losing the election may file objections to it. If the objections are deemed to be without merit, the NLRB will certify the election. If the objections are meritorious, the NLRB will conduct a new election. Once a union is elected, it is the employees' exclusive bargaining representative and has a statutory duty under Section 8(b)(1) of the NLRA to represent all employees fairly when

engaging in collective bargaining (without regard to their union affiliation) and when enforcing the collective bargaining agreement.¹³³

UNFAIR LABOR PRACTICES BY EMPLOYERS

Section 8(a) of the NLRA prohibits employers from engaging in specified activities against employees or their unions. Such activities, known as *unfair labor practices*, are investigated and prosecuted by the general counsel of the NLRB and his or her representatives.

Section 8(a)(1) of the NLRA makes it illegal for an employer to interfere with, restrain, or coerce employees in the exercise of their Section 7 rights to organize and bargain collectively, and to engage in other protected, concerted activities. This prohibition covers a wide range of employer conduct, including (1) threatening employees with any adverse action for organizing or supporting a union, (2) promising employees any benefits if they abandon support for a union, (3) interrogating employees about union sentiment or activity, and (4) engaging in surveillance of employees' union activities. For example, the U.S. Court of Appeals for the First Circuit held that an employer committed an unfair labor practice when it fired a truck driver after he was seen giving an unidentified person a half-block ride in a company truck. The employer argued that it had fired the truck driver for violating its "one strike and you're out" policy against letting nonemployees ride in company trucks, but the court found that the employer knew about the employee's active role in organizing for a union and would not have fired him, if he had not been actively involved with the union organization.¹³⁴

Section 8(a)(1) also prohibits an employer from enforcing an overly broad rule against soliciting other employees (perhaps for union support) or distributing literature on company premises and protects employees who engage in concerted activities for mutual aid and protection. For example, an employer may not retaliate against a group of employees who complain to management about some aspect of their working conditions, such as poor lighting in the workplace. For an activity to be a *concerted activity*, it must be "engaged in with or on the authority of other

133. Vaca v. Sipes, 386 U.S. 171 (1967).

134. Holsum de Puerto Rico, Inc. v. NLRB, 456 F.3d. 265 (1st Cir. 2006).

employees, and not solely by and on behalf of the employee himself.”¹³⁵

Under Section 8(a)(2) of the NLRA, an employer may not dominate or assist a labor organization. The employer may not instigate, encourage, or directly participate in the formation of a labor organization, nor may it give financial support to a labor organization. These provisions were enacted to prevent employers from assisting compliant organizations in becoming representatives of their employees and then imposing “sweetheart” collective bargaining contracts—that is, contracts unduly favorable to the employer.

Section 8(a)(3) prohibits employers from discriminating against any employee to encourage or discourage membership in any labor organization. If an employee has been unlawfully discharged, the NLRB may order that the employee be reinstated and given full back pay.

Under Section 8(a)(4) of the NLRA, it is an unfair labor practice for an employer to discharge or otherwise discriminate against an employee because he or she has filed charges with, or given testimony to, the NLRB, either in a representation proceeding or pursuant to an unfair labor practice charge.

Section 8(a)(5) of the NLRA imposes upon unionized employers a duty to bargain collectively. A related provision, Section 8(d), requires employers to approach negotiations with an honest and serious intent, to engage in give-and-take bargaining, in an attempt to reach an agreement. This obligation to bargain in good faith does not, however, compel either party to agree to a proposal or make concessions. If an employer does not bargain in good faith, a union may seek redress through the NLRB. Remedies may include damages payable to employees or injunctive relief.

LAWFUL AND UNLAWFUL STRIKES AND ECONOMIC ACTION

Labor law permits both employers and labor organizations to engage in certain tactics against each other, known as “economic action,” to influence the other party to reach agreement in collective bargaining. Strikes and related publicity tactics such as picketing form an important part of the economic actions available to labor organizations.

135. Meyers Indus., Inc., 268 N.L.R.B. 493, 497 (1984).

Lawful strikes are of two kinds: economic strikes and unfair labor practice strikes. An *economic strike* occurs when a union is unable to extract acceptable terms and conditions of employment through collective bargaining. An employer subjected to an economic strike may hire permanent replacements for the positions vacated by the striking employees. If it does so, the employer is not required to reinstate striking employees who offer to return to work, unless the departure of replacements creates vacancies. An *unfair labor practice strike* occurs when workers strike an employer wholly or partly to protest an unfair labor practice and the employer’s conduct is in fact found to violate the NLRA. Workers who engage in an unfair labor practice strike have a right to be reinstated, if they make an unconditional offer to return to work.

Striking employees may have no legal protection or reinstatement rights if they conduct a “wildcat” strike by violating a “no-strike” provision in their collective bargaining agreements. Slowdowns, intermittent strikes, and work stoppages likewise are unprotected activity. Otherwise, lawful strikes may result in liability for striking employees, if their tactics violate local safety or public peace ordinances, or the state penal code (e.g., assault and battery).

The NLRA prohibits unduly lengthy *recognitional picketing* (whose purpose is to force the employer to recognize the union as a collective bargaining agent for its employees). It also outlaws *secondary boycotts*, which are certain threats or tactics against an outside company to induce the third party to put pressure (usually by withholding business) on the employer with which the union has a dispute.

NON-STRIKE-RELATED UNFAIR LABOR PRACTICES BY UNIONS

Section 8(b)(1)(A) of the NLRA prohibits unions from coercing employees to join the union or support its activities. A union is also prohibited from coercing employees to join, or refrain from abandoning, a strike. Unions are prohibited from discriminating against represented employees on the basis of race, gender, national origin, union membership, or internal union political affiliations.

Under Section 8(b)(2) of the NLRA, a union may not cause or attempt to cause an employer to discriminate against an employee on the basis of union affiliation or activities. Section 8(b)(3) requires the union to bargain in good faith with the employer.

G L O B A L V I E W

The Right to Continued Employment

Most foreign countries do not share the U.S. concept of "employment at will" and instead provide employees with certain rights to continued employment.

The European Union

Although the European Union (EU) has worked on harmonizing many employment laws of its member states, it has not attempted to harmonize the laws related to termination of employment.¹³⁶ No member states recognize the U.S. concept of employment at will. Instead, each country has specific laws on unfair dismissal and/or general civil code provisions that apply to the termination of employment contracts. Although the specifics of these laws vary, they all provide employees with a basis for challenging a dismissal on the grounds that it is unfair and a mechanism for adjudicating such claims.

For example, employers in the United Kingdom are generally free to agree with their employees to whatever employment relationship suits them both, subject to certain statutory restrictions. Under English law, an employee has two sets of rights: contractual and statutory. Contractual rights are governed by the employee's employment contract, whether they are express or implied by custom or law, and are enforced by a suit for wrongful dismissal. Wrongful dismissal occurs when an employer dismisses an employee in breach of its contractual obligations. An employee's normal remedy for breach of contract is to sue for damages, which are limited to the amount required to put the employee in the position he or she would have been in had the contract been performed.

Statutory restrictions are set forth in various statutes, the most important of which are the Employee Rights Agreement 1996 (ERA 1996) and the Employment Act 2002 (EA 2002), and are enforced by a claim for unfair dismissal. To bring a claim for unfair dismissal, an employee must show that he or she was dismissed for a reason listed in Section 95 of the ERA 1996, which applies to termination for, among other things, a union-related reason, the

assertion of a statutory right, a health- and safety-related reason, a reason related to working time or the assertion of rights under the national minimum-wage law, a reason connected with trade union recognition or bargaining arrangements, and taking part in a protected industrial action in certain circumstances. The three remedies for unfair dismissal are reinstatement (which treats the employee as if he or she had never been dismissed); reengagement (which involves the employee returning to the same or a similar job); or compensation (which consists of a basic award calculated on a strict formula and a compensatory award, which is based on what the tribunal considers just and equitable according to the loss sustained by the employee as a result of the dismissal).

French workers are entitled to significantly more benefits and legal protection than their counterparts in the United States or the United Kingdom. French law recognizes the concept of "just cause" dismissal, in that an employer must justify an employee's dismissal and will be subject to legal sanctions if it is unable to do so.¹³⁷ During any agreed-on trial period, a French employee can be dismissed without formalities or particular reasons. Once the trial period has elapsed, however, the employer must prove that any dismissal is for legitimate reasons (either for cause or as a result of a reduction in force due to economic factors).¹³⁸ Case law has accepted that "just cause" includes professional incompetence, insufficient results, professional shortcomings, loss of confidence in the employee, and sexual harassment.

Unless terminated for gross negligence or willful misconduct, the employee is entitled to a payment, or indemnity, set by statute, if he or she has at least two years of uninterrupted seniority, any accrued but unused vacation pay, and an indemnity equal to the salary he or she would have received during the notice period, if the employer

CONTINUED

137. See generally *id.* at 3-1 to 3-18.

138. Ordinance 2005-83 of August 2, 2005, created the "new hire contract," which provides that for private-sector employees during the first two years of employment, by an employer of up to twenty people, either the employer or the employee may terminate the new hire contract for personal reasons, without complying with standard dismissal procedures.

136. See generally INTERNATIONAL LABOR AND EMPLOYMENT LAWS 1-68 (Timothy J. Darby & William L. Keller eds., 2007).

wants to pay the employee in lieu of providing the required notice. In addition, if the employee is dismissed without legitimate reason, he or she is entitled to receive compensation and damages for abusive breach of the employment contract. An employer's failure to comply with the statutory dismissal procedure also gives rise to damages even if the dismissal was justified.

Japan

Japanese employment laws are employee-friendly, especially when compared with U.S. law. There is no concept of "at-will" employment, and employers' rights to terminate employees are limited by statute, case law, and custom.

A new Labor Contracts Law, which became effective March 1, 2008, restates previous court decisions regarding employer and employee rights and obligations. It provides that an employer can dismiss an employee only for just cause; the absence of just cause gives rise to a claim of abuse of the right of dismissal. In addition, a fixed-term employment contract cannot be terminated without a compelling reason. Finally, the law restricts an employer's right to continually renew short-term employment contracts.

In addition, a Labor Tribunal Law, which became effective April 1, 2006, establishes an industrial tribunal system

to quickly and efficiently settle employment disputes, including those related to termination of employment.

India

India views the employment relationship as a contract that is subject to judicial intervention. Thus, the courts have implemented procedural safeguards shielding employees from indiscriminate termination by employers.¹³⁹ Although Indian law starts from the common law premise that an employee can be terminated by an employer without giving a reason, this position has been affected by legislative intervention and by case law. Some instances of misconduct may justify termination without notice or payment in lieu of notice, but employers are generally required to provide some form of compensation to a terminated employee, and most employers with more than 100 employees must seek permission from the labor department of the government before dismissing or laying off a worker, or shutting down, irrespective of financial condition.

139. Jaivir Singh, *The Law, Labour and Development in India*, paper presented at the Annual World Bank Conference on Development Economics in Oslo, Norway (June 24–26, 2002), available at [http://wbln0018.worldbank.org/eurup/web.nsf/pages/paper+by+Jaivir+Singh/\\$File/SINGH.PDF](http://wbln0018.worldbank.org/eurup/web.nsf/pages/paper+by+Jaivir+Singh/$File/SINGH.PDF).

THE RESPONSIBLE MANAGER

AVOIDING WRONGFUL-DISCHARGE SUITS AND OTHER EMPLOYEE PROBLEMS

If an employer wants to preserve the traditional legal right to discharge employees at will, it should take steps to ensure that it does not inadvertently limit this right. To illustrate, an application form might include the following language above the employee signature line: "I understand that, if hired, my employment can be terminated at any time, with or without cause, at either my employer's or my option." Inclusion of such language reminds the employee that the employment is at will, verifies that he or she was so informed, and lessens the likelihood that the employee will be able to establish an implied contractual right to be discharged only for cause. Additionally, no statements should be made during interviews that could create an impression that the applicant will not be fired without good cause. "Employees are never fired from here without good reason," "Your job will be secure, as long as you do your work," and "We treat our employees like family" are examples of such statements.

If an employer chooses to have a policy of progressive discipline, the policy should state that it does not alter at-will employment and that all decisions on progressive discipline—whether to apply it, what steps to take or skip—are within the company's sole discretion. If specific rules of conduct are listed, the manual should describe them as examples, not an exhaustive list, and inform employees that violation of a stated rule is not required for termination, because employment remains terminable at will. Supervisors and managers, as well as the human resources staff, should be trained to administer the policy, to document performance problems, and to counsel employees about the need to improve, but not to portray the policy as an entitlement.

If a company wants to impose a covenant not to compete on its employees, it should consider what state's law will apply to the covenant. Given that different states apply different standards for reviewing noncompetes, the company must

CONTINUED

structure each agreement in a way that courts will recognize and uphold. The company should also clarify the specific roles and responsibilities of a given employee so that the noncompete is not overly restrictive, thereby reducing the risk of judicial invalidation. Finally, the company should provide consideration, such as a bonus or a promotion, for existing employees.¹⁴⁰

The FLSA imposes numerous obligations on employers.¹⁴¹ Most importantly, an employer must carefully classify its employees, as exempt or nonexempt, to ensure that it pays overtime to all employees who are not exempt from the FLSA overtime pay obligations. Nonexempt employees required to work through lunch must be compensated. Employers cannot dock salary for late arrivals or partial-day absences of exempt employees. Employers should factor in bonus payments, prorated to a weekly rate of pay, when calculating overtime payments to nonexempt employees. Although commuting time to and from work is not compensable, employers must consider whether they should compensate for commuting time, if a non-exempt employee travels from home directly to a client's

140. Some jurisdictions state that a continued at-will employment relationship amounts to consideration for a noncompetition agreement. See *Lake Land Employment Group of Akron v. Columber*, 804 N.E.2d 27 (Ohio 2004).
141. Simon Nadel, *FLSA: The Law Employers Love to Hate Is Scrutinized in Light of the New Economy*, 68 U.S.L.W. 2771 (2000).

site rather than to the employer's site. Although outside salespeople are exempt, salespeople who work at the employer's place of business are not exempt.

Most managers in the United States have a visceral negative reaction to attempts to unionize their workers, believing that unions interfere with management control in the workplace and hinder efforts to achieve competitive levels of costs, quality, and productivity. Nevertheless, some academics argue that there is systemic empirical evidence indicating that unions are positively associated with higher training expenditures, successful employee involvement, and successful quality-improvement programs and organizational innovation. Indeed, many of the best-known examples of high-performance production systems occur at unionized plants, such as those at Saturn, Xerox, Corning, Levi-Strauss, NUMMI, and AT&T.¹⁴² These and other benefits of a well-regulated workforce—and the assistance of a labor organization to achieve that objective—may become apparent to management faced with organizing desires in its workforce.

Perhaps the best defense against a lawsuit is to create a corporate culture where employees feel appreciated, which includes compensating them fairly and providing honest feedback about job requirements and performance.

142. JEFFREY PFEFFER, THE HUMAN EQUATION: BUILDING PROFITS BY PUTTING PEOPLE FIRST 226 (1998).

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

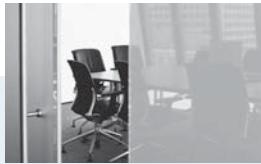

Making Employment Decisions in Difficult Times

Gita Bhandari joined your high-tech start-up in 2006, immediately after graduating from Carnegie-Mellon University. She turned down better-paying consulting and investment banking opportunities to get in on the ground floor of a young, fast-growing company. As compensation, Bhandari receives a nominal salary and stock options. Because the company's product will require three years to bring to market, the options do not vest for three years. This means that Bhandari forfeits all of the stock options if she leaves the company before 2009.

In 2008, the company began having serious problems. Even though the project is on schedule and is anticipated to be a huge success, costs are skyrocketing, and your investors demand a significant reduction in operating expenses.

You are considering firing Bhandari. Although she has performed well, Bhandari was the most recent person hired. She is an at-will employee, but, considering that she has less than one year to go until she can exercise her stock options, you fear a lawsuit, especially given the company's close-knit character. At this critical stage, the legal fees alone from a wrongful-termination lawsuit could bankrupt the company.

Should you fire Bhandari to reduce operating expenses? If Bhandari is terminated, on what basis could she sue the company? Would she prevail? How could you have structured the relationship to avoid this potential lawsuit?

INSIDE STORY

WHO IS WATCHING THE WATCHDOGS?

In December 1996, WTVT-TV, a subsidiary of Fox Television, hired Jane Akre and her husband, Steve Wilson, as an investigative reporting team. Soon thereafter they began to work on a series about the use of Monsanto's recombinant bovine growth hormone (rBGH) in Florida dairy cattle. rBGH is a genetically engineered hormone sold to dairy farmers, who inject it into their cows to increase milk production. It is controversial because some evidence suggests that rBGH may promote cancer in humans who drink milk from rBGH-treated cows. rBGH has been banned throughout Europe because of human health concerns.

Three days before the series was scheduled to air, Fox TV executives received a letter from Monsanto's lawyers saying that Monsanto would suffer "enormous damage" if the series ran. Station management temporarily delayed broadcast of the series and re-reviewed it for accuracy. When the station decided to go forward with the broadcast a week later, it received a second letter from Monsanto that warned of "dire consequences" for Fox if the series aired. At this point WTVT pulled the story. Over the next weeks, Akre and Wilson produced seventy-three station-mandated rewrites, all of which were rejected by WTVT management.

According to Akre and Wilson, they cooperated with every WTVT request to revise the series, until they were asked to misrepresent the facts as they knew them—specifically, they refused to include a statement that there was "no difference" between hormone-treated and untreated milk. Wilson claims that the WTVT station manager told them, "We paid \$3 billion for these television stations. We will decide what the news is. The news is what we tell you it is." He then told the reporters that he would fire them for insubordination and that another reporter would make the required changes. When Akre and Wilson threatened to file a complaint with the Federal Communications Commission (FCC) if that happened, WTVT offered them large cash settlements if they would keep quiet about the story. They refused the offer and ultimately were fired in December 1997.

The WTVT managers insist that they made a good faith effort to edit the series but that the reporters were uncooperative and the series remained too "biased and one-sided" to broadcast. The station contends that the reporters were fired for "unreasonable and intemperate behavior [which] did not advance [WTVT's] interests in providing quality news programming to its viewers."

Akre and Wilson sued WTVT alleging, among other things, that their terminations violated Florida's whistleblower statute, because they were fired in retaliation for resisting WTVT's attempts to distort or suppress the rBGH story and for threatening to report the alleged news distortion to the FCC. After listening to five weeks of evidence, a six-person jury found that WTVT had retaliated against Akre in response to her threat to disclose the alleged news distortion to the FCC and awarded her \$425,000 in damages. The jury found against Wilson on the same claim. Both Wilson and WTVT appealed.

The Florida appellate court reversed the trial court's decision, finding that WTVT's termination of Akre for threatening to report WTVT's attempts to distort the news did not violate the Florida whistleblower statute, which prohibits retaliation against employees who have "[d]isclosed, or threatened to disclose" employer conduct that "is in violation of" a law, rule, or regulation (Section 448.102(1)(3)). Reading the statute narrowly, the court found that the FCC's policy against the intentional falsification of the news—which the FCC refers to as its "news distortion policy"—did not qualify as a "law, rule or regulation." The court stated that the FCC had never published its news distortion policy as a regulation, and that even if the policy qualified as a rule, it was never "adopted," as defined by another Florida statute.

The jury found that WTVT had terminated Akre for threatening to report WTVT's attempts to distort the rBGH news story. Even if the termination did not violate the Florida whistleblower statute, was it ethical for WTVT to terminate Akre and Wilson if they did not make station-mandated changes to the series? How would you have handled this situation if you had been the station manager? During the appeal, WTVT asserted that there were no written rules against distorting news in the media. The station argued that, under the First Amendment, broadcasters have the right to lie or deliberately distort news reports on public airwaves. WTVT did not dispute Akre's claim that it pressured her to broadcast a false story; it simply claimed that it had a right to do so.¹⁴³

QUESTIONS AND CASE PROBLEMS

1. In 2000, California enacted, with strong union support, a law that prohibits employers that receive state-funded grants of more than \$10,000 from using any portion of these funds to “assist, promote, or deter” union-organizing campaigns. Companies that accept state funds are permitted to use their own money for labor-oriented speech, but they must keep careful records to document that they segregated the public money. Violators face suits by private taxpayers and the state attorney general, and they are liable for treble damages. Led by the Chamber of Commerce, a number of employer groups sued to enjoin enforcement of the law on the basis that it was preempted by Section 8(c) of the National Labor Relations Act (NLRA), which provides that companies’ antilabor speech cannot be considered evidence of an unfair labor practice, so long as it does not threaten or coerce workers. California defended the statute as a necessary measure to prevent taxpayer money from influencing workers’ decisions to organize. The law does not alter the rights of companies to discourage unionizing, but merely guarantees that such efforts will be privately funded. Which party should prevail? [*Chamber of Commerce v. Brown*, 128 S. Ct. 2408 (2008).]
2. In March 1998, forty-three-year-old Peter Barnes read an ad in the *Chicago Tribune* that Pentrix was seeking experienced word processors to work in its Chicago office. Pentrix is a national corporation specializing in the design and manufacture of hand-held computers. The ad stated that Pentrix was looking for “experienced word

processors seeking a career in a stable and growing company.” On March 8, 1998, Barnes interviewed with Renee Thompson, the head of Pentrix’s word processing department in Chicago. Thompson was impressed with Barnes’s prior experience and reassured him that although Pentrix is a national corporation, the employees in Pentrix are like a family and look after one another. Thompson offered Barnes a job at the end of the interview, and Barnes began work on March 15, 1998.

Barnes received an updated policy manual from the personnel department every year that he worked for Pentrix. In addition to discussing such things as vacation, salary, and benefits, the policy manual described Pentrix’s progressive discipline system.

Pentrix’s progressive discipline system consisted of three basic steps. First, an employee’s supervisor must discuss the employee’s deficiencies with the employee and suggest ways for the employee to improve his or her work performance. Second, the employee must receive written notice of his or her poor performance with suggestions of how the performance can improve. Third, the employee must receive a written warning that if the employee’s performance does not improve, he or she will be terminated.

The manual provided that in cases of “material misconduct” a supervisor had the discretion to decide whether to follow the progressive discipline procedures. The policy manual also provided that Pentrix had complete discretion to decide who would be discharged in the event of a company layoff.

In 2000, the following language was added to the policy manual:

These policies are simply guidelines to management. Pentrix reserves the right to terminate or change them at any time or to elect not to follow them in any case. Nothing in these policies is intended or should be understood as creating a contract of employment or a guarantee of continued employment with Pentrix. Employment at Pentrix remains terminable at the will of either the employee or Pentrix at any time for any reason or for no reason.

Barnes signed an acknowledgment of receipt of the 2000 policy manual.

Barnes received several good performance reviews during the time he worked at Pentrix. On a few occasions, Thompson discussed with Barnes the importance of arriving at work on time, but no record was kept of the times that he was late. Thompson noted in Barnes's 2005 and 2006 performance evaluations that he should proofread his work more carefully.

In October 2007, Barnes received an offer to work as a word processor for Lintog, another computer manufacturing corporation in Chicago. Barnes discussed this offer with Thompson. Thompson persuaded Barnes to remain at Pentrix by suggesting that he might be promoted to day-shift word processing supervisor when the current day-shift supervisor resigned. The day-shift supervisor has yet to resign from Pentrix.

Barnes was discharged from Pentrix on July 1, 2008. Thompson told Barnes that he was being fired because Pentrix was experiencing a slowdown and that two word processors were being let go in each of Pentrix's twenty offices across the country. Thompson wrote on the separation notice placed in Barnes's personnel file that Barnes was being discharged as a result of a workforce reduction. Before leaving on July 1, Barnes saw Olga Svetlana, Pentrix's vice president of computer design, getting into her car. Svetlana said to Barnes, "Too bad about your job, but maybe this will teach you to stop leaking our computer designs to other companies."

Barnes had trouble sleeping and felt depressed after being fired from Pentrix. He waited three weeks before he began looking for another job. He then submitted an application to Lintog, the company that had offered him a job in 2007. Rob Grey, the head of the word processing department at Lintog, called Renee Thompson at Pentrix to find out why Barnes had left. Thompson responded that Barnes had worked in Pentrix's word processing department for more than ten years and was discharged as a result of a slowdown. Barnes interviewed with Grey on July 26, 2008. During the interview, Grey asked Barnes why he had left his job at Pentrix.

Barnes responded that although he was officially told that he was being discharged because of a reduction in force, he was fired because he was wrongly suspected of leaking the corporation's computer designs. Barnes was not hired by Lintog.

- a. What claims might Barnes bring against Pentrix, Inc.?
- b. If you were investigating whether Barnes could successfully sue Pentrix, what information would you want to know?
- c. What damages might Barnes be entitled to recover?

3. In the following cases, should the court find that the employees were exempt employees who received a salary or hourly employees entitled to overtime pay?

- a. Laurie Young was hired by Cerner Corporation as a software engineer at a salary of \$65,000, one pay grade above Cerner's entry-level salary for new engineers. The position description for Young's position stated that she would be responsible for writing computer code to user specifications. During her employment, however, she did not write any computer code, nor did she develop or execute her own test plans. Instead, Young tested systems and programs using a tool called Informatica that allowed her to determine if a program was pulling the correct data from a database. If she determined that it was not pulling the correct data, she would change the statements in the program to look for other data transformations offered by Informatica to resolve the problem. On one occasion, she spent a month writing modifications to a stored computer procedure that was available to other users. [*Young v. Cerner Corp.*, 2007 WL 2463205 (W.D. Mo. 2007).]
- b. Two Starbucks store managers, Sean Pendlebury of Boca Raton and Laurel Overton of Delroy Beach, Florida, claim that they should not be exempt from earning overtime because the bulk of their duties are not managerial. Like baristas—hourly employees who wait on customers, make drinks, or clean the store—Pendlebury and Overton make lattes—and serve customers. They allege that less than 10 percent of their time is spent on managerial tasks. They are paid a flat salary that is higher than a barista's pay, but baristas earn overtime pay if they work more than forty hours per week. [*Pendlebury v. Starbucks Coffee Co.*, 518 F. Supp. 2d 1345 (S.D. Fla. 2007).]

4. Edwards, a certified public accountant, was hired as a tax manager by the Los Angeles office of Arthur Andersen. In that position, Edwards provided income, gift, and estate planning services to individuals with a high net worth. As a condition of his employment, Edwards signed Andersen's standard noncompetition agreement, which included the following:

If you leave the Firm, for eighteen months after release or resignation, you agree not to perform

professional services of the type you provided for any client in which you worked during the eighteen months prior to release or resignation. This does not prohibit you from accepting employment with a client [the "Non-Compete"]. For twelve months after you leave the Firm, you agree not to solicit (to perform professional services of the type you provided) any client of the office(s) to which you were assigned during the eighteen months preceding release or resignation [the Nonsolicitation of Clients].

You agree not to solicit away from the Firm any of its professional personnel for eighteen months after release or resignation [the Nonsolicitation of Employees].

In March 2002, Andersen was indicted for obstruction of justice in connection with the investigation of Enron Corporation by the Securities and Exchange Commission. In May 2002, HSBC agreed to purchase a portion of Andersen's Los Angeles tax practice, including Edwards's group. As a condition of the purchase, Andersen required all Andersen managers to execute a Termination of Non-Compete (TONC) that included a broad release of claims against Andersen. When Edwards refused to sign, HSBC withdrew his employment offer, and Edwards sued Andersen for, among other things, intentional interference with prospective economic advantages. Edwards claimed that the noncompetition agreement was invalid and therefore that requiring him to execute the TONC as consideration for release from the noncompetition agreement was also invalid. Will Edwards succeed in challenging the validity of the Non-Compete? The Nonsolicitation of Clients? The Non-solicitation of Employees? [*Edwards v. Arthur Andersen LLP*, 47 Cal. Rptr. 3d 788 (Cal. Ct. App. 2006).]

5. In October 2002, Weyerhaeuser Corporation hired a security company to bring in four dogs to search for drugs and guns in its parking lot. The dogs did not find any drugs but focused on several vehicles containing guns. The company then ordered the owners of the vehicles to open their cars so that they could be hand searched. Weyerhaeuser said the weapons violated a new company policy that extended a longtime workplace gun ban to the parking area, and it terminated four Weyerhaeuser employees and eight others who worked for subcontractors, all of whom had stored guns in their vehicles in violation of the policy. The company claimed that it had told workers about the new policy in writing and at team meetings, but the terminated workers claimed they were never told about the rule. The employees immediately sued for wrongful termination. What arguments can the employees make in their wrongful-termination suit? What arguments will Weyerhaeuser make in response? Will the employees succeed?

The firings outraged many in the rural community in the foothills of the Ouachita Mountains, where carrying a firearm in one's car is commonplace, especially during deer hunting season. As a result, the Oklahoma legislature overwhelmingly passed a law stating that "no person, property owner, tenant, employer, or business entity shall be permitted to establish any policy or rule that has the effect of prohibiting any person, except a convicted felon, from transporting or storing firearms in a locked vehicle on any property set aside for any vehicle." Before the law became effective, however, several prominent companies with Oklahoma operations, including the Williams Companies and ConocoPhillips, sued to stop it. A federal court enjoined the state of Oklahoma from enforcing the law. The plaintiffs asserted that the statute violates their property rights and due process rights, is unconstitutionally vague, and is inconsistent with federal laws regulating firearms. They also argue that the statute will impair their ability to guarantee workplace safety by prohibiting weapons on their property. What arguments will the state of Oklahoma make in response? Which party should prevail? [Susan Warren, *In Oklahoma, a Ban on Guns Pits State Against Big Firms*, WALL ST. J., Nov. 26, 2004, at A1; *ConocoPhillips Co. v. Henry*, 520 F. Supp. 2d 1282 (10th Cir. 2007).]

6. Lisa Mull was a line operator at Zeta Consumer Products' plastic-bag manufacturing facility in New Jersey. One of Mull's duties was to work with a machine known as a "winder," which winds plastic bags onto spools for packaging and delivery. The machine's frequent malfunctions required Mull to clear the jam and replace the nylon ropes that turned the machine's cylinders. On one occasion, after Mull had turned off the machine by pressing the stop button on the control panel, the winder suddenly began to operate, pulling Mull's left hand into the machine and causing serious injuries, including amputation of two fingers.

Several months before the accident, OSHA had cited Zeta for failing to provide its employees with so-called lockout/tagout procedures, which are required by federal law and are designed to control the release of hazardous energy when a worker is servicing or performing maintenance on equipment or machinery. Also prior to the date of Mull's injury, another line operator had sustained injuries similar to Mull's; Zeta was aware of the injuries. In addition, other line operators indicated that Zeta, motivated by a desire to enhance productivity, had altered the original design of the winder by removing safety interlock switches (which prevent the machine from operating when the access cover is open). Line operators had also complained to management that Zeta failed to post warnings on the winder to inform workers of its "sudden start-up" capabilities or that the safety interlock switches had been removed.

Mull sued the employer for damages, and Zeta moved for summary judgment on the basis that Mull's sole remedy was recovery under New Jersey's Workers' Compensation Act. What, if any, OSHA liability does Zeta face based on these facts? How should the court rule? Should Zeta be concerned about any other potential liability arising out of these facts? [*Mull v. Zeta Consumer Products*, 823 A.2d 782 (2003).]

7. Elizabeth M. Stewart was a highly talented salesperson for Cendant Mobility Services Corporation. Stewart's husband was also employed by Cendant as an executive in the operations department. During a major corporate reorganization, Cendant terminated Stewart's husband. Shortly thereafter, Stewart spoke with James Simon, Cendant's executive vice president of sales, regarding her concerns about how her employment with Cendant might be affected if her husband ultimately found employment with a competitor. Simon told Stewart that her husband's employment would have no bearing on her employment with Cendant and that she had no reason to be concerned about her status at Cendant because she was a highly valued employee. On the basis of these assurances, Stewart continued in her position with Cendant and did not pursue other employment opportunities.

Nearly one year after Cendant's reorganization, Cendant learned that Stewart's husband was working for a competitor and subsequently reduced her duties and limited her interaction with clients. Cendant also requested that Stewart verbally agree to a document that purported to delineate her obligations to Cendant in relation to her husband's work on behalf of any competitor of Cendant. When Stewart declined to agree to this document, Cendant terminated her employment. Stewart sued Cendant claiming that she had relied to her detriment on Simon's promise that her employment with Cendant would not be affected adversely by her husband's probable future employment with a competitor. How should the court rule? [*Stewart v. Cendant Mobility Services Corp.*, 836 A.2d 736 (Conn. 2003).]

8. Have any of the employers in the following cases terminated an employee in violation of public policy? Has each employer acted ethically?
- A nonexempt employee alleged that she was discharged after thirty years of employment with the Cleveland Clinic Foundation because she complained about being underpaid and requested remediation. She also claimed that she was forced to falsify her timekeeping records during her employment at the clinic. [*DeMell v. Cleveland Clinic Foundation*, 2007 WL 1705094 (Ohio App. 8 Dist. June 14, 2007).]
 - An employee hired as an "environmental/assistant safety manager" complained about La-Z-Boy's

handling of injured employees on a number of occasions. Among other incidents, she submitted a memorandum in which she stated that employees' injury claims were being intentionally mismanaged and that the claim adjuster was hostile to employees who filed workers' compensation claims. She also informed the human resources director that the "alternate duty assignments" given to injured employees were demeaning. When she told La-Z-Boy's vice president that an employee had been injured and that his benefits were being improperly denied, she alleges that she was told "she would be fired if she ever talked to any employees about their Workers' Compensation issues or their injuries." Several months later while she was on maternity leave, she was informed that she had been terminated and her position had been filled. [*Touchard v. La-Z-Boy, Inc.*, 148 P.3d 945 (Utah 2006).]

- Joan Grinzi worked as a case manager for San Diego Hospice Corporation for thirteen years. During her employment, she received a promotion, commendations, and raises. Hospice never warned or disciplined her, and she performed all her duties and obligations. In early 2002, Hospice fired her, explaining that her termination was because of her membership in the Women's Garden Circle, an investment group that Hospice believed to be an illegal pyramid scheme. A few days later, Hospice told her that she was terminated for wrongful use of Hospice's e-mail system. Grinzi filed suit, claiming that the true reason for her termination was her lawful conduct outside working hours, consisting of her membership in the Women's Garden Circle, in violation of the First Amendment and Labor Code Sections 96(k) and 98.6, which provide for the employee, or a labor commissioner, to prosecute "claims for the loss of wages as the result of . . . discharge from employment for lawful conduct occurring during nonworking hours away from the employer's premises." [*Grinzi v. San Diego Hospice Corp.*, 120 Cal. App. 4th 72 (2004).]
- Collotype Labels suspended Luke after learning that he had lied about having his position covered when he took time off. While he was suspended, Luke sent an e-mail to a Collotype manager in another office, entitled "trouble brewing," that related to various complaints raised by a number of Collotype employees. The next day, Collotype terminated Luke's employment for insubordination, and provided him with a termination memorandum stating that one of the reasons for his termination was that he had been soliciting signatures for a letter denouncing the company's management. [*Luke v. Collotype Labels USA, Inc.*, 159 Cal. App. 4th 1463 (2008).]

CHAPTER 13

CIVIL RIGHTS AND EMPLOYMENT DISCRIMINATION

INTRODUCTION

Laws Designed to Eliminate Employment Discrimination

The abolition of slavery after the Civil War and the civil rights movement of the 1960s were two great forces behind modern civil rights legislation. From the Civil Rights Act of 1866 to the Genetic Information Nondiscrimination Act of 2008, the law has moved in a direction to eliminate discrimination based on race, gender, color, religion, national origin, age, disability, or genetics information. Civil rights laws help ensure that every member of society has the opportunity to reach his or her full potential.

Managers who fail to adopt and enforce policies to ensure compliance with federal and state legislation prohibiting employment discrimination put their companies at risk of being penalized by large fines and judgments. Financial settlements secured by the Equal Employment Opportunity Commission (EEOC) rose from \$295 million in fiscal 2001 to \$415 million in 2004. From 2004 through 2007, however, the agency's budget was frozen, and financial settlements dropped to \$274 million in 2006 and \$345 million in 2007.¹ With the EEOC facing a backlog of 40,000 cases, private litigation of employment-discrimination claims has become increasingly important. For example, in 2007, attorneys in a major race discrimination class action reached a settlement pursuant to which FedEx agreed to pay almost \$55 million and to overhaul its pay, discipline, and promotion practices.²

1. Isaiah J. Poole, *EEOC Set Up to Drown*, TomPaine.common sense, http://www.tompaine.com/articles/2007/04/25/eec_set_up_to_drown.php.

2. Mathew Hirsch, *FedEx, Workers Reach \$55 Million Deal on Racial Claims*, RECORDER, Apr. 11, 2007, at 1.

CHAPTER OVERVIEW

This chapter provides an overview of federal legislation barring employment discrimination, with special attention to Title VII of the Civil Rights Act, the Age Discrimination in Employment Act (ADEA), the Americans with Disabilities Act (ADA), the Family and Medical Leave Act, and the Uniformed Services Employment and Reemployment Rights Act. It illustrates the various legal theories pursued under each piece of legislation and shows how those theories relate to legal and appropriate behavior by managers in a business environment. We also discuss how discrimination laws apply to affirmative action and the hiring of contingent or temporary workers. The chapter concludes with an overview of the ways that other countries approach workplace discrimination and diversity.

OVERVIEW OF CIVIL RIGHTS LEGISLATION

The federal statutes that forbid various kinds of discrimination in employment are summarized in Exhibit 13.1. Many states have passed their own fair employment acts, which in some instances provide greater protection than their federal counterparts.³ The federal statutes apply only to employees,

3. For example, California, Illinois, Minnesota, New Jersey, New Mexico, and Rhode Island have passed laws barring employment discrimination based on gender identity. See Charles Toutant, *New Transsexual Rights Law Leaves Lawyers Guessing About Its Terms*, N.J. L.J., June 25, 2007.

EXHIBIT 13.1

Major Pieces of Federal Civil Rights Legislation

Statute	Major Provisions	Employers Subject to Statute	Comments
Civil Rights Act of 1866 ^a (Section 1981)	Prohibits racial discrimination by employers of any size in the making and enforcement of contracts, including employment contracts.	All public and private employers	The bar against racial discrimination applies not only to hiring, promotion, and termination, but also to working conditions, such as racial harassment, and to breaches of contract occurring during the term of the contract.
Equal Pay Act of 1963 ^b	Mandates equal pay for equal work without regard to gender.	All public and private employers with twenty or more employees (including federal, state, and local governments)	
Title VII of the Civil Rights Act of 1964 ^c (Title VII)	Prohibits discrimination in employment on the basis of race, color, religion, national origin, or sex. Later amended to provide that discrimination on the basis of sex includes discrimination on the basis of pregnancy, childbirth, or related medical conditions.	All public and private employers with fifteen or more employees (including federal, state, and local governments)	
Age Discrimination in Employment Act of 1967 ^d (ADEA)	Protects persons forty years and older from discrimination on the basis of age. The ADEA was amended in 1990 by the Older Workers' Benefit Protection Act, which prohibits age discrimination in providing employee benefits and establishes minimum standards for waiver of one's rights under the ADEA.	All public and private employers with twenty or more employees (including federal, state, and local governments)	
Vietnam Era Veterans' Readjustment Assistance Acts of 1972 and 1974 ^e	Require affirmative action to employ disabled Vietnam-era veterans.	Employers holding federal contracts of \$10,000 or more	Enforced by U.S. Department of Labor.
Vocational Rehabilitation Act of 1973 ^f	Prohibits discrimination against the physically and mentally disabled. Imposes affirmative-action obligations on employers having contracts with the federal government in excess of \$2,500.	Employers receiving federal financial assistance of any amount	Enforced by U.S. Department of Labor. This legislation was the precursor to and guided the development of the Americans with Disabilities Act.
Uniformed Services Employment and Reemployment Rights Act of 1994 ^g	Gives employees who served in the military at any time the right to be reinstated in employment without loss of benefits and the right not to be discharged without cause for one year following such reinstatement.	All public and private employers	
Immigration Reform and Control Act of 1986 ^h (IRCA)	Prohibits discrimination against applicants or employees based on national origin or citizenship status.	All private employers with four or more employees	If employer has fifteen or more employees, plaintiff must file national origin discrimination claims under Title VII.

CONTINUED

EXHIBIT 13.1

Major Pieces of Federal Civil Rights Legislation (*Continued*)

Statute	Major Provisions	Employers Subject to Statute	Comments
Americans with Disabilities Act of 1990 (ADA), as amended by the ADA Amendments Act of 2008 ⁱ	Prohibits discrimination in employment on the basis of a person's disability. Also requires businesses to provide "reasonable accommodation" to the disabled, unless such an accommodation would result in "undue hardship" on business operations.	All private employers with fifteen or more employees	The ADA is the most sweeping civil rights measure since the Civil Rights Act of 1964.
Civil Rights Act of 1991 ^j	Legislatively overruled several parts of recent Supreme Court rulings that were unfavorable to the rights of plaintiffs in employment-discrimination cases. Also extended coverage of the major civil rights statutes to the staffs of the president and the Senate.	Varies	
Family and Medical Leave Act of 1993 ^k	Designed to allow employees to take time off from work to handle domestic responsibilities, such as the birth or adoption of a child or the care of an elderly parent. Employees are guaranteed job security despite familial responsibilities.	Private employers with fifty or more employees at work sites within seventy-five miles of each other	Part-time employees are excluded from the Act's coverage and are not to be counted in calculating the fifty employees necessary for an employer to be covered by the Act.
Genetic Information Nondiscrimination Act of 2008 ^l (GINA)	Prohibits employers, group health plans, and health insurers from discriminating based on genetic information.	All public and private employers with fifteen or more employees (including federal, state, and local governments)	Employers are prohibited from hiring, firing, placing, or making promotional decisions based solely on an individual's genetic information, but there is no cause of action for disparate impact.

a. 42 U.S.C. § 1981.
b. 29 U.S.C. § 206(d).
c. 42 U.S.C. §§ 2000e–2000e-17.
d. 29 U.S.C. §§ 621–634.
e. 38 U.S.C. § 4100 *et seq.*
f. 29 U.S.C. §§ 701–797.
g. 38 U.S.C. §§ 4301–4307.
h. Pub. L. No. 99-603, 100 Stat. 3359 (codified as amended in scattered sections of the U.S.C.) (1986).
i. 42 U.S.C. §§ 12101–12213, as amended by Pub. L. No. 110-325, 122 Stat. 2553.
j. Pub. L. No. 102-106, 105 Stat. 1071 (codified in scattered sections of the U.S.C.) (1991).
k. 29 U.S.C. §§ 2601–2654.
l. H.R. 493, 110th Cong. (2008) (enacted) and signed into law on May 21, 2008.

not independent contractors (see Chapter 5 for a discussion of the difference between employees and contractors).

Although the statutes described in Exhibit 13.1 have created a far more level playing field for all workers, progress can be slow. For example, the Equal Pay Act was enacted in 1963, but as of 2006, women still earned only 76.9 percent of what men earned annually.⁴

4. Institute for Women's Policy Research Fact Sheet, *The Gender Wage Ratio: Women's and Men's Earnings* (updated Feb. 2008), available at <http://www.iwpr.org/pdf/C350.pdf>.

ENFORCEMENT

The Equal Employment Opportunity Commission (EEOC) is the primary enforcer of civil rights legislation in the United States. A part of the Department of Justice, the EEOC processes hundreds of complaints, investigating and evaluating their merit. An individual challenging an employment practice must file a complaint with the EEOC within the specified *charging period*. For example, Title VII claims must be filed within 180 days after the alleged unlawful employment practice occurred. If a claim is unfounded or

not filed in a timely manner, it will be dismissed. If a timely claim withstands initial inquiry and the EEOC is unable to pursue the case due to staff and resource constraints, then the agency will provide a right-to-sue letter to the private party. Without this administrative permission, private litigants cannot initiate suits under various statutes, including Title VII and the ADA.

Although an individual employee can be required to agree to arbitrate civil rights' disputes, this does not preclude the EEOC from suing the employer in a court of law for damages payable to the aggrieved employee. See Chapter 3 for further information on the arbitration of discrimination claims.

DEFINITION OF ADVERSE EMPLOYMENT ACTION

In most discrimination cases, courts have required the employee to establish that his or her employer subjected him or her to an adverse employment action. A majority of the appellate courts have interpreted *adverse employment action* broadly to include demotions, refusals to hire or promote, unwarranted negative job evaluations, disadvantageous transfers or assignments, depriving an employee of support services, cutting off challenging assignments, moving an employee from a spacious office to a dingy closet, forcing an employee to jump through hoops in order to obtain severance benefits, making and soliciting from coworkers negative comments about an employee, needlessly delaying authorization for medical treatment, requiring an employee to work without a lunch break, and changing an employee's schedule without notification.⁵ Several appellate courts, however, have adopted a very restrictive test, holding that only actions affecting hiring, firing, promoting, and demoting are adverse employment actions. Other appellate courts, including the U.S. Court of Appeals for the Sixth Circuit, have adopted a middle-of-the-road approach, holding that an adverse employment action is something that materially affects the terms and conditions of employment, such as employee compensation or privileges. (The showing of adverse action necessary to support a retaliation claim is discussed later in this chapter.)

REMEDIES

Available remedies in discrimination cases generally include compensation for lost salary and benefits (*back pay*); hiring, wage adjustments, promotion, reinstatement, and other injunctive relief to stop prohibited discriminatory actions; and *front pay* equal to what the employee would have received had

he or she not been discharged. Front pay is generally awarded when reinstatement is inappropriate because the position is unavailable or hostility raises a practical barrier.

The plaintiff may also recover compensatory damages for future pecuniary losses, emotional pain and suffering, inconvenience, mental anguish, loss of enjoyment of life, and other nonpecuniary losses. While front pay is limited in duration because it compensates for the immediate effects of discrimination, lost future earnings compensate an employee for a lifetime of diminished earnings resulting from the reputational harm suffered as a result of discrimination. Therefore, an employee may be awarded both front pay and damages for lost future earnings.⁶ As discussed more fully later in this chapter, punitive damages may be available under certain circumstances as well.

TITLE VII

Title VII bans discrimination based on an individual's race, color, religion, national origin, or sex. Title VII claims generally fall within one of four broad categories: traditional discrimination, harassment, failure to accommodate religious beliefs, and retaliation.

TRADITIONAL DISCRIMINATION CLAIMS

Litigation in traditional Title VII actions has produced two distinct legal theories of discrimination: (1) disparate treatment and (2) disparate impact.

Disparate Treatment

A plaintiff claiming *disparate treatment* must prove that the employer intentionally discriminated against him or her by denying a benefit or privilege of employment (such as a promotion or pay raise) because of his or her race, color, religion, sex, or national origin. The U.S. Supreme Court has established a systematic approach for proving these claims.⁷ First, the employee must prove a *prima facie* case, which entails proving that (1) he or she is a member of a class of persons protected by Title VII; and (2) he or she was denied a position or benefit that he or she sought, for which he or she was qualified, and that was available. If the employee proves the *prima facie* case, the employer then must present evidence, but need not prove, that it had legitimate, nondiscriminatory grounds for its decision, such as the employee's lack of

6. Williams v. Pharmacia, Inc., 137 F.3d 944 (7th Cir. 1998).

7. See McDonnell Douglas Corp. v. Green, 411 U.S. 792 (1973). See also Ash v. Tyson Foods, 546 U.S. 454 (2006).

5. Ray v. Henderson, 217 F.3d 1234 (9th Cir. 2000).

qualifications or poor job performance. Once the employer meets its burden of producing evidence, the employee then must prove that the grounds offered by the employer were merely a pretext for the employer's actions and that intentional discrimination was the true reason.

In the following disparate treatment case, the U.S. Supreme Court considered whether an employer triggers a new EEOC charging period each time the employer issues paychecks that reflect discriminatory acts that occurred prior to the charging period.

A CASE IN POINT

CASE 13.1

LEDBETTER V. GOODYEAR TIRE & RUBBER CO.

SUPREME COURT OF THE UNITED STATES
127 S. Ct. 2162 (2007).

IN THE LANGUAGE OF THE COURT

FACTS Lilly Ledbetter, a female area manager, worked at Goodyear's Gladson, Alabama plant from 1979 to 1998. Initially, Ledbetter's salary was in line with the salaries of male area managers. By the end of 1997, however, Ledbetter was the only female area manager and was paid \$3,727 per month, while the lowest-paid male area manager was paid \$4,286 and the highest-paid male area manager was paid \$5,232 per month. At trial, Ledbetter alleged that the disparity was created during the 1980s, when a supervisor retaliated against her by giving her a poor evaluation after she rejected his sexual advances, and in the mid-1990s when another supervisor gave her a poor evaluation because she was female. As a result of these discriminatory evaluations, Ledbetter's pay was not increased as much as it would have been if she had been evaluated fairly, and these past pay decisions continued to affect the amount of her pay.

In March 1998, Ledbetter submitted a questionnaire to the EEOC alleging certain acts of sex discrimination; she filed a formal EEOC charge in July. After taking early retirement in November 1998, Ledbetter filed a lawsuit against Goodyear in which she asserted, among other things, a Title VII pay discrimination claim. Goodyear maintained that the evaluations had been nondiscriminatory, but the jury found for Ledbetter and awarded her back pay and damages. The U.S. Court of Appeals for the Eleventh Circuit reversed, holding that a Title VII pay discrimination claim must be based on a discriminatory act that occurred during the 180-day EEOC charging period. The court then concluded that there was insufficient evidence to prove that Goodyear had acted with discriminatory intent in making the only two pay decisions that occurred within that time span, namely a decision made in 1997 to deny Ledbetter a raise and a similar decision made in 1998.

ISSUE PRESENTED Can a plaintiff bring an action under Title VII alleging illegal pay discrimination when disparate pay received during the statutory charging period is the result of intentionally discriminatory pay decisions that occurred outside the charging period?

OPINION ALITO, J., writing for the U.S. Supreme Court:

An individual wishing to challenge an employment practice under [Title VII] must first file a charge with the EEOC. Such a charge must be filed within a specified period after the alleged unlawful employment practice occurred, and if the employee does not submit a timely EEOC charge, the employee may not challenge that practice in court.

....

Ledbetter asserted disparate treatment, the central element of which is discriminatory intent. However, Ledbetter does not assert that the relevant Goodyear decisionmakers acted with actual discriminatory intent either when they issued her checks during the EEOC charging period or when they denied her a raise in 1998. Rather, she argues that the paychecks were unlawful because they would have been larger if she had been evaluated in a nondiscriminatory manner *prior to* the EEOC charging period. Similarly, she maintains that the 1998 decision was unlawful because it "carried forward" the effects of prior, uncharged discrimination decisions. In essence, she suggests that it is sufficient that

CONTINUED

discriminatory acts that occurred prior to the charging period had continued effects during that period. ("[E]ach paycheck that offers a woman less pay than a similarly situated man because of her sex is a separate violation of Title VII with its own limitations period, regardless of whether the paycheck simply implements a prior discriminatory decision made outside the limitations period"). . . .

. . .

We are not in a position to evaluate Ledbetter's policy arguments, and it is not our prerogative to change the way in which Title VII balances the interests of aggrieved employees against the interest in encouraging the "prompt processing of all charges of employment discrimination," and the interest in repose.

Ledbetter's policy arguments for giving special treatment to pay claims finds no support in the statute and are inconsistent with our precedents. We apply the statute as written, and this means that any unlawful employment practice, including those involving compensation, must be presented to the EEOC within the period prescribed by statute.

RESULT The Court affirmed the decision of the Eleventh Circuit and dismissed Ledbetter's claims. Because the later effects of past discrimination did not restart the clock for filing an EEOC charge, Ledbetter's claim of discrimination was untimely.

DISSENT GINSBURG, J., with whom STEVENS, SOUTER, and BREYER, JJ., join:

The realities of the workplace reveal why the discrimination with respect to compensation that Ledbetter suffered does not fit within the category of singular discrete acts "easy to identify." A worker knows immediately if she is denied a promotion or transfer, if she is fired or refused employment. And promotions, transfers, hirings, and firings are generally public events, known to co-workers. When an employer makes a decision of such open and definitive character, an employee can immediately seek out an explanation and evaluate it for pretext. Compensation disparities, in contrast, are often hidden from sight. It is not unusual, decision in point illustrates, for management to decline to publish employee pay levels, or for employees to keep private their own salaries. . . .

. . .

The problem of concealed pay discrimination is particularly acute where the disparity arises not because the female employee is flatly denied a raise but because male counterparts are given larger raises. Having received a pay increase, the female employee is unlikely to discern at once that she has experienced an adverse employment decision. She may have little reason even to suspect discrimination until a pattern develops incrementally and she ultimately becomes aware of the disparity. Even if an employee suspects that the reason for a comparatively low raise is not performance but sex (or another protected ground), the amount involved may seem too small, or the employer's intent too ambiguous, to make the issue immediately actionable—or winnable.

. . .

The Court asserts that treating pay discrimination as a discrete act, limited to each particular, pay-setting decision, is necessary to "protec[t] employers from the burden of defending claims arising from employment decisions that are long past." But the discrimination of which Ledbetter complained is *not* long past. As she alleged, and as the jury found, Goodyear continued to treat Ledbetter differently because of sex each pay period, with mounting harm. Allowing employees to challenge discrimination "that extend[s] over long periods of time," into the charge-filing period, we have previously explained, "does not leave employers defenseless" against unreasonable or prejudicial delay.

. . .

This is not the first time the Court has ordered a cramped interpretation of Title VII, incompatible with the statute's broad remedial purpose. Once again, the ball is in Congress' court.

CRITICAL THINKING QUESTIONS

1. Is it fair to require a victim of pay discrimination to bring a claim within 180 days of the discriminatory event when she may not be aware that she received a lower salary increase than her male peers? Should the outcome be different if the employee had full knowledge that she was receiving a lower salary increase than her male peers?
2. Do you agree with Justice Ginsburg that Congress should act to override this decision?

In *Frank v. United Airlines, Inc.*,⁸ the U.S. Court of Appeals for the Ninth Circuit held that United Airlines' use of different weight policies for male and female flight attendants was illegal disparate treatment on the basis of sex. The airline required female flight attendants to meet weight limits based on suggested weights for medium body frames, but permitted male flight attendants to meet weight limits based on large body frames. The court held that United failed to show that having thinner female than male flight attendants affected the flight attendants' ability to greet passengers, move luggage, push carts, or provide physical assistance in emergencies. The court found that the plaintiffs had successfully established that United's reasons were a pretext and that the different weight limits for male and female flight attendants constituted illegal discrimination. In fact, the court concluded, the discriminatory weight requirement may have actually hindered female employees' job performance.

Disparate Impact

The *disparate impact* theory arose out of Title VII class actions brought in the 1970s against large employers. These suits challenged testing and other selection procedures, claiming that they systematically excluded women or particular ethnic groups from certain types of jobs. It is not necessary to prove intentional discrimination to prevail in a disparate impact case. Discrimination can be established by proving that an employment practice, although neutral on its face, disproportionately affects a protected group in a negative way.

For example, the owner of a sausage plant implemented a strength test for entry-level jobs that required repetitive lifting of up to thirty-five pounds to a height of sixty inches. The EEOC established its *prima facie* case by showing that 46 percent of the individuals hired for these jobs were women before the test was adopted, but the number of women hired dropped to 15 percent after the test was adopted. The employer attempted to show that the test "related to safe and efficient job performance and [was] consistent with business necessity" by presenting evidence that the test effectively gauged

the skills needed for the job and that there was a consistent decline in the number of work-related injuries after the test was implemented. There was, however, also evidence that the downward trend in injuries had begun before the adoption of the strength test, when the employer had instituted other measures to reduce injuries. The U.S. Court of Appeals for the Eighth Circuit found that the employer had not presented sufficient evidence of business necessity because it had not shown that these other safety measures could not have produced the same results. As a result, the court affirmed the jury's verdict that use of the strength test had an unlawful disparate impact on female applicants.⁹

The business justification offered by an employer to justify the disparate impact must relate to job performance. Inconvenience, annoyance, or expense to the employer will not suffice. For example, a Latina applicant who is denied employment because she failed an English-language test might challenge the language requirement. If she has applied for a sales job, the employer might be able to justify the requirement on the ground that ability to communicate with customers is an indispensable qualification. On the other hand, if she has applied for a job on the production line, that justification would probably not suffice unless her duties would include communicating with others in English. As under disparate treatment analysis, the burden of persuasion ultimately rests with the plaintiff.

Historically, disparate impact analysis has been limited to objective selection criteria, such as tests and degree requirements. This analysis may also apply to subjective bases for decisions, such as interviews and supervisor evaluations.¹⁰

HARASSMENT

Employees can bring claims for harassment in violation of Title VII on the basis of sex, race, color, religion, or national origin. The most prevalent type of harassment claim is sexual harassment, and thus the law regarding harassment has been largely developed in the context of sexual harassment

8. 216 F.3d 845 (9th Cir. 2000).

9. EEOC v. Dial Corp., 469 F.3d 735 (8th Cir. 2006).

10. See *Allen v. City of Chicago*, 351 F.3d 306 (7th Cir. 2003).

claims.¹¹ Nevertheless, the analysis used in sexual harassment cases is applied to claims of harassment on the basis of race, color, religion, and national origin as well.

Sexual Harassment

Sexual harassment law is based on language in Title VII that prohibits discrimination “because of sex” and is one of the more complex and emotional issues in antidiscrimination law. Sexual harassment can be asserted by male or female employees. Sexual harassment charges brought by men accounted for 16 percent of all sexual harassment charges filed with the EEOC (including claims filed with state and local agencies that have a work sharing agreement with the EEOC) in 2007, up from 11.6 percent in 1997.¹² The vast majority of such charges involved harassment by other men.

Quid Pro Quo Harassment Early on, the courts recognized that a specific, job-related adverse action, such as denial of a promotion, in retaliation for a person’s refusal to respond to his or her supervisor’s sexual advances is a violation of Title VII. Such retaliation, which is referred to as *quid pro quo* harassment, is a theory unique to sexual harassment claims.

Hostile Environment Harassment A threat of adverse job action in retaliation for rebuffing sexual advances does not constitute *quid pro quo* harassment if the threat is not carried out. Instead, it is a form of *hostile environment harassment*.¹³ Employees can bring claims for hostile environment harassment on the basis of race, color, religion, and national origin as well.

In *Meritor Savings Bank v. Vinson*,¹⁴ the U.S. Supreme Court first ruled that creation of a hostile environment by sexual harassment is a form of sex discrimination barred by Title VII, even if the employee cannot show a concrete economic effect on employment, such as discharge or denial of a raise or promotion, to establish a violation. Not every sexually offensive comment or act constitutes actionable sexual harassment, however; there must be sufficient offensive conduct to give rise to a pervasively hostile atmosphere. This determination should be based upon the totality of the circumstances.

In *Harris v. Forklift Systems, Inc.*,¹⁵ the U.S. Supreme Court held that a showing of a serious effect on an employee’s psychological well-being, or other injury, is not necessary

for a hostile work environment claim under Title VII, reasoning that “Title VII comes into play before the harassing conduct leads to a nervous breakdown.” The Court ruled in favor of a female manager of an equipment-rental company who was harassed for two years by its president. In the presence of other employees, the president said such things as, “You’re a woman, what do you know?” and “We need a man as the rental manager,” and called her “a dumb-ass woman.” The president also made sexual innuendos, suggesting that they “go to the Holiday Inn to negotiate her raise,” and occasionally asked female employees to get coins from his front pants pocket. Despite the employee’s complaints, the sexual comments continued.

Defining a Hostile Work Environment To determine whether there is a hostile or abusive environment, courts look at all the circumstances, including (1) the frequency and severity of the discriminatory conduct; (2) whether it is physically threatening or humiliating, or merely an offensive utterance; and (3) whether it unreasonably interferes with an employee’s work performance.

To be actionable under Title VII, sexual harassment must be so severe or pervasive as to alter the conditions of the victim’s employment and to create an abusive work environment. The U.S. Supreme Court has ruled that “‘simple teasing,’ offhand comments, and isolated incidents (unless extremely serious) will not amount to discriminatory changes in the terms and conditions of employment.”¹⁶ The conduct must be “extreme.” These standards for judging hostility are sufficiently demanding to prevent plaintiffs from converting Title VII into a “general civility code”; they are intended to filter out “complaints attacking ‘the ordinary tribulations of the workplace, such as the sporadic use of abusive language, gender-related jokes, and occasional teasing.’”

For example, the U.S. Court of Appeals for the Seventh Circuit ruled that a supervisor’s multiple and direct propositions for sex during a business meeting were sufficiently severe to create a hostile work environment.¹⁷ In *Duncan v. General Motors*,¹⁸ however, the U.S. Court of Appeals for the Eighth Circuit concluded that a male supervisor did not create a hostile work environment when he showed three-dimensional models of sexual organs and a picture of a naked woman to a female subordinate. The court stated that such action, while “boorish, chauvinistic, and decidedly immature,” did not create an objectively hostile work environment where the plaintiff’s employment had been altered.

18. 300 F.3d 928 (8th Cir. 2002), *aff’d*, 538 U.S. 994 (2003).

In *Schmitz v. ING Securities, Futures & Options, Inc.*,¹⁹ the court considered whether repeated comments made by the employer's chief financial officer to the receptionist regarding her risqué clothing constituted sexual harassment. The CFO told her that her skirts and blouses were too tight, too short, and too revealing. He called her an "exhibitionist" and once summoned her into his office to reprimand her for dressing so provocatively that any "hot-blooded male" in the office would be aroused and distracted from his work. After she complained to ING's director of human resources, her workload increased, and the CFO became openly hostile to her. Six weeks later, she was terminated for inadequate work performance. The court dismissed her claim for sexual discrimination and retaliation, and the U.S. Court of Appeals for the Seventh Circuit affirmed on the grounds that the receptionist had failed to establish that she was subject to sexual advances or requests for sexual favors. The court also held that the receptionist had failed to show that her work environment was hostile or abusive. Commenting on the CFO's behavior, the court said that "[his] failings 'to treat a female employee with sensitivity, tact, and delicacy'" are "too commonplace . . . to be classified as discriminatory."²⁰

Although some courts have held that a onetime incident is not enough to create a hostile environment, the trend in both sexual harassment suits and other claims of harassment appears to be to find a hostile environment if the incident is severe enough and involves a supervisor. In *Brooks v. San Mateo, California*,²¹ the U.S. Court of Appeals for the Ninth Circuit held that a single incident in which a male coworker touched a female employee's breast and stomach while she was answering a 911 emergency call was not sufficient to establish a hostile work environment. The employee suffered no physical injury, and the employer took prompt steps to remove the male employee from the workplace. The court noted that a single incident involving a supervisor was more likely to result in employer liability for hostile environment than comparable conduct by a coworker.

Although some state courts have upheld claims for hostile environment in so-called paramour cases (where coworkers claim an employee has received preferential treatment as a result of having sexual relations with a supervisor),²² a majority of federal courts have struck down such claims.²³

For example, in *Ackel v. National Communications, Inc.*,²⁴ the plaintiff complained that she was replaced by her supervisor's paramour as a result of favoritism based on their sexual relationship. The U.S. Court of Appeals for the Fifth Circuit stated that "courts have held that when an employer discriminates in favor of a paramour, such an action is not sex-based discrimination, as the favoritism, while unfair, disadvantages both sexes alike for reasons other than gender."²⁵

Same-Sex Sexual Harassment In *Oncale v. Sundowner Offshore Services, Inc.*, the U.S. Supreme Court held that Title VII prohibits same-sex harassment; in other words, it prohibits harassment where the harasser is the same sex as the employee being harassed.²⁶ Acknowledging that same-sex harassment was not the evil Congress sought to remedy when it passed Title VII, the Court nevertheless saw "no justification in the statutory language or our precedents for a categorical rule excluding same-sex harassment claims from the coverage of Title VII." However, the Court was careful to explain that to be actionable, the harassment must be tied to some type of gender discrimination: it must be "discrimination because of sex." Thus, the Court explained, "The critical issue is whether members of one sex are exposed to disadvantageous terms or conditions of employment to which members of the other sex are not exposed." The Supreme Court called on courts and juries to use "common sense" to differentiate sex discrimination from horseplay, noting that a pat on the bottom by a football coach to a player running onto the field may not constitute sex discrimination, but similar touching of a secretary might.²⁷

Applying the standard set forth in *Oncale*, the U.S. Court of Appeals for the Fifth Circuit found that obnoxious comments by a male supervisor about a male employee's sexuality, inappropriate touching of the employee's private body parts, and spitting tobacco juice on him could constitute sex discrimination, if the plaintiff could show that the same-sex harasser's actions were "explicit or implicit proposals of sexual activity" and that there was "credible evidence that the harasser was homosexual."²⁸ Such evidence would prove that the same-sex employee would not have been harassed if he had been a member of the opposite sex.

Sexual Orientation and Transgender Harassment The *Oncake* decision did not extend Title VII protection to harassment based on a person's sexual orientation. Although legislation to amend Title VII to include sexual orientation has been introduced in every term of Congress since 1975, it has not been enacted. The U.S. Supreme Court has, however, suggested that homosexual employees may state *sexual stereotyping* claims under Title VII against employers who discriminated against them because they were not "manly" enough men or "womanly" enough women.²⁹ There is also authority in many of the circuits for applying Title VII to cases in which an employee claims that he or she was subjected to harassment due to the discomfort or hostility of fellow employees because of the employee's gender nonconformity.³⁰

For example, in *Rene v. MGM Grand Hotel*, a gay male alleged that his harassers grabbed and poked at his genitals, but there was no evidence that any of his harassers had expressed any interest in engaging in sexual activity with Rene. The court found that harassment that included touching body parts was "inescapably [harassment] because of sex." The court held that an employee's sexual orientation is irrelevant for purposes of Title VII and neither provides nor precludes a cause of action for sexual harassment: "That the harasser is, or may be, motivated by hostility based on sexual orientation is . . . irrelevant. . . . It is enough that the harasser engaged in severe or pervasive unwelcome physical conduct of a sexual nature."³¹

More recently, the U.S. Court of Appeals for the Sixth Circuit upheld a jury's finding that Philecia Barnes, born Philip Barnes, a twenty-four-year veteran of the Cincinnati police force, was a victim of sex discrimination under Title VII. Barnes was denied a promotion to sergeant while on probation, subjected to an unusual daily evaluation by the other sergeants, and required to wear a microphone at all times.³²

Racial, National Origin, and Religious Harassment

As with claims of hostile environment harassment on the basis of sex, harassment claims based on race, color, national origin, or religion are evaluated according to the

IN BRIEF

Elements of a Sexual Harassment Claim

Unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature constitute sexual harassment when:

1. An individual's employment depends on submission to such conduct;
2. Submission to or rejection of such conduct is used as the basis of employment decisions; or
3. Such conduct unreasonably interferes with the individual's work performance or creates an intimidating, hostile, or offensive working environment.

To establish a claim of hostile environment sexual harassment under Title VII, the plaintiff must show that:

1. The harassment created an abusive working environment;
2. The harassment was based on sex; and
3. The harassment was so severe or pervasive as to alter the conditions of the victim's employment.

rule in *Harris v. Forklift Systems, Inc.*³³ Courts examine the totality of the circumstances to determine whether an employee was exposed to a hostile environment. In *Azimi v. Jordan's Meats, Inc.*,³⁴ a Muslim immigrant from Afghanistan sued his employer, claiming that he was subjected to racial or ethnic harassment. The U.S. Court of Appeals for the First Circuit affirmed the jury's finding of a hostile work environment, noting that the incidents of maltreatment were "outrageous" and included numerous disparaging remarks about the employee's religion, physical intimidation (one coworker grabbed him by the neck and tried to shove pork in his mouth), and other offensive conduct, often done anonymously (for example, an unsigned note left in his locker with a swastika on one side and a hate message containing racial and religious epithets on the other, pieces of pork placed in the pockets of his work jacket, and a picture of Osama Bin Laden hung in his locker).

In the following case, the court considered whether repeated offensive comments by a coworker created a racially hostile work environment.

A CASE IN POINT**CASE 13.2****GREEN V. FRANKLIN NATIONAL BANK OF MINNEAPOLIS**

UNITED STATES COURT OF APPEALS FOR
THE EIGHTH CIRCUIT
459 F.3d 903 (8th Cir. 2006).

IN THE LANGUAGE OF THE COURT

FACTS Linda Green, an African American female, worked as a teller for Franklin National Bank from March 2002 until her termination on August 26, 2002. She was transferred to the Washington Avenue branch in April after she complained that a teller at the branch where she worked had called her "stupid." Beginning in May 2002, Green worked with Jared Howard, a Caucasian male teller at the Washington branch. According to Green, Howard began harassing her and using racial slurs to describe her. Specifically, he called her "monkey," "black monkey," and "chimpanzee" on at least eight occasions during a three-month period. On August 7, Howard sent her an e-mail that said, "Just wanted to let you know . . . You got a funny shaped head." Although Green asked Howard to stop using racial slurs, he persisted and engaged in other conduct toward her that she found demeaning. Green reported Howard's racial harassment to Kim Reep, her supervisor, who told her that she could not do anything for Green and that Green should report the conduct to Wayne Erdman, a vice president of the bank. In July, Green complained about Howard's racial harassment to Erdman, who said he would speak to Howard about it. (According to Green, Erdman never spoke with Howard about Green's complaint.) On August 1, Reep gave Howard a warning about his racially insensitive comments; Reep gave him a second warning on August 6.

According to the bank president, the company's policy on sexual harassment also applied to racial harassment and specified that after an employee notified his or her direct supervisor of harassment, the supervisor was required to investigate the claim. The supervisor was also responsible for attempting to resolve the complaint. There was no requirement to report harassment to the bank president. Upon beginning her employment, Green had signed a form acknowledging that she understood the bank's harassment policy. When Green received the e-mail about her "funny shaped head," she forwarded it to Reep, who discussed it with Erdman. The bank terminated Howard later in August 2002.

The district court granted summary judgment for the bank on Green's hostile work environment claim because it found that (1) the harassment was not severe or pervasive enough to be actionable, and (2) the bank's response was adequate to preclude liability.

ISSUE PRESENTED Does repeated use of the term "monkey" and other similar words make out a *prima facie* case of racial harassment?

OPINION MELLOY, J., writing for the U.S. Court of Appeals for the Eighth Circuit:

In the present matter, Green's allegations about Howard's statements to her are sufficient to be actionable. His comments were frequent and directed at Green. . . .

Green had told Howard that she thought the term "Monkey" was roughly equivalent to "Nigger." Other courts have agreed with Green's assessment of calling African-Americans "monkeys." "To suggest that a human being's physical appearance is essentially a caricature of a jungle beast goes far beyond the mere unflattering; it is degrading and humiliating in the extreme." The use of the term "monkey" and other similar words have been part of actionable racial harassment claims across the country. Primate rhetoric has been used to intimidate African-Americans and monkey imagery has been significant in racial harassment in other contexts as well.

In all, there are eight alleged instances of Howard using racially insensitive terms toward Green in a three-month time frame. We have found just a few incidents in a longer time span to be sufficient for a hostile work environment.

Taking all inferences in the light most favorable to Green, we find sufficient severity and pervasiveness of harassment for Green's claim to be actionable.

However, we affirm the grant of summary judgment on the hostile work environment claim because Green has failed to show that Franklin National Bank did not take the proper remedial action. Title VII does not necessarily require that an employer fire a harasser. Nonetheless, Franklin National Bank did fire Howard to end the harassment against Green.

RESULT The appeals court upheld the summary judgment for the bank. Even though Howard's statements were sufficient to establish a hostile work environment, the bank had a defense because it took prompt and appropriate remedial action once Green reported the harassment to her supervisor.

COMMENTS As is explained more fully in the next section, in cases involving harassment by a coworker, employers have a defense from liability if they can show that they took appropriate corrective measures once they knew or should have known of the harassment. In this case, the court concluded that warning and then ultimately firing Howard was an adequate response.

CRITICAL THINKING QUESTIONS

1. Red Mendoza filed a sexual harassment action in which she claimed that her supervisor constantly followed her and watched her. In two instances, he looked her up and down, stopped in her groin area, and made a sniffing motion. On another occasion, he passed by her and rubbed his right hip against her left hip and touched her shoulders. Has Mendoza met her burden of proving a hostile work environment?³⁵
2. Hythem Al-Salem, an immigrant from Libya, asserted that over six months he overheard a coworker call him "camel jockey" and a "sand nigger." He also alleged that a coworker offered him pork, even though he knew Al-Salem's religion forbade it, and that he had heard of his supervisor's comments that he would not be promoted. Has he met his burden of proving a hostile work environment?³⁶

35. See *Mendoza v. Borden*, 195 F.3d 1238, 1245 (11th Cir. 1999).

36. See *Al-Salem v. Bucks County Water & Sewer Auth.*, 1999 WL 167729 (E.D. Pa. Mar. 25, 1999).

Liability for Hostile Environment

As explained in Chapter 5, employers are vicariously liable under the doctrine of *respondeat superior* for all torts committed by employees acting within the scope of employment. As a result, if a supervisor fails to promote an employee because of his or her national origin, for example, the employer is liable for discrimination because the supervisor was acting within the scope of employment when deciding whom to promote. But when a supervisor harasses an employee (either by demanding sexual favors or by creating a hostile environment), the supervisor is rarely acting within the scope of his or her employment.

The U.S. Supreme Court has drawn on general principles of agency law to determine when an employer is liable for the creation of a hostile environment. Under Section 219(2) of the Restatement (Second) of Agency, an employer is liable for torts of employees not acting in the scope of employment if (1) the employer intended the conduct, (2) the employee's high rank makes him or her the employer's alter ego, (3) the employer was negligent, or (4) the employee

was aided in accomplishing the tort by the existence of the agency relation.³⁷

Negligence An employer is negligent with respect to harassment if it knew or should have known of the harassment but failed to stop it by taking appropriate corrective measures. This negligence standard governs hostile environment by coworkers (and probably customers with whom the employee must deal as part of his or her job). For example, in *Ferris v. Delta Air Lines*,³⁸ the U.S. Court of Appeals for the Second Circuit found that Delta was responsible for a sexually hostile work environment that allowed the plaintiff flight attendant to be raped by a male coworker. Delta was on notice that the male employee had previously raped three other flight attendants, yet it failed to take any action against him. The court stated that Delta had a "responsibility to warn or protect likely future victims."

38. 277 F.3d 128 (2d Cir. 2001).

VIEW FROM CYBERSPACE

Employment Discrimination in the Virtual Office

Job seekers everywhere are using the Internet to pursue career opportunities, and employers are responding in kind by researching blogs and social networking websites like MySpace.com or Facebook.com to find out more about job applicants and employees. The website Monster.com boasts that in 2005 more than 186 million job seekers visited one of Monster's websites and that an average of 40,000 new résumés are posted with Monster.com every day.^a A 2008 Careerbuilder.com survey of 3,169 hiring managers found that 22 percent of them go to Internet search engines to research applicants, up from 11 percent in 2006.^b

This increased use of the Internet by employers has raised new concerns that employers may misuse information available on the Web in making employment decisions. Although an employment application submitted over the Internet may not reveal protected characteristics, such as religion, political views, national origin, race, or sexual preference, an employer may be able to discover this information by searching profiles available on social networking websites. An employer may also discover photos or writings related to an applicant's religion, political views, national origin, race, or sexual history. It may also be difficult for an employer to determine whether information that it obtains through the Internet is credible, yet the employer may use this information to make an adverse employment decision regarding that applicant.

Another concern is that an employer may violate discrimination laws by searching the Internet for

information only about specific applicants, such as women or minorities. Even if an employer conducts Internet searches for all applicants, it may show discriminatory bias toward some. For example, an employer may view a photo of an African American male holding a beer at a bar with a hip-hop DJ more negatively than a photo of a Caucasian male holding a beer at a rock 'n' roll bar with other white males wearing fraternity shirts.^c

Employers may also use information obtained from the Internet to make adverse employment decisions about existing employees. There are numerous stories about employees who have been fired for content posted on their blogs or profiles on social networking sites. For example, a teacher at a Catholic school in Las Vegas was fired after posting on his MySpace page that he was gay, and a Florida sheriff's deputy was fired after posting on his MySpace page that he was a heavy drinker and was fascinated with female breasts. Programmer Mark Pilgrim was fired after his manager followed a link from an online manual to Pilgrim's blog and discovered an essay about his past addictions to nicotine, alcohol, and marijuana.^d Ellen Simonetti, a Delta Air Lines flight attendant, posted provocative pictures of herself in uniform on her blog. Delta terminated her because the company believed the photographs were inappropriate and a misuse of her uniform. Simonetti then filed a sex discrimination lawsuit because Delta had allowed male employees to post pictures of themselves in their uniforms on other websites.^e

In response to the increased use of the Internet by employers, the Office

of Federal Contract Compliance Programs (OFCCP) instituted a rule in 2006 to ensure that federal contractors do not discriminate against minorities and women who apply for jobs on the Internet. The rule requires all federal contractors to maintain records of Internet résumés viewed, the race and gender of applicants, and which applicants were hired. If an employer uses a search function to find qualified applicants, it must save information about the search, including when it was conducted, the criteria used, and the names of the applicants identified through the search. Critics complained that the rule requires employers to collect and organize information that can then be used against them in employment-discrimination lawsuits. Those who favored the rule, however, noted that the obligation to keep records about job applicants was not new and that the rule cleared up ambiguity as to when and about whom records must be kept.^f

In light of the trend toward researching employees and job applicants online, employees and applicants should assume that employers will read everything posted about them on the Internet. Employers trying to protect themselves should develop policies and procedures regarding the use of Internet searches to ensure that they will not be used in a discriminatory manner. The Internet is dramatically changing the availability of information related to employees and job applicants, but it remains to be seen how employment discrimination laws will be applied to many of the new search techniques.

Aided-in-the-Agency Relation and Supervisor Harassment

In *quid pro quo* sexual harassment cases and hostile environment cases, the employer is always vicariously liable under the aided-in-the-agency-relation standard when a supervisor takes a tangible employment action against a subordinate (such as firing, failing to promote, reassigning with significantly different responsibilities, or reducing benefits). Thus, in such cases, the employer is vicariously liable for the hostile environment created by a supervisor with immediate (or successively higher) authority over the victimized employee, regardless of whether the employer knew or should have known about the supervisor's conduct.

In *Faragher v. City of Boca Raton*,³⁹ the U.S. Supreme Court applied the aided-in-the-agency-relation standard to a case involving the creation of a hostile environment by a supervisor who threatened to take tangible adverse employment action but did not do so. The Court acknowledged that in a sense a harassing supervisor is always assisted in his or her conduct by the supervisory relationship: "When a fellow employee harasses, the victim can walk away or tell the offender where to go, but it may be difficult to offer such responses to a supervisor" with the power to hire, fire, and set work schedules and pay raises.

Even so, the Court felt constrained by its prior holding in *Meritor* that the employer is not automatically liable for harassment by a supervisor. It also noted that the primary objective of Title VII is to avoid harm. To implement that statutory policy, the Court considered it appropriate "to recognize the employer's affirmative obligation to prevent violations and give credit here to employers who make the reasonable efforts to discharge their duty." At the same time, the Court acknowledged an employee's duty to avoid or mitigate harm. If the employee unreasonably failed to avail himself or herself of the employer's preventive or remedial apparatus, the employee should not recover damages that could have been avoided if he or she had done so. Accordingly, the Court held that if the supervisor's harassment does not culminate in a tangible employment action, then the employer may raise an affirmative defense to liability or damages.

39. 524 U.S. 775 (1998).

To establish the defense, the employer must prove two things: (1) it exercised reasonable care to prevent and promptly correct any harassing behavior, and (2) the employee unreasonably failed to take advantage of any preventive or corrective opportunities provided by the employer or to avoid harm otherwise. For example, in *Hill v. American General Finance, Inc.*,⁴⁰ Louise Hill, a lending/collection administrator, filed a racial and sexual harassment lawsuit against American General Finance (AGF). The U.S. Court of Appeals for the Seventh Circuit affirmed the district court's decision dismissing Hill's action on the basis that the AGF policies were adequate and Hill had failed to take reasonable steps to notify the company of her harassment. In determining whether the company took corrective action, the court noted that AGF had several policies and procedures in place to help employees deal with harassment, including an equal employment policy and a sexual harassment policy. In addition, the company had established a complaint procedure pursuant to which aggrieved employees could report to a number of different managers. The court found that after receiving Hill's notice of harassment, the company took immediate corrective action by launching an investigation regarding her allegations. As a result of this investigation, the company punished the supervisor who had harassed her.

Personal Liability As a general rule, the U.S. appellate courts have ruled that a supervisor cannot be held personally liable for discrimination in violation of Title VII against a subordinate employee.⁴¹ However, the U.S. Court of Appeals for the Second Circuit has held that supervisors may be held personally liable for harassment under other federal statutes.⁴² In addition, supervisors may be held personally liable under some state anti-discrimination statutes.⁴³

DUTY TO ACCOMMODATE RELIGIOUS BELIEFS

Religious discrimination charges filed with the EEOC have risen from 1,709 in 1997 to 2,880 in 2007.⁴⁴ These claims not only include refusals to hire or promote based on religious prejudice, but also allegations that employers would not give employees flexible schedules so that they could attend religious ceremonies or flexibility in workplace dress

44. EEOC, *Religion-Based Charges FY 1997–2007*, available at <http://www.eeoc.gov/stats/religion.html> (last visited June 30, 2008).

codes to accommodate clothing mandated by the employee's religion.

A growing number of religious discrimination cases involve Christian employees who bring their religious views into the workplace.⁴⁵ In the following case, the U.S. Court of Appeals for the Seventh Circuit considered whether an employer engaged in religious discrimination when it failed to reassign an employee whose job description violated his religious beliefs.

A CASE IN POINT

CASE 13.3

ENDRES V. INDIANA STATE POLICE

UNITED STATES COURT OF APPEALS FOR
THE SEVENTH CIRCUIT
349 F.3d 922 (7th Cir. 2003).

SUMMARY

FACTS Endres was an officer in the Indiana State Police. Soon after Indiana began licensing casinos, Endres was assigned by lottery to a full-time position as a Gaming Commission agent at the Blue Chip Casino in Michigan City, Indiana. Gaming Commission agents certify gambling revenue, investigate complaints from the public about the gaming system, and conduct licensing investigations for the casinos and their employees. Endres, a Baptist, believed that he must neither gamble nor help others do so because games of chance are sinful.

Endres told the State Police that he was willing to enforce general vice laws at casinos, but that providing the specialized services required of Gaming Commission agents would violate his religious beliefs because it would facilitate gambling. When the State Police refused his request for a different assignment, Endres refused to report for duty and was fired for insubordination.

Endres sued under Title VII, contending that the State of Indiana had discriminated against him on account of his religion by failing to reasonably accommodate his religious beliefs. The district court denied Indiana's motion to dismiss, and the State appealed. The U.S. Court of Appeals for the Seventh Circuit ruled for the State, and Endres moved for a rehearing en banc.

ISSUE PRESENTED Is the State of Indiana required to reassign an employee who objects to working as a Gaming Commission agent on the basis that facilitating gambling violates his religious beliefs?

SUMMARY OF OPINION The U.S. Court of Appeals for the Seventh Circuit began by stating that Section 701(j) of Title VII requires an employer to offer reasonable accommodations for an employee's religious beliefs unless doing so would cause "undue hardship on the conduct of the employer's business." Endres contended that Section 701(j) should give law enforcement personnel a right to choose which laws they enforce and whom they will protect from crime, but the court concluded that this argument was not practical:

Many officers have religious scruples about particular activities: to give just a few examples, Baptists oppose liquor as well as gambling, Roman Catholics oppose abortion, Jews and Muslims oppose the consumption of pork, and a few faiths include hallucinogenic drugs in their worship and thus oppose legal prohibitions on these drugs. If Endres is right, all of these faiths . . . must be accommodated by assigning believers to duties compatible with their principles. Does Section 701(j) require the State Police to assign Unitarians to guard the abortion clinic, Catholics to prevent thefts from liquor stores, and Baptists to investigate claims that supermarkets mis-weigh bacon and shellfish? Must prostitutes be left exposed to slavery or murder at the hands of pimps because protecting them from crime would encourage them to ply their trade and thus offend almost every religious faith?

CONTINUED

The court stated that juggling law enforcement assignments to make each compatible with the varying religious beliefs of a heterogeneous police force would be daunting to managers and difficult for other officers who would be called on to fill in for the objector. Even if it were possible to swap assignments on one occasion, another could arise when personnel were not available to cover for selective objectors, or when seniority systems or limits on overtime curtailed the options for shuffling personnel.

The court held that Title VII did not require the State Police to make an accommodation for Endres, stating that "Endres has made a demand that . . . would be unreasonable to require any police or fire department to tolerate."

RESULT The court denied Endres's motion to rehear the case en banc, reversed the district court's decision, and remanded the case with instructions to enter judgment on the merits for the Indiana State Police.

RETALIATION

Title VII and other statutes prohibit both employment discrimination and retaliation against an employee for exercising his or her protected rights. For example, Section 703(a) of Title VII, the core anti-discrimination provision, forbids discrimination "with respect to . . . compensation, terms, conditions or privileges of employment."⁴⁶ The anti-retaliation provision, Section 704(a), provides:

[I]t is an unlawful employment practice for an employer to discriminate against any of [its] employees or applicants for employment because [the employee or applicant] has opposed any practice made an unlawful employment practice by [Title VII] or because [the employee or applicant] has made a charge, testified, assisted, or participated in any manner in an investigation proceeding, or hearing under [Title VII].⁴⁷

To prove a case of retaliation, an employee must demonstrate that (1) the employee's activity was protected by Title

46. 42 U.S.C. § 2000e-2(a).

47. 42 U.S.C. § 2000e-3(a).

VII; (2) the employer knew of the employee's exercise of protected rights; (3) the employer took some adverse employment action against the employee, or the employee was subjected to severe or pervasive retaliatory harassment by a supervisor; and (4) there was a causal connection between the protected activity and the adverse employment action or harassment. Generally, plaintiffs file a retaliation claim in conjunction with an underlying claim of discrimination. To succeed on a claim for retaliation, however, a plaintiff does not need to prevail on his or her Title VII discrimination claim.⁴⁸

Because the language of Title VII's substantive anti-discrimination provision differs from its anti-retaliation provision, lower federal courts have had to decide whether Congress intended the two provisions to be interpreted consistently or whether the employer conduct necessary to constitute a violation varies depending on whether the claim is for discrimination or retaliation. In the following decision, the U.S. Supreme Court articulated the test for determining whether an adverse employment decision is serious enough to constitute retaliation under Title VII.

48. *Fine v. Ryan Int'l Airlines*, 305 F.3d 746 (7th Cir. 2002).

A CASE IN POINT

CASE 13.4

BURLINGTON NORTHERN &
SANTA FE RAILWAY CO. v.
WHITE

SUPREME COURT OF THE UNITED STATES
548 U.S. 53 (2006).

SUMMARY

FACTS Sheila White, the only woman in her department, operated the forklift at the Tennessee Yard of Burlington Northern and Santa Fe Railway (Burlington). After she complained of sexual harassment, Burlington disciplined her immediate supervisor but transferred White from forklift duty to standard track laborer tasks. She filed a complaint with the EEOC, claiming that her reassignment was unlawful gender discrimination and retaliation for her complaint. Later, she was suspended without pay for thirty-seven days for insubordination. Burlington subsequently found that she had not been insubordinate and reinstated her with back pay for the days she had been suspended. After exhausting her administrative remedies, White filed an action against Burlington in federal court, claiming that her reassignment and suspension constituted unlawful retaliation

CONTINUED

under Title VII. A jury awarded her compensatory damages, and the U.S. Court of Appeals for the Sixth Circuit affirmed after concluding that White had suffered a “materially adverse change in the terms and conditions of employment.” Burlington appealed.

ISSUES PRESENTED Does Title VII’s anti-retaliation provision forbid only those employer actions and resulting harms that are related to employment or the workplace? How harmful must the adverse actions be to fall within its scope?

SUMMARY OF OPINION The U.S. Supreme Court began by noting that the language of Title VII’s substantive anti-discrimination provision differs from that of the anti-retaliation provision. Whereas the anti-discrimination provision expressly limits its scope to actions that affect employment or alter workplace conditions, the anti-retaliation provision is broader. The Court concluded that there was a strong reason to believe that Congress intended for the two provisions to differ in purpose as well as language. While the anti-discrimination provision seeks a workplace where individuals are not discriminated against, the anti-retaliation provision seeks to secure the objective of the substantive provision by preventing an employer from interfering in any way with an employee’s efforts to secure or advance enforcement of Title VII’s basic guarantees.

As a result, the Court concluded that the anti-retaliation provision, unlike the substantive provision, is not limited to discriminatory actions that affect the terms and conditions of employment: “In our view, a plaintiff must show that a reasonable employee would have found the challenged action materially adverse, ‘which, in this context means it well might have “dissuaded a reasonable worker from making or supporting a charge of discrimination.’”

Applying this standard to the facts of this case, the Court found there was a sufficient evidentiary basis to support the jury’s verdict on White’s retaliation claim. Burlington did not question the jury’s determination that the motivation for the company’s actions was retaliation. Instead, it questioned the statutory significance of the harm that the acts caused, arguing that the reassignment of duties should not constitute retaliatory discrimination where, as here, the former and present duties fell within the same job category. Burlington also argued that the suspension for thirty-seven days without pay lacked statutory significance because Burlington ultimately reinstated White with back pay.

The Court rejected Burlington’s assertions. First, it concluded that the jury was not required to find that the challenged actions were related to the terms or conditions of employment. Although reassignment of job duties is not automatically actionable, a particular reassignment may be materially adverse and “should be judged from the perspective of a reasonable person in the plaintiff’s position, considering ‘all the circumstances.’” In this case, the jury had considerable evidence that the track labor duties were “more arduous and dirtier” than the forklift operator position. The Court also found that White’s suspension was adverse, because many reasonable employees would find a month without a paycheck to be a serious hardship. Second, it ruled that the jury’s finding that each of these actions was “materially adverse” was adequately supported by the evidence.

RESULT The Supreme Court upheld the jury verdict against Burlington.

CRITICAL THINKING QUESTIONS

1. In its decision, the Supreme Court never stated whether the standard it adopted for retaliatory discrimination also applied to initial claims of employment discrimination. In other words, would the disciplinary measures found to be retaliatory in *Burlington Northern* also be deemed adverse actions for purposes of a discrimination claim?
2. Would removal of an employee’s flextime schedule constitute racial discrimination? Retaliation?⁴⁹

49. See *Washington v. Ill. Dep’t of Revenue*, 420 F.3d 658 (7th Cir. 2005).

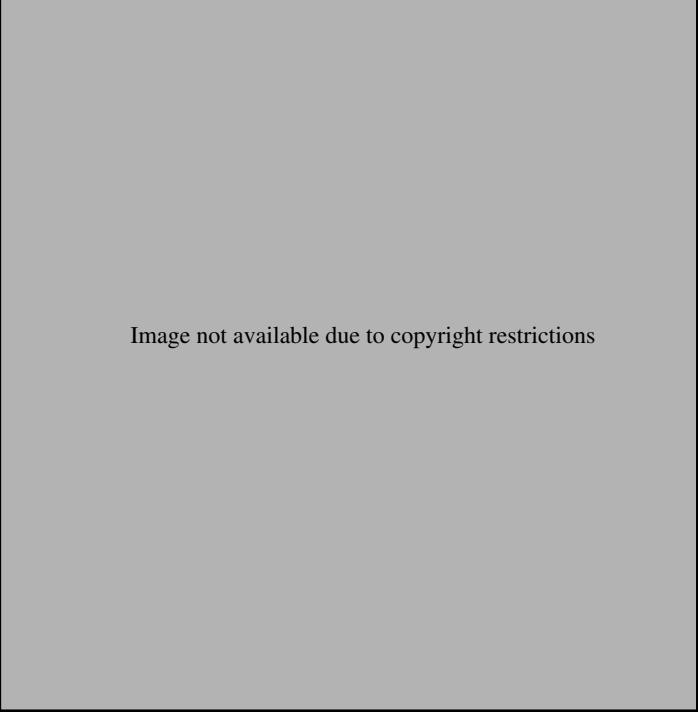

A large gray rectangular area with the text "Image not available due to copyright restrictions" centered in white.

Image not available due to copyright restrictions

In *Fine v. Ryan International Airlines*,⁵⁰ the U.S. Court of Appeals for the Seventh Circuit found that Ryan retaliated against Fine by firing her a day after she submitted a letter outlining her multiple experiences of sexual discrimination at the company. Ryan had claimed that Fine was fired because she “routinely missed work and was always hard to get along with.” The court found that there were no written complaints about either Fine’s attendance or her interpersonal skills in her personnel file, and thus concluded that Fine had adequately demonstrated that her dismissal was a retaliatory act by Ryan.

In contrast, in *Antonio v. The Sygma Network, Inc.*,⁵¹ Gladys Antonio was unable to prove that her employer terminated her in retaliation for reporting that her supervisor, Dena Johnson, had told her that she had offensive body odor, which her supervisor believed had to do with Antonio’s culture. Nine months after her complaint, Johnson terminated Antonio when she failed to return to work as scheduled after returning to Zimbabwe for a vacation. Although the court assumed that Antonio’s complaint regarding Johnson’s “culture” remark constituted protected opposition to discrimination, it agreed with the district court that Johnson’s termination of Antonio nine months later was too temporally remote to support an inference of causation.

50. 305 F.3d 746 (7th Cir. 2002).

51. 458 F.3d 1177 (10th Cir. 2006).

Actions allegedly taken to prevent further harassment may be deemed a retaliation under Title VII if they harm the employee’s employment situation. For example, in *Dilenno v. Goodwill Industries of Mid-Eastern Pennsylvania*,⁵² the U.S. Court of Appeals for the Third Circuit found that transferring an employee to a job that the employer knew she could not perform was retaliation for her complaint that her manager was sexually harassing her. The plaintiff was transferred from her job of tagging and pricing clothing to a job requiring her to sort through clothes contributed to Goodwill. The employee’s phobia of “critters,” such as mice, insects, and bugs found in these bags of clothing, prevented her from performing the job. The court explained that “[i]t is important to take a plaintiff’s job-related attributes into account when determining whether a lateral transfer was an adverse employment action.”

In 1997, the U.S. Supreme Court unanimously ruled that both current and former employees can sue for retaliation.⁵³ The case involved an employer who allegedly gave a former employee a negative reference because he had filed a claim of racial discrimination against the company. In addition, the U.S. Court of Appeals for the Second Circuit has held that even involuntary participation in Title VII proceedings by an employee accused of sexual harassment qualifies as protected activity. As a result, it found that an employer violated Title VII when it retaliated against an employee who had successfully defended himself against harassment charges.⁵⁴

SPECIAL APPLICATIONS OF TITLE VII

Civil rights legislation was founded on the fundamental premise that people should not be denied a job or an opportunity on the job because of their race, color, religion, national origin, or sex. The law has expanded beyond that basic premise to reach more subtle forms of discrimination.

Sexual Stereotyping

In *Price Waterhouse v. Hopkins*,⁵⁵ Ann Hopkins was denied partnership in the accounting firm PricewaterhouseCoopers after being told by the policy board that, to improve her chances for partnership, she should “walk more femininely, talk more femininely, dress more femininely, wear make-up,

52. 162 F.3d 235 (3d Cir. 1998).

53. *Robinson v. Shell Oil Co.*, 519 U.S. 377 (1997).

54. *Deravin v. Kerik*, 335 F.3d 195 (2d Cir. 2003).

55. 490 U.S. 228 (1989).

have her hair styled, and wear jewelry.” The U.S. Supreme Court concluded that the evidence produced by Hopkins was sufficient to establish that sexual stereotyping played a part in the firm’s decision not to promote her and held that it constituted discrimination based on sex. With respect to sexual stereotyping, the Court stated: “An employer who objects to aggressiveness in women but whose positions require this trait places women in an intolerable and impermissible Catch-22: out of a job if they behave aggressively and out of a job if they don’t. Title VII lifts women out of this bind.”⁵⁶ In addition, although the case dealt with gender discrimination, the Court expressly stated that all references to gender and all principles announced in the opinion “apply with equal force to discrimination based on race, religion, or national origin.”

Pregnancy Discrimination

The Pregnancy Discrimination Act provides that discrimination on the basis of pregnancy is, on its face, a form of sex discrimination under Title VII.⁵⁷ For example, the U.S. Court of Appeals for the Sixth Circuit recently held that a female employee who was promised a promotion to supervisor, but was offered a lesser promotion after her employer learned she was pregnant, made out a *prima facie* case of discrimination.⁵⁸

These protections are not absolute, however. In *Reeves v. Swift Transportation Co.*,⁵⁹ a former employee who was pregnant sued Swift claiming that she was wrongfully terminated when she became pregnant. Swift terminated the employee pursuant to a policy that denied light-duty work to employees who could not perform heavy lifting and also had not been injured on the job. The U.S. Court of Appeals for the Sixth Circuit affirmed the district court’s grant of summary judgment in favor of Swift. The court stated: “Swift’s light-duty policy is indisputably pregnancy-blind. It simply does not grant or deny light work on the basis of pregnancy, childbirth, or related medical conditions. It makes this determination on the nonpregnancy-related basis of whether there has been a work-related injury or condition.”

Likewise, the U.S. Court of Appeals for the Eighth Circuit held that an employer did not discriminate against its female employees by denying coverage under its health-care plan for contraceptives unless they were medically needed. The court concluded:

56. *Id.*

57. 42 U.S.C. § 2000e(k).

58. *Lulaj v. Wackenhut Corp.*, 512 F.3d 760 (6th Cir. 2008).

59. 446 F.3d 637 (6th Cir. 2006).

[T]his case concerns Union Pacific’s coverage of contraception for men and women. The proper comparator is the provision of the medical benefit in question, contraception. Union Pacific’s health plans do not cover any contraception used by women such as birth control, sponges, diaphragms, intrauterine devices or tubal ligations or any contraception used by men such as condoms and vasectomies. Therefore, the coverage provided to women is not less favorable than that provided to men. Thus, there is no violation of Title VII.⁶⁰

Fetal-Protection Policies

Certain substances used in manufacturing are harmful to the fetus being carried by a pregnant woman. In an effort to avoid such harm, and related lawsuits for unsafe working environments, some companies adopted so-called *fetal-protection policies*, which barred a woman from certain jobs unless her inability to bear children was medically documented. In *Automobile Workers v. Johnson Controls, Inc.*,⁶¹ the U.S. Supreme Court held that Johnson Controls’ policy, which precluded women with childbearing capacity from working at jobs in which lead levels were defined as excessive, was a facially discriminatory policy forbidden under Title VII and ruled that women cannot be excluded from certain jobs because of their childbearing capacity. The Court stated that “[d]ecisions about the welfare of future children must be left to the parents who conceive, bear, support, and raise them rather than to the employers who hire those parents.”

In the wake of *Johnson Controls*, employers have been forced to walk a fine line between avoiding discrimination related to pregnancy and limiting or reducing potential workplace hazards. For example, in *Asad v. Continental Airlines*,⁶² Asad sued Continental under state tort laws claiming that Continental was responsible for her newborn son’s cerebral palsy. Asad had requested a job transfer for the duration of her pregnancy to escape exposure to carbon monoxide fumes. Continental refused the transfer, citing *Johnson Controls* and other cases holding that the Pregnancy Discrimination Act (PDA) does not require employers to “accommodate” pregnant women.⁶³ The U.S. District Court for the Northern District of Ohio deviated from prior court

61. 499 U.S. 187 (1991).

62. 328 F. Supp. 2d 772 (N.D. Ohio 2004).

63. See *Auto. Workers v. Johnson Controls*, 499 U.S. 187 (1991); *Spivey v. Beverly Enters., Inc.*, 196 F.3d 1309 (11th Cir. 1999); *Armstrong v. Flowers*, 33 F.3d 1308 (11th Cir. 1994); *Duncan v. Children’s Nat'l Med. Ctr.*, 702 A.2d 207 (D.C. 1997).

rulings when it held that although *Johnson Controls* demonstrated that employers could not prevent women who are or who may become pregnant from working in an environment that may be hazardous to a fetus, “the PDA and Title VII should not prevent an employer from temporarily transferring a pregnant woman, at her request, for the protection of her fetus.”

Family Responsibilities

From 2000 to 2006, there was a 400 percent increase in claims of *family responsibility discrimination* (*FRD*), also referred to as maternal wall discrimination, based on sexual stereotyping.⁶⁴ As of 2006, the Center for Work Life Law and the University of California, Hastings College of the Law, had identified more than 600 *FRD* cases. Although the traditional way to prove disparate treatment under Title VII is by use of comparative evidence (that is, evidence of how nonprotected class members are treated), the U.S. Court of Appeals for the Second Circuit ruled in *Back v. Hastings on Hudson Union Free School District*⁶⁵ that disparate treatment can also be proved by evidence of gender stereotyping:

The defendants argue that stereotypes about women or mothers are not based upon gender, but rather “gender plus parenthood,” thereby implying that such stereotypes cannot, without comparative evidence of what was said about fathers, be presumed to be “on the basis of sex.... [It is particularly] clear, however, that, at least where stereotypes are considered, the notions that mothers are insufficiently devoted to work, and that work and motherhood are incompatible, are properly considered to be, themselves, gender-based.

The *Back* case involved a school psychologist who was denied tenure because her employer assumed that, because she had children, she would not continue to work hard if she was granted tenure. In another case, an outstanding lawyer was not offered a promotion because her employer assumed she would not be willing to travel because she was a mother.⁶⁶

FRD can also affect fathers. One study found that fathers who took a parental leave were recommended for fewer rewards and had lower performance ratings than mothers.⁶⁷ *FRD* affects blue-collar workers as well as professionals.

67. Panel Discussion, *Gender Stereotyping*, *supra* note 64.

For example, Wal-Mart requires its employees to move frequently in order to be eligible for promotions. There is research showing that women are less able to move than men, and a class of Wal-Mart female employees has alleged that this requirement has a disproportionate impact on them.⁶⁸

In addition to disparate treatment and disparate impact cases, plaintiffs have also brought *FRD* cases based on hostile environment. For example, a jury found that a woman had been subjected to a hostile work environment based on evidence that her supervisor complained about absences caused by her son’s ear infections, attached signs (“Out—Sick Child”) to her cubicle when she had to care for him, informed her that she had to make up “every minute” she was away from the office for doctor’s appointments, warned her not to get pregnant again, and threw a phone book on her desk and told her to find a pediatrician whose office was open after hours.⁶⁹

Interracial Association

In *Holcomb v. Iona College*, the plaintiff, a white assistant coach of the Iona College basketball team, alleged that he was fired because he was married to an African American woman. The U.S. Court of Appeals for the Second Circuit joined the Fifth, Sixth, and Eleventh Circuits in ruling that Title VII protects employees from discrimination based on their association with a person of a different race. The court reasoned that “where an employee is subjected to adverse action because an employer disapproves of interracial association, the employee suffers discrimination because of the employee’s own race.”⁷⁰

English-Only Laws

The national origin provisions of Title VII have been used to challenge workplace rules that prohibit employees from speaking any language other than English at work. The EEOC has taken the position that language is closely linked with national origin, so English-only policies can have a disparate impact on Hispanic employees and others whose native language may not be English.⁷¹ Federal courts have agreed with the EEOC.

For example, the U.S. Court of Appeals for the Ninth Circuit reversed a grant of summary judgment to a Title

71. *At Panel Discussion on National Origin Bias, EEOC Says English-Only Challenges Are Rising*, 66 U.S.L.W. 2375 (1997).

VII defendant after finding that the plaintiffs had made out a *prima facie* case that the defendant's English-only rule created a hostile environment for Hispanic employees. The court noted that an English-only policy itself, not just its effect, may create or contribute to the hostility of the work environment:

Here, the very fact that the [defendant] City would forbid Hispanics from using their preferred language could reasonably be construed as an expression of hostility to Hispanics. At least that could be a reasonable inference if there was no apparent legitimate purpose for the restrictions. It would be unreasonable to take offense at a requirement that all pilots flying into an airport speak English in communications with the tower or between planes; but hostility would be a reasonable inference to draw from a requirement that an employee calling home during a work break speak only in English. The less the apparent justification for mandating English, the more reasonable it is to infer hostility toward employees whose ethnic group or nationality favors another language.⁷²

Dress Codes

Although employers have the right to enact and enforce dress codes, they can result in legal claims involving religious and sexual discrimination and harassment. The trend by employers to allow employees to wear casual clothing has the potential to further complicate this matter.

Employees have based claims of religious discrimination on their employer's refusal to let them wear turbans rather than protective headgear. In response, the Occupational Safety and Health Administration amended its regulations to exempt persons wearing turbans from its hard-hat requirements.

DEFENSES UNDER TITLE VII

Title VII sets forth several statutory defenses to claims of discriminatory treatment. Of these, the defense of bona fide occupational qualification is most frequently cited.

Bona Fide Occupational Qualification

Title VII provides that an employer may lawfully hire an individual on the basis of religion, sex, or national origin, if religion, sex, or national origin is a *bona fide occupational qualification (BFOQ)* reasonably necessary to the normal

operation of that particular business. This is known as the *BFOQ defense*. The BFOQ defense is not available when discriminatory treatment is based on a person's race or color. Because BFOQ is an affirmative defense, the employer has the burden of showing a reasonable basis for believing that the category of persons (for example, women) excluded from a particular job was unable to perform that job.

The BFOQ defense has been narrowly construed. EEOC regulations provide that gender will not qualify as a BFOQ when a gender-based restriction is based on (1) assumptions of the comparative employment characteristics of women in general (such as the assumption that women have a higher turnover rate than men); (2) stereotyped characterizations of the sexes (for example, that men are less capable of assembling intricate equipment than women); or (3) the preferences of coworkers, employers, or customers for one gender or the other.⁷³ Gender will be considered a BFOQ when physical attributes are important for authenticity (as with actors) or when a gender-based restriction is necessary to protect the rights of others to privacy (as with restroom attendants).

Seniority and Merit Systems

Title VII states that it is not unlawful for employers to apply different standards of compensation, or different terms, conditions, or privileges of employment pursuant to a bona fide seniority or merit system, provided that such differences are not the result of an intention to discriminate because of race, color, religion, sex, or national origin. This is considered an exemption from Title VII rather than an affirmative defense. Consequently, the plaintiff has the burden of proving the employer had a discriminatory intent or illegal purpose in implementing the seniority or merit system. Moreover, although a disproportionate impact may be used as evidence of discriminatory intent, such an impact is not, in itself, sufficient to establish discriminatory intent.

After-Acquired Evidence

When an employee initiates a suit under Title VII, the employer will sometimes learn during the course of discovery that the individual violated company rules. Under these circumstances, employers have argued that the plaintiff's discrimination claim should fail because, had the employer known of the employee misconduct, the employee would have been discharged anyway.

In *McKennon v. Nashville Banner Publishing Co.*,⁷⁴ the U.S. Supreme Court held that after-acquired evidence of

72. Maldonado v. City of Altus, 433 F.3d 1294 (9th Cir. 2006).

73. 29 C.F.R. pts. 1604.2(a)(1)(i)–1604.2(a)(1)(iii).

74. 513 U.S. 352 (1995).

misconduct does not bar a discrimination claim. But the employee misconduct is not ignored: remedies available to plaintiffs in cases involving misconduct should be limited to back pay and should not include reinstatement or front pay.

REMEDIES UNDER TITLE VII

In addition to back pay, front pay, and other compensatory damages, as well as reinstatement and other injunctive relief, a prevailing plaintiff may be able to recover punitive damages in certain cases of intentional discrimination.

Punitive Damages

In *Kolstad v. American Dental Association*,⁷⁵ the U.S. Supreme Court ruled that punitive damages may be awarded under Title VII only in cases of “intentional discrimination,” that is, cases that do not rely on the disparate impact theory of discrimination. To recover punitive damages, the complaining party must demonstrate that the employer engaged in a discriminatory practice or practices *with malice or with reckless indifference to the federally protected rights of an aggrieved individual*. The employee is not required to show that the employer engaged in egregious misconduct, however. Rather, the employee must show that the employer had the requisite discriminatory mental state. Punitive damages are available and can be awarded even if the jury awarded no compensatory damages.⁷⁶ (Punitive damages are not available in suits against a government, governmental agency, or political subdivision.)

Even if the employee can show the requisite malice or indifference, the employer still may not be liable for punitive damages. The Court held that if the employer has engaged in “good-faith efforts” to comply with Title VII, then it is not vicariously liable for punitive damages based on discriminatory employment decisions by managerial agents when those decisions were contrary to the company’s good faith efforts. To hold otherwise, the Court reasoned, would reduce the incentive for employers to implement anti-discrimination programs.

In *Brady v. Wal-Mart Stores, Inc.*, the district court rejected Wal-Mart’s challenge to the punitive damages award for discriminatory conduct prohibited under the Americans with Disabilities Act. The court found that Wal-Mart’s knowledge of the plaintiff’s disability, coupled with its adverse employment action against him, showed or

permitted an inference that the discrimination was in willful disregard of the ADA.⁷⁷

In another case, however, the U.S. Court of Appeals for the Fourth Circuit affirmed the compensatory damages award of \$600,000, based on evidence that the defendant’s managers had created a racially hostile environment through their constant use of racial slurs and insults and the defendant’s failure to respond to repeated complaints by the plaintiffs’ shop steward, but the court overturned the punitive damages award of \$1.2 million.⁷⁸ The court held that even though the employer’s antiharassment policy and training had been ineffective to stop the hostile environment, they operated as a total bar to a punitive damages award:

While the ineffectiveness of an antiharassment policy defeats an employer’s affirmative defense . . . , a policy’s ineffectiveness alone cannot demonstrate the lack of good faith required for justifying an award of punitive damages. If it could, employers with antiharassment policies who failed on their affirmative defenses would automatically be exposed to punitive damages

Caps on Liability

Compensatory and punitive damages available for discrimination based on sex or religion are capped by the Civil Rights Act of 1991 at \$50,000 for employers of 100 or fewer employees, \$100,000 for employers with 101 to 200 employees, \$200,000 for employers with 201 to 500 employees, and \$300,000 for employers with more than 500 employees.⁷⁹ These compensatory caps do not apply to intentional racial or ethnic discrimination, however. In addition, the Supreme Court has stated that front pay is not considered compensatory damages and thus is not subject to the cap on compensatory awards.⁸⁰

Courts may also decide to limit the amount of compensatory damages awarded a plaintiff. For example, the Supreme Court of Michigan threw out a \$21 million jury award to a sexual harassment plaintiff on the basis that it was excessive.⁸¹ Employees claiming discrimination frequently sue under state employment-discrimination laws, which often do not include caps on damages.

AGE DISCRIMINATION

As the baby boomers, who comprise a substantial percentage of the American workforce, grow older, the issue of age discrimination in employment has become more visible. In fact, the number of workers over the age of fifty-five is expected to grow by more than 11.6 million between 2006 and 2016. In 2006, workers over the age of fifty-five constituted 16.8 percent of the workforce, but they will constitute 22.7 percent by 2016.⁸²

The Age Discrimination in Employment Act (ADEA) prohibits age discrimination in employment with respect to individuals aged forty years or older. To establish a *prima facie* case of age discrimination under the ADEA, the employee must prove that he or she (1) was within the protected age group, (2) was qualified for the position at issue, (3) suffered an adverse employment action, and (4) was replaced by a sufficiently younger person.⁸³ Individuals under age forty have no protection from discrimination based on age. Courts have held that the employer, not the individual making the discriminatory decision, is liable for age discrimination.⁸⁴

The substantive provisions of the ADEA are similar to those of Title VII. The ADEA generally prohibits age discrimination with respect to employee hiring, firing, and compensation, as well as with respect to the terms, conditions, and privileges of employment. As with Title VII, creation of a hostile environment because of age is a form of age discrimination.⁸⁵ The ADEA also prohibits retaliation against an individual aged forty or older because of the individual's opposition to unlawful age discrimination, or because he or she has made a charge or testified or assisted in an investigation, proceeding, or litigation under the ADEA.

Although the ADEA protects individuals over the age of forty, a unanimous U.S. Supreme Court explained in *O'Connor v. Consolidated Coin Caterers Corp.*⁸⁶ that age discrimination cannot be inferred simply because the replacement employee is outside the protected class. In other words, replacing a 40-year-old employee with a 39-year-old employee does not give rise to a stronger inference of discrimination than replacing a 52-year-old employee with a 40-year-old employee. Rather, "the fact that a replacement

is substantially younger than the plaintiff is a far more reliable indicator of age discrimination."

Even so, the ADEA prohibits unlawful age discrimination among persons within the protected age group. Thus, for example, if two individuals aged 41 and 53 apply for the same position, the employer may not lawfully reject either applicant on the basis of age. On the other hand, an employer may still have engaged in age discrimination by rejecting someone over 40 in favor of another person over 40 if the chosen candidate is substantially younger than the rejected candidate.⁸⁷

However, the U.S. Supreme Court has held that the ADEA does not protect younger workers over forty against older workers. In *General Dynamics Land Systems, Inc. v. Cline*,⁸⁸ a collective bargaining agreement between Land Systems and a union eliminated the company's obligation to provide health benefits to subsequently retired employees, except for then-current workers who were at least fifty years old. Employees who were at least forty and therefore protected under the ADEA, but under fifty, filed a complaint claiming that the agreement violated the ADEA because it discriminated against them on the basis of their age. The district court dismissed the action, calling the claim one of "reverse age discrimination" on which no court had ever granted relief. The U.S. Court of Appeals for the Sixth Circuit reversed, but the Supreme Court held that "[w]e see the text, structure, purpose and history of the ADEA, along with its relationship to other federal statutes, as showing that the statute does not mean to stop an employer from favoring an older employee over a younger one."

A finding of liability for intentional discrimination under the ADEA can be based solely on the plaintiff's *prima facie* case of discrimination together with sufficient evidence for a reasonable fact finder to reject the employer's nondiscriminatory explanation for its decision.⁸⁹ In order to create a genuine issue of material fact as to whether the employer's nondiscriminatory explanation is pretextual, the plaintiff must "point to some evidence, direct or circumstantial, from which a fact finder could reasonably either (1) disbelieve the employer's articulated legitimate reasons; or (2) believe that an invidious discriminatory reason was more likely than not a motivating or determinative cause of the employer's action."⁹⁰

The ADEA does not guarantee workplaces “free from the ordinary ebb and flow of power relations and inter-office politics.” In *Suarez v. Pueblo International, Inc.*, the U.S. Court of Appeals for the First Circuit held that Ramon Suarez, the fifty-nine-year-old president of CaribAd (a subsidiary of Pueblo International), was not constructively discharged based on age when Pueblo was restructured and most of CaribAd’s employees were relocated to corporate headquarters, leaving Suarez alone in an office with a receptionist.⁹¹ Although Suarez was told that the in-house advertising for which he had been responsible was being transferred to someone else and that he would be responsible for bringing in new clients, he maintained his position as president and continued to be paid his salary of \$190,000 a year. The court stated that “[i]n that rarified [sic] financial atmosphere . . . an increase in work requirements that does not surpass reasonable expectations” cannot sustain a constructive discharge claim. Even if Pueblo was attempting to marginalize Suarez, the “unpleasantness, hurt feelings, and wounded pride” that resulted did not create working conditions that were “so onerous, abusive or unpleasant that a reasonable person in the employee’s position would have felt compelled to resign.”

DISPARATE IMPACT AND THE REASONABLE FACTOR OTHER THAN AGE DEFENSE

In *Smith v. City of Jackson, Mississippi*,⁹² the U.S. Supreme Court held that employer actions that on their face do not discriminate based on age may still violate the ADEA if they have a statistically significant impact on workers over forty. Nonetheless, the Court held that the scope of disparate impact liability is narrower under the ADEA than under Title VII. Recognizing that “age, unlike race or other classifications protected by Title VII, not uncommonly has relevance to an individual’s capacity to engage in certain types of employment,” the Court ruled that employees must identify the specific test, requirement, or practice that is responsible for any observed statistical disparities. It is not enough to point to a generalized policy that leads to such an impact.⁹³ Moreover, even if the employee identifies the relevant practice, the employer has a defense if the employer bases its

decision on a “reasonable factor other than age” (the *RFOA* defense). In *Meacham v. Knolls Atomic Power Laboratory*,⁹⁴ the U.S. Supreme Court ruled that the employer in a disparate impact case has the burden of proving that its decision was made based on such reasonable factors. The employer is not required to show business necessity, however.

OLDER WORKERS' BENEFIT PROTECTION ACT

The Older Workers’ Benefit Protection Act⁹⁵ (OWBPA) prohibits age discrimination in providing employee benefits. It also establishes minimum standards for employees who waive their rights under the ADEA.

To meet the minimum standards, the employee waiver must be “knowing and voluntary.” The employee must be given at least twenty-one days to consider whether to enter into an agreement waiving rights under the ADEA. This period is extended to forty-five days when the waiver is in connection with an early retirement or exit-incentive plan offered to a group or class of employees. The agreement must also give the employee a period of at least seven days following execution of the agreement during which the employee may revoke it. An employee who has accepted a severance payment in exchange for waiving his or her rights under the ADEA can still sue the employer for violation of the ADEA without having to return the payment if the waiver was not made in accordance with the OWBPA.⁹⁶

Employers may revoke a proposed early retirement agreement during the time frame that the OWBPA gives employees to act on it. For example, in *Ellison v. Premier Salons International, Inc.*,⁹⁷ the U.S. Court of Appeals for the Eighth Circuit held that an employer could revoke a separation agreement containing a waiver of claims under the ADEA and provide a new, less valuable agreement, after the employer learned that the employee had made defamatory statements about the company.

DEFENSES

An employer faced with an age discrimination claim may assert in its defense that (1) age is a BFOQ reasonably necessary to the normal operation of the business (extremely difficult to prove); (2) the differential treatment is based on reasonable factors other than age (the RFOA defense discussed earlier in the chapter); (3) the employer’s action is

91. 229 F.3d 49 (1st Cir. 2000).

96. *Oubre v. Entergy Operations, Inc.*, 522 U.S. 422 (1998).

97. 164 F.3d 1111 (8th Cir. 1999).

based on a bona fide seniority system or employee benefit plan—such as a retirement, pension, or insurance plan—that is not invoked as a subterfuge to evade the purposes of the ADEA; or (4) the discharge or discipline of a protected individual was for good cause.⁹⁸ Although these defenses are set forth in the ADEA itself, employers should proceed with caution because the courts construe them strictly.

REMEDIES UNDER THE ADEA

Employees who bring successful claims under the ADEA or the OWBPA are entitled to both equitable relief, which includes hiring, wage adjustments, promotion, or reinstatement, and monetary relief.⁹⁹ Monetary remedies include back pay, front pay, and liquidated damages. Liquidated damages equal to the amounts owing to a person as a result of the violation are provided only in the event of willful violations by the employer. Compensatory damages and punitive damages are also available under the ADEA.

DISABILITY DISCRIMINATION

Title I of the Americans with Disabilities Act (ADA) prohibits employers from discriminating against a qualified individual because of a disability in regard to job application procedures, hiring, advancement, discharge, compensation, job training, and other terms, conditions, and privileges of employment. Such discrimination includes the use of selection criteria to screen out individuals with disabilities, unless the criteria are job related and consistent with business necessity. The ADA requires employers to make “reasonable accommodations” for requesting employees who have a “physical or mental impairment that substantially limits a major life activity.” Subsequent to the enactment of the ADA, several U.S. Supreme Court decisions made it difficult for certain disabled employees to prove they were entitled to the protections of the ADA. For example, in *Sutton v. United Airlines*,¹⁰⁰ the Supreme Court held that an impairment, such as myopia, that could be corrected with a device or treatment, was not a disability. As a result, the Court held that an airline pilot could not challenge an airline’s rule requiring pilots of long-range jets to have 20-20 vision without glasses. In 2008, Congress passed the ADA

Amendments Act (ADAAA) to address these Supreme Court rulings “by reinstating a broad scope of protection to be available under the ADA.” The ADAAA specifically prohibits employers from discriminating against disabled employees who have an impairment that is episodic or in remission, or that employ “mitigating measures,” such as corrective eyewear. At the same time, however, the ADAAA requires that workers prove that they have a disability that “would substantially limit a major life activity when active.”¹⁰¹ The ADAAA will also provide protection, for the first time, to workers with serious ailments like diabetes, epilepsy, and cancer.¹⁰²

IMPERMISSIBLE DISCRIMINATION

Under the ADA, employers are prohibited from (1) intentionally discriminating against disabled persons and (2) engaging in employment practices that are not intentionally discriminatory, but have the effect of discriminating against disabled persons or perpetuating the past effects of such discrimination. The term “discriminate” as construed by the ADA includes the following prohibited practices:

1. Limiting, segregating, or classifying an applicant or employee because of his or her disability so as to adversely affect his or her opportunities or status.
2. Entering into a contractual relationship with an employment or referral agency, union, or other organization that has the effect of subjecting applicants or employees with a disability to prohibited discrimination.
3. Using standards, criteria, or methods of administration that have the effect of discriminating or perpetuating the effects of discrimination because of disability.
4. Not making reasonable accommodations to the known physical or mental limitations of an otherwise qualified applicant or employee with a disability, unless to do so would impose undue hardship on the employer.
5. Denying job opportunities to an otherwise qualified applicant or employee with a disability in order to avoid having to make reasonable accommodations for that disability.
6. Using qualification standards or employment tests that tend to screen out individuals with disabilities, unless the standards or tests are shown to be job related and consistent with business necessity.
7. Failing to select and conduct job testing in such a way as to ensure that when the test is administered to an

102. *Rights for the Disabled*, WASH. POST, Sept. 22, 2008, at A14.

applicant or employee with a disability that impairs his or her sensory, manual, or speaking skills, the results of the test accurately reflect the skills or aptitude that test is designed to measure, rather than reflecting the sensory, manual, or speaking impairment.

The employee must be able to attend work to be considered a “qualified individual” within the meaning of the ADA. In *Corder v. Lucent Technologies*,¹⁰³ the court found that an employee diagnosed with depression who was unable to attend work did not qualify for protection under the ADA.

Both disparate treatment and disparate impact cases can be brought under the ADA.¹⁰⁴ In addition, the U.S. Courts of Appeals for the Fourth, Fifth, Eighth, and Tenth Circuits have determined that employees can also bring a claim for a hostile work environment under the ADA.¹⁰⁵

The ADA prohibits employers from discriminating against employees who have an “association” with someone with a disability.¹⁰⁶ A plaintiff can make out an *association claim* by showing that (1) the plaintiff was qualified for the position, (2) the plaintiff was subject to an adverse employment action, (3) the plaintiff was known to have a relative with a disability, and (4) the adverse employment action occurred under a circumstance that raised a reasonable inference that the relative’s disability was a determining factor in the decision.¹⁰⁷ For example, the U.S. Court of Appeals for the Seventh Circuit held that an employee could raise a claim of “association discrimination” when the employer fired her because her husband’s medical bills, paid by the employer’s health plan, were too costly.¹⁰⁸

The ADA also extends to employee benefit packages. In March 2000, however, the U.S. Court of Appeals for the Second Circuit agreed with six other federal circuits in holding that the ADA does not bar employers from providing less coverage for mental and emotional disabilities than for physical disabilities under long-term disability plans.¹⁰⁹ The Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (H.R. 6983, enacted as part of Pub. L. No. 100–343) requires employers with fifty or more employees that provide group health insurance with mental

health coverage to pay mental illness and addiction expenses on terms (such as deductibles, copayments, and covered hospital days and out-patient visits) that are on a par with the coverage offered for physical illnesses. Employers can obtain an exemption if providing parity would increase the total costs of health coverage by more than a specified percentage.

DEFINITION OF DISABILITY

The ADA codifies existing law developed under the Vocational Rehabilitation Act of 1973 by defining a “person with a disability” as (1) a person with a physical or mental impairment that substantially limits one or more of that person’s major life activities, (2) a person with a record of a physical or mental impairment that substantially limits one or more of that person’s major life activities, or (3) a person who is regarded as having such an impairment.

Physical or Mental Impairment

The first and second prongs of the ADA’s definition of a disability focus on whether the individual has, or has a record of, a physical or mental impairment. The *Code of Federal Regulations* defines a physical or mental impairment as:

Any physiological disorder, or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: neurological, musculoskeletal, special sense organs, respiratory (including speech organs), cardiovascular, reproductive, digestive, genitourinary, hemic and lymphatic, skin, and endocrine; or [a]ny mental or psychological disorder, such as mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities.¹¹⁰

Neither the ADA nor the *Code of Federal Regulations* lists all of the diseases or conditions that qualify as a “physical or mental” impairment. The ADA states generally, however, that an impairment is a physiological or mental disorder.¹¹¹ As a result, physical characteristics, such as skin color, weight, or height within the normal range, are not physical impairments, and personality traits, such as rudeness, irresponsible behavior, or a short temper, are not themselves impairments either. The ADA does not extend to all abnormal physical characteristics. For example, the U.S. Court of Appeals for the Sixth Circuit held that morbid obesity is not an impairment under the ADA unless it is the result of a physiological condition.¹¹²

112. EEOC v. Watkins Motor Lines, Inc., 463 F.3d 436 (6th Cir. 2006).

In addition, environmental, cultural, or economic disadvantages, such as lack of education or a prison record, are not impairments. For example, a person who cannot read due to dyslexia, which is a learning disability, has an impairment and is thus disabled. In contrast, a person who cannot read because he or she did not go to school does not have a disability because failure to attend school is not an impairment.

Substantially Limits a Major Life Activity An impairment is a disability under the ADA only if it causes the individual to be unable to perform, or to be significantly limited in the ability to perform, a major life activity that an average person can perform with little or no difficulty. Courts will consider the impairment's nature and severity, how long it will last or is expected to last, and its expected impact.¹¹³

Major life activity includes walking, seeing, hearing, and speaking. The U.S. Supreme Court resolved a split in the circuits when it ruled in *Bragdon v. Abbott*¹¹⁴ that reproduction is a major life activity. The U.S. Court of Appeals for the Ninth Circuit held that an employee who took medication for an anxiety disorder that made him drowsy and sexually impotent was entitled to relief under the ADA on the grounds that sleeping, engaging in sexual relations, and interacting with others were major life activities.¹¹⁵ In contrast, in *Furnish v. SVI Systems*,¹¹⁶ the U.S. Court of Appeals for the Seventh Circuit held that an employee with cirrhosis of the liver caused by chronic hepatitis B had no claim under the ADA, because lack of a fully functioning liver did not limit the ability to perform a "major life activity." Likewise, in *Pack v. Kmart Corp.*,¹¹⁷ the U.S. Court of Appeals for the Tenth Circuit held that although a pharmacy technician's depression was a mental impairment that limited her ability to concentrate at work, concentration was not a "major life activity" under the ADA.

The U.S. Courts of Appeals for the Seventh, Eighth, and Ninth Circuits have held that eating is considered a major life activity because it is integral to daily existence.¹¹⁸ The U.S. Court of Appeals for the Seventh Circuit found that severe diabetes substantially limited an employee's major life activity of eating, because he was required to perpetually and constantly monitor his food and sugar intake to avoid "debilitating, and potentially life-threatening, symptoms."¹¹⁹

119. See *Lawson v. CSX Transp., Inc.*, 245 F.3d 916 (7th Cir. 2001).

In *Toyota Motor Manufacturing, Kentucky, Inc. v. Williams*,¹²⁰ an employee who claimed that she was unable to perform her automobile assembly-line job, because she was disabled due to carpal tunnel syndrome and related impairments, sued Toyota for failing to provide her with a reasonable accommodation as required by the ADA. The district court granted Toyota's motion for summary judgment, holding that the employee's impairment did not qualify as a "disability" under the ADA because it had not "substantially limit[ed]" any "major life activit[y]." The U.S. Court of Appeals for the Sixth Circuit reversed, finding that her impairments substantially limited the employee in the major life activity of performing manual tasks. The U.S. Supreme Court faulted the appeals court for failing to ask whether the employee's impairments prevented or restricted her from performing tasks that were of central importance to most people's daily lives. The Court concluded that an employee is not considered to be substantially limited from performing manual tasks simply because he or she cannot perform certain tasks associated with his or her job. Because the employee could brush her teeth, garden, and perform other routine household tasks, she was deemed not disabled.

Physicians can play a large role in deciding whether an impairment substantially limits a major life activity. For example, in *Blockel v. J.C. Penney Co.*,¹²¹ the U.S. Court of Appeals for the First Circuit did not question whether an employee, who was fired after she was required to limit the number of hours she worked per week by her doctor due to a seizure disorder, depression, and post-traumatic stress disorder, was disabled. In contrast, in *McKenzie v. Dovala*,¹²² the U.S. Court of Appeals for the Tenth Circuit stated that an employee who had a prior record of a variety of psychological afflictions, including post-traumatic stress disorder related to childhood sexual abuse by her father, was not protected by the ADA because her doctors had cleared her for all work-related activities at the time her employment application was denied.

Regarded as Disabled

A person is also protected under the ADA if he or she is regarded as having an impairment that substantially limits one or more major life activities. This is based on the notion that societal stereotypes and prejudices may constrain individuals more than their actual limitations. As a result, the ADA prohibits an employer from discriminating against an

120. 534 U.S. 184 (2001).

121. 337 F.3d 17 (1st Cir. 2003).

122. 242 F.3d 967 (10th Cir. 2001).

individual based on its perception that the individual is disabled, because the employer's reactions may be based on stereotypes, misinformation, and long-held misconceptions of handicapped individuals. In other words, an individual might be "regarded as" disabled even if he or she does not actually have a disability, if the employer treats him or her as if the condition constituted a disability.

Exclusions

Although the definition of a disability under the ADA is relatively vague, the statute clearly excludes many things. For example, the ADA specifically excludes homosexuality, bisexuality, sexual-behavior disorders, compulsive gambling, kleptomania, and pyromania from the definition of a disability.

Psychoactive-substance-use disorders resulting from current illegal use of drugs, including the use of alcohol in the workplace against the employer's policies, are also excluded from the ADA's definition of a disability. Although "current use" is not specifically defined in the statute, it has been interpreted to include drug use weeks or months before discharge.¹²³ In contrast, an employee or applicant who no longer actively uses drugs or alcohol on the work site, but who is involved in or has completed a supervised rehabilitation program, may be regarded as a disabled person.¹²⁴ Also, although an individual may not be fired on the basis of his or her alcoholism, an employer may discharge the person based on behavior related to the alcoholism.¹²⁵ In 2000, the EEOC issued an informal guidance letter stating that an employer that excludes injuries or diseases that result from chronic alcoholism or drug addiction from its disability retirement plan could be required to justify the exclusion by the risks or costs of coverage or as necessary for the viability of the plan.¹²⁶

REASONABLE ACCOMMODATION

The ADA requires employers to make reasonable accommodations to an employee's disability, as long as doing so does not cause the employer "undue hardship." Thus, even if a disability precludes an individual from performing the essential functions of the position or presents a safety risk, the employer is required to assess whether there is a

reasonable accommodation that will permit the individual to be employed despite the disability.

To establish liability under the ADA, the employee generally must have requested an accommodation from the employer; it is the employee's initial request for an accommodation that triggers the employer's obligation to provide one.¹²⁷ An employee who fails to provide the employer with necessary medical information is precluded from claiming that the employer failed to provide reasonable accommodation.¹²⁸ Employers must train supervisors to recognize when a reasonable request for accommodation has been made.¹²⁹

Title I sets forth a nonexhaustive list of what might constitute *reasonable accommodation*, including the following: (1) making work facilities accessible; (2) restructuring jobs or modifying work schedules; (3) reassigning the individual to another job; (4) acquiring or modifying equipment or devices; (5) modifying examinations, training materials, or policies; and (6) providing qualified readers or interpreters or other similar accommodations for individuals with disabilities. An employer is not required to provide special training for an employee with a disability or to hire another employee to assist the disabled employee.¹³⁰

At least six federal appeals courts have found that once a request for accommodation is made, an employer must be proactive and make a reasonable effort to determine the appropriate accommodation.¹³¹ A minimum requirement seems to be that the employer should discuss potential accommodations with the disabled employee and not make unilateral decisions regarding the adequacy of potential accommodations.¹³² Courts have not been receptive to claims that an employer should be required to transfer the plaintiff to a new supervisor.¹³³

In some cases, however, reassignment may be deemed a necessary reasonable accommodation. In *Smith v. Midland*

133. Frances A. McMorris, *Employee's Transfer Plea Rejected in Another Disabilities-Act Ruling*, WALL ST. J., Jan. 21, 1997, at B5.

Brake, Inc.,¹³⁴ the U.S. Court of Appeals for the Tenth Circuit found that the employer could have reassigned the employee to another job within the company after he became unable to perform his job because of a chronic skin condition. The court said that the ADA's reasonable accommodation requirement would be transformed into a "hollow promise" if it merely extended the right "to compete equally with the rest of the world for a vacant position" to disabled workers.

In contrast, in *Huber v. Wal-Mart*,¹³⁵ the U.S. Court of Appeals for the Eighth Circuit held that the employer did not violate the ADA by refusing to reassign a dry grocery order filler at a Wal-Mart Store to a vacant router position after she suffered a permanent injury to her right arm that prevented her from performing the essential functions of her order filler job. Instead of automatically reassigning her to the router position, Wal-Mart required her to compete for the job with other applicants pursuant to its policy of hiring the most qualified applicant for the job. The court stated: "[T]he ADA is not an affirmative action statute and does not require an employer to reassign a qualified disabled employee to a vacant position when such a reassignment would violate a legitimate, non-discriminatory policy of the employer to hire the most qualified candidate." An employer does not have to accommodate a disabled employee if doing so would conflict with seniority rules under the employer's collective bargaining agreement.¹³⁶

In *U.S. Airways, Inc. v. Barnett*,¹³⁷ however, the Supreme Court held that an employer's unilaterally imposed seniority system (not embodied in a collective bargaining agreement) that conflicts with a reassignment that is a reasonable accommodation under the ADA will not necessarily serve to bar the reassignment. In this case, an employee who suffered a serious back injury while working asked his employer to reassign him to another job in the company's mail room. Two employees with greater seniority planned to exercise their seniority right to transfer to jobs in the mail room, thereby preventing the disabled employee from working there. Although a seniority system is ordinarily sufficient to show that accommodation is not reasonable under the ADA, the Court ruled that an employee may present evidence of special circumstances that make exception to the seniority rule reasonable under particular facts: "[T]he plaintiff might show, for example, that the employer, having retained the

right to change the system unilaterally, exercises the right fairly frequently, reducing employee expectations that the system will be followed—to the point where the requested accommodation will not likely make a difference."

There is a split among the federal appellate courts regarding whether an employer is required to make a reasonable accommodation for an employee "regarded as" disabled. The U.S. Courts of Appeals for the First and Third Circuits have found that "regarded as" plaintiffs are entitled to reasonable accommodation,¹³⁸ while the Fifth, Sixth, Eighth, and Ninth Circuits have held that no accommodation is required.¹³⁹

DEFENSES UNDER THE ADA

Defenses available to an employer under the ADA include undue hardship, business necessity, and permissible exclusion.

Undue Hardship

A reasonable accommodation is not required if it would impose an undue hardship on the employer. The ADA defines *undue hardship* to mean an activity requiring significant difficulty or expense when considered in light of (1) the nature and cost of the accommodation needed; (2) the overall financial resources of the facility, the number of persons employed at the facility, the effect on expenses and resources, or any other impact of the accommodation on the facility; (3) the overall financial resources of the employer and the overall size of the business with respect to the number of employees and the type, number, and location of its facilities; and (4) the type of operation of the employer, including the composition, structure, and functions of the workforce, and the geographic separateness and administrative or fiscal relationship of the facility in question to the employer.

One accommodation that was deemed unreasonable involved an employee with various mental impairments that made it impossible for him to work in an unduly stressful environment. The employee asked for a transfer out of the stressful work environment and later sued when the employer did not honor his request. The U.S. Court of Appeals for the Third Circuit ruled that transferring the

employee away from the stressful work environment was not a reasonable accommodation because it would impose extraordinary administrative costs on the employer.¹⁴⁰

Business Necessity

Employers may also argue that they had to discriminate against an applicant or employee with a disability due to a business necessity. In *Belk v. Southwestern Bell Telephone Co.*,¹⁴¹ the U.S. Court of Appeals for the Eighth Circuit ruled that employment tests, qualification standards, and other selection criteria are acceptable under the ADA if they are related to the job and consistent with business necessity. Southwestern Bell had argued that it had job-related reasons for not accommodating a worker who wore a leg brace during a physical performance test for a technician job.

In *EEOC v. Exxon Corp.*,¹⁴² the U.S. Court of Appeals for the Fifth Circuit analyzed Exxon's policy, adopted in response to the 1989 *Exxon Valdez* oil spill disaster, of permanently removing any employee who had undergone treatment for substance abuse from certain safety-sensitive positions. The EEOC sued, arguing that Exxon had to prove that the class of individuals posed a "direct threat" to the health or safety of others. The court rejected this argument, stating that Exxon could justify its policy as a business necessity. Whereas the "direct threat" test focuses on the individual employee and the specific risk posed by the employee's disability, the "business necessity" defense concerns whether a safety policy constitutes a business necessity, both the magnitude of possible harm and the probability of harm must be evaluated.

In *Tice v. Centre Area Transportation Authority*,¹⁴³ the U.S. Court of Appeals for the Third Circuit held that a transportation authority did not violate the ADA by ordering a post-hiring physical examination of a bus driver who had repeatedly taken medical leave due to a back injury. The examination was job related and consistent with the business necessity of determining whether the employee was physically fit to perform his job.

Permissible Exclusion

An applicant or employee who is disabled may be excluded from the employment opportunity only if, by reason of the disability, he or she (with or without reasonable

accommodation) cannot perform the essential functions of the job or if the individual's employment poses a significant risk to the health or safety of others.

Inability to Perform Essential Functions In determining whether a job function is essential, the ADA requires that consideration be given to the employer's judgment as to which functions are essential, but it also looks to any written job description prepared *before* advertising or interviewing for the job commenced. The applicant or employee has to prove only that he or she is able to perform the essential functions of the job, not all of the functions.¹⁴⁴

Direct Threat An employer cannot deny a job due to risk of future injury to the employee or others, unless, given the person's current condition, there is a probability of substantial harm. For example, the U.S. Court of Appeals for the Eleventh Circuit ruled that a dental office acted lawfully when it laid off a hygienist who tested positive for the human immunodeficiency virus (HIV). The court concluded that the hygienist posed a direct threat to the health and safety of others, because his job included engaging in invasive, exposure-prone activities, such as cleaning teeth, on a frequent basis.¹⁴⁵ The presence of sharp instruments on which the hygienist could prick his hand increased the risk of HIV transmission. Employers cannot rely on their own physician's opinion, however; risk of injury must be based upon generally accepted medical opinion.

In *Echazabal v. Chevron USA, Inc.*,¹⁴⁶ the U.S. Supreme Court held that the "direct threat" defense under the ADA applies to employees who pose a direct threat to their own health or safety even if they pose no threat to other persons. Although Echazabal worked for various maintenance contractors at Chevron's El Segundo, California oil refinery, Chevron refused to hire him because he had a liver disease that might be aggravated by exposure to solvents and chemicals in the refinery. Chevron also asked the maintenance contractor that employed Echazabal to remove him from the refinery or assign him to a position where he would not be exposed to solvents or chemicals. Echazabal sued Chevron, alleging that it had violated the ADA. The Supreme Court found that Chevron's reasons for denying employment to Echazabal were reasonable: Chevron wished to avoid time lost to sickness, excessive turnover from medical retirement or death, litigation under state law, and the risk of violating the Occupational Safety and Health Act. The

144. *Deane v. Pocono Med. Ctr.*, 142 F.3d 138 (3d Cir. 1998).

145. *Waddell v. Valley Forge Dental Assocs.*, 276 F.3d 1275 (11th Cir. 2001).

146. 536 U.S. 73 (2002).

Court concluded that if an employer hires an individual who knowingly consents to the particular dangers the job would pose to him, “there is no denying that the employer would be asking for trouble.” The employer’s decision to hire “would put Congress’s policy in the ADA, [and] a disabled individual’s right to operate on equal terms within the workplace, at loggerheads with the competing policy of OSHA, to ensure the safety of ‘each’ and ‘every’ worker.”

HIV DISCRIMINATION

Due to advances in drug treatments, more individuals are living healthy, productive lives while infected with the HIV. This is called asymptomatic HIV disease. When an individual’s immune system is compromised and the person becomes ill due to HIV-related complications, the individual is considered symptomatic. Acquired immune deficiency syndrome (AIDS) refers to the most serious stage of symptomatic HIV disease. Although the ADA does not specifically list HIV disease as a disability,¹⁴⁷ the U.S. Supreme Court has held that both asymptomatic and symptomatic HIV-positive individuals are disabled within the meaning of the ADA.¹⁴⁸

In the context of HIV disease, courts have narrowly construed the direct threat defense in accordance with medical evidence that HIV cannot be transmitted through casual contact. Thus, only those professions that could lead to the transmission of bodily fluids, such as health-care workers, are given closer analysis under the direct threat exception.

Dealing with HIV Disease in the Workplace

An employer cannot justify discrimination against a person with AIDS on the basis of coworker or customer preference. Similarly, the fact that the employment of someone with AIDS will increase group health insurance costs or cause absenteeism does not make discrimination permissible.

In *Leonel v. American Airlines*,¹⁴⁹ the U.S. Court of Appeals for the Ninth Circuit held that American Airlines may have violated the ADA by refusing to hire HIV-positive flight attendant candidates who did not reveal their medical status as part of a medical examination that was conducted before the company had completed its background checks. The court stated:

Both the ADA and [the equivalent state law] deliberately allow job applicants to shield their private medical

information until they know that, absent an inability to meet the medical requirements, they will be hired, and that if they are not hired, the true reason for the employer’s decision will be transparent. American’s attempt to focus on the evaluation rather than the collection of medical information squares with neither the text nor the purposes of the statutes. Whether or not it looked at the medical information it obtained from the appellants, American was not entitled to get the information at all until it had completed the background checks, unless it can demonstrate it could not reasonably have done so before initiating the medical examination process.

The court also held that American may have violated the plaintiffs’ rights to privacy under the California Constitution by conducting complete blood count tests on their blood samples without notifying them or obtaining their consent.

Many states recognize either a common law or a constitutional right to privacy that protects individuals from improper communication of their HIV status, even though the information is true and was properly obtained for a specific purpose. Communication of such personal information might be protected by the qualified-privilege defense, as long as it is confined only to those people who have a legitimate need to know. General communication of someone’s HIV status among coworkers is probably not protected by the privilege. Statutes prohibiting disclosure of medical information, specifically HIV-related information, may also be a source of employer liability. Thus, HIV-related information should be kept in confidence among individuals who need to know.

The employer also runs the risk of being sued for libel or slander if careless statements are made about employees. For example, falsely accusing an employee of having AIDS could be grounds for a defamation suit. Truth, however, is a complete defense.

GENETIC DISCRIMINATION

In April 2000, the EEOC Commissioner announced that the ADA prohibits genetic discrimination. Although the ADA does not specifically refer to genetic discrimination, the statute’s “regarded as disabled” prong includes discrimination on the basis of a diagnosed genetic predisposition toward an asymptomatic condition or illness.¹⁵⁰ As explained in Chapter 12, the Genetic Information Nondiscrimination Act of 2008 (GINA) prohibits discrimination based on genetic information.

REMEDIES UNDER THE ADA AND GINA

The ADA and GINA are enforced in the same manner as Title VII, and the same remedies are available. Compensatory and punitive damages for discrimination based on disability or genetic information are subject to the same caps as those applicable to discrimination based on sex or religion. The ADA also prohibits retaliation against an individual for exercising his or her rights under the statute. The federal circuits are split over the availability of compensatory and punitive damages for such claims, however. The U.S. Court of Appeals for the Seventh Circuit and district courts in the Third and Sixth Circuits have held that such damages are not recoverable,¹⁵¹ but a district court in the Second Circuit has held that compensatory and punitive damages are available.¹⁵²

FAMILY AND MEDICAL LEAVE ACT OF 1993

Under the Family and Medical Leave Act (FMLA) of 1993,¹⁵³ eligible employees are entitled to twelve weeks of unpaid leave per year. An employee may use leave under the Act in four situations: (1) the birth of a child; (2) the placement of an adopted or foster-care child with the employee; (3) care of a child, a parent, or a spouse; or (4) a serious health condition that renders the employee unable to do his or her job. Whereas the focus of the ADA is to demonstrate that an employee can work despite a disability, the objective of the FMLA is to provide time off to an employee who cannot work because of family responsibility or a serious health condition. To be eligible for a family leave, the employee must have worked at the place of employment for at least twelve months and have completed at least 1,250 hours of service to the employer during that twelve-month period.

To vindicate rights under the FMLA, a plaintiff may sue both the employer and his or her supervisor individually.¹⁵⁴ This interpretation is distinctive because a supervisor generally cannot be sued in his or her individual capacity under Title VII, the ADEA, or the ADA. In addition, despite states' immunity from private actions under the Eleventh

Amendment, the U.S. Supreme Court has held that employees can sue state employers for FMLA violations.¹⁵⁵

The FMLA's requirements are a floor, not a ceiling, for what employers can provide their employees in terms of leave. If employers provide for more generous leave, however, they must give employees notice regarding the consequences of taking the extra leave.¹⁵⁶

An employee cannot waive his or her right to leave time under the FMLA. But the employer may require, or an employee may choose, to substitute any or all accrued paid leave for the leave time that is provided for under the Act. Employers have no obligation to give employees advance notice that their paid leave will be counted toward the unpaid leave provided by the FMLA.¹⁵⁷

In general, the employer is required to restore the employee to the same position, or one with equivalent benefits, pay, and other terms and conditions of employment, following the expiration of FMLA leave. However, an employer may still terminate an employee during the family medical leave, if the employer would have made the same decision had the employee not taken the leave. For example, in *Gambini v. Total Renal Care, Inc.*, the U.S. Court of Appeals for the Ninth Circuit held that an employer did not violate the FMLA by firing an employee on FMLA pregnancy leave because there was uncontradicted evidence that the employer terminated the employee for conduct unrelated to her FMLA leave.¹⁵⁸

In *O'Connor v. PCA Family Health Plan, Inc.*,¹⁵⁹ the U.S. Court of Appeals for the Eleventh Circuit held that an employee taking leave under the FMLA does not have an absolute right to reinstatement if his or her employment is terminated during the leave as part of a general reduction in force (RIF) by the employer. The court explained: "An employee has no greater right to reinstatement or to other benefits and conditions of employment than if the employee had been continuously employed during the FMLA leave period." The burden of proof is on the employer denying reinstatement to show that it would have discharged the employee even if he or she had not been on FMLA leave.

An employer is also not required to reinstate key employees to their previous positions if the employer determines that "such denial is necessary to prevent substantial and grievous economic injury to the operations of the employer." "Key employee" is defined as a salaried employee who is

157. *See* Ragsdale v. Wolverine World Wide, Inc., 535 U.S. 81 (2002).

158. 486 F.3d 1087 (9th Cir. 2007).

159. 200 F.3d 1349 (11th Cir. 2000).

among the highest-paid 10 percent of the employees located within seventy-five miles of the facility at which the subject employee is employed. EEOC regulations require the employer to notify an employee, at the time the leave is requested, of his or her status as a key employee and of the consequence of taking a leave.¹⁶⁰

In 2008, the Department of Labor proposed wide-ranging changes in its first major update of regulations implementing the FMLA. The proposed regulations would impose more employer notice requirements regarding employee qualification for leave, clarify the rules related to substitution of paid leave, clarify that an employee who is incapacitated for three consecutive days must see a medical provider within thirty days of the incapacity, require employees with chronic health conditions to demonstrate that they have seen a doctor twice per year, and require employees to follow workplace call-in procedures if they want to take unscheduled, intermittent leave.¹⁶¹

VETERANS' REEMPLOYMENT RIGHTS

The Uniformed Services Employment and Reemployment Rights Act of 1994 (USERRA) protects the civilian jobs of members of the uniformed services of the United States. The deployment of U.S. troops, including large numbers of reservists, to Afghanistan and Iraq has increased the interest in USERRA protections.

Service in the uniformed services is defined as follows:

[T]he performance of duty on a voluntary or involuntary basis in a uniformed service under competent authority and includes active duty, active duty for training, initial active duty for training, inactive duty training, full-time National Guard duty, a period for which a person is absent from a position of employment for the purpose of an examination to determine the fitness of the person to perform any such duty, and a period for which a person is absent from employment for the purpose of performing funeral honors duty."¹⁶²

Covered employers include "any person, installation, organization, or other entity that pays salary or wages for work performed or that has control over employment opportunities," including federal and state government employers.¹⁶³

160. Panza v. Grappone Cos., 2000 WL 1700143 (D.N.H. Oct. 20, 2000).

161. 73 Fed. Reg. 7925 (Feb. 11, 2008).

162. 38 U.S.C. § 4303(13).

163. 38 U.S.C. § 4303(4)(A).

Section 4312 of USERRA requires an employer to rehire covered employees, and Section 4311 prohibits employers from treating those employees differently after they are rehired. Section 4316 prevents employers from dismissing the employees without cause for a limited period of time (the length of the protected period depends on the length of military service). USERRA also protects an employee from adverse employment decisions when the employee's membership in the uniformed services is a motivating factor in the employer's decision.¹⁶⁴ USERRA also prohibits other forms of discrimination because of an employee's military status or service. For example, a district court granted summary judgment to an active duty serviceman who was denied employment as a police officer, because his active duty prevented him from beginning service until two months after the police department's start date. The employer argued that it had refused to employ the serviceman because of his unavailability to report to work, not his status, but the court disagreed: "This contention can be dispatched quickly: it ignores the plain language of section 4311(a), which prohibits discrimination based not only on a person's status as a member of the uniformed services, but also on the service member's 'obligation to perform service.'"¹⁶⁵ In addition, reemployment must be to a position comparable "to the position he would have held had he remained continuously in his civilian employment."¹⁶⁶

A person claiming violation of USERRA may file a complaint with the U.S. Secretary of Labor, ask the U.S. Attorney General to file a lawsuit on his or her behalf, or file a civil lawsuit in state or federal court. A court may (1) order an employer to comply with the act, (2) award back pay and front pay, and (3) award an additional amount equal to the pay award as liquidated damages if it finds the employer willfully failed to comply with the Act. The court may also exercise full equity powers. USERRA allows a successful plaintiff to recover its attorneys' fees, expert witness fees, and other litigation expenses.¹⁶⁷

AFFIRMATIVE ACTION

Affirmative-action programs are generally viewed as a means of remedying past acts of discrimination. Such programs are usually established pursuant to court orders, court-approved consent decrees, or federal and state laws

164. Newport v. Ford Motor Co., 91 F.3d 1164, 1167 (8th Cir. 1996).

165. McLain v. City of Somerville, 424 F. Supp. 2d 329 (D. Mass. 2006).

166. Rogers v. City of San Antonio, 392 F.3d 758, 763 (5th Cir. 2004), *cert. denied*, 545 U.S. 1129 (2005).

167. 38 U.S.C. § 4323.

that impose affirmative-action obligations on government contractors.

Executive Order 11246 requires federal government contractors to include certain provisions in every government contract not exempted by the order. In these provisions, the contractor agrees (1) not to discriminate in employment on the basis of race, color, religion, sex, or national origin; (2) to take affirmative steps to prevent discrimination; and (3) to file equal opportunity surveys every other year.¹⁶⁸ In some cases, a contractor's affirmative-action plan must be put in writing. Although individuals have no private right of action based on an alleged violation of the order, the Department of Labor, through its Office of Federal Contract Compliance Programs, can impose a wide range of sanctions, including terminating a government contract and disqualifying the contractor from entering into any future government contracts.¹⁶⁹ Government contractors are subject to affirmative-action obligations under certain federal laws as well, including the Vocational Rehabilitation Act of 1973 and the Vietnam Era Veterans' Readjustment Assistance Act of 1972.

As explained in Chapter 4, the U.S. Supreme Court has held that government-mandated affirmative-action plans are subject to strict scrutiny under the Equal Protection Clause.¹⁷⁰ In reinstating a reverse-discrimination claim by a white-owned construction company that had lost a contract to a minority-owned business, the Court held that benign and invidious racial classifications should be subject to the same standards. This ruling was significant because it required the government to show a specific history of discrimination in order to justify preferential treatment of minority-owned businesses in government contracts.

In 1998, in *Lutheran Church–Missouri Synod v. FCC*,¹⁷¹ the U.S. Court of Appeals for the District of Columbia Circuit struck down the Federal Communications Commission's affirmative-action requirements for radio and television broadcast licenses. The court held that *Adarand*'s requirement of strict scrutiny applied not just to racial preferences in hiring, but to any race-conscious decision making that affects employment opportunities, even if it does not establish preferences, quotas, or set-asides. The court explained:

168. Exec. Order No. 11246, 3 C.F.R. 339 (1964–1965), reprinted in 42 U.S.C. § 2000e (1994).

169. The Office of Federal Contract Compliance Programs' regulations overhauling the thirty-year-old requirements for affirmative action under Executive Order 11246 were published in the November 13, 2000 issue of the *Federal Register*, 65 Fed. Reg. 68,022, and took effect on December 13, 2000.

170. *Adarand Constructors, Inc. v. Peña*, 515 U.S. 200 (1995).

171. 141 F.3d 344 (D.C. Cir. 1998).

[W]e do not think it matters whether a government hiring program imposes hard quotas, soft quotas, or goals. Any one of these techniques induces an employer to hire with an eye toward meeting the numerical target. As such, they can and surely will result in individuals being granted a preference because of their race.

The court also held that even if the FCC's interest in fostering diverse programming could be deemed a compelling state interest, the FCC's equal employment opportunity rules were not narrowly tailored to foster diverse programming. In response to *Lutheran Church*, the FCC adopted new rules that require broadcast licensees to disseminate information about job openings to all members of the community to ensure that all potential applicants have the opportunity to compete for jobs.¹⁷²

Although government programs have been struck down by the courts, some affirmative-action programs by private employers have been accepted. For example, in *United Steelworkers v. Weber*,¹⁷³ the U.S. Supreme Court upheld a collective bargaining agreement containing an affirmative-action plan giving preference to African American employees entering skilled-craft training positions. Concluding that Title VII did not preclude all private, voluntary, race-conscious affirmative-action programs, the Court noted that the plan (1) like Title VII, was designed to break down patterns of racial segregation and hierarchy, (2) "does not unnecessarily trammel the interests of white employees," and (3) was a temporary measure intended to eliminate rather than maintain racial balance. The EEOC has promulgated regulations regarding voluntary affirmative-action plans.¹⁷⁴

In *Taxman v. Board of Education*,¹⁷⁵ the U.S. Court of Appeals for the Third Circuit struck down a school board's affirmative-action plan as a violation of Title VII. The plan gave preference to minority teachers over nonminority teachers in layoff decisions when teachers were equally qualified. The court read the Supreme Court's ruling in *United Steelworkers* as permitting race-based employment decisions only when they are necessary to remedy past discrimination. A mere desire to promote diversity in education was not sufficient to warrant a discriminatory policy. The U.S. Supreme Court granted the petition for certiorari and heard oral arguments, but the parties settled the case before the Court ruled. Several civil rights groups feared that the Supreme Court would use this case as an occasion

172. 47 C.F.R. pt. 73.2080 (2000).

173. 443 U.S. 193 (1979).

175. 91 F.3d 1547 (3d Cir. 1996).

to ban all affirmative-action programs, so they contributed the bulk of the money paid in the settlement.¹⁷⁶

The Civil Rights Act of 1991 limited the ability of persons to challenge affirmative-action litigated judgments and consent decrees. A person cannot challenge a judgment or consent decree if any of the following three conditions is applicable: (1) the person had actual notice of the proposed judgment or order sufficient to let that person know that the judgment or decree might adversely affect the interests and legal rights of that person and had an opportunity to present objections, (2) the person had a reasonable opportunity to present objections to the judgment or order, or (3) the person's interests were adequately represented by another person who had previously challenged the judgment or order on the same legal grounds and with a similar factual situation.

► ETHICAL CONSIDERATION

In *Grutter v. Bollinger*,^a the U.S. Supreme Court upheld the University of Michigan Law School's admissions policy, which took race and ethnicity into account in an effort to achieve student body diversity. The Law School's policy did not define diversity solely in terms of racial and ethnic status, although it reaffirmed the Law School's commitment to diversity with reference to the inclusion of African American, Hispanic, and Native American students. It did not use numerical quotas, however. The policy had been challenged by a white applicant who claimed that it discriminated against her on the basis of race in violation of the Fourteenth Amendment. In an *amicus curiae* brief submitted in support of the Law School, the U.S. military asserted that a racially diverse officer corps was essential to its national security mission. The Court ruled that, at least for law schools, diversity was a compelling state interest.

Yet, in a companion case,^b the Supreme Court invalidated the University of Michigan's undergraduate admissions policy, which used mechanistic numerical formulas to admit more applicants of color. Unlike the Law School—which included race and ethnicity as just two of many factors used to make admissions decisions—the undergraduate programs specified one set of required grade point averages and board scores for whites granted automatic admission and another, lower set of grades and board scores for nonwhites granted automatic admission.

Many U.S. employers actively recruit and hire minority candidates.^c Is it ethical for employers to make hiring decisions based on race in order to promote workplace diversity? For example, should an employer choose a qualified

minority candidate over a more qualified nonminority candidate to promote diversity? What if the two candidates are equally qualified for a particular job?^d

APPLICABILITY OF CIVIL RIGHTS LAWS TO TEMPORARY WORKERS

The EEOC has responded to the growth in the number of temporary or contingent workers by extending potential liability for discrimination against such workers to both the employment agencies or temporary staffing firms and their client-employers.¹⁷⁷ If both the staffing firm and its client have the right to control the worker, they are treated as joint employers, and both are subject to liability for both back and front pay, as well as compensatory and punitive damages.

If the staffing firm learns that one of its clients has discriminated against a temporary employee, the firm should not assign other workers to that work site, unless the client has taken the necessary corrective and preventive measures to ensure that the discrimination will not recur. Otherwise, the staffing firm will be liable, along with the client, if a worker later assigned to that client is subjected to similar misconduct.

The text of the EEOC's guidance on the application of employment-discrimination laws to contingent workers (Contingent Worker Guidance) is available at <http://www.eeoc.gov/policy/docs/conting.html> (last modified July 6, 2000). The text of the EEOC's guidance on the application of the ADA to contingent workers, which supplements the Contingent Worker Guidance, is available at <http://www.eeoc.gov/policy/docs/guidance-contingent.html> (last modified Jan. 23, 2001).

Economic PERSPECTIVE

Globalization, Cultural Norms, and Workplace Discrimination

In 2004, Infosys Technologies, India's largest software exporter, settled its second sexual harassment lawsuit against one of its former officers and directors, Phaneesh Murthy. Murthy was accused of harassing two American women employed in Infosys's Fremont, California office. The suit sent shockwaves through Indian software companies with U.S. operations. In India, sexual harassment is widespread, but the Infosys suits caused Indian companies to realize that sexual harassment is taken seriously in the United States and that the possibility of lawsuits is very real.

In the current era of globalization, there is increasing potential for a clash between the culture of a company's country of origin and the local culture and laws of its foreign branch offices. How multinational corporations should address this interaction as they create, implement, and maintain workplace diversity and anti-discrimination policies is the subject of much debate.

For example, many U.S. corporations, instilled with strong and well-established diversity and anti-discrimination views and practices, feel that it is important to implement a single global policy that applies to all employees in every country in order to create a corporate culture that clearly defines acceptable and unacceptable social norms. This worldwide approach may be based on the idea that certain sets of behaviors and practices are simply unacceptable for all people everywhere.

This global approach may encounter resistance from foreign employees who may view it as yet another way for Americans to impose their cultural standards on the rest of the world. For instance, kissing a work acquaintance may be the social norm in parts of France and Italy. A corporate ban on displays of affection in the workplace could be viewed as offensive in these countries, even though its purpose is to prevent sexual harassment.

In many companies in Japan, it is considered acceptable to make distinctions based on such characteristics as age, gender, family, place of birth, ancestry, and education. Similarly, in Mexico, it is rare to find an indigenous Mexican manager or professional, because individuals of European descent, who dominate the upper and middle classes, openly use family, social, and business ties to maintain advantages. As a result, a U.S.-mandated workplace policy that prohibits all decisions based on these characteristics may cause resentment and friction within the organization.

Because of these cultural differences, some companies have elected to create a single set of broad corporate values, but they implement these values differently at the local level based on the cultural norms and laws of each country in which the company operates. For example, a U.S. corporation could have a company-wide policy prohibiting sexual harassment and mandating investigation of all complaints. Yet this policy might

be implemented differently in the United Kingdom, where an employer who questions employees and managers about alleged sexual harassment might violate laws concerning trust and confidence. A single worldwide policy that did not consider U.K. laws could trigger liability for the company.

In the wake of the Infosys lawsuits, Indian software companies have implemented this hybrid approach. For example, Indian multinational software giant Wipro, Ltd. instituted a company-wide discrimination policy, including a sexual harassment policy, increased its focus on cross-cultural sensitivity training, and began to hire senior managers in its foreign offices to serve as workplace role models for the Indian employees located there. "Today, geographic barriers are disappearing, and the way we do business is changing," said Nandan Nilekani, Infosys's chief executive. "Multicultural interaction is becoming a very important part of our work environment."

THE EXTRATERRITORIAL REACH OF AMERICAN EMPLOYMENT-DISCRIMINATION LAW

In 1991, Congress amended Title VII to protect U.S. citizens employed in a foreign country by a U.S. employer or a U.S.-controlled employer. The ADEA and the ADA also apply extraterritorially to the same extent as Title VII.

The EEOC has provided guidance on how to determine whether an entity is a U.S. employer.¹⁷⁸ The nationality of an entity is determined on a case-by-case basis, taking into consideration the following factors: (1) the entity's place of incorporation, (2) the principal place of business, (3) contacts within the United States, (4) the nationality of dominant shareholders and/or those holding voting control, and

178. EEOC, *Enforcement Guidance on Application of Title VII and the Americans with Disabilities Act*, available at <http://www.eeoc.gov/policy/docs/extraterritorial-vii-ada.html> (last modified Apr. 24, 2003).

(5) the nationality and location of management. An entity that is incorporated in the United States will generally be deemed a U.S. entity.

Even if a foreign entity is not deemed to be a U.S. entity, it will still be covered if it is "controlled by" a U.S. entity. The determination of whether a U.S. employer controls an entity is based on the interrelation of the companies' operations, common management, centralized control of labor relations, and common ownership or financial control of the U.S. employer and the foreign entity.¹⁷⁹

Section 109 of Title VII makes it clear, however, that "it shall not be unlawful," under either Title VII or the ADA, for an employer to act in violation of either statute if compliance would cause the employer to violate the law of the foreign country in which the employee's workplace is located. For example, an employer may be permitted to deny employment to women in a country that prohibits women from working, even though this practice violates Title VII.

179. 42 U.S.C. § 2000e-1(c)(3).

G L O B A L V I E W

Discrimination and Diversity

When engaging in business overseas, managers should familiarize themselves with the employment-discrimination laws of the foreign countries in which they are doing business.

European Union

In the early 2000s, the European Commission, Parliament, and Council of Ministers adopted various directives aimed at preventing workplace discrimination on the basis of sex, religion, age, race, ethnic origin, disability, and sexual orientation.¹⁸⁰ One directive was also modified to ban harassment as a form of discrimination on any of these grounds.¹⁸¹ Although many of the European Union (EU) member states already had legislation prohibiting some

types of discrimination, the new directives brought all of the varying national anti-discrimination laws together to ensure that anti-discrimination law would be applied evenly in all EU countries. The directives also contain a specific ban against retaliation: employees must be protected against adverse treatment in reaction to a complaint or other action aimed at enforcing compliance with the principle of equal treatment.

Under these directives, EU member states were required to (1) ban all forms of discrimination by 2006, (2) establish judicial or administrative bodies to enforce equal treatment in the workplace, and (3) remove any caps on awards for discrimination cases (although each member state is permitted to establish its own system of remedies). The directives left it up to the member states to implement appropriate sanctions to avoid discrimination and harassment. Any EU citizen claiming to be the victim of discrimination can also file a claim in the European Court of Justice in Luxembourg. Even though the European Commission mandated that all member states have uniform laws regarding employment discrimination, each

180. Equal Treatment Directive, European Parliament and Council Directive 2002/73/EC, 2002 O.J. (L 269) (Oct. 5); Equal Treatment Framework Directive, Council Directive 2000/78/EC, 2000 O.J. (L 308) (Nov. 27); Race Equality Directive, Council Directive 2000/43/EC, 2000 O.J. (L 180) 22 (June 29).

181. Council Directive 2002/73/EC, 2002 O.J. (L 269) 15 (Oct. 5).

CONTINUED

member state implements and utilizes these directives in different ways.

In trying discrimination cases, EU member states are required to utilize a burden of proof mechanism similar to the U.S. concepts of disparate treatment and disparate impact. "Disparate treatment" is called "direct discrimination," and "disparate impact" is called "indirect discrimination" in the EU. Direct discrimination analysis ensures that the burden of proof shifts if the complainant establishes "facts [from] which it may be presumed that there has been direct or indirect evidence of discrimination." Indirect discrimination occurs "where a provision, criterion, or practice would put persons of a racial or ethnic origin at a particular disadvantage compared with other persons, unless that provision, criterion, or practice is objectively justified by a particular aim." Like U.S. courts, European courts look at percentages to determine whether a protected class has been disadvantaged by a particular employment practice.

However, the Burden of Proof Directive, which became effective in October 2001, has caused the European system of analysis to differ from the U.S. approach by shifting the burden of proof from employees to employers in cases of sex discrimination. Other European Commission directives have implemented similar rules regarding discrimination on the basis of race. In the case of a discrimination claim, once the employee presents credible evidence that would allow a presumption that discrimination has occurred, the employer must prove there has been no violation of the principle of equal treatment. This burden of proof method makes it easier for employees to prove direct discrimination in a European court than in the United States.

Japan

Article 14 of the Japanese Constitution provides that "all of the people are equal under the law and there shall be no discrimination in political, economic or social relations because of race, creed, sex, social status, or family origin."¹⁸² Despite this provision, Japanese anti-discrimination law is not very developed. Japan has no statutes prohibiting discrimination on the basis of race or national origin (most likely because Japan is generally a racially homogeneous society), and its laws regarding age, disability, and sex

182. See generally INTERNATIONAL LABOR AND EMPLOYMENT LAWS 32-50–32-52 (Timothy J. Darby & William L. Keller eds., 2007).

discrimination do not contain substantial enforcement provisions.

Laws regarding sex discrimination are the most highly developed discrimination laws in Japan. There was a surge in the number of sexual harassment claims in Japan in the 1990s. Most of these cases were tort claims resulting from physical contact or sexual assaults. One Japanese district court has held that a hostile work environment can also constitute an actionable tort because it infringes on the employee's human dignity and causes working conditions to deteriorate.

In June 1997, Japan's Equal Employment Opportunity Law of 1985 (EEOL) was drastically revised to provide more protection for women in the workplace. The 1997 amendment imposed a duty on employers to prevent sexual harassment. The EEOL also prohibits discrimination against women in employment recruitment, hiring, assignment, promotion, training, education, fringe benefits, and termination. The 1997 amendment includes sanctions, which were not present in the original law, to enforce these new provisions. In addition, when an employer violates the EEOL, the Labor Minister can publicize that fact.

Although twelve women were successful in procuring a court order upholding a \$1.6 million award against a company for systematically discriminating against them in pay and promotions, many Japanese job seekers, labor lawyers, economists, and women's rights advocates interviewed by the *New York Times* said that the law had "had little real impact, and the old patterns of consignment of women to non-career positions [had] continued unabated."¹⁸³ The World Economic Forum ranked Japan ninety-third in its 2007 Gender Gap study,¹⁸⁴ and the Minister of Labor recently came under attack after he called women "child-bearing machines."¹⁸⁵

Japan's Employment Promotion Law, which became effective in October 2007, addresses employment discrimination based on age in recruiting and hiring, and applies to old and young, as well as domestic and foreign, employees.

India

Indian anti-discrimination law has developed slowly since the implementation of the Indian Constitution in 1950. The constitution prohibits discrimination in employment on the basis of religion, race, color, caste, sex, disability, descent, place of birth, or residence.¹⁸⁶

Perhaps the greatest struggle for equal rights has involved members of the Dalit caste (formerly called "untouchables"). These people occupy India's lowest caste and are viewed as unclean by higher-caste Hindus. In an effort to end the caste system, India passed the Protection of Civil Rights Act, 1955.¹⁸⁷ One purpose of this Act was to enable Dalits to obtain jobs other than the low-paying and undesirable occupations to which they were traditionally relegated. As a result, the Indian government started an affirmative-action system for Dalits by implementing hiring quotas and special training programs in public-sector employment, state financial colleges, and legislatures.¹⁸⁸ Christian Dalits, however, are not eligible for this program, although Buddhist and Sikh Dalits maintain eligibility. Some Indian states also reserve special government jobs for Muslim Dalits.¹⁸⁹ Attempts by the Indian government to extend the affirmative-action program to the private sector have been strongly opposed by Indian industry. However, most of

India's major information technology companies have adopted the United Nations Global Compact's principles regarding the elimination of discrimination with respect to employment and occupation.¹⁹⁰

The Indian government has also started an affirmative-action program for citizens with disabilities. The Persons with Disabilities Act of 1995 mandates that 3 percent of government jobs be reserved for the disabled.¹⁹¹

The Indian government passed its first law concerning rights for women in the workplace in 1948. The law prohibited women from cleaning certain machinery in factories and granted female factory workers maternity leave for up to twelve weeks.¹⁹² Since then, other laws mandating equal pay, maternity benefits, and equal opportunity in hiring have been passed. Sexual harassment is perhaps the most recent area of gender anti-discrimination law to be developed. In 1997, the Indian Supreme Court recognized sexual harassment in the workplace as not only a personal injury to the affected woman, but also a violation of her fundamental human rights. In its ruling, the Supreme Court issued guidelines making employers responsible for both preventive and remedial measures to make the workplace safe for women.¹⁹³

There is no specific provision governing age discrimination in India. Employers are generally free to establish age limits for any job according to their requirements.

THE RESPONSIBLE MANAGER

HONORING EMPLOYEES' CIVIL RIGHTS

Managers must be diligent in preventing and correcting any unlawful discrimination either in the preemployment process or during employment. Legally astute managers recognize the value of a diverse workforce that reflects the company's range of customers, suppliers, and other stakeholders.

Management should develop a written policy that (1) clearly outlines discriminatory acts prohibited by federal, state, and local statutes; and (2) prohibits retaliation against employees who complain about discrimination. Employees should be advised that any form of discrimination is inappropriate. The policy should have an enforcement mechanism and should clearly state that violations of the policy will result in poor performance reviews or termination. Such a policy will not only curb discriminatory acts, but in the event that litigation should arise, it will also demonstrate that management diligently attempted to prevent such behavior.

The firm should also create an environment in which employees feel comfortable bringing complaints against fellow workers and supervisors. There should be at least two individuals in the company, a male and a female, to whom such complaints may be brought. Because supervisors are often the discriminators, an employee should not be required to first complain to his or her supervisor. Managers should not keep reports of harassment confidential, even if requested to do so by the employee. Each complaint should be thoroughly investigated, and, if necessary, the violator should be punished.

Although the establishment of a comprehensive policy is one way to prevent unlawful discriminatory practices, it is not sufficient in itself. Managers must also abide by the policy and comply with all federal, state, and local statutes prohibiting unlawful discrimination; supervisors should undergo training regarding such laws.¹⁹⁴ If management participates in discriminatory acts, the firm's employees will have little incentive to abide by its policy against discrimination and will hesitate to bring a claim for discriminatory treatment.

It is crucial that employers make sure that they do not retaliate against employees who have filed discrimination

claims. Although employers often perceive discrimination claims by an employee as an act of disloyalty, retaliation for these claims will make it more likely that the employer will be found liable by a jury or judge, even if the initial claim would not have supported liability.

Employers should also create nondiscriminatory policies and procedures for hiring new employees. The employer should avoid relying on word-of-mouth recruitment practices, which tend to reach a disproportionate number of persons of the same race or ethnicity as the employer's current employees, and should use media designed to reach people in both minority and nonminority communities. When advertising vacant positions, employers should use a job posting system that allows for an open and fair application process. The job advertisements themselves should not express a preference or limitation based on race, color, religion, gender, national origin, or age, unless such specifications are based on bona fide occupational qualifications.

Employers should also train employees in interviewing to ensure that interviewers ask proper questions and use objective hiring criteria. Although federal laws do not expressly prohibit preemployment inquiries concerning an applicant's race, color, national origin, sex, marital status, religion, or age, such inquiries are disfavored because they create an inference that these factors will be used as selection criteria. These inquiries may also be expressly prohibited under state law. As a general rule, recruitment personnel should ask themselves, "What information do I really need to decide whether an applicant is qualified to perform this job?"

With respect to the ADA, employers should be proactive and engage in an interactive process with employees requesting accommodation. If an employer explores every option but still cannot find a way to provide an accommodation, the employer should inform the individual and ask if he or she has any suggestions.¹⁹⁵ Employers should create a paper trail to document the actions they took to find an accommodation.

CONTINUED

194. California codified this recommendation in 2004 by requiring that all supervisors employed in companies of more than fifty employees undergo harassment training every two years. CAL. GOV'T CODE § 12950.1 (West 2007).

195. *Interactive Process Helps Employers Prevail, but Isn't Required*, CORP. COUNS. WKLY., Jan. 10, 2001, at 12.

Employers may also want to consider employment practice liability insurance (EPLI) to protect against discrimination claims. Interest in EPLI has been growing.¹⁹⁶ Although these insurance plans were expensive, did not provide broad coverage, and excluded punitive damages when they were introduced in the early 1990s, by the late 1990s more carriers had entered the market, resulting in lower prices and expanded coverage.

196. The 2003/2004 EPLI Market Survey revealed a 25 to 35 percent increase in the EPLI market, with a total of \$1.3 billion in gross premiums.

Dating and romantic relationships between employees at a company can lead to discrimination and sexual harassment claims, particularly when there is a significant power and age gap between partners. Such relationships are very perilous. If the parties have a falling-out, the subordinate may claim that the relationship was not consensual and say that he or she feared adverse employment consequences for rebuffing the manager's advances. To address this problem, IBM instituted a policy that a manager may become involved with a subordinate as long as the manager transfers to another job within or outside the company, so that he or she is not supervising or evaluating the performance of the subordinate involved.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE Can Jokes Create a Hostile Environment?

Catherine Van Order is a manager at American Eagle's hangar at the Miami International Airport. The hangar's workforce consists of eighty mechanics, including a small number of African Americans, Latinos, and white ex-strikers from Eastern Air Lines who are earning half as much as they did at their old employer. American Eagle is struggling to regain the public's confidence after two of its planes suffered fatal crashes. Although the airline is downsizing in two other southern cities, it wants to increase its business to Latin America and the Caribbean so it has hired more staff at the Miami airport. Workers are assigned heavy workloads at low pay and have to work with aging equipment in run-down facilities, leading to a great deal of tension at the Miami airport hangar.

Employees have tried to ease the tension by playing practical jokes on each other and making wisecracks. These jokes have included sexual and ethnic jokes along with comments about people's appearance, including weight, and their religion. Employees posted cartoons depicting black mechanics as

gorillas or starving Somalis on the bulletin board. When Van Order suggested to one of the mechanics that the joking was getting out of control, he told her that people were just making fun of stereotypes and that nobody was trying to be personally offensive to their coworkers.

Although no employees complained to her about the joking, Van Order issued a memo setting forth the company's policy on discrimination and harassment. Several employees then told her that the memo had affected morale; without the joking, workers seemed tense and anxious, and were less productive. Within several weeks, the joking commenced again and escalated when a poster of a black basketball player with a mop on his head and a watermelon in his hand was posted in the locker room. After this incident, Van Order spoke to several African American workers about it, but they seemed reluctant to talk. She sensed that they were quiet for fear of either losing their jobs or becoming the victim of hostile treatment by their coworkers. What should Van Order do?

INSIDE STORY

FROM WALL STREET TO MAIN STREET, WOMEN DEMAND EQUAL OPPORTUNITY

In 1973, Helen O'Bannon, who had graduated with honors from Wellesley College and received a master's degree in economics from Stanford University, applied for a job as a stockbroker at Merrill Lynch. The firm gave O'Bannon a test that included the question, "When you meet a woman, what interests you the most about her: (a) her beauty; (b) her intellect." She later learned that applicants received more points for choosing "beauty" than "intellect." When Merrill Lynch turned down her application, O'Bannon filed a class-action sex discrimination lawsuit against Merrill, which resulted in Merrill's 1976 agreement to comply with U.S. civil rights laws and to hire applicants based on their qualifications instead of their gender.¹⁹⁷

Twenty-one years later, eight women filed another class-action sex discrimination lawsuit against Merrill. The women alleged that they received lower compensation and had fewer opportunities for advancement than men. The *Cremin v. Merrill Lynch* lawsuit was settled in 1998 when the class representatives accepted a dispute resolution process that, under certain circumstances, led to arbitration. Of the 2,000 eligible women in the action, 912 filed claims against Merrill, most of which were settled, with Merrill paying more than \$100 million.¹⁹⁸

In April 2004, a panel of arbitrators found that Merrill had engaged in a "pattern and practice of discrimination" and ordered it to pay \$2.2 million to Hydie Sumner, a broker who had worked in Merrill's San Antonio, Texas office. In July 2005, another arbitration panel ruled that Merrill was required to rehire Sumner. When Sumner originally filed her claim, Merrill called it frivolous, but the firm changed its tone after the arbitration awards. In an e-mail message sent to all employees, Robert J. McCann, president of the global client business, called the discrimination Sumner was subjected to "unacceptable and offensive" and the whole affair "inexcusable."¹⁹⁹

The women at Merrill Lynch are not the only women on Wall Street who believe they have been treated unfairly by their employer. In the late 1990s, a class action was filed against Smith Barney on behalf of more than 20,000 current and former

female employees who alleged that they were subjected to a hostile work environment. Smith Barney settled this action by agreeing to allow female employees to bring their claims before a selected arbitrator.²⁰⁰ Morgan Stanley paid \$54 million in July 2004 to settle accusations that it had denied promotions and equal pay to women in the institutional securities department,²⁰¹ and in April 2007, it agreed to pay at least \$45 million to settle claims by current and former female brokers that they were discriminated against in training, promotions, and pay.²⁰²

Some women's advocates express disappointment about the lack of progress for women working on Wall Street. According to Susan Antilla, Bloomberg news financial columnist and author of *Tales from the Boom-Boom Room, Women vs. Wall Street*: "Walk through the trading floor and you won't see Penthouse centerfolds posted on computer screens anymore, but in terms of women achieving greater parity of positions and salary, the gap is just as big as ever." Women make up 87 percent of assistants, but only 19 percent of brokers and 29 percent of senior-level management.²⁰³

In 2004, a federal district court judge in California certified a class of approximately 1.6 million current and former female Wal-Mart employees in a class-action lawsuit claiming that Wal-Mart had failed to promote women to management and to pay them the same wages as similarly situated men.²⁰⁴ This certification of the largest class in U.S. history was upheld by the U.S. Court of Appeals for the Ninth Circuit in 2007.²⁰⁵

The lawyers who brought the class-action lawsuit say their goal is to pressure Wal-Mart to change the way that it behaves toward its more than 700,000 female employees. Wal-Mart stores generally did not advertise openings for managerial

trainees, and male managers frequently pinpointed men for "the management track."²⁰⁶

According to records submitted to the district court, women made up 65 percent of Wal-Mart's nonmanagement staff of approximately 1.2 million employees in 2001, but only 33 percent of its managers and 14 percent of its store managers. In addition, men at all levels were generally paid more. Stephanie Odle, an assistant store manager in Riverside, California, was surprised to learn that a male assistant manager at the same store was making approximately \$25,000 per year more than she did. When she confronted the district manager about the salary difference, he replied that the other "assistant manager has a family and two children to support."²⁰⁷ Odle is a single mother.

Like the women of Wall Street, the Wal-Mart plaintiffs assert that the Wal-Mart culture "did not take them seriously" and included "trips to strip clubs for managers and clients."²⁰⁸ A store manager told one plaintiff: "Men are here to make a career and women aren't. Retail is for housewives who just need to earn extra money."²⁰⁹

With such a large class, any settlement by Wal-Mart could cost the company billions of dollars, even if individual plaintiffs

receive small awards. The day after the class was certified, shares of Wal-Mart's stock fell 1.8 percent on the New York Stock Exchange. Wal-Mart has stated that it will fight the Ninth Circuit's decision by asking the full appellate court to order a new hearing before a fifteen-judge panel and then appeal to the U.S. Supreme Court if necessary. Wal-Mart argues that the ruling clashes with a wave of recent decisions from other federal courts. One major flaw, according to Wal-Mart, is the court's conclusion that the company may be discriminating against women by letting its store managers use subjective criteria for promotions and pay raises. Other courts have held that a class-action suit is inappropriate because such subjective decisions lead to diverse results. Wal-Mart also argues that the court discounted the company's analysis showing there was no disparity between men and women at more than 90 percent of its stores. The Ninth Circuit disagreed, finding that the plaintiffs' statistics and expert analyses, as well as declarations from 120 past and present employees, contained significant proof of a corporate policy of discrimination and supported plaintiffs' claims that female employees nationwide were subjected to a common pattern and practice of discrimination.

QUESTIONS AND CASE PROBLEMS

1. Hewlett-Packard (HP) launched a workplace diversity campaign that consisted of hanging posters entitled "Diversity Is Our Strength." Each poster depicted an HP employee above the caption "Black," "Blonde," "Old,"

"Gay," or "Hispanic." In response to the "Gay" posters, employee Richard Peterson, a self-described "devout Christian" who believes homosexual activities violate the commandments in the Bible, posted two biblical passages

on an overhead bin in his work cubicle. One stated: "If a man also lie with mankind, as he lieth with a woman, both of them have committed an abomination; they shall surely be put to death; their blood shall be put upon them." Leviticus 20:13."

Peterson's direct supervisor removed the postings after she determined that they violated HP's policy prohibiting harassment, which stated: "Any comments or conduct relating to a person's race, gender, religion, disability, age, sexual orientation, or ethnic background that fail to respect the dignity and feeling [sic] of the individual are unacceptable."

Peterson informed management that HP's diversity campaign was an initiative to "target" heterosexual and fundamentalist Christian employees by condoning homosexuality. Peterson once again posted the verses in his cubicle and stated that he would not remove them unless HP removed the "Gay" posters. Peterson was subsequently terminated for insubordination. Does Peterson have a valid claim of religious discrimination against HP? Do Peterson's gay coworkers have a claim against HP for Peterson's postings? [*Peterson v. Hewlett-Packard*, 358 F.3d 599 (9th Cir. 2004).]

2. In May 2003, Jennifer Willis, senior account manager at Coca Cola Enterprises, called her supervisor and said she was sick and unable to come to work. She also told him she was pregnant, but did not specify that she was sick because of the pregnancy. When she called in the next day, a Tuesday, to find out where she should report to work, she was told that she needed a medical release. She told her supervisor that she had a doctor's appointment on "Wednesday," which the supervisor assumed was the next day, but the appointment was actually scheduled for the following Wednesday. Willis had no further contact with her employer until Thursday of the next week when company officials arrived at her home to recover her company car. At that point, she contacted her employer and was eventually brought in for a meeting where she was informed that she had been terminated for violating the company's "No Call/No Show" policy. Under this policy, "an employee absent from work for three consecutive days without notifying the supervisor during that period will be considered to have voluntarily resigned." Willis filed a lawsuit in which she claimed that her termination was discriminatory. Does Willis have a valid claim? How should Coca Cola Enterprises respond? [*Willis v. Coca Cola Enterprises, Inc.*, 445 F.3d 413 (5th Cir. 2006).]
3. The EEOC filed a lawsuit against NEA-Alaska, a labor union that represents teachers and other public school employees, alleging that the union had created a sex-based

hostile work environment for three female employees. The female employees testified that repeated and severe instances had occurred, during which Thomas Harvey, the union's assistant executive director, shouted, used foul language, invaded their space (including an incident when he grabbed a female employee from behind), and made threatening physical gestures. NEA-Alaska responded that Harvey treated male and female employees the same way and that there was no evidence that Harvey made sexual overtures or lewd comments, that he referred to women in gender-specific terms, or that he imposed gender-specific requirements on the female employees. In other words, Harvey treated male and female employees the same way. How should NEA-Alaska respond? Who should prevail? If you were Harvey's supervisor, what would you do? [*Christopher v. National Education Association*, 422 F.3d 840 (9th Cir. 2005).]

4. Rosalie Cullen was forty-nine years old and had worked as a manager of marketing administration for Olin Corporation for over twenty-five years. She was terminated in February 1996 because, according to Olin, the company was downsizing due to an economic downturn. Cullen filed a suit against Olin under the ADEA, alleging that she was fired due to her age. She presented evidence that Doug Cahill, the president of the Winchester Division of Olin, where Cullen worked, had remarked at a meeting that some employees were "old fashioned" and that "older people have trouble with change and that they were gonna have to learn to go with the change or conform or they were going to be out." In addition, she introduced evidence that after she was fired, all of her duties were taken over by employees ranging in age from thirty-two to forty-three years old. Olin argued that Cahill was so far removed from the selection process that his comments did not motivate the decision to discharge Cullen. Cullen argued that Cahill was the person who decided that personnel cutbacks were necessary, set the parameters for the layoffs, and reviewed the vice president's personnel decisions. Did Olin violate the ADEA? [*Cullen v. Olin Corp.*, 195 F.3d 317 (7th Cir. 1999), cert. denied, 529 U.S. 1020 (2000).]
5. Amaani Lyle applied for the position of writers' assistant for *Friends*, a television show about the lives of young, sexually active adults. During her interview, she was told that one of the most important aspects of the job was taking very copious and detailed notes for the writers' meetings where story lines, jokes, and dialogue were discussed. She was also told that she must type incredibly fast. Four months after she was hired, the *Friends* producers fired Lyle because she consistently missed very important story lines and jokes during the writers' meetings and typed too slowly.

Lyle subsequently filed a claim for sexual harassment. She claimed that during the writers' meetings, the writers constantly engaged in discussions about anal and oral sex, discussed their sexual exploits both real and fantasized, commented on the sexual nature of the female actors on the show, made and displayed crude drawings of women's breasts and vaginas, pretended to masturbate, and altered the words on the scripts and other documents to create new words such as "tits" and "penis."

Warner Brothers defended on the basis that the writers' job was to create jokes, dialogue, and story lines for an adult-oriented situation comedy:

[B]ecause "Friends" deals with sexual matters, intimate body parts and risqué humor, the writers of the show are required to have frank sexual discussions and tell colorful jokes and stories (and even make expressive gestures) as part of the creative process of developing story lines, dialogue, gags, and jokes for each episode. Lyle, as a writers' assistant, would reasonably be exposed to such discussions, jokes, and gestures.

Who should prevail on Lyle's sexual harassment claim? [*Lyle v. Warner Brothers Television*, 132 P.3d 211 (Cal. 2006).]

6. Anthony Buie worked in the finishing department at Quad/Graphics. Buie's supervisors warned him about frequent absenteeism three times between March 1998 and September 1999. When providing the last warning, his supervisor gave him a written notice that continued attendance problems could result in termination. In October 1999, Buie called in sick again and told his supervisor that he had AIDS and that his absenteeism was due to the disease. This was the first time Quad/Graphics knew of Buie's condition. Several days later, Quad/Graphics told Buie not to return to work.

Several days later, Buie met with Caroline Vrabel, Quad/Graphics' employee services manager, who told him that he could apply for FMLA leave for some of the absences when he had called in sick. She further told him not to report to work until he had completed the FMLA application and his attendance issue had been resolved. Buie complied, but after he returned to work, Frank Arndorfer, vice president of finishing operations, decided that Buie's leave would be considered a disciplinary suspension for excessive absenteeism.

In November, Buie met with Vrabel and Arndorfer. Vrabel told Buie that she had excused many of his absences, but that she had calculated that he still had accumulated fourteen unexcused absences during the preceding eleven months, including six no-call, no-show absences. When

Buie met again with Vrabel and Arndorfer several days later, Arndorfer presented Buie with a last-chance agreement and offered him the choice between signing the agreement or being fired immediately. The agreement, which Buie signed, stated that he could be terminated for any violation of the employee services manual or the agreement itself. Several weeks later, Buie was terminated after a couple of confrontations with coworkers. His coworkers who were involved in the incidents were disciplined but not discharged.

Did Quad/Graphics discriminate against Buie on the basis of his disability? Does Buie have a valid claim for retaliation under the FMLA? [*Buie v. Quad/Graphics, Inc.*, 366 F.3d 496 (7th Cir. 2004).]

7. Burnett was a janitor for Habitat, a property management business. His job required him to lift heavy objects. In October 2003, Burnett told Polo, his supervisor, that he had a medical problem. Polo offered to transfer Burnett to a different location, but Burnett declined because of his "weak bladder" and the reduced access to a restroom at the other location. After he missed work for a week in December, Burnett presented Polo with a copy of a doctor's examination that showed he had a serious prostate problem. When he met with Polo to discuss his absence, Burnett said he was feeling sick and compared his symptoms to his brother-in-law's symptoms before he was diagnosed with prostate cancer. In January 2004, Burnett told another supervisor that he was going to have a prostate biopsy at the end of the month. A short time later Polo reprimanded Burnett for wasting time, and Burnett filed a union grievance.

After the biopsy, Burnett returned to work with a doctor's treatment plan that limited him from heavy lifting or strenuous activity. Burnett claimed that his supervisors ignored these restrictions, and he submitted two vacation requests. Polo denied the second request and told Burnett that the treatment plan was not important. Burnett said he was going home because he felt sick, and Polo terminated him the next day for insubordination. A week after he was terminated, Burnett was diagnosed with prostate cancer. Burnett claimed Habitat violated the FMLA by denying him leave and violated the ADA. Did Habitat violate the FMLA? The ADA? What defense will Habitat assert? Did Burnett's supervisors exercise good business judgment? Act ethically? [*Burnett v. LFW, Inc.*, 472 F.3d 471 (7th Cir. 2006).]

8. In the fall of 2001, the Metropolitan Government of Nashville and Davidson County (Metro) hired Dr. Gene Hughes as the employee relations director for the Metro School District. In May 2002, an attorney for the Metro

Legal Department contacted the Human Resources Department after Jennifer Bozeman, an attorney with Metro Legal, learned from another employee that several employees had expressed concern about specific incidents of inappropriate behavior by Hughes. Because Hughes would ordinarily be responsible for investigating sexual harassment complaints, Metro assigned Veronica Fraser, the assistant director of human resources, to investigate the complaint. Fraser contacted employees who worked with Hughes, including Vicky Crawford, a thirty-year employee, and asked them to come to her office so that she could interview them. During her interview, Crawford told the investigators that Hughes had sexually harassed her. Fraser's investigation concluded that Hughes had engaged in inappropriate and unprofessional behavior, although not to the extent of Crawford's allegations. No disciplinary action was taken against Hughes, but the investigators recommended education and training for the staff. After

the Hughes investigation was concluded, all three employees who made statements against Hughes were immediately investigated and promptly discharged. Crawford was terminated in January 2003, after being accused of embezzlement and drug use, charges that were ultimately found to be unfounded. Crawford filed a charge of retaliation with the EEOC and, after receiving her notice of right to sue, filed a lawsuit.

Crawford claimed that her actions during the internal investigation constituted both opposition to a practice made unlawful by Title VII and participation in an investigation under Title VII, within the meaning of Section 704(a) of Title VII, but her employer asserted that she was not protected by Title VII because she did not file a claim of discrimination. How will the court decide? [*Crawford v. Metropolitan Government of Nashville and Davidson County*, 211 F.3d 373 (6th Cir. 2006), cert. granted, 128 S. Ct. 1118 (2008).]

CHAPTER 14

EXECUTIVE COMPENSATION AND EMPLOYEE BENEFITS

INTRODUCTION

Compensation Excesses Lead to Corporate Reform

In 2005, Dennis Kozlowski, the former CEO of Tyco International, Ltd., was found guilty of twenty-two counts of grand larceny and conspiracy, falsifying business records, and other white-collar crimes. Among the alleged abuses, Kozlowski reportedly received 200 loans from the company's key employee loan program, borrowing \$274 million (of which \$245 million was used for homes, yachts, furniture, and domestic help); forgave \$25 million in corporate loans to himself; obtained \$29.7 million in interest-free loans to build a compound in Boca Raton, Florida, under a special relocation program; and then caused the company to forgive \$100 million in loans issued to executives pursuant to that program, including \$32.6 million of loans to himself.¹ Kozlowski and former Tyco CFO Mark Swartz were ordered to pay \$239 million in fines and restitution and are currently serving up to twenty-five years each in prison.²

Kozlowski's excesses also resulted in costly investigations and lawsuits for the company. The Tyco board of directors paid the state of New Hampshire \$5 million and settled with the Securities and Exchange Commission (SEC) for \$50 million. In 2007, Tyco agreed to pay almost \$3 billion to settle most class-action lawsuits that followed the scandal, but in June 2008, new class-action lawsuits were filed by

fifty mutual funds and the state of Michigan, and more litigation may be on the way.³

Just as the corporate scandals arising out of the compensation excesses of the late twentieth century were beginning to subside, a new brand of wrongdoing took center stage. Option backdating, a scheme whereby option grant dates are chosen after the fact to maximize the value of grants, seemed to be happening everywhere. In 2006, Jacob Alexander, the former CEO of Comverse Technology, Inc., fled the country after his practice of assigning grant dates by finding the lowest share price came to light.⁴ Allegedly, Comverse management submitted options for nonexistent employees to the firm's compensation committee for approval. These options were then aggregated in the option database under the name I. M. Fantom and later reallocated to executives including Alexander. As of June 2008, Alexander remained in Namibia.

Although some legal experts predicted that only a small number of executives would face criminal charges related to the backdating, indictments continue to issue, and several executives have been convicted or pleaded guilty to criminal charges. In January 2008, federal prosecutors announced a deal for the deferred prosecution of Andrew J. McKelvey, the former CEO of Monster Worldwide, who is suffering from terminal pancreatic cancer. As part of the deal, McKelvey issued a statement in which he accepted responsibility for

his participation in a backdating scheme pursuant to which he and others "routinely selected prices for stock option grants based on historical dates when Monster's stock price had closed at, or near, a low point resulting in grants of in-the-money stock options."⁵ In June 2008, Henry Samueli, co-founder of Broadcom Corporation, pleaded guilty to making a false statement to the SEC in connection with the commission's investigation of backdating at the company. Samueli faces up to five years' probation and more than \$12 million in penalties according to his plea agreement.⁶

Since 2002, a number of actions have been taken in reaction to the compensation excesses of the late 1990s and the early 2000s. In 2002, Congress enacted the Sarbanes-Oxley Act (SOX), which requires more timely disclosure of executive pay deals, prohibits loans to officers and directors, and requires CEOs and CFOs to return performance-based pay or profits from stock sales following restatements of financial results that involve misconduct. In 2004, the Financial Accounting Standards Board (FASB) issued rules that require companies to expense stock option awards, and Congress passed a change to the Internal Revenue Code that puts broad restrictions on deferred compensation, including stock options that are granted with an exercise price less than the fair market value of the stock on the date of grant. In 2006, the SEC adopted rules that require companies to make more comprehensive disclosure about executive compensation and require the board of directors to approve and be legally responsible for their company's proxy statement report on pay practices. Large institutional investors have also turned up the heat on executive compensation issues. The 2007 annual meeting season generated 161 shareholder proposals related to executive compensation, representing 42.9 percent of the total number of shareholder proposals on corporate governance issues.⁷

One reason that executive compensation has become such a controversial topic is that there is no consensus in the United States as to the correct amount of compensation that should be paid to an executive of a publicly traded company.

-
5. Press Release, U.S. Dept. of Justice (Jan. 23, 2007), available at <http://www.usdoj.gov/usao/nys/pressreleases/January08/mckelveydppr.pdf>.
 6. Amir Efrati, *Ex-Broadcom Officer Pleads Guilty*, WALL ST. J., June 24, 2008, at B2.
 7. Georgeson, 2007 Annual Corporate Governance Review (2007), available at <http://www.georgeson.com/usa/download/acgr/acgr2007.pdf>.

If there were such a consensus, laws could be drafted that directly or indirectly worked to ensure that the compensation payable to such an executive was within a reasonable tolerance of the acceptable amount. Instead, as will be discussed below, laws address process and disclosure, and in certain situations, they prohibit or discourage certain forms of executive compensation, rather than addressing the amount of compensation. For example, as noted above, the SOX prohibition on loans to officers and directors of publicly traded companies prevents the board of directors from making a loan of \$1 million to the CEO to enable the CEO to buy stock of the company. However, the board could pay the CEO a bonus of \$1 million in the form of company stock. The board could also grant the CEO a stock option to acquire at a later date stock of the company that has a value today of \$1 million. In both the bonus scenario and the option scenario, the CEO has no downside risk if the value of the stock declines from today's value; whereas, in the loan scenario, the CEO has some actual "skin-in-the-game" and will incur the loss in value. Why did Congress outlaw such loans? Although there is probably no one reason, a possible explanation is that Congress was concerned by the examples of Kozlowski and others who persuaded their companies to lend them large sums of money and later prevailed on their companies to forgive a significant portion of the loans. Having no standard for determining what amount of forgiveness (that is, compensation) was appropriate under the circumstances, Congress simply outlawed the practice of loans entirely. As a result, boards of directors of publicly traded companies have at least one less alternative when designing appropriate compensation arrangements for their executives.

Despite the increased regulation and disclosure, the subprime mortgage crisis has set off a new wave of scrutiny of executive compensation. Although the collapse of the mortgage industry and the ensuing credit crisis could cost the U.S. economy \$1 trillion and has hurt working families who are struggling with ballooning mortgage payments, falling real estate prices, and mortgage foreclosure, the executives of companies at the center of the crisis have collected hundreds of millions of dollars, even as they have been forced out of these companies. "The obvious question is this: How can a few executives do so well when their companies do so poorly?" asked Representative Henry Waxman, chairman of the U.S. House Committee on Oversight and

Government Reform, at a hearing on CEO pay at firms involved in the subprime mortgage crisis.⁸

CHAPTER OVERVIEW

This chapter offers a general overview of certain executive compensation and employee benefits laws. It describes state and federal securities laws governing executive compensation and stock options, the basic features of stock options and other stock ownership plans, and ERISA. We conclude with a discussion of certain international trends in executive and stock compensation. Generally omitted from this chapter is a discussion of such topics as salary, cash bonus arrangements, long-term incentive cash bonus arrangements, cash-deferred compensation arrangements, supplemental retirement benefits, insurance arrangements (such as medical insurance, life insurance, disability insurance, and errors and omissions insurance), corporate indemnification agreements, and fringe benefits such as car allowances, expense accounts, country club memberships, financial and tax planning assistance, vacations, sick leave, and holidays. The primary focus of this chapter is on executives of

publicly traded companies with an occasional reference to circumstances affecting executives of nonpublicly traded companies.

REGULATION OF EXECUTIVE COMPENSATION

In setting executive compensation, a corporation's board of directors is subject to both state and federal law.

STATE REGULATION

The board of directors of a corporation formed in the United States, either directly or through a compensation committee appointed by the board, is responsible under the applicable state corporate law for setting the compensation of corporate officers. The board's actions are governed by state agency and corporate laws. (The fiduciary obligations of officers and directors are discussed further in Chapter 21.)

In the following case, the Delaware Court of Chancery considered breach-of-fiduciary claims against Walt Disney Company directors who served on the company's compensation committee. The lawsuit arose out of the compensation committee's approval of an employment agreement with Michael Ovitz that included a severance package that wound up being worth \$140 million.

A CASE IN POINT

CASE 14.1

IN RE THE WALT DISNEY COMPANY DERIVATIVE LITIGATION

DELAWARE COURT OF CHANCERY
907 A.2d 693 (DEL. CH. 2005).

IN THE LANGUAGE OF THE COURT

FACTS In 1994, Disney lost its president and chief operating officer, Frank Wells, in a tragic helicopter crash, and its chairman, Michael Eisner, underwent quadruple bypass surgery three months later. These two events persuaded Eisner and Disney's board of directors that it was time to identify Eisner's successor, and Eisner's prime candidate was Michael Ovitz, the founder and head of Creative Artists Agency. Eisner and Irwin Russell, a Disney director and chairman of the compensation committee, negotiated the financial terms of Ovitz's employment contract.⁹ Russell recruited Graef Crystal, an executive compensation consultant, and Raymond Watson, a member of the compensation committee, to assist him in evaluating the financial terms. In a letter to Russell, Crystal expressed concern that the pay package would give Ovitz the best of both worlds—that is, low risk and high returns—but Russell did not show this letter to any board member except Eisner.

CONTINUED

9. According to Russell, he raised a concern that the compensation package would result in strong criticism because the salary was at the top level for any Disney corporate officer and significantly above that of the CEO, and the number of stock options granted was far beyond the standards applied within Disney and corporate America generally.

While Russell, Crystal, and Watson were finalizing their analysis of the financial terms, Eisner and Ovitz agreed to enter into a five-year contract pursuant to which Ovitz would receive a tranche of three million options for the first five years and a tranche of two million additional options if the contract was renewed; if the value of the options in the first tranche had not appreciated to \$50 million at the end of five years, Disney would make up the difference.¹⁰ On August 14, 1995, they signed a letter agreement that outlined the basic terms of Ovitz's employment subject to approval by Disney's compensation committee and board of directors, and Disney issued a press release the same day.

While preparing a written agreement based on the terms in the letter agreement (the OEA), Disney's in-house legal department concluded that the \$50 million guarantee should be eliminated and replaced it with (1) a reduction in the option strike price from 115 percent to 100 percent of Disney's stock price on the day of grant for the two million options that would become exercisable in the sixth and seventh year of Ovitz's employment; (2) a \$10 million severance payment if Disney did not renew Ovitz's contract; and (3) an alteration of the renewal option to provide for a five-year extension, with a \$1.25 million annual salary, the same bonus structure as the first five years of the OEA, and a grant of three million additional options. Absent defined causes, neither party could terminate the OEA without penalty. Specifically, if Disney fired Ovitz for any reason other than gross negligence or malfeasance, Ovitz would receive a nonfault payment that consisted of his remaining salary due under the terms of the OEA, \$7.5 million a year for unaccrued bonuses, the immediate vesting of his first tranche of options, and a \$10 million cash-out payment for the second tranche.

On September 26, 1995, the Disney compensation committee (which consisted of Russell, Watson, Sidney Poitier, and Ignacio Lozano) met for one hour to consider, among other items, the OEA terms. The draft OEA was not available, but a summary of the terms was distributed. The committee discussed historical comparables; the factors that Russell, Watson, and Crystal had considered in setting the size of the option grants; and the termination provisions. Although Crystal was available by phone, no one from the committee called. The committee voted unanimously to approve the OEA terms, subject to "reasonable further negotiations within the framework of the terms and conditions." The board of directors, which met immediately after the compensation committee, unanimously voted to elect Ovitz as president. The compensation committee met several weeks later to discuss stock option-related issues and, among other things, approved an award of options to Ovitz that were exercisable until the later of September 30, 2002, or twenty-four months after termination, but in no event later than October 16, 2005, in the event of a nonfault termination.

By the fall of 1996, it had become clear that Ovitz was "a poor fit with his fellow executives." Eisner asked Disney's general counsel whether the company could terminate Ovitz for cause under the OEA in order to avoid the nonfault termination payment, but the general counsel concluded that there was no cause (as defined in the OEA) to terminate Ovitz. Although the board was aware that Ovitz was going to be terminated, Eisner finalized the terms of Ovitz's nonfault termination without obtaining the approval of either the compensation committee or the board.

The plaintiffs filed a derivative action, alleging, among other things, that the Disney directors on the compensation committee breached their fiduciary duty when they approved the OEA.

ISSUE PRESENTED Did the members of the Disney compensation committee breach their fiduciary duties in connection with the hiring of Michael Ovitz?

OPINION CHANDLER, C., writing for the Delaware Court of Chancery:

CONTINUED

10. Crystal faxed a memorandum to Russell in which he estimated that the proposed contract was worth \$23.6 million per year for the first five years and \$23.9 million if the renewal option was exercised. He opined that these figures approximated Ovitz's compensation with Creative Artists Agency. Crystal subsequently revised the estimate to \$24.1 million per year if the renewal option was exercised.

As I will explain in painful detail hereafter, there are many aspects of defendants' conduct that fell significantly short of the best practices of ideal corporate governance. Recognizing the protean nature of ideal corporate governance practices, particularly over an era that has included the Enron and WorldCom debacles, and the resulting legislative focus on corporate governance, it is perhaps worth pointing out that the actions (and the failures to act) of the Disney board that gave rise to this lawsuit took place ten years ago, and that applying 21st century notions of best practices in analyzing whether those decisions were actionable would be misplaced.

... Delaware law does not—indeed, the common law cannot—hold fiduciaries liable for a failure to comply with the aspirational ideal of best practices, any more than a common-law court deciding a medical malpractice dispute can impose a standard of liability based on ideal—rather than competent or standard—medical treatment practices, lest the average medical practitioner be found inevitably derelict. . . .

....
... What follows is my judgment on whether each director of The Walt Disney Company fulfilled his or her obligation to act in good faith and with honesty of purpose under the unusual facts of this case.

....
1. Eisner

Eisner was clearly the person most heavily involved in bringing Ovitz to the Company and negotiating the OEA. . . . In that aspect, Eisner is the most culpable of the defendants. . . . On the other hand, at least as the duty of care is typically defined in the context of a business judgment (such as a decision to select and hire a corporate president), of all the defendants, he was certainly the most informed of all reasonably available material information, making him the least culpable in that regard.

This dichotomy places the Court in a somewhat awkward position. By virtue of his Machiavellian (and imperial) nature as CEO, . . . Eisner to a large extent is responsible for the failings in process that infected and handicapped the board's decisionmaking abilities. Eisner stacked his (and I intentionally write "his" as opposed to "the Company's") board of directors with friends and acquaintances who, though not necessarily beholden to him in a legal sense, were certainly more willing to accede to his wishes and support him unconditionally than truly independent directors. . . .

....
Despite all of the legitimate criticisms that may be leveled at Eisner, especially at having enthroned himself as the omnipotent and infallible monarch of his personal Magic Kingdom, I nonetheless conclude, after carefully considering and weighing all the evidence, that Eisner's actions were taken in good faith . . . and [he] did not breach his fiduciary duty of care because he was not grossly negligent.

....
2. Russell

... Russell for the most part knew what he needed to know, did for the most part what he was required to do, and . . . he was doing the best he thought he could to advance the interests of the Company by facilitating a transaction that would provide a legitimate potential successor to Eisner and provide the Company with one of the entertainment industry's most influential individuals.

3. Watson

... [P]laintiffs have not demonstrated by a preponderance of the evidence that Watson either breached his fiduciary duty of care or acted in anything other than good faith in connection with the hiring of Ovitz and the approval of the economic terms of the OEA.

4. Poitier and Lozano

... Poitier and Lozano did not intentionally disregard a duty to act, nor did they bury their heads in the sand knowing a decision had to be made. They acted in a manner that they believed was in the best interests of the corporation. Delaware law does not require (nor does it prohibit) directors to take as active a role as Russell and Watson took in connection with Ovitz's hiring. There is no question that in comparison to those two, the actions of Poitier and Lozano may appear casual or uninformed, but I conclude that they did not breach their fiduciary duties and that they acted in good faith in connection with Ovitz's hiring.

RESULT The court found, among other things, that Russell, the chairman of Disney's compensation committee, was not grossly negligent and did not act in bad faith when he negotiated with and hired Michael Ovitz; Russell and Watson, the compensation committee members who helped design the compensation package, did not breach their fiduciary duties or act in anything other than good faith; and Poitier and Lozano, the other members of the compensation committee who approved the terms of the employment agreement in a one hour meeting, also did not breach their fiduciary duties. The Delaware Supreme Court subsequently affirmed this decision.¹¹

CRITICAL THINKING QUESTIONS

1. The plaintiffs presumably were motivated to bring this lawsuit as a result of what they believed to be an excessively generous payment to Ovitz. The plaintiffs, relying on *Smith v. Van Gorkom* (Case 21.1), argued that Poitier and Lozano breached their duty of care by not spending sufficient time reviewing the terms of the OEA and by not reviewing sufficient documentation, including Crystal's correspondence with Russell and a draft of the OEA, but the court disagreed. What, if any, distinctions can you draw between the directors' actions in *Van Gorkom* and the actions of the Disney compensation committee? Should it matter whether the compensation received by Ovitz was reasonable in relation to either the services he provided to Disney or what he could have earned had he not accepted the job with Disney?
2. What actions should the Disney compensation committee have taken to minimize the risk of a derivative action like this one?

11. *In re The Walt Disney Co. Derivative Litig.*, 906 A.2d 27 (Del. 2006).

Although in recent years the corporate-governance spotlight has been largely focused on public companies, the directors of privately held corporations are held to the same standards that are applied to the directors of public corporations. For example, the U.S. District Court for the Southern District of New York held that the directors of Trace, a privately held corporation, breached their fiduciary duty to the company when they ratified the excessive compensation that the CEO had paid to himself over a five-year period. After Trace filed for bankruptcy in 1999, the Chapter 7 trustee brought an action against Marshall Cogan, the CEO, controlling shareholder, and founder of Trace, and the other board members seeking to hold them personally liable for Cogan's excessive compensation. Finding that Cogan had engaged in a series of self-dealing

transactions from 1991 to 1996 that resulted in the payment of excessive compensation to himself, the court held that the board of directors breached their fiduciary duties to Trace because the evidence did not establish that their action was a well-informed decision of a truly independent board of directors.¹² In 2005, however, the U.S. Court of Appeals for the Second Circuit dismissed claims against the defendants and remanded the case for a jury trial, in which the defendants will have a second chance to defend themselves against charges that they breached their fiduciary duties.¹³

13. *Pereira v. Farace*, 413 F.3d 330 (2d Cir. 2005), *cert. denied*, 547 U.S. 1147 (2006).

FEDERAL SECURITIES REGULATION

The two principal federal acts that regulate securities transactions and issuers are the Securities Act of 1933 (the 1933 Act) and the Securities Exchange Act of 1934 (the 1934 Act). These Acts reflect three fundamental beliefs: (1) investors should be provided with full information prior to investing, (2) corporate insiders should not be allowed to use nonpublic information concerning their companies to their own financial advantage, and (3) investors who have been injured by misconduct should receive relief even in the absence of common law fraud. Employees who receive stock pursuant to compensatory stock plans are subject to the limitations on the use of nonpublic information. (The 1933 Act and the 1934 Act are discussed further in Chapter 22.)

Consistent with the beliefs reflected in the federal securities laws, the SEC has taken the position that although it does not have the power to regulate executive compensation directly (with the important exception of compensation payable in the form of employer stock, as discussed below), it can regulate compensation indirectly by requiring companies to provide detailed information about executive compensation to their shareholders.¹⁴ This position was reflected in former SEC Chairman Richard C. Breeden's statement that "the best protection against abuses in executive compensation is a simple weapon—the cleansing power of sunlight and the power of an informed shareholder base."¹⁵ In addition to requiring disclosure, Congress has used federal tax laws to provide incentives to encourage certain types of executive compensation (such as options) and to discourage other types of executive compensation (such as excessive non-performance-based compensation and golden parachutes).

Increased Disclosure Obligations

Executive compensation disclosure requirements under the SEC rules are frequently a consideration when compensation decisions are made. As a part of the rulemaking required by the Sarbanes-Oxley Act, the SEC adopted extensive amendments to public company reports on Form 8-K in 2004 (discussed further in Chapter 22). One of the most significant changes was the requirement to report entering into, materially amending, or terminating compensation agreements

and arrangements involving executive officers and directors. This change led to an enormous increase in the number of Form 8-K filings related to executive compensation events, many of which were not material. Consequently, in 2006, as part of its overhaul of executive officer and director compensation disclosure rules, the SEC amended the Form 8-K reporting requirements again to ensure that only material executive compensation events required disclosure.

The 2006 overhaul of executive officer and director compensation disclosure rules replaced disclosure requirements that had been criticized as rigid and out of step with principles-based requirements. One of the most significant changes is the requirement that a "Compensation Discussion and Analysis" (CD&A) section be included in a company's proxy statement for its annual meeting of stockholders (or in its Annual Report on Form 10-K, if not incorporated by reference from the proxy statement). The CD&A is a narrative overview that explains the material elements of compensation for the company's named executive officers and is intended to provide the public with insight into the company's compensation policies and decision-making process. It must describe the objectives of the company's compensation program, what the compensation program is designed to reward, each element of compensation and why the company chooses to pay each element, how the company determines the amount (and, if applicable, the formula) for each element of pay, and how each compensation element and the company's decisions regarding that element fit into the company's overall compensation objectives and affect decisions regarding other elements. The rules also require the compensation committee report to state that the committee has reviewed and discussed the CD&A with management, and based on its review and discussions, the committee has recommended to the board that the CD&A be included in the company's proxy statement.

The 2006 rules also require more detailed tabular and narrative disclosure relating to total compensation, holdings of equity-related interests, and retirement and other post-employment compensation. Companies must include seven separate tables that present specific information under these three broad categories, each of which is followed by a narrative description of material factors necessary to understand the disclosures in the table. The principal disclosure vehicle for executive compensation is the Summary Compensation Table, which presents compensation data for the company's principal executive officer, the principal financial officer, and the three most highly compensated other executive officers for each of the company's last three completed fiscal years. The rules also require two tables relating to holdings of equity-related interests to provide an overall picture of the value of equity awards to executives, from grant to realization: one table discloses

14. Section 402 of the Sarbanes-Oxley Act is an exception to this general rule in that it prohibits loans to officers and directors. Sarbanes-Oxley Act of 2002, Pub. L. No. 107-204, 116 Stat. 745 (codified as amended in scattered sections of 11, 15, 18, 28, 29 U.S.C.A.).

15. Marilyn F. Johnson et al., *An Empirical Analysis of the SEC's 1992 Proxy Reforms on Executive Compensation* 4 (Research Paper No. 1679, Feb. 2001), available at <http://gsbapps.stanford.edu/researchpapers/library/RP1679.pdf>.

the outstanding equity awards held by each named executive officer at year-end, and the other discloses the value realized upon exercise or vesting of stock-based awards during the most recently completed fiscal year.

The rules also require a Pension Benefits Table, which discloses, on a plan-by-plan basis, the actuarial present value of accumulated benefits under the plan, the number of years of credited service, and the dollar amount of payments and benefits paid to each named executive officer during the fiscal year. The Nonqualified Deferred Compensation Table discloses the year-end balances, executive contributions, company contributions, earnings, and withdrawals for the year. If a company provides severance, retirement, or change-of-control benefits to a named executive officer, the company must include a narrative disclosure of the material terms of the arrangements and quantify the estimated payments for each separate triggering event.

Shareholder Proposals

The required disclosure of executive and director compensation has led to a substantial increase in shareholder proposals regarding executive compensation. (Shareholder proposals are discussed further in Chapter 20.) Institutional investors in a 2006 ISS survey cited executive compensation as their number-one concern over the next three years.¹⁶ In the 2007 proxy season, companies saw a growing number of executive compensation proposals that drew high levels of support, and at least twenty companies had compensation-related shareholder proposals that received majority support. “Say on Pay” proposals for annual shareholder advisory votes on a company’s executive pay policies and practices received particularly strong support. Mindful of the rising number of shareholder proposals, AFLAC adopted changes to its pay programs to address shareholder concerns, and Verizon Communications, Inc. became the second company to commit to putting a “Say on Pay” proposal to a shareholder vote in 2009.¹⁷ In at least one important respect, shareholders do have a “say on pay.” In July 2003, the SEC approved new New York Stock Exchange (NYSE) and Nasdaq rules requiring (with certain exceptions) shareholder approval of all stock option and other equity compensation plans.¹⁸

Compensation Committees

Executive compensation is generally set by the compensation committee of the company’s board of directors. Although oversight groups like the National Association of Corporate Directors have called for independent compensation committees since the early 1990s, the Sarbanes-Oxley Act of 2002 did not address the makeup of the compensation committee, even though it set high standards of independence for audit committees. In November 2003, however, the SEC approved governance rules for the NYSE and Nasdaq that require independent compensation committees as part of their listing standards. These governance rules, which took effect for listed companies on the earlier of the date of the 2004 annual shareholders’ meeting or October 31, 2004, require compensation committees to (1) approve and operate under a charter (NYSE only); (2) limit membership to independent directors (NYSE) or require a majority of independent directors (Nasdaq); (3) review and approve corporate goals and objectives relevant to CEO performance (NYSE); (4) approve CEO compensation based on the goals and objectives used to evaluate the CEO’s performance (NYSE) or determine CEO compensation without the CEO being present (Nasdaq); (5) determine the CEO’s long-term compensation based on the company’s performance and relative shareholder returns, the value of awards to CEOs of comparable companies, and awards given to the company’s CEO in prior years (NYSE); (6) make recommendations to the board about non-CEO compensation, incentive compensation plans, and equity-based plans (NYSE and Nasdaq); and (7) prepare an annual report on executive compensation to be included in the company’s annual meeting proxy statement or Form 10-K annual report (NYSE).

Although the NYSE and Nasdaq requirements for compensation committees do not bind directors of nonpublic companies, they signal the standards to which courts may hold directors of all companies.¹⁹

SEC Regulation of Equity Compensation Plans

Although the SEC does not have the power to regulate most forms of executive compensation directly, the SEC does have the authority to regulate compensation payable in the form of company stock.

Registration—Publicly Traded Companies In general, federal registration of shares to be issued pursuant to

19. Joseph M. Poerio, *New Bearings for Compensation Committees: Five Steps for Getting Executive Compensation Right*, J. REP.: L. & POL’Y (Bureau of Nat’l Affairs, Benefits Practice Ctr., Executive Compensation Library, Compensation, Feb. 2004).

a compensatory stock plan of a company that is publicly traded in the United States can be done relatively simply by registering the shares to be issued pursuant to the plan on SEC Form S-8. For a further discussion of the registration requirement for the issuance of stock, see Chapter 22.

Exemption from Registration—Privately Held Companies Nonpublic companies that are not registered pursuant to the 1934 Act often face a problem when instituting employee stock plans. If the company relies on Rule 504 of Regulation D issued pursuant to the 1933 Act, it can issue only \$1 million in stock in one twelve-month period. Because employee offerings are usually continuous, the issuer may face serious offering integration problems. It is seldom practical to shut down a stock plan for six months to take advantage of Regulation D's integration safe harbor. (The 1934 Act and Regulation D are discussed further in Chapter 22.)

In response to these problems, the SEC adopted Rule 701, which, subject to certain conditions and limitations, exempts offers and sales of securities made pursuant to either (1) a written compensatory benefit plan for employees, directors, general partners, trustees (if the issuer is a business trust), officers, consultants, or advisers; or (2) a written contract relating to the compensation of such persons. If the benefit plan is for consultants or advisers, they must render bona fide services not connected with (1) the offer and sale of securities in a capital-raising transaction or (2) promoting a market for the issuer's securities. Exempt compensatory benefit plans include purchase, savings, option, bonus, stock appreciation, profit-sharing, thrift-incentive, and pension plans.

Under Rule 701, if total sales (not offerings) of stock²⁰ during a twelve-month period do not exceed the greater of (1) \$1 million, (2) 15 percent of the total assets of the issuer, or (3) 15 percent of the outstanding securities of the class being offered and sold, the offerings are exempt from registration. Other than providing a copy of the benefit plan or contract under which the options or securities are awarded, there are no specific disclosure requirements under Rule 701 for sales up to

20. In measuring sales, all options granted during the period are considered part of the aggregate sales, with the sales price defined as the option exercise price as of the date of grant. Repriced options are treated as new grants; however, credit is given so that double-counting does not occur. Shares issued pursuant to restricted stock or compensatory stock purchases are calculated as of the date of sale. For deferred compensation equity plans, measurements are based on the date of an irrevocable election to defer compensation. In calculating securities for the 15 percent rules, currently exercisable or convertible options, warrants, rights, and other securities are treated as outstanding. Nat'l Ctr. for Employee Ownership, *Exemption from Securities Registration Under Rule 701* (2002), available at <http://www.nceo.org/library/rule701.html>.

► ETHICAL CONSIDERATION

Do high-ranking executives have an ethical responsibility to think about the fairness of the transaction or the impact of the sale on the buyer when they sell stock at the top of the market? How far does this responsibility extend?

\$5 million in a twelve-month period. If, during a twelve-month period, total sales to the specified class of persons above are more than \$5 million, the issuer must disclose certain additional information, such as risk factors, a summary of the material terms of the plan, and certain financial information. Rule 701 provides additional integration relief for issuers who sell both under Rule 701 and under Rules 504, 505, or 506 of Regulation D or Section 4(2) of the 1933 Act. Offerings under Rule 701 are not integrated with those under Regulation D or Section 4(2), and vice versa.

If a company has issued stock pursuant to Rule 701, employees and others holding such stock may sell it ninety days after its initial public offering without compliance with certain Rule 144 requirements.²¹ Specifically, nonaffiliates may sell the shares through a broker without regard to any of the Rule 144 requirements, and affiliates may sell the shares without complying with the holding period requirements of Rule 144(d).

Additional SEC Regulation of Equity Compensation for Certain Executives Certain executives of publicly traded companies are (1) required to file reports with the SEC of their acquisitions or disposition of company stock, (2) required to disgorge short-swing trading profits, (3) required to return certain compensation received if there is a restatement of the company's financial statements as a result of "misconduct," and (4) prohibited from receiving a loan from the company.

EQUITY COMPENSATION ARRANGEMENTS

It has been the prevailing wisdom for decades that an executive will be more motivated to perform to the best of his or her ability if the executive is a shareholder of the company. Equity compensation plans are seen as a flexible way to share ownership with employees, reward them for performance, and attract and retain a motivated staff. There is not, however, a consensus as to the most appropriate way to achieve such a result, nor is there a consensus as to what is the best balance between equity ownership and nonequity

21. Subject to any contractual lockup provisions that may have been imposed on the stock.

forms of compensation. In this section, we will explore certain forms of equity compensation, but we will not be exploring the amount of such compensation.

Although stock options gained popularity as a means of aligning the interests of executives with those of the shareholders of their companies, critics believe that options have backfired. They argue that at best, options have promoted a short-term focus, and at worst, they have created an incentive for executives to inflate company earnings and make irresponsible forecasts. In some cases, executives have even fraudulently manipulated earnings in an attempt to keep stock prices high, while they exercised their options and sold their stock at inflated prices. Gary Winnick of Global Crossing, Ltd. and Dennis Kozlowski of Tyco International were among the many executives who apparently used this *pump and dump* strategy to their personal advantage as the Internet bubble began to burst.

Studies have also found an inverse relationship between the number of options that key executives hold and the success of their corporations. Interestingly, however, studies have also shown that broad-based employee stock ownership appears to increase sales, employment, and productivity.²²

Although the media tend to focus on large stock option grants to executives, 90 percent of all options have been awarded to nonmanagerial employees, according to a National Opinion Research Center study. As a result of recent accounting rule changes that require stock options to be expensed (these rule changes are discussed in the “Historical Perspective” in this chapter), however, a majority of companies that had granted stock options broadly now offer stock options only to top management. According to a survey from Mercer Consulting, 58 percent of employers have reduced the number of employees eligible for stock option grants, and 61 percent have cut the number of shares granted.²³

As a substitute for stock options, companies have considered a number of alternatives, including restricted stock, employee stock purchase plans, stock appreciation rights, and phantom stock.

RESTRICTED STOCK PLANS

Restricted stock plans are becoming a more popular way of compensating employees. They are frequently used in the private company context where the stock is sufficiently inexpensive that the executive can afford to purchase a substantial portion of it. In the publicly traded company context,

however, generally the company’s stock is “too expensive” for the executive to purchase and hold a substantial portion. Accordingly, a publicly traded company will more often give restricted stock to the executive without payment by the executive other than the requirement for continued service for the employer, as described in the following paragraph.

The term “restricted stock” has at least two meanings. In a securities law context, it often means stock whose sale is subject to restrictions imposed by applicable securities laws. In the context of executive compensation, however, *restricted stock* usually means stock subject to vesting restrictions. For example, an employee might be given stock, or be allowed to purchase stock (sometimes at a discount from fair market value), but be required to forfeit the stock if his or her employment ends before the restrictions have been removed (e.g., when the stock vests either by the employee working for the company for a certain period of time or after certain performance goals have been met). Some plans allow the restrictions to lapse gradually (e.g., 25 percent of the shares vest at the end of the first year of employment and monthly thereafter for the next thirty-six months). Other plans provide that the restrictions do not lapse until the end of the period (e.g., all of the shares of stock vest after the employee has worked for the company for four years).

Tax Treatment of Restricted Stock

An employee who receives stock in connection with the performance of services is normally taxed at ordinary income tax rates to the extent that the stock value when received exceeds the amount paid. If an employee receives stock pursuant to a restricted stock plan, where the stock is subject to a substantial risk of forfeiture due to the restrictions placed on it, the taxable event (including the measurement of taxable income) is delayed until the restrictions lapse. (In general, a *substantial risk of forfeiture* exists if the recipient’s right to full enjoyment of the stock is conditioned upon the future performance of substantial services.) This is true even when the employee pays full value for the stock at the time of receipt.

As a result, if an employee is issued stock under a restricted stock plan that vests over a period of time, on each vesting date he or she will recognize taxable income equal to the difference (if any) between the fair market value of the stock on the vesting date and the amount paid by the employee to purchase the stock. For example, assume an employee pays \$25,000 for 10,000 shares of common stock (\$2.50 per share) and one-fourth of the stock vests after one year with the balance vesting monthly thereafter for the next three years. Assume further that at the end of the first year, the value of the stock has increased to \$4 per share. Unless the employee filed a timely Section 83(b) election within thirty days of the purchase of the stock, he or she will recognize ordinary taxable income equal to \$3,750—the value

22. Nat’l Ctr. for Employee Ownership, *Largest Study Yet Shows ESOPs Improve Performance and Employee Benefits*, available at http://nceo.org/library/esop_perf.html (last visited Sept. 2, 2008).

23. *Workers Lose Stock Options*, LRA ONLINE, Sept. 12, 2005, <http://www.laborresearch.org/print.php?id=400>.

of one-fourth of the stock (\$10,000) minus one-fourth of the purchase price (\$6,250). This income will be recognized and the tax will be due even if the stock is illiquid, making it impractical for the employee to sell the stock in order to pay the taxes. Similarly, on each monthly vesting date thereafter, the employee will recognize additional ordinary taxable income measured by the then-current value of the shares that become vested minus the amount paid for those shares. This income is treated as if it were cash wages paid by the company to the employee and is subject to income and employment tax withholding. If the stock cannot be sold to satisfy the withholding obligation, other cash resources, for example, the employee's cash salary, will have to be found.

As an alternative to recognizing taxable income on each vesting date, the employee may file an election under Section 83(b) of the Internal Revenue Code within thirty days of the initial purchase of the shares pursuant to a restricted stock plan. By filing a timely *Section 83(b) election*, the employee elects to pay tax at the time the stock is purchased in an amount equal to what would be due if the stock were not subject to vesting. If the employee pays full market value at the time the restricted shares are purchased, no tax will be due because the value of the stock on that date does not exceed the purchase price. Once the employee has made a timely Section 83(b) election, subsequent vesting of the stock will not be taxable. Instead, the employee pays tax only when the stock is ultimately sold, and any gain recognized on the sale will be a capital gain.

Filing a Section 83(b) election is almost always advantageous when the differential between the value of the stock and the purchase price of the stock on the date of sale or exercise is zero or very small because it allows the employee to defer tax beyond the vesting dates and enables all appreciation in the stock's value to qualify for capital gains treatment. If the differential is larger, however, filing a Section 83(b) election can sometimes result in payment of tax for stock that is subsequently forfeited if the employee does not meet the vesting requirements.

STOCK OPTION PLANS

Restricted stock plans are often criticized as resulting in substantial benefits for the executive notwithstanding stagnant or even falling stock prices. Stock option plans provide benefits to the executive only if the stock price rises above the stock option exercise price. Such a plan, therefore, avoids the most common criticism leveled at restricted stock plans. For growth-oriented smaller companies, stock options are an effective way to preserve cash while giving employees a share in the company's future growth. They also make sense for publicly held companies that have well-established benefit plans but want to include employees

in ownership. Options are not, however, a mechanism for existing owners to sell shares. Options may not be appropriate in the context of small, closely held companies that do not want to go public or be sold because these companies may find it difficult to create a market for the shares.

A *stock option* gives the person to whom it is granted (the *optionee*) the right to buy a certain number of shares at a fixed price for a fixed number of years, but usually no more than ten years (the *exercise period*). The price at which the optionee can exercise the options by purchasing the stock is called the *exercise price*, or the *strike price*, and is usually the market price of the stock at the time the options are granted. A company usually sets restrictions on when the options can be exercised. These restrictions, referred to as *vesting restrictions*, typically require that the optionee continue to work for the company for a minimum number of years before part or all of the options can be exercised.

In common parlance, stock options are labeled based on their treatment for federal income tax purposes. As a result, as of 2008, there are two principal kinds of stock options, each with different tax consequences: nonqualified stock options (NSOs)—also known as nonstatutory stock options—and incentive stock options (ISOs). In order to qualify as an *incentive stock option (ISO)*, a number of conditions have to be satisfied, including the following: ISOs can only be granted to employees (thus, nonemployee directors can only receive NSOs); ISOs can only become first exercisable as to \$100,000 of stock per calendar year measured at the date of grant (thus, stock options granted to executives at publicly traded companies will often be primarily NSOs); and ISOs must have an exercise price at least equal to the fair market value of the stock on the date of grant. Any options that do not meet these and other ISO requirements are called *nonqualified stock options (NSOs)*. ISOs are frequently used by privately held companies, whereas NSOs are more typically used by publicly held companies. In addition, many public companies also have employee stock purchase plans (ESPPs) that have option-like features. (ISOs and ESPP options are also known as *statutory stock options*.)

Optionees hope that the share price will go up and that they will be able to "cash in" by exercising their options at the lower exercise price and selling the stock at the higher market price. When an employee exercises his or her option, the company sells the exercised shares to the optionee, typically by simply issuing authorized but unissued shares, thereby diluting other shareholders' interests in the corporation. As a result, stock option plans generally do not provide a source of liquidity for the existing shareholders. Optionees can hold on to the stock after exercise, in the hope of higher returns, or sell the stock if there is a market or a private buyer for the stock. If the stock price falls after the

Historical

PERSPECTIVE

Stock Options

Stock options have had a long and varied existence in the United States. Depending on the circumstances prevailing at the moment, stock options may be in favor, out of favor, or somewhere in between. One of the earliest recorded examples of a U.S. corporation issuing stock options to employees involved the New England Norton Company, a manufacturer of grinding wheels, machines, and abrasives, that began to award options to its top employees in the late 1890s. Stock options did not gain general acceptance, however, until the advent of publicly traded corporations when shareholders, realizing that managers were no longer the principal owners of the corporations they managed, became concerned that the interests of nonowner managers might not be aligned with the interests of the shareholders. Stock options spread rapidly during the 1920s while the stock market was booming and, to a certain extent, after the 1929 crash, because executives could not otherwise afford to purchase stock in the companies they managed.

Stock options became somewhat more appealing to executives in 1950 when Congress passed various tax provisions that might, in limited circumstances, provide the executive with more favorable tax treatment of stock option compensation than cash compensation. By 1952, one-third of the 1,084 companies on the New York Stock Exchange were using executive stock options.

During the 1960s, Congress enacted a number of restrictions on stock options that rendered them almost useless. In 1976, Congress repealed

the favorable tax treatment for individual executive stock options, effectively taxing them in a manner similar to cash compensation. Nevertheless, two developments in the 1970s helped to lay the groundwork for the explosion of stock options that occurred in the 1980s and 1990s by changing the mind-set so that stock options could be seen as having a value in excess of their intrinsic value (that is, the excess of the value of the stock over the exercise price). First, three economists came up with a way to value publicly traded options (the Black-Scholes method). Second, in 1973, the Chicago Board of Trade opened the first public market for stockholders to trade options on the shares of public companies.

During the 1980s, Congress enacted new tax laws that created incentive stock options, once again restoring a more favorable tax treatment for some options, at least in some circumstances. Very likely, however, the existence of incentive stock options played only a small role in the enormous expansion of stock options. Much more important was the booming stock market of the 1980s and 1990s. Drawn by the promise of future stock market gains, companies soon began to offer increasingly large stock option grants to key executives instead of increasing their salaries.^a In 1987, when Charles Lazarus earned an option payoff of \$56 million, and other Toys "R" Us employees also became millionaires as a result of their options, CEOs began to realize that instead of earning a million or two from a traditional salary and bonus, they could earn millions of dollars through option grants. In 1992, the top five executives at the

1,500 largest U.S. corporations cashed in approximately \$2.4 billion of options.

Then, in 1993, changes to the tax laws prevented companies from deducting non-performance-based compensation for a senior executive that was in excess of \$1 million. Because stock options under shareholder-approved stock plans with an exercise price at fair market value or higher were treated as "performance-based compensation" that was exempt from the \$1 million deduction limit, companies had an added incentive to shift CEO pay to options.^b

During the 1990s, many U.S. corporations gradually began to extend options to a broader base of employees, although only 6 percent of large corporations came close to the high-tech companies' practice of awarding stock to most or all employees. By one estimate, even in companies that grant stock options to a broad group of employees, executives receive an average of 65 percent of the options granted.^c As of 2008, the National Center for Employee Ownership estimated that nine million employees held stock options, down from the peak in 2001, when the number was about 30 percent higher.^d

Even though the company gets an income tax deduction when employees exercise their nonqualified stock options, prior to 2006 most U.S. companies did not have to treat incentive stock options or nonqualified stock options as an expense for financial reporting purposes when the company reported its profits to shareholders.^e Although a company had to include sufficient disclosure to enable an interested user of its financial statements to

CONTINUED

calculate what the expense would have been had one been taken, the idea persisted that stock options represented a form of “stealth compensation.” With the collapse of Enron and Global Crossing, the stealth compensation aspect of stock options drew renewed criticism. Both of these corporations had issued huge option packages for their executives, who exercised these options and sold shares just before the stocks plummeted in value, leaving many other stockholders with huge losses.

By January 2006, the International Accounting Standards Board (IASB) and the Financial Accounting Standards Board required most companies using either international accounting standards or U.S. generally accepted accounting principles (GAAP) to expense stock options by calculating the value of an option, as of the date the option was granted, and expensing such amount over the appropriate service period. Although companies have some flexibility in determining the model to use to calculate the value of the option, the

model has to take into account specific factors including the expected volatility of the company's stock.^f

The decline in the popularity of stock options in the early 2000s came largely as a result of a plunging stock market for technology stocks, a general perception that the robust stock market of the prior two decades was a thing of the past, and the changes in accounting rules that required stock options to be expensed. Since a generally flat stock market would result in little or no return on stock options, executives began to favor restricted stock bonuses as their form of equity compensation rather than stock options.

Meanwhile, a number of executives who had received stock options in the late 1990s and early 2000s were coming under investigation for backdating, as discussed in the text.

a. JOSEPH BLASI ET AL., IN THE COMPANY OF OWNERS: THE TRUTH ABOUT STOCK OPTIONS 72 (2003).

b. Many companies do not seem to care about the effects of this law. For example, Archer Daniels Midland paid its chief executive a base salary of \$2.4 million in 1999, which cost the company as much as \$490,000 in deductions. In its proxy, the company noted that limiting pay to \$1 million would be “inadvisable.” David Leonhardt, *Order of Compensation Universe Reflects Pull of New Economy*, N.Y. TIMES, Apr. 2, 2000, § 3, at 1.

d. Nat'l Ctr. for Employee Ownership, *Employee Stock Options Fact Sheet*, available at <http://nceo.org/library/optionfact.html> (last accessed Sept. 2, 2008).

e. Although companies did not have to record an expense for stock options, prior to 2006, most companies were required to provide extensive information in the footnotes to their financial statements so that interested users of the financial statements could determine what charge would have been appropriate had the companies elected to expense the options.

f. Reuters News, *Update 1—Accounting Watchdog Demands Stock Option Expensing*, Feb. 19, 2004

option has been exercised, however, the optionee can lose money. If the stock price falls below the exercise price prior to the date the stock option is exercised, the optionee is not required to exercise the option and can let the unexercised option expire if the stock price is lower than the exercise price when the stock option would otherwise terminate.

Tax Treatment of Stock Options

When an NSO is exercised, the company generally is entitled to deduct the spread from its earnings. (The *spread* is the difference between the exercise price of a stock option and the fair market value of the stock at the time that the optionee exercises the option.) The spread is taxable to the optionee as ordinary income, whether or not the optionee actually sells the shares. The tax deduction the company receives is the same amount it would have been able to deduct if the company had paid the employee the same amount as a cash bonus, but by using options the company does not have to part with cash to claim the deduction.

In contrast, with ISOs, the employee does not recognize regular income at the time of exercise, and if the employee does not sell the stock until more than two years after the ISO was granted and more than one year after the ISO was exercised, the employee will recognize long-term capital gains on the entire gain upon sale of the shares. (Such a sale is called a “qualified disposition.”) The tax consequences of a “disqualified disposition” are generally not as favorable and are described below.) If the sale by the employee is pursuant to a qualified disposition, the company cannot deduct the spread or the gain in computing its taxable income. Although the difference between the exercise price of an ISO and its fair market value on the date of exercise is not subject to ordinary income tax, it is a preference adjustment that must be included by the optionee when calculating *alternative minimum tax (AMT)*. The AMT is a tax that is payable to the extent that the AMT would produce a tax that is greater than the regular income tax. For optionees who hold unexercised ISOs with a large spread, the AMT can be huge when the ISO is exercised, even if the stock

price drops precipitously after the exercise of the ISO. If this occurs, the only way for the optionee to avoid the AMT is to sell the stock acquired on the exercise of the ISO in the same calendar year that the ISO is exercised.

The "In Brief" summarizes certain key characteristics of ISOs, NSOs, and other employee stock plans.

Stock Option Backdating

In November 2005, a publicly traded company announced the resignation of three of its top executive officers following an SEC investigation into the backdating of stock option grants. Since then, the SEC has investigated more than 160 companies. As of November 2007, the SEC had brought

civil enforcement actions against seven companies and twenty-six former executives associated with fifteen companies, and according to the Department of Justice, there had been at least ten criminal filings against defendants for backdating.²⁴ Approximately 200 companies have been under federal investigation and/or have restated earnings.²⁵

	Incentive Stock Options (ISOs)	Nonqualified Stock Options (NSOs)	Section 423 Employee Stock Purchase Plans	Restricted Stock Plans
	<ul style="list-style-type: none"> For privately held companies with taxable income, a tax-sharing arrangement combined with an NSO may be superior to an ISO alone. 	<ul style="list-style-type: none"> Design flexibility allows companies to structure plans in a variety of ways to meet their equity compensation strategies. For publicly traded companies, most employees holding ISOs do not satisfy the ISO holding requirement. Accordingly, publicly traded companies recognize the same tax deduction whether the option is an ISO or an NSO. Privately held companies with taxable income may prefer NSOs over ISOs in order to ensure a tax deduction for the spread on exercise. Generally much simpler to administer and explain to optionees 	<ul style="list-style-type: none"> A “lesser of” purchase price arrangement avoids the purchase right becoming worthless. By requiring the purchase price be paid via payroll deductions and by providing for fixed exercise dates, the employer can efficiently administer an ESPP covering a substantial number of employees. 	<ul style="list-style-type: none"> Assuming there is no purchase price paid by the employee, restricted stock requires fewer shares to provide a similar level of benefit compared to stock options (because the participant retains the full value of the stock not merely the excess value over the exercise price). Design flexibility allows companies to structure plans in a variety of ways to meet equity compensation strategies.

*This chart assumes that all stock acquired pursuant to the exercise of an ISO, an NSO, or an ESPP arrangement is vested upon acquisition and that stock acquired pursuant to a restricted stock plan is unvested at acquisition.

Source: From National Center for Employee Ownership, <http://nceo.org>. Used and substantially modified for this book by permission.

Stock options are typically granted “at the money”—that is, with an exercise price that equals the current price of the stock at the time of grant. The date of the grant may have a material effect on its value to the recipient, especially when the company’s stock price is volatile. *option backdating* refers to the intentional setting of a grant date that precedes the actual date of the corporate action that effected the grant, in order to achieve a lower option exercise price and hence a higher value to the recipient. Backdating results in an option already being “in the money” at the time of the grant.

Backdating can be accomplished either at the time of the grant, by arbitrarily selecting an earlier date when the stock’s price was lower, or after the grant has been made, by retroactively changing the grant date. Backdating is not always illegal. However, if the backdating occurs without disclosure, then the recipient of the stock options receives an increase in compensation at the expense of other shareholders when he or she exercises his or her options to purchase stock. Undisclosed backdating of stock options violates securities laws, plan rules, accounting rules, and tax laws,

and can subject companies and their executives to civil and criminal penalties.

Most government investigations (other than tax investigations) have centered on backdating of grants to executive officers, presumably because information relating to executive grants is publicly disclosed in proxy statements and can easily be compared to stock price history to determine the existence of suspicious patterns. Many of the investigations also center on stock option grants made prior to August 29, 2002, because after that date, executive officers were required to file forms with the SEC disclosing stock option grants within two business days.

Although the investigations have focused on undisclosed backdating of stock options, the timing of option grants can also be manipulated to coincide with public announcements by the issuing company. *Spring-loading* occurs when stock options are issued in advance of a positive public announcement that the issuing company believes will drive up the market value of its stock. *Bullet-dodging*, on the other hand, occurs when stock options are issued after a negative public announcement that the issuing company believes may temporarily reduce the market value of the stock.

Securities Laws Publicly traded companies are required to disclose executive officers' compensation in their proxy statements. If a company disclosed that stock options were granted "at the money," but in fact the options were granted on a date when the fair market value of the underlying stock would have resulted in the options being "in the money," the disclosure may have been inaccurate.

In addition, Section 16 of the Securities Exchange Act of 1934 requires executive officers to report the grants of stock options on forms they file with the SEC. Inaccurate reporting of a stock option grant date could be alleged to be a violation of Section 16.

When it has suspected possible irregularities, the SEC has investigated and exercised its broad array of enforcement powers. In December 2007, the SEC announced a record \$468 million settlement in its options backdating case against William McGuire, former chairman and CEO of UnitedHealth Group, Inc., the nation's largest managed-care firm. If approved by a court, the settlement will require McGuire to pay a \$7 million civil penalty to the SEC and to pay \$30 million and return three million shares of stock to settle the options for a class-action law suit. In addition, he will be required to reimburse UnitedHealth for all incentive and equity-based compensation that he received from 2003 through 2006. This repayment represents the first SEC-sanctioned use of the "clawback" provision of the Sarbanes-Oxley Act of 2002, which is aimed at requiring executives to disgorge

stock profits and bonuses that they earned while misleading investors.²⁶

Plan Rules Many stock option plans require that stock options be granted with an exercise price no lower than fair market value or a specified percentage thereof (generally 85 percent) on the date of grant. If an improperly dated option grant results in an exercise price lower than that permitted by the plan, the grant might violate the terms of the plan unless it was characterized as a grant outside of the plan or as a de facto amendment of the plan, either of which could violate the rules of the stock exchange upon which the stock is listed.

Accounting Rules Until 2006, there was no charge to earnings for GAAP purposes for most companies if the exercise price of a stock option was at least equal to the fair market value of the stock on the grant date. However, if the exercise price was lower than the fair market value of the stock on the date of grant, the company was required to record compensation expense equal to the difference between the exercise price and the fair market value at the date of grant. As a result, the improper dating of options may require a company to restate its financial statements for prior years to reflect additional compensation expense. Because compensation expense is recorded over the vesting period of the option (generally four years), a single occurrence of improper dating could result in the restatement of several years of financial statements. In addition, irregularities in option grant practices could reflect material weaknesses in internal controls. Exhibit 14.1 lists companies with some of the largest financial statement restatements resulting from improper option backdating.

Tax Laws As noted above, an incentive stock option must have an exercise price at least equal to the fair market value of the stock on the date of grant. If, as a result of backdating, an option intended to be an ISO fails to meet this requirement, the option will be taxed as if it were a nonqualified stock option. For many employees, this consequence had little significance because they regularly exercised their options and simultaneously sold the stock so acquired. However, the company often failed to withhold required income and employment taxes. In addition, the American Jobs Creation Act of 2004 added Section 409A of the Internal Revenue Code, discussed below. Section 409A introduced the possibility of additional taxes for discounted options that vested

after December 31, 2004, were exercised after December 31, 2005, and either were not “cured” of the discount element prior to being exercised or were not otherwise brought into compliance with Section 409A prior to being exercised.

Civil and Criminal Liability In July 2008, the California Public Employees’ Retirement System (CalPERS) announced a proposed \$895 million settlement of its class-action lawsuit against UnitedHealth Group over the company’s stock option grant practices—the largest option backdating recovery to date in a civil class-action lawsuit.²⁷ CalPERS sued UnitedHealth in 2006 after news reports that UnitedHealth had allowed executives to set their stock purchase dates when share values were low, thereby enabling them to sell later when the price was high. The proposed settlement also included a process for election of a shareholder-nominated director, enhanced standards for director independence, a mandated holding period for option shares held by executives, shareholder approval of option repricing, and a requirement that incentive compensation take into consideration UnitedHealth’s performance relative to its peer group.²⁸ A Department of Justice criminal probe, an SEC investigation of the firm, and other shareholder class-action lawsuits are still pending.²⁹

29. Bickley & Shorter, *supra* note 24, at 3.

The first criminal case involving stock option backdating to go to trial was that of Gregory Reyes, former CEO of Brocade Communications Systems, a supplier of systems involved in the storage of data sent over the Internet. Unlike most Internet companies, when Brocade went public in 1999, it appeared to be profitable, reporting earnings of \$67.9 million for fiscal year 2000. When the option backdating was revealed and the company was forced to restate its earnings to take into account the expenses it should have recorded, that “profit” turned into a loss of \$951 million.³⁰ In August 2007, Reyes was convicted of ten felonies, sentenced to twenty-one months in prison, and fined \$15 million.

In December 2007, Stephanie Jensen became the first human resources executive to be convicted of a crime in a backdating scheme. Prosecutors based their case on testimony and evidence showing that the former Brocade HR director supervised her staff as they created records relating to option grants and meetings of a special compensation committee (made up only of Reyes) that never actually occurred. Jensen was sentenced to four months in prison, six months in a halfway house, and a year of supervised release, in addition to a \$1.25 million fine.

Other Stock Option Litigation

Stock options have become a key component of alleged damages in wrongful-termination lawsuits. For example, in *Scully v. US WATS*, the U.S. Court of Appeals for the Third Circuit found that US WATS had wrongfully deprived Mark Scully of his stock options. US WATS had hired Scully in May 1995, as president and chief operations officer, for a two-year period to implement a financial turnaround of the company. As an inducement to remain the full two years, the company granted him an option to purchase 850,000 shares of stock that would vest over the same period. The plan provided that all options would terminate upon termination of employment. Despite Scully’s apparent success and even though the company’s owner assured him that his employment would continue until May 1997, Scully was terminated without warning on December 30, 1996, effective immediately. When Scully attempted to exercise his option to purchase the 600,000 shares that had vested, US WATS refused to honor the option, claiming that the option had automatically expired when he was fired. Noting that the district court had found that the “real reason for the defendants’ actions, or at least a principal reason,” was that US WATS had granted more stock options than it could fulfill and would have to report this to the SEC unless it could eliminate some of the options before December 31, 1996, the

30. Floyd Norris, *U.S. Options Brought Riches and Now Big Trouble*, N.Y. TIMES, Jul. 25, 2006, at C1.

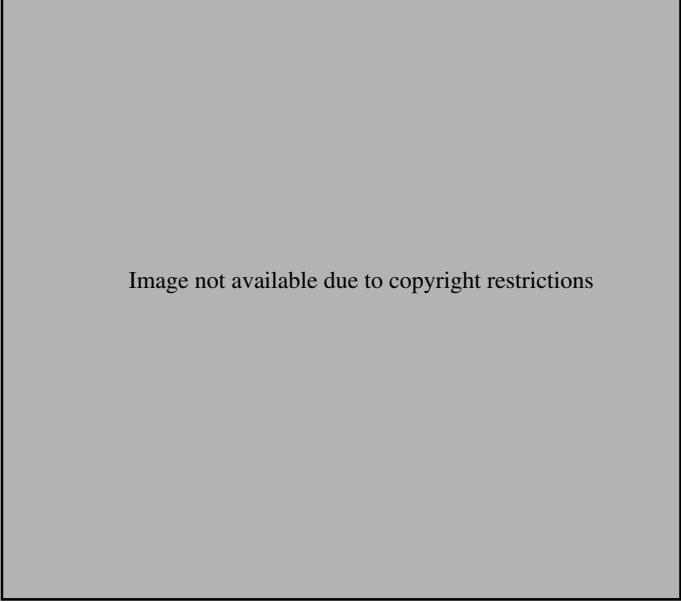

Image not available due to copyright restrictions

Third Circuit upheld the district court's award of \$531,250, which represented the value of Scully's stock options.³¹

In *Benard v. Netegrity*,³² however, a U.S. district court in New York dismissed a claim that Netegrity had wrongfully discharged Benard to prevent his stock options from vesting. The court found that Netegrity had not promised Benard any fixed term of employment and that there was no requirement of "good faith in an at-will employment relationship."

Suits for stock option compensation often include allegations of discrimination and can result in much higher awards than the salary claims that are typically awarded in such cases. In *Greene v. Safeway Stores, Inc.*,³³ the U.S. Court of Appeals for the Tenth Circuit awarded Robert Greene the \$4.4 million difference between the value of his stock options at the time he was forced to exercise them, because his employment had been terminated in violation of the Age Discrimination in Employment Act, and their value at the time he would otherwise have exercised them.

Clawback provisions, which give an employer the right to recoup some or all of an employee's stock option gain if he or she goes to work for a competitor within a certain period of time following exercise of the option, are also a significant source of litigation. The outcome may vary depending on which state law governs. For example, in *International Business Machines Corp. v. Bajorek*,³⁴ Dr. Bajorek's stock option agreements required that, upon exercise, he certify that he was in compliance with a cancellation clause that

prohibited him from working for a competitor; if he violated that clause during the six-month period after exercise, he would have to pay back any profits from the options to IBM. The stock option agreements provided that all disputes were to be resolved according to the law of New York. Bajorek exercised stock options that were worth more than \$900,000 at the time of exercise, but upon leaving IBM, he went to work full-time with Komag, an IBM competitor. IBM then notified him that his stock options were canceled. Bajorek, a resident of California, sued IBM in California, seeking a declaratory judgment that he was in compliance with his agreements and that IBM was not entitled to cancel his stock options. IBM sued Bajorek in New York for breach of contract on the theory that he had breached his promise not to go to work for a competitor for six months. The New York case was transferred to California and consolidated with the California case. The U.S. District Court for the Northern District of California accepted Bajorek's argument that application of New York law would violate California public policy against enforcing postemployment covenants not to compete except in connection with the sale of a business, and it held that the clawback provision in the stock option agreements was void under California law. On appeal, however, the U.S. Court of Appeals for the Ninth Circuit held that New York law governed the stock option agreements and that the clawback provision was enforceable under New York law. As a result, the court vacated the district court's judgment on the pleadings in favor of Bajorek and remanded the action for adjudication of IBM's suit for damages for breach of contract under New York law. The Ninth Circuit reasoned that the clawback provision did not violate California public policy, noting that it had previously held that California law permitted restrictions on competition as long as they were limited and left a substantial portion of the market available to the employee—the so-called *narrow restraint doctrine*. In 2008, however, the California Supreme Court held that the narrow restraint doctrine articulated by the Ninth Circuit in *Bajorek* was a misapplication of California law, thus implying that the clawback provision in the *Bajorek* case would not be enforceable in California.³⁵

EMPLOYEE STOCK PURCHASE PLANS

Stock options granted under an *employee stock purchase plan (ESPP)*, or a *Section 423 plan*, also receive special treatment under the Internal Revenue Code. By law, ESPPs must be broad based. Employers usually use ESPPs as a way for rank-and-file employees to share in the growth of

31. 238 F.3d 497 (3d Cir. 2001).

32. 2000 WL 1760796 (S.D.N.Y. 2000).

33. 210 F.3d 1237 (10th Cir. 2000).

34. 191 F.3d 1033 (9th Cir. 1999).

35. Edwards v. Arthur Andersen LLP, 2008 WL 3083156 (Cal. Aug. 7, 2008).

the company by purchasing stock, usually by way of payroll deductions. The discount from the fair market value of stock purchased via an ESPP that satisfies Internal Revenue Code Section 423 is deferred until the employee sells it. If the sale of the stock occurs more than two years after the option was granted and more than one year after the stock was purchased pursuant to such option, the sale is a *qualified disposition*. All other sales result in a *disqualified disposition*. If the employee has a qualified disposition, the employee generally recognizes ordinary income in an amount equal to the lesser of the value of the stock on the grant date over the purchase price determined on the grant date or the actual gain at the time of sale. All additional gain is taxed as long-term capital gain. If the employee has a disqualified disposition, the employee generally recognizes ordinary income equal to the excess of the value of the stock on the date of purchase over the purchase price. The difference between such value on the date of purchase and the value on the date of sale is generally taxed as capital gain or loss and will be short term or long term depending on the holding period from the date of purchase. If the sale results in a qualified disposition, the employer may not take a tax deduction. If the sale results in a disqualified disposition, the employer is entitled to a deduction equal to the ordinary income recognized by the employee on the sale.

The principal requirements of an ESPP are that (1) the plan must include most groups of employees (excluding, if the company chooses, relatively new hires and part-time or seasonal employees); (2) the plan must be implemented with shareholder approval; and (3) the right to purchase stock under the plan must be nontransferable. The determination of the option exercise price, the payment provisions, and all other provisions must be uniform for all employees. The only exceptions are that the ESPP may limit the maximum amount of options that can be exercised under the plan, and it may limit the amount of options that all employees may be granted to a specified relationship to total compensation, or to the base or regular rate of compensation.

To receive favorable tax treatment, an employee can own no more than 5 percent of the voting power of the employer or 5 percent of the value of all shares of the employer's stock. The ESPP must also provide that no employee can accrue the right at any time to purchase more than \$25,000 of stock per calendar year, valued at the fair market value of such stock (determined at the time of the grant). In addition, the exercise price of the options must be discounted by no more than 15 percent of the stock's fair market value at the time the option is granted, or an amount that under the option's terms cannot be more than 15 percent of the stock's fair market value at the time the option is exercised. The maximum allowable option exercise is five years from

the date of grant for an option that contains an exercise price at least 85 percent of the fair market value of the company's stock determined on the date of exercise. If the option exercise price is determined in any other manner, then the option must be exercised within twenty-seven months from the date of grant.

If the terms of an offering under a purchase plan do not meet the Section 423 requirements, all options granted under that offering will be treated as not having been granted under a Section 423 ESPP. Failure to meet the requirements results in the options being taxed upon exercise like non-qualified stock options, as discussed above.

Like stock options, ESPPs must be expensed under FAS 123R. As a result, 8 percent of public companies surveyed by Deloitte & Touche LLC in a 2005 survey stated that they planned to eliminate their ESPPs. Another 51 percent said that they would reduce stock purchase discounts and/or eliminate or shorten look-back periods, which provide employees with higher discounts in a rising market. Thirty percent of the 340 firms participating in the survey said they would conform to a safe harbor, which limits discounts to 5 percent instead of the 15 percent discount discussed above, in order to avoid expense recognition.³⁶

RESTRICTED STOCK UNITS AND STOCK APPRECIATION RIGHTS

A *restricted stock unit (RSU)* is a promise to pay a bonus in the future in the form of a share of the company's stock. (If the company will be paying the bonus in cash in an amount equal to the value of a share of company stock, the award is more commonly referred to as *phantom stock*.) An RSU is usually subject to vesting conditions so that it is not paid unless the vesting conditions are satisfied. Restricted stock units (and phantom stock plans) are not tax qualified, so they may be subject to Section 409A, as discussed below. Accordingly, they will usually be drafted to comply with the provisions of Section 409A to avoid taxation under Section 409A rules. Assuming compliance with Section 409A, the employee recognizes ordinary income when the stock (cash in the case of phantom stock) is received. On a subsequent sale of the stock received in connection with an RSU, the employee will generally recognize capital gain or loss (with the amount of ordinary income as the basis). Such gain or loss will be short term or long term depending on the holding period from the date the income was recognized.

A *stock appreciation right (SAR)* is a promise by the employer to pay the employee an amount equal to any increase

36. *Rank-and-File Employees to Feel Brunt of Options Cutbacks, ESPPs Losing Steam Says Deloitte Survey*, PR NEWSWIRE, July 12, 2005.

in the value of a share of company stock over a fixed value (often called the strike price). A SAR can be paid either in cash (a *cash-settled SAR*) or in company stock (a *stock-settled SAR*). A SAR is usually subject to vesting conditions so that it cannot be exercised unless the conditions are satisfied. SARs often can be exercised any time after they vest, subject to various termination events such as termination of employment or the expiration of a fixed term. In general, a SAR with a strike price at least equal to the value of the stock on the date the SAR is granted is exempt from the application of Section 409A. Accordingly, a SAR either will have a strike price that is at least equal to the value of the stock on the date the SAR is granted or will otherwise comply with the provisions of Section 409A to avoid taxation under the Section 409A rules. Assuming the SAR is exempt from Section 409A or complies with Section 409A, the employee recognizes ordinary income when the stock (in the case of a stock-settled SAR) or cash (in the case of a cash-settled SAR) is received. On a subsequent sale of the stock (in the case of a stock-settled SAR), the employee will generally recognize capital gain or loss (with the amount of ordinary income as the basis). Such gain or loss will be short term or long term depending on the holding period from the date the income was recognized.

EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

For several decades before 1974, the number of retirement plans, the number of employees covered by those plans, and the annual benefits paid to retirees from these plans grew tremendously. Despite these increases, many employees who expected to receive pension payments upon retirement received either no benefits or far lower benefits than they had anticipated. Plan officials made ill-advised investments, employees quit or were discharged with few or no vested benefits, or the employer terminated an underfunded plan with insufficient assets to cover its obligations. To help remedy these problems, Congress enacted the Employee Retirement Income Security Act of 1974 (ERISA).³⁷

COVERAGE

With few exceptions, ERISA applies to most retirement plans (referred to as *pension plans*), and to many other types of employee benefit plans (referred to as

“welfare benefit plans”), established by employers. With regard to pension plans, ERISA (1) establishes minimum funding requirements and participation and vesting standards; (2) imposes fiduciary obligations on pension plan administrators; (3) requires detailed disclosure and reporting of certain pension plan information; (4) imposes substantial restrictions on the investment of pension plan assets; and (5) calls for pension plan administrators to provide annual, audited financial statements to the government and participants. An employer must also maintain records of each employee’s years of service and vesting percentage.

PENSION PLANS

In a *defined benefit pension plan*, the employer guarantees that the participant will receive an annual benefit for life following retirement (or the actuarial equivalent of such benefit), based on the formulas in the plan, regardless of the total contributions made to the plan or the plan’s investment performance. Thus, the employer bears the economic risk of poor investment performance (and enjoys the benefits of superior financial performance). The employer is required to fund the defined benefit pension plan on an annual basis based on reasonable actuarial assumptions. In contrast, in a *defined contribution pension plan*, the employer makes no guarantee as to any particular benefit on retirement. Instead, the retirement benefit is whatever can be funded by the balance in the participant’s account at retirement. Thus, the participant bears the economic risk of poor investment performance (and enjoys the benefits of superior investment performance). The employer’s obligation to make contributions to a defined contribution pension plan depends on the terms of the plan. Some defined contribution pension plans provide for a fixed percentage of the participant’s compensation. Other plans are totally discretionary with the employer on a year-by-year basis.

A *401(k) plan* is a defined contribution pension plan funded with contributions by the participants or a combination of participant and employer contributions. Both 401(k) plans and *SIMPLE plans* (plans for employers with fewer than one hundred employees that are similar to 401(k) plans but have stricter rules and simpler administration) allow employees to defer a portion of their salaries on a pretax basis into an investment fund set up by the company. By law, participation in 401(k) plans cannot be too heavily weighted in favor of higher compensated employees, so companies generally offer a partial match to encourage broad participation in these voluntary plans. The match can be in cash or any investment vehicle the company chooses, including

37. 29 U.S.C. §§ 1001–1461.

company stock. Before 401(k) plans were created in 1980, traditional defined benefit plans had 30 million active participants. By 2005, however, that figure had shrunk to 21 million, while 401(k) plans had grown to 47 million active participants. According to the latest available data, 90 percent of 401(k) plans are the only retirement plan offered by their sponsors, and 59 percent of these stand-alone plans have been created since 1995.³⁸

An *employee stock ownership plan (ESOP)* can provide numerous tax and other benefits for employees, the company, and shareholders. ESOPs are tax-qualified, however, so they must meet many coverage, nondiscrimination, distribution, and other Internal Revenue Code requirements. Among other things, ESOPs must not discriminate in favor of highly compensated employees, and the Internal Revenue Code's distribution rules require the employer to repurchase the stock after an employee terminates employment at the election of the employee (if a market does not otherwise exist). An ESOP's assets must also be invested primarily in stock of the sponsoring employer, and an ESOP is the only plan that is allowed to borrow funds on the credit of the sponsoring company to acquire employer stock to hold as a plan asset in the ESOP trust.

ERISA provides that officers and trustees of a pension plan (including both defined benefit pension plans and defined contribution pension plans) are fiduciaries, required to act solely in the interests of the plan's participants and beneficiaries in providing benefits and defraying expenses.³⁹ ERISA expressly requires private pension plans to use the "prudent person" investment standard. This rule requires trustees to employ "the care, skill, prudence and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims."⁴⁰

In *Hughes Aircraft Co. v. Jacobson*,⁴¹ Hughes had provided a defined benefit plan for employees to which both the company and employees made contributions. In 1987, when the plan had surplus assets of almost \$1 billion, Hughes stopped making contributions to it. In 1989, Hughes amended the plan to include an early retirement program with additional benefits to certain eligible employees. Two

years later, the company amended the plan again to provide that new participants could not contribute to the plan and would receive fewer benefits. A class of retirees sued, claiming that Hughes had violated ERISA by amending the plan.

The U.S. Supreme Court rejected the retirees' claim. The Court explained that a defined benefit plan consists of a general pool of assets rather than individual dedicated accounts. Although employees can contribute to the plan, the employer assumes the entire investment risk. The members of the plan have a right to their accrued benefits but not to any particular asset that is part of the plan's general asset pool. As a result, the plan's performance does not affect their statutory entitlement. The Court stated that "[s]ince a decline in the value of a plan's assets does not alter accrued benefits, members similarly have no entitlement to share in a plan's surplus—even if it is partially attributable to the investment growth of their contributions."⁴² The Court also rejected the claims that Hughes had violated its fiduciary duties, finding that ERISA's fiduciary provisions did not apply to the amendments.

In *Bins v. Exxon Co. U.S.A.*,⁴³ the U.S. Court of Appeals for the Ninth Circuit addressed whether an employer considering a specific proposal to alter employee benefits, presented by managers empowered to implement the changes, has a fiduciary duty to disclose the proposed modification to the potentially affected employees. Ernest Bins, who had worked for Exxon for fifteen years, heard rumors in the months before his retirement that the company was considering offering a lump-sum retirement incentive under the employee benefit plan covered by ERISA. In response to his inquiries, a benefits counselor and human resources adviser told Bins that they knew nothing about whether the rumor was true. Less than two weeks after Bins retired, Exxon publicly announced the very retirement incentive about which he had inquired. Bins sued, claiming that the company had breached its duties as an ERISA fiduciary in not disclosing the potential change in ERISA benefits to all employees who might be affected. The appeals court agreed, ruling that an employer "seriously considering" a proposal to implement a change in ERISA benefits must disclose information about the proposal to all plan participants or beneficiaries to whom the employer knows, or has reason to know, the information is material. An employer "seriously considers" a proposal when (1) a specific proposal (2) is being discussed for purposes of implementation (3) by senior management

with authority to implement the change. The U.S. appellate courts are split on the issue of whether an ERISA fiduciary has an affirmative duty to disclose proposed changes in benefits in the absence of employee inquiries.

In *Massachusetts Mutual Life Insurance Co. v. Russell*,⁴⁴ the U.S. Supreme Court held that ERISA Section 502(a)

(2) provides remedies only for entire defined benefit pension plans, not for individual members of those plans. In the following case, the U.S. Supreme Court considered whether the *Russell* decision precluded a Section 502(a)(2) action by a participant in a defined contribution pension plan.

A CASE IN POINT

CASE 14.2

LA RUE V. DEWOLFF, BOBERG & ASSOCIATES, INC

SUPREME COURT OF
THE UNITED STATES
127 S. Ct. 2738 (2007).

SUMMARY

FACTS James LaRue had an account in a 401(k) retirement savings plan that was administered by his employer, DeWolff, Boberg & Associates (DeWolff). The plan permitted participants to direct the investment of their contributions in accordance with specified procedures and requirements. In 2001 and 2002, LaRue directed DeWolff to make certain changes to the investments in his individual 401(k) plan account, but DeWolff failed to carry out these instructions. In 2004, LaRue filed a lawsuit against DeWolff, claiming that DeWolff's failure to carry out his instructions depleted his interest in the plan by approximately \$150,000 and amounted to a breach of fiduciary duty under ERISA. His complaint sought "make-whole" or other equitable relief as allowed by Section 502(a)(3) of ERISA, as well as "such other and further relief as the court deems just and proper."

DeWolff filed a motion for judgment on the pleadings, asserting that the complaint was a claim for monetary relief that is not recoverable under Section 502(a)(3). LaRue responded that he "d[id] not wish for the court to award him any money, but . . . simply want[ed] the plan to properly reflect that which would be his interest in the plan, but for the breach of fiduciary duty." The district court concluded that LaRue was seeking damages rather than equitable relief and granted DeWolff's motion for judgment on the pleadings. Relying on *Massachusetts Mutual Life Insurance Co. v. Russell*,⁴⁵ the U.S. Court of Appeals for the Fourth Circuit held that ERISA Section 502(a)(2) provides remedies only for entire plans, not for individuals. It affirmed the lower court's decision, and LaRue appealed.

ISSUE PRESENTED Does ERISA Section 502(a)(2) allow a participant in a defined contribution pension plan to sue a fiduciary whose alleged misconduct impaired the value of plan assets in the participant's individual account?

SUMMARY OF OPINION The U.S. Supreme Court noted that while Section 502(a)(2) does not provide a remedy for individual injuries distinct from plan injuries, it does authorize recovery for fiduciary breaches that impair the value of plan assets in a participant's individual account. Section 502(a)(2) provides for suits to enforce the liability-creating provisions of Section 409 of the Act, which imposes fiduciary duties on plan administrators relating to the proper management, administration, and investment of plan assets in order to ensure that the benefits authorized by the plan are ultimately paid to plan participants.

The misconduct alleged in *Russell* fell outside the fiduciary duties imposed by Section 409A. Russell received all of the benefits to which she was contractually entitled, but sought consequential damages arising from a delay in the processing of her claim. The Court's emphasis on protecting the "entire plan" reflected the fact that the plan in which Russell was a participant, like most pension plans at that time, was a defined benefit plan. Misconduct by the administrator of a defined benefit pension plan will not affect an individual participant's entitlement to benefits unless it

CONTINUED

45. *Id.*

creates or enhances the risk of default by the entire plan. Noting that LaRue had invested in a 401(k), which is a defined contribution pension plan, the Court stated:

For defined contribution plans, . . . fiduciary misconduct need not threaten the solvency of the entire plan to reduce benefits below the amount that participants would otherwise receive. Whether a fiduciary breach diminishes plan assets payable to all participants and beneficiaries, or only to persons tied to particular individual accounts, it creates the kind of harms that concerned the draftsmen of §409. Consequently, our references to the "entire plan" in *Russell*, which accurately reflect the operation of §409 in the defined benefit context, are beside the point in the defined contribution context.

RESULT The Court held that although Section 502(a)(2) does not provide a remedy for individual injuries distinct from plan injuries, it does authorize recovery for fiduciary breaches that impair the value of plan assets in a participant's individual 401(k) account. The Court vacated the judgment of the U.S. Court of Appeals for the Fourth Circuit and remanded the case for further proceedings consistent with its opinion.

Judicial Review of Benefit Determinations

Twenty years ago, in *Firestone Tire & Rubber Co. v. Bruch*,⁴⁶ the U.S. Supreme Court established the standard for judicial review of benefit determinations by plan administrators or other fiduciaries under ERISA. The Court held that principles of trust law made a deferential standard of review appropriate when an ERISA fiduciary exercised discretionary powers. As a result, if a plan gives the administrator authority to determine eligibility for benefits or interpret the plan, a court will not overturn an

46. 489 U.S. 101 (1989).

administrator's decision unless there is an abuse of discretion. However, a court will review an administrator's decision without deference if the plan is silent or does not give the administrator discretionary authority to determine eligibility.

The *Firestone* decision also stated that if a benefit plan gives discretion to an administrator operating under a conflict of interest, the conflict must be weighed as a factor in determining whether there is an abuse of discretion. In the following case, the U.S. Supreme Court considered whether employers and insurers who both administer benefit claims and fund the benefits in question are operating under a conflict of interest.

A CASE IN POINT

CASE 14.3

METROPOLITAN LIFE INSURANCE Co. v. GLENN

SUPREME COURT OF THE
UNITED STATES
128 S. Ct. 2343 (2008).

IN THE LANGUAGE OF THE COURT

FACTS Metropolitan Life Insurance (MetLife) is an administrator and the insurer of Sears, Roebuck & Co.'s long-term ERISA disability insurance plan. The plan gives MetLife, as administrator, the discretionary authority to determine the validity of employees' benefits claims and provides that MetLife, as insurer, will pay the claims.

After Wanda Glenn, a Sears employee, was diagnosed with severe dilated cardiomyopathy, a heart condition whose symptoms include fatigue and shortness of breath, she applied for disability benefits under her disability insurance plan in June 2000. MetLife concluded that she could not "perform the material duties of [her] own job" and therefore met the plan's standard for an initial twenty-four months of benefits. MetLife also referred Glenn to a law firm to assist her in applying for Social Security disability benefits, some of which MetLife would be entitled to receive as an offset to her plan benefits. In April 2002, an administrative law judge found that Glenn's illness prevented her "from performing any jobs [for which she could qualify] existing in significant numbers in the national economy" and granted her permanent disability payments retroactive to

CONTINUED

April 2000. Glenn kept none of these backdated benefits: three quarters were paid to MetLife, and the remainder (plus some additional money) was paid to her lawyers.

The Sears plan provided that Glenn had to meet a stricter standard to continue receiving disability benefits after twenty-four months. This standard required that her medical condition render her incapable of performing not only her own job, but also "the material duties of any gainful occupation for which" she was "reasonably qualified." MetLife denied Glenn the extended benefit because it found that she was "capable of performing full time sedentary work." Glenn sought federal court review under ERISA, but the district court denied her relief. The U.S. Court of Appeals for the Sixth Circuit reversed.

ISSUES PRESENTED Does an entity that both administers an ERISA plan and determines whether a participant is eligible for benefits have a conflict of interest that a reviewing court should consider when deciding whether the entity has abused its discretion in denying benefits? If so, how should the conflict be taken into account?

OPINION BREYER, J., writing for the U.S. Supreme Court:

[Eds.: The Court began by noting that its decision in *Firestone Tire & Rubber Co. v. Bruch*⁴⁷ set forth four principles for review of benefit determinations by a plan administrator: (1) the court should be guided by principles of trust law; (2) these principles require courts to review a denial of plan benefits "under a de novo standard" unless the plan provides to the contrary; (3) where the plan provides to the contrary by granting the administrator discretionary authority, trust principles make a deferential standard of review appropriate; and (4) if a benefit plan gives discretion to an administrator who is operating under a conflict of interest, the conflict must be weighed as a factor in determining whether there is an abuse of discretion. The Court noted that this case focused upon the application and meaning of the fourth principle.]

The first question asks whether the fact that a plan administrator both evaluates claims for benefits and pays benefits claims creates the kind of "conflict of interest" to which *Firestone's* fourth principle refers. In our view, it does.

That answer is clear where it is the employer that both funds the plan and evaluates the claims. In such a circumstance, "every dollar provided in benefits is a dollar spent by . . . the employer, and every dollar saved . . . is a dollar in [the employer's] pocket." The employer's fiduciary interest may counsel in favor of granting a borderline claim while its immediate financial interest counsels to the contrary. Thus, the employer has an "interest . . . conflicting with that of the beneficiaries," the type of conflict that judges must take into account, when they review the discretionary acts of a trustee of a common-law trust.

....
The answer to the conflict question is less clear where (as here) the plan administrator is not the employer itself but rather a professional insurance company. Such a company, MetLife would argue, likely has a much greater incentive than a self-insuring employer to provide accurate claims processing.

.... [W]e nonetheless continue to believe that for ERISA purposes a conflict exists. For one thing, the employer's own conflict may extend to its selection of an insurance company to administer its plan. For another, ERISA imposes higher-than-marketplace quality standards on insurers.

Finally, a legal rule that treats insurance company administrators and employers alike in respect to the *existence* of a conflict can nonetheless take account of the circumstances to which MetLife points so far as it treats those, or similar, circumstances as diminishing the *significance* or *severity* of the conflict in individual cases.

CONTINUED

47. *Id.*

We turn to the question of “how” the conflict we have just identified should “be taken into account on judicial review of a discretionary benefit determination.” In doing so, we elucidate what this Court set forth in *Firestone*, namely, that a conflict should “be weighed as a ‘factor’ in determining whether there is an abuse of discretion.”

....

We believe that *Firestone* means what the word “factor” implies, namely, that when judges review the lawfulness of benefit denials, they will often take account of several different considerations of which a conflict of interest is one.

In such instances, any one factor will act as a tiebreaker when the other factors are closely balanced, the degree of closeness necessary depending upon the tiebreaking factor’s inherent or case-specific importance. The conflict of interest at issue here, for example, should prove more important (perhaps of great importance) where circumstances suggest a higher likelihood that it affected the benefits decision, including, but not limited to, cases where an insurance company administrator has a history of biased claims administration.

The Court of Appeals’ opinion in the present case illustrates the combination-of-factors method of review. The Court of Appeals gave the conflict weight to some degree; its opinion suggests that, in context, the court would not have found the conflict alone determinative. The court instead focused more heavily on other factors. In particular, the court found questionable the fact that MetLife had encouraged Glenn to argue to the Social Security Administration that she could do no work, received the bulk of the benefits of her success in doing so (the remainder going to the lawyers it recommended), and then ignored the agency’s finding in concluding that Glenn could in fact do sedentary work. This course of events was not only an important factor in its own right (because it suggested procedural unreasonableness), but also would have justified the court in giving more weight to the conflict (because MetLife’s seemingly inconsistent positions were both financially advantageous). And the court furthermore observed that MetLife had emphasized a certain medical report that favored a denial of benefits, had deemphasized certain other reports that suggested a contrary conclusion, and had failed to provide its independent vocational and medical experts with all of the relevant evidence. All these serious concerns, taken together with some degree of conflicting interests on MetLife’s part, led the court to set aside MetLife’s discretionary decision.

RESULT The Court affirmed the decision of the Sixth Circuit setting aside MetLife’s benefits denial.

CRITICAL THINKING QUESTIONS

1. In his dissent, Justice Scalia agreed with the Court that a third-party insurance company that administers an ERISA-governed disability plan and pays benefits out of its own coffers has a conflict of interest. If the insurance company (e.g., MetLife) had a contractual relationship with the employer (e.g., Sears), whereby the employer would partially or fully reimburse the insurance company for claims in excess of expectations, would the insurance company still have a conflict of interest? If Sears and MetLife had such an agreement, is there a possible explanation why they did not bring the existence of the agreement to the attention of the Court?
2. Justice Scalia criticized the Court’s totality-of-the-circumstances test on the basis that it makes each case unique and the outcome of each case unpredictable. Instead, he asserted that a fiduciary with a conflict does not abuse its discretion unless the conflict “actually and improperly motivates the decision,” and he argued that there was no such evidence in this case. (Although the definition of disability for Social Security benefits seemed to be different from the definition for long-term benefits in the Sears disability plan, the majority opinion appeared to ignore the differences.) Do you agree with Justice Scalia that MetLife did not abuse its discretion?

► ETHICAL CONSIDERATION

Is it ethical for company executives to urge employees to accumulate large holdings of the company's stock in their 401(k) retirement plans without telling them that the executives are considering selling large amounts of their own holdings in the company?

The Pension Protection Act of 2006

In the first two years of the twenty-first century, thousands of Enron employees lost virtually all of their retirement savings while some Enron executives retained significant wealth by selling their Enron stock prior to its decline in value. The retirement security of employees at many other major corporations was similarly undermined. A more recent example of this is highlighted in the "Inside Story" later in this chapter.

The Pension Protection Act of 2006,⁴⁸ a 900-page omnibus law, was passed in part to prevent similar abuses in the future. It requires 401(k) plans and other defined contribution pension plans that hold publicly traded employer stock to allow participants and beneficiaries to divest the employer shares. Plans are required to offer at least three different types of investment options, in addition to employer stock, in order to satisfy a variety of risk tolerances among participants and beneficiaries. The Act also requires 401(k) quarterly statements to warn employees that holding more than 20 percent of their portfolio in any one company or industry could leave them inadequately diversified. To encourage employee participation, the Act allows companies to automatically enroll 401(k)-eligible employees and to automatically increase worker contributions every year. Automatic enrollment is expected to boost the participation rate in 401(k) plans beyond 90 percent.⁴⁹ It also allows the plan provider chosen by the employer to offer investment advice to workers.

The Act also boosts the portability of 401(k) plans, making it easier for employees to roll over funds. This will allow employees who work at a nonprofit organization to roll their 403(b) plans into a 401(k) if they go to work for a for-profit corporation.

Contribution limits to individual retirement accounts (IRAs), 401(k) plans, and other types of retirement plans that were increased by the Economic Growth and Tax Relief Rec-

48. See <http://www.dol.gov/EBSA/pensionreform.html> (last visited Sept. 7, 2008).

49. Jeanne Sahadi, *Pension Reform: Boon for 401(k)s*, CNNMONEY.COM, Aug. 17, 2006, http://money.cnn.com/2006/08/17/pf/retirement/pension_signing/index.htm.

onciliation Act of 2001 (EGTRRA), but set to expire in 2010, were made permanent and will be indexed for inflation.

In an effort to address the deteriorating funding of many defined benefit pension plans and, in some cases, the termination of plans when a plan sponsor was unable to meet its funding obligations, many of the Act's provisions are aimed at requiring defined benefit pension plans to meet more stringent funding rules. The Act requires contributions to underfunded plans that, in most cases, are sufficient to fully fund the plan within seven years. It requires that minimum contributions be made quarterly for certain underfunded plans. The Act requires larger contributions if a defined benefit plan is "at risk," and it limits benefit increases and acceleration of payments by underfunded plans. Finally, it increases the limit on deductible contributions to 150 percent of a defined pension plan's current liability.

Some have predicted that the Act will hasten the abandonment of defined benefit pension plans and confirm that 401(k) plans, with or without an employer match, will sweep the field. IBM's decision in 2006 to freeze its defined benefit pension plan and move its entire retirement program to a company- and employee-funded 401(k) plan was seen as emblematic of this shift.⁵⁰

401(k) Litigation

As the number of employees with 401(k) plans has grown, the number of lawsuits targeting 401(k) plan fiduciaries, including corporate executives, company directors, and investment committee members, has also grown. Litigation involving 401(k) plans increased significantly after a 2002 lawsuit against Enron, on behalf of 224,000 employees, led to a \$220 million settlement, according to the law firm that was co-lead counsel.⁵¹ In 2005, Williams Companies, the largest U.S. natural gas pipeline owner, agreed to pay \$55 million to settle a lawsuit by employees who claimed that they were misled into investing in company stock for their retirement accounts.⁵²

In 2006, a St. Louis attorney filed lawsuits against a number of the nation's largest companies, including Bechtel Group, Boeing, Caterpillar, Deere & Co., Exelon, General Dynamics, International Paper, Kraft Foods, Northrup Grumman, and United Technologies, for allegedly allowing

51. J.K. Wall, *401(k) Losses Bite Wellpoint*, NEWSNET.COM, June 16, 2008, http://www.insurancenewsnet.com/article.asp?a=top_lh&id=96069.

52. Robert Powell, *Will 401(k) Shortfalls Precipitate Wave of Lawsuits?* INVESTORS.COM, Sept. 21, 2005, <http://www.investors.com/breakingnews.asp?journalid=31773162&brk=1>.

their employees' 401(k) plans to be charged fees that were too high in violation of ERISA, which requires that 401(k) plan fees be reasonable. The lawsuits claim that the fee structures imposed by third-party administrators, record keepers, investment managers, and others are complex, excessive, undisclosed, and illegal; that the fee structures contain prohibited transactions; and that plan sponsors committed numerous fiduciary breaches, including failure to disclose relevant information to plan participants and beneficiaries.⁵³ Most of these suits have survived initial rulings on motions to dismiss.⁵⁴ Since the lawsuits were filed, a congressional committee, the U.S. Department of Labor, and the SEC have conducted investigations into inadequate disclosures of administrative fees charged to employees in 401(k) and other retirement plans.

After the 401(k) lawsuit against Deere & Co. was dismissed by a federal judge in June 2007, the Department of Labor filed a brief in the U.S. Court of Appeals for the Seventh Circuit requesting that the judge's ruling be reversed. The *Deere* case involves three workers who allege that the fees and expenses associated with the investment options that the company's \$2.5 billion 401(k) plan offered to participants were "excessive" and "unreasonable." The suit claims that Deere and Fidelity, its plan administrator, breached their fiduciary responsibilities by charging excessive fees and failing to disclose the details of a revenue-sharing arrangement between the two companies. As the primary enforcer of ERISA, the Labor Department's support of the plaintiffs' action was viewed as significant.

More recently, four former Wellpoint, Inc. employees filed a lawsuit against the health insurance giant over the losses that

its 401(k) retirement plan suffered when the company slashed its profit for the year in March 2008. The lawsuit alleges that Wellpoint's officers breached their fiduciary duties by failing to promptly inform 401(k) participants that the company's business was worsening.⁵⁵ In April 2008, Wal-Mart employees sued the world's largest company for breach of its fiduciary duties with respect to the company's \$9.5 billion 401(k) plan. The suit alleges that the company breached its duties as a fiduciary by allowing its 401(k) plan participants to be charged "unreasonably expensive" fees. The plaintiffs claim the fees were too high because Wal-Mart's plan offers participants retail mutual funds rather than less expensive institutional funds "despite the ready availability of reasonably priced options, particularly for a massive plan like Wal-Mart's with tremendous potential to leverage economies of scale."⁵⁶

WELFARE BENEFIT PLANS

Welfare benefit plans (such as medical, dental, and disability plans) are also subject to ERISA's rules on reporting, disclosure, and fiduciary responsibility. For example, employees must be provided with documents such as a summary plan description, a summary annual report, and a summary of any material modifications to the plan. Further, the employer or plan administrator must maintain sufficient records, usually including the employee's age, hours worked, salary, and contributions, to calculate each employee's benefits.

In the following case, the U.S. Supreme Court considered whether a health insurance plan fiduciary could recover costs from a beneficiary of the plan who had been reimbursed for expenses by a third party.

A CASE IN POINT

CASE 14.4

SEREBOFF V. MID ATLANTIC MEDICAL SERVICES, INC.

SUPREME COURT OF THE
UNITED STATES
547 U.S. 356 (2006).

SUMMARY

FACTS Marlene Sereboff and her husband Joel were the beneficiaries of a health insurance plan administered by Mid Atlantic Medical Services and covered by ERISA. The plan contained an Acts of Third Parties provision that applied if a third party was responsible for their illness or injury and required the beneficiaries to reimburse Mid Atlantic for plan benefits from any recovery from that third party. The provision further stated that Mid Atlantic's share of the recovery would not be reduced because the beneficiary did not receive the full damages claimed. The Sereboffs were injured in a car accident in California, and the plan paid the couple's medical expenses. When the Sereboffs subsequently filed a tort action against several parties seeking compensatory damages for their injuries, Mid Atlantic sent them several letters asserting a lien on the proceeds from the suit for medical expenses paid by Mid Atlantic, which eventually totaled almost \$75,000. After the Sereboffs settled their suit for \$750,000,

CONTINUED

they did not distribute any portion of the funds to Mid Atlantic, and Mid Atlantic filed suit, claiming a right to collect from the Sereboffs under Section 502(a)(3) of ERISA. The district court ruled for Mid Atlantic and ordered the Sereboffs to pay \$75,000 plus interest, with a deduction for Mid Atlantic's share of the attorneys' fees and court costs that the Sereboffs had incurred. On appeal, the U.S. Court of Appeals for the Fourth Circuit affirmed, although it observed that the circuits were divided as to whether Section 502(a)(3) authorized recovery in these circumstances.

ISSUE PRESENTED Can an ERISA plan fiduciary recover medical costs from a beneficiary who has been reimbursed for injuries by a third party?

SUMMARY OF OPINION The Supreme Court noted that a fiduciary can bring a civil action under ERISA Section 502(a)(3) to "enforce . . . the terms of the plan" and that the Court had previously construed Section 502(a)(3) to authorize only remedies "that were typically available in equity." The Court held that Mid Atlantic's claim was for equitable restitution because the Sereboffs' possession of the settlement funds satisfied the requirement. Rather than simply seeking to recover the Sereboffs' assets generally, Mid Atlantic was attempting to recover through a constructive trust or equitable lien on a specifically identified fund. The fact that this action involved a breach-of-contract claim did not mean the relief was not equitable because that would make the ERISA provision that expressly provides for equitable relief to enforce plan terms "an empty promise."

RESULT The Supreme Court affirmed the Fourth Circuit's decision that ERISA permits a fiduciary to recover costs from settlement proceeds that a beneficiary receives in a personal-injury lawsuit.

Other employee benefits (which may not be part of a formal plan) are covered by ERISA if a reasonable person could determine from the surrounding circumstances the existence of the intended benefits, the beneficiaries, the financing for the benefits, and the procedures for receiving the benefits. Many types of group severance pay plans are deemed to be either welfare plans or, less commonly, pension plans and are thus regulated by ERISA. However, individually negotiated severance agreements generally are not.

HMOs

In *Pegram v. Herdrich*,⁵⁷ the U.S. Supreme Court considered the fiduciary duties imposed by ERISA in the context of health maintenance organizations (HMOs) that provide care pursuant to employer-sponsored health plans. Cynthia Herdrich was covered by Carle Clinic Association P.C., Health Alliance Medical Plans, Inc., and Carle Health Insurance Management Company, Inc. (collectively Carle) through State Farm Insurance Company, her husband's employer. During a physical exam, Dr. Lori Pegram, a Carle doctor, discovered an inflamed mass in Herdrich's abdomen.

Instead of ordering an immediate ultrasound at the local hospital, Dr. Pegram decided that Herdrich could wait eight more days for an ultrasound at a facility staffed by Carle. Before the scheduled ultrasound, Herdrich's appendix ruptured, causing peritonitis.

Herdrich sued Pegram and Carle for medical malpractice and fraud. She also argued that the provision of medical services under the Carle HMO, which rewarded its physicians for limiting medical care to cut costs, was a breach of Carle's duty under ERISA because it created an incentive to make decisions in the physicians' self-interest rather than in the exclusive interests of their patients. The district court dismissed the ERISA claim on the basis that Carle was not acting as a fiduciary in the situation, and the appeal court reversed. The Supreme Court distinguished between pure "eligibility decisions," which turn on a plan's coverage of a particular condition or medical procedure for its treatment and are covered by ERISA, and "treatment decisions," which are choices about how to go about diagnosing and treating a patient's condition and are not covered by ERISA. Observing that the decisions that Herdrich claimed were fiduciary in character were mixed eligibility and treatment decisions, the Court held that such mixed decisions by HMO physicians were

57. 530 U.S. 211 (2000).

not fiduciary decisions under ERISA: “Traditional trustees administer a medical trust by paying out money to buy medical care, whereas physicians making mixed eligibility decisions consume the money as well. Private trustees do not make treatment judgments, whereas treatment judgments are what physicians reaching mixed decisions do make, by definition.”

FEDERAL PREEMPTION

Although *Pegram v. Herdrich* did not address the issue of ERISA preemption, the ruling could be read as implying that state law medical malpractice claims challenging an HMO’s mixed eligibility and treatment decisions would not be barred by ERISA. In 2004, in *Aetna Health Inc. v. Davila*,⁵⁸ the Supreme Court held that benefit determinations made by an HMO (even if “infused with medical judgment”) are pure eligibility decisions—not mixed eligibility decisions like those made indirectly by a physician—and therefore are preempted by ERISA.

The case consolidated two separate suits against HMOs. One suit involved Ruby Calad, who underwent a hysterectomy but was ordered by her HMO to leave the hospital one day later, despite her doctor’s opposition. Calad suffered complications and was rushed to the emergency room several days later. The other suit involved Juan Davila, who nearly died of internal bleeding when his HMO refused to pay for a medication prescribed by his doctor and insisted he use a cheaper pain relief medication instead. Calad and Davila filed separate lawsuits in which they alleged that their HMOs’ refusals to cover the requested services violated their duty of care when making health-care treatment decisions and “proximately caused” the plaintiffs’ injuries in violation of the Texas Health Care Liability Act, a patients’ right law that provided patients with the right to sue their managed care organizations for certain wrongful coverage decisions that resulted in injury or death.

Although the federal district courts dismissed their complaints, the U.S. Court of Appeals for the Fifth Circuit held that their claims were not preempted by ERISA because the decisions for which the HMOs were being sued were mixed eligibility and treatment decisions. The court stated that “ERISA should not be interpreted to preempt state malpractice laws or to create a federal common law of medical malpractice.”⁵⁹ The Supreme Court reversed the Fifth Circuit, holding that Calad’s and

Davila’s claims were completely preempted by ERISA. Writing for the majority, Justice Thomas distinguished the case from *Pegram v. Herdrich*. In *Pegram*, the physician’s “eligibility decision and the treatment decision were inextricably mixed,”⁶⁰ but the Court concluded that Congress did not intend an HMO to be treated as a fiduciary under ERISA “to the extent it makes mixed eligibility decisions acting through its physicians.”⁶¹ In contrast, the coverage decisions of the HMOs in this case were not made by physicians or employers of such physicians and were therefore pure eligibility decisions. In a separate concurring opinion, Justices Ginsburg and Breyer joined “the rising judicial chorus urging that Congress and [this] Court revisit what is an unjust and increasingly tangled ERISA regime.”⁶² They also referenced an amicus brief filed by the U.S. Solicitor General, which suggested that some form of “make whole” relief is available against a breaching fiduciary under ERISA.⁶³

ERISA does not preempt all state laws, however. In *UNUM Life Insurance Co. of America v. Ward*,⁶⁴ UNUM had issued a long-term group disability policy to Management Analysis Company (MAC) as a benefit plan governed by ERISA. The policy required that proof of claims be furnished to UNUM within a certain limited period of time. John Ward, a MAC employee, became disabled and qualified for state disability benefits. Upon inquiry, MAC informed Ward that its long-term disability plan covered his condition, and Ward submitted a benefits application. MAC processed the application and forwarded it to UNUM, which advised Ward that his claim was untimely. Under California’s notice-prejudice rule, an insurer cannot avoid liability where proof of claim is untimely, unless the insurer can show that it suffered actual prejudice from the delay. Under California’s agency rule, a California employer that administers an insured group health plan should be deemed to act as the agent of the insurance company. Ward argued that under this rule, his notice to MAC, acting as UNUM’s agent, sufficed to supply timely notice to the insurance company.

The issue before the U.S. Supreme Court was whether ERISA preempted the two California state law rules. The Court concluded that the notice-prejudice rule regulates insurance, an area traditionally governed by state law, and was not preempted by ERISA. By allowing a longer period to file than the minimum filing terms mandated by federal law, the state law complemented rather than contradicted ERISA. However,

the Court ruled that the agency rule related to an employee benefit plan and was, therefore, preempted by ERISA.

In an effort to avoid the HMOs' traditional defense that claims regarding quality of care should be filed under ERISA, a group of chronically ill and disabled patients, who claimed that they were denied quality medical care, filed a case alleging that two HMOs, Humana Health Plans of Texas and PacificCare of Texas, and a physicians' group, HealthTexas Medical Group, violated the Americans with Disabilities Act (ADA) by limiting care for chronically ill patients because they are more costly to treat. Although the case was ultimately settled, a Texas federal court judge had held earlier that the ADA prevents HMOs from discriminating against patients with disabilities.⁶⁵

PENALTIES

ERISA imposes various penalties for failure to conform to requirements. Plan participants or beneficiaries may sue for lost benefits and loss of the plan's tax benefits. Any plan fiduciary that breaches a duty is personally liable for the losses resulting from the breach. ERISA also provides civil penalties for breach of its prohibited transaction rules (which bar many transactions between an ERISA plan and a fiduciary of that plan) of up to 100 percent of the amount of the prohibited transaction.⁶⁶

To minimize costs and maximize benefit levels, many employers with union employees under collective bargaining agreements belong to multiemployer pension plans. Under the Multiemployer Pension Plan Amendments Act of 1980, withdrawal from such a plan may result in stiff penalties.

Internal Revenue Code, and these reforms affect a number of NQDC arrangements, such as elective deferral arrangements, supplemental employee retirement plans, and plans with income deferral features such as stock appreciation rights, discounted stock options, and severance and change-in-control plans. These changes were enacted in response to perceived abuses in deferred compensation that were seen in the corporate scandals of the early 2000s, including Enron.

Under prior law, participants were generally allowed to change at least the form, and often the commencement date, of the payment of their deferred compensation. In fact, participants could often cancel a deferral and take an immediate distribution by agreeing to forfeit as little as 10 percent of the participant's account balance (a "haircut withdrawal"). Under the new rules, deferrals of compensation must be elected prior to the start of the year in which they are earned, and the distribution dates or events must be selected at the time of the original deferral election. Haircut withdrawals are no longer permitted, and the distribution dates and events generally may not be changed without delaying commencement of the benefits at least five years beyond the date of the original distribution date. The Act enumerates the events that constitute permissible distribution triggers.

If an income deferral is subject to Section 409A, the affected employee must report the income as soon as the deferral vests or falls out of compliance (even if it will not be paid for years) and must pay an additional tax equal to 20 percent of the noncompliant income. If the income inclusion occurs in a tax year after the income was vested, the employee must also pay an interest-like tax from the year of vesting until the year of income inclusion. The principal exception to Section 409A applicable to an income deferral is an arrangement where payments under the plan must be paid to the plan participant within two and one-half months after the end of the tax year in which they are no longer forfeitable.

Section 409A can apply to stock option plans and variations of stock option plans such as stock appreciation rights. In order to exempt a stock option (or SAR) from the application of Section 409A, limits and restrictions on what stock can be used, complex requirements for determining value on the grant date, and a prohibition on any "discount" provisions must be satisfied. Other types of plans or arrangements that may be subject to Section 409A include separation pay agreements and change-in-control plans. The primary way companies granting stock options can avoid Section 409A is by granting statutory options (that is, ISOs or ESPP options) or nonstatutory options that have a fair market value or higher exercise price and no feature for deferral of income. Section 409A puts more pressure on private companies to accurately determine the value of

AMERICAN JOBS CREATION ACT OF 2004

While the primary purpose of the American Jobs Creation Act of 2004⁶⁷ was to repeal the existing scheme of income tax breaks for foreign sales corporations and extraterritorial income, the Act also contained sweeping and far-reaching changes in a number of areas, including executive compensation in general and *nonqualified deferred compensation arrangements* (*NQDCs*) in particular. Most of the reforms affecting NQDC plans are found in Section 409A of the

65. Zamora-Quezada v. HealthTexas Med. Group of San Antonio, 34 F. Supp. 2d 433, 440 (W.D. Tex. 1998).

66. 29 U.S.C. §§ 1106, 1132.

67. See <http://thomas.loc.gov/cgi-bin/query/F?c108:6:/temp/~c1082ibdxy:e0:>.

their stock when granting stock options because an underestimate of the fair market value of the company's stock may unintentionally expose their employees to the severe tax penalties discussed above.⁶⁸

68. Scott A. Webster & Kingsley L. Taft, *The Rules of the Road for Executive Compensation in Private Companies: Option Expensing and Deferred Compensation*, 8 J. BIOLAW & BUS. (2005).

Section 409A is likely to have a significant impact on executive compensation, including the elimination of discounted stock options, increased costs to implement a nonelective deferral arrangement due to the complexity of complying with Section 409A, and somewhat reduced participation in elective deferral arrangements because the flexibility of such arrangements has been reduced.

G L O B A L V I E W

Implementing a Global Stock Plan

As U.S. multinational companies expanded in the global marketplace during the 1990s, they began to implement global stock plans. By the beginning of the twenty-first century, many companies were offering stock to almost all of their employees around the world. Although the introduction of IASB and FASB rules that require a company to treat equity awards granted to employees as an expense on its financial statements has caused companies to reduce the number of employees included in options and stock purchase plans, as well as the number of shares granted,⁶⁹ equity compensation programs continue to provide multinationals with an attractive tool to recruit, reward, and retain employees worldwide.

A U.S. multinational company might want to extend its stock compensation plans to its non-U.S. employees for the same reasons that the company has stock compensation plans for its U.S. employees: recruiting, retention, and motivation. The U.S. multinational must, however, take into account numerous hurdles in successfully extending its stock compensation plans outside the United States. In particular, in each country, it may face an entirely new set of laws involving securities issues, tax issues, exchange rate control issues, privacy issues, and employment issues, to name just a few. In addition, it may encounter cultural and communication

differences that will need to be taken into account to successfully extend a stock compensation plan into a new country.

Although U.S. companies prefer to offer their U.S. stock plans, with as few changes as possible, to employees located in other countries, it may make sense for a company to consider adopting a country-specific plan with a different design from the U.S. plan in countries where the company has a sufficiently large employee base. Even when a uniform approach is taken, adopting some local variations, including modifications to vesting schedules, pricing, or methods of exercise, may allow the company to achieve tax advantages or avoid regulatory hurdles.⁷⁰

The stock option plan is still the most commonly used stock plan among U.S. multinationals.⁷¹ Most global stock option plans remain limited to executives.

Employee stock purchase plans are most commonly used for broader employee groups. If a U.S. multinational extends participation in its ESPP to foreign employees, it may revise the plan to ensure that foreign participants will qualify for any home country tax benefits. Conversely, a foreign multinational with U.S. employees may modify (for use in the United States only) its stock purchase program so that U.S. employees are able to take advantage of Section 423 when participating in the program in the United States.

69. According to a survey of 138 companies, grants of stock options declined in 2006 to 77 percent of all awards made by respondents, from 90 percent in 2005 and 95 percent in 2004. Buck Consultants, *2006 Global Long-Term Incentive Practice Survey Executive Summary*, 2006.

70. EQUITY-BASED COMPENSATION FOR MULTINATIONAL CORPORATIONS (Scott S. Rodrick ed., 9th ed. 2007).

71. Buck Consultants, *supra* note 69.

THE RESPONSIBLE MANAGER

KEY PRINCIPLES RELATED TO COMPENSATION

Reports issued by the Conference Board Commission on Public Trust and Private Enterprise, the Business Round-table, and the National Association of Corporate Directors' Blue Ribbon Commission on Executive Compensation and the Role of the Compensation Committee highlight the following key principles relating to compensation.

First, a strong and independent compensation committee should oversee and understand the entire executive compensation package and engage its own advisers and consultants. Companies listed on the New York Stock Exchange must have compensation committees composed entirely of independent directors, and Nasdaq requires listed companies to have compensation determined either by an independent compensation committee or by a majority of independent directors. There should be no family relationships, personal friendships, or prior business or philanthropic relationships between the committee members and the executives for whom the committee is determining compensation. At a minimum, the CEO should not participate in compensation committee meetings or compensation issues considered by the board of directors.⁷²

Second, executive compensation should have a significant performance-based component (some part of which can be equity incentives). Many institutional investors are also calling for a clearer link between pay and performance. For example, Institutional Shareholder Services, Inc. (ISS) supports shareholder proposals advocating the use of performance-based equity awards, unless the proposal is overly restrictive or the company demonstrates that at least 50 percent of the shares awarded to the top five officers are already performance based. Now that FAS 123R requires that all options be expensed, the pay-for-performance mandate is likely to spill over into stock option vesting.

Third, benchmarking should be discouraged because it facilitates what some refer to as the "Lake Woebegon

Effect," where all executives (and as a result, their compensation) are above average. This leads to escalating executive compensation packages as companies seek to stay ahead of at least half of their peers. A report by former SEC Chairman Richard Breeden, the court-appointed monitor for MCI/WorldCom, suggests that a logical starting point for executive compensation might be the 25th percentile, rather than the 75th percentile. Benchmark data can be useful, but compensation committees need to examine competitive pay packages more carefully and sprinkle those packages with performance incentives.

Fourth, executives should be subject to acquire-and-hold policies that force them to retain a significant equity stake in their employers. Ownership guidelines have two purposes: (1) to align the long-term interests of executives and shareholders, and (2) to prevent executives from focusing on short-term increases in stock price at the expense of long-term performance. Presumably, these goals could be accomplished by option terms that prohibit option exercise for a substantial period of time; the leveraged nature of options would have a bigger financial impact on executives.

Fifth, executive compensation should be transparent and conspicuously disclosed. Disclosure of executive and director compensation is very important to institutional shareholders. Companies should clearly spell out, in terms that will be understood by investors, the company's compensation programs and philosophy, including the performance criteria upon which certain compensation will be paid and the rationale for the salary levels, incentive payments, and stock option grants of top executive officers.

Thoughtful companies will respond with well-constructed, well-communicated compensation programs that place greater emphasis on performance than has been the case in the past.⁷³

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

Employee Ownership May Not Be as Sweet as It Seems

Since its founding in 1931 by Charles Stewart Mott, U.S. Sugar, the largest American producer of cane sugar, has always been associated with his descendants. William S. White, who has been a director of U.S. Sugar for thirty-seven years and chairman for twenty years, is married to Mott's granddaughter. According to the class-action lawsuit filed by U.S. Sugar employees, discussed below, the Mott-White family owns 4 percent of the company's stock, but effectively controls 51 percent.

In 1983, U.S. Sugar went private in a transaction that terminated its employees' pension plan, replacing it with the U.S. Sugar Employee Stock Ownership Plan, which is administered by U.S. Trust Company as trustee. As of 2008, the Plan was U.S. Sugar's largest single shareholder, owning 35 percent of its outstanding shares. Because U.S. Sugar is a privately held company, there is no public market for, and no publicly available means to determine the value of, its shares (the company is not required to, and does not, make any disclosures of its financial information). The only way for employees who hold shares through the Plan to sell their shares is to sell them back to U.S. Sugar under the terms of the Plan at the "fair market value." To prevent disputes over the fair market value of shares in employee stock ownership plans like the Plan, federal law requires private companies to obtain independent third-party appraisals each year. From 2005 to 2008, the price paid by U.S. Sugar to purchase shares held by employees ranged from a high of \$204 per share to a low of \$180.

As retiring workers cash out their shares in the Plan, U.S. Sugar retires their stock. This leaves fewer shares outstanding, causing the percentage of stock owned by other stockholders to grow, without their having to spend a penny buying stock.

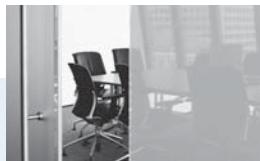

In this way, according to the complaint, Mr. White's immediate family increased its control in the company by 19 percent between 2000 and 2005.

In 2005, and again in 2007, the Laurence Group, a large agribusiness group, offered to acquire U.S. Sugar for \$293 per share in cash. To help assess the Laurence Group's offer, U.S. Sugar hired another appraisal firm, which calculated the company's breakup value at \$2.5 billion, or about \$1,273 per share. The U.S. Sugar board of directors then rejected the Laurence Group's offer as inadequate.

U.S. Sugar shareholders, including employees who owned stock through the Plan, were not told about these offers and had no chance to tender their shares. To make matters worse, U.S. Sugar announced in April 2008 that it was eliminating its dividend payments, which many current and former employees relied on to make ends meet. When unhappy employee participants in the Plan indicated that they planned to attend the company's annual meeting in May 2008 to voice their complaints to management as shareholders, U.S. Sugar announced that, for the first time, employee shareholders would not be allowed to attend the meeting. According to company representatives, the employees are not entitled to attend because they are not shareholders of record: instead, they would be represented by U.S. Trust Company, the trustee of the Plan.

Assuming the facts alleged by the plaintiffs in their complaint are true, has U.S. Sugar acted legally? Has it acted ethically?⁷⁴

INSIDE STORY

HOW ONE MAN PROFITED FROM EXPLOITING THE AMERICAN DREAM OF HOME OWNERSHIP

Angelo Mozilo began his career at the age of fourteen as a part-time messenger for a Manhattan mortgage lender. He worked his way up while attending college at night and moved to Florida after the firm merged with a

southern lender. When a conglomerate bought the business in 1968, Mozilo resigned and co-founded Countrywide Credit Industries, which later became Countrywide Financial Corporation.

Countrywide began making mortgages that could be insured by the Federal Housing Administration or guaranteed by the Veterans Administration. It later expanded into traditional mortgages that could be sold to government-sponsored mortgage buyers Fannie Mae and Freddie Mac, becoming Fannie Mae's largest supplier after the savings and loan melt-down of the late 1980s.

In 2004, countrywide, led by Mozilo, its CEO, became the largest U.S. mortgage lender, in part by using aggressive sales techniques and lowering lending standards. Along with other lenders, Countrywide introduced exotic mortgages that allowed borrowers to qualify for larger mortgages. Countrywide also began to sell an increasing number of its borrowers "pay option ARMs," an adjustable-rate mortgage loan that gives a borrower a choice of payment methods, which include a minimum payment that is less than the interest owed. If a borrower elects this payment option, the difference between the interest owed and the interest actually paid is added to his or her outstanding loan balance each month in a process known as "negative amortization." A borrower who elects this method of payment also faces steeply elevated interest rates.⁷⁵ As competition for these risky loans grew, Countrywide joined many other lenders in relaxing its standards for borrowing. In a number of cases, Countrywide loaned money without documenting the borrower's income.

During the 2001–2006 real estate bubble, Mozilo's compensation soared. His total compensation during that period approached \$200 million. Although he had planned to retire in 2006, Mozilo agreed to stay on for three more years when his heir apparent left the company. Countrywide's board of directors hired a compensation consultant, Ross Zimmerman of Exequity, to advise it regarding Mozilo's compensation package. When Zimmerman told the board that the performance targets in Mozilo's employment contract were too easy to meet and suggested ways for the board to restructure the contract, Mozilo bristled, and the board allowed him to hire his own consultant, John England of Towers Perrin, at Countrywide's expense. Although England presented himself to Zimmerman as independent, subsequent e-mail correspondence between England and Mozilo suggests that England was hired to fight back against Zimmerman's suggestions.⁷⁶ In one e-mail message to England, Mozilo complained, "Boards have been placed under enormous pressure by the left-wing anti-business press and the envious

leaders of unions and other so-called, C.E.O. Comp Watchers."⁷⁷ In December 2006, the board approved an employment agreement that included an annual salary of \$1.9 million, an incentive bonus of between \$4 million and \$10 million, an equity award of \$10 million, and \$37.5 million in severance benefits.

In 2006, Mozilo put in place a 10b5-1 trading plan that allowed him to sell his shares of Countrywide stock automatically at regular intervals. Although these stock sales were supposedly "preset" by the plan, during late 2006 and early 2007, Mozilo adopted a new trading plan, added a second plan, and then revised it.⁷⁸ Mozilo sold \$130.6 million of stock through these plans during the first half of 2007, up from \$60.4 million in the last half of 2006.⁷⁹ In October 2007, the SEC opened an informal investigation into these stock sales.⁷⁹

While Mozilo was selling his shares, Countrywide was providing company stock as its matching contribution to its employees' 401(k) plans. About one-third of the \$1 billion of 401(k) assets in the Countrywide plan at the end of 2006 was invested in the company's stock, making it the single largest holding in the plan.⁸⁰ After watching the stock lose three-fourths of its value from January 2007 to September 2007, a group of Countrywide employees filed a class-action lawsuit against Mozilo and the executives in charge of the company's retirement plan. The lawsuit claims that the defendants concealed information about the company's financial problems, which caused thousands of 401(k) plan participants to lose millions of dollars when the stock subsequently collapsed.

During the second half of 2007, Countrywide suffered \$1.6 billion in mortgage-related losses. By the end of 2007, more than 5 percent of Countrywide's \$28.42 billion in pay option ARMs were at least ninety days overdue, and 71 percent of its pay option ARM borrowers had opted to make the minimum payments described above. These deteriorating credit market conditions forced Countrywide to seek outside financial assistance by selling \$2 billion in convertible shares to

79. *Id.* Although the exact focus of the SEC investigation is not known, the SEC started to examine 10b5-1 plans in early 2007 following an academic study that found that insiders were setting them up just ahead of big stock drops and suggested that some plans may have been abused.
80. Eileen Ambrose, *Workers Still Filling 401(k) Plans with Company Stock*, CHICAGO TRIBUNE.COM, Oct. 7, 2007, available at http://www.chicagotribune.com/business/yourmoney/chi-ym-stock-1007oct07_0,1740998.story.

CONTINUED

Bank of America. In January 2008, as the mortgage credit crisis deepened, Countrywide announced a \$4 billion merger with Bank of America pursuant to which Countrywide stockholders would receive Bank of America stock. By the time the merger closed in June 2008, Bank of America stock had fallen from \$38.50 per share to \$23.87 per share, reducing the merger value to \$2.8 billion.⁸¹ In early 2007, Countrywide's market value had been more than \$25 billion.⁸²

Countrywide's actions on Mozilo's watch resulted in a loss of over \$20 billion for its stockholders, including thousands of employees who held onto Countrywide stock in their 401(k) accounts at the same time that Mozilo was selling close to \$200 million of his stock. Countrywide's actions also caused more than 10,000 Countrywide employees to lose their jobs as a result of a series of aggressive layoffs from mid-2007 to February 2008 when Countrywide stopped reporting employment numbers.⁸³

Countrywide's and Mozilo's actions are also being investigated by the SEC, the Department of Justice, and the FBI.⁸⁴ In June 2008, California, Illinois, and Florida filed lawsuits against Countrywide and Mozilo for deceptive mortgage practices, and Washington Governor Christine Gregoire announced plans to fine Countrywide for alleged discrimination against minor-

ity borrowers and asked that the company's license to lend in the state be revoked.⁸⁵ Mozilo's reputation for regarding Countrywide as a personal fiefdom was also reinforced by accounts of how he intervened on behalf of politicians, athletes, and other "friends of Angelo" to give them mortgages on highly favorable terms.⁸⁶

Although his reputation is battered, Angelo Mozilo is one of the few people who has profited from the Countrywide financial debacle. In January 2008, facing growing public criticism over a "Godzilla-like" pay package, Mozilo agreed to waive his \$37.5 million severance payment, but he did not leave Countrywide empty-handed. He received an enhanced supplemental executive retirement plan with a lump sum worth \$22.4 million, a pension plan with a present value of \$1.3 million, and \$20.6 million in deferred compensation, in addition to the \$414 million he received from his stock sales between 2004 and 2007.⁸⁷ As discussed in the "Inside Story" in Chapter 22, the \$700 billion government bailout approved by Congress in the fall of 2008 included pay curbs on executives of firms participating in the bailout.

QUESTIONS AND CASE PROBLEMS

1. While attending Georgia Tech, Alan, Brian, and Diane conceived of an innovative design for a hospital management software system, but they did not actually write the code. At the time, they talked about starting a business after graduation, but there was no formal agreement. Four months after graduation, Alan and Brian formed a company to develop the system. They initially took the position that Diane was not entitled to share in the new enterprise because of the enormous amount of work that would be required to develop the code and make it commercially viable. Nevertheless, their lawyer suggested reaching an agreement with Diane, whereby she would receive a 5 percent equity interest in the new company in exchange for any rights she might have in the technology.

Alan is a brilliant engineer. He prefers to speak machine language, rather than English. He has not been in a hospital since a week after his birth. As long as he has plenty of Diet Coke, he is happy to program computers 24/7. He will stick with a programming challenge until he has mastered it. Brian dropped out of medical school a semester before graduating. Although he was a brilliant student, he was searching for a way to cure people in a fashion that would enable him to leverage his ability to serve more than one patient at a time. Brian has great ideas, but he has a problem with commitment. He has already begun to wonder how soon he will leave this project and move on to something else.

Will Alan and Brian react differently to their lawyer's advice? If so, how and why? Should Alan and Brian accept their lawyer's advice? What risks do they face if they do not accept the advice?

2. Anuj and Ying-Mei have formed a corporation to exploit a new software program conceived of, and written in large part by, Ying-Mei. Anuj and Ying-Mei met while Anuj was pursuing his MBA and Ying-Mei was obtaining a Ph.D in electrical engineering. During the two years that Anuj

was in business school, he and Ying-Mei worked hard on their venture. Anuj engaged in extensive market research to validate the need for the software program and wrote a detailed set of functional specifications based on his market research. Ying-Mei wrote design specifications based on the functional specifications and then wrote the code for the software. While Ying-Mei was writing the code, Anuj wrote the business plan for their company.

Anuj and Ying-Mei met with counsel during the summer after Anuj's first year of business school, and they agreed that they would each purchase 1 million shares of common stock in Nucorp at a price of \$.01 per share. Because they agreed that they had already provided significant value to the venture, they also established that their stock would be 25 percent vested on the date of purchase and that another 25 percent would vest on the first anniversary, which would occur right after Anuj's graduation from business school. Ying-Mei wanted to be rewarded for her contribution of the program to the venture, and Anuj agreed to give her an additional 25 percent of vesting on the date that she contributed the software program to Nucorp.

As a result, when Anuj and Ying-Mei started talking to venture capitalists after Anuj's graduation, Anuj was 50 percent vested in his stock, and Ying-Mei was 75 percent vested. After several months of meetings, Enlightened Ventures presented Anuj and Ying-Mei with a term sheet, pursuant to which Enlightened Ventures agreed to provide Nucorp with the \$5 million seed round of funding they were seeking, in exchange for preferred stock that would convert into 2.5 million shares of common stock. The term sheet provided that Anuj and Ying-Mei would have to revest in their vested stock. In other words, each of them would have to agree that their 1 million shares would be unvested, subject to 25 percent vesting on the first anniversary of the venture financing, with 2.08 percent vesting each month thereafter so that their stock would be fully vested four years after the venture financing.

Anuj and Ying-Mei are, of course, not happy about revesting their stock, especially because they believe they have already made significant contributions to the venture. Enlightened Ventures made it clear, however, that this condition is a “deal-breaker” and that they are lucky to have found a top tier venture-capital group that is willing to make a substantial investment in the company. Anuj and Ying-Mei are concerned that Enlightened Ventures may terminate them before they are vested in any of their stock. They are also concerned that if Nucorp is acquired before they are fully vested, the acquiring corporation will already have a CEO and a chief technical officer, and therefore, they may have no place in the merged company. What kinds of compromise positions might Anuj and Ying-Mei want to discuss with Enlightened Ventures regarding the vesting of their founders’ stock?

3. In July 1996, Oracle signed a letter agreement with Pier Carlo Falotti to work from Geneva, Switzerland, as senior vice president for Europe, the Middle East, and Africa for \$1 million in annual salary. The letter provided that Oracle would grant Falotti an initial option to purchase 600,000 shares of Oracle stock and that once Falotti accepted Oracle’s offer, they would enter into an employment contract subject to Swiss law. Oracle and Falotti subsequently signed several additional letter agreements and an employment agreement, all of which were governed by Swiss law. There were no references to stock options in the subsequent letters or the agreement. During Falotti’s employment, all stock option grants were governed by Oracle’s 1991 Long-Term Equity Incentive Plan. This Plan, along with a Grant Agreement and an Exercise Notice Agreement, collectively formed Oracle’s Stock Option Agreement and included a California choice-of-law provision. The Stock Option Agreement also provided that all disputes regarding stock option grants would be decided by Oracle’s compensation committee and that the committee’s decisions were binding on both Oracle and the employee.

On May 31, 2000, four days before his options were to vest, Falotti was terminated. However, Falotti told Oracle’s CEO that under Swiss law, he could not be fired because he was ill and unable to work. Oracle’s compensation committee met and unanimously decided Falotti had “ceased to be employed” on May 31, 2000, and could not exercise any stock options after that date. Oracle filed a declaratory relief action seeking a declaration that Falotti could not exercise the \$10 million of options that vested after May 31, 2000, and that he was not entitled to any stock option damages in lieu of the unexercised options. Falotti counterclaimed that Swiss law provided that before he could be terminated,

there was a two-month notice period during which he was entitled to wages and benefits. What will Oracle argue? What will Falotti argue? Who should win? [*Oracle Corp. v. Falotti*, 319 F.3d 1106 (9th Cir. 2003).]

4. In February 1998, Rohit Phansalkar, a Wall Street executive, joined a small merchant banking firm, Andersen Weinroth & Co. (AWC). During his tenure, AWC sold Phansalkar more than 600,000 shares of its client, Millennium Cell, as part of an initial public offering. Phansalkar also represented AWC on the board of directors of several client companies, including Osicom Technologies, a public company, and Zip Global Network, a privately held company based in India. Both Osicom and Zip granted Phansalkar stock options. As required, Osicom described the stock options in a filing with the Securities and Exchange Commission, but privately held Zip was not required to make a public filing. In June 2000, Phansalkar left AWC to become president of Osicom. In September 2000, AWC filed a lawsuit against Phansalkar, claiming that he had failed to disclose the stock options he received as AWC’s representative on the Osicom and Zip boards. A month later Phansalkar filed a counterclaim, arguing that AWC had illegally converted his Millennium shares, worth \$4.4 million, so that they would become AWC property. Did Phansalkar have a legal or ethical obligation to disclose his stock option grants to AWC? If so, on what basis? [*Phansalkar v. Andersen Weinroth & Co.*, 344 F.3d 184 (2d Cir. 2003).]
5. Carmine Cicio received employer-sponsored health insurance coverage through Vytra Healthcare, an HMO. In March 1997, Cicio was diagnosed with multiple myeloma. In January 1998, his doctor, Edward Samuel, asked Vytra to approve a double stem cell transplant, describing the procedure as medically necessary and possibly lifesaving. Vytra denied the request on the basis that the procedure was “experimental/investigational” and not covered under Cicio’s policy. Cicio, through Dr. Samuel, appealed the decision. By the time Vytra approved a single stem cell transplant, the window for effective treatment had passed, and Cicio died about six weeks later. His widow sued Vytra in the New York Supreme Court, alleging eighteen causes of action, most of them under state law. The defendants first removed the case to the U.S. District Court for the Eastern District of New York, contending that Mrs. Cicio’s claims were covered under ERISA, and then moved to dismiss based on the preemption doctrine. Does Mrs. Cicio have the right to sue Vytra under state tort law, or is her action preempted by ERISA? [*Cicio v. Vytra Healthcare*, 542 U.S. 933 (2004).]

6. You are the head of administration for the employee stock option plans of a publicly traded company. The compensation committee of the company's board of directors has developed, and the board has approved, a schedule of annual option grants for employees at Grade 14 and above (for example, Grade 14 employees will receive an option for 1,000 shares, Grade 15 employees will receive an option for 1,500 shares, and so on). The options for calendar year 2008 for employees other than executive officers were granted by the CEO (a duly authorized individual) who signed a granting document on January 15, 2008, with an attached schedule of 1,357 recipients, their grade levels, and their grants, which totaled 3,127,666 shares. The list was compiled from lists supplied by the various regional managers as to employees qualifying for an option or other award and was cross-checked with the human resources department. Consistent with prior practice, the CEO did not personally check the attached list.

Of the 1,357 grants, only two differed from the compensation committee schedule for their grade level; both differences were due to unusual circumstances involving the particular employee (one of the grants had a higher number of shares than the schedule for the employee's grade level, and the other had a lower number of shares). On January 25, 2008, you received an e-mail from a regional manager in a remote corner of the company informing you that one of the Grade 15 employees in his region was inadvertently left off the list he sent you in December and that the omitted employee should receive the standard grant of 1,500 shares. On January 25, 2008, the company's stock was trading at \$3 per share higher than its closing price on January 15, 2008. You have not yet sent the approval list to stock option administration for processing. What should you do?

7. Shirley McLeod was hired by Valley Media in 1998 to fill a position described as "Operations—General Warehouse," which consisted of stocking videocassettes in a warehouse and involved long periods of standing. McLeod signed up for health insurance and other benefits under the Valley Media Plan, with an effective date of April 1, 1999. The Plan, which was funded and administered by Hartford Life and Accident Insurance Company, provided that:

No benefit will be payable under the Plan for any Disability that is due to, contributed to by, or results from a Pre-existing Condition unless such Disability begins:

(1) after the last day of 90 consecutive days while insured during which you received no medical care for the Pre-existing Condition; or

(2) after the last day of 365 consecutive days during which you have been continually insured under this Plan.

"Pre-existing Condition" was defined as:

- (1) any accidental bodily injury, sickness, mental illness, pregnancy, or episode of substance abuse; or
- (2) any manifestations, symptoms, findings, or aggravations related to or resulting from such accidental bodily injury, sickness, mental illness, pregnancy, or substance abuse:

for which you received Medical Care during the 90 day period that ends the day before:

- (1) your effective date of coverage; or
- (2) the effective date of a Change in Coverage.

Medical Care is received when:

- (1) a Physician is consulted or medical advice is given; or
- (2) treatment is recommended, prescribed by, or received from a Physician.

On February 22, 1999, McLeod consulted Dr. Eileen DiGregorio because of numbness in her left arm. Dr. DiGregorio had already treated McLeod for a number of years for cardiac insufficiency and bulging discs. Dr. DiGregorio provided medical care for the numbness during the February 1999 visit, but did not diagnose or otherwise suggest that McLeod might have multiple sclerosis (MS). McLeod continued to seek treatment over the next few months from Dr. DiGregorio and two neurologists, none of whom produced a diagnosis of MS. In August 1999, McLeod was diagnosed with MS. With the benefit of hindsight, a number of physicians, including her treating physicians, attributed McLeod's various pre-coverage symptoms and ailments to MS. In March 2000, McLeod applied to Hartford for short-term disability benefits. Her claim was initially approved, but when she applied for long-term disability benefits (LTD), Hartford denied her application on the grounds that her disabling condition, MS, was a preexisting condition for which LTD benefits were not payable under the Plan. After exhausting her administrative appeals, McLeod filed a complaint against Hartford alleging, among other things, that Hartford had breached its fiduciary obligations under ERISA when it denied her application for LTD. Is this decision a pure eligibility decision or a mixed eligibility/treatment decision? What standard of review should be applied to Hartford's decision? Should McLeod's claim be upheld? [*McLeod v. Hartford Life & Accident Insurance Co.*, 372 F.3d. 618 (3d Cir. 2004).]

8. The WorldCom 401(k) Salary Savings Plan (the Plan), an “employee pension benefit plan” as defined by ERISA, included a number of funds, among which was a fund invested in WorldCom stock. WorldCom was the sponsor, the fiduciary, the Plan Administrator, and the Investment Fiduciary of the Plan. On June 25, 2002, WorldCom announced that it had improperly treated more than \$3.8 billion in ordinary costs as capital expenditures in violation of GAAP and would have to restate its publicly reported financial results for 2001 and the first quarter of 2002. WorldCom later announced that its reported earnings for 1999 through the first quarter of 2002 had overstated earnings by \$3.3 billion and that it would likely write off goodwill of \$50 billion. These disclosures had a catastrophic effect on the price of WorldCom shares and the value of WorldCom notes. WorldCom stockholders and bondholders lost millions of dollars in investments.

On July 21, 2002, WorldCom filed for bankruptcy. Soon thereafter, certain WorldCom employees who had invested in WorldCom stock through the company’s Plan brought a class-action lawsuit alleging violations of ERISA against certain officers, directors, and employees of WorldCom, including Bernard Ebbers, CEO and president, and Dona Miller, WorldCom’s employee benefits director. The defendants responded that WorldCom alone was the ERISA fiduciary for the 401(k) plan and that ERISA claims for breach of fiduciary duty could be brought only against WorldCom. Ebbers and Miller also asserted that the action sought improperly to extend the duties of disclosure created by the federal securities laws into the ERISA context. Are the officers of a corporate plan administrator liable for breach of fiduciary duty under ERISA? Can an ERISA fiduciary be sued for failure to disclose items required by federal securities law? [*In re WorldCom, Inc., ERISA Litigation*, 263 F. Supp. 2d 745 (S.D.N.Y. 2003).]

CHAPTER 15

CRIMINAL LAW

INTRODUCTION

Impact on Corporate Behavior

Criminal law is a powerful tool for controlling corporate behavior and ensuring ethical conduct. Companies devote significant resources to preventing and defending criminal law violations. Primary areas of concern for many managers include bribery, compliance with environmental laws, worker safety, government contracts, securities fraud, antitrust law compliance, and securities trading by officers and directors.

Studies calculate that white-collar crime is responsible for \$250 billion in annual losses by U.S. businesses.¹ By comparison, personal and household crimes account for the relatively paltry sum of \$17.6 billion.² According to a survey conducted in 2003, one-third of the companies in the world have engaged in criminal misconduct.³ The most common U.S. crime was asset misappropriation, followed by cybercrime.⁴

Criminal liability may be imposed in several ways. Individuals are always responsible for their own criminal acts, even if they were following orders from top management. In certain limited circumstances, supervisors may be vicariously liable for the acts of their subordinates. Corporations (and other business entities) may also be found guilty of crimes based on the illegal conduct of their employees.

CHAPTER OVERVIEW

This chapter defines the elements necessary to create criminal liability. It discusses the statutory sources of criminal law and then describes criminal procedure—the mechanics of a criminal action, the plea options, and the trial. We explain a variety of constitutional issues, including search warrant requirements and the privilege against self-incrimination. The chapter continues with a discussion of the Federal Sentencing Guidelines. Then it summarizes a variety of white-collar crimes, including violations of the Racketeer Influenced and Corrupt Organizations Act, wire and mail fraud, money laundering, computer crime, and obstruction of justice. We conclude with a list of penalties and a description of three federal amnesty and leniency programs.

DEFINITION OF A CRIME

A *crime* is an offense against the public at large. It may be defined as any act that violates the duties owed to the community, for which the offender must make satisfaction to the public. Conviction of a crime can lead to a substantial fine, a prison sentence, or even the death penalty. Because the results of a criminal conviction can be so serious, an act is criminal only if it is defined as such in a federal or state statute or local ordinance enacted by a city or county. In contrast, much of civil law was developed by the courts without applicable statutes or ordinances. A criminal charge and prosecution are brought by either the state or the federal government. Under most federal and state laws, crimes are divided into two categories. A *felony* is a crime punishable

by death or by imprisonment for more than one year. A *misdemeanor* is a less serious crime, punishable by a fine or a jail sentence of one year or less.

SOURCES OF CRIMINAL LAW

By some estimates the *United States Code* contains more than 4,000 federal criminal offenses.⁵ If one includes the *Code of Federal Regulations*, that number increases to upwards of 10,000.⁶

The criminal statutes of the individual states are similar to their federal counterparts but not exactly the same. This is because most states have adopted the Model Penal Code but have modified it to meet their own needs. The *Model Penal Code* is a set of criminal law statutes that were proposed by the National Conference of Commissioners on Uniform State Laws for adoption by the states.

ELEMENTS OF A CRIME

Two elements are necessary to create criminal liability: (1) an act that violates an existing criminal statute and (2) the requisite state of mind.

The Criminal Act

The term *actus reus* (guilty act or wrongful deed) is often used to describe the act in question. A crime is not committed unless some overt act has occurred. Merely thinking about a criminal activity is not criminal.

The State of Mind

The statute that defines the criminal act also defines the requisite state of mind. Generally, a crime is not committed unless the criminal act named in the statute is performed with the requisite state of mind, known as *mens rea* (guilty mind).

Strict Liability Under some statutes, a person can be guilty regardless of his or her state of mind or degree of fault. This is known as *strict liability*. Typically, strict liability statutes address issues of public health and safety⁷ or involve “dangerous or deleterious devices or products or

obnoxious waste materials,”⁸ such as grenades⁹ and opium.¹⁰ Strict liability statutes are generally disfavored. The U.S. Supreme Court has characterized the requirement of “a relation between some mental element and punishment for a harmful act [as] almost as instinctive as the child’s familiar exculpatory ‘But I didn’t mean to.’”¹¹ Most courts will require clear legislative intent to impose strict liability before they will dispense with *mens rea* as an element of a crime.¹² As a result, a court may require knowledge of wrongdoing even when the statute is silent on the mental state required. (Vicarious criminal liability for regulatory offenses is discussed later in the chapter.)

Mens Rea: Negligence, Recklessness, and Intent The three forms of *mens rea* are negligence, recklessness, and intention to do wrong. Negligence is the least culpable state of mind, and intention to do wrong is the most culpable. Generally speaking, crimes associated with a higher degree of culpability are punished more severely. Convictions for intentional homicide, for instance, bring penalties far more harsh than those for negligent homicide.

Negligence is the failure to see the possible negative consequences of one’s actions that a reasonable person would have seen. Individuals may be negligent even if they did not know that their conduct could cause harm. All that is necessary is a showing that a reasonable person would have known of the possible harm. A reasonable person is often thought of as a rational person using ordinary care under the circumstances.

Recklessness is the conscious disregard of a substantial risk that one’s actions will result in the harm prohibited by the statute. Recklessness is found when the individual knew of the possible harm of his or her act but ignored the risk. A person has an *intention to do wrong* when he or she consciously intends to cause the harm prohibited by the statute, or when he or she knows such harm is substantially certain to result from his or her conduct.

The commonly invoked platitude “ignorance of the law is no excuse” is true as a general principle. Nevertheless, this is an imprecise rule that, taken alone, does not tell courts how to apply the *mens rea* requirements of particular

6. *Id.*

7. See, e.g., United States v. Park, 421 U.S. 658 (1975) (Food, Drug and Cosmetic Act).

8. United States v. Int’l Minerals & Chem. Corp., 402 U.S. 558, 564–65 (1971).

9. United States v. Freed, 401 U.S. 601 (1971).

10. United States v. Balint, 258 U.S. 250 (1922) (holding that a person could be guilty of undocumented sales of certain narcotics even if he did not know that the drugs he was selling were “narcotics” within the ambit of the Narcotic Act of 1914).

11. Morissette v. United States, 342 U.S. 246, 250–51 (1952).

12. See, e.g., Staples v. United States, 511 U.S. 600 (1994).

criminal statutes. There is often substantial room for interpretation and debate as to the meaning of certain statutes and the *mens rea* required under them.

For example, criminal statutes often require willful or knowing misconduct or both. Although “willful” is a “word of many meanings whose construction is often dependent on the context in which it appears,”¹³ in general, a *willful* act is “one undertaken with a ‘bad purpose.’ In other words, in order to establish a ‘willful’ violation of a statute, ‘the Government must prove that the defendant acted with knowledge that his conduct was unlawful.’”¹⁴ The defendant does not need to know which particular law he or she is breaking, however, only that some law is being violated.

In contrast, the term *knowingly* merely requires proof of knowledge of the facts that constitute the offense, not knowledge of unlawfulness, unless the text of the statute dictates a different result. For example, in *Liparota v. United States*,¹⁵ the Supreme Court addressed the *mens rea* required by the federal food stamp fraud statute, which provides that “whoever knowingly uses, transfers, acquires, alters or possesses coupons or authorization cards in any manner not authorized by [the statute] or the regulations” is subject to a fine and imprisonment. Acknowledging that it was unclear how far down the sentence the word “knowingly” traveled, the Court set forth the rule that when statutory language is ambiguous, the traditional assumption is that some *mens rea* is required. As a result, the Court held that the defendant could not be convicted under the statute unless he knew that he was acquiring food stamps in an unauthorized or illegal manner.

In contrast, consider the intention-to-do-wrong requirement in the context of the federal false-statement statute.¹⁶ The statute makes it a crime to “knowingly and willfully” make any false statement or representation “in any manner within the jurisdiction of any department or agency of the United States.” Suppose that a woman made a statement to a federal agent knowing that the statement was false but without knowing that the person to whom she directed the statement was a federal agent. Would this defendant be convicted? The U.S. Supreme Court ruled that she would be.¹⁷ The Court applied the “intention-to-do-wrong” requirement only to the “false-statement” portion of the statute. In other words, it required only that the defendant knowingly lied to

a person who was in fact a federal agent, rather than that she knowingly lied to a person she knew was a federal agent.

CRIMINAL VERSUS CIVIL LIABILITY

Civil law, particularly tort law (discussed in Chapter 9), compensates the victim for legal wrongs committed against a person or his or her property. Criminal law protects society by punishing the criminal. It does not compensate the victim. The victim of a crime may bring a civil suit for damages against the perpetrator, however.

Many regulatory statutes provide for both criminal and civil sanctions. An individual or a firm may therefore be sued under both criminal and civil law for a single act. Violation of a criminal statute is *negligence per se*; this means that in a subsequent civil suit, the court will accept the criminal conviction as sufficient proof that the defendant was negligent, that is, that he or she did not act with the care a reasonably prudent person would have used under the same circumstances. Consequently, defendants must carefully review their criminal defense strategy in light of possible future civil litigation.

BURDEN OF PROOF

Criminal trials impose a much heavier *burden of proof* than civil cases. In a criminal case, the accused is presumed innocent until proved guilty beyond a reasonable doubt. In most civil cases, the plaintiff only needs to establish the facts by a preponderance of the evidence.

This difference in the degree of proof required is typical of the procedural and constitutional safeguards protecting defendants’ rights throughout criminal proceedings. In a criminal case, the formidable resources of the state are focused on an individual. In this contest of unequal strength, it seems only fair to require the state to meet a higher standard of proof.

CRIMINAL PROCEDURE

A criminal action begins with the arrest of the person suspected of a crime and proceeds through a preliminary hearing to plea bargaining and trial.

ARREST

After a person is *arrested* (taken into custody against his or her will for criminal prosecution or interrogation), he or she is taken to a police station and *booked*; that is, the charges

13. Bryan v. United States, 524 U.S. 184, 191 (1998).

14. *Id.*; see also Safeco Ins. Co. of Am. v. Burr, 127 S. Ct. 2201, 2208–09 (2007) (differentiating between the meaning of “willful” in criminal and civil contexts and holding that mere recklessness is sufficient in a civil case).

15. 471 U.S. 419 (1985).

16. 18 U.S.C. § 1001.

17. United States v. Yermian, 468 U.S. 63 (1984).

against him or her are written in a register. The arresting police officer must then file a report with the prosecutor. Based on this report, the prosecutor decides whether to press charges against the arrested person. If charges are to be pressed, many states require that the accused be taken before a public judicial official, usually a justice of the peace or magistrate, to be informed of the charges. *Bail*, the amount of money a defendant must post as a bond to guarantee his or her appearance at trial, is often determined during this initial appearance before the public official. Sometimes a defendant will be released from custody pending trial on his or her own recognizance without having to post bail.

PLEA

If the charge is only a misdemeanor, the accused will be asked at this initial appearance whether he or she pleads guilty or not guilty. In the case of a felony, the next step in many states is a *preliminary hearing*, at which the prosecutor must present evidence demonstrating probable cause that the defendant committed the felony. Following this hearing, formal charges are usually filed either by the prosecutor through an *information*, a document filed with the court, or by a grand jury through an *indictment*. The accused is then arraigned before a trial court judge. At the arraignment, the accused is informed of the charges against him or her and asked to enter a *plea* of guilty or not guilty. If the defendant enters a plea of not guilty, the case is set for trial.

The accused can also plead *nolo contendere*, which means that he or she does not contest the charges. For the purpose of the criminal proceedings, this plea is equivalent to a guilty plea. Unlike a guilty plea, however, a plea of *nolo contendere* cannot be introduced at a subsequent civil trial. Therefore, a *nolo contendere* plea may be used by corporate defendants who anticipate civil suits based on the same activity for which they face criminal charges.

Plea Bargaining, Immunity, and Consent Decrees

Very few cases ever reach trial. Most are resolved through plea bargaining between the accused and the prosecutor. *Plea bargaining* is the process whereby the prosecutor agrees to reduce the charges in exchange for a guilty plea from the accused.

Frequently, a lower-ranking member of a criminal conspiracy will “cop a plea,” that is, provide the prosecutor with testimony incriminating his or her criminal superiors, in exchange for a reduced sentence or immunity from prosecution. The immunity granted may be either *use immunity* or *transactional immunity*. *Use immunity* prohibits the

testimony of the witness from being used against that witness in any way. *Transactional immunity*, which is broader, prohibits any criminal prosecution of the witness that relates to any matter discussed in his or her testimony.

Some courts have challenged the offer of leniency in exchange for testimony as a violation of the federal statute forbidding the exchange of “anything of value” for testimony. However, the twelve federal courts of appeals that have considered the issue have all rejected that challenge and allow the government to offer leniency.¹⁸ As one circuit court judge put it: “To pay a witness, other than an expert witness, for his testimony is irregular and in fact is unlawful in federal trials. . . . The practice of paying witnesses for their testimony apparently is forbidden in trials in the state courts of Wisconsin as well. To pay in money, that is; immunity from prosecution, a lighter sentence, placement in a witness-protection program, and other breaks are lawful coin in this realm.”¹⁹

Consent decrees are common in the corporate context. A *consent decree* is a court order based on an agreement by the defendant corporation to take measures to remedy the problem that led to the criminal charges. Like a plea of *nolo contendere*, a consent decree cannot be introduced as evidence of guilt in a subsequent civil trial.

TRIAL

A criminal trial proceeds in much the same way as civil trials, which were discussed in Chapter 3. There are opening statements, direct examination and cross-examination of witnesses, and closing arguments. The jury then deliberates to reach a verdict of guilty or not guilty.

SENTENCING

If the defendant is convicted, the court will proceed with sentencing. State and federal criminal statutes normally specify penalties that include both jail or prison time and monetary fines. The length of the sentence and the amount of the fine usually fall within a specified range. In a state court, if the defendant is found guilty, the judge generally has sentencing discretion within that range. The Federal Sentencing Guidelines, as originally enacted by the U.S. Sentencing Commission pursuant to the Federal Sentencing Reform Act, required federal judges to sentence defendants in accordance with the criteria and ranges set forth in the

18. United States v. Souffront, 338 F.3d 809 (7th Cir. 2003). The Federal Circuit, which hears primarily patent claim appeals, has not yet considered the issue.

19. Mataya v. Kingston, 371 F.3d 353, 359 (7th Cir. 2004).

guidelines. As discussed further below, the U.S. Supreme Court struck down the mandatory character of the guidelines in *United States v. Booker*²⁰ and ruled that a sentencing court is required to consider the ranges specified by the guidelines but has discretion to depart from them as the judge sees fit.

CONSTITUTIONAL PROTECTIONS

The U.S. Constitution affords criminal defendants a number of important rights and protections.

EX POST FACTO CLAUSE

Under the *Ex Post Facto Clause* of the U.S. Constitution,²¹ a person can be convicted of a crime only if his or her actions constituted a crime at the time they occurred. As the U.S. Supreme Court explained: “To fall within the ex post facto prohibition, a law must be retrospective—that is, it must apply to events occurring before its enactment—and it must disadvantage the offender affected by it, by altering the definition of criminal conduct or increasing the punishment for the crime.”²²

The Ex Post Facto Clause also prevents a person from having to bear legal consequences for an act when such legal consequences did not exist at the time the act was committed. For example, in *Carmell v. Texas*,²³ Carmell was charged with several sexual offenses against his stepdaughter. At the time the offenses occurred, Texas law provided that a victim’s testimony could serve as the basis for a conviction for sexual offenses only if supported by corroborating evidence. Prior to Carmell’s trial, however, Texas law was amended to permit conviction for sexual offenses based solely on the victim’s testimony. Carmell was convicted on the basis of his stepdaughter’s testimony alone. The U.S. Supreme Court held that it was unconstitutional to apply the less strict proof requirements in the amended law to establish Carmell’s conviction. Similarly, the Supreme Court struck down a California statute that permitted the resurrection of otherwise time-bound prosecutions for sex-related child abuse.²⁴ The U.S. Court of Appeals for the Tenth Circuit applied the Ex Post Facto Clause to an agency regulation that was legislative in nature, but the court acknowledged

that there was a split in the circuits over the applicability of the clause to administrative regulations.²⁵

The U.S. Supreme Court ruled that the clause does not preclude courts from retroactively applying judicially created modifications to federal statutes and regulations as long as the prior law put the defendant on notice that his or her conduct was wrongful.²⁶ Applying that rule, the U.S. Court of Appeals for the Seventh Circuit held that a defendant convicted of selling cocaine could lawfully be sentenced to a longer prison term than would have been permissible by the Federal Sentencing Guidelines prior to the U.S. Supreme Court’s decision in *Booker*²⁷ giving judges the discretion to deviate from the Guidelines.²⁸ The court rejected the defendant’s Ex Post Facto Clause argument, noting that the sale of cocaine was illegal before *Booker* and that the existing drug laws provided a clear warning that a conviction for selling cocaine carried a lengthy prison term.

FOURTH AMENDMENT PROTECTIONS

The Fourth Amendment to the U.S. Constitution provides:

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

This provision was intended to prevent the arbitrary and intrusive searches that had characterized British rule during the American colonial period, and it applies only to actions by government officials, unless a private person is acting on behalf of the government. As discussed in detail below, courts have struggled to strike the appropriate balance between the individual’s reasonable expectation of privacy and the government’s legitimate need to secure evidence of wrongdoing to prevent criminal acts and apprehend criminals.

The Arrest Warrant Requirement

An arrest is a Fourth Amendment seizure. No arrest is valid unless there is probable cause. *Probable cause* for arrest is defined as a reasonable belief that the suspect has

20. 543 U.S. 220 (2005).

21. U.S. CONST. art. I, § 10.

22. *Lynce v. Mathis*, 519 U.S. 433, 441 (1997).

23. 529 U.S. 513 (2000).

24. *Stogner v. California*, 539 U.S. 607 (2003).

25. *Smith v. Scott*, 223 F.3d 1191 (10th Cir. 2000). *Accord United States v. Bell*, 991 F.2d 1445 (8th Cir. 1993) (subjecting Federal Sentencing Guidelines to ex post facto analysis). *Contra Dominique v. Weld*, 73 F.3d 1156 (1st Cir. 1996).

26. *Rogers v. Tennessee*, 532 U.S. 451 (2001).

27. *United States v. Booker*, 543 U.S. 220 (2005).

28. *United States v. Jamison*, 416 F.3d 538 (7th Cir. 2005).

committed a crime or is about to commit a crime. Certain stops and searches may be justified without a showing of probable cause, however, such as brief questioning when police observe unusual conduct that leads to a reasonable suspicion of criminal activity.

In general, an arrest warrant is required only for arrests in the suspect's own home or in another person's home. The Fourth Amendment does not require that a warrant be obtained prior to an arrest in a public place when the officer has reasonable suspicion to believe a felony has been committed by the individual or when a misdemeanor has been committed in the officer's presence. In determining what is "reasonable suspicion," the Supreme Court has deemed nervous, evasive behavior on the part of the suspect to be relevant. For example, the Court held that an arrest made by police officers patrolling a high-crime area was reasonable when the suspect fled after spotting the officers.²⁹ Stating that headlong flight is a "consummate act of evasion," the Court reasoned that "determination of reasonable suspicion must be based on common sense judgments and inferences about human behavior."

The Search Warrant Requirement

The Fourth Amendment prohibits only "unreasonable searches and seizures" without a search warrant. The courts have wrestled with defining what is "unreasonable" and what constitutes a "search."

Reasonable and Unreasonable Expectations of Privacy: The Katz Test A touchstone of the Supreme Court's analysis in Fourth Amendment cases is whether the individual has a reasonable expectation of privacy under the circumstances. In the Court's landmark Fourth Amendment case *United States v. Katz*,³⁰ Justice John Marshall Harlan's concurring opinion framed the issue as follows: Has government action intruded upon an individual's subjective expectation of privacy? If so, is that expectation one that society deems reasonable? If, on the one hand, an individual has a subjective privacy expectation that society deems reasonable, then the police are not entitled to conduct a search or seizure without first obtaining a warrant. Conducting a warrantless search or seizure under those circumstances would be deemed "unreasonable" and a violation of the Fourth Amendment under the *Katz* test. If, on the other hand, the person being searched does not have a subjective expectation of privacy or has an expectation that society would not consider objectively reasonable, then no warrant is required.

29. Illinois v. Wardlow, 528 U.S. 119 (2000).

30. 389 U.S. 347 (1967).

In such a case, a warrantless search would not be considered "unreasonable."

In applying this framework, courts have held that a citizen's interest in freedom from governmental intrusions is particularly strong in his or her private home—a person clearly has a reasonable expectation of privacy there. In places open to the public (such as a business office), law enforcement has been given broader scope. Thus, the Court permitted a warrantless search of garbage cans placed at curbside for collection where the garbage was readily accessible to animals and strangers, including the trash haulers who could have sorted through it before commingling it with garbage collected from other dwellings. Similarly, the Supreme Court permitted warrantless searches of business offices when the government agent entered during business hours and observed whatever was visible to customers or the public from the public areas of the premises. No search warrant is required for government officials to search an individual's bank deposit records either. An individual lowers the expectation of privacy by revealing his or her affairs to the bank and assumes the risk that the information will be revealed to the government.

Other well-established exceptions to the search warrant requirement are (1) a search incident to a lawful arrest, (2) a search of an automobile if there is probable cause to believe evidence of a crime will be found, (3) search and seizure of anything discovered by police in plain view if the officers are legitimately on the premises, (4) a stop and frisk of a suspect if the officer reasonably believes the suspect is dangerous, (5) a search when the owner or a person who appears to have authority voluntarily and intelligently consents to the search, and (6) any instance when the police are in "hot pursuit" or when the evidence may disappear before a warrant can be obtained (e.g., blood samples containing alcohol). If a person is validly arrested, the officer has the authority to search the arrestee and the area immediately within the arrestee's control to protect the officer's safety.

The Supreme Court has drawn a line between visual inspection and tactile examination, however. A border patrol officer cannot touch or squeeze a bus passenger's carry-on bag placed in the overhead rack, even though other passengers might also be expected to touch the bag.³¹

Suspicionless Drug Testing and Administrative Searches In general, a search or seizure is unreasonable "in the absence of individualized suspicion of wrongdoing."³² Nonetheless, the Supreme Court has upheld "certain regimes of suspicionless searches where the program was designed to serve 'special needs, beyond the normal need

31. Bond v. United States, 529 U.S. 334 (2000).

32. City of Indianapolis v. Edmond, 531 U.S. 32 (2000).

for law enforcement.”³³ These include the random drug testing of student-athletes,³⁴ U.S. Customs Service employees seeking transfer or promotion to certain positions,³⁵ and railway employees involved in train accidents or found to be in violation of particular safety regulations.³⁶ Conversely, the Supreme Court struck down the mandatory drug testing of candidates for high state office in Georgia after noting that these officials typically did not perform high-risk, safety-sensitive tasks and that the statute was not enacted in response to any fear or suspicion of drug use by state officials.³⁷ It also rejected the “special needs” argument after finding that a program testing pregnant women for drugs without their consent, with positive results turned over to the police, primarily served law enforcement aims.³⁸

The Court has also upheld suspicionless searches for certain administrative purposes, including inspections of fire-damaged structures to determine the cause of a blaze,³⁹ buildings to ensure compliance with a city housing code,⁴⁰ and the premises of a “closely regulated” business.⁴¹ A warrantless inspection of a closely regulated business will be reasonable only if (1) there is a “substantial” government interest that informs the regulatory scheme pursuant to which the inspection is made; (2) the warrantless inspections are necessary to further the regulatory scheme; and (3) the inspection program, in terms of the certainty and regularity of its application, provides a constitutionally adequate substitute for a warrant.⁴²

Searches Employing New Technology The framers of the Fourth Amendment protections could not have conceived of the technological tools at the disposal of today’s law enforcement agencies. As a result, it has been the duty of the courts to apply those protections in a modern, technologically sophisticated context. The seminal *Katz* decision involved the government’s use of an electronic bug on the outside of a pay-phone booth. The Supreme Court ruled this mode of surveillance unconstitutional without a warrant.

41. *New York v. Burger*, 482 U.S. 691 (1987).

42. *United States v. Argent Chem. Labs., Inc.*, 93 F.3d 572 (9th Cir. 1996).

More than thirty years later, in *Kyllo v. United States*,⁴³ the Court ruled that police may not use infrared thermal-image scanners to scan homes without a warrant. The scanners reveal artificial heat sources, such as heat being released from grow lights for hidden marijuana crops. The Court characterized “the right of a man to retreat into his own home and there be free from unreasonable governmental intrusion” as being at “the very core” of the Fourth Amendment. Thus, “[i]n the home . . . all details are intimate details, because the entire area is held safe from prying government eyes.” Recognizing that future technology may make it possible to literally see through the walls of a dwelling and stressing the importance of drawing not only a firm but also a “bright” line at the entrance to the house, the Court ruled, “Where, as here, the Government uses a device that is not in general public use, to explore details of the home that would previously have been unknowable without physical intrusion, the surveillance is a ‘search’ and is presumptively unreasonable without a warrant.”

The dissent argued that there is “a distinction of constitutional magnitude” between through-the-wall surveillance that gives the observer or listener direct access to information in a private area, on the one hand, and the thought processes used to draw inferences from information in the public domain obtained from off-the-wall surveillance on the other hand. The thermal-imaging device detected only the heat emitted from the exterior of the house, which could have been observed by a neighbor or passerby. As such, the dissent argued, use of the device did not amount to a search and was “perfectly reasonable.”

A more contested issue is whether police may obtain, without a warrant, the names and electronic addresses of the persons to whom a defendant has sent e-mail. Law enforcement personnel argue that this is equivalent to obtaining pen registers listing telephone calls, which are available without a warrant. Defense lawyers and privacy advocates claim that an e-mail list is far more intrusive and revealing because the names and addresses convey much more information than a series of telephone numbers.

Traffic Stops and Checkpoints The Supreme Court has given police broad scope to stop motorists suspected of traffic violations. If a police officer makes a traffic stop based on an objective belief that there is probable cause to believe a traffic violation has occurred, then it is irrelevant that the police officer might have used the violation only as a pretext to stop the car.⁴⁴ Police officers need not inform

43. 533 U.S. 27 (2001).

44. *Whren v. United States*, 517 U.S. 806 (1996).

detained drivers that they are “legally free to go” before asking for consent to search their vehicles.⁴⁵ A police officer may order passengers out of a vehicle during the course of a traffic stop,⁴⁶ but the police cannot conduct a full car search after issuing a routine traffic citation unless the driver consents.⁴⁷ If the vehicle’s occupants are arrested, however, then officers may lawfully search the arrestees as well as the area within their immediate reach during the arrest to ensure both the officers’ safety and the preservation of evidence.⁴⁸ Once the scene is secure and the arrested individuals pose no threat to the officers or evidence, however, a warrant may be required before a broader search, including a search of the interior of the car, may be conducted.⁴⁹

Recognizing the government’s interest in policing the nation’s borders and intercepting illegal aliens, the Supreme Court upheld brief, suspicionless seizures of motorists at two fixed Border Control checkpoints located on major U.S. highways less than one hundred miles from the Mexican border.⁵⁰ The Supreme Court also upheld highway sobriety checkpoints designed to detect signs of intoxication and to remove impaired drivers from the road.⁵¹ Checkpoints tailored to find witnesses to a particular criminal incident are permissible as well.⁵²

But the Court struck down highway checkpoints aimed at the discovery and interdiction of illegal narcotics: “When law enforcement authorities pursue primarily general crime control purposes at checkpoints . . . , stops can only be justified by some quantum of individualized suspicion.”⁵³ The Court distinguished between sobriety checkpoints to protect the public from an “immediate, vehicle-bound threat of life and limb” and narcotics stops “justified only by the generalized and ever-present possibility that interrogation and inspection may reveal that any given motorist has committed a crime.” The Court made it clear that sobriety checkpoints, border searches, searches at airports and government buildings, and “roadblocks set up to thwart imminent terrorist attack or to catch a dangerous criminal who is likely to flee by way of a particular route” were not prohibited. The Court left open the legality of a checkpoint program

52. *Illinois v. Lidser*, 540 U.S. 419 (2004).

53. *City of Indianapolis v. Edmond*, 531 U.S. 32 (2000).

with the primary purpose of checking driver’s licenses and a secondary purpose of interdicting narcotics.

In a subsequent case, the Supreme Court held that a suspicionless search outside a car by a drug-detection dog during a lawful traffic stop for speeding that revealed the presence of marijuana was not a search subject to the Fourth Amendment.⁵⁴ Unlike the thermal-imaging device at issue in *Kyllo*, which could have detected lawful activity within the home—including “at what hour each night the lady of the house takes her daily sauna and bath”—a well-trained narcotics-detection dog’s sniff and alert reveal “no information other than the location of a substance that no individual has any right to possess.”

Obtaining a Search Warrant

When a search warrant is required, a law enforcement agent must persuade a “neutral and detached” magistrate that a search is justified. The rights of private citizens are protected by the requirement that a magistrate, rather than a law enforcement agent, determine whether probable cause exists for the search.

A valid search warrant must (1) be based on probable cause, (2) be supported by an oath or affirmation, and (3) describe in specific detail (with particularity) what is to be searched or seized. Probable cause is determined by the totality of the circumstances, balancing the privacy rights of the individual against the government’s law enforcement needs.

When government authorities obtain a warrant to conduct a physical search of a business, the scope of the search typically must have some limits. To obtain a broad warrant to conduct a sweeping raid of a company, the government must show that the company is “pervaded by fraud.” The “pervaded by fraud” exception applies only to companies that are little more than “boiler room” sales operations engaged only negligibly in legitimate business activities.⁵⁵

THE EXCLUSIONARY RULE

The *exclusionary rule* is virtually unique to the U.S. legal system. It generally prohibits the introduction in a criminal trial of evidence that was obtained by an illegal search or seizure in violation of the Fourth Amendment (or in violation of the Fifth Amendment’s ban on self-incrimination, discussed below). Illegal evidence includes evidence found when the search went beyond the scope of the warrant, evidence gathered without a warrant when a warrant was required, and evidence acquired

54. *Illinois v. Caballes*, 543 U.S. 405 (2005).

55. *In re Grand Jury Investigation Concerning Solid State Devices, Inc.*, 130 F.3d 853 (9th Cir. 1997).

directly or indirectly as a result of an illegal search, arrest, or interrogation (called *fruit of the poisonous tree*).

The exclusionary rule is often criticized in the media as simply a device to set guilty criminals free on a technicality. Supporters of the rule argue that it is necessary to protect personal freedom.

Exceptions to the Exclusionary Rule

The two most important exceptions to the exclusionary rule are the good faith exception and the inevitable discovery exception.

The *good faith exception* provides that evidence obtained by police in good faith will not be excluded from trial even if it was obtained in violation of the Fourth Amendment.⁵⁶ Because the exclusionary rule was designed to deter police misconduct, the Supreme Court reasoned that no deterrent purpose would be served by excluding evidence that the police acquired while acting in good faith. The good faith exception also covers errors made by court personnel. As a result, if police conduct an unconstitutional search relying on erroneous information from a court employee, the exclusionary rule will not apply.

The *inevitable discovery exception* provides that illegally obtained evidence can lawfully be introduced at trial if it can be shown that the evidence would inevitably have been found by other legal means.⁵⁷ For example, *United States v. Pimentel*⁵⁸ involved Duroyd Manufacturing Company, a defense contractor that falsified documents and charges to the Defense Department. Evidence of this fraud was contained in a letter to Duroyd from one of its subcontractors, which the government obtained in an illegal search. The court denied Duroyd's request to exclude the letter from evidence. Because the contract gave

the Defense Department's auditors the right to examine all "books, records, documents and other evidence . . . sufficient to reflect properly all direct and indirect costs . . . incurred for the performance of this contract," the court concluded that this letter would inevitably have been discovered.

FIFTH AMENDMENT PROTECTIONS

The Fifth Amendment prohibits forced self-incrimination, double jeopardy, and criminal conviction without due process of law.

Protection Against Self-Incrimination

The Fifth Amendment provides that no person "shall be compelled in any criminal case to be a witness against himself." This protection against self-incrimination extends to the preliminary stages in the criminal process as well as the trial itself. In the landmark self-incrimination case decided in 1966, *Miranda v. Arizona*,⁵⁹ the Supreme Court ruled that a statement made by a defendant in custody is admissible only if the defendant was informed prior to police interrogation of his or her constitutional right to remain silent and to have counsel present. These warnings are referred to as the *Miranda warnings*. More than three decades later, the Supreme Court invalidated a federal statute⁶⁰ that purported to overrule the *Miranda* rule,⁶¹ reasoning that "*Miranda's* constitutional character prevailed against a federal statute that sought to restore the old regime of giving no warnings and litigating most statements' voluntariness."⁶²

In the following case, the Supreme Court considered the constitutionality of the police practice of question first, warn later.

61. *Dickerson v. United States*, 530 U.S. 428 (2000).

62. *Missouri v. Seibert*, 542 U.S. 600 (2004).

A CASE IN POINT

CASE 15.1

MISSOURI V. SEIBERT

SUPREME COURT OF THE
UNITED STATES
542 U.S. 600 (2004).

SUMMARY

FACTS Patrice Seibert's son, who had cerebral palsy, died in his sleep. Concerned that Seibert would be accused of neglecting her son, Seibert's other sons and their friends plotted with her to burn down their mobile home in order to make it look as though her son had died in the fire. As part of the plan, Donald, an eighteen-year-old mentally challenged boy who was living with the Seiberts, was left in the mobile home when it was set on fire so that Seibert's son would not appear to have been alone. Donald died in the fire. An officer questioned Seibert for an estimated thirty to forty minutes before informing her of her rights. After she confessed, the officer read her the *Miranda* warnings, which she signed; subsequently, she confessed again. Seibert was found guilty of second-degree murder in a Missouri state court that admitted the post-*Miranda* confession but

CONTINUED

not the pre-*Miranda* confession. The Missouri Supreme Court overturned the conviction, and the State of Missouri appealed.

ISSUE PRESENTED Does purposefully waiting to provide a *Miranda* warning until the middle of an interrogation violate the accused's *Miranda* rights?

SUMMARY OF OPINION The U.S. Supreme Court upheld the decision of the Missouri Supreme Court and ruled that Seibert's postwarning statements were inadmissible. The midstream recitation of warnings after an interrogation and unwarned confession did not comply with *Miranda*'s constitutional warning requirement. The Supreme Court explained:

Question-first's object . . . is to render *Miranda* warnings ineffective by waiting to give them until after the suspect has already confessed. The threshold question in this situation is whether it would be reasonable to find that the warnings could function "effectively" as *Miranda* requires. There is no doubt about the answer. By any objective measure, it is likely that warnings withheld until after interrogation and confession will be ineffective in preparing a suspect for successive interrogation, close in time and similar in content. The manifest purpose of question-first is to get a confession the suspect would not make if he understood his rights at the outset. When the warnings are inserted in the midst of coordinated and continuing interrogation, they are likely to mislead and deprive a defendant of knowledge essential to his ability to understand the nature of his rights and the consequences of abandoning them. And it would be unrealistic to treat two spates of integrated and proximately conducted questioning as independent interrogations subject to independent evaluation simply because *Miranda* warnings formally punctuate them in the middle.

Unlike the situation in *Oregon v. Elstad*,⁶³ when the police mistakenly forgot to read an accused his *Miranda* rights, the police in this case consciously chose to wait until the suspect had confessed before reading her rights.

RESULT Patrice Seibert's post-*Miranda* warning confession was inadmissible in court. Her conviction was overturned.

COMMENTS Justice Breyer concurred with the majority decision, writing: "In my view, the following simple rule should apply to the two-stage interrogation technique: Courts should exclude the 'fruits' of the initial unwarned questioning unless the failure to warn was in good faith." Justices O'Connor, Scalia, and Thomas dissented.

63. 470 U.S. 298 (1985).

The Fifth Amendment privilege against self-incrimination applies only to compelled testimonial evidence. Requiring defendants to provide tangible evidence such as fingerprints, body fluids (urine and blood), or voice or handwriting samples does not violate the Fifth Amendment prohibition against self-incrimination. Requiring a person to appear in a lineup also does not violate the privilege.

The privilege does not extend to investigations by certain self-regulatory organizations, such as the Financial Industry Regulatory Authority (FINRA), which is the private body authorized by the Securities and Exchange Commission (SEC) to regulate securities broker-dealers and registered

representatives.⁶⁴ As a condition of membership, securities firms and professionals must agree to give on-the-record testimony whenever requested by FINRA. FINRA can bar individuals and firms from the securities business if they refuse to appear and testify. But if a FINRA investigation becomes too intertwined with an investigation by the SEC,

64. See D.L. Cromwell Invs., Inc v. NASD Regulation, Inc., 279 F.3d 155 (2d Cir. 2002) (holding that the National Association of Securities Dealers (NASD), predecessor to FINRA, did not engage in state action when requiring testimony even though the respondent faced a parallel criminal investigation).

creating such a “close nexus” that seemingly private behavior may be treated as that of the state,⁶⁵ then the privilege against self-incrimination may apply.⁶⁶

Business Records and Papers and the Collective Entity Doctrine The Fifth Amendment protection for business records and papers is very limited. Corporations (and other business entities) enjoy no protection. Under the *collective entity doctrine*, the Supreme Court has held that the custodian of records for a collective entity (such as a corporation) may not resist a subpoena for such records on the ground that the act of production will incriminate him or her.⁶⁷ Nonetheless, the custodian cannot be compelled to testify as to the contents of the documents if that testimony would incriminate him or her personally.

The Fifth Amendment privilege may not be invoked to resist compliance with a regulatory regime, as long as that regime is designed with a public purpose unrelated to the enforcement of criminal laws.⁶⁸ Thus, when government regulations require a business to keep certain records, those records can be used against the reporting individual in a criminal prosecution.

The business records compiled by a sole proprietor may have some protection if the government cannot authenticate the documents without the proprietor. In that case, the act of furnishing the documents may have the qualities of self-incriminating testimony.⁶⁹ In short, although a person can be required to hand over specified documents, he or she cannot be required to assist in identifying sources of information.⁷⁰

Foreign Prosecutions A witness in a U.S. proceeding who is not facing prosecution in the United States may not invoke the privilege to avoid having to give testimony that might incriminate the witness in another country, unless the other sovereign is itself bound by the privilege.⁷¹ The

Supreme Court has left open the question of whether the privilege against self-incrimination may be asserted if the cooperation between the United States and another country has reached a point at which prosecution in the other country could not fairly be characterized as “foreign.”

No Double Jeopardy

The *Double Jeopardy Clause* of the Fifth Amendment protects criminal defendants from multiple prosecutions for the same offense. If the defendant is found not guilty, then the defendant is cleared of all charges, and the prosecutor may not appeal the verdict. If the defendant is found guilty, however, the defendant can appeal. Double jeopardy does not bar a second prosecution if the first proceeding ended in a hung jury or if a guilty verdict was reversed on appeal.

There are important limitations on the protection against double jeopardy. A single criminal act may result in several statutory violations for which the defendant may be prosecuted even if each prosecution is based on the same set of facts. For example, if the defendant operated a securities scam, a prosecutor could bring criminal charges for securities law violations, wire and mail fraud, false statements, and tax evasion. The Double Jeopardy Clause also does not protect against prosecutions by different governments (such as state and federal) based on the same underlying facts. Thus, after the two police officers who beat Rodney King in 1991 were acquitted on California state criminal charges, spawning the 1992 Los Angeles riots, they could still be tried and convicted one year later on federal charges for violating King’s civil rights.

Finally, the prohibition against double jeopardy does not preclude a civil suit against a criminal defendant by the victim. Thus, although O.J. Simpson was acquitted on criminal murder charges in 1996, the families of his alleged victims were still able to secure multimillion-dollar monetary judgments against Simpson in a 1997 civil trial.

Civil and Criminal Prosecutions by the Government The government often seeks both civil sanctions (such as fines) and criminal punishment for the same illegal conduct. The Double Jeopardy Clause protects only against the imposition of multiple *criminal* punishments for the same offense. Legislative intent is the guiding factor in determining whether a particular penalty is “civil” or “criminal.” When the legislature has indicated an intention to establish a civil sanction, courts should rarely transform it into a criminal penalty for double jeopardy purposes.⁷²

70. *United States v. Hubbell*, 530 U.S. 27 (2000) (holding that “the constitutional privilege against self-incrimination protects the target of a grand jury investigation from being compelled to answer questions designed to elicit information about the existence of sources of potentially incriminating evidence”).

71. *United States v. Balsys*, 524 U.S. 666 (1998).

72. *Hudson v. United States*, 522 U.S. 93 (1997).

Bar on Use of Involuntary Confessions

When the conduct of law enforcement officials in obtaining a confession is outrageous or shocking, the *Due Process Clauses* of the Fifth and Fourteenth Amendments bar the government from using the involuntary confession, even if the *Miranda* warnings were given. For example, physical coercion or brutality invalidates a confession. In contrast, the courts have usually held that misleading or false verbal statements that induce the suspect to confess are not grounds for invalidating the confession, unless the statements rise to the level of unduly coercive threats.

A Florida appeals court invalidated a confession elicited through the use of fabricated (and false) laboratory reports linking the defendant to the crime.⁷³ Other courts, however, have indicated that there is no “bright line” that dictates that all uses of false documents are unconstitutional. These courts have held that confessions similarly obtained were in fact “voluntary,” after considering the “totality of the circumstances.”⁷⁴

Before a confession of guilt will be admitted into evidence, the trial judge must determine whether the confession was voluntarily made, as required by the Due Process Clauses. Nonetheless, the erroneous admission at trial of a coerced confession will not always automatically require that the conviction be overturned.⁷⁵

SIXTH AMENDMENT PROTECTIONS

The Sixth Amendment grants the criminal defendant a number of procedural protections, including a right to counsel and to a trial by jury.

Assistance of Counsel

The defendant in most criminal prosecutions has the right “to have the Assistance of Counsel.” This means, first, that the accused has the right to his or her own attorney. If the defendant cannot afford an attorney, he or she is entitled to a court-appointed attorney. Second, once taken into custody, the accused must be informed of his or her right to counsel as part of the *Miranda* warnings. Third, the assistance of counsel must be effective, that is, within the range of competence required of attorneys in criminal cases. In practice, counsel is presumed to be effective; only in outrageous cases is counsel considered ineffective. Fourth, an attorney must be appointed for an appeal of a verdict.

73. Florida v. Cayward, 552 So. 2d 971 (Fla. App. 1989).

74. See, e.g., Sheriff, Washoe County v. Bessey, 914 P.2d 681 (Nev. 1996); Arthur v. Virginia, 480 S.E.2d 749 (Va. App. 1997); Lincoln v. Maryland, 882 A.2d 944 (Md. Ct. Spec. App. 2005).

75. See Arizona v. Fulminante, 499 U.S. 279 (1991) (holding that the harmless error test applies to determine whether conviction must be overturned).

Jury Trial

Most defendants in criminal cases have the right to a jury trial. Jury trials are not required in cases in which the authorized punishment for the charged offense is six months or less. A jury is also not required in juvenile proceedings. State court juries consist of six to twelve individuals, with a minimum of six jurors. Federal courts have twelve jurors. To render a verdict in a federal criminal trial, the jury must reach a unanimous decision. Juries of six in state courts must also be unanimous in order to render a verdict in a criminal case, but the U.S. Supreme Court has not ruled on juries of seven or more. Application of the Sixth Amendment right to a jury trial to sentencing is discussed later in the chapter.

Other Procedural Rights

The Sixth Amendment also guarantees the right to a speedy trial and the right to confront and cross-examine witnesses. The latter, which is embodied in the *Confrontation Clause*, can limit the prosecution’s ability to introduce prior statements by witnesses not subject to cross-examination at trial.⁷⁶

EIGHTH AMENDMENT PROTECTIONS

The Eighth Amendment prohibits cruel and unusual punishment. Although the U.S. Supreme Court has repeatedly upheld the death penalty in cases involving murder, it ruled in a five-to-four decision in 2008 that a defendant convicted of raping his eight-year-old stepdaughter could not be executed.⁷⁷ The Court stated that the death penalty was available only in cases involving murder and crimes against the state, such as treason, espionage, and terrorism. In an opinion by Justice Kennedy, joined by Justices Stevens, Souter, Ginsburg, and Breyer, the Court recognized the “hurt and horror” suffered by child rape victims but cautioned, “When the law punishes by death, it risks its own sudden descent into brutality, transgressing the constitutional commitment to decency and restraint.”

NONCONSTITUTIONAL PROTECTIONS

In a criminal prosecution, the prosecutor is obligated to share certain evidence with the defendant, including all evidence that the defendant specifically requests and any exculpatory evidence regardless of whether the defendant has requested it. To neutralize the natural advantage of the state against the individual defendant, more requirements to reveal evidence

76. Crawford v. Washington, 541 U.S. 36 (2004).

77. Kennedy v. Louisiana, 128 S. Ct. 2641 (2008).

INTERNATIONAL SNAPSHOT

In China, more than sixty different crimes carry the death penalty. Amnesty International reported that the country executed 1,770 convicts in 2005. Other sources estimate that the actual number of annual executions in China may be as high as 10,000.

In China, the death penalty is not reserved for heinous physical crimes. Economic crimes, including tax fraud and bribery, are also punishable by death. In 2007, the Chinese government executed Wang Zhendong, chair of a company that took \$385 million from the public through a Ponzi scheme, as well as two mid-level professionals at the China Construction Bank who were convicted of a \$52 million fraud. Other white-collar criminals have been convicted and sentenced to death, but they remain imprisoned. They include oil executive Li Rongxing, who embezzled more than \$4 million and took more than \$600,000 in bribes, and former Bank of China CEO Liu Jinbao, who was found guilty of taking \$173,000 in bribes and embezzling another \$2.7 million. Even regulators are not exempt from the harshest of punishments. Zheng Xiaoyu, a former food and drug official, was executed in 2007 after being convicted of accepting bribes from pharmaceutical companies. Xiao Yang, President of the Supreme People's Court, defended his country's liberal use of the death penalty: "It is necessary to use the death penalty in China to punish criminals who commit extremely serious crimes in order to safeguard state security, public interests, and smooth operation of economic construction."

Sources: Al Lewis, *In China, Execution Is Critical*, DENVER POST, July 17, 2007, at C1; Ariana Eunjung Cha, *Art Fraud Yields Death Sentence*, WASH. POST, Mar. 20, 2007, at D1; and Keith Bradsher, *A Chinese Banker Is Convicted, and a Message Is Sent*, N.Y. TIMES, Aug. 13, 2005, at 2.

are imposed on the prosecutor than on the defendant. Nonetheless, the defendant may be required to reveal certain information to the prosecutor, such as statements made by witnesses who have testified in a sworn statement.

ATTORNEY-CLIENT PRIVILEGE

The communications between a criminal defendant and his or her attorney are protected from disclosure by the attorney-client privilege, which was discussed in detail in Chapter 3. When criminal charges are brought against a corporate employee who is represented by a lawyer paid by the corporation, it may be unclear to whom the attorney-client privilege belongs. Is the client the employee charged with the offense, the corporation that is paying the lawyer, or both? In general, a client must establish a relationship with the attorney for

the attorney-client privilege to apply. Thus, if the employee wants to be treated as the client, the employee should obtain an engagement letter from the attorney that expressly states that the employee is the client even though the employer is paying the attorney's fees. In-house counsel investigating possible violations of law usually represent the corporation, not the individual employees who might be questioned by counsel. As discussed further below, a willingness to waive the attorney-client privilege has become an important bargaining chip for firms facing a possible indictment or sentencing.

FEDERAL SENTENCING GUIDELINES

Congress created the U.S. Sentencing Commission, an independent agency in the judicial branch, to provide an honest, fair, and effective federal sentencing system that would impose reasonably uniform sentences for similar criminal offenses committed by similar offenders. The Sentencing Commission established the Federal Sentencing Guidelines (the Guidelines), which created categories of "offense behavior" and "offender characteristics." A sentencing court was required to select a sentence (up to the maximum authorized by statute for each federal crime) from within the Guidelines ranges specified by the combined categories. In unusual cases, a court was permitted to depart from the Guidelines, but it had to specify reasons for the departure. As explained earlier, the U.S. Supreme Court struck down the mandatory character of the Guidelines in 2005, holding that judges may depart from the Guidelines in the unusual case when there is an aggravating or mitigating circumstance not adequately taken into consideration by the Sentencing Commission.⁷⁸ The Court pointed out, however, that "[i]n

78. United States v. Booker, 543 U.S. 220 (2005) (holding that the mandatory nature of the Guidelines violated the Sixth Amendment right to be found guilty by a jury only upon proof beyond a reasonable doubt of all elements of the crime charged). See also Apprendi v. New Jersey, 530 U.S. 466 (2000) (holding that any fact—other than the existence of a prior conviction—that increases the penalty for a crime beyond the prescribed statutory minimum must be submitted to a jury and proved beyond a reasonable doubt). The *Booker* Court recognized "the authority of a judge to exercise broad discretion in imposing a sentence within a statutory range" and stated that "the defendant has no right to a jury determination of the facts that a judge deems relevant." Accordingly, merely advisory provisions that recommend, rather than require, the selection of particular sentences in response to different sets of facts would not violate the Sixth Amendment. To achieve this result, the Court severed and excised the provisions in the Sentencing Reform Act that made the Guidelines mandatory. Dissenting Justice Stevens called this a "creative remedy" that constituted an inappropriate "exercise of legislative, rather than judicial, power." 543 U.S. 220 (2005).

most cases, as a matter of law, the Commission will have adequately taken all relevant factors into account, and no departure will be legally permissible. In those instances, the judge is bound to impose a sentence within the Guidelines range.”⁷⁹ If the sentence comes up for review on appeal, the Supreme Court instructed the court of appeals to determine whether the sentence is unreasonable in light of a variety of mitigating and aggravating circumstances.

INDIVIDUALS

Congress abolished federal parole in 1984. Rather than permit a parole commission to decide how much of a sentence an offender will actually serve, an offender serves the full sentence imposed by the court, less approximately 15 percent for good behavior.

Under the Guidelines, individuals are sentenced to prison using offense levels, their criminal history, and other factors deemed relevant by the sentencing judge. For example, when sentencing a defendant convicted of garden-variety mail and wire fraud, the court would first consider the individual’s criminal history. For a perpetrator with no history, the base offense level is 6. The offense level is then increased depending on the amount of the loss. If the loss is more than \$400 million, then an increase of 30 levels is applied to arrive at a recommended base offense level of 36. An offense level of 36 would correspond to somewhere between 188 and 405 months in prison; for perpetrators with an extensive criminal history, the Guidelines would recommend sentences at the high end of the range. The recommended fine for individuals convicted of this offense level would be between a minimum of \$20,000 and a maximum of \$200,000.

ORGANIZATIONS

The Federal Sentencing Guidelines for Organizations, originally enacted in 1991, specify stiff fines for companies convicted of fraud, antitrust violations, and most types of corporate wrongdoing. According to the Sentencing Commission, the guidelines for organizations were “designed so that the sanctions imposed upon organizations and their agents . . . will provide just punishment, adequate deterrence, and incentives for organizations to maintain internal mechanisms for preventing, detecting and reporting criminal conduct.”⁸⁰

The Guidelines take a carrot-and-stick approach. The “stick” is that organizations are held liable for the criminal

actions of all their employees and agents. The “carrot” is that a company’s maintenance of a meaningful voluntary compliance program is deemed a mitigating factor that will reduce otherwise applicable fines.⁸¹ A company can also achieve significant mitigation of fines by cooperating with or self-reporting misconduct to authorities. Corporate directors risk violating their fiduciary duty of care if they fail to take advantage of all mitigation measures available under the Guidelines.⁸²

The Guidelines apply to all companies with two or more members but recognize that smaller organizations may have more informal compliance programs. They suggest that “[a]s appropriate, a large organization should encourage small organizations (especially those that have, or seek to have, a business relationship with the large organization) to implement effective compliance and ethics programs.”⁸³

Determining the Sentence

Exhibit 15.1 shows the steps involved in calculating the recommended fine for an organization convicted of a crime, and Exhibit 15.2 shows the tables used in the calculation. The first step in calculating the sentence for a particular crime is to determine the recommended base fine, which depends on the severity of the crime. For instance, money laundering is considered a more serious offense than price-fixing; thus, to the base fine for price-fixing is \$20,000 (offense level 10 in Exhibit 15.2), whereas the base fine for laundering money instruments (such as checks) is \$1.6 million (offense level 23). If this base fine is exceeded by either the organization’s gain or the victim’s (or society’s) loss from the crime, then that amount will supplant the base fine.

The second step is to adjust the base fine to reflect the culpability of the organization. The culpability score is used to determine minimum and maximum multipliers, as shown in the lower part of Exhibit 15.2. The base fine is then multiplied by the minimum and maximum multipliers to determine the recommended fine range. A culpability score starts at a baseline of five points out of ten. Points are then added or subtracted based on various criteria, including whether (1) management condoned or willfully ignored

the criminal misconduct, (2) management assisted authorities in their investigation, and (3) the organization had an effective compliance and ethics program in place at the time of the misconduct to not only prevent and detect criminal conduct but also facilitate compliance with all applicable laws. For example, the culpability score can be reduced by five points for timely and full cooperation and acceptance of responsibility.⁸⁴

Cooperation and Mitigation Under the 2004 version of the Guidelines, firms could be required to waive the attorney-client privilege and work-product protection to receive full credit for cooperation. Subsequently, the bar and business interest groups put significant pressure on Congress to create legislative protection for the privilege.⁸⁵ The Sentencing Commission removed the waiver requirement language from the amended Guidelines issued in 2006.⁸⁶

As mentioned earlier, the possibility of fine mitigation serves as a strong incentive for organizations to adopt and maintain effective compliance and ethics programs. Exhibit 15.3 sets forth the seven requirements that must be satisfied under the Guidelines (as amended as of November 1, 2006)

for mitigation due to the existence of an effective compliance and ethics program.⁸⁷

Letting Employees Take the Rap

When facing a criminal probe, corporations have increasingly responded to the Guidelines' encouragement to cooperate with authorities by winning leniency for themselves at the expense of their employees. Because the Guidelines call on corporations to apply "adequate discipline" to employees deemed responsible for criminal violations, a company has an incentive to isolate a small group of "fall guys," fire them, and cooperate with the federal government in their prosecution. This pattern frequently occurs even though it can often be difficult to determine who is really responsible for corporate crimes.⁸⁸

Although it may be appropriate to let a true "rogue" employee take the rap, under certain circumstances, scapegoating raises fundamental questions of fairness. William S. Laufer warns that scapegoating is most likely to result in "self-deception, denial of responsibility, and lack of repentance" when top management is complicit or middle management tacitly encourages employees to engage in wrongdoing in spite of a comprehensive compliance program, when senior executives and managers condoned

► ETHICAL CONSIDERATION

Is it ethical for a corporation to turn in some but not all of the managers who may have participated in criminal wrongdoing? Is it ethical to terminate executives during a criminal investigation but before charges have been brought?

the commission of the offense or consciously disregarded knowledge of the illegality, when the person being blamed is far subordinate to those cooperating with the government, and when the firm “purchases” the trappings of compliance to impress regulators.⁸⁹

LIABILITY FOR CRIMINAL ACTS

Liability may be imposed on the person who actually committed the crime, on that person’s supervisors, and on the corporation (or other entity) that employed the violator.

INDIVIDUAL LIABILITY

Individuals face direct liability for their own acts and, under certain circumstances, vicarious liability for the acts of others.

Direct Liability

If an officer, director, or employee commits a crime against the employer (such as theft, embezzlement, or forgery), that person will be prosecuted as an individual. Even when individuals commit crimes with the intent of trying to benefit the firm, they will still be prosecuted as individuals and held responsible for their acts. As discussed below, that person’s supervisor may also be held responsible.

If a supervisor asks an employee to commit an act that the employee suspects is criminal, the employee should bear two things in mind. First, if there is a criminal prosecution, it is not a valid defense for the employee to state that he or she was just following the orders of upper-level officers or directors of the corporation. Second, as discussed in Chapter 12, in the vast majority of jurisdictions, an employee cannot be terminated for refusing to commit a criminal act.

89. William S. Laufer, *Corporate Prosecution, Cooperation, and the Trading of Favors*, 87 IOWA L. REV. 653, 659–60 (2002).

E X H I B I T 1 5 . 3**Key Components of an Effective Corporate Compliance and Ethics Program**

To take advantage of the provisions in the Federal Sentencing Guidelines that reduce culpability for a company with an effective compliance and ethics program, a company must:

1. Establish compliance standards and procedures reasonably capable of reducing the prospect of criminal activity and otherwise promote an organizational culture that encourages ethical conduct and commitment to compliance with the law. A viable code of conduct is a good starting point.
2. Assign the board of directors the responsibility for overseeing the compliance effort. The company should assign a high-ranking person with adequate authority to be in charge of the program, to take “day-to-day operational responsibility,” and to report on the program at least annually to the board of directors.
3. Use due care in delegating authority. The company must not delegate substantial discretionary authority to individuals who have previously engaged in any criminal or unethical misconduct. The fox can’t guard the hen house.
4. Periodically, provide mandatory training to effectively communicate the standards to all employees and other agents. Training should include a discussion of the laws applicable to the business and focus on helping employees identify risk areas. A well-designed video can help ensure ongoing training about the standards. Good online training tools are available as well.
5. Adopt mechanisms for monitoring compliance with the standards and reporting criminal misconduct without fear of retribution. The company should provide an anonymous toll-free hotline or other mechanism for reporting that ensures anonymity or confidentiality to encourage reporting of misconduct.
6. Consistently enforce the standards through investigation and adequate discipline. The company must be willing to discipline violators through salary reduction, poor performance ratings, and termination of employment. When employees report misconduct, the company must take steps to respond. The company should also provide incentives to ensure compliance with the program.
7. Adopt procedures for feedback and correction. After an offense has been detected, the organization must take all reasonable steps to respond adequately to the offense and to prevent further offenses—including making any necessary modifications to its compliance program. Some sort of auditing or monitoring system should be in place to ensure the program is working.

Vicarious Liability

Vicarious liability (also called *imputed liability*) is the imposition of liability on one party for wrongs committed by another. Under the theory of vicarious liability, officers, directors, and managers may, under certain limited circumstances, be found guilty of a crime committed by employees under their supervision. Although the criminal statutes imposing vicarious liability on corporate officers usually require that the officer commit some wrongful act, failure to provide adequate supervision or to satisfy a duty imposed by the statute is typically sufficient to fulfill this requirement.

The more delicate issue is what kind of *mens rea*, or mental state, is required to find a corporate officer vicariously liable for a crime. In cases involving criminal vicarious liability, the crucial questions are most often, “How much did the manager know?” and “How much does the statute require that the manager know before he or she can be held criminally liable?”

Responsible Corporate Officer Doctrine Under the *responsible corporate officer doctrine*, a corporate officer may be found guilty of a crime if he or she bore a “responsible relation” to a violation of a statute dealing with “products

which may affect the health of customers,”⁹⁰ that is, if the officer had the power to prevent the violation and failed to do so. In applying this doctrine, it is important to remember that two different but interwoven issues are involved. The first is a vicarious liability issue: whether an officer bears responsibility for the actions of his or her subordinates. The second is a *mens rea* issue: whether the officer must have known about or intended the violation before he or she can be held personally criminally liable.

The Supreme Court applied the responsible corporate officer doctrine in *United States v. Park*.⁹¹ John Park was the CEO of Acme Markets, a national retail food chain that employed 36,000 people and operated 874 retail outlets. On two separate occasions, the Food and Drug Administration (FDA) had advised Park that the company was storing food in rodent-infested warehouses. Although Park had been told by a vice president that the problem had been taken care of after the first FDA visit, he failed to personally investigate

90. *United States v. Park*, 421 U.S. 658 (1975). *See also United States v. Dotterweich*, 320 U.S. 277 (1943) (holding that criminal sanctions can be imposed on the corporate officers who have a “responsible relation” to the offending acts of the corporation even in the absence of proof that the officers were conscious of the wrongdoing).

91. 421 U.S. 658 (1975).

Image not available due to copyright restrictions

even after the FDA visited a second time and again complained of rats in the warehouses.

Despite Acme's size and the multiple layers of authority between Park and the employees who had been instructed to eliminate the rodents in the warehouses, Park was found guilty as an individual of distributing "adulterated" food in violation of the Food, Drug and Cosmetic Act (FDCA), a misdemeanor punishable by a minimum fine of \$10,000 and imprisonment for up to one year. The Court noted that "Congress has seen fit to enforce the accountability of responsible corporate agents dealing with products which may affect the health of customers" by enacting "rigorous" penal sanctions. Corporate officers have a "duty to implement measures that will insure that violations will not occur"; in other words, the FDCA imposed "requirements of foresight and vigilance."

The responsible corporate officer doctrine is applied most frequently to strict liability offenses. When a statute requires that a defendant "knowingly" commit a wrongful act, courts have ruled that the responsible corporate officer doctrine cannot be used to convict officers unless there is direct or circumstantial proof of knowledge.⁹² For example, the Federal

Meat Inspection Act and certain environmental statutes, such as the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Resource Conservation and Recovery Act (RCRA) (discussed in Chapter 16), require that defendants knowingly commit wrongful acts before being found guilty. Even though these statutes clearly concern public health and safety, the appellate courts required a showing of knowledge.⁹³

In many circumstances, courts take a broad view of what constitutes knowledge, however, and do not require the government to prove that a defendant knew the specific legal details related to a violation.⁹⁴ The principle applies in the responsible corporate officer context as well. For example, the U.S. Court of Appeals for the Seventh Circuit ruled that to establish an RCRA violation, the government need not show that the defendant knew the offending material was hazardous waste as defined by Environmental Protection Agency regulations. It was sufficient that the defendant understood that the material "had the potential to be harmful to others or the environment, . . . the waste was not an innocuous substance."⁹⁵ Appellate courts have also held that knowledge may be inferred in appropriate circumstances.⁹⁶ For example, in *United States v. Self*,⁹⁷ the U.S. Court of Appeals for the Fifth Circuit stated: "[W]hile knowledge of prior illegal activity is not conclusive as to whether a defendant possessed the requisite knowledge of later illegal activity, it most certainly provides circumstantial evidence of the defendant's later knowledge from which the jury may draw the necessary inference."

Appellate courts have used the responsible corporate officer doctrine to impose fines under the Occupational Safety and Health Act⁹⁸ and the Radiation Control for Health and Safety Act.⁹⁹ Initially, the federal courts did not apply the doctrine to felony charges, and judges refused to impose lengthy sentences based on the doctrine. This changed in 2001 when the U.S. Court of Appeals for the Eleventh Circuit sentenced two defendants to stiff prison terms for violations of the Clean Water Act and RCRA by employees under their supervision.¹⁰⁰

92. See, e.g., *United States v. MacDonald & Watson Waste Oil Co.*, 933 F.2d 35 (1st Cir. 1991) ("[I]n a crime having knowledge as an express element, a mere showing of official responsibility . . . is not an adequate substitute for direct or circumstantial proof of knowledge."). Similarly, the U.S. District Court for the Western District of Missouri held that "something more than a mere status should be required before civil penalties are assessed against corporate officers for knowing violations of the [Federal Hazardous Substances Act]." *United States v. Shelton Wholesale, Inc.*, 1999 U.S. Dist. LEXIS 15980 (W.D. Mo. Sept. 21, 1999). But see *United States v. Int'l Minerals & Chem. Corp.*, 402 U.S. 558 (1971) (holding that officers of chemical company were "under a species of absolute liability for violation of the regulations [proscribing knowing failure to record shipment of chemicals] despite the 'knowingly' requirement").

93. See, e.g., *United States v. Agnew*, 931 F.2d 1397 (10th Cir. 1991).

94. See e.g., *United States v. Kung-Shou Ho*, 311 F.3d 589 (5th Cir. 2002).

95. *United States v. Kelly*, 167 F.3d 1176, 1179 (7th Cir. 1999).

96. See, e.g., *United States v. Johnson & Towers, Inc.*, 741 F.2d 662, 669–70 (3d Cir. 1984) (holding that "knowledge" in an RCRA criminal prosecution "may be inferred by the jury as to those individuals who hold the requisite responsible positions with the corporate defendant").

97. 2 F.3d 1071, 1087–88 (5th Cir. 1993).

98. See, e.g., *United States v. Doig*, 950 F.2d 411 (7th Cir. 1991).

99. See, e.g., *United States v. Hodges X-Ray, Inc.*, 759 F.2d 557 (6th Cir. 1985).

100. See, e.g., *Hansen v. United States*, 262 F.3d 1217 (11th Cir. 2001), cert. denied, 535 U.S. 1111 (2002) (Case 16.4).

The threat of a prison term can be a strong incentive for corporate actors to accept a plea bargain. In 2007, three Purdue Frederick executives charged pursuant to the responsible corporate officer doctrine with violating FDA regulations avoided jail time by pleading guilty to misdemeanor misbranding charges related to marketing of the company's OxyContin pain relief drug.¹⁰¹ The defendants agreed to pay a combined \$34.5 million in fines.

Impossibility Defense A corporate officer may escape liability if he or she did everything possible to ensure legal compliance, but the company was still unable to comply with the applicable standards. In these circumstances, the officer can argue the defense of impossibility. According to the U.S. Court of Appeals for the Second Circuit: "To establish the *impossibility defense*, the corporate officer must introduce evidence that he exercised extraordinary care and still could not prevent violations of the Act."¹⁰²

CORPORATE LIABILITY

Under the doctrine of *respondeat superior*, which means "let the superior give answer," a corporation (or other business entity) can be held liable for criminal offenses committed by its employees if the acts were committed within the scope of their employment (whether actual or apparent). (The application of *respondeat superior* in civil cases was discussed in Chapters 5 and 9.) Although a small minority of state courts have held that a corporation cannot be guilty of a non-strict liability crime—that is, a crime requiring a guilty mental state such as "knowledge" or "intent"—it is now the generally accepted rule that a corporation may be convicted of a crime (such as negligent homicide) for which a specific guilty mental state is essential. In such cases, the knowledge or intent of the corporation's employees and agents is imputed to the corporation.¹⁰³ For example, the Pennsylvania Superior Court held a bus company criminally liable for homicide by vehicle when a low-level employee, the driver of a school bus owned by the corporation, ran over and killed a six-year-old who was crossing in front of the bus.¹⁰⁴ The bus driver could not see the child because mirrors that were required by state statute were missing. In many cases, the legislature has clearly

101. *General Counsel to Pay \$8 M in OxyContin Flap*, CONN. L. TRIB., July 2, 2007, at 3.
102. United States v. Gel Spice Co., 773 F.2d 427 (2d Cir. 1985) (quoting United States v. New England Grocers Co., 488 F. Supp. 230 (D. Mass. 1980)) (emphasis added).
103. See, e.g., *Boise Dodge v. United States*, 51 F.3d 1390 (9th Cir. 1969); *Vaughn & Sons, Inc. v. State*, 737 S.W.2d 805 (Tex. Crim. App. 1987); 18 AM. JUR. 2d *Corporations* § 2137 (1985).
104. *Commonwealth v. McIlwain Sch. Bus Lines*, 423 A.2d 413 (Pa. Super. 1980).

indicated (either in the language of the statute or in legislative history) a desire to impose criminal liability on corporations; courts consistently enforce such legislative intent.¹⁰⁵ Judicial imputation is limited by the practical reality of a corporation's nature. For instance, because a corporation's intent is by definition that of its employees, it cannot engage in a conspiracy with only one employee.¹⁰⁶

In cases involving misdemeanor offenses or regulatory crimes, the well-established rule is that a corporation is criminally liable for all violations committed by any of its agents or employees.¹⁰⁷ Even in the case of felonies, the corporation will almost always be vicariously liable if upper management or the board of directors adopts a policy or issues instructions that cause an employee to violate the law. Even if an agent acted contrary to a corporate policy or express instructions, the corporation may still be criminally liable if the agent was acting within his or her apparent authority (and, in some states, at least in part for the benefit of the corporation).¹⁰⁸ For example, in *United States v. Potter*,¹⁰⁹ notwithstanding an executive's clear prohibition of the tactic, a manager of a gambling facility and dog track offered bribes to a state representative's law partner. The bribe was intended to influence the legislator's stance on proposed laws affecting the company. The U.S. Court of Appeals for the First Circuit upheld the conviction of the company, noting that the bribe had been offered for the benefit of the corporation by the manager responsible for maintaining relationships with local political figures.

As a practical matter, courts have been willing to impose liability upon the corporation if the agent's actions were at least "tolerated" by management.¹¹⁰ Typically, courts make this determination based on the totality of the circumstances surrounding the agent's actions. In one case,¹¹¹ Edwin Clancy, the president of defendant Penn Valley Resorts, agreed to provide dinner and an open bar for sixty undergraduate students from the State University of New York. A twenty-year-old minor became noticeably intoxicated, and en route back to the university, he caused an automobile accident in which

INTERNATIONAL SNAPSHOT

Many European nations do not recognize corporate criminal liability because (1) the corporation does not possess a guilty mind, (2) the corporation is not viewed as the real offender when a crime is committed, and (3) the corporation is not considered well suited for either punishment or rehabilitation. For example, the German constitution prohibits imposition of criminal liability on corporations. These countries focus instead on identifying and punishing the individuals responsible for the criminal acts.

he was killed. At the time of death, his blood alcohol content was .23; a level of .10 is normally considered sufficient to make a person intoxicated. The Pennsylvania Superior Court held that a corporation could be found criminally liable even if the corporation's board of directors did not condone the action. If the illegal conduct is performed or tolerated by a high managerial agent acting on behalf of the corporation within the scope of his or her office or employment, the corporation can be held criminally liable. The corporation's conviction for criminal involuntary manslaughter, reckless endangerment, and furnishing liquor to minors and visibly intoxicated persons was upheld.

Deciding Whether to Prosecute a Business Organization

Prosecutors have discretion when deciding whether to prosecute a corporation or other business entity. On December 12, 2006, Deputy Attorney General Paul J. McNulty issued revised "Principles of Federal Prosecution of Business

Organizations" (the *McNulty Memorandum*) to establish determinants to be used in deciding whether to prosecute a company. As discussed below, the factors were further revised by Deputy Attorney General Mark Filip in August 2008. The nine factors used to make this determination are set forth in Exhibit 15.4.

McNulty's predecessor, Larry Thompson, authored the previous guidance memorandum (the *Thompson Memorandum*) in 2003. A key and controversial factor that the Thompson Memorandum listed as appropriate to consider in determining whether a company cooperated was whether it waived its right to attorney-client privilege and work-product protection. The Thompson Memorandum provided:

Prosecutors may request a waiver in appropriate circumstances. The Department does not, however, consider a waiver of a corporation's attorney-client and work product protection an absolute requirement, and prosecutors should consider the willingness of a corporation to waive such protection when necessary to provide timely and complete information as one factor in evaluating the corporation's cooperation.¹¹²

As a result, corporations faced with significant criminal investigations often cooperated with the government by collecting and analyzing documents related to suspected criminal activity, interviewing employees, conducting costly and time-consuming internal investigations and forensic audits, and turning over the results of this work to

EXHIBIT 15.4

Factors Used by the Department of Justice to Decide Whether to Indict a Company

The factors federal prosecutors should consider in determining whether to charge a corporation are:

1. The nature and seriousness of the offense.
2. The pervasiveness of the wrongdoing within the corporation, including complicity or condonation by corporate management.
3. History of similar misconduct.
4. Timely and voluntary disclosure of the wrongdoing and willingness to cooperate.
5. The existence and adequacy of the corporation's pre-existing compliance program.
6. Remedial actions, including efforts to implement or improve a compliance program, replace responsible management, discipline or terminate wrongdoers, pay restitution, and cooperate with relevant government agencies.
7. Collateral consequences of criminal liability, including disproportionate harm to nonculpable persons.
8. The adequacy of the prosecution of individuals responsible for the corporation's malfeasance.
9. The adequacy of civil or regulatory remedies.

the government.¹¹³ In addition, companies often refused to support employees or officers who were believed to be the architects of the underlying improper conduct.¹¹⁴

In response to pressure from business interests and the defense bar, Senator Arlen Specter sponsored a bill in 2006 that would have prevented the federal government from requesting attorney-client privilege waivers from firms under investigation and from taking into account a firm's willingness to grant a waiver when deciding whether to prosecute.¹¹⁵ In an effort to preserve some use of the waiver as a investigative tool, McNulty revised the waiver provisions in the Thompson Memorandum in 2006 to make it clear that granting a waiver is not a prerequisite for determining that a company has cooperated with investigators.¹¹⁶ On August 28, 2008, Deputy Attorney General Mark R. Filip announced that credit for cooperation will not depend on the corporation's waiver of attorney-client or work product privileges but on voluntary and timely disclosure of all relevant

facts.¹¹⁷ Although corporations are free to waive privilege, the revised principles direct prosecutors not to request waivers of non-factual or "core" attorney-client communications or work product. They also instruct prosecutors not to consider the corporation's advancement of employees' legal fees or its participation in a joint defense agreement when evaluating cooperativeness. Specter acknowledged that the revisions were "a step in the right direction," but claimed that legislation was still necessary.¹¹⁸

WHITE-COLLAR CRIME

White-collar crime is violation of the law by a corporation (or other business entity) or one of its managers. White-collar employees—that is, managers or professionals—may be either the victims or the perpetrators of crime. Most white-collar crime is nonviolent.

Many white-collar criminal statutes do not have a *mens rea* requirement. It is, therefore, possible to commit a crime

IN BRIEF

Liability for Criminal Actions

Type of Defendant	Standard for Liability
Individual	An individual can perpetrate a crime against the corporate employer (e.g., embezzlement) or for the benefit of the corporation (e.g., price-fixing). The individual must have performed <i>actus reus</i> (criminal act) with <i>mens rea</i> (guilty mind).
Corporate officers	Officers can be directly liable for failing to supervise their subordinates. In addition to individual liability for their own acts, officers may, under certain limited circumstances, be vicariously liable for crimes committed by employees under their supervision. Under the responsible corporate officer doctrine, officers can be liable for criminal actions of their subordinates if the officer bore a "responsible relation" to the violation of law. Typically, the doctrine is limited to violations of strict liability statutes involving public health or safety where the officer is charged with a misdemeanor or the prosecution proves, through direct or circumstantial evidence, that the officer knew of the violation. Increasingly, courts are applying the doctrine to felonies requiring knowledge or intent.
Corporations (and other business entities)	<i>Respondeat superior</i> liability. A corporation is criminally liable for (1) all misdemeanor offenses and regulatory crimes committed by any of its agents or employees; (2) all crimes committed pursuant to top management's corporate policy or express instructions; and (3) all crimes committed by employees if the acts were committed (a) within the scope of their employment (whether actual or apparent and, in some states, also in furtherance of the corporation's business interests) or (b) were tolerated by top management.

in the corporate setting without having the intention of breaking the law.

CRIME AGAINST THE EMPLOYER

Examples of crimes committed by an employee against his or her employer include theft, embezzlement, fraud, acceptance of a bribe, and certain computer-related crimes.

Theft, technically known as *larceny*, is simply the taking of property without the owner's consent. White-collar theft ranges from taking home pens and paper from the office to stealing money through the company's computer system.

Embezzlement is the taking of money or property that is lawfully in the employee's possession by reason of his or her employment. For example, a company's treasurer who takes money that belongs to the company by writing checks to dummy accounts is guilty of embezzlement.

Fraud is any deception intended to induce someone to part with property or money. Fraud may involve a false representation of fact, whether by words or by conduct, or concealment of something that should have been disclosed. Examples of fraud include padding an expense account, submitting falsely inflated insurance reimbursement bills, and doctoring financial statements to influence the company's stock price.

Acceptance of a bribe may also be a crime against the employer. For example, a sales representative cannot legally accept a kickback from a purchaser of his or her employer's products. Similarly, a purchasing agent for a corporation must not accept a bribe from an outside salesperson.

Employees and outsiders may also commit a variety of computer crimes, including computer fraud, hacking, and transmitting viruses. These are discussed later in this chapter.

CRIMES PERPETRATED BY THE CORPORATION AND ITS AGENTS

Examples of crimes perpetrated by corporations (and other business entities) and employees or agents acting on their behalf include consumer fraud, securities fraud, tax evasion,

► ETHICAL CONSIDERATION

The line between accepting gifts and taking bribes is not always clear. For instance, if a data-processing manager will make the decision on the purchase of a mainframe computer, it is unethical or illegal for him or her to accept a percentage of the sales price of the computer from the seller. Some data-processing managers accept expensive meals, sports tickets, and other "perks" from computer salespersons. Is acceptance of such gifts ethical?

and environmental pollution. Corporations can also commit crimes against other corporations. Examples include price-fixing (discussed in Chapter 17) and misappropriation of trade secrets or violations of copyright or trade secret laws (discussed in Chapter 11).

The balance of this section is devoted to a description of the most common types of white-collar crimes. The maximum penalties for many of the most common types of white-collar crimes are listed in Exhibit 15.5. They are grouped by the public policies they further, as set out in Chapter 1.

Racketeering Under the Racketeer Influenced and Corrupt Organizations Act (RICO)

The Racketeer Influenced and Corrupt Organizations Act (RICO)¹¹⁹ was originally designed to combat organized crime and to provide an enforcement mechanism against syndicate bosses and masterminds who might otherwise escape liability. Today, the criminal provisions of RICO are one of a prosecutor's most powerful weapons for fighting classic white-collar crimes. RICO has proved particularly effective against groups of traders, brokers, and others who have developed a continuous relationship of passing and trading on inside information.

RICO prohibits (1) the investment in any enterprise of income derived from racketeering, (2) the acquisition of an interest in an enterprise through a pattern of racketeering activity, (3) participation in an enterprise through a pattern of racketeering activity involving at least two related predicate acts in a ten-year period, and (4) conspiring to engage in any of these activities.

RICO Requirements RICO broadly defines an *enterprise* as "any individual, partnership, corporation, association, or other legal entity, and any union or group of individuals associated in fact although not a legal entity." The enterprise need not be engaged in business or have profit as an aim.¹²⁰ Groups recognized by the courts as enterprises for RICO purposes include members of an anti-abortion group,¹²¹ People for the Ethical Treatment of Animals (PETA),¹²² and a street gang called the Nasty Boys.¹²³ *Racketeering activity* is defined to include various state and federal offenses, specifically including mail and wire fraud and fraud in the sale

EXHIBIT 15.5

Penalties for White-Collar Crime

OFFENSE	MAXIMUM FINE OR PENALTY	MAXIMUM SENTENCE	COMMENTS
Promote Economic Growth by Facilitating Capital Markets			
Failure to register nonexempt security offering (<i>Securities Act of 1933</i> , 15 U.S.C. § 77x)	\$10,000	5 years	Purchasers can recover damages equal to the difference between purchase price and fair market value at time of suit or, if securities have been sold, difference between purchase price and sale price.
Insider trading of securities (<i>Securities Exchange Act of 1934</i> , 15 U.S.C. § 78ff)	\$5 million for individuals and \$25 million for corporations for willful violations. SEC can also recover a civil fine of up to three times profit gained or loss avoided. Brokerage firms can be fined up to \$2.5 million if they “knew or recklessly disregarded” information that would indicate insider trading by employees.	20 years	Contemporaneous traders can recover damages equal to the amount of profit gained or loss avoided. Tippers and all direct and remote tippees are jointly and severally liable. Individuals whose tips to prosecutors result in insider trading convictions can recover bounty payments as high as 10% of fines and penalties paid by the defendant.
Securities fraud (<i>Securities Exchange Act of 1934</i> , 15 U.S.C. § 78ff, and Rule 10b-5)	\$5 million for individuals and \$25 million for corporations for willful violations	20 years	Private plaintiffs can recover damages equal to the difference between price paid to purchase or sell security and what would have been paid absent the fraud.
Public company securities fraud (<i>Sarbanes-Oxley Act of 2002</i> , 18 U.S.C. § 1348)	\$5 million for individuals and \$25 million for corporations for willful violations	25 years	
False certification of SEC periodic reports or financial statements by CEO or CFO (<i>Sarbanes-Oxley Act of 2002</i> , 18 U.S.C. § 1350)	\$1 million or \$5 million if executive acted willfully	10 years or 20 years if executive acted willfully	
Failure of accountants to keep audit documents and work papers for at least five years (<i>Sarbanes-Oxley Act of 2002</i> , 18 U.S.C. § 1520)	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims for knowing and willful violations	10 years for knowing and willful violations	
Promote Economic Growth by Giving Incentives to Innovate			
Copyright infringement (<i>Copyright Act</i> , 18 U.S.C. § 2319)	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims	5 years for first offense; 10 years for subsequent convictions	

CONTINUED

EXHIBIT 15.5

Penalties for White-Collar Crime (*Continued*)

OFFENSE	MAXIMUM FINE OR PENALTY	MAXIMUM SENTENCE	COMMENTS
Patent infringement <i>(Patent Act, 35 U.S.C. §§ 281, 283–285)</i>	No criminal penalties	No criminal penalties	Civil remedies include injunctions to protect against infringement and damages to compensate for infringement. A court may triple the amount of damages and in exceptional cases award attorneys' fees to prevailing party.
Misappropriation of trade secrets <i>(Economic Espionage Act, 18 U.S.C. § 1831)</i>	\$500,000 for an individual and \$10 million for corporation for intentional and knowing violations	15 years	
Protect Workers			
Willful violation of workplace safety laws resulting in death of an employee <i>(Occupational Safety and Health Act (OSH Act), 29 U.S.C. § 666)</i>	\$10,000 for first offender; \$20,000 for subsequent convictions	6 months for first offender; 12 months for subsequent convictions	
Willful violations of Employee Retirement Income Security Act (ERISA) <i>(Sarbanes–Oxley Act of 2002, 29 U.S.C. § 1131)</i>	\$100,000 for individuals; \$500,000 for organizations	10 years	
Retaliation against whistleblowers who report securities law violations to government agencies <i>(Sarbanes–Oxley Act of 2002, 18 U.S.C. § 1513)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims	10 years	Whistleblower can also sue to recover damages resulting from retaliatory acts.
Promote Consumer Welfare by Ensuring Safe Products and Services			
Sale of adulterated or misbranded food or drug <i>(Food, Drug and Cosmetic Act, 21 U.S.C. § 333)</i>	\$1,000 for first offenses without intent to defraud or mislead; \$10,000 for subsequent convictions or first offenses with intent to defraud or mislead	1 year for first offenses without intent to defraud or mislead; 3 years for subsequent convictions or first offenses with intent to defraud or mislead	
Sale of drug without required FDA approval <i>(Food, Drug and Cosmetic Act, 21 U.S.C. § 333)</i>	\$250,000 per violation for knowing violations	10 years for knowing violations

EXHIBIT 15.5

Penalties for White-Collar Crime (*Continued*)

OFFENSE	MAXIMUM FINE OR PENALTY	MAXIMUM SENTENCE	COMMENTS
Promote Consumer Welfare by Facilitating Low-Cost Goods and Services			
Price-fixing and other antitrust violations <i>(Sherman Act, 15 U.S.C. §§ 1–3)</i>	\$1 million fine per violation for individuals; \$100 million for corporations	10 years	
Promote Consumer Welfare by Facilitating Innovative Products and Services			
Payment of bribes or failure to have adequate internal accounting controls (<i>Foreign Corrupt Practices Act, 15 U.S.C. §§ 78dd-2</i>)	\$100,000 for individuals and \$2,000,000 for corporations; under the Alternative Fines Act, fines can be twice gross gain of corrupt bribe.	5 years	
Promote Consumer Welfare by Preventing Deceptive Practices			
Mail or wire fraud <i>(Mail Fraud Act, 18 U.S.C. § 1341, or Wire Fraud Act, 18 U.S.C. § 1343)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims; \$1 million for violations that affect financial institutions	20 years; 30 years for violations that affect financial institutions	Violation of these acts can trigger civil and criminal liability under the Racketeer Influenced and Corrupt Organizations Act (RICO).
Money laundering <i>(18 U.S.C. § 1956)</i>	Greater of \$250,000 for individuals (\$500,000 for organizations) and twice the value of the property involved in the transaction	20 years	
Computer fraud <i>(Computer Fraud and Abuse Act, 18 U.S.C. § 1030)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or less to victims	10 years for first-time offenders; 20 years for subsequent offenders	
Racketeering <i>(Racketeer Influenced and Corrupt Organizations Act (RICO), 18 U.S.C. § 1963)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and two times the defendant's gain or the victim's loss; forfeiture of all property wrongfully acquired or maintained	Life	Any injured person may also sue to recover threefold the damages sustained and the cost of the suit except no private right of action based solely on securities fraud (18 U.S.C. § 1964).
Bribery <i>(18 U.S.C. § 201)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims and three times the value of the bribe	15 years	
Promote Public Welfare by Promoting Effective Administration of Justice			
Obstruction of justice <i>(18 U.S.C. §§ 1501–1520)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims	20 years	Includes altering or destroying documents with intent to impair their use in an official proceeding; offering or promoting false testimony; and threatening or intimidating witnesses, jurors, or court officials.

EXHIBIT 15.5

Penalties for White-Collar Crime (*Continued*)

OFFENSE	MAXIMUM FINE OR PENALTY	MAXIMUM SENTENCE	COMMENTS
Perjury <i>(18 U.S.C. § 1621)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims	5 years	Falsehood must be relevant to inquiry.
Tampering with a record or otherwise impeding an official proceeding <i>(Sarbanes-Oxley Act of 2002, 18 U.S.C. § 1512)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims	20 years	
Promote Public Welfare by Collecting Taxes and Spending Money			
False statements to U.S. Government <i>(False Statements Act, 18 U.S.C. § 1001)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims for knowing and willful violations	5 years for knowing and willful violations; 8 years if offense involves terrorism	
Tax fraud or evasion <i>(Internal Revenue Code, 26 U.S.C. § 7201)</i>	\$100,000 for individuals (\$500,000 for corporations) plus costs of prosecution	5 years	Violations include willful attempts to evade any tax imposed under the Code, including employee withholding requirements, false statements in a tax return, willful delivery of a fraudulent return to the Secretary of the Treasury, and any false statements in a tax return.
False claims for reimbursement to U.S. Government <i>(False Claims Act, 18 U.S.C. § 287)</i>	Greater of \$250,000 fine per violation for individuals (\$500,000 for organizations) and twice gain to violators or loss to victims for knowing and willful violations	5 years	U.S. Government includes any individual or any agency in civil, military, or naval service.
Promote Public Welfare by Protecting the Environment			
Unlawful transport or disposal of hazardous waste <i>(Resource Conservation and Recovery Act (RCRA), 42 U.S.C. § 6928)</i>	\$50,000 per day for first-time offenders and \$100,000 per day for subsequent violations; \$250,000 for knowingly endangering others and \$1 million for organizations that knowingly endanger others	2 years for first-time offenders and 4 years for subsequent violations; 15 years for knowingly endangering others	Imposes “cradle to the grave” responsibility for generators of hazardous waste and requires disposal in a licensed facility.
Unlawful disposal of hazardous materials in water <i>(Clean Water Act, 33 U.S.C. § 1319)</i>	Not less than \$2,500 nor more than \$25,000 per day for negligent first-time violations; \$50,000 per day for subsequent violations; \$250,000 for first-time knowing endangerment and \$500,000 for subsequent knowing endangerment violations; \$1 million for organizations that knowingly endanger others for the first time and \$2 million for subsequent violations	1 year for negligent first-time violations and 2 years for subsequent violations; 15 years for first-time knowing endangerment and 30 years for subsequent violations	

of securities. Consequently, almost any business fraud can serve as the basis for a criminal RICO violation.

To demonstrate a *pattern* of racketeering activity, a plaintiff must show that at least two related predicate acts have occurred within a ten-year period. Two isolated acts are not considered sufficient.

Private Civil Actions In addition to criminal penalties, the statute grants a civil private right of action that permits individuals to recover treble damages (that is, three times their actual damages) and also their costs and attorneys' fees. The private right of action was apparently intended as a tool against businesses fueled by funds generated through organized crime. The statute contains no explicit requirement that organized crime be involved, however, and RICO has been used in numerous civil suits against legitimate businesses.

To prevail in a civil case under RICO, the plaintiff must demonstrate that the defendant committed an "overt act . . . in furtherance of a RICO conspiracy."¹²⁴ Thus, a president fired for reporting activity that violated RICO did not have a private cause of action against his former employer because the termination of his employment was not a racketeering activity. In the Private Securities Litigation Reform Act of 1995,¹²⁵ Congress foreclosed the use of the RICO civil private right of action against alleged perpetrators of securities fraud. Denying the potential for RICO-based shareholder lawsuits was one of many measures in this statute that were designed to curb abusive shareholder litigation. Criminal RICO charges can still be based on securities fraud.

Limits on the Use of RICO Although RICO is generally given a liberal construction to ensure that Congress's intent is not frustrated by an overly narrow reading of the statute, its reach is not unlimited. In *Reves v. Ernst & Young*,¹²⁶ purchasers of demand notes from a farmers' cooperative brought a securities fraud and RICO action against the cooperative's auditors. The U.S. Supreme Court held that the accountants hired to perform an audit of the cooperative's records did not exert control over the company or "participate in the operation or management" of the cooperative's affairs. Such a finding of participation would have been necessary to find the accountants liable under RICO for failing to inform the cooperative's board of directors that the cooperative was insolvent. As clarified by the U.S. Court of Appeals for the Seventh Circuit, "participation" requires

124. *Beck v. Prupis*, 529 U.S. 494 (2000).

125. Pub. L. No. 104-67, § 107, 109 Stat. 737, 758 (codified at 18 U.S.C.A. § 1964(c)).

126. 507 U.S. 170 (1993).

that one "knowingly agree to perform the services of a kind which facilitate the activities of those who are operating the enterprise in an illegal manner."¹²⁷

Reves is an important case for accountants, underwriters, attorneys, and others who work with a company issuing securities. Such persons can no longer be found liable under RICO just because they were involved in the offering process. Instead, some involvement in the management of the issuer of the securities is required.

Mail and Wire Fraud

Next to RICO, the Mail and Wire Fraud Acts¹²⁸ may be the prosecutor's most powerful weapon against white-collar crime. Chief Justice Warren Burger characterized the Mail Fraud Act as a "stopgap" provision that criminalizes conduct that a court finds morally reprehensible but that is not mentioned in any other criminal statute.

To establish *mail fraud* or *wire fraud* under the Acts, the prosecutor must demonstrate (1) the existence of a scheme intended to defraud or to obtain money or property by fraudulent means and (2) the use of the mails or of interstate telephone lines in furtherance of the fraudulent scheme. The U.S. Supreme Court has broadly construed "fraud" to encompass "everything designed to defraud by representations as to the past or present, or suggestions and promises as to the future."¹²⁹

Federal prosecutions under these Acts have involved such diverse activities as defense procurement fraud, insurance fraud, false financial statements fraud, medical advertising fraud, tax fraud, divorce mill fraud, and securities fraud. In *Schmuck v. United States*,¹³⁰ the U.S. Supreme Court upheld an indictment for mail fraud even though the use of the mail was merely incidental to the scheme to defraud. Wayne T. Schmuck, a used-car distributor, had purchased used cars, rolled back their odometers, and sold them to Wisconsin retail dealers at prices artificially inflated by the low-mileage readings. The unwitting dealers relied on the altered readings and resold the cars to customers at inflated prices. The dealers consummated these transactions by mailing title-application forms to the state authorities on behalf of the buyers. The Supreme Court held that the mailings at issue satisfied the mailing element of the crime of mail fraud.

A prosecution for wire and mail fraud can be brought in addition to other prosecutions based on the same events. Thus, the defendant may be charged with violation of the

127. *Brouwer v. Raffensperger*, 199 F.3d 961 (7th Cir. 2000).

128. 18 U.S.C. §§ 1343, 1341.

129. *Durland v. United States*, 161 U.S. 306, 313 (1896).

130. 489 U.S. 705 (1989).

securities laws, the tax laws, or the Truth in Lending Act, as well as with wire or mail fraud. Indeed, it is rare for a white-collar criminal prosecution to be brought without alleging a violation of the Wire and Mail Fraud Acts. Violation of the Wire and Mail Fraud Acts can also trigger RICO liability. As a result, wire and mail fraud and RICO prosecutions often proceed in tandem.

This prosecutorial ability to bring charges under various statutes increases the plea-bargaining power of the government. By presenting multiple statutory violations to the jury, the prosecutor also increases the chances of conviction and the likelihood of a stiffer sentence.

Money Laundering

Especially in the wake of the terrorist attacks on September 11, 2001, which may have been financed at least in part by funds improperly held and transferred abroad by U.S. financial institutions, the federal government has stepped up its investigation and prosecution of cases involving *money laundering*, that is, the transfer of funds derived from unlawful activities with the intent of concealing or disguising the location, source, ownership, or control of said funds. The U.S. Supreme Court limited the government's ability to bring cases under the federal money laundering statute in the following case.

A CASE IN POINT

CASE 15.2

CUELLAR V. UNITED STATES

SUPREME COURT OF THE
UNITED STATES
128 S. Ct. 1994 (2008).

SUMMARY

FACTS On July 14, 2004, Humberto Fidel Regalado Cuellar was stopped by police 114 miles from the Mexican border for driving erratically. During questioning, Cuellar seemed very nervous and gave conflicting accounts of his recent whereabouts. When officers inquired about a bulge in his shirt pocket, Cuellar produced a wad of cash that smelled of marijuana, prompting officers to ask for permission to search his vehicle. Cuellar agreed, and the officers discovered a secret compartment in the rear of Cuellar's Volkswagen Beetle containing approximately \$81,000 in cash. The cash was bundled in plastic bags and duct tape, and animal hair was spread over the back of the car. Although Cuellar claimed the animal hair was from previously transporting goats, police doubted that goats could fit into such a small vehicle and believed that Cuellar had spread the hair in an attempt to mask the marijuana smell.

Cuellar was charged with violating the federal money laundering statute¹³¹ by attempting to transport the proceeds of unlawful activity across the border, knowing that the transportation was designed "to conceal or disguise the nature, the location, the source, the ownership, or the control" of the money. Cuellar was found guilty, but the court of appeals overturned his conviction, reasoning that "[while] evidence showed intent to avoid detection while driving funds to Mexico, it did not show that petitioner intended to create the appearance of legitimate wealth." The Government appealed.

ISSUE PRESENTED Is the intention to create the appearance of legitimate wealth necessary to support a conviction for money laundering, or is it sufficient to prove that the defendant concealed funds being transported from the United States to another country?

SUMMARY OF OPINION The federal money laundering statute makes it unlawful to engage in certain financial transactions and criminalizes certain types of transportation, including the following:

[attempting to transport] funds from a place in the United States to . . . a place outside the United States . . . knowing that the . . . funds involved in the transportation . . . represent the proceeds of some form of unlawful activity and knowing that such transportation . . . is designed in whole or in part . . . to conceal or disguise the nature, the location, the source, the ownership, or the control of the proceeds of specified unlawful activity.

The U.S. Supreme Court ruled that the statute does not require the prosecution to prove that the defendant intended to create "an appearance of legitimate wealth," citing Congress's use of broad language to capture more than the classic definition of money laundering.

CONTINUED

131. 18 U.S.C. § 1956(a)(2)(B)(i).

The Court nonetheless reversed Cuellar's conviction on the grounds that the evidence was insufficient to prove that he knew that driving his vehicle from a place in the United States to a place outside the United States with funds in his trunk (the "such transportation" at issue) was *designed* to conceal or disguise the attributes of the illegally obtained funds. The Court explained:

We agree with [Cuellar] that merely hiding funds during transportation is not sufficient to violate the statute, even if substantial efforts have been expended to conceal the money. Our conclusion turns on the text of § 1956 (a)(2)(B)(i), and particularly on the term "design." In this context, "design" means purpose or plan, i.e., the intended aim of the transportation. . . . Judge Smith supplied an example of this construction: A petty thief who hides money in his shoe and then walks across the border to spend the money in local bars, has engaged in transportation designed to conceal the location of the money because he has hidden it in an unlikely place. We think it implausible, however, that Congress intended this meaning of "design." . . . It appears far more likely that Congress intended courts to apply the familiar criminal law concepts of purpose and intent than to focus exclusively on how a defendant "structured" the transportation.

RESULT Cuellar's conviction was overturned. Although the prosecution did not have to prove that he intended to create the appearance of wealth, it did have to prove that Cuellar's secrecy in hiding the money was part of a larger "design" to disguise the source or nature of the money, which it failed to do.

False Statements to the U.S. Government

The False Statements Act provides:

Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully

- (1) falsifies, conceals or covers up by any trick, scheme, or device a material fact;
- (2) makes any false, fictitious or fraudulent statements or representations; or
- (3) makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be fined or imprisoned . . . or both.¹³²

Although not used as frequently as the Wire and Mail Fraud Acts, the False Statements Act has become an effective tool for criminal prosecutions of businesses and employees who deal dishonestly with governmental administrative agencies. For example, in *United States v. Yermian*,¹³³ an

employee of Gulton Industries, a defense contractor, was convicted of making false statements to the Department of Defense in connection with his application for a security clearance.

False Claims to the U.S. Government and Health-Care Fraud

Since the late 1980s, the U.S. government has used a civil statute, the False Claims Act (FCA),¹³⁴ to attack defense-contract and health-care fraud. Twenty-three states, as well as the municipalities of New York City and Chicago, have enacted their own false claim acts.¹³⁵ Both the government and private parties (usually whistleblowers), acting on the government's behalf as *qui tam plaintiffs*, can bring civil suits to recover treble damages and penalties from persons who submit false claims for government funds knowingly or with recklessness or deliberate ignorance of their truth or falsity. In 2000, the U.S. Supreme Court rebuffed a challenge to the *qui tam* provisions when it held that whistleblowers

Historical PERSPECTIVE

White-Collar Crime

The term "white-collar crime" was first used in 1939 when Edwin Sutherland coined it in a speech about "crime in relation to business" that he was presenting to the American Sociological Society.^a Sutherland defined white-collar crime as a "crime committed by a person of respectability and high social status in the course of his occupation."^b Sutherland promoted the idea—revolutionary for his time—that wealthy or high-status individuals commit crimes, too. Prior to Sutherland's work, crime was viewed primarily as a reaction to poverty and thus endemic to the lower classes.

Sutherland asserted that "crime is not so highly concentrated in the lower class as the usual statistics indicate."^c He further pointed out that the cost of white-collar crime was much higher than that of street crime: "The financial cost of white-collar crime is probably several times as great as the financial cost of all the crimes which are customarily regarded as the 'crime problem'."^d Sutherland went on to argue: "The financial loss from white-collar crime, great as it is, is less important than the damage to social relations. White-collar crimes violate trust and therefore create distrust, which lowers social morale and produces social disorganization on a large scale."^e Nonetheless, white-collar criminals were not "regarded as real criminals."^f

According to Sutherland, the "robber barons" of the late nineteenth and early twentieth centuries (including J.P. Morgan and John D. Rockefeller) were notorious examples of white-collar criminals.^g These corporate titans openly exploited labor for their own

gain and created monopolies violating the Sherman Antitrust Act of 1890,^h but they did not go to prison.ⁱ

After the stock market crash of 1929 and the ensuing Great Depression crippled the financial markets, Congress enacted the Securities Act of 1933 and the Securities Exchange Act of 1934 "to set limits on what people can do in the name of profit."^j Yet it was not until 1961, seventy years after the passage of the Sherman Antitrust Act, that the first white-collar criminals were sent to jail.^k Seven executives at major companies implicated in a price-fixing conspiracy, including General Electric and Westinghouse, were sentenced to thirty days, less time for good behavior.^k During the first seventy years of the Sherman Act, the government had brought 1,580 antitrust cases against corporations, but all of them resulted in civil penalties.^l

Prosecution of white-collar crime did not become commonplace until the mid-1970s. It was only after the Watergate break-in and a series of scandals involving bribery of foreign governments that the federal government began targeting white-collar crime as a high-priority area.^m

By the mid-1980s and early 1990s, a number of high-profile corporate crime cases were making headlines. These included a series of insider trading cases involving Ivan Boesky, Michael Milken, and Drexel Burnham Lambert (discussed in the "Inside Story" in Chapter 23). Of the fourteen Wall Street crooks convicted in the 1980s, former junk-bond king Milken received the longest sentence—ten years.ⁿ He ended up

serving only twenty-two months, however.

Even before the Milken scandal was over, the government had a new target: the savings and loan industry. The most high-profile case involved Lincoln Savings & Loan headed by Charles Keating. Its collapse—dubbed "the largest public-finance scandal of the century"^o—cost the U.S. taxpayers \$2.5 billion. Keating was convicted in 1992 of fraud, racketeering, and securities violations and sentenced to ten years in prison. He served four and one-half years before his sentence was overturned. In 1999, he pleaded guilty to defrauding investors and was sentenced to the time he had already served.

One expert writing in 2002 commented that the "criminal sanction is generally reserved for the losers, the scamsters, the low-rent crime."^p He compared the fate of "starched-collar criminals" who loot companies of millions or billions of dollars with that of petty thieves:

The starched-collar S&L crooks got an average of 36.4 months in the slammer. Those who committed burglary—generally swiping \$300 or less—got 55.6 months; car thieves got 38 months; and first-time drug offenders, 64.9 months. Now compare the costs of the two kinds of crime: The losses from all bank robberies in the U.S. in 1992 totaled \$35 million. That's about 1% of the estimated cost of Charles Keating's fraud at Lincoln Savings & Loan.^q

After the spate of accounting scandals at the turn of the millennium, the U.S. government took a tougher stance on corporate crime. As discussed more

CONTINUED

fully this chapter's "Inside Story," several executives charged over the next few years, including WorldCom's Bernie Ebbers and Tyco's Dennis Kozlowski, were sentenced to upwards of two decades in prison.

But federal prosecutors have recently had trouble making some of the charges and convictions stick. Accounting firm Arthur Andersen was destroyed by an obstruction of justice conviction arising out of its destruction of documents relating to its audit of Enron Corporation, but its conviction was ultimately overturned by the Supreme Court in 2005 as a result of faulty jury instructions.^r Several former Merrill Lynch executives were freed in 2006 when the U.S. Court of Appeals for the Fifth Circuit vacated their convictions, which had been attained under an "honest services" fraud theory.^s The government had argued that their failure to perform their services in an honest and forthright manner was sufficient to constitute fraud. In a 2007 ruling, a district court judge dismissed all charges against thirteen of nineteen

former KPMG employees alleged to have participated in the creation and use of illegal tax shelters.^t As of mid-2008, even the conviction of former Enron CEO Jeffrey Skilling was considered potentially vulnerable on appeal to the Fifth Circuit.^u A key part of the government's case against Skilling was the same "honest services" theory that proved problematic in the Merrill Lynch convictions.

Just as the dust appeared to be settling on the spate of corporate scandals that sent a record number of former CEOs and CFOs to prison, the financial community was shocked by the collapse of the subprime mortgage market. As discussed more fully in the "Inside Story" in Chapter 24, both federal and state criminal investigations were ongoing as of mid-2008.

have standing under Article III of the U.S. Constitution to sue on the government's behalf.¹³⁶ Often these civil suits lead to criminal prosecution under other federal statutes, such as the Mail and Wire Fraud Acts.

The *qui tam* plaintiffs receive up to 25 percent of the recovery. Between 1987 and 2007, the United States had recovered more than \$20 billion through FCA *qui tam* cases, of which more than \$2 billion was paid to the whistleblowers who brought the cases.¹³⁷

The health-care industry is particularly susceptible to fraud. Companies often find it tempting to cheat rather than

compete on price. The presence of third-party payors, such as private insurance companies and government programs, increases the opportunities and incentives to cheat. According to the FBI, fraud accounted for between 3 and 10 percent of the \$2.16 trillion in health-care expenditures in the United States in 2006, meaning that fraudulent activities diverted at least \$64.8 billion.¹³⁸

In 1996, Congress created several new criminal offenses as part of the Health Insurance and Portability Account Act of 1996 (HIPAA).¹³⁹ These include health-care fraud,¹⁴⁰ theft or embezzlement in connection with a health-care offense,¹⁴¹

false statements relating to a health-care offense,¹⁴² and obstruction of a criminal investigation of a health-care offense.¹⁴³ HIPAA makes firms convicted of felony health-care fraud after August 21, 1996, ineligible to participate in federal health-care programs. Nonetheless the government has been reluctant to use its power to bar major drug companies that have committed fraud from doing business with federal programs, such as Medicare or Medicaid, for fear of harming the 80 million elderly and poor clients who rely on the drugs these companies provide.¹⁴⁴

Even before the enactment of HIPAA, beginning in 1993, the Department of Justice had made fighting fraud and abuse in the health-care industry a top priority.¹⁴⁵ It focused first on the clinical laboratory industry, then on the major hospital chains, and most recently on pharmaceutical companies.¹⁴⁶ In 2006 alone, the U.S. Attorney's Office opened 836 new criminal investigations into health-care fraud allegations.¹⁴⁷ Criminal convictions in health-care fraud cases increased from 59 in 1992 to 263 in 1999 to 547 in 2006.¹⁴⁸ In 2006, the government secured \$2 billion in health-care fraud judgments and settlements.¹⁴⁹

Exhibit 15.6 shows health-care fraud settlements of \$100 million or more in the period from 1998 to 2008. Since 1999, the government has recouped more than \$8 billion from health-care fraud cases, compared with \$3.3 billion collected in the 1990s.¹⁵⁰ Tenet Healthcare alone gave up nearly \$1 billion in penalties.¹⁵¹

Computer Crime

White-collar crime often involves computers. Many computer-related crimes are likely to go undetected because they generally involve little or no visible physical activity. The computer may be used not only to commit the offense but also

to hide or destroy the evidence. Even if computer crime is detected, it often goes unreported. Most businesses, especially financial institutions, do not want it publicly known that an employee or an outsider used the company's computer system to steal from the company or access confidential files.

Despite ongoing efforts to thwart it, computer crime continues to flourish. The FBI's 2005 Computer Crime Survey showed that 87 percent of surveyed companies had experienced a computer security incident of some sort in the preceding year.¹⁵² About 80 percent had a virus or spyware problem; 23 percent had had their network sabotaged; and 13 percent reported that their computer system had been illegally accessed, with another 24 percent indicating that they did not know whether their system had been accessed without authorization.¹⁵³ Only 4 percent reported that proprietary information had been improperly accessed.¹⁵⁴ The FBI speculated that the actual number of corporate computer networks infiltrated was likely higher than the survey indicated.¹⁵⁵

Computer crime can take several forms. *Computer fraud* is the use of a computer to steal company or government funds. This type of theft generally involves improper or unauthorized access to the computer system and the creation of false data or computer instructions. The computer system then generates fraudulent transfers of funds or bogus checks that are cashed by the wrongdoer.

More than forty different sections of the federal criminal code may apply to thefts by computer, ranging from embezzlement to wire fraud. Most computer-aided thefts can also be prosecuted under traditional state larceny laws. Other computer crimes can be prosecuted under a multitude of other laws that normally apply to non-computer-related crime.¹⁵⁶ The Economic Espionage Act and child pornography statutes, as well as bootlegging, identity theft, and stalking laws, are all applicable to crimes committed with the use of computers.

The ability of computer hackers to access protected governmental and financial records is one of the primary concerns spawned by increased use of the Internet. The Department of Homeland Security experienced nearly

EXHIBIT 15.6

Health-Care Fraud Cases Resulting in Payments of \$100 Million or More:
1998 to 2008

Company <i>(Date of Plea, Conviction, or Settlement)</i>	Crime	Settlement/Penalty
Health Care Service Corp. <i>(1998)</i>	Pleaded guilty to eight counts for false claims and obstruction of audits. The company submitted false reports to the Health Care Financing Administration to make its performance look better than it actually was.	\$144 million, including \$4 million in criminal fines and \$140 million in civil fines under the False Claims Act.
Beverly Enterprises <i>(1999)</i>	Pleaded guilty to criminal fraud for over-charging Medicare by \$460 million in phony cost reports. The nursing home chain billed the program for time not spent on Medicare patient care.	\$175 million, including a \$5 million criminal fine and a \$170 million civil fine under the False Claims Act. The company agreed to implement a corporate integrity plan and divest ten nursing homes.
National Medical Care, Inc. <i>(2000)</i>	Pleaded guilty to charges that the company had engaged in a variety of illegal behavior, including giving kickbacks for referrals and submitting false claims to Medicare by charging for unnecessary testing.	\$486 million, including criminal fines of \$101 million and a \$385 million civil fine under the False Claims Act. The company agreed to institute a corporate integrity agreement.
Vencor, Inc. <i>(2001)</i>	Settled claims alleging that the company submitted false claims to government insurance programs, including Medicare and Medicaid.	\$244.5 million, including \$104.5 million in civil fines under the False Claims Act, \$25 million in fines for claims that were not fraudulent, \$90 million to Medicare, and \$25 million to the states. The company neither admitted nor denied wrongdoing.
TAP Pharmaceuticals <i>(2001)</i>	Pleaded guilty to one count of criminal conspiracy to violate the Prescription Drug Marketing Act. The company used illegal kickbacks to doctors to induce them to prescribe its prostate cancer drug, Lupron, which was more expensive than other available drugs. Kickbacks included money as "educational grants" as well as expensive dinners, parties, golf and ski trips, and TVs/VCRs. The company gave doctors free samples with the understanding that they would bill Medicare and Medicaid for the drugs. The company also ensured that doctors received profits by charging them substantially less than the federal government paid for the drug. Losses totaled an estimated \$145 million.	\$875 million, including a \$290 million criminal fine under the Prescription Drug Marketing Act, a \$559 million civil fine under the False Claims Act, and \$25.5 million in civil fines to the states. TAP agreed to employ a corporate integrity agreement as part of its settlement.
Bristol-Myers Squibb <i>(2003)</i>	Settled charges that the company paid \$72.5 million to competitors and illegally prolonged patents on its antidepressant, BuSpar, and cancer drugs, Taxol and Platinol, to prevent generic entry for these three drugs, which contributed \$2 billion in annual revenues.	\$670 million with \$155 million going to state governments and the rest to affected private groups. The company agreed to a ten-year ban on its practice of filing patents to gain an automatic thirty-month delay on the entry of generic versions of its off-patent drugs.

Health-Care Fraud Cases Resulting in Payments of \$100 Million or More:
1998 to 2008 (*Continued*)

Company <i>(Date of Plea, Conviction, or Settlement)</i>	Crime	Settlement/Penalty
Bayer (2003)	Pleaded guilty to violating the Prescription Drug Marketing Act. Bayer also violated the law requiring drug companies to offer Medicaid the lowest prices. Bayer charged the federal program higher prices for its antibiotic, Cipro, and its hypertension drug, Adalat, than it charged HMOs. In a scheme referred to as "lick and stick," the company cheated the government by relabeling or repackaging the drugs to sell them at lower prices to HMOs.	\$257 million, including \$6 million in criminal fines and \$251 million in civil fines for violating the Medicaid best-price statute. Of the civil fine, \$108 million went to state Medicaid programs, and \$143 million went to the federal government. Bayer also implemented an improved corporate integrity program to ensure accurate price reporting in the future.
AstraZeneca (2003)	Pleaded guilty to one count of health-care fraud for violating the Prescription Drug Marketing Act in promoting its prostate cancer drug, Zoladex. The company gave illegal kickbacks to doctors to induce them to prescribe the drug. The company gave doctors free samples with the understanding that they would bill Medicare and Medicaid. The company also ensured that doctors received profits by charging them substantially less than the federal government paid for the drug.	\$355 million, including a \$64 million criminal fine, a \$266 million civil fine under the False Claims Act, and \$25 million to the states for Medicaid fraud.
HCA, Inc. (2000 and 2003)	In 2000, pleaded guilty to fourteen criminal counts of defrauding government health insurance programs by an estimated \$650 million. Additional claims against the company were settled in the spring of 2003. HCA defrauded Medicare and other federal programs by overcharging for services and provided kickbacks to doctors to induce them to refer patients to HCA hospitals.	\$1.7 billion, including \$631 million in civil fines, \$250 million to Medicare, and \$17.6 million for state Medicaid programs. HCA agreed to increase the strength and scope of its compliance program.
Abbott Laboratories (2003)	Pleaded guilty to one count of obstructing a federal inquiry into allegations that the company sold or gave away its nutritional pumps to nursing homes and hospitals at discounted prices and charged Medicare and Medicaid higher prices.	\$600 million, including \$200 million in criminal fines and \$400 million in civil fines. The company agreed to institute a corporate integrity agreement to monitor its marketing practices.
Pfizer/Warner-Lambert (2004)	Two criminal counts for violating the Federal Food, Drug and Cosmetic Act by marketing its epilepsy drug, Neurontin, for unapproved uses. The company also promoted its drug by giving kickbacks to physicians.	\$430 million, including a \$240 million criminal fine, \$152 million in civil fines under the False Claims Act, and \$38 million to consumer protection agencies. The company agreed to improve its corporate compliance program.

EXHIBIT 15.6

Health-Care Fraud Cases Resulting in Payments of \$100 Million or More:
1998 to 2008 (*Continued*)

Company (Date of Plea, Conviction, or Settlement)	Crime	Settlement/Penalty
HealthSouth (2004)	Settled charges of fraudulent billing for Medicare and other federal insurance programs.	\$325 million civil fine under the False Claims Act.
Gambro Healthcare (2004)	Pleaded guilty to health-care fraud. Cheated Medicare and Medicaid by charging the government insurance programs for unnecessary tests as well as setting up a phony subsidiary company to receive payments. Other crimes included paying kickbacks to doctors in exchange for referrals.	\$350 million, including \$25 million in criminal fines, \$310.5 million in civil fines, and \$15 million for the states. The company also agreed to institute a corporate integrity agreement.
GlaxoSmithKline (2005)	Settled fraud allegations related to the pricing of the company's two antinausea drugs, Zofran and Kytril. The company allegedly charged health-care providers a lower price than it charged Medicare and Medicaid, allowing the providers to keep the difference.	\$150 million, with the federal government receiving \$140 and state governments \$10 million. The company also agreed to report average sales prices and average manufacturer's prices for drugs covered by federal programs as part of its corporate integrity agreement.
Caremark (2005)	Settled claims that AdvancePCS, a pharmacy benefits manager purchased by Caremark in 2004, participated in a kickback scheme involving drug manufacturers and health plan customers. AdvancePCS also allegedly withheld rebates paid on prescription drugs from customers.	\$137.5 million, which covered only federal claims and did not include claims filed on behalf of states based on the rebate withholding practice.
Serono Group (2005)	Pleaded guilty to improperly marketing an AIDS drug, Serostim, by supplying doctors with testing software that would register "body cell mass" loss in AIDS patients even if they had not lost weight. The company also admitted bribing doctors to prescribe its drug.	\$704 million in total penalties, including criminal fines of \$136.9 million. \$305 million of the civil damages went to the federal government, with the remainder split among state Medicare programs.
King Pharmaceutical (2005)	Overcharged government agencies for generic and brand-name drugs and underpaid rebates.	\$124 million to cover all claims.
St. Barnabas Hospitals (2006)	Falsely increased the costs of treating patients in order to obtain \$500 million in supplemental payments from Medicare.	\$265 million to the federal government. The company also agreed to have its Medicare billing practices monitored by an outside party for six years.
Tenet Healthcare (2006)	Settled claims that the hospital chain improperly billed Medicare for supplemental payments, bribed physicians to refer patients to Tenet hospitals, and "upcoded" patient records to reflect more costly care than had been provided.	In a settlement valued at \$900 million, Tenet agreed to pay \$725 million and to discontinue its pursuit of another \$175 million in outstanding Medicare bills. Tenet made an initial payment of \$450 million and agreed to a schedule of quarterly payments. The final installment should be paid in August 2010. Tenet also agreed to hire an outside firm to review its compliance programs.

EXHIBIT 15.6

Health-Care Fraud Cases Resulting in Payments of \$100 Million or More:
1998 to 2008 (*Continued*)

Company <i>(Date of Plea, Conviction, or Settlement)</i>	Crime	Settlement/Penalty
Schering-Plough <i>(2004 and 2006)</i>	In 2004, pleaded guilty to one criminal count for fraud for violating the federal antikickback statute. Provided incentives to insurance companies to induce them to use its allergy drug, Claritin, rather than a cheaper drug, Allegra. This scheme resulted in the private insurers receiving the drug at a discount, less than the amount charged the federal government, a violation of the federal law that requires that Medicaid receive the lowest prices. In 2006, one of the company's sales units pleaded guilty to a criminal conspiracy charge stemming again from its pricing of Claritin. The charge also included allegations that the company illegally promoted other drugs for off-label uses and bribed doctors to prescribe its products.	In the 2004 settlement, \$345.5 million, including \$52.5 million in criminal fines and \$293 million in civil fines, with \$117 million going to the states and \$179 million to the federal government under the False Claims Act. The 2006 settlement of \$435 million included a \$180 million criminal fine. The guilty plea prohibited the sales unit from conducting business with the government, but its functions were moved to other segments of the company.
Medco Health Solutions, Inc. <i>(2006)</i>	The pharmacy benefits manager allegedly paid kickbacks to health insurance plans and received kickbacks from drug manufacturers. Also alleged to have destroyed prescription records when filling them took longer than contractually permitted.	\$155 million, establish a Medicare and pharmacy practices compliance program, and annual review by an independent auditor and the U.S. Attorney's office.
Amerigroup Corp. <i>(2006 and 2007)</i>	In 2006, a jury found the company guilty of Medicaid fraud for illegally discriminating against patients, such as pregnant women, with potentially costly medical conditions. In 2007, a federal judge ruled that the company had filed more than 18,000 false Medicare claims.	\$344 million in total. The jury awarded treble damages of \$144 million in the first trial. The court imposed a \$190 million penalty in the second case.
Purdue Frederick Co. <i>(2007)</i>	Three executives pleaded guilty to misdemeanor criminal charges that the drugmaker "misbranded" the company's OxyContin as a less addictive alternative to other painkillers. The complaint, in part, alleged that sales officials used misleading data to convince doctors to accept the claim.	\$600 million in total, with \$470 million to state and federal agencies and \$130 million to settle civil suits brought by patients who became addicted. In addition, the three executives agreed to pay a combined \$34.5 million in fines.
Bristol-Myers Squibb <i>(2007)</i>	Paid bribes to physicians in return for prescribing the company's drugs and marketed an antipsychotic for off-label uses.	\$515 million and a five-year corporate integrity agreement with the Department of Health and Human Services.
Aventis Pharmaceuticals <i>(2007)</i>	Submitted inflated bills to Medicare and other health-care programs for an antinausea drug between 1997 and 2004.	\$190 million to settle both federal and state fraud claims.
Merck & Co. <i>(2008)</i>	Sold several drugs to hospitals and physicians at discounted prices, up to 90% off, that were not offered to Medicare.	\$650 million settlement, with \$431 million split among forty-nine states and the remainder allocated to the federal government.

13,000 computer security incidents in 2007, three times as many as in 2006.¹⁵⁷ Cyber attacks on the U.S. military's networks were up 55 percent in 2007.¹⁵⁸ The private sector has been equally afflicted. Hackers have stolen credit card numbers, transmitted highly destructive viruses, and shut down popular online sites.¹⁵⁹ Online fraud alone accounted for \$239 million in consumer losses in 2007.¹⁶⁰

The Computer Fraud and Abuse Act The Computer Fraud and Abuse Act¹⁶¹ (CFAA) is the mainstay of federal computer fraud legislation. It prohibits (1) accessing a protected computer (defined below) without authorization or exceeding authorized access; (2) knowingly transmitting a program, information, code, or command that results in intentionally causing "damage" without authorization to a protected computer; (3) knowingly and with intent to defraud trafficking in any password or similar information through which a protected computer may be accessed without authorization; and (4) threatening to cause damage to a protected computer. "Damage" is defined as "any impairment to the integrity or availability of data, a program, a system, or information."

The CFAA also makes illegal the knowing transmission of computer viruses. A *computer virus* is a computer program that can replicate itself into other programs without any

subsequent instruction, human or mechanical. A computer virus may destroy data, programs, or files, or it may prevent user access to a computer (*denial-of-service attacks*). The proliferation of networks of personal computers has created millions of entry points for viruses. A virus can be concealed in any software and then passed on to other computers through attachments to electronic mail, information services, disks, or other means.

Although the CFAA originally applied only to "federal interest computers" (computers of the federal government and certain financial institutions), Congress amended the Act in 1996 to substitute the phrase "protected computer" in place of "federal interest computer." Because a *protected computer* is defined as a computer used in "interstate or foreign commerce or communication," computers used in a crime need not be located in different jurisdictions as long as they are connected to the Internet.¹⁶² Other amendments have created more crimes, lowered the required level of intent, expanded the jurisdictional reach, and increased the penalties.¹⁶³

The following case demonstrates how the 1996 amendments to the CFAA, together with the explosive growth in the use of the Internet, greatly expanded the types of activities covered by the Act. (Although this case involved civil claims, the sections of the CFAA the court analyzed also provide the basis for a criminal prosecution.)

A CASE IN POINT

CASE 15.3

**SHURGARD STORAGE CENTERS,
INC. v. SAFEGUARD SELF
STORAGE, INC.**

UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT
OF WASHINGTON
119 F. SUPP. 2D 1121 (W.D.
WASH. 2000).

IN THE LANGUAGE OF THE COURT

FACTS Shurgard Storage Centers, the industry leader in full- and self-service storage facilities in both the United States and Europe, sued a competitor, Safeguard Self Storage, for allegedly embarking on a "systematic" scheme to hire away key employees for the purpose of obtaining trade secrets. Shurgard claimed that Eric Leland, a Shurgard employee subsequently hired by Safeguard, used Shurgard's computers to access various trade secrets and proprietary information belonging to Shurgard and to send e-mails containing the information to Safeguard. Leland was still employed by Shurgard at the time he sent the e-mails.

Shurgard alleged violations of the Computer Fraud and Abuse Act as well as misappropriation of trade secrets, conversion, unfair competition, and tortious interference with a business expectancy. Safeguard moved to dismiss the CFAA claims.

ISSUE PRESENTED Does the Computer Fraud and Abuse Act apply to an employee's use of his employer's computer to e-mail misappropriated trade secrets to a competitor?

CONTINUED

OPINION ZILLY, J., writing on behalf of the U.S. District Court for the Western District of Washington:

Under § 1030(a)(2)(C), “whoever . . . intentionally accesses a computer without authorization or exceeds authorized access, and thereby obtains . . . information from a protected computer if the conduct involved an interstate or foreign communication . . . shall be punished . . .” [Eds.: Section 1030(g) creates a private right of action for persons who suffer damage or loss because of a violation.]

. . . [T]he defendant asserts that the plaintiff has not alleged that the employees in question accessed the trade secrets without authorization. . . .

....

The plaintiff responds by arguing that the authorization for its former employees ended when the employees began acting as agents for the defendant. . . .

....

Under the *Restatement (Second) of Agency*:

Unless otherwise agreed, the authority of an agent terminates if, without knowledge of the principal, he acquires adverse interests or if he is otherwise guilty of a serious breach of loyalty to the principal.¹⁶⁴

Under this rule, the authority of the plaintiff’s former employees ended when they allegedly became agents of the defendant. . . .

....

. . . [T]he defendant maintains the CFAA is limited to those industries whose computers contain vast amounts of information, which if released, could significantly affect privacy interests in the public at large. The defendant also maintains the CFAA is limited to “outsiders” or “hackers,” and not “insiders” (employees). Though the original scope of the CFAA was limited to the concerns addressed by the defendant, its subsequent amendments have broadened the scope sufficiently to cover the behavior alleged in this case.

....

. . . [T]he CFAA was intended to control interstate computer crime, and since the advent of the Internet, almost all computer use has become interstate in nature.

RESULT The defendant’s motion to dismiss was denied. Shurgard had stated valid claims under the CFAA.

COMMENTS Section 1030(e)(8)(A) defines “damage” as “any impairment to the integrity or availability of data, a program, a system or information, that causes loss aggregating at least \$5,000 in value during any one-year period to one or more individuals.”¹⁶⁵ The court held that the defendant’s collection and dissemination of confidential information impaired its integrity even though no data were physically damaged or erased. The court also held that the plaintiff had stated a claim under 18 U.S.C. § 1030(a)(4), which prohibits any person from knowingly and with intent to defraud accessing a protected computer without authorization. The court held that a plaintiff need not prove the common law elements of fraud, only that the defendant engaged in wrongdoing or employed dishonest methods.

There is currently a split among the federal circuits about whether a breach of the duty of loyalty immediately terminates an agent’s authority to access a protected computer, thereby making

CONTINUED

164. RESTATEMENT (SECOND) OF AGENCY § 112 (1958).

165. In *United States v. Middleton*, 231 F.3d 1207 (9th Cir. 2000), the Ninth Circuit held that “individuals” includes corporations and other artificial entities.

the agent's access to the computer unauthorized, or whether some degree of authority remains and the offending agent has exceeded that authority. The U.S. Court of Appeals for the Seventh Circuit agreed with the *Shurgard* court that under agency law the agent's authority terminates with the breach,¹⁶⁶ but other courts have found the argument unconvincing. Those courts point out that the statute differentiates between "unauthorized" and "exceeds authorization." To interpret the statute in the manner suggested by *Shurgard* eliminates any difference between the two terms.¹⁶⁷

CRITICAL THINKING QUESTIONS

1. Is a computer or its information "damaged" within the meaning of the CFAA if intruders alter existing log-on programs to copy user passwords to a file that the hackers can retrieve later if, after retrieving the newly created password file, the intruders restore the altered log-in file to its original condition?
2. Does a computer user with authorized access to a computer and its programs act without authorization if he or she uses the program in an unauthorized way?

166. See Int'l Airport Ctrs., LLC v. Citrin, 440 F.3d 418 (7th Cir. 2007).

167. B&B Microscopes v. Armogida, 532 F. Supp. 2d 744, 758 (W.D. Pa. 2007); for a detailed textual analysis, see Diamond Power Int'l v. Davidson, 540 F. Supp. 2d 1322, 1341–43 (N.D. Ga. 2007).

Computer Piracy Computer piracy is the theft or misuse of computer software. (With the increasing value and decreasing size of computer equipment, the theft of computer hardware is increasing. This is larceny, however, not computer piracy.)

Concerned with the increasing amount of computer software theft, Congress amended the Copyright Act in 1980 to cover computer software. (Copyright law is discussed further in Chapter 11.) Most states have also made the theft of computer software a crime. For example, Sections 156.30 and 156.35 of the New York Penal Law define six crimes related to computer misuse. The statute makes it a felony to duplicate a computer software program without authorization if the software has a value in excess of \$2,500 or the duplication is done in connection with another felony. The legislation also prohibits the possession of unlawfully duplicated materials with a value in excess of \$2,500.

Crimes Involving Intellectual Property

U.S. companies lose more than \$250 billion a year as a result of worldwide copyright, trademark, and trade secret infringement.¹⁶⁸ Chapter 11 discussed criminal liability under the Copyright Act, the No Electronic Theft Act, the Digital Millennium Copyright Act, and the Economic Espionage Act.

168. PROGRESS REPORT OF THE DEPARTMENT OF JUSTICE'S TASK FORCE ON INTELLECTUAL PROPERTY 13 (2006), available at [http://www.cybercrime.gov/2006IPTFProgressReport\(6-19-06\).pdf](http://www.cybercrime.gov/2006IPTFProgressReport(6-19-06).pdf).

The Foreign Corrupt Practices Act

The Foreign Corrupt Practices Act,¹⁶⁹ discussed further in Chapter 25, makes it a crime for any U.S. firm to make payments to an official of a foreign government in an attempt to influence the actions of the official. The Act also requires detailed record keeping and internal control measures by all public companies, whether international or purely domestic.

Antitrust Laws

Criminal prosecutions under the antitrust laws occur most frequently in actions brought under Sections 1 and 2 of the Sherman Act.¹⁷⁰ As discussed in Chapter 17, Section 1 of the Sherman Act prohibits, among other things, all unreasonable restraints of trade, including price-fixing. Section 2 prohibits monopolization, that is, the willful acquisition or maintenance of monopoly power coupled with the intent to monopolize.

Criminal prosecutions under the Sherman Act are initiated under the direction of the U.S. attorney general through the Antitrust Division of the Department of Justice or the appropriate U.S. attorney. Because the Sherman Act contains both criminal and civil sanctions, the government must always determine whether to bring a criminal action, a civil action, or both. In making this determination, the government continues to rely on a report issued by the U.S. attorney general in 1955, under which the criminal sanction has

169. 15 U.S.C. § 78dd-2.

170. 15 U.S.C §§ 1–2.

VIEW FROM CYBERSPACE

Fighting Cybercrime

From a criminal's viewpoint, cybercrime is appealing for a number of reasons. It is a nonviolent and often easy way to make money; it does not involve personal interaction with the victims; and it has only recently come to be regarded as a serious crime. Increasingly, the Department of Justice, the FBI, the Federal Trade Commission (FTC), the U.S. Postal Service, and state, local, and foreign governments are working together to catch cybercrooks.^a

According to the FBI's Internet Crime Complaint Center (IC3), the FTC received more than 200,000 Internet-related fraud reports in 2006.^b Losses in the United States from cybercrime in 2003 alone were estimated at a minimum of \$14 billion: \$10 billion from spam, \$2 billion from business fraud, and \$2 billion from identity theft.^c In 2007, U.S. consumers were taken for \$3.2 billion in "phishing" scams alone.^d (In phishing schemes, criminals use fake e-mail messages to induce consumers to divulge personal information.) In early 2008, Yahoo discovered that 7.8 billion links established through searches on its website led to sites that were either designed or altered to help criminals steal information.^e Criminals have become more businesslike and brazen, even advertising credit card numbers for sale online.^f The burgeoning industry now has specialists—such as "bot herders" who control a network of computers by infecting them with disguised software—available for hire by groups that need their services to engage in criminal computing activities.^g

As discussed in the "View from Cyberspace" in Chapter 9, defendants have been sent to prison for violating both the Federal CAN-SPAM Act and state analogues. For example, in 2004 Jeremy Jaynes was sentenced to nine years in prison for violating Virginia's antispam statute after he e-mailed 10,000 messages to America Online customers. The severity of the sentence reflected the fact that "juries are now familiar with spam and are willing to impose tough sentences for the non-violent but annoying crime."^h

That same year, federal officials announced fifty-three convictions as part of "Operation Web Snare," which had targeted identity theft, fraud, counterfeit software, computer intrusions, and other online crimes. The crimes affected more than 150,000 victims and caused estimated losses of more than \$215 million.ⁱ Dan Larkin, head of the IC3, characterized Operation Web Snare as "not the end but rather the start of such investigations."^j

Also in 2004, the Department of Justice announced the first successful conviction in "Operation Fastlink."^k Jathan Desir pleaded guilty to three counts of copyright infringement and conspiracy to commit copyright infringement for pirating software, movies, videogames, and music. Desir faced up to fifteen years in prison. Investigators conducted more than 120 searches in 27 states and 11 foreign countries and identified almost 100 individuals worldwide as leaders or high-level members of various international piracy organizations.

INTERNATIONAL SNAPSHOT

Until fairly recently, bribery was a widely accepted part of the European economy. In Germany, bribes were even tax deductible. In 2006, then Prime Minister Tony Blair ordered a halt to an investigation into Britain's top military contracting company, BAE Systems, which had paid billions of dollars to the Saudi royal family in exchange for fighter plane contracts worth \$80 billion. The company and the Saudi royal family stated that the payments were legal and that the British and Saudi governments knew about them. Blair justified ending the investigation, saying, "The result would have been devastating for our relationship with an important country with whom we cooperate closely on terrorism, on security, on the Middle East peace process. That is leaving aside the thousands of jobs which would have been lost, which is not the consideration in this case, but I just point it out." Less than a year after the investigation was terminated, Saudi Arabia awarded BAE Systems a \$60 billion, twenty-five-year contract to supply the country with military jets.

A CASE IN POINT

CASE 15.4

WISCONSIN v. MCGUIRE

COURT OF APPEALS OF WISCONSIN
735 N.W.2d 555, 562
(Wis. Ct. App. 2007).

SUMMARY

FACTS In the spring of 2001, Kevin McGuire borrowed a total of \$140,000 from Laura DeLuisa, with whom McGuire had a romantic relationship. McGuire told DeLuisa that the money was for an auto racing business venture, claimed to own several race cars, and stated that she would realize a profit. McGuire subsequently signed a promissory note agreeing to repay the \$140,000 plus 10 percent interest, with the entire amount plus interest coming due immediately upon default. DeLuisa received only three payments and eventually contacted the Wisconsin state securities regulators about the possible fraud. The investigation revealed that McGuire had filed for bankruptcy three years earlier and was sentenced to jail in 1990 for larceny. He had not told DeLuisa about either issue. Wisconsin law defines securities fraud as follows:

It is unlawful for any person, in connection with the offer, sale or purchase of any security in this state, directly or indirectly . . . to make an untrue statement of a material fact or omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they are made, not misleading.¹⁷³

At trial McGuire was found guilty based on his failure to inform DeLuisa about his previous legal troubles. On appeal, McGuire claimed that the promissory note was not a security as defined by Wisconsin law and therefore he could not be guilty of violating the state securities fraud statute.

ISSUE PRESENTED Is a promissory note from a personal friend a "security" under Wisconsin law?

CONTINUED

173. Wis. Stat. § 551.41.

generally been limited to particularly egregious conduct, such as price-fixing or group boycotts, or has been applied to individuals previously convicted of an antitrust offense.

Securities Law Violations

As explained further in Chapter 22, the offer and sale of securities are governed by a complex set of federal and state laws and regulations.

Federal Securities Laws Both the Securities Act of 1933¹⁷¹ and the Securities Exchange Act of 1934¹⁷² provide criminal penalties in addition to civil sanctions for offering and selling securities without an exemption, securities fraud, insider trading, and other violations. Although the Securities and Exchange Commission (SEC) administers both the 1933 Act and the 1934 Act, the U.S. attorney decides whether to bring criminal charges.

State Blue Sky Laws The states also impose criminal sanctions for violations of their *blue sky laws*. As demonstrated in the following case, state securities laws can be more expansive than their federal counterparts.

171. 15 U.S.C.A. § 77a *et seq.*

172. 15 U.S.C.A. § 78a *et seq.*

SUMMARY OF OPINION To determine whether the note was a security, the Wisconsin Court of Appeals applied the four-part analytical structure introduced by the U. S. Supreme Court in 1993 in the *Reves* case to determine the meaning of the term “security” in federal securities legislation.¹⁷⁴ Wisconsin had adopted the framework twelve years later. Before detailing the analysis, the court was careful to note that although the definition of “security” was similar under state and federal law, Wisconsin securities law “at least impliedly casts a wider net. Whereas under [the 1993 Supreme Court decision] a note may be said to be a *non-security*, that is not necessarily the case under Wisconsin law.”

Under the Supreme Court’s framework, all promissory notes are presumed to be securities, but that presumption may be rebutted with a showing that the instrument in question is more like one of the several enumerated nonsecurities. Additionally, the Supreme Court made it clear that state courts should also consider whether a new category of nonsecurity should be added under state common law.

The Wisconsin court determined that McGuire’s promissory note remained a security after applying the four-part test: (1) McGuire had intended to raise money for his business venture; (2) DeLuisa was attempting to make a profit; (3) viewed objectively, DeLuisa’s contributions were investments; and (4) no other regulatory scheme protected DeLuisa. The court also declined to create a new category of nonsecurities, pointing out that while the parties had a personal relationship, this did not establish a unique situation worthy of judicial exemption from the purview of the state securities laws.

RESULT McGuire’s conviction was upheld.

174. *Reves v. Ernst & Young*, 507 U.S. 170 (1993).

Obstruction of Justice, Perjury, and Related Offenses

The Sarbanes–Oxley Act increased the penalties for existing obstruction-of-justice offenses, such as jury and witness tampering and destroying evidence while a government investigation or lawsuit is pending or imminent.¹⁷⁵ It also created several new crimes, including (1) destroying corporate audit working papers, records, or analyses within five years after the completion of the audit;¹⁷⁶ (2) destroying, altering, or falsifying records relevant to potential future federal investigations or bankruptcy;¹⁷⁷ and (3) retaliating against an individual who provided a law enforcement officer with any truthful information relating to the commission or possible commission of a federal offense.¹⁷⁸ (See Appendix K.)

If government prosecutors are uncertain whether they can get a conviction on a substantive crime, they are increas-

ingly turning to related cover-up crimes, such as obstruction of justice and perjury. A person commits *perjury* when he or she takes an oath to tell the truth and willfully and contrary to such an oath states a material matter that he or she does not believe to be true.¹⁷⁹

The conviction of Martha Stewart, chief executive of Martha Stewart Living Omnimedia, in 2004 is a prime example of this phenomenon. She was initially suspected of insider trading when she sold her ImClone stock after Samuel Waksal, ImClone’s CEO, learned that the Food and Drug Administration had denied approval for ImClone’s new cancer drug. She truthfully told investigators that Waksal had not tipped her to sell her shares, but she claimed that she had a preexisting agreement with her broker at Merrill Lynch to sell her shares if the price dropped below \$60. She also told investigators that her broker had not told her that Waksal was selling ImClone stock. When her broker’s assistant admitted that there was no prior sell agreement and testified that he had informed Stewart that Waksal was selling, Stewart was prosecuted for obstruction of justice. She was never indicted for insider trading, however, because it was not clear that knowing Waksal was selling was, by

179. 18 U.S.C. § 1621.

itself, material nonpublic information obtained in breach of a duty of trust or confidence. In short, she was convicted of lying about a crime for which she was never charged.¹⁸⁰

One of the first cases testing the revised obstruction-of-justice statutes involved Thomas Trauger, a former partner at the accounting firm Ernst & Young. Trauger was charged in September 2003 with obstruction of justice under 18 U.S.C. § 1519 for altering and destroying documents related to one of his audit clients, NextCard. After Trauger was notified that banking regulators had requested the accounting work papers relating to the audit of NextCard's 2000 fiscal year, Trauger allegedly told a fellow employee to "beef up" the work papers to make it appear as though the auditing team had been "right on the mark" all along. The men went into a computerized archive for the work papers and revised them, then deleted the original work papers from the system.¹⁸¹ Trauger then proceeded to hand over the revised work papers to investigators. In October 2004, Trauger pleaded guilty to obstruction of justice and was sentenced to five years in prison. His plea was viewed as a triumph of the new Sarbanes–Oxley provision. As one U.S. attorney explained, "This is one of the first cases in which an auditor has pled guilty to destroying key documents in an effort to obstruct a federal investigation."¹⁸²

OTHER FEDERAL REGULATORY AND TAX OFFENSES

A large number of federal regulatory laws provide for criminal as well as civil penalties for their violation. Several of the more important are discussed in this section.

ENVIRONMENTAL LAWS

As explained in Chapter 16, the federal environmental laws provide for criminal sanctions against both corporate and individual violators. For example, any person who knowingly falsifies any records required to be maintained under the Clean Water Act may be fined and imprisoned. Prison terms and fines are doubled for subsequent violations. The Resource Conservation and Recovery Act (RCRA)¹⁸³ imposes criminal penalties on both the corporation and indi-

183. 42 U.S.C. § 6901 *et seq.*

vidual employees who dispose of hazardous waste without the appropriate RCRA permit.

WORKER SAFETY LAWS

Both federal and state laws provide sanctions for failure to provide a safe working environment.

The Occupational Safety and Health Act

As discussed in Chapter 12, the Occupational Safety and Health Act (OSH Act)¹⁸⁴ applies to all employers engaged in a business affecting interstate commerce. Most violations of the Act are punished by civil penalties. Civil penalties are mandatory when the employer receives a citation for a serious violation, discretionary when the violation is nonserious. More severe civil penalties are imposed for willful or repeated violations.

Section 666(e) of the Act provides for criminal penalties if the employer commits a willful violation that results in the death of an employee. In such a case, the violator may be fined up to \$7,000 per violation, imprisoned for up to six months, or both.

State Law Prosecutions of Workplace Safety Hazards

As noted in Chapter 12, state prosecutors have taken an aggressive approach toward workplace safety hazards that result in injuries. Employers have tried to defend against such charges by claiming that the OSH Act preempts state prosecutions based on failure to maintain workplace safety. The U.S. Court of Appeals for the First Circuit rejected this argument,¹⁸⁵ and several other courts have adopted the First Circuit's reasoning.¹⁸⁶

TAX LAWS

Certain violations of the Internal Revenue Code are subject to criminal penalties. The strictest penalties are found in Section 7201,¹⁸⁷ which prohibits willful attempts to evade any tax imposed under the Code, including failure to comply with employee withholding requirements. Section 7206 forbids any false statements in a tax return, and Section 7207

Political PERSPECTIVE

BP Refinery Deaths Result in Renewed Calls for Tougher OSHA Criminal Penalties

On March 23, 2005, an explosion at a British Petroleum (BP) oil refinery in Texas City, Texas, killed fifteen workers and injured hundreds more.^a As noted in Chapter 12, BP agreed to pay \$21.4 million in civil fines to the Occupational Safety and Health Administration (OSHA), to correct all violations found, and to hire "process and safety experts" for the refinery.^b Even though OSHA determined that the explosion was caused by more than 300 willful safety and health violations by BP, the federal government did not bring any criminal charges against BP pursuant to the OSH Act. Instead, the Department of Justice charged BP with one felony violation of the Clean Air Act, which requires facilities (such as oil refineries) to maintain adequate environmental "release prevention, detection and correction requirements."^c In October 2007, BP pleaded guilty to the one felony count and agreed to pay a criminal fine of \$50 million and to serve a three-year period of probation.

This reliance on the environmental laws to prosecute BP was necessitated, in substantial part, by the weak criminal penalties available under the OSH Act. In 2007, Senator Edward M. Kennedy, (D-Mass.), along with twenty cosponsors, including Senators Obama (D-III.) and Clinton (D-N.Y.), introduced the Protecting America's Workers Act (S. 1244), in hopes of making OSHA "mean something again."^d Identical legislation was introduced in the House of Representatives by U.S. Representatives Lynn Woolsey (D-Cal.)

and Phil Hare (D-III.). The bill would, among other things, amend the OSH Act to make the most serious offenses felonies punishable by imprisonment for up to ten years and a fine of up to \$500,000 for corporations (\$250,000 for individuals). Similar legislation introduced in previous years stalled in committee, but the political winds may be shifting.

The sponsors of the bill blamed the Bush administration for "weakening OSHA to the point that it is almost obsolete."^e In Senate testimony, Peg Seminario, Director of Health and Safety for the AFL-CIO, cited the number of workers killed each year, blamed OSHA for not doing routine inspections (except in rare cases), and argued that the tougher penalties prescribed in the Protecting America's Workers Act were necessary "to provide for strong, meaningful enforcement that will deter violations and serve as an incentive to improve conditions and protect workers from harm."^f

In October 2007, BP America Chairman and President Bob Malone claimed that in the months and years since the Texas City violations occurred, "[W]e have made real progress in the areas of process and safety performance and risk management."^g Yet, less than three months later, another BP employee was killed at the Texas City refinery when a metal lid blew off a pressurized water filtration unit.^h BP acknowledged that conditions were "not where they want to be,"ⁱ and Senator Kennedy ordered OSHA to report on the steps being taken to

require BP to improve safety at the refinery.^j

j. Press Release, Kennedy Calls for OSHA Response to Texas City Refinery Disaster (Apr. 3, 2008), available at http://kennedy.senate.gov/newsroom/press_release.cfm?id=39b24b8d-9b73-4967-aca7-62bc9c698de2.

criminalizes the willful delivery of a fraudulent return to the secretary of the treasury.

A tax fraud prosecution must allege willful misconduct on the part of the accused. Consequently, prosecutors in tax fraud cases often add a mail fraud charge, which can result in a conviction even if willful misconduct is not proved. Moreover, mail fraud, unlike tax fraud, can be the basis for a RICO claim.

Section 6672 imposes civil liability for a penalty equal to the amount of a corporation's unpaid federal employment taxes on "those with the power and responsibility within the corporate structure for seeing that the taxes withheld from various sources are remitted to the Government."¹⁸⁸ The U.S. Court of Appeals for the Ninth Circuit has ruled that a person cannot be held liable for failure to pay over taxes unless the party (1) was the person required to collect, truthfully account for, and pay over the tax; and (2) willfully refused to pay the tax.¹⁸⁹

189. *Teel v. United States*, 529 F.2d 903 (9th Cir. 1976).

CAMNESTY AND LENIENCY PROGRAMS

In an effort to promote self-policing and self-reporting, the federal government will provide amnesty or leniency to offenders who proactively report and remedy violations. Examples include the Department of Justice's amnesty for price-fixing cartels (discussed in Chapter 17) and the Environmental Protection Address leniency for violations detected by voluntary self-audits (discussed in Chapter 16). These policies work primarily by "making companies an offer they shouldn't refuse."¹⁹⁰

190. This phrase was the title of a speech given by Deputy Assistant Attorney General Gary Spratling in 1999 about the Department of Justice's amnesty policy. Gary R. Spratling, *Making Companies an Offer They Shouldn't Refuse: The Antitrust Division's Corporate Leniency Policy—An Update*, Address at the Bar Association of the District of Columbia's 35th Annual Symposium on Associations and Antitrust, Washington D.C. (Feb. 16, 1999).

G L O B A L V I E W

Cracking Down on International Tax Evasion

Tax evasion is an illegal practice whereby a person intentionally does not pay his or her tax liability, often by hiding funds in offshore tax havens—countries that impose little or no tax liability. Most countries allow individuals and firms to invest their money wherever they please but obligate them to report all of their income to the tax authorities in their home country. In the United States alone, it is estimated that the Internal Revenue Service could be losing as much as \$50 billion a year due to illegal international tax maneuvering.¹⁹¹

In July 2008, the U.S. Department of Justice moved to compel UBS, a Swiss banking giant, to turn over the names of all American clients suspected of evading taxes through secret offshore accounts.¹⁹² The request, known as a "John Doe" summons, would require the Swiss bank

to turn over the names of nearly 20,000 American clients who prosecutors suspect have stashed nearly \$20 billion overseas, thereby evading \$300 million or more in taxes.¹⁹³ Although all Americans holding funds abroad are required to fill out a W-9 tax form, a letter from two senior UBS executives revealed that the bank had promised to guard the secrecy of those American clients who did not wish to file the required tax form.¹⁹⁴ As UBS debated whether to provide the information to the U.S. authorities, Swiss banking and legal circles urged the company not to betray the famous secrecy that has been a tradition of Swiss banking since the Middle Ages.¹⁹⁵

Liechtenstein, a tiny principality wedged between Austria and Switzerland with a history of secrecy in banking, also came under investigation when it was revealed that several high-profile Germans were diverting funds

to the country in an effort to avoid paying taxes.¹⁹⁶ As news of the scandal broke, hundreds of Germans came forward to pay the back taxes due plus 6 percent interest in an effort to avoid prosecution.¹⁹⁷ About 90 percent of Liechtenstein's financial services business is provided to nonresidents looking for a "discrete and flexible legal structure, strict bank secrecy and favourable tax arrangements."¹⁹⁸

In 2007, the Organization for Economic Cooperation and Development (OECD) announced that money was being directed to thirty-eight tax havens at a faster rate than previously reported.¹⁹⁹ In 2008, Germany joined fifteen other countries in signing the OECD Council of Europe Convention on Mutual Administrative Assistance in Tax Matters, which was designed to combat cross-border tax

evasion.²⁰⁰ The OECD hopes to put an end to tax evasion by sharing information on bank accounts holders with all countries, with a particular concentration on Andorra, Monaco, and Liechtenstein, which have remained on the OECD's "un-cooperative tax haven" list.²⁰¹

The OECD continues to maintain that ending tax evasion is possible, but experts recognize that it will require global cooperation:

Without vigorous and coordinated action by governments to ensure that the right legislative framework is in place, that tax administrations have the necessary information, tools and resources to address the problem, and without greater bilateral and multilateral cooperation, offshore tax evasion will continue to grow and undermine the integrity of national tax systems. No one country by itself can meet this challenge.²⁰²

THE RESPONSIBLE MANAGER

ENSURING CRIMINAL LAW COMPLIANCE

Senior management can take various actions to create a culture that values both organizational integrity and compliance with the spirit and the letter of the law. First, the company should develop a code of ethics, as discussed in Chapter 2. All criminal acts should be outlawed by the code. The code of ethics should have an enforcement mechanism, and it should clearly state that violations of the code will result in sanctions, such as salary reductions, poor performance ratings, and, in extreme cases, termination of employment.

The company should develop and implement a comprehensive program to ensure compliance with laws and regulations. The audit committee of the board of directors should oversee the program. The corporation should also have educational programs to teach employees about

the laws applicable to their areas of responsibility and to remind them about the provisions of the compliance program. Outside firms can be hired to review the corporation's compliance program and suggest areas for improvement.

A good reporting structure is crucial. Corporate in-house counsel should be independent and report suspected criminal activity directly to the board of directors. They should not succumb to pressure from division managers to give the go-ahead to an action that they believe may violate a criminal statute. Firms should also self-report violations. Prosecutors and courts are more inclined to mitigate the punishment of a corporation if it consistently reports the criminal misconduct of its employees.

It should be clear throughout the company that ethical behavior is expected. What top management does when it

CONTINUED

sees criminal law-related problems will influence all employees. It is much harder for employees to justify committing criminal acts against the corporation when they cannot claim that top management is also guilty of violating the law. Criminal misconduct is often a function of goal-setting and performance measures that induce people to do what they should not do. Managers should be careful to avoid sending mixed signals that reward (or demand) performance at all costs regardless of compliance with the law.

If the corporation is faced with a possible criminal investigation, prompt action is important. When there is any indication of possible criminal conduct by company employees, the corporation should seek the immediate advice of outside counsel prior to contacting the authorities. If employees are interviewed in connection with an internal investigation, internal and outside counsel should make it clear that they are representing the company, and not the employee. Managers should be careful when turning over information about internal investigations to prosecutors because they may inadvertently waive the attorney-client privilege applicable to notes prepared by outside counsel.

Although companies may be reluctant to investigate and self-report violations, it is better to know about a problem and deal with it than to let it persist and get out of control. No corporate compliance program is foolproof, but an effective program can "prevent and detect most violations; reduce financial litigation, regulatory, and reputational harm; get mitigation credit under the Sentencing Guidelines; and help set a tone in investigations that shows the company cares

about doing business the right way."²⁰³ It can also help shield officers and directors from vicarious liability.

Corporate compliance may even be a source of competitive advantage.²⁰⁴ According to the consulting firm Deloitte & Touche, "companies that follow both the letter and the spirit of the law by taking a 'values-based' approach to ethics and compliance will have a distinct advantage in the marketplace. Benefits of this approach can include improvements to a company's market performance, brand equity, and shareholder value."²⁰⁵ In addition to the direct costs of sanctions (such as fines and punitive damages) and the legal costs associated with litigation and appeals, illegality can divert funds from strategic investments, tarnish a firm's image with customers and other stakeholders, raise capital costs and reduce sale volume,²⁰⁶ and sap employee morale.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE: From Cookie-Jar Reserves to Booking Sales of "Buggy" Software

You are the chief financial officer of X-Ray Corporation, the largest subsidiary of Medtech, a publicly traded medical-imaging firm. When you report to Medtech's CEO that X-Ray had better-than-expected earnings for the quarter ended June 30, 2008, the CEO asks you to "hold some of them back" as a cushion in case other subsidiaries report lower-than-expected earnings in future quarters. How would you respond? Suppose that you tell the CEO that you can't do that because this "cookie-jar reserve" would violate Generally Accepted Accounting Principles, but the CEO warns that failure to create the reserve would be a career-limiting move. What would you do?

What if, instead of an earnings surplus over analysts' projections, X-Ray Corporation had lower-than-expected earnings due to unforeseen bugs in the software for its new suite of imaging equipment? How would you respond to a request from the CEO to book sales in the quarter ending June 30, 2008, that would not actually be finalized until July 2008, which is when X-Ray's engineers predict that the bugs will be worked out?²⁰⁷

207. This feature is based, in part, on a scenario described in Carol J. Loomis, *Lies, Damned Lies, and Managed Earnings*, *FORTUNE*, Aug. 2, 1999, at 92.

INSIDE STORY

THE CEO AS FELON

In response to Enron, WorldCom, and other corporate scandals, President George W. Bush created the Corporate Fraud Task Force in July 2002 to promote prosecution of corporate criminals. Exhibit 15.7 summarizes a number of the high-profile cases that led to convictions or guilty pleas in the period from 2000 to 2008.

In June 2003, the former chief executive of Rite Aid, Martin Grass, was sentenced to eight years in prison for accounting fraud. One U.S. attorney commented, "This conviction . . . should serve as a warning for corporate executives: if you lie to the investing public, to grand juries, to investigators, regulators and prosecutors, you will be vigorously investigated and prosecuted."²⁰⁸

208. Adrian Michaels, *Former Rite Aid Chief Jailed*, FIN. TIMES, May 28, 2004, at 32.

EXHIBIT 15.7

Executives on Trial

The CEO or CFO	The Crime	Plea/Trial Outcome	Punishment/Status
Cosmo Corigliano, Chief Financial Officer <i>Cendant</i>	One count of conspiracy to commit mail and wire fraud and make false statements to the SEC and one count of wire fraud.	Pleaded guilty (2000)	Sentenced to three years on probation and 300 hours of community service after testifying against former Cendant CEO Walter Forbes.
Diana D. Brooks, Chief Executive <i>Sotheby's Holdings</i>	Price-fixing conspiracy with rival Christie's.	Pleaded guilty (2000)	Spent six months under house arrest, three years on probation, paid a \$350,000 fine, and performed 1,000 hours of community service.
A. Alfred Taubman, Chairman <i>Sotheby's Holdings</i>	Six-year price-fixing conspiracy with rival Christie's.	Convicted (2001)	Sentenced to one year and one day. Served ten months and ordered to pay for his incarceration as well as \$7.5 million in fines.
Osamah S. Bakhit, Chief Executive <i>Aviation Distributors</i>	Eighteen counts, including conspiracy, securities fraud, falsifying documents, and making false statements.	Pleaded guilty (2002)	Sentenced to three years in federal prison and fined \$50,000.
Sam Waksal, Founder and Chief Executive <i>ImClone</i>	Six counts for fraud including securities fraud, conspiracy, insider trading, obstruction of justice, perjury, bank fraud, and a separate charge of tax evasion.	Pleaded guilty (2002)	Serving seven years and three months in federal prison and fined \$4.3 million.
Martin Grass, Chief Executive <i>Rite Aid</i>	Conspiracy to defraud and conspiracy to obstruct justice	Pleaded guilty (2003)	Serving seven years, fined \$500,000, and ordered to forfeit \$3 million.
David Wittig, Chairman and Chief Executive <i>Westar Energy</i>	In separate trials: individual counts of bank fraud, conspiracy, and money laundering; conspiracy and multiple counts of circumventing internal controls.	Convicted (bank fraud) (2003)	Sentenced to two years and fined \$1 million for bank fraud. Trial for conspiracy and circumventing internal controls tentatively scheduled for January 2009.

CONTINUED

EXHIBIT 15.7

Executives on Trial (*Continued*)

The CEO or CFO	The Crime	Plea/Trial Outcome	Punishment/Status
Gholamreza Mikaili, Chief Executive <i>Unify Corporation</i>	Ten counts of conspiracy and securities fraud.	Convicted (2003)	Sentenced to fifty-one months and ordered to pay \$1 million in fines and restitution.
Andrew Fastow, Chief Financial Officer <i>Enron</i>	Two counts of conspiracy to commit wire and securities fraud; dismissal of ninety-six other counts contingent on prosecutors' satisfaction with his cooperation against Skilling and Lay.	Pleaded guilty (2004)	Sentenced to six years, to be followed by three years of supervised release. Agreed to forfeit more than \$29 million.
Scott Sullivan, Chief Financial Officer <i>WorldCom</i>	Three counts of securities fraud, conspiracy to commit securities fraud, and filing false reports with the SEC.	Pleaded guilty (2004)	Sentenced to five years.
Martha Stewart, Founder and Chief Executive <i>Martha Stewart Living Omnimedia</i>	Two counts of making false statements, one count of obstruction, and one count of conspiracy.	Convicted (2004)	Served five months followed by five months of home confinement. Also paid a fine of \$30,000.
Oral Suer, Chief Executive <i>United Way</i>	Two counts for transporting stolen money across state lines, making false statements, and concealing facts about an employee retirement plan.	Pleaded guilty (2004)	Served twenty-seven months and ordered to pay \$497,000 in restitution.
C. Gregory Earls, Chairman and Chief Executive <i>U.S. Technologies</i>	Twenty-two counts, including one count of securities fraud, two counts of mail fraud, and nineteen counts of wire fraud for defrauding the company of \$13.8 million.	Convicted (2004)	Sentenced to ten years and ordered to pay \$21.9 million in restitution.
John Rigas, Chief Executive <i>Adelphia Communications</i>	One count of conspiracy, two counts of bank fraud, and fifteen counts of securities fraud for looting the company of hundreds of millions, but acquitted of wire fraud charges.	Convicted (2004)	Sentenced to fifteen years.
Timothy Rigas, Chief Financial Officer <i>Adelphia Communications</i>	One count of conspiracy, two counts of bank fraud, and fifteen counts of securities fraud for looting the company of hundreds of millions, but acquitted of wire fraud charges.	Convicted (2004)	Sentenced to twenty years.
Enrique P. Fiallo, Chief Executive <i>Enterasys Network Systems</i>	Single count of conspiracy to commit wire, mail, and securities fraud.	Pleaded guilty (2004)	Sentenced to four years.
Bernie Ebbers, Founder and Chief Executive <i>WorldCom</i>	Securities fraud, conspiracy to commit fraud, and filing false reports with the SEC.	Convicted (2005)	Sentenced to twenty-five years.
Dennis Kozlowski, Chief Executive <i>Tyco International</i>	Conspiracy, grand larceny, and securities fraud for stealing more than \$600 million from the company in unauthorized compensation and illicit stock sales.	Convicted (2005)	Sentenced to between eight and one-third and twenty-five years.
Mark Schwartz, Chief Financial Officer <i>Tyco International</i>	Conspiracy, grand larceny, and securities fraud for stealing more than \$600 million from the company in unauthorized compensation and illicit stock sales.	Convicted (2005)	Sentenced to between eight and one-third and twenty-five years.

CONTINUED

EXHIBIT 15.7

Executives on Trial (*Continued*)

The CEO or CFO	The Crime	Plea/Trial Outcome	Punishment/Status
Richard M. Scrushy, Chairman and Chief Executive <i>HealthSouth Corporation</i>	Eighty-five counts, including conspiracy; mail, wire, and securities fraud; filing false statements and certifications; and money laundering.	Acquitted (2005)	Subsequently convicted of bribing former Alabama Governor Don Siegelman and sentenced to nearly seven years.
Sanjay Kumar, Chief Executive <i>Computer Associates International</i>	Ten counts, including securities fraud, conspiracy, and obstruction of justice.	Pleaded guilty (2006)	Sentenced to twelve years and fined \$8 million.
Jeffrey Skilling, Chief Executive <i>Enron</i>	Thirty-six counts of fraud, including ten counts of insider trading, fifteen counts of securities fraud, four counts of wire fraud, six counts of making false statements, and one count of conspiracy to commit wire and securities fraud.	Convicted (2006)	Sentenced to more than twenty-four years in prison and fined \$45 million.
Robin Szeliga, Chief Financial Officer <i>Qwest Communications International</i>	One count of insider trading.	Pleaded guilty (2006)	Received two years on probation, six months of home detention, and a \$250,000 fine.
Jacob Alexander, Chief Executive <i>Comverse Technology</i>	Thirty-five counts of wire fraud, securities fraud, and tax evasion related to stock option backdating.	Indicted (2006)	Fled to Namibia in August 2006 and fighting extradition.
Kenneth Lay, Chairman and CEO <i>Enron</i>	Eleven counts, including one count of bank fraud, three counts of making false statements to banks, one count of conspiracy, two of wire fraud, and four of securities fraud.	Conviction vacated (2006)	Convicted in May 2006 but died of heart failure in Colorado less than two months later. Because Lay's appeal was pending at his death, his convictions were voided.
Walter Forbes, Chief Executive <i>Cendant</i>	Accused of a decade of wire, mail, and securities fraud; insider trading; and conspiracy resulting in investor losses of \$19 billion. Also lying to the SEC.	Convicted (2006)	Sentenced to twelve years and seven months. Ordered to pay a \$3.3 billion fine.
Conrad Black, Chief Executive <i>Hollinger International</i>	Obstruction of justice and three counts of mail fraud.	Convicted (2007)	Sentenced to six and one-half years and ordered to pay \$6.1 million in restitution.
Gregory Reyes, Chief Executive <i>Brocade Communications Systems</i>	Ten counts of securities fraud based on stock option backdating scheme.	Convicted (2007)	Sentenced to twenty-one months and fined \$15 million.
Ronald Ferguson, Chief Executive <i>General Re</i>	Sixteen counts, including conspiracy, securities fraud, mail fraud, and making false statements to the SEC.	Convicted (2008)	Facing maximum of 230 years and \$46 million fine.
Elizabeth Monrad, CFO <i>General Re</i>	Sixteen counts, including conspiracy, securities fraud, mail fraud, and making false statements to the SEC.	Convicted (2008)	Facing maximum of 230 years and \$46 million fine.
Joseph Nacchio, Chief Executive <i>Qwest Communications International</i>	Forty-two counts of insider trading.	Conviction overturned (2008)	Awaiting new trial on same charges. Had been sentenced to six years in prison and ordered to pay \$71 million in fines and forfeitures following April 2007 conviction on nineteen counts.

By mid-2008, the government had filed felony charges against thirty Enron employees. Jeffrey Skilling, the former chief executive, and Kenneth Lay, the former CEO and chair, were convicted at trial of conspiracy, fraud, and making false statements to the public about the health of Enron stock. Andrew Fastow, former CFO of Enron, pleaded guilty to two counts of conspiracy to commit wire and securities fraud in early 2004 and was sentenced to six years in prison after giving crucial testimony against Lay and Skilling.

WorldCom was forced to file for bankruptcy in 2002 as a result of a record \$11 billion accounting fraud. The former CFO Scott D. Sullivan pleaded guilty and was the key witness against his former boss CEO Bernie Ebbers. Ebbers was convicted in March 2005 of securities fraud, conspiracy to commit securities fraud, and filing false reports with the Securities and Exchange Commission.²⁰⁹ He had borrowed \$400 million from WorldCom, secured by his WorldCom stock, and prosecutors claimed that he perpetuated the fraud to reverse the slide in WorldCom's stock price. Ebbers took the stand in his own defense and played down his expertise, testifying, "I don't know about technology and I don't know about finance

209. Jonathan D. Glater & Ken Belson, *Ebbers, on Witness Stand, May Have Lost His Case*, N.Y. TIMES, Mar. 16, 2005, at C1.

and accounting."²¹⁰ Ebbers also testified that he was unaware of what the WorldCom CFO was doing. The jury didn't buy it. According to a posting by the father of juror Sarah Nulty, the jury "concluded that with his personal fortune evaporating and the company he built sinking, it was inconceivable that Ebbers was not paying attention" to WorldCom's finances.²¹¹

One source pointed out that without convictions of the top guys, little else matters: when it comes to restoring the public confidence in the courts and Wall Street, all the guilty pleas on earth won't amount to much if their purpose is to gain evidence against CEOs who nonetheless wind up tap-dancing their way to freedom on a smile and a handshake and the assurance that they're really, really stupid.²¹² Ebbers's conviction, coupled with the CEO and CFO certification requirements imposed by the Sarbanes-Oxley Act of 2002, appear to spell the demise of the "aw shucks" or "it wasn't me" defense.²¹³

QUESTIONS AND CASE PROBLEMS

1. Acting on a tip, two inspectors from the Environmental Protection Agency (EPA) took samples of the wastewater discharged from a paper mill by accessing sewer pipes through a manhole located on the edge of company property 300 feet from where the water dumped into the public sewer system. The mill and its owner were indicted on criminal environmental law charges based, in part, on the test results from those samples. Are the test results admissible at trial? [*Riverdale Mills Corp. v. Pimpare*, 392 F.3d 55 (1st Cir. 2004).]
2. Dow Chemical Company operated a 2,000-acre chemical-manufacturing facility with numerous covered buildings in Midland, Michigan. Dow maintained extensive security around the facility. Security measures around the perimeter of the facility prevent ground-level public viewing, and Dow also investigates any low-level aircraft flights over the facility.

The EPA sought to inspect two of Dow's power plants in the facility for violations of federal air-quality standards. Without obtaining a search warrant to enter the property and despite Dow's refusal to voluntarily agree to a search, the EPA employed a commercial airplane with precision aerial-camera mapping equipment to photograph Dow's large manufacturing and research facilities from the air. The powerful equipment allowed power lines as small as 0.5 inch in diameter to be observed. Yet, at all times, the aircraft stayed within navigable airspace.

Dow became aware of the EPA's actions and claimed that its Fourth Amendment rights had been violated. Did the EPA's photographs constitute an unreasonable search in violation of the Fourth Amendment? [*Dow Chemical Co. v. United States*, 476 U.S. 227 (1986).]

3. Bert's Sporting Goods, Inc., with stores located throughout the state of Lys, sells a wide variety of sporting goods, including guns. Section 123.45 of the Lys Penal Code

requires sellers of guns to verify that the purchaser has not committed a felony within the last five years. If the purchaser has committed a felony within the last five years, the seller is not allowed to make the sale. Selling a gun to a recent felon is considered a misdemeanor and is punishable by up to one year in jail and/or a maximum \$10,000 fine.

Jim Dandy, who was convicted of a felony under Lys's penal code four years ago, went to purchase a gun at one of the Bert's Sporting Goods stores. Joe Mountain, a salesman at Bert's, sold Dandy the gun without asking for identification or checking to see whether Dandy was a convicted felon.

As a matter of fact, Mountain never checked whether any of the customers to whom he sold guns were felons. Mountain did not know of the Lys law requiring him to check on the customer's prior criminal history. However, Jay Lake, Mountain's supervisor, knew of the law and also knew that Mountain never checked whether a customer was a felon. Bert, the sole shareholder and director of Bert's Sporting Goods, Inc., knew about the law but did not know that Mountain did not check on his customers' prior criminal history.

Dandy used the gun in a robbery and shot two police officers during his getaway. He was never captured. Can Mountain be punished under Section 123.45 of the Lys Penal Code? What about Lake? Bert? Bert's Sporting Goods, Inc.? What penalties should be assessed? [*Staples v. United States*, 511 U.S. 600 (1994).]

4. Barry Engel was president of Gel Spice Company, which imported, processed, and packaged spices. As president, he was responsible for the purchasing and storing of spices in the company's warehouse in Brooklyn, New York. In June 1972, the Food and Drug Administration (FDA) inspected the Gel Spice warehouse and found widespread

rodent infestation. Upon reinspection in August 1972, the FDA found evidence of continuing infestation. Following the two 1972 inspections, the FDA considered a criminal prosecution against Gel Spice. Before referring the case to the Department of Justice, however, the FDA conducted an additional inspection. At that July 1973 inspection, no evidence of rodent infestation was found, and the criminal prosecution was dropped. Three years later, in July 1976, the FDA inspected Gel Spice and again found active rodent infestation. Four additional inspections were performed from 1977 to 1979, each of which revealed continuing infestation. Thereafter, the government instituted criminal proceedings against Gel Spice and its president, Barry Engel. Under what theory of criminal liability could Engel be held liable for violating the Food, Drug and Cosmetic Act? Can Engel successfully assert any defense? [*United States v. Gel Spice Co.*, 773 F.2d 427 (2d Cir. 1985).]

5. An American Wrecking Corporation (AWC) employee was killed when bricks fell on him as he prepared a section of building for demolition. AWC was cited for willfully violating the Occupational Safety and Health Act (OSH Act) governing the removal of loose material during the demolition process. Willful violations of the Act can serve as the basis of criminal complaints. AWC filed a review petition. At hearing, the Occupational Safety and Health Administration Review Committee's experts testified that the bricks were unstable and should have been taken down, while company employees stated that they believed that the bricks had been supported by iron in the structure. The administrative law judge ruled that the company had willfully violated the statute by not removing the bricks because the hazardous condition should have been obvious to the demolition supervisor. On appeal, should this ruling be upheld? If so, what would be the appropriate sentence? [*American Wrecking Corp. v. Secretary of Labor*, 351 F.3d 1254 (D.C. Cir. 2003).]
6. Bermel Enterprises, Inc. is a supplier of computer programming consulting services to the federal government. In completing their time reports, Alex and Margot Frankel, two Bermel systems analysts, have consistently overstated the time they spent working on the government projects. These time reports determine how much money the government pays the company. Additionally, Michelle Laff, a manager at Bermel, has falsified the results of systems tests conducted on the computer systems installed for the government. As a result, the systems appear to be bug-free when, in fact, they contain many errors.

What criminal charges may the government bring against the employees? Against Larry Bermel, owner of Bermel Enterprises, Inc.? Against Bermel Enterprises, Inc. itself?

7. Dwayne Giles shot his ex-girlfriend, Brenda Avie, six times outside his grandmother's house, ultimately killing her and fleeing the scene. There was no witness to the crime, and Giles maintained at trial that he used the gun in self-defense, with his eyes closed and with no intent of murdering his ex. Avie's wounds indicated that during the attack she had been lying on the ground with her hands up. During the trial, the prosecution introduced statements Avie had given to police three weeks prior to her death to the effect that Giles had choked her and threatened her with a knife. California law allows juries to hear such threats when a witness is unavailable to testify at trial. Giles was convicted but appealed based on his Sixth Amendment right to confront and cross-examine witnesses testifying against him. Should Giles's conviction stand? [*Giles v. California*, 128S. Ct. 2678 (2008).]
8. Joseph Russo and Everett James Garner entered into an agreement to establish a building materials manufacturing business, Panel Building Systems, Inc. (PBS). To obtain capital to fund the development of the new company, Russo applied for a \$630,000 loan from the U.S. Small Business Administration (SBA). On the loan application, Russo stated that he was the president and 100 percent owner of PBS. PBS subsequently defaulted on the loan, and the SBA suffered losses of about \$474,000. During the SBA's investigation of the default, it was revealed that the actual president of PBS was Garner, not Russo, and that Garner had a poor financial record. Russo later admitted that he knew the information supplied on the loan application was false and that the false information was supplied in order to secure a loan from the SBA. Russo was sued for knowingly and willfully making a false statement to the federal government under 18 U.S.C. § 1001, which requires willful intent to deceive.

Russo claimed that although he knew the information supplied on the loan application was false, he lacked willful intent to deceive the federal government because he always intended to be president and CEO of PBS. Russo also argued that he thought Garner was a wealthy man and that he did not know Garner had a poor financial record. Did Russo have willful intent to deceive the federal government? [*United States v. Russo*, 202 F.3d 283 (10th Cir. 2000).]

CHAPTER 16

ENVIRONMENTAL LAW

INTRODUCTION

Role in Business Management

Environmental law consists of numerous federal, state, and local laws with the common objective of protecting human health and the environment. These laws are of great concern to a variety of firms, many of which may not have considered environmental liability when they first went into business.

Some industries (such as petroleum, mining, and chemical manufacturing) are well accustomed to intense government regulation of the environmental effects of their operations. In the last forty years, however, the scope and impact of environmental laws have grown steadily. Today, real estate owners and investors, developers, insurance companies, and financial institutions find that their operations, too, are often affected by laws and regulations intended to protect the environment. In addition, concerns about global warming have prompted virtually every company to consider ways to reduce its *carbon footprint*, the amount of carbon dioxide and other greenhouse gases it releases into the air.

Failure to comply with environmental laws can result in large judgments and punitive fines for companies, as well as criminal penalties (including imprisonment) for the corporate executives responsible for these violations. In 2004, an asbestos removal company executive was sentenced to twenty-five years in prison, the longest sentence ever issued under federal environmental laws, after being convicted of a decade's worth of Clean Air Act violations. The executive had repeatedly ordered workers to remove asbestos without wetting it first and falsified at least 1,500 air quality reports.¹

1. Michelle York, *Father and Son Get Long Terms in Defective Asbestos Removal*, N.Y. TIMES, Dec. 24, 2004, at 5.

CHAPTER OVERVIEW

This chapter examines four federal environmental laws that illustrate the importance of environmental regulation for an expanding scope of business activities. The Clean Air Act, the Clean Water Act, and the Resource Conservation and Recovery Act are discussed as examples of environmental statutes that control the release of pollutants into the air, water, and land. The Comprehensive Environmental Response, Compensation, and Liability Act is discussed as an example of a remedial statute with broad application to all kinds of businesses and individuals. The chapter also addresses the potential liability under the environmental laws of shareholders, directors, officers, and managers, as well as affiliated companies and lenders. We outline the key elements of effective compliance programs and conclude with a discussion of international efforts, including the Kyoto Protocol, to stop global warming.

ENVIRONMENTAL LAWS

In recent decades, growing awareness of the environmental problems posed by an industrial society has led to an increase in the number and reach of environmental laws and regulations at both the federal and state levels.

COMMON LAW NUISANCE

Historically, public officials relied primarily on the common law tort theory of nuisance to control industrial and agricultural activities that interfered with the health or

comfort of the community. Thus, industrial odors, noise, smoke, and pollutants of all kinds were the subjects of numerous lawsuits that attempted to balance the legitimate business interests of the polluter with the private interests of the surrounding community. But the need to file a lawsuit in each case and the complexity of the common law made nuisance a cumbersome way to control environmental pollution in an industrial society. Moreover, a lawsuit could not prevent pollution; it could only provide a remedy after the fact. Today, state and federal regulatory programs have largely replaced common law nuisance as a means of pollution control.

ENVIRONMENTAL STATUTES AND REGULATIONS

Environmental law consists of federal and state statutes, administrative regulations, and the administrative and judicial interpretations of their meaning. Environmental statutes establish policy, set goals, and authorize the executive branch or one of its administrative agencies to adopt regulations specifying how the law will be implemented. The statutes and regulations are interpreted and applied in administrative and judicial proceedings. In addition, administrative agencies, such as the Environmental Protection Agency, often issue policy statements and technical guidance, which do not have the force of law but guide enforcement efforts and provide assistance to the regulated community.

Three Categories

There are three broad categories of environmental law. The largest category consists of laws that regulate the release of pollutants into the air, water, or ground. These laws usually authorize the government to issue and enforce permits for release of pollutants. They may also authorize emergency responses and remedial action if, for example, improper waste disposal or accidental chemical spills threaten human health or the environment. Statutes in this category include the Clean Air Act; the Federal Water Pollution Control Act, as amended by the Clean Water Act; the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund);² and similar state laws.

2. As amended by the Superfund Amendments and Reauthorization Act of 1986, the Superfund Recycling Equity Act of 1999, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002. See the Superfund section on laws, policy, and guidance on the EPA's website, <http://www.epa.gov/superfund/policy/index.htm>.

These four federal pollution-control laws are discussed in this chapter.

A second category governs the manufacture, sale, distribution, and use of chemical substances as commercial products. This category includes (1) the Federal Insecticide, Fungicide and Rodenticide Act, which applies to pesticide products; and (2) the Toxic Substances Control Act, which applies to all chemical substances either manufactured in or imported into the United States, excluding certain substances that are regulated under other federal laws. The Safe Drinking Water Act, which governs the quality of drinking water served by public drinking-water systems, can also be included in this category.

A third category includes laws that require government decision makers to take into account the effects of their decisions on the quality of the environment. These include the National Environmental Policy Act of 1969 (NEPA)³ and similar laws adopted by most states. NEPA affects all business activities that require governmental authorizations, permits, or licenses.⁴

NATURAL RESOURCES LAWS

Although environmental law contributes to the protection of natural resources, it generally does not include

-
3. Codified, as amended, at 42 U.S.C. §§ 4321–4370f.
 4. The U.S. Supreme Court upheld the Federal Motor Carrier Safety Administration's proposed rules concerning Mexican motor carriers even though the agency did not consider the environmental impact of having more Mexican trucks after an executive order was issued allowing a larger number to cross the U.S. border. *Dep't of Transp. v. Pub. Citizens*, 541 U.S. 752 (2004). The Court reasoned that because the agency lacked discretion to prevent these cross-border operations, neither NEPA nor the Clear Air Act required an evaluation of their environmental effects.

INTERNATIONAL SNAPSHOT

Under the treaty between members of the European Union, "environmental protection is to be integrated into the definition and implementation of all Community activities and policies" and not just segregated to legislation enacted specifically to address broad environmental concerns. Central to environmental policy acts is the requirement that the government expressly consider environmental values in its decision making and that it document this consideration in written environmental impact reports that can be reviewed by the public. These requirements are especially important when the government itself is responsible for major development projects.

wilderness preservation, wildlife protection,⁵ coastal zone management, energy conservation, national park designation, and the like. Those laws are commonly referred to as *natural resources laws*. Nor does environmental law cover land-use regulation and zoning. Such laws, which are generally administered by local governments, are commonly referred to as land-use laws and are discussed in Chapter 19.

ADMINISTRATION OF ENVIRONMENTAL LAWS

The *Environmental Protection Agency (EPA)* administers all the federal laws that set national goals and policies for environmental protection, except the National Environmental Policy Act, which is administered by the Council on Environmental Quality. The EPA was created in 1970 by an executive order and operates under the supervision of the President. The EPA administrator and assistant administrators are appointed by the President with the advice and consent of the Senate. The EPA is, however, neither an independent agency nor a cabinet-level department.

Several of the assistant administrators are responsible for administering the agency's regulatory programs; others have internal administrative functions. These national program managers share responsibility with the ten regional administrators who head each of the ten EPA regional offices. The national managers at headquarters develop policy and set goals for the regional offices. The regional administrators take responsibility for day-to-day program operation.

STATE PROGRAMS

State agencies administer state laws and, with the authorization of the EPA, federal laws as well. State environmental laws and programs often predate the comparable federal programs. Moreover, many states have laws that are more stringent and more comprehensive than the federal laws. For example, California's hazardous-waste-management laws, water-quality-control laws, underground-tank regulations,

and ban on the land disposal of certain hazardous wastes all predate and, in some cases, provided the model for subsequent federal legislation.

In light of these preexisting state environmental programs and the need to reduce the EPA's administrative burden, Congress gave the EPA the authority to authorize or approve a state program in lieu of the federal program in that state. The EPA does not delegate its federal authority; it merely approves a state program as "equivalent to or more stringent than" the federal program and then refrains from implementing the federal program in that state. The EPA generally does provide oversight, however. It retains its enforcement authority and may revoke its authorization if the state program fails to meet federal requirements. In addition, as discussed further below, in some instances the EPA invokes federal preemption (discussed in Chapter 4) to prevent the states from imposing stricter standards than the ones mandated by the EPA.

INDUSTRY PARTICIPATION

Environmental laws and regulations are constantly changing as new threats to human health and the environment become apparent and new ways are discovered to manage such threats safely and economically. Congressional or administrative agency staff may be unaware of how a proposed law or regulation may affect a particular industry and usually welcome constructive industry participation in the law- and rule-making process. This is particularly the case when a company can propose alternative ways to accomplish the same legislative goals.

In the final months of the George W. Bush administration, a number of firms lobbied for a variety of so-called midnight regulations, including updating the air-monitoring rules for dry cleaners, simplifying the rules for recycling solid waste, and exempting feedlots from the requirement

5. The Ninth Circuit ruled that dolphins, whales, and other cetaceans did not have standing under the Endangered Species Act to sue to challenge the Navy's use of active sonar. *Cetacean Cnty. v. Bush*, 386 F.3d 1169 (9th Cir. 2004). The court dismissed as dicta its statement in *Palila v. Hawaii Department of Land & Natural Resources*, 852 F.2d 1106, 1107 (9th Cir. 1988), that the Hawaiian Palila bird "has legal status and wings its way into federal court as a plaintiff in its own right" to enforce the Endangered Species Act.

► ETHICAL CONSIDERATION

Environmental laws establish minimum standards to which companies must adhere. Companies also have fiduciary duties to their shareholders, and many labor activists argue that companies have similar duties to their employees. Is it ethical for a manager to adhere to stricter standards than mandated by law when such adherence will raise costs, reduce shareholder returns, and possibly jeopardize existing jobs? Is it more ethical, or less, to do so when the standards are to be implemented in a developing country with no environmental laws?

of obtaining a discharge permit under the Clean Water Act. Rick Melbert, director of regulatory policy at the nonpartisan group OMB Watch, remarked: “Whatever your political agenda, you’re going to try to accomplish it through these regulations. . . . There’s much less public scrutiny, and so much less transparency.”⁶

THE CLEAN AIR ACT

The Clean Air Act⁷ sets four types of air quality goals. First, it requires the EPA to establish *national ambient air quality standards (NAAQS)*, which are the maximum levels of pollutants in the outdoor air that, with adequate margins of safety, are compatible with public health.⁸ Standards must be set without regard for cost considerations.⁹ The EPA has set standards for six pollutants: (1) particulate matter, (2) sulfur dioxide, (3) ozone, (4) nitrogen dioxide, (5) carbon monoxide, and (6) lead. Every state and locality must seek to achieve and maintain these national air quality standards, which are revised periodically. If a nonattainment area fails to develop an adequate plan to attain the national standard, the federal

government is required to impose penalties, such as bans on construction of new sources of pollution, limits on drinking-water hookups, withholding of federal air-pollution funds, and limits on the use of federal highway funds. By affecting decisions concerning land use and transportation, as well as imposing emission controls, the law helps determine which areas of the country and which industrial sectors will be able to grow.

Second, the Clean Air Act requires that air quality in those areas that already meet the NAAQS not be allowed to deteriorate. Third, the Act requires the preservation of natural visibility within the major national parks and wilderness areas. Fourth, it requires the EPA to establish emission standards that protect public health, with an ample margin of safety, from hazardous air pollutants.¹⁰

The law also requires reductions in vehicle tail-pipe emissions of certain pollutants and the use of reformulated gasoline. It mandates that fleets use clean, low-emission fuels in some nonattainment areas. Major sources of some 200 hazardous air pollutants are required to meet emission limits based on best available control technology. Electric power plants must reduce emissions that lead to the formation of acid rain. Finally, the law phased out methylchloroform and chlorofluorocarbons and placed limitations on the production of certain substitute chemicals.

In the following case, the U.S. Court of Appeals for the District of Columbia Circuit invalidated a rule that would have relieved electric power plants from an obligation to use best available technology to reduce mercury emissions.

6. Elizabeth Williamson, *Rush Is On to Cement Regulations: Industries Bet They'll Fare Better with This White House Than the Next One*, WALL ST. J., Mar. 11, 2008, at A6.

7. 42 U.S.C. § 7401 *et seq.* The Fifth Circuit held that the Clean Air Act was a valid exercise of Congress’s power under the Commerce Clause in *United States v. Ho*, 311 F.3d 589 (5th Cir. 2002), *cert. denied*, 539 U.S. 914 (2003).

8. The U.S. Supreme Court rejected claims that the Act constituted an unconstitutional delegation of legislative power because it arguably left the EPA free to set the NAAQS at any point between zero and concentrations that would yield a “killer fog.” *Whitman v. Am. Trucking Ass’ns*, 531 U.S. 457 (2001).

9. *Id.*

10. See also *Massachusetts v. EPA*, 549 U.S. 497 (2007) (rejecting the EPA’s contention that the agency was not authorized to regulate vehicle emissions as a means of combating global warming and pointing out that the Clean Air Act granted the power to regulate emissions to the agency and that policy considerations were irrelevant to that mandate).

A CASE IN POINT

CASE 16.1

NEW JERSEY V. EPA

UNITED STATES COURT
OF APPEALS FOR THE DISTRICT
OF COLUMBIA
517 F.3d 574 (D.C. Cir. 2008).

SUMMARY

FACTS In 2000, acting pursuant to Section 112 of the Clean Air Act, the EPA concluded that it was “appropriate and necessary” to regulate mercury emissions from coal- and oil-fired electric utility steam generating units (EGUs) because they could “cause, or contribute to, an increase in mortality or an increase in serious irreversible or incapacitating reversible illness.”¹¹ When mercury drops out of the air, it accumulates in rivers and streams and is stored in the tissues of fish. If pregnant women or children eat the fish, the mercury can cause the child to suffer serious developmental problems. In 2005, the EPA issued a rule purporting to remove coal- and oil-fired EGUs from the Section 112 list (the Delisting Rule). A second rule adopted that same year (1) set

CONTINUED

11. 42 U.S.C. § 7412(a)(1).

performance standards pursuant to Section 111 for new coal-fired EGUs; (2) established a national mercury emissions cap for new and existing EGUs, allocating each state and certain tribal areas a mercury emissions budget; and (3) created a voluntary market-based cap-and-trade program for new and existing coal-fired EGUs. In a *cap-and-trade system*, plants' allowable emissions would be capped, and plants that emitted more than their allotments could buy credits from plants with emissions below the specified levels. New Jersey and fourteen other states, the city of Baltimore, and various environmental organizations sued to invalidate both rules on the grounds that the EPA violated Section 112's plain text when it delisted the EGUs and acted in an arbitrary and capricious manner when it reversed its determination that regulation of the EGUs' release of mercury was appropriate and necessary.

ISSUE PRESENTED Did the EPA violate the Clean Air Act when it removed EGUs from the list of sources of mercury pollution listed in the Clean Air Act after having previously determined that the release of mercury from the plants was hazardous to human health?

SUMMARY OF OPINION The U.S. Court of Appeals for the District of Columbia Circuit began by noting that Congress's concern about the EPA's slow pace in regulating sources of hazardous air pollution resulted in amendments to the Clean Air Act in 1990 that eliminated much of the EPA's discretion to regulate sources of hazardous air pollution. In the eighteen years following passage of Section 112 in 1970, the EPA had listed only eight pollutants and established standards for only seven of these, which addressed only a limited selection of possible pollution sources. The court explained that the 1990 amendments required the EPA to regulate more than 100 specific pollutants, including mercury. Congress gave the EPA the power, pursuant to Section 112(c)(9), to remove sources of pollutants from the Section 112 list, but only after determining that "emissions from no source in the category or subcategory concerned . . . exceed a level which is adequate to protect public health with an ample margin of safety and no adverse environmental effect will result from emissions from any source." Because the EPA failed to make the requisite finding before adopting the Delisting Rule, the court invalidated that rule and the rule purporting to regulate EGUs under Section 111.

The court rejected the EPA's argument that it had the authority to remove coal- and oil-fired plants from the Section 112(c) list at any time it made a negative "appropriate and necessary" finding. It also rejected, as contrary to the EPA's 2000 determination, the EPA's assertion that the EGUs were not a source meeting the statutory criteria for listing under Section 112. Citing *Chevron, U.S.A., Inc. v. Natural Resources Defense Council, Inc.*,¹² the court ruled that Congress had directly spoken to the issue of delisting and that "the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress."¹³ The court characterized the EPA's reasoning as "the logic of the Queen of Hearts, substituting EPA's desires for the plain text of section 112(c)(9)." (In Lewis Carroll's *Alice in Wonderland*, the Queen of Hearts declares, "Sentence first—verdict afterwards.") Because the EPA failed to make the findings required by Section 112(c)(9) to delist the EGUs from the Section 112(c)(1) list, both EPA rules were invalid.

RESULT Both the Delisting Rule and the cap-and-trade rules were invalidated.

COMMENTS Environmentalists cautioned that the cap-and-trade system could result in "hot spots" of pollution if local plants could buy their way out of the obligation to use the best available technology to cut mercury emissions.¹⁴ EPA spokesperson Jonathan Shrader criticized the court's ruling, saying, "We have now no control over existing power plants, which should be

14. David A. Fahrenthold & Steven Mufson, *Court Rejects Emission "Trades,"* WASH. POST, Feb. 9, 2008.

of concern to the American people," and asserting that the court's ruling invalidated a program that would have reduced mercury emissions by 70 percent.¹⁵ Professor Robert Percival of the University of Maryland commented, "It's fairly clear that even judges that are, you know, not that fond of environmental regulation are kind of appalled at how willing the [administration] has been to try to bend the law."¹⁶

15. *Id.*

16. *Id.*

FEDERAL AND STATE REGULATION OF GREENHOUSE GASES

In *Massachusetts v. EPA*,¹⁷ the U.S. Supreme Court confirmed the EPA's authority to regulate carbon dioxide and other greenhouse gases in motor vehicles and directed the EPA to make a finding regarding its obligation to regulate such emissions. The Court also ordered the EPA to consider whether it should provide a waiver under the Clean Air Act to permit California to impose the tough fuel economy standards embodied in California Health and Safety Code Section 43018.5(b)(1). California's standards are stricter than those imposed under federal law. Stressing the need for a uniform set of national standards, the EPA denied California's waiver request on December 19, 2007.¹⁸

In June 2008, the U.S. District Court for the Eastern District of California refused to lift an injunction prohibiting California from enforcing its fuel economy standards until a waiver of federal preemption is granted or federal legislation permitting their enforcement is enacted.¹⁹ The court did, however, decline to insulate automobile and truck manufacturers from a California provision that would give them only forty-five days to conform to the tougher California standards following the grant of a waiver of federal preemption by the EPA. After noting that "[e]nvironmental regulation is a constantly evolving part of the normal business landscape," the court stated:

Plaintiffs' arguments suggest, without actually so stating, that at least some of the Plaintiff auto manufacturers

Image not available due to copyright restrictions

made a conscious decision to proceed on the assumption that a waiver of federal preemption would never be granted by the EPA. If it turns out that the manufacturers that made that assumption are wrong, those Plaintiff auto manufacturers may well be at a significant disadvantage relative to auto manufacturers that are currently positioned more favorably with respect to compliance. But, so far as this court can discern, the choice to proceed as though California would never be granted waiver of federal preemption is fundamentally just a business decision that, like any other, may have negative consequences if wrongly made. It is not up to the courts to deflect the burden of such business decisions.

A rider to the 2008 Consolidated Appropriations Act signed by President Bush on December 26, 2007, directed the EPA "to require mandatory reporting of greenhouse gases above appropriate thresholds."²⁰ Many see this as a

necessary first step in creating a national cap-and-trade program. The EPA announced that the new rule, which under the Act must be proposed before October 2008 and finalized before July 2009, will cover “basically all sectors of the economy.”²¹

In June 2008, the EPA sent the Office of Management and Budget a draft proposal for regulating greenhouse gas emissions from vehicles under the Clean Air Act. In response, the Departments of Agriculture, Commerce, Energy, and Transportation declared that “the Clean Air Act is fundamentally ill-suited to the effective regulation of greenhouse gas emissions.”²² Edward Lazear, chair of the Council of Economic Advisers, and John H. Marburger, director of the Office of Science and Technology Policy, asserted that “acting in a globally uncoordinated fashion will put the United States at a competitive disadvantage. . . . If businesses in other countries do not suffer the penalty for emitting greenhouse gases, production has an incentive to move abroad.”²³ One month later, EPA Administrator Stephen Johnson announced that the EPA had decided to defer making a regulatory determination of whether emissions of greenhouse gases endanger public health and welfare and should be regulated under the Clean Air Act.²⁴ Instead, the EPA issued an advanced notice of proposed rulemaking requesting public comment on the advantages and disadvantages of regulating emissions under the Clean Air Act, technologies for reducing emissions, and alternative regulatory approaches.²⁵

THE CLEAN WATER ACT

The Federal Water Pollution Control Act was adopted in 1972 and was substantially amended by the Clean Water Act of 1977 and by the Water Quality Act of 1987. The Act, as amended, is commonly referred to as the Clean Water Act.²⁶ The principal goal of the Clean Water Act is to eliminate the discharge of pollutants into the navigable waters of the United States.

Navigable waters are all “waters of the United States which are used in interstate commerce,” including “all

freshwater wetlands that are adjacent to all other covered waterways.” In *Solid Waste Agency of Northern Cook County v. Army Corps of Engineers*,²⁷ the U.S. Supreme Court ruled that an abandoned sand and gravel pit in northern Illinois that provided habitat for migratory birds did not constitute “navigable waters” within the meaning of the Clean Water Act. The Court held that the Act does not apply to ponds that are not adjacent to open water, reasoning that the term “navigable” in the statute reflected Congress’s intention to limit application of the Clean Water Act to waters that are or have been navigable in fact or that could reasonably be made so. Permitting federal jurisdiction over ponds and mudflats would impinge on the states’ traditional power over land and water use. In *Rapanos v. United States*,²⁸ the Court further refined its interpretation of “waters of the United States” to include “those relatively permanent, standing or continuously flowing bodies of water ‘forming geographic features’” such as streams, oceans, rivers, and lakes, but excluding “channels through which water flows intermittently or ephemerally, or channels that periodically provide drainage for rainfall.”²⁹

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

The principal regulatory program established by the Clean Water Act is the *National Pollutant Discharge Elimination System (NPDES)*, which requires permits for the discharge of pollutants from any point source to navigable waters. EPA regulations establish *national effluent limitations*, which impose increasingly stringent restrictions on pollutant discharges, based on the availability of economically achievable treatment and recycling technologies. More stringent restrictions are imposed on new sources through the setting of national standards of performance. General and specific industry pretreatment standards are set for discharges to *publicly owned sewage treatment works (POTWs)*. The pretreatment standards are designed to ensure the effective operation of the POTW and to avoid the pass-through of pollutants. The POTW, in turn, must comply with its own NPDES permit for the discharge of treated waters. The NPDES program is administered largely through approved state programs, although the EPA maintains NPDES authority in areas not within the jurisdictions of states having EPA-approved programs.

INDIVIDUAL LIABILITY OF CORPORATE OFFICERS

A corporate officer can be held civilly liable under the Clean Water Act if he or she had the authority to exercise control over the activity that caused the unlawful discharge. A corporate officer can also be held criminally responsible if he or she knowingly violated the act.

In *United States v. Iverson*,³⁰ the U.S. Court of Appeals for the Ninth Circuit upheld a one-year prison sentence for the president and chairman of the board of CH20, Inc., a manufacturer of acid cleaners and alkaline compounds, after finding that he had actual authority to prevent the company's dumping of industrial waste into a sewer. The executive was also fined \$75,000 and received an additional sentence of three years of supervised release.

Similarly, the owner of a steel drum recycling company was found to have directed employees to dispose of hazardous waste water in various clandestine ways, from dumping it directly into sewers to bribing a city worker to put drums of waste in the city incinerator. He even ordered the construction of a fake evaporation tank that deceived enforcement officials into believing that contaminated water was being properly handled. Calling the owner's actions "environmental homicide," the district court judge sentenced to him to thirteen years in prison and ordered him to pay \$14,000 in restitution.³¹

THE RESOURCE CONSERVATION AND RECOVERY ACT

The Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976 and the Hazardous and Solid Waste Amendments of 1984 (RCRA),³² governs the management of hazardous wastes. The Act authorizes the EPA to identify and list hazardous wastes, to develop standards for the management of hazardous wastes by generators and transporters of wastes, and to set standards for the construction and operation of hazardous waste treatment, storage, and disposal facilities. RCRA covers current and future hazardous waste treatment facilities. Abandoned or historically polluted sites are governed by the Comprehensive Environmental Response, Compensation,

and Liability Act (CERCLA), discussed later in this chapter. The Federal Facility Compliance Act of 1992 and the Land Disposal Program Flexibility Act of 1996 strengthened enforcement of RCRA at federal facilities and eased RCRA-based restrictions on the disposal of certain types of waste, respectively.³³

CRADLE-TO-GRAVE RESPONSIBILITY

RCRA imposes "cradle-to-grave" responsibility on generators of hazardous waste. Each generator must obtain an EPA identification number and use a transportation manifest when transporting wastes for treatment or disposal. This allows the EPA to track the transportation, treatment, and disposal of hazardous wastes from the generator's facility to the final disposal site. A manifest is also required to transport hazardous wastes to an authorized storage facility.

RCRA bans the disposal of hazardous wastes onto land without treatment to render them less hazardous. To comply with the EPA's requirements for disposal on land, companies that generate hazardous waste may have to make substantial capital investments in treatment systems or incur increased costs for having wastes treated elsewhere prior to disposal.

Generators of hazardous waste must certify that they have a program in place to reduce the quantity and toxicity of their wastes. They must also certify that they are disposing of their wastes in a manner that, to the extent practicable, minimizes future threats to human health and the environment.

Owners and operators of hazardous waste facilities must obtain permits and comply with stringent standards for the construction and operation of their facilities. These standards include maintaining certain liability insurance coverage and providing financial assurances that show the owner/operator has the financial wherewithal to close the facility at the appropriate time and to maintain it properly after closure.

Even though hazardous waste transporters and treatment and storage facilities are closely regulated, companies that generate hazardous wastes must carefully select treatment, transportation, and disposal facilities. Liability may be imposed not only on the persons who "own or operate" the facility but also on those who have used the facility for the storage, treatment, or disposal of wastes. Persons who "contributed" to the improper waste disposal are also potentially liable. This includes individuals, such as officers who had no direct involvement in the disposal but had the authority to control the corporation's actions and failed to do so.

Strategic Environmental Management

Although the use of laws, regulations, and standards, referred to as "command and control" policy, is still an important tool for ensuring that companies' operations do not pollute the environment, many corporations have gone beyond simply complying with the laws.^a In response to the Union Carbide plant explosion in Bhopal, India, in 1984, which killed and injured thousands of people, the U.S. Chemical Manufacturers Association required its members to implement a program, called Responsible Care, to improve environmental performance.

Two years later, Congress enacted the Superfund Amendments and Reauthorization Act (SARA), which required companies to publish emission levels for hundreds of chemicals. This opened corporate books to public scrutiny and prompted many companies to try to reduce emissions. For example, in 1988, Monsanto announced a plan to reduce its emissions by 90 percent. Other companies, such as AT&T, made similar commitments to go beyond simply complying with the legal limits.

Corporations also broadened their focus to include the materials they used in production, as well as the pollutants they generated. After scrutinizing both their inputs and outputs, companies began to implement principles of "eco-efficiency" in their operations by using less energy, fewer new materials, and more reused and recycled materials. For example, Lockheed reduced the amount of energy it used in its 600,000-square-foot building by using sunlight rather than electrical lighting. This required an initial investment of \$2 million, but saved the company \$500,000 per year thereafter. Lockheed's use of sunlight also increased employee productivity.

During this period, corporations also began to look for pollution-prevention and eco-efficiency strategies that would produce economic savings, as well as environmental benefits. Michael E. Porter and Claas van der Linde maintained that firms could remain competitive and, in fact, gain competitive advantage through *innovation offsets*, technological advantages gained by companies that meet the challenge of environmental regulations and discover lower costs and better-quality products as a result.^b Corporations started implementing the concept of *strategic environmental management*, which advocates placing environmental management on the profit side of the corporation rather than the cost side. This represented a profound shift in how companies viewed their relationship with the environment.

In the next era of corporate environmentalism that began in the 1990s and continues in the twenty-first century, companies are working not just to reduce waste but to eliminate it altogether. This process involves looking at whole systems, rather than the individual parts, to create designs that take advantage of feedback loops within the company's operations. Some companies have begun to sell services rather than products, for example, by providing a rug or copying machine to a corporation for a period of time and then recycling it for continued use.

Companies are also working with other firms for both economic and environmental benefit. For example, *industrial ecology* is an approach that advocates a systems approach to eco-efficiency and applies it to groups of corporations working together. The best-known application of this approach is in Kalundborg, Denmark, where a refinery, power plant, pharmaceutical company,

and fish farm located next to each other reduce costs by using each other's waste as resource inputs. For example, heat generated from one operation is used in another company's manufacturing operations.

Finally, corporations have begun to exploit the opportunities created by environmental problems.^c Honda and Toyota have introduced hybrid cars and SUVs with reduced emissions and increased gas mileage and are racing to develop vehicles powered by fuel cells. Energy companies are also investing in developing alternative sources of energy.

Forest Reinhardt has identified five approaches that companies can take to incorporate environmental issues into their business model: (1) differentiate their products by making them environmentally friendly and, as a result, command high prices; (2) "manage" competitors by imposing a set of private regulations or helping government write rules; (3) cut costs by implementing environmental practices; (4) manage risk and reduce lawsuits and accidents; and (5) make systemic changes concerning environmental issues that will redefine competition in their markets.^d

d. FOREST REINHARDT, DOWN TO EARTH: APPLYING BUSINESS PRINCIPLES TO ENVIRONMENTAL MANAGEMENT (2000).

CRIMINAL LIABILITY

Although RCRA imposes strict civil liability, a criminal violation requires some sort of knowledge. In particular, RCRA provides criminal sanctions for any person who “knowingly transports any hazardous waste identified or listed under this subchapter to a facility which does not have a permit.”³⁴ As explained in Chapter 15, it is not always clear how far down the sentence the word “knowingly” travels.

In *United States v. Hayes International Corp.*,³⁵ the U.S. Court of Appeals for the Eleventh Circuit held that knowledge of the regulation banning transport of hazardous waste to an unlicensed facility is not an element of the offense. Furthermore, the defendants could be found guilty even if they did not know that the substance being disposed of was a hazardous waste within the meaning of the regulations. It was enough that they knew that they were disposing of a mixture of paint and solvents. The court distinguished *Liparota v. United States*,³⁶ which required knowledge that the purchase of food stamps was illegal, on the grounds that (1) the food stamp law required “knowing violation of a regulation” and (2) RCRA, unlike the food stamp law, was a public welfare statute involving a heavily regulated area with great ramifications for the public health and safety. The court concluded that it was fair to charge those who chose to operate in such an area with knowledge of the regulatory provisions.

The court held, however, that the government did have to prove that the defendants knew that the facility to which the waste was sent did not have a permit. Thus, even if the transporters did not know a permit was required, as long as they knew the facility did not have one or knew that they had not inquired, that would be sufficient knowledge for a conviction. Such knowledge could be shown circumstantially. For example, given that it is common knowledge that properly disposing of wastes is an expensive task, if someone is willing to take away wastes at an unusually low price or under unusual circumstances, then a juror could infer that the transporter knew that the wastes were not being taken to a licensed facility.

The court did acknowledge that mistake of fact would be a defense if the defendants had had a good faith belief that the materials were being recycled. The regulations applicable at the time provided an exemption from the permit requirement for waste that was recycled. The court distinguished a case in which the U.S. Supreme Court had held that a person who believed in good faith that he was

shipping distilled water, when in fact he was shipping dangerous acid, did not “knowingly” ship dangerous chemicals in violation of applicable regulations.³⁷ Unlike the defendant in that case, the defendants in *Hayes* knew what was being shipped—a combination of waste and solvents—and they did not have a good faith belief that the materials were being recycled. Therefore, the convictions were upheld.

THE FEDERAL SUPERFUND LAW (CERCLA)

More than any other environmental law, the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended,³⁸ has affected individuals and businesses that do not themselves produce environmental pollutants. CERCLA authorizes the federal government to investigate and take remedial action in response to a release or threatened release of hazardous substances to the environment. CERCLA established the *Hazardous Substance Superfund* to finance federal response activity. Through 2007, the Superfund has been replenished with tax revenue numerous times, for a total of more than \$32 billion in appropriations.³⁹

How federal Superfund money will be spent is determined in part by the EPA’s National Priorities List, which identifies sites that may require remedial action. The EPA lists the sites in a rulemaking proceeding based on a *hazard ranking score*, which represents the degree of risk that the site presents to the environment and public health.

STRICT LIABILITY

The courts have interpreted the liability provisions of CERCLA broadly in order to effectuate the statute’s remedial policies. With few exceptions, CERCLA imposes strict liability, meaning that any of the potentially responsible parties are liable regardless of fault. It is now well established, for example, that the present owner of the land is liable for the cleanup of hazardous substances disposed of on the land by another person (usually a previous owner or tenant), unless it can establish the third-party defense (also called the innocent landowner defense), discussed later in this chapter.

35. 786 F.2d 1499 (11th Cir. 1986).

36. 471 U.S. 419 (1985).

POTENTIALLY RESPONSIBLE PARTIES

The EPA may undertake remedial action itself or require the potentially responsible parties to do so. The *potentially responsible parties (PRPs)* include (1) the present owner or operator of the facility, (2) the owner or operator at the time of disposal of the hazardous substance, (3) any person who arranged for treatment or disposal of hazardous substances at the facility, and (4) any person who transported hazardous substances to or selected the facility.⁴⁰ If the EPA performs the remedial work, it can recover its cleanup costs from

40. 42 U.S.C. § 9607.

INTERNATIONAL SNAPSHOT

A fundamental element of the U.S. environmental scheme is that the polluter pays. The European Union (EU) has also adopted this policy: "The cost of preventing and eliminating nuisances must, as a matter of principle, be borne by the polluter."^a The EU's policy on the environment is designed to (1) preserve, protect, and improve the quality of the environment; (2) protect human health; (3) ensure prudent and rational utilization of natural resources; and (4) promote measures at the international level to deal with regional or worldwide environmental problems.

This concept has also been introduced in Asia. Taiwan, for example, enacted an environmental law modeled, in part, on CERCLA, with modifications to address the local culture, issues, and concerns. On a smaller scale, the government of Delhi, India, has begun enforcing local litter and recycling ordinances more stringently under the "polluter pays" principle.

When the laws of other nations are closely patterned on U.S. laws, compliance may be easier for U.S. companies operating in those countries; nonetheless, close attention should be paid to the differences between the U.S. laws and the laws of other countries. As other governments embrace U.S. pollution remediation principles, the United States may find itself in an awkward position. For example, Suresh Prabhu, India's former environment minister, remarked: "The polluters pay principle is internationally accepted today. So if the US and other rich countries are responsible for 70% of all the [greenhouse gases] in the atmosphere today, it's their responsibility to ensure the world doesn't hurtle towards an environmental crisis."^b

the responsible parties. CERCLA does not permit punitive damages absent a showing of recklessness.

Lessee as Owner

Certain courts have held lessees of contaminated property liable as "owners" under CERCLA, reasoning that site control is a sufficient indicator of ownership to impose owner liability on lessees or sublessors. The U.S. Court of Appeals for the Second Circuit rejected this approach, reasoning that site control confuses the two statutorily distinct categories of owner and operator under CERCLA.⁴¹ Instead, the Second Circuit ruled, the critical question is whether the lessee's status is that of a de facto owner. In determining whether a lessee is an owner, important factors to consider are (1) the length of the lease and whether it allows the owner/lessor to determine how the property is used; (2) whether the owner has the power to terminate the lease before it expires; (3) whether the lessee can sublet the property without notifying the owner; (4) whether the lessee must pay taxes, insurance, assessments, and operation and maintenance costs; and (5) whether the lessee is responsible for making structural repairs.

JOINT AND SEVERAL LIABILITY

The law permits the imposition of joint and several liability, which means that any one responsible party can be held liable for the total amount of response (cleanup) costs and natural resource damage even though others may also be responsible for the release. A responsible party who incurs costs cleaning up a toxic-waste site can seek cost recovery or contribution from other responsible parties. In resolving contribution claims, the court may allocate response costs among liable parties using such equitable factors as the court determines are appropriate.⁴² Of course, the right of contribution is of value only if the other parties are still in existence and able to pay. Many times, they are not. Thus, joint and several liability allows the government to select financially sound parties from whom to collect response costs and puts the burden of recovering these costs from other responsible parties on the selected defendants.

A party may escape joint and several liability if it can prove that it contributed to only a divisible portion of the harm or that it was the source of waste that, when mixed with

41. *Commander Oil Corp. v. Barlo Equip. Corp.*, 215 F.3d 321 (2d Cir. 2000), *cert. denied*, 531 U.S. 979 (2000).

42. In *Browning-Ferris Industries of Illinois v. Ter Maat*, 195 F.3d 953 (7th Cir. 1999), the U.S. Court of Appeals for the Seventh Circuit held that if one party has been required to pay the entire cost of cleaning up a site to which several other parties also contributed hazardous waste, the other parties can be held jointly and severally liable for contribution.

other hazardous waste, did not contribute to the release and cleanup costs that followed. The party bears the burden of establishing a reasonable basis for apportioning liability.⁴³

A CASE IN POINT

CASE 16.2

KOTROUS v. GOSS-JEWETT CO.

UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

523 F.3d 924 (9th Cir. 2008).

IN THE LANGUAGE OF THE COURT

FACTS The U.S. Court of Appeals for the Ninth Circuit addressed the issue of recovering costs for CERCLA-related cleanup in two separate cases. As both turned on the same point of law, the court addressed them in one opinion. The first case involved Kotrous, a businessman, who in 1995 had purchased land that had housed a dry cleaning business for the preceding quarter century. After discovering that the soil and groundwater at the site were contaminated with chemicals used for dry cleaning, Kotrous undertook voluntary remediation efforts (that is, he cleaned up the hazardous waste without first being sued by the EPA or any other person) and then sued to recover the cost of those efforts from other potentially responsible parties, including the Goss-Jewett Company, which had operated the cleaning business, and Bayer, the company that had supplied the chemicals.

The second case was similar. Adobe Lumber had recently purchased a shopping center and then discovered that it had contaminated soil and water. The source of the contamination was also a dry cleaning business. Adobe took steps to rectify the contamination voluntarily and then brought suit against other potentially responsible parties to defray the cost of the cleanup.

The defendants in both cases argued that because the plaintiffs had not themselves been sued under CERCLA, they had no right to seek *contribution* (partial coverage of the cleanup costs under CERCLA Section 113) or to recover costs (complete coverage of the cleanup costs under Section 107) from other potentially responsible parties. Under Section 113, PRPs who are held jointly liable in a common suit under CERCLA have an explicit right to seek contribution, that is, partial repayment of the costs incurred, from the other PRPs. Section 107 gives a person who has cleaned up a site the right to recover its actual cleanup costs but is silent on the availability of contribution.

ISSUE PRESENTED May a landowner who has not been sued under CERCLA receive contribution or recover costs associated with the voluntary remediation of contaminants on its property?

OPINION TASHIMA, J., writing for the U.S. Court of Appeals for the Ninth Circuit:

In *Atlantic Research*,⁴⁴ the Supreme Court answered [a] question left open [by prior holdings]: “whether § 107(a) provides . . . [potentially responsible parties] . . . with a cause of action to recover costs from other PRPs.” The Court held that it does.

....

CERCLA § 113(f) grants an explicit right to contribution to PRPs “with common liability stemming from an action instituted under § 106 or § 107(a).” Section § 107(a), by contrast, “permits recovery of cleanup costs but does not create a right to contribution. A private party may recover under § 107(a) without any establishment of liability to a third party,” but a PRP may recover only the costs it has incurred in cleaning a site, not the costs of a settlement agreement or a court judgment.

....

Under *Atlantic Research*, a PRP such as Kotrous or Adobe that incurs costs voluntarily, without having been subject to an action under § 106 or § 107, may bring a suit for recovery of its costs

CONTINUED

44. United States v. Atl. Research Corp., 127 S. Ct. 2331 (2007).

under § 107(a); a party in such a position does not need a right to implied contribution under § 107. Any of the defendants sued by such a PRP may seek contribution under § 113(f) because they now will have been subject to an action under § 107.

RESULT Both cases were remanded for further proceedings. Kotrous and Adobe could sue the other potentially responsible parties under Section 107 of CERCLA to recover the response costs they voluntarily paid. They were not entitled to contribution under Section 113, however, because they had not themselves been sued under Section 106 or 107.

Critical Thinking Questions

1. What percentage of the cleanup costs, if any, should the current owners, Kotrous and Adobe, be required to pay?
2. If Kotrous or Adobe had refused to pay the cleanup costs and instead had sold the land to a third party without disclosing the contamination, could that party later bring a claim against the prior owner under CERCLA?

LIABILITY OF AFFILIATED COMPANIES AND PIERCING THE CORPORATE VEIL

Corporate relatives also face potential CERCLA liability under certain circumstances. In *United States v. Bestfoods*,⁴⁵ the U.S. Supreme Court outlined the responsibility a parent corporation has for the hazardous waste disposal activities of a subsidiary. There are two bases for imposing liability on parent corporations for facilities ostensibly operated by their subsidiaries: (1) as an owner of a subsidiary whose corporate veil has been pierced and (2) as an operator of the facility.

Derivative Liability as an Owner

A parent corporation will have derivative CERCLA liability as an owner for its subsidiary's actions when (but only when) there are grounds for piercing the subsidiary's corporate veil. As explained more fully in Chapter 20, such a collapsing of the legal distinction between parent and subsidiary is appropriate only if the corporation is just a sham or if the distinction is a fiction meant simply to protect shareholders from illegal activity.

In its initial ruling in *Bestfoods*, the U.S. Court of Appeals for the Sixth Circuit had turned to Michigan corporate law to decide whether to pierce the Michigan firm's corporate veil. Other courts have turned to federal common law, that is, the principles found in cases that the courts have developed for interpreting federal statutes like CERCLA. Under federal common law, courts may give less

respect to the corporate form than under the common law of many states.

Direct Liability as an Operator of the Subsidiary's Facility

A parent corporation will have direct liability for its own actions if it operates a facility owned by its subsidiary. To be deemed an operator, the parent corporation "must manage, direct, or conduct operations specifically related to pollution, that is, operations having to do with the leakage or disposal of hazardous waste, or decisions about compliance with environmental regulations."⁴⁶ Thus, the question is not whether the parent operates the subsidiary, but rather whether it operates the facility.

The Supreme Court acknowledged in *Bestfoods* that it is common for directors of a parent corporation to serve as directors of its subsidiary. Directors and officers holding positions with both the parent and its subsidiary can and do legitimately "change hats" to represent the two corporations separately. Courts generally presume that the directors are wearing their "subsidiary hats," and not their "parent hats," when managing the subsidiary. As a result, the parent is not liable just because dual officers and directors made policy decisions and supervised activities at the subsidiary's facility. But if an agent of the parent who wears only the parent's hat manages or directs activities at the subsidiary's facility, then the parent company may be held directly liable as an operator.

45. 524 U.S. 51 (1998).

46. *Id.*

The parent company may also be directly liable if (1) the parent operates the facility in the stead of its subsidiary or alongside the subsidiary in some sort of joint venture; or (2) a dual officer or director departs so far from the norms of parental influence exercised through dual officeholding as to serve the parent in operating the facility, even when ostensibly acting on behalf of the subsidiary. Activities involving the facility that are consistent with the parent's investor status (such as monitoring the subsidiary's performance, supervising the subsidiary's finance and capital budget decisions, and articulating general policies and procedures) should not give rise to direct operator liability for the parent.

SUCCESSOR LIABILITY

Another important issue is *successor liability*, that is, the responsibility an acquirer of corporate assets has for the liabilities of the seller. Ordinarily, a purchaser of corporate assets—as opposed to a purchaser of all the stock of a corporation or a merger partner—does not automatically assume any of the seller's liabilities. The doctrine of successor liability arose out of attempts by companies to evade liability by selling the bulk of their business or assets to another firm and then distributing the proceeds to their shareholders, thereby leaving creditors with no assets to collect against. Although this aspect of corporate law is normally a province of state common law, several federal courts refer to a federal common law of successor liability for environmental cleanup under CERCLA.

The U.S. Courts of Appeals for the Third, Fourth, Seventh, and Eighth Circuits have taken the position that the doctrine of successor liability under CERCLA should be fashioned by reliance on federal common law. For example, the Seventh Circuit reasoned that resort to federal common law was warranted to achieve national uniformity in interpreting CERCLA and to prevent parties from frustrating the statute's aims by incorporating under the laws of states that restrict successor liability.⁴⁷

In contrast, the Second Circuit read *Bestfoods*⁴⁸ to require reference to state corporate law to determine when there should be successor liability⁴⁹ and abandoned the substantial continuity test it had embraced in an earlier case.⁵⁰ The *substantial continuity test* (sometimes referred

to as the *continuity of enterprise approach*) imposes successor liability when the purchaser of assets “maintains the same business, with the same employees doing the same jobs, under the same supervisors, working conditions, and production process, and produces the same products for the same customers” as the seller corporation.⁵¹ Although several states employ this test, the majority of states impose successor liability only when there is a single corporation after the transfer of assets with the same shareholders and directors before and after the acquisition.⁵² Because most states apply this more stringent *mere continuation (identity) test*, the Second Circuit concluded that the substantial continuity test should not be applied in this case. Instead, the Second Circuit applied the traditional common law rule, which states that a corporation acquiring the assets of another takes on its liabilities only when (1) the acquirer has expressly or implicitly agreed to assume them, (2) the transaction may be viewed as a de facto merger or consolidation,⁵³ (3) the successor is the mere continuation of the predecessor, or (4) the transaction is fraudulent. The First,⁵⁴ Sixth, and Eleventh Circuits have also relied on state common law to determine successor liability.

LIABILITY OF LENDERS AND FIDUCIARIES

Lenders face potential liability under CERCLA because foreclosure of a contaminated property potentially makes them an owner. The Asset Conservation, Lender Liability, and Deposit Insurance Protection Act of 1996⁵⁵ excluded from the definition of “owner or operator” a lender that did not participate in the management of a facility prior to foreclosure. Participation in management means “actually participating in the management or operational affairs” of the facility. Mere capacity to influence management is not a sufficient basis for imposing operator liability on a lender. Thus, a lender may hold “indicia of ownership,” such as a deed of trust, to protect its security interest without facing liability as long as it does not actually manage or operate the facility.

51. *United States v. Caroling Transformer Co.*, 978 F.2d 832 (4th Cir. 1992).

52. *Id.*

53. *See New York v. Nat'l Servs. Indus.*, 460 F.3d 201 (2d Cir. 2006) (holding de facto merger requires continuity of ownership).

54. *Cyr v. B. Offen & Co.*, 501 F.2d 1145 (1st Cir. 1974); *United States v. Davis*, 261 F.3d 1, 54 (1st Cir. 2001) (noting that *Bestfoods* “left little room” for the creation of a special federal rule of liability under CERCLA).

55. 42 U.S.C. § 9601(20).

47. *North Shore Gas Co. v. Salomon, Inc.*, 152 F.3d 642 (7th Cir. 1998).

48. 524 U.S. 51 (1998).

49. *New York v. Nat'l Servs. Indus.*, 352 F.3d 682 (2d Cir. 2003). *Accord Ne. Conn. Econ. Alliance, Inc. v. ATC P'ship*, 861 A.2d 473 (Conn. 2004).

50. *B.F. Goodrich v. Betkoski*, 99 F.3d 505 (2d Cir. 1996).

Although a lender may take steps to sell the property if the debtor defaults and may even buy it at the foreclosure sale, without automatically becoming a potentially responsible party, the lender must attempt to sell or re-lease the property as soon as practicable for a commercially reasonable price. Failure to do so will make the lender potentially liable as an owner.

The liability of a fiduciary, such as a trustee, is limited to the assets held in trust. There is also a safe harbor for fiduciaries that undertake lawful response actions, but the safe harbor does not protect against negligence that causes or contributes to the release or threatened release of hazardous substances.⁵⁶

DEFENSES

There are five defenses to liability under CERCLA. The defendant can avoid liability by showing that the release of hazardous substances was caused solely by (1) an act of God (that is, an unavoidable natural disaster, such as an earthquake); (2) an act of war; or (3) the act or omission of a third party, provided that certain other requirements are met. A fourth defense for purchasers of *brownfields*, contaminated sites that are eligible for cleaning and reclaiming with assistance from the Superfund,⁵⁷ was added by the Brownfields Revitalization Act. A fifth defense is available for recyclers against claims brought by private parties but not against claims by the federal or state government.

Third-Party or Innocent Landowner Defense

To assert the *third-party defense* (also referred to as the *innocent landowner defense*), a defendant must show that the third party responsible for the release was not an employee and had no contractual relationship with the person asserting the defense. If the facility was acquired from the third party, the written instrument of transfer (usually a deed) is deemed to create a contractual relationship, unless the purchaser acquired the facility after the hazardous substances were disposed of and without any knowledge or reason to know that hazardous substances had previously been disposed of at the facility. To establish that the purchaser had no reason to know that hazardous substances were disposed of at the facility, the purchaser must show that, prior to the sale, it undertook “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice in an effort to minimize liability.”⁵⁸

56. 42 U.S.C. § 9607(n).

57. For a more in-depth look at brownfields, see the “Inside Story” in Chapter 19.

58. 42 U.S.C. § 9601(35)(B).

The EPA initially declined to define what constituted “all appropriate inquiry,” but was instructed to do so by the 2002 Small Business Liability Relief and Brownfields Revitalization Act. After forming a negotiated rulemaking committee comprising environmental engineers, representatives of industry, state and local government officials, and community activists, the EPA promulgated a final rule in 2007 that gave prospective purchasers definitive guidance on what is necessary to prove the appropriate inquiry required for the third-party defense.⁵⁹ The requirements are summarized in Exhibit 16.1.

Brownfields and Ready-for-Reuse Certificates

As discussed more fully in Chapter 19, the Brownfields Revitalization Act⁶⁰ makes it possible for acquirers of certain contaminated sites to avoid liability for legacy (that is, preexisting) contamination on the site. Landowners must comply with all institutional controls and guidelines issued by the EPA. For example, a landowner must take “reasonable steps” to prevent future or continuing releases of hazardous materials onto the land. Failure to comply with the guidelines exposes landowners to liability for the entire cleanup costs.⁶¹ A full review of federal and state EPA guidelines is recommended to determine what constitutes “reasonable steps.”

To offer more certainty to acquirers of contaminated sites, the EPA will, under certain circumstances, issue certificates of reuse under RCRA. The EPA issued its first certificate of reuse to a steel plant in Oklahoma in 2002. This certificate “verifies that environmental conditions on this property are protective of its current use and anticipated future uses.”⁶² These reuse certificates are incentives to clean up formerly contaminated land.

59. 70 Fed. Reg. 66,070 (Nov. 1, 2005); *see also* the section on Brownfields and Land Revitalization on the EPA’s website, <http://www.epa.gov/brownfields/regneg.htm>.

60. Small Business Liability Relief and Brownfields Revitalization Act (2002); *see also* Robert Dahlquist & Tiffany Barzal, *Ah: Relief from CERCLA. But Where’s the Relief?*, 12 Bus. Law. 39 (2003), for an excellent discussion of the relief from Superfund liability granted to some small businesses. The Economic Development Administration Reauthorization Act of 2003, Pub. L. No. 108-373, 118 Stat. 1756 (2004), provided for a demonstration program to encourage the use of solar energy technologies at brownfields sites. Up to \$5 million for each fiscal year from 2004 through 2008 is authorized to develop “brightfield” sites.

61. These guidelines are available at <http://www.cfpb.epa.gov/compliance/resource/policies/cleanup/brownfields/index.cfm>. *See also* EPA Guidance Issued on Avoiding Liability for Properties Tainted by Contiguous Sites, 72 U.S.L.W. 2448 (2003).

EXHIBIT 16.1**What Constitutes “All Appropriate Inquiry” Under CERCLA?**

To avail itself of the third-party defense, the landowner or prospective purchaser must hire an environmental professional, as defined in the final rule, to conduct a site assessment. That assessment must include:

- Interviews with past and present owners, operators, and occupants.
- Reviews of historical sources of information.
- Reviews of federal, state, tribal, and local government records.
- Visual inspections of the facility and adjoining properties.
- Commonly known or reasonably ascertainable information.
- An assessment of the degree of obviousness of the presence or likely presence of contamination at the property and the ability to detect the contamination.

Additional inquiries that must be conducted by or for the prospective landowner include:

- Searches for environmental cleanup liens.
- Assessments of any specialized knowledge or experience of the prospective landowner.
- An assessment of the relationship of the purchase price to the fair market value of the property, if the property was not contaminated.
- Commonly known or reasonably ascertainable information.

The rule specifies that any assessment conducted in accordance with ASTM standard E1527-05 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) will comply with the rule and thereby satisfy the requirement of “all appropriate inquiry.”

Recyclers

The Superfund Recycling Equity Act of 1999 exempts recyclers from liability in private-party actions under CERCLA. They remain liable in suits brought by the state or federal government, however. Under the statute, a person “who arranged for recycling of a recyclable material shall not be liable under [CERCLA’s cost recovery and contribution sections] with respect to such material.” The term “recyclable material” includes lead-acid and nickel-cadmium used in batteries. The Act applies retroactively to private actions that were pending on its date of enactment, November 29, 1999.⁶³

RETROACTIVE APPLICATION

In *United States v. Olin Corp.*,⁶⁴ the U.S. Court of Appeals for the Eleventh Circuit ruled that owners can be held liable

for hazardous waste disposed of before CERCLA became law. The court reasoned that “Congress’s twin goals of cleaning up pollution that occurred prior to December 11, 1980, and of assigning responsibility to culpable parties can be achieved only through retroactive application of CERCLA’s response cost liability provisions.”

Subsequent to the Eleventh Circuit’s decision in this case, the U.S. Supreme Court held in *Eastern Enterprises v. Apfel*⁶⁵ that retroactive application of the Coal Industry Retiree Health Benefit Act of 1992 to a company that had abandoned its coal business in 1965 violated the Takings Clause of the Fifth Amendment to the U.S. Constitution. Although defendant firms have argued in several cases that *Eastern Enterprises* overrules all previous decisions holding that CERCLA could be constitutionally applied retroactively, three federal circuit courts (the U.S. Courts of Appeals for the Second, Sixth, and Eighth Circuits), as well as several federal district courts (including the Eastern District of Virginia, the Northern District of New York, the Western District of Arkansas,

63. Gould Inc. v. A&M Battery & Tire Serv., 232 F.3d 162 (3d Cir. 2000).

64. 107 F.3d 1506 (11th Cir. 1997).

65. 524 U.S. 498 (1998).

and the District of New Jersey),⁶⁶ have rejected this argument and upheld the retroactive application of CERCLA.

66. United States v. Alcan Aluminum Corp., 315 F.3d 179, 189–90 (2d Cir. 2003) (listing post-*Eastern Enterprises* decisions finding retroactive application of CERCLA constitutional). *But see* Gen. Elec. Co. v. EPA, 360 F.3d 188 (D.C. Cir. 2004) (ordering district court to consider General Electric's preenforcement constitutional challenge).

A CASE IN POINT

CASE 16.3

PAKOOTAS V. TECK COMINCO METALS, LTD.

UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT
OF WASHINGTON

2004 U.S. DIST. LEXIS 23041
(E.D. Wash. Nov. 8, 2004).

IN THE LANGUAGE OF THE COURT

FACTS Plaintiffs Joseph A. Pakootas and Donald R. Michel, enrolled members of the Confederated Tribes of the Colville Reservation, sued to enforce a unilateral administration order (UAO) by the U.S. EPA requiring the defendant, Teck Cominco Metals, Ltd. (TCM), to investigate and determine the full nature of the contamination at the “Upper Columbia River Site” due to materials disposed of into the Columbia River from the defendant’s smelter. TCM is a Canadian corporation that owned and operated a smelter in Trail, British Columbia, located approximately ten Columbia River miles north of the United States–Canada border. The State of Washington was also a plaintiff, having intervened in the litigation as a matter of right under CERCLA.

TCM moved to dismiss the action, contending that the U.S. court did not have subject matter or personal jurisdiction and that the plaintiffs’ complaints failed to state claims upon which relief could be granted.

ISSUE PRESENTED Does a U.S. court have the power to enforce the provisions of CERCLA against a Canadian corporation for actions taken by that corporation in Canada?

OPINION MCDONALD, J., writing for the U.S. District Court for the Eastern District of Washington:

A. Subject Matter Jurisdiction

This case arises under CERCLA and, therefore, there is a federal question which confers subject matter jurisdiction on this court.

....

B. Personal Jurisdiction

....

Absent one of the traditional bases for personal jurisdiction—presence, domicile, or consent—due process requires a defendant have “certain minimum contracts with [the forum state] such that the maintenance of the suit does not offend traditional notions of fair play and substantial justice.” *International Shoe Co. v. Washington*.⁶⁷ The forum state must have a sufficient relationship with the defendants and the litigation to make it reasonable to require them to defend the action in a federal court located in that state.

The extent to which a federal court can exercise personal jurisdiction, absent the traditional bases of consent, domicile or physical presence, depends on the nature and quality of defendant’s “contacts” with the forum state.

If a non-resident, acting entirely outside of the forum state, intentionally causes injuries within the forum state, local jurisdiction is presumptively reasonable. Under such circumstances, the

CONTINUED

67. 326 U.S. 310 (1945).

defendant must "reasonably anticipate" being haled into court in the forum state. Personal jurisdiction can be established based on: (1) intentional actions; (2) expressly aimed at the forum state; (3) causing harm, the brunt of which is suffered, and which defendant knows is likely to be suffered, in the forum state. . . .

The facts alleged in the individual plaintiffs' complaint and the State of Washington's complaint-in-intervention satisfy this three-part test. The complaints allege that from approximately 1906 to mid-1995, defendant generated and disposed of hazardous substances directly into the Columbia River and that these substances were carried downstream into the waters of the United States where they have eventually accumulated and cause continuing impacts to the surface water and ground water, sediments, and biological resources which comprise the Upper Columbia River and Franklin D. Roosevelt Lake. . . . This disposal causes harm which defendant knows is likely to be suffered downstream by the State of Washington and those individuals, such as Pakootas and Michel, who fish and recreate in the Upper Columbia River and Lake Roosevelt.

The burden is on the defendant to prove the forum's exercise of jurisdiction would not comport with "fair play and substantial justice." . . .

. . .
The exercise of jurisdiction over defendant TCM does not offend traditional notions of fair play and substantial justice. The burden on defendant in defending in this forum is not great. Trail, B.C. is located approximately 10 miles from the Eastern District of Washington. For reasons discussed below, the court finds the exercise of personal jurisdiction over defendant does not create any conflicts with Canadian sovereignty. It is obvious the State of Washington has a significant interest in adjudicating this dispute, as evidenced by its intervention as a plaintiff, and venue is proper here under CERCLA.

C. Failure to State a Claim

A Rule 12(b)(6) dismissal is proper only where there is either a "lack of a cognizable legal theory" or "the absence of sufficient facts alleged under a cognizable legal theory." . . .

Defendant contends the UAO cannot be enforced against a Canadian corporation based on conduct which occurred in Canada. . . .

. . . CERCLA's definition of "environment" is limited to waters, land, and air under the management and authority of the United States, within the United States, or under the jurisdiction of the United States.

. . . The court . . . will assume this case involves an extraterritorial application of CERCLA to conduct occurring outside U.S. borders. In doing so, however, the court does not find that said application is an attempt to regulate the discharges at the Trail smelter, but rather simply to deal with the effects thereof in the United States.

Congress has the authority to enforce its laws beyond the territorial boundaries of the United States. It is, however, a longstanding principle of American law "that legislation of Congress, unless a contrary intent appears, is meant to apply only within the territorial jurisdiction of the United States." . . .

. . .
"[I]f Congressional intent concerning extraterritorial application cannot be divined, then courts will examine additional factors to determine whether the traditional presumption against extraterritorial application should be disregarded in a particular case." First, "the presumption is generally

CONTINUED

not applied where the failure to extend the scope of the statute to a foreign setting will result in adverse effects within the United States."

....

Here, defendant TCM contends the presumption against extraterritorial application is not defeated because CERCLA is "bare of any language affirmatively evidencing any intent to reach foreign sources." There is no dispute that CERCLA, its provisions and its "sparse" legislative history, do not clearly mention the liability of individuals and corporations located in foreign sovereign nations for contamination they cause within the U.S. At the same time, however, there is no doubt that CERCLA affirmatively expresses a clear intent by Congress to remedy "domestic conditions" within the territorial jurisdiction of the U.S. That clear intent, combined with the well established principle that the presumption is not applied where failure to extend the scope of the statute to a foreign setting will result in adverse effects within the United States, leads this court to conclude that extraterritorial application of CERCLA is appropriate in this case.

....

There is no direct evidence that Congress intended extraterritorial application of CERCLA to conduct occurring outside the United States. There is also no direct evidence that Congress did not intend such application. There is, however, no doubt that Congress intended CERCLA to clean up hazardous substances at sites within the jurisdiction of the United States. That fact, combined with the well-established principle that the presumption against extraterritorial application generally does not apply where conduct in a foreign country produces adverse effects within the United States, leads the court to conclude that extraterritorial application of CERCLA is not precluded in this case. The Upper Columbia River Site is a "domestic condition" over which the United States has sovereignty and legislative control. Extraterritorial application of CERCLA in this case does not create a conflict between U.S. laws and Canadian laws.

....

Because the fundamental purpose of CERCLA is to ensure the integrity of the domestic environment, we expect that Congress intended to proscribe conduct associated with the degradation of the environment, regardless of the location of the agents responsible for said conduct.

RESULT The motion to dismiss was denied so that the case could proceed.

CRITICAL THINKING QUESTIONS

1. Would the Canadian government be able to cite this case as precedent for holding U.S. companies liable under Canadian law for acid rain in Canada?⁶⁸
2. What public policy considerations are involved when deciding whether to apply U.S. environmental laws to conduct occurring outside the United States? Are they the same as those implicated when deciding whether to apply U.S. antitrust,⁶⁹ employment discrimination,⁷⁰ securities,⁷¹ or copyright and trademark law⁷² to conduct occurring outside the United States?

68. See Shi-Ling Hsu & Austen L. Parrish, *Litigating Canada-U.S. Transboundary Harm: Intentional Environmental Lawmaking and the Threat of Territorial Reciprocity*, 48 VA. J. INT'L L. 1 (2007).

69. Envtl. Def. Fund v. Massey, 986 F.2d 528 (D.C. Cir. 1993).

70. Carnero v. Boston Scientific Corp., 433 F.3d 1 (1st Cir. 2006).

71. Tamari v. Bache & Co., 730 F.2d 1103 (7th Cir. 1984).

72. Suba Films v. MGM-Pathe Commc'n Co., 24 F.3d 1088 (9th Cir. 1994).

ENVIRONMENTAL JUSTICE

In 1992, the EPA created the Office of Environmental Justice and began integrating environmental justice into the agency's policies, programs, and activities. *Environmental justice* refers to the belief that decisions with environmental consequences (such as where to locate incinerators, dumps, factories, and other sources of pollution) should not discriminate against poor and minority communities. Because such decisions usually require state or municipal permits, environmental justice concerns are often enforced by the federal government against states, cities, and counties.

ENFORCEMENT ACTIVITIES AND SANCTIONS FOR NONCOMPLIANCE

Enforcement of environmental laws includes the monitoring of regulated companies' compliance with the laws, remediation of problems, and the punishment of violators.

AGENCY INSPECTIONS

The environmental laws give broad authority to the administering agencies to conduct on-site inspections of plant facilities and their records. Many laws authorize the collection of samples for analysis. Inspections may be conducted routinely or in response to reports or complaints from neighbors or employees. If criminal violations are suspected, the agency may be required to obtain a search warrant before conducting a nonroutine inspection. Violations observed during the inspection may result in civil or criminal enforcement actions.

ADMINISTRATIVE AND CIVIL ENFORCEMENT ACTIONS

Because the environmental laws are intended to accomplish such important societal goals and violations of the laws may cause serious harm or injury, environmental regulatory agencies generally are given strong enforcement powers. For a first violation, the agency might issue a warning and impose a schedule for compliance. If the schedule is not met or the violations are repeated, more aggressive enforcement action will likely follow. Such action may take the form of an administrative order to take specified steps to achieve compliance or a formal administrative complaint containing an assessment of administrative penalties. The penalties

vary. Because they can be assessed for each day of each violation, they can be substantial for repeated, multiple, or long-standing violations.

CRIMINAL PROSECUTION

In more egregious cases, the enforcing agency may refer the case to the U.S. Attorney's office or its state counterpart for criminal prosecution. In most instances, courts are authorized to impose penalties of \$25,000 to \$100,000 per day of violation and to sentence individuals to prison terms of one year or more.⁷³ In some cases, the agency may have authority to close down the violator's operations.

73. See, e.g., 33 U.S.C. § 1319 & 42 U.S.C. § 6928.

INTERNATIONAL SNAPSHOT

Although historically pollution laws were often not enforced in India, in November 1999, the Supreme Court of India ordered New Delhi authorities to comply with its 1996 order to close approximately 90,000 small factories that were polluting residential areas in the capital city or to relocate them to areas outside the city. The businesses at issue included leather, fertilizer, chemical, food processing, and paint plants that polluted the city's air and water sources. After the India Supreme Court issued the order, thousands of workers violently protested the closure of the factories by torching buses, blocking major roads, and throwing stones.^a These protests essentially shut down the capital for a week. Opponents of the closures argued that shutting down the small factories, which provided employment to approximately one million people and generated business worth more than \$1 billion annually, would cripple the city's economy.^b The India Supreme Court argued that closure of the polluting factories was necessary for public health reasons and stated that it would not be influenced by the protests: "The court will not withdraw its orders just because hooligans have taken to the streets."^c The governments of the rapidly industrializing states of Haryana and Uttar Pradesh, which are just north of New Delhi, ran advertisements encouraging factories to relocate there.^d

d. Kartik Goyal, *India: Neighbouring States Gain As Delhi Shuts Polluting Units*, REUTERS ENG. NEWS SERVICE, Dec. 29, 2000.

The EPA often recommends against criminal prosecution by the Department of Justice if the company self-reports and cooperates with the EPA. Any protection against criminal prosecution gained by voluntary disclosures under the audit policy applies only to the company, however. Officers and

employees may still be subject to criminal liability based on information disclosed by the company.

The following case has been described as the most expansive application to date of the responsible corporate officer doctrine in a criminal case.

A CASE IN POINT

CASE 16.4

UNITED STATES V. HANSEN

UNITED STATES COURT OF APPEALS
FOR THE ELEVENTH CIRCUIT
262 F.3d 1217 (11th Cir. 2001),
CERT. DENIED, 535 U.S. 1111
(2002).

IN THE LANGUAGE OF THE COURT

FACTS Christian Hansen founded the Hanlin Group in 1972 and served as its CEO until April 1993. The Hanlin Group operated a chemical plant in Brunswick, Georgia, through its subsidiary LCP Chemicals—Georgia (LCP). The plant employed about 150 workers. Before Hanlin acquired the Brunswick facility in 1979, the site had been occupied by other companies that had produced and dumped hazardous materials on the land and the surrounding area. LCP constructed a wastewater treatment system and obtained a permit in 1990 to dump “treated” water into Purvis Creek, a nearby waterway. Although LCP had represented that its treatment facilities could process seventy gallons of water per minute, in fact, the facility could process only thirty-five gallons per minute. In August 1992, the Occupational Safety and Health Administration cited the plant for safety hazards associated with contaminated water on the cell room floors.

Hanlin filed for bankruptcy in 1991. Soon thereafter, Christian asked his son Randall to join LCP as an executive vice president to help turn the facility around.

In February 1992, James Johns, the Brunswick plant manager, informed Randall that, without “extensive work” on the wastewater treatment system, the plant could not operate for more than a few days without willfully violating environmental regulations. Randall attempted to raise additional funds by selling excess equipment and reducing the payroll, but the funds available for maintenance, repair, and environmental compliance remained limited. All major projects and all capital and extraordinary expenditures required the approval of the Hanlin board, the Hanlin bankruptcy creditors’ committee, and the bankruptcy court. Although Randall requested funds to address the wastewater problems, the funds were usually not released.

Later that year, Randall visited the plant again after meeting with representatives from the EPA and was told by Alfred Taylor, the new plant manager, that the water treatment problem was growing even more serious. Taylor testified at trial that Randall was “just as concerned as they were” about the problems and authorized him to hire a task force to help solve the problem.

After a year and a half of more violations, which were duly reported to the state and federal EPA by Randall and LCP, Randall and his managers considered shutting down the facility either permanently or temporarily. But Randall told his managers, “They won’t let me do that.” In April 1993, the board removed Christian as CEO and elected Randall in his place. Randall also served as plant manager of the Brunswick facility from July through September 1993.

Randall searched for a suitable buyer with the resources and capital to fix the plant’s problems. During this time, he received reports of the continuing violations at the plant.

In June 1993, the Georgia Environmental Protection Division (EPD) proposed a revocation of LCP’s license to dump wastewater into Purvis Creek. In July and August 1993, Christian told employees to pump wastewater into drums containing oil, even though he knew that wastewater mixed with oil could not be run through the wastewater treatment system. He also advised employees not to dump any more water into Purvis Creek. Employees repeatedly told Randall, Christian, and Taylor that water was running out of the treatment facility’s doors due to breaks in the beams. These employees were told that conditions would change as soon as the plant had a cash infusion from a buyer, but that nothing more could be done at that time.

CONTINUED

During this period, Randall found a buyer that was willing to advance funds to help alleviate the releases of hazardous waste. Although conditions improved briefly, the deal fell through, and the Georgia EPD revoked LCP's license in September 1993, forcing LCP to close the plant entirely. Randall requested \$1.5 million from the bankruptcy court to deal with the environmental impacts of a full plant closure, but his request was denied.

Following the closure, the facility was turned over to the U.S. EPA for cleanup, which cost approximately \$50 million. Shortly thereafter, the U.S. Attorney's office indicted Christian and Randall Hansen and Taylor for violating numerous environmental laws from 1984 through the plant's final shutdown in 1994. The government also indicted Douglas Hanson, LCP's environmental and health and safety manager. Hanson pleaded guilty to violating CERCLA and the Endangered Species Act and testified against Christian, Randall, and Taylor.

Christian Hansen was convicted of violating the Clean Water Act (CWA), the Resource Conservation and Recovery Act (RCRA), and CERCLA, and he was sentenced to 108 months in prison. Randall was convicted of violating the CWA and RCRA and was sentenced to 46 months in prison. Taylor was convicted of violating the CWA, RCRA, and CERCLA and was sentenced to 78 months in prison. All three appealed their convictions.

ISSUE PRESENTED When may corporate officers and plant managers be held individually guilty as operators of a hazardous waste facility under the CWA, RCRA, and CERCLA?

OPINION PER CURIAM, by the U.S. Court of Appeals for the Eleventh Circuit:

The indictment alleged that the defendants, "after learning that the Brunswick facility was disposing of hazardous wastes . . . without a RCRA permit, continued to operate the Brunswick facility in such a manner as to continue the disposal of these hazardous wastes without expending adequate funds . . . to prevent the disposal of such hazardous wastes into the environment." The jury was instructed that the defendants were responsible for the acts of others that they "willfully directed," "authorized," or aided and abetted by "willfully joining together with [another] person in the commission of a crime." . . .

a. Hansen

. . .

The testimony at trial indicated that Christian Hansen was aware that wastewater was permitted to flow out the cell room back door in June 1993, and directed the use of the old Bunker C storage tanks for storage of wastewater, including the inadequately treated wastewater from the treatment system, from July through September 1993. Although the acts continued after Hansen left his decision-making position, the acts occurred at his direction. This evidence was sufficient for the jury to reasonably conclude beyond a reasonable doubt that his acts were in furtherance of the violations. . . .

b. Randall

Randall claims that the government presented no evidence that he personally treated, stored, or disposed of a hazardous waste, personally effected a CWA violation, or instructed an agent to do so. He maintains that, under the laws of bankruptcy and corporate governance, he lacked the authority to close the plant or to allocate the funds for the needed capital improvements. He contends that LCP needed the bankruptcy court's approval to use the bankruptcy estate's assets, or to obtain a new debt, to perform the needed repairs at the Brunswick plant.

In February 1994, LCP applied to the bankruptcy court for the funds "to shutdown" the plant and for new equipment, but the motion was denied. . . . LCP Board of Directors member James Mathis testified that Randall was responsible for "running the day-to-day operations of the company" once he became the interim CEO and COO. . . .

CONTINUED

LCP, as a debtor in possession, could use the property of the estate in the ordinary course of business, but needed court approval to use, sell, or lease, other than in the ordinary course of business, property of the estate. It could obtain secured credit . . . in the ordinary course of business, but needed court approval to obtain unsecured credit or to incur unsecured debt other than in the ordinary course of business. Bankruptcy does not insulate a debtor from environmental regulatory statutes. In reviewing an injunction to clean up a hazardous waste site, the U.S. Supreme Court commented:

We do not suggest that [the debtor's] discharge [in bankruptcy] will shield him from prosecution for having violated the environmental laws . . . or for criminal contempt for not performing his obligations under the injunction prior to bankruptcy. . . . We do not hold that the injunction . . . against any conduct that will contribute to the pollution of the site or the State's waters is dischargeable in bankruptcy. . . . Finally, we do not question that anyone in possession of the site . . . must comply with the environmental laws. . . . Plainly, that person or firm may not maintain a nuisance, pollute the waters of the State, or refuse to remove the source of such conditions.⁷⁴

Although Randall claims that his role as Executive Vice-President and acting CEO was limited to financial matters, he also received daily reports about the plant's operations and environmental problems, wrote and received memos regarding specific plant operational problems, received monthly written environmental reports, and oral environmental reports. He admitted that Hanlin's bankruptcy was not an excuse for violating environmental laws. There is no indication that he asked the Hanlin Board or the bankruptcy court to close the plant. The evidence indicates that he apparently misled them into believing that environmental compliance was not a problem. After the Georgia EPD attempted to revoke the plant's [dumping] permit in June 1993, Randall contested the revocation, explaining that the plant's CWA violations were due to a lightning strike and equipment failures, and asserted that "LCP has already taken steps to improve the situation." This evidence was sufficient for the jury to conclude that Randall's actions were in furtherance of the violations.

c. Taylor

Taylor argues that he should not be held responsible for the environmental violations that occurred after he resigned as plant manager. Taylor resigned as plant manager on 16 July 1993, but returned shortly thereafter as a project engineer and continued in that position until the plant closed. . . .

Although Taylor left his managerial position, he continued to work in a position in which he directed or authorized acts of the employees on environmental and safety problems. . . . This evidence was sufficient for the jury to conclude beyond a reasonable doubt that these acts were in furtherance of the violations.

RESULT The defendants' convictions were supported by the evidence and were, accordingly, upheld.

COMMENTS The Justice Department has responded to criticism that environmental crime prosecutors are "overreaching by criminalizing what should be handled through the civil or regulatory process" with a resolute stance of continuing to criminally pursue those it considers violators.

CRITICAL THINKING QUESTIONS

1. Is it fair to hold an officer criminally liable for environmental problems when the officer lacks the funds to fix the problems or to shut the plant down properly to prevent further violations?
2. Is it fair to attribute corporate actions to the corporation's officers when they never instructed or encouraged their employees to violate the environmental laws?

74. *Ohio v. Kovacs*, 469 U.S. 274, 284–85 (1985).

SELF-REPORTING REQUIREMENTS

Many statutes and regulations require regulated companies to report certain facts to the EPA, such as the concentrations or the amounts of pollutants discharged from a facility or both. These reports may indicate a violation and may therefore prompt an enforcement action by the agency. There are severe penalties for filing false reports, including criminal sanctions for knowingly providing false information to a government agency.

EPA INCENTIVES FOR SELF-POLICING

The EPA's audit policy statement on self-policing is designed "to enhance protection of human health and the environment by encouraging regulated entities to voluntarily discover, promptly disclose and expeditiously correct violations of Federal environmental requirements."⁷⁵ If a

company meets all nine conditions for leniency set forth in Exhibit 16.2 or all except the first one (that the discovery is made through systematic monitoring), then the EPA will generally opt not to pursue criminal proceedings.⁷⁶ Parties that meet these nine conditions for leniency are also eligible for a substantial reduction in civil penalties or the elimination of the gravity component of civil penalties.⁷⁷ Companies that fulfill all the conditions except the first can receive 75 percent mitigation of gravity-based civil penalties.⁷⁸ As an additional incentive, the EPA may "refrain from routine audits."⁷⁹

A company may also qualify under the policy if, after having been found liable for violations at one facility, it discloses similar violations at others. The voluntary disclosure policy has been widely used. To date, more than

76. *Id.*

77. The gravity component is that portion of the penalty over and above the violator's economic gain from noncompliance.

78. *Id.*

79. *Id.*

EXHIBIT 16.2

Conditions for Leniency Under the EPA's Audit Policy Statement

1. *Systematic discovery of the violation through an environmental audit or a compliance management system:* The violation must have been discovered through either (a) an environmental audit or (b) a compliance management system that reflects due diligence in preventing, detecting, and correcting violations.
2. *Discovery and disclosure independent of government or third-party plaintiff:* The entity must discover the violation independently. That is, the violation must be discovered and identified before the EPA or another government agency likely would have identified the problem either through its own investigative work or from information received through a third party.
3. *Correction and remediation:* The entity must remedy any harm caused by the violation and expeditiously certify in writing to appropriate federal, state, and local authorities that it has corrected the violation.
4. *Preventing recurrence:* The regulated entity must agree to take steps to prevent a recurrence of the violation after it has been disclosed. Preventive steps may include, but are not limited to, improvements to the entity's environmental auditing efforts or compliance management system.
5. *No repeat violations:* Repeat offenders are not eligible to receive audit policy credit. Under the repeat violations exclusion, the same or a closely related violation must not have occurred at the same facility within the past three years.
6. *Other violations excluded:* Policy benefits are not available for violations that result in serious actual harm to the environment or that may have presented an imminent and substantial endangerment to public health or the environment. When events of such a consequential nature occur, violators are ineligible for penalty relief and other incentives under the audit policy.
7. *Cooperation:* The regulated entity must cooperate as required by the EPA and provide the EPA with the information it needs to determine policy applicability. The entity must not hide, destroy, or tamper with possible evidence following discovery of potential environmental violations.
8. *Voluntary disclosure:* The violation must have been identified voluntarily, and not through a monitoring, sampling, or auditing procedure that is required by statute, regulation, permit, judicial or administrative order, or consent agreement.
9. *Prompt disclosure:* The entity must disclose the violation in writing to the EPA within twenty-one calendar days after discovery.

Source: EPA, *Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations, Final Policy Statement* (May 11, 2000), at 16–28.

670 companies have made voluntary disclosures, resulting in the resolution of claims at more than 1,300 facilities.⁸⁰

MANAGEMENT OF ENVIRONMENTAL COMPLIANCE

Legally astute managers recognize the need to adopt corporate policies and create management systems to ensure that company operations are protective of human health and the environment. These programs generally include several key elements.

CORPORATE POLICY

A strong corporate policy of environmental protection, adopted and supported at the highest levels of management, is usually the keystone of an effective program. Mere compliance with environmental laws may not be enough. A practice that is lawful today could nevertheless lead to environmental harm and future liability. For example, underground storage of flammable materials was once considered a sound practice and was actually required by many local fire codes. Little thought was given to the possibility of leaks or spillage around the tanks, with resulting harm to underground water supplies. If the risks had been perceived properly, double containment could have been provided when the tanks were first installed. This lack of foresight caused many companies to incur substantial costs for groundwater restoration.

The corporate policy should require every employee to comply with environmental laws. It should encourage management to consider more stringent measures than those required by law if such measures are necessary to protect human health and the environment. Finally, the policy should encourage a cooperative and constructive relationship with government agency personnel and should support

active participation in legislative and administrative rule-making proceedings.⁸¹

WELL-DEFINED ORGANIZATIONAL STRUCTURE AND CRISIS-MANAGEMENT PLAN

Management of environmental compliance requires a well-defined organizational structure with clearly delineated responsibilities and reporting relationships. The complex and technical nature of environmental laws and regulations requires a highly trained professional staff with legal and technical expertise.

A company should have policies and procedures for reporting environmental law violations to corporate management and for managing the company's reporting obligations to government agencies. Top management also needs to ensure that whistleblowers are not subject to retaliation.

Environmental problems are what Max Bazerman and Michael Watkins call "predictable surprises."⁸² Therefore, every company should have a crisis-management plan in place that designates someone other than the CEO to coordinate the response. That response, in turn, should include immediate stabilization of the situation, objective inquiry into it, and some immediate action to assure the company's constituencies that things are being put under control. For that reason, constituencies must receive information as the response continues. To the extent that crises are at least foreseeable, more detailed plans should be developed ahead of time.⁸³

EDUCATION AND TRAINING

A corporation can be held liable for the malfeasance of its employees acting within the scope of employment, even if they acted contrary to company policies. At the same time, an employee involved in illegal conduct can be held personally criminally liable, even if he or she was just following orders from a supervisor. In addition, as explained in this chapter and in Chapter 15, under certain circumstances, the corporate executive officers responsible for operating or overseeing the operation of facilities or activities involving

80. Peyton Sturges, *Revisions to EPA Audit Policy Dovetail with Enforcement Initiatives, Official Says*, 68 U.S.L.W. 2576 (2000). In the spring of 2003, the EPA announced that it had waived \$1.5 million in fines payable by East Coast-based companies after they self-reported violations occurring as far back as 1994 and as recently as 2001. The violations ranged from failing to file appropriate waste authorization forms to misreporting the qualities of dangerous chemicals being dumped by the companies. *EPA Waives \$1.5 Million in Potential Fines Against Companies Reporting Own Violations*, 71 U.S.L.W. 2551 (2003).

81. *EPA May Recommend Not Prosecuting Companies That Uncover, Report Crimes*, 66 U.S.L.W. 2520 (1998). The official EPA statement of its policy is available at <http://es.epa.gov/compliance/index.html>.

83. Stanley Sporkin, A Plan for Crisis Management and Avoidance, Address at the Nonprofit Risk Management Institute (Nov. 12, 1997).

hazardous waste can be civilly and criminally liable for illegal conduct by the employees under their supervision.

The most essential component of good environmental management is comprehensive education and training. Every employee must know about and understand the company's environmental policy and recognize his or her responsibilities in carrying it out.

RECORD KEEPING, ACCOUNTING, AND DISCLOSURE

Good record-keeping and cost-accounting systems are also essential. Many environmental laws require certain records to be developed and maintained for specified periods of time. These laws should be consulted when a company develops a record-retention policy. The company should also develop cost-accounting procedures that will allow it to forecast and report the costs of environmental compliance.

Publicly traded companies must carefully evaluate the costs of complying with environmental law and potential environmental liabilities in order to meet the disclosure and reporting requirements of the Securities and Exchange Commission (SEC). The SEC requires disclosure of environmental enforcement proceedings and litigation, as well as estimated costs of environmental compliance, including capital expenditures and any effects of compliance on earnings and competitive position that may be material. The SEC uses information provided by the EPA in enforcing these reporting requirements. In particular, FIN 47 requires companies to include any future environmental liabilities, particularly those related to closing a facility, in their financial statements. According American Bar Association estimates, FIN 47 reduced the 2005 after-tax earnings of Eli Lilly & Co. by \$22 million, Commonwealth Edison by \$42 million, Ford Motor Company by \$251 million, and Citigroup by \$49 million.⁸⁴

PERIODIC ENVIRONMENTAL AUDITS

An important step in comprehensively managing environmental liability and reducing penalties for noncompliance is to conduct periodic environmental audits. Such candid, internal self-assessments document and measure (1) compliance with occupational health and safety requirements; (2) compliance with federal, state, and local emissions limits and other requirements of a company's licensing, if any; (3) current practices for the generation, storage, and disposal of hazardous wastes; and (4) potential liability for

past disposal of hazardous substances. Audits should also test the effectiveness of the management system and ensure that all instances of noncompliance are corrected.

Although such programs can generate valuable information for management, they may also be self-incriminating. A thorough audit that reveals contaminated properties, shoddy disposal practices, and lax compliance with regulations will certainly aid a company seeking to improve its environmental compliance. If the results of such an audit were publicly available, however, plaintiffs in the discovery stage of litigation could use the audit results to further their case. For that reason, several states have enacted laws making such information privileged in order to encourage companies to produce and use it. At least one court has established a qualified privilege for certain self-critical analyses.⁸⁵

The more stringent governmental financial reporting required by the Sarbanes-Oxley Act of 2002 has prompted auditors to take a closer look at the actual procedures used by in-house environmental managers. The requirement that the CEO and CFO of public companies certify the accuracy of their financial statements provides yet another reason for companies to perform in-house environmental evaluations with diligence and foresight.⁸⁶

Many businesses are complying with standards established by nongovernmental certification programs.⁸⁷ Environmental certification programs verify that the activities of certified firms are environmentally appropriate. The International Organization for Standardization (ISO) environmental management program and the chemical industry's Responsible Care program are two of the most widely used programs. Complying with these standards offers a number of benefits. The EPA has enacted a number of policies that promote certification, including the "Performance Track" program that gives special treatment to businesses meeting certification-like requirements. Among the prerequisites for qualifying for both ISO and Performance Track are (1) the adoption of an in-house environmental management system, (2) a commitment to improve environmental performance and open reporting to the public, and (3) a record of compliance with environmental requirements. Companies that meet the requirements enjoy streamlined monitoring, record keeping, and reporting under the Clean Air Act and Clean Water Act and greater flexibility in installing "best available control technology" under the Clean Air Act.⁸⁸ Furthermore, a

INTERNATIONAL SNAPSHOT

Although internal environmental audits in the United States may be protected through the attorney-client privilege, that may not be the case in other countries where the attorney-client privilege is either not recognized or provides less protection than in U.S. courts. For example, in many countries in Latin America, the attorney-client privilege does not extend to attorney memos that a company may have in its files. Internal environmental audit documents, including attorney memos, may be obtained in most Latin American countries through a court order. As a result, foreign citizens can use these documents to file claims in U.S. courts against domestic companies for their actions outside the United States.^a

The scope of the doctrine varies even within more developed areas. In the United Kingdom employees below a certain level fall outside the bounds of the privilege. In Italy, a conversation with a patent agent is granted the same protection as a meeting with a lawyer. Only thirteen of thirty-nine European countries extend the privilege to communications with in-house counsel, believing there is insufficient independence between the client and its lawyer.

^a *U.S. Business Documents Can Be Used in Suits by Foreign Citizens, Attorney Says*, 69 U.S.L.W. 2251 (2000).

number of major international banks have agreed to finance environmentally sensitive projects, such as power plants, dams, and pipelines, only if the projects also qualify under international environmental and social-impact standards.⁸⁹

PROTOCOLS FOR AGENCY INSPECTIONS

Government agencies may undertake inspections with little or no advance notice. The company should be prepared in advance for such an event by having a protocol for handling the inspection. Individuals trained in the company protocol should accompany the inspector to ensure that the inspection is conducted properly and within the inspector's authority. The person who accompanies the inspector should prepare a report to management and make sure that any instances of noncompliance identified during the inspection are corrected.

PUBLIC AND COMMUNITY RELATIONS

As popular sentiment increasingly favors environmental sensitivity and protection, companies must pay attention

to the public relations consequences of their environment-affecting actions. Dissatisfaction with a company's environmental record can lead to adverse publicity, activist protests, consumer boycotts, and more stringent regulation.

The manner in which a company handles an environmental problem can also have an important impact on its relationship with the community where it is located, as well as on the economic damages it will suffer. A company can gain credibility and respect by handling an environmental accident in a proactive and fair manner.

For example, Eastman Kodak's response to an environmental problem increased its standing in the city of Rochester, New York, where it is headquartered. When the local newspaper reported that toxic chemicals from Kodak had seeped into the bedrock beneath the soil and were moving underground toward homes, panic erupted and the prices of the homes plummeted. The company instituted a series of homeowner relief programs to assure homeowners that they would lose no money as a result of the decline in value of their homes. Kodak offered discounted refinanced mortgages and home improvement grants to encourage people to stay in their homes rather than sell them. For those who wanted to sell, the company agreed to pay the difference between the selling price and the home's market value before the environmental problem was discovered. If a house took longer than three months to sell, Kodak supplied interest-free bridge loans so that owners could move into their new homes before their old homes were sold. The president of the neighborhood association that represented 5,000 Rochester households commented, "The program was a perfect example of a company being proactive in their interactions with the community. Everyone I know [from the polluted area] felt they were given a good deal. I've not heard any objections."⁹⁰

LONG-TERM STRATEGIES

The company should develop strategies for reducing the costs of compliance and the risk of liability over the long term. These might include minimizing the amounts and kinds of pollutants produced, developing ways to recycle waste products, and investing in new technologies to render wastes nonhazardous. If hazardous wastes are produced, the company should have procedures for evaluating and selecting well-managed and well-constructed treatment and disposal facilities.

Firms are also well advised to plan now for more stringent greenhouse gas limits in the future. In 2008, three leading U.S. banks (Citigroup, JP Morgan-Chase, and

IN BRIEF

Developing an Environmental Compliance Program

In evaluating or developing an environmental program, a manager should consider the following areas and ask the following questions:

1. *Achieving and maintaining compliance:*

- What laws and regulations affect the company's facilities?
- What procedures effectively balance compliance costs with liability?
- How can those procedures be communicated to those responsible for their implementation?
- How can employees be persuaded they have a stake in the program's success?

2. *Obtaining timely notice of new requirements:*

- What is being done to keep abreast of new requirements?
- Will management receive notice early enough to make necessary changes cost-effectively?

3. *Influencing future requirements:*

- What environmental laws and regulations are on the horizon?
- How are they being tracked?
- What is being done to influence their wording and enactment?

4. *Monitoring compliance accurately:*

- What kind of monitoring is required?
- Who will perform that monitoring?
- How will the results be assessed?

5. *Timely and accurate reporting:*

- When must a manager report information to regulators?
- What procedures ensure that reportable incidents are brought to management's attention?
- Does the company have databases for tracking chemical use and other technical information?

6. *Responding to emergencies:*

- What systems are in place to respond to emergencies?
- Are responsible employees trained to respond appropriately?

7. *Maintaining community relations:*

- How strong is the company's relationship with the surrounding community?
- What kind of programs are in place to maintain and expand that relationship?
- How would management expect the community to respond to emergencies?

Global Warming: Kyoto and Beyond

As the 2012 Kyoto Protocol deadline approaches, world leaders are left to wonder whether the first global effort to combat greenhouse gas emissions has had any substantial positive impact on this key world issue. The Kyoto Protocol is an amendment to the United Nations Framework Convention on Climate Change, which was ratified by thirty-seven industrialized countries (excluding the United States and Australia) that pledged to reduce harmful greenhouse gas emissions to an average of 5 percent below the levels emitted in 1990. Each country was assigned an allowed level of emissions of carbon dioxide gases it was allowed to emit, but was also allowed to trade or purchase emissions credits from other (often developing) countries in order to meet the assigned goals.⁹²

Even though the United States produces nearly a quarter of the world's greenhouse gases each year, President George W. Bush opposed the ratification of Kyoto.⁹³ He cited the cost of reductions and the fact that Kyoto exempted developing countries, such as Indonesia and China (the world's current top carbon polluter⁹⁴), from the emissions caps applicable to industrialized nations.⁹⁵ In 2006 alone, China built 114,000 megawatts of fossil-fuel-based generating capacity, almost all of it coal-fired.⁹⁶ Critics of Kyoto argued that dramatic, and very costly, reductions in U.S. emissions would not reduce global levels of greenhouse gases if these other countries were not subject to the same limits.⁹⁷

The European Union (EU) adopted a cap-and-trade system in 2005 as a way to meet the requirements set forth in Kyoto. As mentioned earlier, a cap-and-trade system is a market-based system that caps the amount of carbon dioxide that companies, such as power generators,

are allowed to output.⁹⁸ If a company emits more than the amount allotted, it must then cut its emissions levels, buy allowances from more efficient companies, or buy extra allowances at government auctions. Nonetheless, emissions in the EU still rose about 1 percent a year from 2005 to 2008.⁹⁹ The failure of Europe's system to reduce emissions has been blamed on the national governments' handing out too many carbon permits. When officials designed the system, they based the emissions caps on estimates provided by each country, which received their data from the companies emitting the harmful gases—meaning that companies had no incentive to overhaul their factories or to install emissions-reducing technology.¹⁰⁰

In response to criticisms of Kyoto, legislators from the Group of Eight nations (G8), India, Mexico, Brazil, China, and South Africa met in Washington, D.C., in February 2007 in an attempt to reach a nonbinding agreement on climate change that would require developing countries to meet targets for cutting greenhouse emissions and institute a cap-and-trade system.¹⁰¹ As of August 2008, these efforts had not borne fruit. The United Nations already administers a pollution-trading program whereby poorer countries can sell pollution credits to polluters in rich countries, which can use the credits to help satisfy Kyoto or EU limits. The program was designed to spur investment in pollution-control technology in poorer countries to enable them to cut emissions without curtailing economic growth. Yet French chemical maker Rhodia SA, which operates facilities in South Korea and Brazil that destroy nitrous oxide (a greenhouse gas), stands to generate more than \$1 billion from sales of pollution credits. Rhodia's facility in South Korea is expected to generate more revenues than all the registered pollution-cutting projects in Africa.¹⁰²

In theory, the United States would be able to cut emissions to 71 percent below their 2005 levels by 2050 if it adopted a cap-and-trade system.¹⁰³ A bill proposed by U.S. Senators John Warner of Virginia and Joe Lieberman of Connecticut called for a national cap-and-trade program that would cap U.S. emissions of greenhouse gases by 18 percent by 2020. It faced heavy opposition, however.¹⁰⁴ Critics asserted that a national cap-and-trade law would stifle the economy and result in the loss of up to four million U.S. jobs by 2030 as well as cost \$660 billion per year to enforce.¹⁰⁵ As the Senate began debating the bill in June 2008, White House spokesperson Dana Perino warned that President Bush would veto the proposed cap-and-trade bill in the unlikely event it passed.¹⁰⁶

Whether or not a cap-and-trade system is the answer, the need for a solution of some kind is becoming increasingly apparent. During the July 2008 G8 Summit, Japanese Prime Minister Yasuo Fukuda led a discussion

designed to reach a consensus on the growing issue of global warming.¹⁰⁷ In hopes of leading this global initiative, Japan has proposed a "Cool Earth Promotion Programme," a three-part plan to expand upon the post-Kyoto framework, seek international cooperation, and look into other technologies and innovations that will foster economic growth while reducing greenhouse emissions.¹⁰⁸ But as David G. Victor, Adjunct Senior Fellow for Science and Technology for the Council on Foreign Relations, cautioned:

With a growing consensus for action, the world now faces the challenge of designing an effective policy response. International cooperation will be required because greenhouse gases are long-lived in the atmosphere—emissions from every country spread worldwide to create a truly global problem. . . . Today, awareness abounds and the main impediment to action is the lack of a viable architecture for international cooperation.¹⁰⁹

THE RESPONSIBLE MANAGER

MANAGING ENVIRONMENTAL RISKS

Several sources of potential environmental liability present risks to the parties in business transactions. In evaluating a company for purposes of acquisition, investment, or financing, a manager must consider that the company's earnings may be affected by the costs of compliance with environmental laws. The value of its equipment assets may be affected by regulatory limitations that make the equipment obsolete. Its ability to expand in existing locations may be impaired as a result of limitations on new sources of air emissions or the lack of nearby waste treatment or disposal facilities. A company's cash flow may be affected by additional capital investments or by increased operating costs necessitated by environmental regulations. Failure to comply

with existing regulations may lead to the imposition of substantial penalties, also affecting cash flow. Small companies or companies that are highly leveraged may not be able to meet these additional demands for cash.

Similarly, a small company may not be able to survive the imposition of liability for response costs under CERCLA or similar state laws. Potential liabilities may not be properly reflected in the company's financial statements. Finally, a company's operations or the condition of its properties may present risks of injury to other persons and their property, giving rise to possible tort claims.

The most important element in managing the risk of these potential liabilities is *due diligence*, that is, a systematic

CONTINUED

and ongoing process for determining whether property contains or emits hazardous substances and whether the company is in compliance with environmental laws. The object of environmental due diligence investigations is to identify and characterize the risks associated with the properties and operations involved in the business transaction. Such investigations have become highly sophisticated undertakings, often requiring the use of technical consultants and legal counsel with special expertise. Although much of the effort focuses on the review of company documents and available public records, it may also involve physical inspections of the properties, including soil and groundwater sampling and analysis. Care should be taken to avoid negligent soil investigations, which can create liability for disposal of hazardous waste. Environmental due diligence may represent a significant cost of the transaction and may take much longer to complete than traditional due diligence efforts.

The scope of the due diligence effort will depend on the nature of the assets and the structure of the transaction. For example, if the transaction is a simple purchase and sale of real estate, then the due diligence can be limited to the property to be acquired and its surroundings. If the transaction involves the acquisition of a business with a long history of operations in many locations, however, then the due diligence investigation must cover not only the current operating locations but also prior operating locations and the sites used for off-site disposal of wastes. This is particularly true when a company is acquired by merger because the surviving company takes over all of the liabilities of the disappearing company.

Allocation of the risk of liability under CERCLA and other environmental laws has become a significant issue in the negotiation of business transactions. The parties can, by contract, allocate the identified risks of environmental liability by undertaking specified obligations, assuming and retaining contingent liabilities, adjusting the purchase price, making representations and warranties, giving indemnities, and the like. But care must be exercised when the identified risks are not yet quantifiable. For example, if liability for response costs is accepted in return for a reduction in the purchase price, it should be borne in mind that response costs often exceed by a wide margin the initial estimate provided by a consultant or government agency.

It is also important to remember that contractual arrangements to shift environmental liability are not binding on federal or state governments. Thus, even if the seller

of a piece of property agrees to indemnify the purchaser for any environmental claims arising out of the seller's activities, the EPA can still recover response costs from the present owner. The present owner could sue the seller for indemnification and contribution, but the present owner will bear the entire cleanup cost if the previous owner is insolvent or has insufficient assets.

Under CERCLA, secured lenders, and in some cases equity investors, may be deemed liable for response costs as present operators if they participate in the day-to-day management of the borrower's facilities. If a lender takes title at foreclosure, it may also be deemed liable for response costs as a present owner unless it attempts to dispose of the property reasonably quickly. Thus, the risk of hazardous substance releases on the subject property should be carefully evaluated in connection with the loan application. The operations of the borrower should also be carefully reviewed to evaluate the risks they present during the life of the loan. If a release of hazardous substances occurs on the property, its value as collateral is impaired. Upon default, the lender may not be able to recover the outstanding amount of the debt.

In trying to protect against diminishment of the value of collateral, a lender must be careful not to participate in management, however. Overly strict loan covenants that involve the lender in making operational decisions (such as approval of major capital expenditures) may create operator liability for the lender.

In addition, some states have adopted *superlien* provisions, which secure recovery of response costs incurred by state agencies. Where a superlien exists, it may take priority over existing security interests.

When an owner leases property, it must take care to evaluate the environmental risks of the tenant's operations. Use of the property should be carefully limited to prevent any unauthorized activities. If the tenant's activities present significant risks, financial assurances in the form of parent corporation guarantees, letters of credit, or performance bonds might be obtained to ensure that any damage caused by the tenant will be remedied. Tenants also should be cautious in taking possession of property formerly occupied by others. Many tenants perform *baseline assessments* to establish the environmental condition of the property at both the commencement and the termination of the lease. These assessments may provide some protection from liability for conditions caused by prior or succeeding tenants.

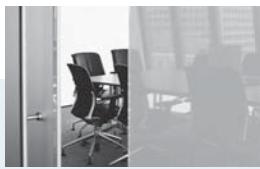

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE Exporting Environmental Compliance

American Widgets is a manufacturing company that has gained a large share of the international widget market, largely because of its high quality and competitive pricing. The disposal of the company's wastes has become increasingly expensive, however. A new ban on land disposal will require the company to incinerate one of its largest waste streams. Plants of competitors located in Southeast Asia and South America are subject to

increasing environmental regulation modeled after the laws in the United States, but they are not subject to a land-disposal ban and will have a significant competitive advantage over plants located in the United States. Jimmy Tsai, an American Widgets manager, is considering the possibility of locating a new plant in Southeast Asia. What factors should he take into account? What alternatives are there besides relocation?

INSIDE STORY

GE: FROM PCBs IN THE HUDSON TO ECOMAGINATION

From 1947 to 1977, the General Electric Company (GE) dumped as much as 1.3 million pounds of polychlorinated biphenyls (PCBs) from its capacitor manufacturing plants at the Hudson Falls and Fort Edward facilities into the Hudson River in New York State. At that time, the dumping of PCBs was legal. In 1977, after PCBs were found to be a threat to the environment and to people who ate fish caught in the river, GE ended decades of river contamination.¹¹⁰

For years GE repeatedly pointed out that it did nothing illegal and ran a massive media campaign to convince the public that the best way to heal the Hudson was to take no action at all.¹¹¹ The company also claimed that PCBs had fallen to acceptable levels and that dredging up the settled soil would only lead to spikes in levels, impose an undue burden on its shareholders, and expose the people of the Hudson Valley to unnecessary health risks.¹¹²

After years of fighting the EPA and environmental activists, GE finally agreed in October 2005 to clean up forty-three miles of the river bottom stretching from Hudson Falls to Troy, New

York.¹¹³ Under the terms of the agreement, which was approved by the U.S. District Court for the Northern District of New York in 2006, GE agreed to dredge the heaviest deposits of PCBs, at a cost of \$100 million to \$150 million. The first phase of the job, scheduled to begin in 2009, will remove about 10 percent of the 2.65 million cubic yards of PCB-contaminated sediment. The second phase of cleanup, where the contamination is less concentrated but spread over a larger area, is expected to take several years and cost about \$500 million.

Also in 2005, GE launched "Ecomagination," a business initiative designed to reduce GE's own emissions and to demonstrate GE's commitment to make environmentally friendly, but profitable products.¹¹⁴ GE, in conjunction with GreenOrder, a sustainability strategy and marketing firm, created the Ecomagination Product Review (EPR) scorecard, which quantifies a product's environmental impacts and benefits relative to other products to determine whether it is worthy to bear the Ecomagination brand.

GE's results speak for themselves. As of early 2008, the firm had met its original four Ecomagination commitments: (1) increasing revenues from Ecomagination products to \$20 billion a year by 2010, (2) doubling investments in the research and

development of environmentally friendly products to \$10 billion a year by 2010, (3) reducing its own greenhouse gas emissions and improving the energy efficiency of its operations, and (4) keeping the public informed of its progress through audited reporting. GE sold \$14 billion in Ecomagination products in 2007 alone. In the period from 2004 to 2006, GE reduced its own greenhouse gas emissions by 4 percent and saved more than \$100 million a year in energy costs by utilizing solar panels, switching to natural gas, cutting emissions in the manufacture of locomotive engines, and adopting other conservation techniques.¹¹⁵ In its 2007 annual

115. *Id.*

report, GE added a fifth commitment: to decrease its water consumption by 20 percent by 2012 and to develop new water purification and conservation processes and products.¹¹⁶ In his February 20, 2008 letter to investors, GE CEO Jeff Immelt called Ecomagination "a global brand, symbolic of innovation at GE" and stated that GE had raised its original Ecomagination revenue target to \$25 billion by 2010.¹¹⁷

QUESTIONS AND CASE PROBLEMS

1. Northeastern Pharmaceutical and Chemical Company (NEPACCO) had a manufacturing plant in Verona, Missouri, that produced various hazardous and toxic by-products. The company pumped the by-products into a holding tank, which a waste hauler periodically emptied. Michaels founded the company, was a major shareholder, and served as its president. In 1971, a waste hauler named Mills approached Ray, a chemical-plant manager employed by NEPACCO, and proposed disposing of some of the firm's wastes at a nearby farm. Ray visited

the farm and, with the approval of Lee, the vice president and a shareholder of NEPACCO, arranged for disposal of wastes at the farm.

Approximately eighty-five 55-gallon drums were dumped into a large trench on the farm. In 1976, NEPACCO was liquidated, and the assets remaining after payment to creditors were distributed to its shareholders. Three years later the EPA investigated the area and discovered dozens of badly deteriorated drums containing hazardous waste buried at the farm. The EPA took remedial action and then

- sought to recover its costs under RCRA and other statutes. From whom and on what basis can the government recover its costs? [*United States v. Northeastern Pharmaceutical and Chemical Co.*, 810 F.2d 726 (8th Cir. 1986), *cert. denied*, 484 U.S. 848 (1987).]
2. In 1968, Habco, Inc. purchased property on Armour Road in North Kansas City, Missouri, that had been contaminated by a series of firms—including U.S. Borax Inc.—that made and blended various herbicides on the premises. The contamination continued under Habco, which was principally owned by Donald Horne. Habco subsequently sold its operating assets—but not the Armour Road real property—to a new company called Habco-Loram Inc. Although Horne remained associated with Habco-Loram, he did not have a personal equitable interest in the firm. When Habco-Loram was unable to meet its obligations, it transferred its assets to Horne, who formed another new firm called Habco International, Inc. Habco International substantially carried on the herbicide operations begun by Habco and continued by Habco-Loram but at a different locale. Habco International never owned or leased the Armour Road site. The DeAngelo brothers purchased Habco International's stock in 1997 and merged Habco International into DeAngelo Brothers Inc. in 1998. The EPA declared the Armour Road site a Superfund site in the early 1990s, and a court ultimately ordered Horne to pay 40 percent of the \$1.16 million in cleanup costs, Borax 10 percent, and DeAngelo 15 percent. Should each of these parties be responsible for paying part or all of the cleanup costs? If you conclude that more than one party has liability, what percentage of the total cleanup costs should each responsible party be required to pay? [*K.C. 1986 Limited Partnership v. Reade Manufacturing*, 472 F.3d 1009 (8th Cir. 2007).]
3. George Lu was named the executive director of the Cornell University Foundation, a nonprofit association organized to support the university. As part of its efforts, the foundation has begun a program to preserve open-space land and ecologically sensitive environments near the university's campus in upstate New York. The foundation plans to buy or receive gifts of land, especially from alumni, and then sell the land to public entities for permanent preservation. The difference between the purchase price and the sale price will be used to finance the association's efforts and to support Cornell generally. One of Lu's first tasks is to develop a protocol and prepare model agreements for making acquisitions.
- a. As a nonprofit, educational organization, does the association have potential liability under the environmental laws?
- b. What procedures should Lu establish to protect the association from potential environmental law liabilities in connection with its acquisitions?
- c. What kinds of contractual arrangements should be considered to protect the association from environmental law liabilities? [See, e.g., *United States v. Alcan Aluminum Corp.*, 34 E.R.C. 1744 (N.D.N.Y. 1991).]
4. RCRA regulations defining solid waste state that a “solid waste is any discarded material.” The EPA issued a new regulation classifying reclaimed mineral-processing materials destined for recycling as regulated “solid waste.” These reclaimed materials are stored in tanks and containers before they are recycled. Industry groups representing most U.S. producers of steel, metal, and coal and most industrial miners challenged the new regulations. They argued that by allowing the materials stored before recycling to be considered waste, the rule conflicts with RCRA’s definition of waste as discarded materials. How should the court rule? [*Ass’n of Battery Recyclers v. EPA*, 208 F.3d 1047 (D.C. Cir. 2000).]
5. The City of Florence, a municipal corporation organized under the laws of Alabama, purchased property for the purpose of encouraging industrial development within the county where the city is located. Florence leased the property to Stylon, a corporation that planned to construct and operate a ceramic tile manufacturing factory on the property. Florence issued bonds to finance the purchase of the property and mortgaged the property to First National Bank of Florence, pledging that Stylon’s rent payments for the property would be used to secure the repayment on the bonds held by the bank.
- Stylon operated a tile manufacturing facility on the property for approximately twenty years until it went bankrupt. During that time, it discharged hazardous substances, which contaminated the property. After Styron went bankrupt, Monarch Tile, Inc. leased the property for fifteen years from the City of Florence, with the city retaining title. Subsequently, Monarch purchased the property from the city.
- After Monarch discovered the contamination, it notified the EPA and was directed to remediate pursuant to CERCLA. Monarch brought suit against the City of Florence for contribution under CERCLA. The City of Florence argued that it was not liable because it held ownership of the property primarily to protect its security interest. How should the court rule? Should the National Bank of Florence or the former Styron shareholders be forced to contribute to the cost of remediation? [*Monarch Tile Inc. v. City of Florence*, 212 F.3d 1219 (11th Cir. 2000).]

6. Gregg Entrepreneur is organizing a small company to manufacture a new biotechnology product. Entrepreneur will be a principal shareholder and president of the company. What measures should Entrepreneur take to ensure that his company operates in compliance with environmental laws?

Despite all the measures Entrepreneur has taken to ensure environmental law compliance, his vice president of operations reports that the production manager has been disposing of wastes into the sewer in violation of national pretreatment standards and that she has been submitting false reports to the publicly owned sewage treatment works (POTWs) to cover up the violations. All of the reports have been signed by the vice president of operations, who had no knowledge that they contained false statements. What steps should Entrepreneur take? Should he report the violations to the POTWs even if it could result in personal civil or criminal liability? What about the vice president? The production manager? What is Entrepreneur's ethical responsibility? [*United States v. Alley*, 755 F. Supp. 771 (N.D. Ill. 1990).]

7. A Colorado silver mine was owned by a company that went bankrupt. The three main creditors of the bankrupt firm formed the Raytheon Mine Company (RMI) as part of the plan of reorganization. RMI ran and operated the mine and gave each creditor a percentage of its stock commensurate with the original bankrupt company. Biller Company was one such minor creditor and never owned more than 20 percent of RMI. Years after the money owed Biller Company was repaid and Biller had sold its interest in the mine, the government assessed serious environmental

cleanup costs under CERCLA. Biller's former partners in RMI brought a claim for contribution against Biller as a successor in interest to the tainted land to recover part of the cleanup costs. Will their claim be successful? [*Raytheon Construction Inc. v. Asarco Inc.*, 368 F.3d 1214 (10th Cir. 2003).]

8. After paying to clean the portion of the Mohawk River around its oil refinery and storage operation, Niagara Mohawk Power Corporation (NMPC) filed claims for contribution against several other companies that had maintained facilities in the area. One of the companies, Mohawk Valley Oil (MVO), had used a parcel to store oil as part of its own petroleum business. On one side of that parcel was the river and on the opposite side was land used by a tar manufacturing company, Tar Asphalt Services (TAS). Among other activities, TAS washed tar from its trucks using kerosene. TAS allowed the contaminated runoff to cross MVO's property into the river. MVO became aware of this TAS practice after it purchased the land and took steps to prevent the runoff from reaching its property as it developed the location. NMPC argued that while MVO's actions had prevented the flow of additional kerosene-tainted water across its property, it had done nothing to remediate the prior disposals and therefore remained liable under CERCLA. Does failing to prevent contaminated water from crossing one's property qualify as a "disposal" of hazardous waste under CERCLA? What liability would MVO have faced if it had failed to take steps to prevent the runoff from TAS's activities once it became aware of it? [*Niagara Mohawk Power Corp. v. Jones Chemical Inc.*, 315 F. 3d 171 (2d Cir. 2003).]

CHAPTER 17

ANTITRUST

INTRODUCTION

Firms Pay Record Fines

During the 1990s, some of the world's biggest multi-national corporations conspired to raise the price of vitamins and vitamin additives, in violation of both U.S. and foreign *antitrust laws*, which prohibit unreasonable restraints on trade and competition, such as price-fixing among competitors. It was the largest price-fixing scam in the world, and it went on for more than ten years. When the cartel was exposed in 1999, two of these companies, Roche Holding A.G. and BASF A.G., agreed to pay more than \$725 million, the largest criminal antitrust fine imposed in the United States to that time (Rhone-Poulenc SA of France escaped criminal charges because it was the first cartel member to cooperate with the U.S. Justice Department). Two Swiss nationals and two German nationals, who were high-ranking officers at Roche and BASF, were sentenced to prison and fined a total of \$625,000. Roche, BASF, Rhone-Poulenc, and four other vitamin manufacturers agreed in November 1999 to pay \$1.17 billion to settle a private class-action lawsuit brought in federal court on behalf of U.S. purchasers of vitamins and vitamin premix.¹ Six vitamin manufacturers, including Roche, BASF, and Rhone-Poulenc, agreed to a \$225 million settlement to end a price-fixing suit brought by consumers, businesses, and governments in twenty-one states, the District of Columbia, and Puerto Rico.² In November 2001, the European Union (EU) imposed record fines of 855.2 million euros against Roche, BASF, Rhone-Poulenc, and several

other companies for colluding to fix the price of vitamins. Numerous criminal and civil lawsuits followed in countries across the world.³ Case 17.5 is one of these lawsuits.

In 2002, the Justice Department began a probe into the activities of dynamic random access memory (DRAM) manufacturers after U.S. computer manufacturers, including Dell and Gateway, complained that inflated DRAM pricing was resulting in lost profits. To date, five manufacturers—Hynix, Infineon, Micron Technology, Samsung, and Elpida—have pleaded guilty, and fifteen executives have either pleaded guilty or been convicted. In 2005, Samsung paid a fine of \$300 million, the second largest U.S. antitrust fine to that date, and the defendants have paid a total of more than \$730 million in fines, the second largest total amount paid in a U.S. criminal antitrust investigation.

The basic principle of antitrust law is that the economy functions best when firms are free to compete vigorously with one another. In a competitive economy, the consumer enjoys better goods at lower prices, or, as economists say, consumer welfare is maximized. If, however, competition is decreased or eliminated by firms seeking jointly or independently to wield monopoly power, consumers suffer and the performance of the economy declines.

Antitrust statutes contain very general prohibitions on business conduct. These general prohibitions often have little content until courts apply them to the particular facts of a case. Thus, bright lines that clearly separate lawful from

unlawful conduct are rare in this field. A business practice that harms competition in one market setting might not harm competition in another. The courts and agencies that enforce the antitrust laws must distinguish between the pernicious and the benign.

As trade barriers continue to be broken down and the global market becomes more integrated, the antitrust laws of the major commercial countries will need to be better harmonized or at least made more transparent through greater predictability as to which country's law applies. The EU's competition law, which is the foreign system most like the U.S. antitrust system, is quickly replacing U.S. antitrust law as the model for other countries as they develop their own competition laws.

CHAPTER OVERVIEW

This chapter offers a general overview of the federal antitrust laws. It begins with a discussion of Sections 1 and 2 of the Sherman Act and then addresses the Clayton Act provisions relating to mergers and combinations. The chapter outlines the Robinson–Patman Act's prohibitions on price discrimination and briefly discusses the Federal Trade Commission Act. We conclude with a discussion of the extraterritorial application of the U.S. antitrust laws, the EU competition laws, and the extraterritorial effect of the EU laws.

unworkable construction of the Sherman Act, the courts have construed Section 1 to prohibit only those restraints of trade that *unreasonably* restrict competition.⁵

TRADE AND COMMERCE

The Sherman Act applies only to “trade or commerce” among states or with foreign nations. The phrase “commerce among the several States” extends the reach of the Act as far as constitutionally allowed under the Commerce Clause.⁵ The resulting scope of antitrust jurisdiction therefore encompasses more than restraints on trade that are motivated by a desire to limit interstate commerce or that have their sole impact on interstate commerce. The commerce requirement is satisfied when the defendant’s conduct (1) directly interferes with the flow of goods in the stream of commerce or (2) has a substantial effect on interstate commerce.

In 1997, a fraternity at Hamilton College in New York argued that the school’s new policy of requiring all students to live in college-owned facilities and to purchase college-sponsored meal plans was an attempt to monopolize the housing and dining markets in that area, in violation of Section 2 of the Sherman Act (discussed below). Although the fraternity alleged substantial effects on interstate commerce, including Hamilton’s out-of-state student population (56 percent) and its annual revenue for room and board from those students (\$4 million), the district court dismissed the complaint on the grounds that the provision of residential services did not involve “trade or commerce.” The appeals court reversed the dismissal, however, and ruled that such a question was suitable for trial.⁶

PROVING A VIOLATION OF SECTION 1 OF THE SHERMAN ACT

For liability to attach under Section 1, a plaintiff must demonstrate that (1) there is a contract, combination, or conspiracy among separate entities; (2) it unreasonably restrains trade; (3) it affects interstate or foreign commerce; and (4) it causes an antitrust injury (the concept of antitrust injury is addressed later in this chapter).

WHAT CONSTITUTES A CONTRACT, COMBINATION, OR CONSPIRACY?

Section 1 does not prohibit unilateral activity in restraint of trade. Acting by itself, an individual or firm may take any action, no matter how anticompetitive, and not violate

Section 1 of the Sherman Act provides that “[e]very contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal.”⁴ On its face, Section 1 appears to prohibit all concerted activity that restrains trade. Yet almost every business transaction restrains trade to a certain extent. A contract, for example, restrains the parties from doing things that would constitute a breach, such as selling goods to someone else. Read literally, Section 1 would outlaw every type of business transaction involving more than one party. In order to avoid an

6. Hamilton Chapter of Alpha Delta Phi, Inc. v. Hamilton Coll., 128 F.3d 59 (2d Cir. 1997).

Historical PERSPECTIVE

Politics and Economics

The first U.S. antitrust law, the Sherman Act, was passed by Congress in 1890 as fear of corporate power grew during the Progressive Era. The Sherman Act was part of a populist movement to combat the rise of trusts in such basic industries as oil and steel. The *trusts* were powerful associations of companies with the intention and power to create a monopoly or otherwise interfere with the free course of trade. "You must heed [the voters'] appeal or be ready for the socialist, the communist, and the nihilist," Senator John Sherman declared during the debate over his bill. The Sherman Act's general prohibitions have evolved over the past hundred years through judicial decisions. This rather

ad hoc development of the law has led to some seemingly confused results. For example, business practices forbidden by the Sherman Act in the early twentieth century are often permissible in today's changed economic environment.

Today, more than a century after the Sherman Act was enacted, the United States finds itself in the midst of a world economy in which firms in many industries compete on an international scale. Often the United States is no longer the dominant economic power. In this changed environment, a new generation of academics, lawyers, and judges has challenged their predecessors' conclusions that certain business practices or

market conditions are inherently anti-competitive. This school of thought, known as the Chicago School, concludes that market forces defeat most anticompetitive practices. Its proponents question the efficacy of the government's regulation of commerce and markets, arguing that instead of promoting competition, attempts at regulation often decrease the competitiveness of markets.

As economics continues to inform legal decisions and market-based arguments are made and refined, antitrust law continues to evolve. To many, this evolutionary process is antitrust's greatest strength and the reason it has entered its second century.

Section 1. (In contrast, Section 2 of the Sherman Act, discussed later in this chapter, does prohibit some forms of unilateral conduct.)

This threshold requirement of concerted action is one of the most frequently litigated issues in antitrust cases. In 1984, the U.S. Supreme Court ruled that a parent corporation and its wholly owned subsidiary cannot "agree" within the concerted-action requirement of Section 1.⁷ More recently, the Supreme Court ruled that pricing decisions made by Equilon, a joint venture between Texaco and Shell Oil to consolidate their operations in the western United States, were not illegal price-fixing between competitors. Under the joint venture agreement, Texaco and Shell agreed to pool their resources and share the risks of and profits from Equilon's activities. Because Texaco and Shell participated in the market jointly through their investments in Equilon, the Court held that it should be regarded as a single entity, despite their decision to market their gasoline under two brands rather than one.⁸

7. *Copperweld Corp. v. Independence Tube Corp.*, 467 U.S. 752 (1984).

8. *Texaco, Inc. v. Dagher*, 547 U.S. 1 (2006).

Conspiracies are inherently secretive. As a result, requiring direct proof of a conspiracy would likely permit many companies that engage in these activities to escape Section 1 liability. On the other hand, because unilateral behavior is not a violation, courts must be careful in relaxing the requirement that conspiracy be proved. Courts have struggled to develop mechanisms that allow Section 1 lawsuits to go forward without direct proof of a conspiracy or agreement while ensuring that defendants are not subjected to meritless lawsuits.

One such mechanism is the distinction between horizontal and vertical agreements. *Horizontal agreements* are those between firms that compete directly with each other, such as retailers selling the same range of products. *Vertical agreements* are those between firms at different levels of production or distribution, such as a retailer and its supplier.

Proving a Horizontal Conspiracy

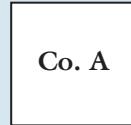

Because an agreement between horizontal competitors, such as Ford Motor Company and General Motors, almost invariably reduces interbrand competition, such agreements are generally disfavored under the antitrust laws.

IN BRIEF

Major Areas of Antitrust Concern

Retail

CHAIN OF PRODUCTION AND DISTRIBUTION

Raw Materials

0%

MARKET SHARE

100%

Unilateral Action

Achieving monopoly (OK, absent exclusionary conduct lacking a legitimate business purpose)
Predatory pricing (*per se* illegal if losses can be recouped later)
Denying essential facility (*per se* illegal)
Price discrimination (generally illegal if it creates competitive injury unless meeting competition is involved)

Horizontal Agreement

Price-fixing (*per se* illegal)
Dividing markets (*per se* illegal)
Group boycotts (usually *per se* illegal)
Mergers (depends on anticompetitive effects)

Vertical Agreement

Maximum or minimum resale price maintenance (rule of reason)
All other forms of price-fixing (*per se* illegal)
Dividing markets (rule of reason)
Mergers (depends on anticompetitive effects; less troubling than horizontal)
Tying products (OK unless market power in tying product)

Interbrand competition is competition between companies producing the same type of product.

The classic definition of conspiracy, whether horizontal or vertical, focuses on whether the alleged conspirators had a meeting of the minds in a scheme that violates the law. The courts will not require evidence of an explicit agreement to violate the law. As the U.S. Court of Appeals for the Ninth Circuit stated with respect to a horizontal conspiracy, a “knowing wink can mean more than words.”⁹

Plaintiffs often attempt to infer a horizontal conspiracy from evidence of parallel behavior by ostensibly independent firms, for example, by showing that they consistently set prices at the same levels and change prices at the same

time (*conscious parallelism*). The problem with this type of evidence (particularly when a homogeneous product or service is involved) is that it is ambiguous as an indicator of anticompetitive behavior. Parallel pricing of similar products or services can result either from illegal price-fixing or from vigorous competition.

The courts will not infer an agreement or conspiracy from parallel behavior unless the plaintiff shows additional facts or “plus factors.” Parallel behavior that would appear to be contrary to the economic interests of the defendants, were they acting independently, supports an inference of conspiracy.¹⁰ On the other hand, if the defendants can

9. Esco Corp. v. United States, 340 F.2d 1000, 1007 (9th Cir. 1965).

10. Theatre Enters., Inc. v. Paramount Film Distrib. Corp., 346 U.S. 537 (1954).

► ETHICAL CONSIDERATION

You work in sales and are friendly with a sales representative from one of your employer's competitors. Your children are in the same class at school, so you see each other frequently. Recently, you talked about a new sales promotion that your company is offering. The promotion was the subject of an advertisement in the trade magazines. Is it ethical to have such a conversation?

produce reasonable business explanations for the behavior, a court will not infer a conspiracy. Other *circumstantial*, or indirect, *evidence* of an agreement, such as a meeting between two defendants, may be a plus factor. Increasing prices and persistent profits despite a decline in demand for the good or service may also be plus factors.

In *Bell Atlantic Corp. v. Twombly*,¹¹ the U.S. Supreme Court ruled that a complaint that includes only an allegation

11. 127 S. Ct. 1955 (2007).

of parallelism should be dismissed. The 1996 Telecommunications Act sought to increase competition by allowing the Bell System's successors, the "Baby Bells," to sell long-distance service while requiring them to open up their local exchanges to rural carriers. However, the plaintiffs alleged that instead of promoting a robust market for local telephone service, the Baby Bells declined to enter each others' regions and made it difficult for rural carriers to use their exchanges. The plaintiffs filed a complaint citing this parallel conduct and sought to begin discovery to find evidence to support their claim. Although the appellate court refused to dismiss the case, the Supreme Court upheld the trial court's dismissal, holding that the plaintiffs were required to include some allegation indicating that the companies had actively worked together. The *Twombly* case marks the latest in a series of cases in which the Court has tightened the scope of the Sherman Act.¹²

In the following case, the court considered whether tobacco companies had conspired to fix prices.

A CASE IN POINT

CASE 17.1

WILLIAMSON OIL CO. V. PHILIP MORRIS USA

UNITED STATES COURT OF APPEALS
FOR THE ELEVENTH CIRCUIT
346 F.3d 1287 (11th Cir. 2003).

IN THE LANGUAGE OF THE COURT

FACTS Between 1993 and 2000, Philip Morris (PM), R.J. Reynolds (RJR), Brown & Williamson (B&W), and Lorillard (collectively, the manufacturers) produced more than 97 percent of the cigarettes sold in the United States. During the early 1990s, as the price gap widened between premium brands, such as Marlboro and Camel, and discount brands, such as Basic and Doral, some "premium smokers" began to shift to nonpremium brands. By 1993, nonpremium brands had captured over 40 percent of the U.S. market. Although this trend benefited RJR and B&W, it was undesirable for premium-intensive manufacturers, such as PM and Lorillard, and PM began to look for ways to reverse the trend toward discount cigarettes. In 1993, PM announced that it was cutting the retail price of Marlboro cigarettes, the best-selling brand in America, by \$.40 per pack and forgoing price increases on other premium brands "for the foreseeable future." This price cut was followed by price cuts to PM's other premium brands. PM's price cuts set off a price war, as RJR, B&W, and Lorillard matched PM's retail price reductions, which cut into the market share held by the discount brands.

Later, however, RJR announced that it would no longer sacrifice profitability for market share and increased the price of its premium and discount brands. The other manufacturers matched the increase within a couple of weeks. Eleven more parallel increases occurred between May 1995 and January 2000.

A class of several hundred cigarette wholesalers sued the manufacturers, alleging that they had conspired to fix cigarette prices at unnaturally high levels, which resulted in wholesale list price overcharges of nearly \$12 billion. The district court entered summary judgment in favor of the manufacturers after concluding that the wholesalers had failed to demonstrate the existence of a "plus factor." The court stated that even if the class had shown that a plus factor was present, the manufacturers had rebutted the inference of collusion because the economic realities of the 1990s cigarette market made the class's conspiracy theory untenable. The district court characterized the

CONTINUED

manufacturers' pricing behavior as nothing more than "conscious parallelism," a perfectly legal phenomenon often associated with oligopolistic industries. The wholesalers appealed.

ISSUE PRESENTED What types of conduct may constitute "plus factors" necessary to create an inference of a price-fixing conspiracy?

OPINION MARCUS, J., writing for the U.S. Court of Appeals for the Eleventh Circuit:

"[T]he distinctive characteristic of oligopoly is recognized interdependence among the leading firms: the profit-maximizing choice of price and output for one depends on the choices made by others."

When they are the product of a rational, independent calculus by each member of the oligopoly, as opposed to collusion, these types of synchronous actions have become known as "conscious parallelism." The Court has defined this phenomenon as "the process, not in itself unlawful, by which firms in a concentrated market might in effect share monopoly power, setting their prices at a profit-maximizing, supracompetitive level by recognizing their shared economic interests and their interdependence with respect to price and output decisions." . . .

As numerous courts have recognized, it often is difficult to determine which of these situations—illegal price fixing or conscious parallelism—is present in a given case. . . .

. . .

. . . [P]rice fixing plaintiffs are relegated to relying on indirect means of proof. The problem with this reliance on circumstantial evidence, however, is that such evidence is by its nature ambiguous, and necessarily requires the drawing of one or more inferences in order to substantiate claims of illegal conspiracy. . . .

. . .

. . . "[T]o survive a motion for summary judgment . . . a plaintiff seeking damages for [collusive price fixing] . . . must present evidence that 'tends to exclude the possibility' that the alleged conspirators acted independently." Evidence that does not support the existence of a price fixing conspiracy any more strongly than it supports conscious parallelism is insufficient to survive a defendant's summary judgment motion. . . .

In applying these principles, we have fashioned a test under which price fixing plaintiffs must demonstrate the existence of "plus factors" that remove their evidence from the realm of equipoise and render that evidence more probative of conspiracy than of conscious parallelism. . . .

. . .

. . . [T]he district court delineated . . . distinct factors that appellants had denominated "plus factors." These are: "(1) signaling of intentions; (2) permanent allocations programs; (3) monitoring of sales; (4) actions taken contrary to economic self-interest." . . .

. . .

. . . [W]e are satisfied that none of the actions on which appellants' arguments are based rise to the level of plus factors. . . . Indeed, when all of appellees' actions are considered together, the class has established nothing more than that the tobacco industry is a classic oligopoly, replete with consciously parallel pricing behavior, and that its members act as such.

RESULT The appeals court affirmed the district court's grant of summary judgment for the defendants. The suit was dismissed.

COMMENTS This case supports the strategy of "price leadership," whereby a firm with significant market share publicly announces its pricing policy, which other competitors elect to follow. As long as there is no explicit or implied agreement to act in concert, price leadership has withstood judicial scrutiny.

CRITICAL THINKING QUESTIONS

1. The court stated that the plaintiffs in this case simply proved that the defendants acted as rational oligopolists. What sort of evidence would establish that the defendants actually were engaging in an illegal price-fixing scheme?
2. The court recognized that there are economic costs associated with using circumstantial evidence to distinguish between lawful conscious parallel decision making within an oligopoly and illegal collusive price-fixing. What are some of these economic costs?

Proving a Vertical Conspiracy

Vertical agreements, such as those between an automaker and its local dealers, may reduce *intrabrand competition*, that is, price competition between local dealers selling the same manufacturer's products. But they often enhance interbrand competition, that is, competition between dealers selling different manufacturers' products. It is in the best interests of both the automaker and its dealers to provide the most marketable product in order to receive the greatest possible share of available consumer dollars. Courts look more favorably on reductions in intrabrand competition when there is vigorous interbrand competition that can prevent the reduction in intrabrand competition from harming consumers.

Since the mid-1980s, the courts have generally been unwilling to allow proof of vertical conspiracies by circumstantial evidence alone. The U.S. Supreme Court has held that firms in a vertical arrangement, unlike competitors, have many legitimate reasons to communicate with each other. Therefore, a plaintiff seeking to prove an unlawful conspiracy must introduce evidence that tends to exclude the possibility that the firms acted independently.¹³ Evidence of action that could be either concerted or independent is insufficient to prove a Section 1 violation under this test.

WHAT CONSTITUTES AN UNREASONABLE RESTRAINT OF TRADE?

There are two approaches to analyzing the reasonableness of a restraint: the *per se* rule and the rule of reason.

Per se Violations

Per se analysis condemns practices that are considered completely void of redeeming competitive rationales. This is appropriate when the practice always or almost always tends to restrict competition and decrease output. Once identified as *illegal per se*, a practice will not be examined further for its procompetitive justifications.

13. Monsanto Co. v. Spray-Rite Serv. Corp., 465 U.S. 752 (1984).

Scholars from the Chicago School have argued that very few practices are inherently anticompetitive. As many courts have accepted this scholarship, the number of truly *per se* violations of the antitrust laws has declined.

The Rule of Reason

If the plaintiff has not proved a *per se* violation, the activity will be evaluated under the *rule of reason*. The objective of this rule is to determine whether, on balance, the activity promotes or restrains competition, or to put it differently, helps or harms consumers. In making this determination, the court will consider the structure of the market as well as the defendant's actions. The court will analyze the anticompetitive and procompetitive effects of the challenged practice. Activity that has a substantial net anticompetitive effect is deemed an unreasonable restraint of trade.

TYPES OF HORIZONTAL RESTRAINTS

Restraints between direct competitors such as price-fixing, market division, and some kinds of group boycotts have traditionally been treated as *per se* violations of Section 1 of the Sherman Act. Trade associations may also be found to be acting unlawfully under the rule of reason in some circumstances.

Some products, such as sporting events, may require horizontal restraints in order to exist at all. Economists suggest that a sporting league comprising the different teams (such as the National Football League) should be viewed as a single firm in the business of providing competition. As a result, constraints on teams are simply attempts to put "departments" within the firm on an equal footing so that customers can enjoy balanced contests among them. Courts take a more formalistic view but make allowances for the needed horizontal constraints.

Horizontal Price-Fixing

Horizontal price-fixing, such as an agreement between retailers to set a common price for a product, is the classic example of a *per se* violation of Section 1. Horizontal

price-fixing agreements include (1) setting prices (including maximum prices); (2) setting the terms of sale, such as customer credit terms; (3) setting the quantity or quality of goods to be manufactured or made available for sale; or (4) rigging bids (agreements between or among competitors to fix contract bids).

Companies that engage in horizontal price-fixing face stiff civil penalties. For example, in 2004, former New York attorney general Eliot Spitzer filed a civil complaint accusing insurance broker Marsh & McLennan of arranging share bidding procedures that steered business to insurers based on kickbacks to Marsh, rather than following procedures in the best interest of the clients purchasing insurance. Although Marsh settled the lawsuit in 2005 by agreeing to pay \$850 million in restitution to injured clients, the complaint started a chain reaction that did not stop with Marsh. The stock prices of insurers mentioned in the complaint dropped sharply, and at least six insurance company executives have pleaded guilty to criminal charges.¹⁴

In addition, the Justice Department views horizontal price-fixing as “hard crime,” to be punished by prison sentences whenever possible. Many executives have been imprisoned for price-fixing. Indeed, under the Federal Sentencing Guidelines, some term of confinement is recommended for individuals convicted of horizontal price-fixing, bid rigging, or market-allocation agreements; in most cases, first-time offenders serve a minimum sentence of six to twelve months.

Multimillion-dollar fines against corporations convicted of price-fixing are the rule rather than the exception. But civil actions, in particular class actions (which inevitably follow criminal prosecutions), can have even more drastic financial consequences. Liability for antitrust damages is joint and several among all of the conspirators, so each conspirator is potentially liable for treble damages for the losses caused by all of the defendants.

Horizontal Market Division and Nonprice Horizontal Restraints

The U.S. Supreme Court considers market divisions so inherently anticompetitive as to constitute *per se* violations of Section 1. *Horizontal market division* can take various forms. For instance, competitors might divide up a market by class of customer, by geographic territory, or by restricting product output. In 1972, the Supreme Court considered the legality of an agreement among members of an association

of supermarket chains to divide the grocery market.¹⁵ The association’s members, twenty-five small- and medium-sized independent supermarket chains, each agreed to sell a particular trademarked brand only in an assigned area. They also agreed not to sell the brand’s products to other retailers. Although the association argued that exclusive territories were necessary to encourage local advertising of the fledgling brand, the Court ruled that market division is prohibited, even if it is intended to enable small competitors to compete with larger companies and to foster interbrand competition. More recently, the Supreme Court has emphasized that horizontal market division by potential as well as actual competitors is *per se* illegal.¹⁶

Group Boycotts

Although an individual generally may choose to do business with whomever he or she wants, an agreement among competitors to refuse to deal with another competitor—a *group boycott*—has traditionally been treated as a *per se* violation of Section 1. Such an agreement is considered so inherently anticompetitive that no economic motivation for the action may be offered as a defense.

For example, the U.S. Supreme Court held that manufacturers of appliances could not agree with a distributor’s competitors to refrain from selling to the distributor or to do so only at higher prices. Such an agreement was treated as a *per se* violation of Section 1 even though there was no agreement on the exact price, quantity, or quality of the appliances to be sold.¹⁷

More recently, the Supreme Court has begun to distinguish some forms of group boycotts that it believes are not so inherently anticompetitive as to merit *per se* treatment. In 1985, the Court refused to apply the *per se* rule when a wholesale purchasing cooperative of office-supply retailers expelled a member for violating a cooperative bylaw requiring notification of changes in ownership. The Court noted that there was no showing that the cooperative possessed market power or unique access to a business element necessary for effective competition.¹⁸ (The concept of market power is addressed later in this chapter.) Applying the rule of reason analysis instead, the Court concluded that the members’ decision to expel the plaintiff was not an unreasonable restraint because cooperatives need to establish and enforce reasonable rules to function effectively. Furthermore, the

18. Nw. Wholesale Stationers, Inc. v. Pacific Stationery & Printing Co., 472 U.S. 284 (1985).

expulsion did not completely exclude the plaintiff from access to the cooperative's wholesale operations.

Trade Associations Courts often do not look favorably upon attempts at self-regulation by trade and professional associations, particularly when such attempts result in group boycotts. For example, the U.S. Supreme Court struck down as a violation of the Sherman Act a minimum fee schedule for lawyers published by a county bar association and enforced through the prospect of professional discipline from the Virginia State Bar Association.¹⁹

Other types of self-regulation, however, will be upheld under the rule of reason if the presumptive economic benefits outweigh any potential economic harm. For example, the California Dental Association (CDA) adopted a code of ethics that included a section prohibiting dentists from soliciting patients with any false or misleading communication. The guidelines forbade advertising that referred to "low" or "reasonable" prices, offered volume discounts, or made any claims about quality of service, ostensibly because such statements could mislead consumers by implying unverifiable superiority over other dentists' services.

The U.S. Court of Appeals for the Ninth Circuit initially held that the CDA had violated Section 5 of the Federal Trade Commission Act because it prevented its members from engaging in truthful, nonmisleading advertising offering discounts or claims about service quality, but the U.S. Supreme Court held that the Ninth Circuit had erred by engaging in a "*quick look*," or abbreviated, *rule of reason analysis* that failed to consider a number of theories under which the CDA restrictions on advertising might prove pro-competitive. On remand, the Ninth Circuit found no antitrust violation, pointing out several ways in which the CDA's guidelines would have a net procompetitive effect: (1) the guidelines required dentists to disclose their regular and discounted rates, thereby allowing a price-conscious consumer to determine from the ads which dentist actually offered a lower fee; (2) restricting advertising in the dental market, where there is strong customer loyalty, was less detrimental than restricting advertising in markets where consumers are much more likely to switch brands; and (3) the restrictions did not amount to a complete ban on advertising.²⁰

Trade and professional associations often disseminate information among their members. Association agreements rarely state goals that violate the Sherman Act, so courts will consider the structure of the market, and the type and timeliness of the information exchanged, to determine whether the exchange of information facilitates

anticompetitive behavior, such as price-fixing or market division.

A large *cartel*, or group of competitors that agrees to do something, is inherently unstable. Conversely, when a market has few competitors, they are more likely to be able to reach and enforce an agreement. Therefore, the more concentrated the industry, the more closely courts will scrutinize trade association activity.

The type of information exchanged also plays a critical role in the analysis. For example, a weekly report disseminated by a hardwood manufacturers' trade association listed the names of companies that sold lumber and the prices at which they sold it. Additionally, monthly reports discussed future price trends and provided future estimates of production. The U.S. Supreme Court held that this exchange of information violated Section 1 of the Sherman Act, as members could use the information to police secret agreements setting uniform prices or terms.²¹ Another manufacturers' association disseminated information on average costs and the terms of past transactions. It did not identify individual sellers or buyers and did not discuss future pricing. The Supreme Court found no violation of Section 1.²²

Information that does not involve prices or terms of sale receives less scrutiny by the courts. Activities such as cooperative industrial research, market surveys, and joint advertising concerning the industry have been upheld. The exchange of information concerning contractors whose payments were two months in arrears was upheld as a reasonable way to help members avoid contractor fraud.²³

The Supreme Court has recognized that standards-making activities by trade associations are generally pro-competitive.²⁴ The availability of compatible products from different manufacturers can increase competition and make it easier for buyers to compare products. For example, DVD manufacturers compete only on price and features because all players will accept all DVDs. Standards also make it easier to introduce complementary new technologies by reducing buyers' concern that they will be left with incompatible products.

Companies with existing technologies, however, can also misuse standards in a way that stifles competition. For example, the U.S. Supreme Court found that the vice president of the dominant manufacturer of a safety device for heating boilers, who was also vice chairman of a trade association subcommittee that promulgated the standards for this device, had conspired with other members of the

subcommittee to misrepresent the standards in order to discourage customers from buying a new manufacturer's products.²⁵

Industry standards may also give rise to antitrust claims if they are structured to favor a specific company or technology. The Open Software Foundation (OSF) was formed by eight computer manufacturers, including many of the major competitors in the market for computer systems, which competed with each other in two separate markets: (1) the purchasing of systems technology for independent developers, and (2) the sale of finished systems in the downstream market for operating systems. The OSF developed its first operating system, OS-1, by fusing existing technology through a competitive bidding process. When an OSF panel selected another vendor for the security program for OS-1, Addamax filed a lawsuit alleging that the entire OSF concept was an illegal buyers' cartel, designed to influence the market for operating systems technology. Although the district court found that the joint venture did not warrant *per se* scrutiny because joint purchasing agreements often produce legitimate economies of scale, it also found that Addamax had raised genuine issues of fact, which entitled it to further pursue its claims under a rule of reason analysis.²⁶

TYPES OF VERTICAL RESTRAINTS

Unlawful *vertical restraints*, that is, restraints between firms at different levels in the chain of distribution, include price-fixing, market division, tying arrangements, and some franchise agreements.

25. Am. Soc'y of Mech. Eng'rs v. Hydrolevel Corp., 456 U.S. 556 (1982).

26. Addamax Corp. v. Open Software Found., Inc., 888 F. Supp. 274 (D. Mass. 1995).

A CASE IN POINT

CASE 17.2

LEEGIN CREATIVE LEATHER PRODUCTS, INC. v. PSKS, INC.

SUPREME COURT OF THE
UNITED STATES
127 S. Ct. 2705 (2007).

Vertical Price-Fixing

Agreements on price between firms at different levels of production or distribution can be as anticompetitive as agreements between direct competitors at the same level of production or distribution. Initially, the U.S. Supreme Court held that both minimum and maximum vertical price-fixing were *per se* illegal.

In *State Oil Co. v. Khan*, however, the Supreme Court held that maximum price-fixing should be analyzed under a rule of reason to "identify those situations in which [it] amounts to anticompetitive conduct."²⁷ The Court noted that *maximum* price restrictions do not necessarily prevent price competition. Suppliers may sell their product at whatever price they choose, subject to a price cap that is arguably procompetitive, even though the maximum price restriction may effectively become the same as an agreement to set a particular price if all sellers tend to sell at the maximum price.

Some academics and jurists also questioned the treatment of *resale price maintenance (RPM)*, an agreement that fixes minimum prices, as a *per se* violation. They argued that most vertical price restrictions affect competition only among sellers of the supplier's products (intrabrand competition) and do not limit competition among sellers of various similar products (interbrand competition) or give them power to restrict output or raise prices. They contended that vertical price restrictions ensure economic efficiencies and maximize consumer welfare by preventing price competition that forces retailers to cut back on nonprice items such as customer service.

In the following case, the U.S. Supreme Court considered whether vertical price-fixing should remain *per se* illegal.

27. 522 U.S. 3 (1997).

IN THE LANGUAGE OF THE COURT

FACTS Leegin Creative Leather Products sells a variety of women's fashion accessories under the brand name "Brighton," in over 5,000 retail stores, mostly independent, small boutiques and specialty stores. PSKS operates Kay's Closet, a women's apparel store that started purchasing Brighton goods from Leegin in 1995. In 1997, Leegin instituted the "Brighton Retail Pricing and Promotion Policy," pursuant to which it refused to sell to retailers that discounted Brighton goods below Leegin's suggested retail prices. In its letter to retailers regarding the policy, Leegin stated that it was adopting the policy to give its retailers sufficient margins to provide customers with the service central to its distribution strategy and expressed concern that discounting harmed Brighton's reputation and brand image.

A year after instituting this policy, Leegin introduced the "Heart Store Program," which offered retailers incentives to become Heart Stores; in exchange, retailers pledged, among other things,

CONTINUED

to sell at Leegin's suggested prices. Although Kay's became a Heart Store, the parties appear to have agreed subsequently that it would not be a Heart Store after 1998. Despite losing this status, Kay's continued to increase its Brighton sales. In December 2002, Leegin discovered that Kay's had been marking down Brighton's entire line by 20 percent. Although Kay's contended it did so to compete with nearby retailers who were also discounting the line, Leegin requested that Kay's stop discounting. When Kay's refused, Leegin stopped selling to the store.

PSKS sued Leegin alleging, among other things, that Leegin had violated the antitrust laws by "enter[ing] into agreements with retailers to charge only those prices fixed by Leegin." At trial Leegin argued that it had established a lawful unilateral pricing policy, but the jury agreed with PSKS and awarded it \$1.2 million. The court trebled the damages and added reimbursement for PSKS's attorneys' fees and costs, increasing the judgment to almost \$4 million. On appeal Leegin did not dispute that it had entered into vertical price-fixing agreements with its retailers. Instead, it argued that the rule of reason should have applied to those agreements. The U.S. Court of Appeals for the Fifth Circuit rejected this argument, explaining that it was bound by the Supreme Court's decision in *Dr. Miles Medical Co. v. John D. Park & Sons Co.*,²⁸ in which the Court established the rule that it is *per se* illegal for a manufacturer to agree with its distributor to set the minimum price that the distributor can charge for the manufacturer's goods.

ISSUE PRESENTED Should vertical minimum resale price maintenance agreements continue to be treated as *per se* unlawful?

OPINION KENNEDY, J., writing for the U.S. Supreme Court:

The reasoning of the Court's more recent jurisprudence has rejected the rationales on which *Dr. Miles* was based. By relying on the common law rule against restraints on alienation, the Court justified its decision based on "formalistic" legal doctrine rather than "demonstrable economic effect." The Court in *Dr. Miles* relied on a treatise published in 1628, but failed to discuss in detail the business reasons that would motivate a manufacturer situated in 1911 to make use of vertical price restraints. Yet the Sherman Act's use of "restraint of trade" "invokes the common law itself, . . . not merely the static content that the common law had assigned to the term in 1890." The general restraint on alienation, especially in the age when then-Justice Hughes used the term, tended to evoke policy concerns extraneous to the question that controls here. Usually associated with land, not chattels, the rule arose from restrictions removing real property from the stream of commerce for generations. The Court should be cautious about putting dispositive weight on doctrines from antiquity but of slight relevance. We reaffirm that "the state of the common law 400 or even 100 years ago is irrelevant to the issue before us: the effect of the antitrust laws upon vertical distributional restraints in the American economy today."

....

The reasons upon which *Dr. Miles* relied do not justify a *per se* rule. As a consequence, it is necessary to examine, in the first instance, the economic effects of vertical agreements to fix minimum resale prices, and to determine whether the *per se* rule is nonetheless appropriate.

....

Stare decisis, we conclude, does not compel our continued adherence to the *per se* rule against vertical price restraints. As discussed earlier, respected authorities in the economic literature suggest the *per se* rule is inappropriate, and there is now widespread agreement that resale price maintenance can have procompetitive effects.

28. 220 U.S. 373 (1911).

In more recent cases the Court, following a common-law approach, has continued to temper, limit, or overrule once strict prohibitions on vertical restraints. . . .

Most recently, in 1997, after examining the issue of vertical maximum price-fixing agreements in light of commentary and real experience, the Court overruled a 29-year-old precedent treating those agreements as *per se* illegal. . . . Our continued limiting of the reach of the decision in *Dr. Miles* and our recent treatment of other vertical restraints justify the conclusion that *Dr. Miles* should not be retained.

RESULT The Supreme Court held that vertical price restraints are to be judged by the rule of reason and remanded the case for proceedings consistent with this opinion.

CRITICAL THINKING QUESTIONS

1. In a dissent joined by Justices Stevens, Souter, and Ginsburg, Justice Breyer listed the factors that case law indicates are relevant when the Court considers overruling an earlier case: (1) the Court applies *stare decisis* more rigidly in statutory than in constitutional cases, (2) the Court sometimes overrules cases that it decided wrongly a reasonably short time earlier, (3) the fact that a decision creates an unworkable legal regime argues in favor of overruling, (4) the fact that a decision unsettles the law may argue in favor of overruling it, (5) the fact that a case involves property rights or contract rights where reliance interests are involved argues against overruling it, and (6) the fact that a rule of law has become embedded in the national culture argues strongly against overruling it. Applying these factors to the instant case, would you agree with the majority that the *Dr. Miles* case should be overruled? If so, on what basis?
2. The dissent predicted that the majority's decision would result in higher prices for consumers. Under what circumstances will consumers benefit from resale price maintenance?

Nonprice Vertical Restraints and Vertical Market Division

Vertical market division is an arrangement imposed by a manufacturer on its distributors or dealers that limits the freedom of the dealer to market the manufacturer's product. Such an agreement may establish exclusive distributorships, territorial or customer restrictions, location clauses, areas of primary responsibility, and the like. These nonprice vertical restrictions are not illegal *per se*. Rather, they are judged under the rule of reason.

The central inquiry is whether the reduction in intrabrand competition is justified by interbrand competition. The higher the market share of a particular manufacturer's product, the greater the likelihood that a decline in intrabrand competition will violate the rule of reason. For example, suppose Pixel Unlimited controls 80 percent of the market for high-definition television (HDTV) screens in Atlanta, Georgia, and sells its products through five independent retail outlets. Pixel agrees with three of its dealers to terminate the other two. Although a reduction in competition among Pixel dealers might arguably increase interbrand HDTV competition,

given Pixel's high market share, that increase may not offset the anticompetitive effect of the decrease in Pixel intrabrand competition. Accordingly, the reduction in the number of Pixel dealers might violate Section 1.

Exclusive Distributorships In an *exclusive distributorship*, a manufacturer may limit itself to a single distributor in a given territory or line of business and may refuse to sell to other potential distributors in that territory or line of business. Exclusive distributorships have been upheld under the rule of reason when there is some competitive pressure that limits the market power of the retailers holding them. Exclusive automobile dealerships for particular geographic regions are the classic example. This restriction on intra-brand competition is permissible because of the intense interbrand competition among U.S. and foreign automobile manufacturers.

Territorial and Customer Restrictions *Territorial* and *customer restrictions* prevent a dealer or distributor from selling outside a certain territory or to a certain class

of customers. For example, a Dow representative selling industrial chemicals might be permitted to sell only to hardware stores, and only in a specified area. The Supreme Court has held that vertical territorial or customer restrictions are not *per se* violations of Section 1. Such restrictions often increase interbrand competition; thus, an accompanying reduction of intrabrand competition may be permissible.

Dual Distributors A manufacturer that sells its goods both wholesale and at retail is called a *dual distributor*. Early decisions held that restraints imposed by dual distributors were illegal *per se* on the basis that such arrangements were unlikely to create the efficiencies and increased competition created by permissible forms of vertical nonprice agreements. The trend in recent decisions, however, is to analyze such restraints under the rule of reason (as long as they originate with the manufacturer, not the retailers) because they can have beneficial economic effects.

Product Bundling and Other Tying Arrangements

Tying arrangements can be challenged under Section 1 of the Sherman Act or Section 3 of the Clayton Act. In a *tying arrangement*, the seller will sell product A (the *tying*, or desired, product) to the customer only if the customer agrees to purchase product B (the *tied* product) from the seller. A tying arrangement is a way of forcing a buyer to purchase a product or service it would not buy on the product's or service's own merits.

For example, suppose Metro Cable expands its cable television service into a new town. The public utilities commission grants Metro the exclusive right to provide cable service in the new town. Metro is a subsidiary of Moviemax, a company that provides a cable television movie channel for subscribers. To improve Moviemax's profit margin, the marketing vice president decides to require all of Metro's customers to subscribe to Moviemax. In this example, the tying product is the basic cable service. The tied product is the Moviemax television channel.

Tying arrangements may unreasonably restrain trade by making it difficult for competitors to sell their goods to customers who are obliged to buy the tied product. In the Moviemax example, the tying arrangement would make it more difficult for other movie channels, such as HBO, to sell their product to cable customers in the new town. Tying arrangements also restrict the freedom of choice of purchasers who are forced to buy the tied product.

To establish a tying arrangement, a plaintiff must show that (1) the tying and tied products are separate products, (2) the availability of the tying product is conditioned upon the purchase of the tied product, (3) the party imposing the tie has enough market power in the tying product market to force the purchase of the tied product, and (4) a "not insubstantial" amount of commerce in the tied product is affected.

Separate Products Whether there are separate products may be difficult to determine. Firms often label or market a combination of goods and services as a single product. The courts attempt to determine whether there are two economically distinct products by ascertaining whether a separate demand exists for each product. For example, in one case the U.S. Supreme Court found that below-market financing that was provided to buyers of prefabricated metal homes was a separate product from the homes themselves. A key issue in the Justice Department's case against Microsoft Corporation, discussed in this chapter's "Inside Story," was whether Microsoft's Internet Explorer web browser was a separate product from Microsoft's Windows operating system.

Condition of Sale If the tying product can be purchased on nondiscriminatory terms, without the tied product, there is no tie. It has been suggested that a manufacturer should not make a second product technologically interdependent with the purchased product, such that technology, rather than contract terms, forces customers to buy both. To date, however, these technological ties have been found lawful as long as there is no separate demand for the products involved, or the interdependent products provide consumers with functionalities not available if the products are purchased separately.

Market Power The nature and extent of the market power required for a tying arrangement are frequently litigated. As the U.S. Supreme Court defines it, market power is "the power to force a purchaser to do something that he would not do in a competitive market."²⁹ Ordinarily, market power is inferred from a firm's predominant share of the market, but under Supreme Court precedent, patented or copyrighted products also conferred market power in tying cases. In the following case, the Supreme Court recently reviewed whether the fact that a product is patented should create a presumption of market power in a tying arrangement.

29. Eastman Kodak Co. v. Image Technical Servs., Inc., 504 U.S. 451 (1992).

A CASE IN POINT**CASE 17.3****ILLINOIS TOOL WORKS, INC. v.
INDEPENDENT INK, INC.****SUPREME COURT OF THE
UNITED STATES
547 U.S. 28 (2006).****SUMMARY**

FACTS Trident, Inc. and its parent Illinois Tool Works, Inc. (collectively, "Trident") manufacture industrial printing systems that include a patented ink jet printhead and ink container and unpatented ink. Trident sells its systems to original equipment manufacturers (OEMs) that are licensed by Trident to incorporate the printheads and ink containers into printers that they sell to customers for use in printing bar codes on cartons and packages. The license agreement requires the OEM to purchase ink exclusively from Trident and further provides that neither the OEM nor its customers will refill the containers with ink of any kind.

Independent Ink developed an ink similar to the ink sold by Trident. Independent Ink filed suit against Trident seeking a judgment of patent noninfringement and invalidity of Trident's patents. Independent Ink alleged, among other things, that Trident illegally tied the sale of its patented printhead and ink container to the purchase of the unpatented ink in violation of Section 1 of the Sherman Act.

The district court granted summary judgment for Trident on the Sherman Act claims. It rejected Independent Ink's contention that Trident "necessarily [has] market power in the market for the tying product as a matter of law solely by virtue of the patent on their printhead system, thereby rendering [the] tying arrangements *per se* violations of the antitrust laws." In ruling for Trident, the court found that Independent Ink had introduced no evidence defining the relevant market or establishing Trident's power therein.

After Independent Ink appealed, the U.S. Court of Appeals for the Federal Circuit reversed, concluding that the "fundamental error" in Trident's submission was its disregard of "the duty of a court of appeals to follow the precedents of the Supreme Court until the Court itself chooses to expressly overrule them." The court held that, under Supreme Court precedent, a patented tying product necessarily conferred market power upon Trident.

ISSUE PRESENTED Does the fact that a product in a tying arrangement is patented create a presumption of market power in that product?

SUMMARY OF OPINION Justice Stevens delivered the unanimous opinion of the U.S. Supreme Court. He began by tracing the history of tying arrangements, noting that four different rules of law have supported challenges to tying arrangements. They have been condemned (1) as "improper extensions of the patent monopoly" under the doctrine of patent misuse, (2) as "contracts in restraint of trade under § 1 of the Sherman Act," (3) as "unfair methods of competition under § 5 of the Federal Trade Commission Act," and (4) as "contracts tending to create a monopoly under § 3 of the Clayton Act." Early decisions assumed that "[t]ying arrangements serve hardly any purpose beyond the suppression of competition."

More recently, the Court rejected the assumption that tying arrangements are always anticompetitive in two cases involving unpatented tying products, *United States Steel Corp. v. Fortner Enterprises, Inc.*³⁰ and *Jefferson Parish Hospital District No. 2 v. Hyde*.³¹ However, the *Jefferson Parish* decision preserved the rule that "if the Government has granted a patent or similar monopoly over a product, it is fair to presume that the inability to buy the product elsewhere gives the seller market power."

The Court explained that this presumption originated in the doctrine of *patent misuse*, which creates a defense to infringement when a patentee uses its patent "as the effective means of restraining competition with its sale of an unpatented article." The presumption then "migrated"

CONTINUED

30. 429 U.S. 610 (1977).

31. 466 U.S. 2 (1984).

to antitrust law in *International Salt Co. v. United States*,³² in which the Court affirmed a district court decision holding that leases of patented machines requiring lessees to use the defendant's unpatented salt products violated Section 1 of the Sherman Act and Section 3 of the Clayton Act as a matter of law. The Court has cited *International Salt* on numerous occasions for the presumption of market power over a patented product.

Even as antitrust law used this presumption, however, Congress began "chipping away" at it in patent misuse law. Initially, Congress excluded certain conduct from triggering the patent misuse defense when it first codified the patent laws. In 1988, Congress eliminated the presumption of market power in patent misuse by amending 35 U.S.C. § 271(d). Although this amendment pertained only to patent misuse and did not refer to the antitrust laws, the Court stated, "It certainly invites a reappraisal of the *per se* rule announced in *International Salt*," noting that "[a] rule denying a patentee the right to enjoin an infringer is significantly less severe than a rule that makes the conduct at issue a federal crime punishable by up to 10 years in prison." The Court continued, "It would be absurd to assume that Congress intended to provide that the use of a patent that merited punishment as a felony would not constitute 'misuse.'" Given that the presumption of market power in antitrust law originated in patent law, "it would be anomalous to preserve the presumption in antitrust after Congress has eliminated its foundation." Accordingly, the Court concluded that tying arrangements involving patented products should be evaluated under the rule of reason rather than under the *per se* rule applied in *International Salt*.

In further support of its decision, the Court took notice of the "vast majority of the academic literature" that disapproved of a presumption of market power. The Court also noted that the Department of Justice and the Federal Trade Commission have adopted guidelines that do "not presume that a patent, copyright, or trade secret necessarily confers market power upon its owner."

RESULT The Court vacated the judgment of the Federal Circuit and remanded the case to the district court, where International Ink should be given a fair opportunity to introduce evidence defining the relevant market and proving that Trident possessed power within it.

COMMENTS This opinion highlights the links between intellectual property law and antitrust, as well as demonstrating how legislation may influence the judiciary.

32. 332 U.S. 392 (1947).

In tying cases, the issue is how power in one market translates into power in another. A dispute between EchoStar and Viacom provides an example of how this may occur. EchoStar, which provides programming to 9 million satellite television subscribers, sued Viacom in the U.S. District Court for the Northern District of California, claiming that Viacom was using its market power as the provider of CBS programming to force EchoStar to buy unrelated programming that it did not want as a condition for renewing its agreement to carry CBS programming. The complaint claimed that Viacom offered EchoStar the right to carry eighteen CBS-owned stations in fifteen big-city markets, but only if EchoStar also bought Viacom's MTV, Nickelodeon, and other cable channel programming. Because the dispute threatened to keep 1.6 million customers from watching the

2004 Super Bowl broadcast and thereby cause EchoStar immediate and irreparable injury, the district court issued a temporary restraining order that permitted EchoStar to keep transmitting CBS, MTV, and other Viacom channels to customers while the litigation proceeded.³³

A firm's ability to translate power in one market into power in another is often a function of product complementarity. If one needs product B (for example, bicycle helmets) to use product A (bicycles), then the firm controlling

33. Andrew Wallenstein & Brooks Boliek, *Viacom, EchoStar Resolve Dispute, Restore Channels*, THR.com, Mar. 11, 2004, http://www.hollywoodreporter.com/hr/search/article_display.jsp?vnu_content_id=1000459190. EchoStar and Viacom settled their dispute in March 2004 on undisclosed terms.

the market for product A (bicycles) will have a good shot at forcing consumers to buy the complementary product (bicycle helmets) from it. Unfortunately, the courts have not fashioned any precise formula using market share and product complementarity by which firms can determine ahead of time the line between antitrust violation and shrewd business.

Effect on Commerce A “not insubstantial” amount of commerce is affected if more than a trifling dollar amount is involved.

Business Justification Although courts continue to say that tying arrangements are illegal *per se*, they now apply a flexible *per se* rule that considers market power and business justifications. As a result, tying arrangements are in effect judged under a type of rule of reason. For example, the U.S. Court of Appeals for the Ninth Circuit upheld Mercedes-Benz’s policy of requiring its dealers to sell only factory-made parts.³⁴ The court found this tying arrangement was justified by the assurance it provided to Mercedes that service on its automobiles, important in preserving its high-quality image, would not be performed with substandard parts.

Some lower courts have also allowed tying arrangements in fledgling industries. For example, one court upheld a tying arrangement whereby purchasers of cable television satellite antennas were required to purchase service contracts to ensure proper functioning of the antennas.³⁵ As discussed further in the “Inside Story,” the U.S. Court of Appeals for the D.C. Circuit held that the rule of reason should be used to decide whether Microsoft had illegally tied its Internet Explorer browser to the Windows operating system.³⁶

Franchise Agreements

A *franchise* is a business relationship in which one party (the franchisor) grants to another party (the franchisee) the right to use the franchisor’s name and logo and to distribute the franchisor’s products from a specified locale. (Franchises are discussed further in Chapter 20.) The U.S. Supreme Court has held that under the rule of reason, vertical market division between a franchisor and a franchisee may be lawful when interbrand competition is enhanced by the limitation on intrabrand competition.³⁷ Such division may take the

34. *Mozart Co. v. Mercedes-Benz of North Am., Inc.*, 833 F.2d 1342 (9th Cir. 1987), *cert. denied*, 488 U.S. 870 (1988).

35. *United States v. Jerrold Elecs. Corp.*, 187 F. Supp. 545 (E.D. Pa. 1960), *aff’d*, 365 U.S. 567 (1961).

37. *Cont'l T.V., Inc. v. GTE Sylvania, Inc.*, 433 U.S. 36 (1977).

form of limits on the number of franchisees in a geographic region and restrictions on the sale of franchisor products to specifically franchised locations.

Antitrust issues are also raised when a franchisor, in an effort to promote uniformity and name recognition, imposes certain limitations on the franchisee. For example, McDonald’s franchisees might be required to decorate their restaurants in an approved fashion and have all their employees wear approved uniforms.

Requirements for the franchisee to purchase goods or equipment from the franchisor have been challenged as illegal tying arrangements. In *Queen City Pizza, Inc. v. Domino’s Pizza, Inc.*,³⁸ Domino’s Pizza franchisees claimed that Domino’s illegally tied the right to use its name and registered trademarks to a requirement that its franchisees purchase ingredients, materials, and supplies for use in their restaurants from Domino’s or Domino’s approved suppliers, thus forcing plaintiffs to pay above-market prices for their ingredients, materials, and supplies. Although the plaintiffs argued that the relevant market should be narrowly limited to pizza and ingredients approved by Domino’s for sale to its franchisees, the U.S. Court of Appeals for the Third Circuit held that “ingredients, supplies, materials, and distribution services used by and in the operation of Domino’s pizza stores” could not, as a matter of law, constitute a relevant market for antitrust purposes. The court appeared to be influenced by the fact that the alleged illegal tie of fresh dough to the purchase of other ingredients from Domino’s was disclosed to the franchisees in the franchise agreement, so the franchisees had had the opportunity to evaluate these potential costs against Domino’s competitors’ costs before they purchased the franchise. This opinion has significantly reduced the ability of franchisees to use antitrust laws to attack restrictive terms in their franchise agreements. Unless the franchisor (1) has a high share of the relevant franchisor product or opportunity or, perhaps, (2) keeps the purchase requirement a secret from the would-be franchisee and makes it difficult for the franchisee to recoup its investment in the franchise, franchisee tying claims are likely to fail.

MONOPOLIES: SECTION 2 OF THE SHERMAN ACT

Section 2 of the Sherman Act provides that “[e]very person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the

38. 124 F.3d 430 (3d Cir. 1997).

several States, or with foreign nations, shall be deemed guilty of a felony.”³⁹

A firm that possesses monopoly power is able to set prices at noncompetitive levels, harming both consumers and competitors. Consequently, Section 2 condemns actual or attempted monopolization of any market. Unlike Section 1, Section 2 does not require an agreement or any other collective action; unilateral conduct may violate Section 2.

Section 2 does not, however, prohibit the mere possession of monopoly power. The offense of monopolization has two elements. The plaintiff must show first that the defendant has monopoly power in a relevant market and then that the defendant willfully acquired or maintained that power through anticompetitive acts. A firm that has monopoly power thrust upon it by circumstances or attains it by superior performance does not violate Section 2. Thus, there is a status element (the defendant must be an entity with monopoly power) and a conduct element (the defendant must commit anticompetitive acts).

MARKET POWER

Courts define *market power* (also called *monopoly power*) as the power to control prices or exclude competition in a relevant market. Market power is marked by supracompetitive prices (that is, prices that are higher than they would be in a competitive market) over an extended period of time and the unavailability of substitute goods or services. The determination of whether a particular corporation has market power usually requires complex economic analysis. Presumptions based on market share and other structural characteristics of markets are used to simplify the analysis; in practice, however, each case turns on its unique (and usually disputed) facts.

Defining the Relevant Market

Competition takes place in discrete markets. Therefore, the existence of market power can be determined only after the relevant market for the product is determined. Markets have two components: a product component and a geographic component.

Multiple-Brand Product Market The *multiple-brand product market* is made up of product or service offerings by different manufacturers or sellers that are economically interchangeable and may therefore be said to compete. Sometimes it is easy to identify substitutes. No one would deny that Coca-Cola competes against Pepsi. Frequently,

the question is more complex. Does Coca-Cola compete against Dr. Pepper? Maybe. Against powdered iced tea? That is harder to say.

These questions are important because the power of a seller to set prices above competitive levels is limited by the ability of purchasers to substitute other products. If purchasers are unable to substitute other goods in the face of a price increase, the seller can set prices at monopoly levels. The product market is that collection of goods or services that customers deem to be practically substitutable.

Single-Brand Product Market The U.S. Supreme Court in *Eastman Kodak Co. v. Image Technical Services, Inc.* held that “[b]ecause service and parts for Kodak equipment are not interchangeable with other manufacturers’ service and parts, the relevant market from the Kodak-equipment owner’s perspective is composed of only those companies that service Kodak machines.”⁴⁰ The Court rejected Kodak’s motion for summary judgment on the basis that the relevant market was all copy machines and that Kodak could not have market power as to Kodak parts and service for copy machines, because it did not have market power in copy machines. Evidence in the case showed that Kodak controlled nearly 100 percent of the Kodak parts market and 80 to 95 percent of the Kodak service market, so Kodak-equipment owners had no readily available substitutes. Because of the high costs of switching to another brand, consumers could not readily change copy-machine manufacturers if Kodak unilaterally raised its service fees. Thus, in some cases, a single brand of a product or service may constitute a separate market in a Section 2 analysis.

Geographic Market Competition is also affected by geographic restraints on product movement. If a firm in Michigan is the only maker of widgets in the Midwest, it has the potential to exercise market power, unless widget makers from other parts of the country can profitably ship their products to that area. Some markets are national or even international in scope, for example, the markets for long-distance telephone service, supercomputer sales, and nuclear power plant designs. Other markets are localized, for example, markets for products that are expensive to transport, such as wet cement. The contours of geographic markets may also be affected by government regulations that confine firms to certain regions.

By defining the geographic market, antitrust courts try to separate firms that affect competition in a given region from those that do not. The geographic market encompasses all firms that compete for sales in a given area at current prices

39. 15 U.S.C. § 2.

40. 504 U.S. 451 (1992).

or would compete in that area if prices rose by a modest amount.

Determining Market Share

Once the relevant market is determined, the plaintiff must show that, within this market, the defendant possessed market, or monopoly power. The Supreme Court has held that monopoly power may be inferred from a firm's predominant share of the market, because a dominant share of the market often carries with it the power to control output across the market and thereby control prices. How a relevant market is defined often determines whether a particular firm has a dominant share of the market. For example, if the relevant market is the market for imported mineral water, Perrier's competitors would include other imported mineral-water sellers like Pellegrino, and Perrier would hold a major share of that market. On the other hand, if the market is defined

as all mineral water (including, for example, Calistoga and Poland Springs), then Perrier's market share would be considerably smaller.

In one case, the Supreme Court found that 87 percent of the market was a predominant share sufficient to create a presumption of market power. As a general proposition, firms with market shares in excess of 60 percent are especially vulnerable to Section 2 litigation. When a single brand of a product or service constitutes the relevant market, market share may be 100 percent.

Barriers to Entry

Market shares do not conclusively establish market power. Market share must be analyzed in the context of other characteristics of the market in question. The plaintiff must show that new competitors face high market barriers to entry and that current competitors lack the ability

Economic PERSPECTIVE

The Regulation of Natural Monopolies

In the imagined world of perfect competition, *productive efficiency* (an equilibrium in which only the lowest-cost producers of goods and services survive) and *allocative efficiency* (an equilibrium in which scarce societal resources are allocated to the production of various goods and services up to the point where the cost of the resources equals the benefit society reaps from their use) would go hand in hand. In the real world, however, this is not always so. For example, the most cost-efficient way to provide landline telephone connections to homes is to link all of the homes to one central station, using one set of lines. Competition would require duplication of this expensive infrastructure; productive efficiency is best served by a monopoly. But the pricing policy of a monopolist is not controlled by competition. Consequently, the

unregulated price of local telephone service would rise above the socially efficient level, and allocative efficiency would be impaired (see Exhibit 17.1). This can be remedied only by regulation of such industries, which are known as natural monopolies.

For many years, the American Telephone and Telegraph Company (AT&T) enjoyed a regulated monopoly in both local and long-distance telecommunications. The provision of long-distance service is not a natural monopoly because more than one network of intercity telephone lines can be profitably operated. Nonetheless, there was no competition in long-distance service because AT&T controlled access to the lines to individual homes.

In 1974, the U.S. government brought an antitrust suit against AT&T, charging monopolization of the telecommunications industry in

violation of Section 2 of the Sherman Act. The case was decided in 1983.^a In 1984, AT&T signed a consent decree to enable competition to flourish in the long-distance market. The decree provided for (1) the breakup of AT&T's monopoly over local service by creating seven regional telecommunications companies, known as the Baby Bells; and (2) a complex set of rules to ensure that both AT&T and other companies providing long-distance service, such as MCI and Sprint, would have equal access to the local networks. The Baby Bells would, of course, be subject to regulation because each of them would still enjoy a monopoly in the provision of local telephone service.

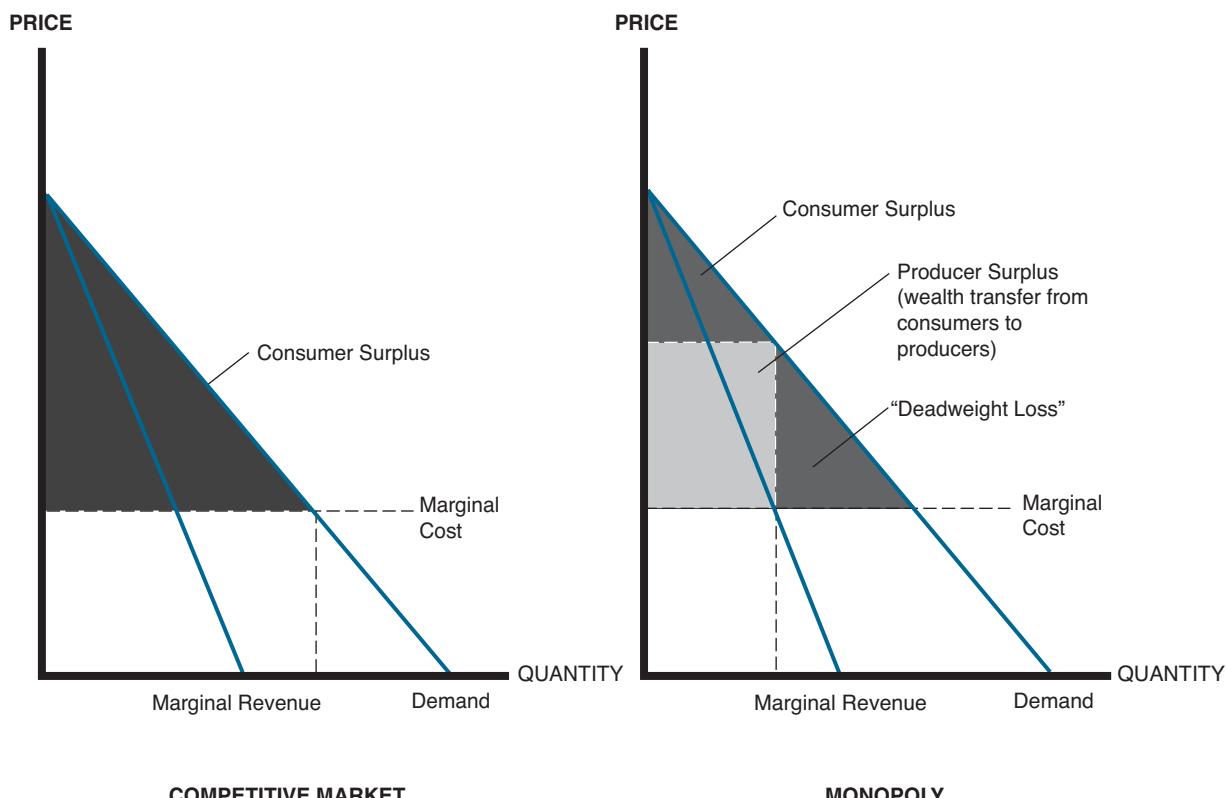

^a. United States v. Am. Tel. & Tel. Co., 552 F. Supp. 131 (D.D.C. 1982), *aff'd sub nom.* Maryland v. United States, 460 U.S. 1001 (1983).

to expand their output to challenge a monopolist's high prices. Common entry barriers include patents, governmental licenses or approvals, control of essential or superior resources, entrenched buyer preferences, economies of scale, and, according to some authorities, high initial capital requirements. Courts will also look at profit levels,

market trends, pricing patterns, product differentiation, and government regulation. Essentially, the court is trying to determine the likelihood that another company will become a viable competitor in the relevant market if there is a small but significant nontransitory increase in price levels.

EXHIBIT 17.1

Welfare Loss from Monopoly

DEFINITION OF TERMS

Consumer surplus The difference between the value of a good to consumers (measured by the price they would be willing to pay for the good) and the price they actually must pay to obtain the good.

Producer surplus The difference between the cost to producers of producing a good (measured by the minimum price at which they would sell a given quantity of the good) and the price they actually receive in the market.

Total surplus The sum of producer and consumer surplus. Total surplus represents the difference between the cost to society of the inputs used to make a good, including raw materials and labor, and the value of the finished good to society. Total surplus measures the overall increase in societal wealth attributable to production of a good.

Deadweight loss The difference between total surplus in a competitive market and total surplus in a monopolized market.

MONOPOLISTIC INTENT

Once the presence of market power is established, the defendant's intent is relevant. Some cases hold that the plaintiff must prove that the defendant's conduct lacks a legitimate business purpose. Other cases hold that the initial burden is on the defendant to prove a legitimate business purpose; if it does so, the plaintiff must then prove a monopolistic intent. It is possible to prove intent through evidence of statements by the monopolist's executive expressing a desire to eliminate competition. Hostility between competitors is commonplace, however, and may even be beneficial to vigorous competition. Therefore, the courts often require that monopolistic intent be proved by evidence of conduct (not merely statements) that is inherently anticompetitive.

A defendant may rebut allegations of monopolistic intent by showing that its success in the marketplace is the result of "superior skill, foresight, and industry." A monopoly earned by superior performance is not unlawful. Indeed, the law recognizes that the possibility of attaining such a monopoly may be a powerful incentive to vigorous competition, which benefits consumers. Therefore, a key issue in Section 2 litigation is whether the defendant acquired or maintained its monopoly by procompetitive acts or by anticompetitive acts. Anticompetitive acts include predatory pricing and, under certain circumstances, refusals to deal.

Predatory Pricing

The courts have not settled on a single definition of *predatory pricing*, that is, the attempt to eliminate rivals by undercutting their prices to the point where they lose money and go out of business, leaving the monopolist unrestrained by competition and thus able to raise its prices. The courts have struggled to develop principles that distinguish between such anticompetitive pricing and the procompetitive pricing that occurs when a more efficient firm competes vigorously yet fairly against its rivals. In the latter case, the more efficient firm could undercut its rivals, forcing them out of business, and a lawful monopoly would result.

Courts will usually find pricing legal when the prices are above average variable cost but below average total cost and the company has excess capacity. (*Variable cost* is the cost of producing the next incremental unit; *total cost* includes variable cost and fixed costs, such as rent and overhead.) If a company does not have excess capacity, the legality of the pricing depends on the company's intent; the cases are very fact-specific. Prices below average variable cost are presumptively illegal, unless the business can demonstrate that the pricing is an introductory offer or that costs will fall dramatically as the company progresses along the learning

curve. At some point, pricing below cost becomes economically irrational unless the predator is anticipating the long-term gains that would result from destroying its rivals.

Some academics have argued that predatory pricing is self-defeating in all but a few market scenarios. Having eliminated its rivals, the predator needs to keep its old rivals, and new entrants, out of the market when it raises its prices to recoup its losses. That will be difficult as the high prices—and high profits—can be expected to attract new entrants. Thus, predatory pricing is an irrational strategy unless the market, because of barriers to entry or other factors, is structurally conducive to monopolization.

In *Matsushita Electric Industrial Co. v. Zenith Radio Corp.*, the U.S. Supreme Court held that some allegations of predation are inherently implausible because the marketplace cannot be successfully monopolized.⁴¹ In such cases, there is no Sherman Act violation, regardless of any monopolistic intent the defendant may have had. This has been referred to as the *rule of impossibility*.⁴²

The U.S. Supreme Court's decision in *Brooke Group Ltd. v. Brown & Williamson Tobacco Corp.*⁴³ is the seminal federal case addressing predatory pricing. In that case, the Supreme Court held that a plaintiff must prove two conditions to succeed on a claim of predatory pricing: (1) that the prices and other direct revenues for the practice complained of are below an appropriate measure of the defendant's costs, and (2) that the defendant has a dangerous probability of recouping its investment "losses" by later raising prices above competitive levels. Because rational businesses will rarely suffer short-term losses in hopes of gaining supracompetitive profits, the Court concluded that "predatory pricing schemes are rarely tried, and even more rarely successful."⁴⁴

In *Weyerhaeuser Co. v. Ross-Simmons Hardwood Lumber Co.*,⁴⁵ the Supreme Court held that the same test also applies to predatory buying claims. Ross-Simmons accused Weyerhaeuser of paying too much for alder logs and not using what it bought, with the goal of driving out competing sawmills that used wood in furniture and other products. The Court found that the risk of chilling procompetitive behavior was as serious in this case as it was in *Brooke Group*, and therefore only higher bidding that leads to below-cost pricing in the relevant output market should constitute a basis for predatory bidding liability.

Exclusionary Conduct

In *LePage's, Inc. v. 3M*,⁴⁶ the U.S. Court of Appeals for the Third Circuit held that above-cost pricing, coupled with exclusionary conduct, can give rise to a violation of Section 2. In 1992, LePage's was selling 88 percent of the private label tape sold in the United States, although private label tape represented only a small portion of the overall transparent tape market. 3M's Scotch-brand tape had a 90 percent market share of this overall transparent tape market. During the early 1990s, 3M entered the private label business, selling its second brand under the name "Highland." Through its rebate programs, 3M offered many of LePage's major customers substantial rebates conditioned on purchases spanning six of 3M's diverse product lines: Health Care Products, Home Care Products, Home Improvement Products, Stationery Products (including transparent tape), Retail Auto Products, and Leisure Time Products. In addition to bundling the rebates, the program set customer-specific target growth rates in each product line. The size of the customer's rebate was linked to the number of product lines in which targets were met, and the number of targets met by the customer determined the rebate it would receive on all of its purchases. If a customer failed to meet the target for any one product, the failure resulted in loss of its rebate across the entire line. This created a substantial incentive for each customer to meet the targets across all product lines.

LePage's brought an antitrust action against 3M claiming, among other things, that 3M's conduct violated Section 2 of the Sherman Act. After a jury trial, the district court entered judgment in favor of LePage's on its monopolization claim, and 3M appealed. The U.S. Court of Appeals for the Third Circuit reversed, noting that 3M relied on the Supreme Court's decision in *Brooke Group Ltd. v. Brown & Williamson Tobacco Corp.* to support its position that "[a]bove-cost pricing cannot give rise to an antitrust offense as a matter of law, since it is the very conduct that the antitrust laws wish to promote in the interest of making consumers better off." Following an extensive review of the Supreme Court's Section 2 decisions, the court concluded that nothing in *Brooke Group* suggested that the decision applied to a monopolist with unconstrained market power.

Turning to the bundled rebates, the court stated that they should be compared with tying arrangements rather than predatory pricing because they have similar foreclosure effects. The court reasoned: "The principal anticompetitive effect of bundled rebates as offered by 3M is that when offered by a monopolist, they may foreclose portions of the market to a potential competitor who does not manufacture

an equally diverse group of products and who therefore cannot make a comparable offer." The court also concluded that the jury reasonably found that 3M's exclusionary conduct violated Section 2:

LePage's produced evidence that the foreclosure caused by exclusive dealing practices was magnified by 3M's discount practices, as some of 3M's rebates were "all-or-nothing" discounts, leading customers to maximize their discounts by dealing exclusively with the dominant market player, 3M, to avoid being severely penalized financially for failing to meet their quota in a single product line.

Refusal to Deal and the Essential Facilities Doctrine

As a general proposition, the antitrust laws do not prevent a firm from deciding with whom it will or will not deal. Yet the courts have long recognized that there are circumstances in which a unilateral refusal to deal may allow a firm to acquire or maintain monopoly power.

A monopolist has a duty to deal with its rivals when it controls an *essential facility*, that is, some resource necessary to its rivals' survival that they cannot feasibly duplicate. A court considers four elements in an essential-facility case: (1) whether the defendant prevents would-be competitors from using the facility, (2) whether it is feasible for the defendant to permit access to the facility by its would-be competitors, (3) whether the defendant has monopoly power and control of the facility, and (4) whether the competitors are able to duplicate the essential facility. The essential-facility doctrine does not require a firm to share resources that are merely useful, that would allow competitors to compete more effectively, or that the competitors could duplicate on their own.

In 1995, the Federal Trade Commission and the Department of Justice issued *Antitrust Guidelines for Licensing Intellectual Property*.⁴⁷ These guidelines set forth three core principles: (1) the standard antitrust analysis applies to intellectual property, (2) intellectual property rights do not necessarily confer market power, and (3) licensing is generally procompetitive and subject to rule of reason analysis.

On remand from the U.S. Supreme Court, the U.S. Court of Appeals for the Ninth Circuit upheld a jury verdict in favor of the plaintiffs in *Image Technical Services, Inc. v. Eastman Kodak Co.*⁴⁸ The court held that Section 2 of the Sherman Act prohibits refusal to deal in order to create or maintain a monopoly unless there is a legitimate business

46. 324 F.3d 141 (3d Cir. 2001), cert. denied, 542 U.S. 953 (2004).

47. The guidelines are available at <http://www.ftc.gov/bc/0558.pdf>.

48. 125 F.3d 1195 (9th Cir. 1997), cert. denied, 523 U.S. 1094 (1998).

justification. The court acknowledged that intellectual property rights may create such a justification. In particular, a monopolist's desire to exclude others from its protected work is a presumptively valid business justification for any immediate harm to consumers caused by a monopolist's unilateral refusal to license a patent or copyright, or to sell its patented or copyrighted work. That presumption may be rebutted, however, by evidence that the intellectual property protection was acquired unlawfully or that its use as a business justification was merely a pretext.

The Ninth Circuit found that Kodak's refusal to sell replacement copier parts to independent service organizations was not justified by a desire to exploit its patents or copyrights. Although Kodak's equipment required thousands of parts, only sixty-five were patented, but Kodak refused to sell both patented and unpatented parts. The court noted the tension between antitrust law's concerns about monopoly, as a threat to competition, and copyright and patent law's goal of granting limited monopolies as an incentive to innovate. While acknowledging that patent and copyright holders may refuse to sell or license a protected work, a monopolist that acquires a dominant position in one market through patents and copyrights may violate Section 2, if it then exploits that dominant position to extend the lawful monopoly into a separate market.

In a subsequent case, the U.S. Court of Appeals for the Federal Circuit rejected the plaintiff's reliance on *Kodak* and upheld Xerox's policy of not selling or licensing its patented products and copyrighted software to independent service organizations.⁴⁹ Whereas the *Kodak* case was a tying case, the plaintiff in *Xerox* made no claims that Xerox had tied the sale of its patented parts to unpatented products. The Federal Circuit also declined to inquire into the subjective motivation behind Xerox's refusal to sell or license its patented and copyrighted works, finding that the antitrust defendant's subjective motivation is immaterial. The court held that in the absence of illegal tying, fraud on the Patent and Trademark Office or the Copyright Registrar, or sham litigation, Xerox's enforcement of its statutory intellectual property rights did not violate the antitrust laws.

Other Anticompetitive Acts

Other practices that have been held to indicate the presence of monopolistic intent include the allocation of markets

and territories, price-fixing, fraudulently obtaining a patent, or engaging in sham litigation against a competitor. Firms can also incur Section 2 liability by acquiring or maintaining monopoly power through corporate mergers or acquisitions.

DERIVATIVE MARKETS AND MONOPOLY LEVERAGING

Ordinarily, Section 2 liability is restricted to monopolistic behavior within the specific market in which the firm has market power. Through leveraging, however, a firm with monopoly power in one market can use that power to gain an advantage in a separate market. It is clear that when such an advantage amounts to monopoly power in the second market, the firm has violated Section 2. It is less clear whether a firm can use its monopoly power in one market to gain a competitive advantage, short of actual monopolization, in another market. In *Berkey Photo, Inc. v. Eastman Kodak Co.*,⁵⁰ the U.S. Court of Appeals for the Second Circuit suggested that the use of monopoly power in one market to obtain a competitive advantage in another market might violate Section 2. Recent U.S. Supreme Court decisions tend to undercut this suggestion. More specifically, in another case,⁵¹ the Supreme Court held that the plaintiff in every Section 2 case involving unilateral conduct must prove a dangerous probability that the defendant's conduct will create or maintain monopoly power in a market. That holding seems to suggest that "leveraging" that confers only a "competitive advantage" in a market cannot violate Section 2. In *Verizon Communications Inc. v. Law Offices of Curtis V. Trinko*, the Supreme Court disagreed with the appellate court's thought that the respondent's complaint might state a monopoly leveraging claim and stated that the appellate court was in error to the extent it had dispensed with the requirement that there must be a dangerous probability of successfully monopolizing a second market.⁵²

The U.S. Court of Appeals for the Ninth Circuit adopted this approach when it found that two airlines that had developed the two largest proprietary computerized airline reservation systems did not violate Section 2 merely because the systems gave them a competitive advantage in the air-transportation market by listing their flights first.⁵³ The court held that unless the monopolist uses its power in the first market to acquire and maintain a monopoly in the

53. Alaska Airlines, Inc. v. United Airlines, Inc., 948 F.2d 536 (9th Cir. 1991).

second market, or to attempt to do so, there is no Section 2 violation. The plaintiffs had conceded that the two airlines did not have a monopoly in the leveraged, downstream air-transportation market and that there was no dangerous probability that either defendant would acquire such a monopoly. Therefore, their Section 2 claims were rejected.

PRICE DISCRIMINATION: THE ROBINSON–PATMAN ACT

Section 2 of the Clayton Act, as amended by the Robinson–Patman Act, prohibits *price discrimination*, that is, selling the same tangible product to different purchasers at the same level of distribution at different prices. By outlawing price discrimination, Congress believed that it could protect independent businesses by preventing the formation of monopolies. The legislators assumed that price discrimination was the means by which trusts were built and that discriminatory price concessions were the means by which large retail chains expanded at the expense of smaller independent retailers.

ELEMENTS OF A ROBINSON–PATMAN CASE

Most Robinson–Patman claims involve either “primary line” or “secondary line” price discrimination. Robinson–Patman claims for *primary line* (or predatory pricing) violations are virtually identical to predatory pricing claims under the Sherman Act. Few primary line claims meet the current standard, which makes attempts to monopolize illegal only if they

present a “dangerous probability of success.” *Secondary line violations* typically involve a “disfavored” purchaser that brings a suit against a seller, or the seller’s “favored” purchaser, for giving the favored purchaser better pricing.

Six elements must be proved to establish secondary line discrimination under the Robinson–Patman Act: (1) there must be discrimination in price, that is, a difference in the price at which goods are sold, in the terms and conditions of sale, or in such items as freight allowances or rebates; (2) some part of the discrimination must involve sales in interstate commerce, that is, at least one sale must be across state lines; (3) the discrimination must involve sales for use, consumption, or resale within the United States; (4) there must be discrimination between different purchasers; (5) the discrimination must involve sales of tangible commodities of like grade and quality; and (6) there must be a probable injury to competition. The probable injury to competition is assessed at three levels: (1) the seller level, (2) the buyer level, and (3) the customer level.

DEFENSES

Even if a plaintiff has shown the elements of a Robinson–Patman violation, the following defenses are available.

Actual Competitors

In the following case, the U.S. Supreme Court held that a manufacturer is not liable for secondary line price discrimination in the absence of a showing that the manufacturer discriminated between dealers competing to sell the manufacturer’s product to the same retail customer.

A CASE IN POINT

CASE 17.4

VOLVO TRUCKS NORTH AMERICA, INC. v. REEDER–SIMCO GMC, INC.

SUPREME COURT OF THE
UNITED STATES
546 U.S. 164 (2006).

IN THE LANGUAGE OF THE COURT

FACTS Reeder-Simco GMC, Inc., an authorized Volvo truck dealer, generally sold its trucks through an industry-wide competitive bidding process, pursuant to which the retail customer describes its product requirements and invites bids from dealers that it selects based on factors such as an existing relationship, geography, and reputation. Once a Volvo dealer receives the customer’s specifications, it requests a discount off the wholesale price from Volvo. Volvo decides on a case-by-case basis whether to offer the discount. The dealer then uses its Volvo discount to prepare its bid, and it purchases trucks from Volvo only if and when the customer accepts the bid. Although nothing prohibits a Volvo dealer from bidding outside its territory, Reeder rarely bid against another Volvo dealer. In the unusual case where a retail customer solicited a bid from more than one Volvo dealer, Volvo’s stated policy was to provide the same discount to each.

In 1997, after Volvo announced plans to enlarge the size of its dealers’ markets and to reduce the number of dealers, Reeder learned that Volvo had given another dealer a discount greater than the discounts that Reeder typically received. Suspecting that it was one of the dealers that Volvo intended to terminate, Reeder sued Volvo for violation of the Robinson–Patman Act, alleging that

CONTINUED

its sales and profits declined because Volvo offered other dealers more favorable discounts. At trial Reeder presented evidence of two instances when it bid against another Volvo dealer for a particular sale. In the first, although Volvo initially offered Reeder a less favorable discount, Volvo ultimately matched the discount that it had offered to the other dealer. In the second, Volvo initially offered the two dealers the same discount, but it increased the other dealer's discount after it, rather than Reeder, was selected by the customer. Reeder also introduced evidence of discounts it received on four occasions when it bid successfully against non-Volvo dealers (and thus purchased Volvo trucks) and evidence of more favorable discounts received by other Volvo dealers in bidding processes in which Reeder did not participate.

The jury found a reasonable possibility that discriminatory pricing may have harmed competition between Reeder and other Volvo dealers, that Volvo's discriminatory pricing injured Reeder, and that Reeder's damages exceeded \$1.3 million. The district court awarded treble damages and entered judgment, and the U.S. Court of Appeals for the Eighth Circuit affirmed.

ISSUE PRESENTED May a manufacturer be held liable for price discrimination under the Robinson–Patman Act in the absence of a showing that the manufacturer discriminated between dealers competing to resell its products to the same retail customer?

OPINION GINSBURG, J., writing for the U.S. Supreme Court:

A hallmark of the requisite competitive injury . . . is the diversion of sales or profits from a disfavored purchaser to a favored purchaser. We have also recognized that a permissible inference of competitive injury may arise from evidence that a favored competitor received a significant price reduction over a substantial period of time. Absent actual competition with a favored Volvo dealer, however, Reeder cannot establish the competitive injury required under the Act.

. . . As we see it . . . selective comparisons of the kind Reeder presented do not show the injury to competition targeted by the Robinson–Patman Act.

Both the purchase-to-purchase and the offer-to-purchase comparisons fall short, for in none of the discrete instances on which Reeder relied did Reeder compete with beneficiaries of the alleged discrimination *for the same customer*. Nor did Reeder even attempt to show that the compared dealers were consistently favored vis-à-vis Reeder. . . . The compared incidents were tied to no systematic study and were separated in time by as many as seven months.

. . .

Interbrand competition, our opinions affirm, is the “primary concern of antitrust law.” The Robinson–Patman Act signals no large departure from that main concern. Even if the Act’s text could be construed in the manner urged by Reeder and embraced by the Court of Appeals, we would resist interpretation geared more to the protection of existing *competitors* than to the stimulation of *competition*.

RESULT The Supreme Court reversed the judgment of the Eighth Circuit in favor of the plaintiffs and remanded the case for further proceedings consistent with its opinion.

CRITICAL THINKING QUESTIONS

1. Will a dealer who sells a manufacturer's products in an exclusive territory be able to sue the manufacturer under the Robinson–Patman Act if the manufacturer is offering lower prices to dealers in other exclusive territories?
2. Will a small retail store be able to sue a manufacturer under the Robinson–Patman Act if the manufacturer is offering lower prices to large retailers in the same geographic region?

Availability

The Robinson–Patman Act permits discrimination that arises from discounts and allowances that a company affirmatively offers to all competing customers. A customer who fails to take advantage of such an offer cannot claim an actionable injury.

Meeting the Competition

Discriminatory prices are not prohibited if the seller acted in “good faith to meet an equally low price of a competitor.”⁵⁴ As defined by the Federal Trade Commission (FTC), good faith is “a flexible and pragmatic, not a technical or doctrinaire, concept. The standard of good faith is simply the standard of the prudent businessman responding fairly to what he reasonably believes is a situation of competitive necessity.”⁵⁵

Cost Justification

Price differentials that would otherwise be prohibited by the Robinson–Patman Act are not prohibited if the differentials “make only due allowance for differences in the cost of manufacture, sale or delivery resulting from the differing methods or quantities” in which the goods are sold and delivered (such as costs of billing; credit losses; costs of advertising, promotion, and selling; and freight and delivery charges).⁵⁶ To establish this defense and justify the price reduction, the defendant must show actual cost savings, not merely generalized assertions of cost savings. The FTC interprets this defense restrictively and compiling the necessary paper trail is expensive.

Changing Conditions

Section 2(a) does not prohibit price changes from time to time in response to changing conditions affecting the market for or the marketability of the goods concerned. Such conditions include, but are not limited to, actual or imminent deterioration of perishable goods, obsolescence of seasonal goods, distress sales under court process, or sales in good faith when the seller discontinues its business in the goods concerned.

In the few cases where this defense has been raised, the issue was whether the price discrimination was a response to one of the conditions listed in the statute. The changing-conditions defense has generally been confined to situations

caused by the physical characteristics of the product, such as the perishable nature of fruit. For example, a court permitted price differentials on bananas from a single shipload because they reflected the perishable nature of bananas.

MERGERS: SECTION 7 OF THE CLAYTON ACT

If a merger or acquisition unreasonably restrains trade, it violates Section 1 of the Sherman Act. If it results in monopolization, it violates Section 2. These statutes are, however, rarely invoked to challenge mergers. Dissatisfied with the ability of the government to attack mergers under the Sherman Act, Congress amended the Clayton Act in 1950 to prohibit mergers that threatened to harm competition. Section 7 of the Clayton Act provides:

No person engaged in commerce or in any activity affecting commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no person subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another person engaged also in commerce or in any activity affecting commerce, where in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.⁵⁷

HART-SCOTT-RODINO ANTITRUST IMPROVEMENTS ACT

The Hart–Scott–Rodino Antitrust Improvements Act (HSR) amended Section 7 of the Clayton Act in 1976 to provide a premerger notification procedure whereby the Federal Trade Commission and the Justice Department can review the anticompetitive effects of proposed mergers meeting certain size-of-party and size-of-transaction tests. A premerger notification must be filed if (1) one party to the transaction has total assets or annual net sales of at least \$100 million or more, and the other party has total assets or annual net sales of \$10 million or more (the “size of persons test”); and (2) as a result of the acquisition, the acquiring person would hold an aggregate total amount of voting securities and assets of the acquired person in excess of \$50 million (the “size of transaction test”). Even if the size of persons test is not met, a premerger notification must be filed if, as

54. 15 U.S.C. § 13(b).

55. Cont'l Baking Co., 63 F.T.C. 2071, 2163 (1963).

56. 15 U.S.C. § 13(a).

57. 15 U.S.C. § 18.

a result of the acquisition, the acquiring person would hold an aggregate total amount of voting securities and assets of the acquired person in excess of \$200 million.

Parties to a merger must give the FTC and the Justice Department thirty days to review their filings (fifteen days in the case of a tender offer). Either period can be extended if the government requests additional information. The agencies are able to complete their review of more than 95 percent of the transactions reported under HSR within the fifteen- or thirty-day period.⁵⁸ Requests for additional information should be avoided, if possible, because they cause further delays before the merging parties know whether the FTC or Justice Department will challenge the proposed merger.

MERGER GUIDELINES

In connection with their enforcement obligations, the FTC and the Justice Department have together developed a series of guidelines as to the kinds of transactions that are likely to be challenged as violations of the Clayton Act.

Under the 1992 Horizontal Merger Guidelines,⁵⁹ the FTC and the Justice Department seek to determine whether a proposed corporate combination will more likely than not reduce competition. To make this determination, the guidelines define a five-part organizational structure consisting of (1) marketing definition and concentration, (2) potential adverse competitive effects, (3) entry analysis, (4) efficiencies, and (5) failing and exiting assets. The order of the elements in the guidelines is not analytically significant because the reviewing agency does not apply the guidelines serially.

As an aid to the interpretation of market data, the Justice Department uses the *Herfindahl–Hirschman Index (HHI)* of market concentration. The HHI is calculated by summing the squares of the individual market shares of all the firms in the market. For example, in a market with four competitors having market shares of 35 percent, 25 percent, 25 percent, and 15 percent, the HHI is $2,700$ ($35^2 + 25^2 + 25^2 + 15^2 = 1,225 + 625 + 625 + 225 = 2,700$).

Proposed mergers ordinarily require no further analysis if (1) the postmerger HHI is under 1,000; (2) the postmerger HHI falls between 1,000 and 1,800, and the change in the HHI is less than 100; or (3) the postmerger HHI is above 1,800, and the change in the HHI is less than 50.

58. FTC & U.S. Dep’t of Justice, *Commentary on the Horizontal Merger Guidelines 2006*, Mar. 2006, available at <http://www.ftc.gov/os/2006/03/commentaryonthehorizontalmergerguidelinesmarch2006.pdf>.

59. The guidelines are available at <http://www.ftc.gov/bc/docs/hmg080617.pdf> (last revised Apr. 8, 1997).

The reviewing agency has often not challenged mergers that involve market shares and concentrations that fall outside the above zones. According to the 2006 Commentary on the Horizontal Merger Guidelines:

This does not mean that the zones are not meaningful, but rather that market shares and concentration are but a “starting point” for the analysis, and . . . many mergers falling outside these three zones nevertheless, upon full consideration of the factual and economic evidence, are found unlikely substantially to lessen competition.⁶⁰

LITIGATION UNDER SECTION 7

Although the Department of Justice’s merger guidelines are of considerable persuasive value, the standards applied by the courts differ in several significant respects. A court’s analysis may also vary depending on the type of merger or corporate combination that has been challenged.

Horizontal Mergers

A *horizontal merger* is the combining of two or more competing companies at the same level in the chain of production and distribution. The first step in determining the lawfulness of such a merger is to identify the relevant product and geographic markets. The same standards discussed in connection with Section 2 of the Sherman Act are used.

Once the market is defined, the court will look primarily at three factors: (1) the market shares of the firms involved in the transaction, (2) the level of concentration in the market, and (3) whether the market is structurally conducive to anticompetitive behavior.

The case of *United States v. Philadelphia National Bank*⁶¹ illustrates this method of analysis. In the early 1960s, Philadelphia National Bank (PNB) was the second largest bank in the Philadelphia market, which consisted of forty-two commercial banks in the metropolitan area of Philadelphia, Pennsylvania, and its three contiguous counties. After PNB signed a merger agreement with Girard Bank, the third largest bank in the same market, the United States sued to enjoin the merger on the grounds that it would violate Section 7 of the Clayton Act.

The merger would have resulted in PNB’s controlling at least 30 percent of the commercial banking business in the four-county Philadelphia metropolitan area, a market share that the U.S. Supreme Court viewed as a threat to competition. After the merger, the two largest banks would control

60. FTC & Dep’t of Justice, *supra* note 58, at 15.

61. 374 U.S. 321 (1963).

59 percent of the market, whereas before the merger the two largest banks controlled only 44 percent. This increase in concentration also worried the Court. Neither the high level of government regulation of the banking business nor the banks' provision of services and intangible credit, rather than tangible products, made the banking industry immune from the anticompetitive effects of undue concentration. Because of these three elements, the Court directed the district court to enter judgment enjoining the merger. The Court explained:

[A] merger which produces a firm controlling an undue percentage share of the relevant market, and results in a significant increase in the concentration of firms in that market is so inherently likely to lessen competition substantially that it must be enjoined in the absence of evidence clearly showing the merger is not likely to have such anticompetitive effects.

The 30 percent market share that the Court held to be excessive has been taken by many lower courts to create a presumption of illegality. The Supreme Court has insisted, however, that no single numerical standard can be applied to all markets. Most courts today require that, in the absence of a highly concentrated market, the merging firms have a combined market share of at least 30 percent before a Section 7 violation will be found.

In *United States v. Oracle*,⁶² the U.S. Justice Department and ten states sought to prevent consolidation in what the Justice Department identified as the market for high-function human relations and financial management software systems licensed to large complex enterprises in the United States—a market the government asserted had only three participants: Oracle, PeopleSoft, and SAP. However, the U.S. District Court for the Northern District of California allowed Oracle's hostile \$7.7 billion proposed acquisition of PeopleSoft to proceed, concluding that the Justice Department had not carried its burden to show that the acquisition would substantially reduce competition.

The court disagreed with the government's claim that the relevant product market for the software systems in question could be limited in both market size and market participants to products offered only by Oracle, PeopleSoft, and SAP. Although the Justice Department had assembled a large number of major enterprise resource planning (ERP) customers who testified that their ERP options were no broader than Oracle, PeopleSoft, and SAP and that anticompetitive price increases would not drive them to consider other alternatives, the court discounted their testimony as expressions of customer preference. The court concluded

that the government had failed to appropriately account for other market participants, such as outsourcing solutions and human relations or financial management solutions from "mid-market" vendors. The court also ruled that the geographic market is worldwide, not limited to the United States as the Justice Department had contended.

In March 2008, the Justice Department approved a proposed merger between satellite radio's two principal carriers, XM Satellite Radio Holdings, Inc. and Sirius Satellite Radio, Inc. Although critics argued that the relevant market was satellite radio and that the proposed merger would create a vertical monopoly for the 17 million satellite radio customers, the Justice Department concluded that satellite radio was a small slice of a larger market that included radio and other music delivery services such as Apple iPods and online entertainment.⁶³

Even if a merger or combination is determined to be presumptively illegal on the basis of market shares, the defendants may still show that the transaction is not likely to decrease competition. For example, if there are no barriers to entry in the relevant market, any transitory increase in concentration will be quickly eroded by the entry of new competitors into the market. If one of the combined firms is failing, the proposed transaction may be the only alternative to that failure. In either of these cases, Section 7 liability can be avoided.

Vertical Mergers

A *vertical merger* is the acquisition by one company of another company at a higher or lower level in the chain of production and distribution. For example, the merger of an airplane manufacturer and an airplane-engine manufacturer would be a vertical merger. In vertical merger cases, courts tend to focus on whether the merger has excluded competitors from a significant sector of the market. For example, Section 7 was held to be violated when competing suppliers were denied access to approximately 25 percent of the highly concentrated automobile market. When the market is less concentrated, however, the courts will analyze the market more thoroughly to determine whether the transaction has any anticompetitive effects.

62. 331 F. Supp. 2d 1098 (N.D. Cal. 2004).

63. In July 2008, the satellite radio companies announced that regulators at the Federal Communications Commission (FCC) had agreed to conditionally approve the merger based in part on the companies' agreement to pay \$19.7 million to settle a case alleging violation of FCC compliance issues. If approved by the full vote of the commission, the agreement would clear the way for the merger to proceed. Miriam Marcus, *XM and Sirius Pay to Play*, FORBES.COM, July 24, 2008, available at http://www.forbes.com/2008/07/24/xm-sirius-merger-closer-markets-cx_mlm_0724markets40_print.html.

Conglomerate Mergers

In the 1960s and 1970s, many academics and government prosecutors favored expanding Section 7 prohibitions to cover mergers that were neither horizontal nor vertical in the traditional sense. The effort to prohibit *conglomerate mergers*—that is, the acquisition of a company by another company in a different line of business—has largely been abandoned. Because the merging companies are in different markets, there is no threat to competition.

One theory advanced during this period has endured, although it has rarely been applied. A merger between firms that are not competitors at the time of the acquisition but that might, without the merger, have become competitors may be held to violate Section 7. This is because potential competition is useful in keeping prices at competitive levels. When prices rise above competitive levels, potential competitors will have an incentive to enter the market and charge competitive prices. When there is no such potential entrant into the market, there is no pressure to keep prices at competitive levels. Monopoly pricing may result.

Consequently, it can be argued that a merger violates Section 7 if a plaintiff proves that (1) the market is highly concentrated; (2) one of the merging firms is an actual, substantial competitor in the market and the other is one of a small number of firms that might have entered the market; (3) entry of the latter firm would be reasonably likely to have procompetitive effects; and (4) without the merger, entry by the latter firm was likely. Some attorneys argue that a merger does not have to eliminate an actual potential entrant in order to violate Section 7. Under this theory, it is sufficient if the merger eliminates a perceived potential entrant.

► ETHICAL CONSIDERATION

False disparaging statements about a rival may rise to the level of an antitrust violation only when they have significant and enduring anticompetitive effects.^a Is it ethical to make such statements before they rise to the level of an antitrust violation? Is it ethical to threaten antitrust litigation to quiet a competitor's accurate but disparaging remarks about one's products?

a. Am. Prof'l Testing Serv., Inc. v. Harcourt Brace Jovanovich Legal & Prof'l Publ'g, Inc., 108 F.3d 1147 (9th Cir. 1997).

and issue interpretive rulings, general statements of policy, trade regulation rules, and guidelines defining unfair or deceptive practices. It can also issue cease-and-desist orders against violators, which can be appealed to a federal court.

ANTITRUST ENFORCEMENT

Federal antitrust laws provide for both government and private lawsuits. The two federal agencies responsible for enforcing U.S. antitrust laws are the Justice Department, through its Antitrust Division, and the FTC.

CRIMINAL VIOLATIONS

Violations of the Sherman Act may be prosecuted by the Justice Department as felonies. The FTC routinely refers possible criminal violations of the antitrust laws to the Justice Department. Corporations can be fined up to \$10 million for each violation, and the fines can be increased under other statutes to the greater of twice the gain to the competitors or twice the loss to the victims. Individuals can be fined up to \$350,000 for each violation and imprisoned for up to three years. As a practical matter, however, criminal prosecution has been limited to violators of Section 1 who participate in bid rigging or price-fixing agreements between horizontal competitors.

CIVIL SUITS

The federal government may also bring civil actions to enforce the antitrust laws. The Justice Department enforces the Sherman and Clayton Acts through civil suits in the federal courts. The FTC enforces the Clayton Act and the FTC Act provisions on “unfair methods of competition” (but not the Sherman Act), primarily through administrative proceedings. The FTC also enforces provisions in the FTC Act that protect consumers against unfair or deceptive

UNFAIR METHODS OF COMPETITION: SECTION 5 OF THE FEDERAL TRADE COMMISSION ACT

Section 5 of the Federal Trade Commission Act (FTC Act) is broader than the other antitrust laws. It provides that “unfair methods of competition in or affecting commerce and unfair or deceptive acts or practices in or affecting commerce, are hereby declared unlawful.” Congress did not define these terms; instead, it empowered the Federal Trade Commission, an independent administrative agency, to determine what practices violate Section 5 so that it can be adapted to changing business practices.

The FTC has the exclusive power to enforce the FTC Act. It can conduct investigations of suspected antitrust violations

acts or practices (discussed further in Chapter 18). Pursuant to a liaison agreement, the Justice Department refers all civil Robinson–Patman Act matters to the FTC for action. Although enforcement of the Robinson–Patman Act is a low priority of the FTC,⁶⁴ private enforcement through civil litigation continues.

Private plaintiffs (sometimes called private attorneys general) are entitled to recover three times the damages they have sustained as a result of violations of the Sherman Act or the Clayton Act. (Enforcement of the FTC Act is reserved to the FTC.) The U.S. government can also sue for treble damages to recover for injury to its business or property resulting from an antitrust violation. These private actions can provide a powerful tool to fight anticompetitive conduct. For example, in April 2004, Microsoft agreed to pay \$1.6 billion to settle a private antitrust suit and resolve intellectual property claims brought by Sun Microsystems, a longtime rival. In 2005, Microsoft agreed to pay RealNetworks \$761 million in cash and services to settle an antitrust lawsuit. With the RealNetworks agreement, Microsoft will have paid about \$4.6 billion to resolve antitrust lawsuits brought by seven companies, including Sun, Time Warner Inc. (on behalf of America Online), IBM, Novell, Gateway, and Burst.com.⁶⁵

Finally, state attorneys general may bring civil actions for injuries sustained by residents in their respective states. In these *parens patriae actions*, treble damages may also be recovered.

AMNESTY

In an effort to promote self-policing and self-reporting, the Justice Department will provide amnesty to offenders who believe they may have been involved in criminal antitrust violations and who cooperate with the Antitrust Division. The necessity of providing incentives to cooperate is particularly compelling in price-fixing cases given the nature of cartels: “Because cartel activities are hatched and carried out in secret, obtaining the cooperation of insiders is the best, and often the only way to crack a cartel.”⁶⁶ The Justice

-
- 64. In 1984, the FTC declared that the Robinson–Patman Act was protectionist legislation that has been costly to the consumer because its underlying goal is to protect individual competitors rather than competition in general. Since then the FTC has initiated only two Robinson–Patman enforcement actions. Irving Scher, *Corporations Should Keep in Mind the Threat of Private Litigation When Ensuring Robinson–Patman Act Compliance*, CORP. COUNS. WKLY., Jan. 16, 2002, at 24.
 - 65. Jonathan Kim, *RealNetworks, Microsoft Settle Suit*, WASH. POST, Oct. 12, 2005, available at <http://www.washingtonpost.com/wp-dyn/content/article/2005/10/11/AR2005101100661.html>.
 - 66. R. Hewitt Pate, International Anti-Cartel Enforcement, Address at the 2004 ICN Cartels Workshop, Sydney Australia (Nov. 21, 2004), at 5–6, available at <http://www.usdoj.gov/atr/public/speeches/206428.pdf>.

Department imposes six conditions for Type A amnesty from criminal prosecution:

- 1. The Antitrust Division of the U.S. Department of Justice has not yet received information from any other source about the conspiracy.
- 2. The applicant takes prompt and effective action to terminate its involvement in the illegal activity upon its discovery of the conspiracy.
- 3. The applicant reports the wrongdoing with candor and completeness and provides full, continuing, and complete cooperation throughout the investigation.
- 4. The applicant's confession is truly a corporate act as opposed to isolated confessions of individual executives or officials.
- 5. The applicant makes restitution to the injured parties.
- 6. The applicant did not coerce another party to participate in the illegal activity and was not the leader or originator of the illegal activity.⁶⁷

Type B amnesty may be available, at the discretion of the Department of Justice, even after the investigation is under way if (1) the applicant is the first to qualify for amnesty with respect to the illegal activity; (2) the Antitrust Division does not yet have evidence against the applicant that is likely to result in a sustainable conviction; (3) the applicant reports the illegal activity with candor and completeness and provides full, continuing, and complete cooperation that advances the Division's investigations; and (4) granting amnesty would not be unfair to others, considering the nature of the illegal activity, the applicant's role in it, and the time when the applicant came forward.⁶⁸ Under either type, the Justice Department may bring criminal charges if the company or its agents fail to fulfill the conditions.⁶⁹ In such a proceeding, the defendants may use the amnesty agreement as a defense and show that the terms were not violated.

ENFORCEMENT OF SECTION 7 AND THE HART–SCOTT–RODINO ANTITRUST IMPROVEMENTS ACT

In the event of a violation of Section 7 of the Clayton Act, the Justice Department, through the courts, and the FTC, through its own administrative proceedings, may seek

-
- 67. U.S. Dep't of Justice, *Corporate Leniency Policy*, Aug. 10, 1993, available at <http://www.usdoj.gov/atr/public/guidelines/0091.htm> (last visited Aug. 22, 2008).
 - 68. *Id.*
 - 69. Stolt-Nielsen, S.A. v. United States, 442 F.3d 177 (3d Cir. 2006).

(1) divestiture of acquired stock or assets; (2) sale of particular subsidiaries, divisions, or lines of business; (3) compulsory sale of needed materials to a divested firm; (4) compulsory sharing of technology; or (5) temporary restrictions upon the defendant's own output or conduct. Justice Department or FTC action can delay, and perhaps unwind, a corporate merger or acquisition.

For example, in April 2007, a district court judge dismissed the FTC's request to temporarily block Whole Foods Market's \$565 million purchase of rival Wild Oats Market. The FTC argued that the proposed transaction would reduce competition in the market for "premium, natural, and organic supermarkets," but the district court concluded that the relevant market was the wider supermarket industry, which enabled the parties to close their transaction in August 2007. Thereafter, Whole Foods began the process of integrating the companies, including closing a number of former Wild Oats stores, rebranding several other Wild Oats stores as Whole Foods stores, and disposing of some of the other Wild Oats assets. Although the FTC typically does not appeal when it fails to secure a preliminary injunction, in this case it appealed the district court's decision, and in July 2008, the U.S. Court of Appeals for the District of Columbia Circuit found that the district court had applied the wrong test in defining the relevant market and had underestimated the FTC's likelihood of success. As a result, the appellate court reversed the district court's denial of the preliminary injunction and remanded the case to the district court, where the parties face the possibility that the court could impose some form of injunctive relief even though the deal closed almost a year earlier.⁷⁰

Private parties, such as competitors of the merging firms, may also bring actions for injunctive relief. Recently, however, some courts have come to look with disfavor upon such actions, fearing that they might halt mergers that would actually intensify competition. State attorneys general may enforce Section 7, and they have begun to do so with increasing frequency.

As mentioned earlier, the Hart–Scott–Rodino Antitrust Improvements Act (HSR)⁷¹ requires a premerger notification to be filed with the Justice Department and FTC under certain conditions. Item 4(c) of the HSR report form requires the reporting party to submit the following, as an exhibit to the filing:

[All] studies, surveys, analyses and reports which were prepared by or for any officer(s) or director(s) (or, in the case of unincorporated entities, individuals

exercising similar functions) for the purpose of evaluating or analyzing the acquisition with respect to market shares, competition, competitors, markets, potential for sales growth or expansion into product or geographic markets, and indicate (if not contained in the document itself) the date of preparation and the name and title of each individual who prepared the document.

The typical offering memorandum (whether prepared by investment advisers or in-house) and such documents as board books, slide presentations, and memos to senior managers or board members about a potential acquisition fall within the 4(c) definition and generally must be included in the HSR filing.

In 1999, the FTC filed an enforcement action against Blackstone Capital Partners, and one of Blackstone's partners who signed the HSR filing on behalf of Blackstone, for violating Item 4(c) by failing to include a document that should have been an exhibit to the HSR filing. Blackstone was required to pay \$2.785 million in civil penalties, and the individual partner was required to pay \$50,000, to settle the FTC suit. This was the first time in the history of the HSR premerger reporting program that the FTC named an individual in a civil penalty action for violation of the HSR rules. According to the FTC, the case was filed to emphasize the importance the FTC places on rigorous compliance with the mandatory disclosure requirements of the HSR report, especially the requirement for so-called 4(c) documents.⁷²

In December 2001, the FTC announced a proposed settlement with Hearst Corporation, under which Hearst agreed to divest the Medi-Span integratable drug information database business, which Hearst had acquired as part of its acquisition of J.B. Laughery, Inc. The order also required Hearst to disgorge \$19 million of profits obtained as a result of the acquisition to injured customers as part of the settlement of a private class-action suit alleging unlawful overcharges by Hearst. The FTC had alleged that Hearst illegally failed to include several high-level corporate documents prepared to evaluate the acquisition of Medi-Span and its competitive effects in violation of Item 4(c). This case marked the first time that the FTC sought either divestiture or disgorgement of profits in a federal court action for a consummated merger. In its statement, the FTC noted that while "the Commission should seek disgorgement as a remedy in competition cases only in exceptional circumstances,

70. FTC v. Whole Foods Mkt., 533 F. 3d 869 (D.C. Cir. 2008).

71. 15 U.S.C. § 18a.

72. Press Release, FTC, *Merchant Banking Firm, Partner Settle FTC Charges for Incomplete Premerger Report* (Mar. 30, 1999), available at <http://www.ftc.gov/opa/1999/03/blackst.htm>.

Hearst's conduct was sufficiently egregious to justify the extraordinary remedy of disgorgement.”⁷³

The settlements in the *Blackstone* and *Hearst* cases highlight the importance of ensuring that the HSR filings are accurate in all respects and include all required documents. The best way to deal with the 4(c) issue is for companies to limit the creation of such documents.

ANTITRUST INJURY

To recover damages, a plaintiff must establish that it sustained an *antitrust injury*, that is, a loss due to a competition-reducing aspect or effect of the defendant's violation of the antitrust laws. A plaintiff may not recover under the antitrust laws for losses that resulted from competition as such.

In 1990, the Supreme Court considered whether resale price maintenance (RPM) gave rise to an antitrust injury in the absence of predatory pricing. USA Petroleum, an independent gasoline retailer, claimed that Atlantic Richfield Company (ARCO), an integrated oil company, conspired with retail service stations selling ARCO-brand gasoline to fix prices at below-market levels. USA Petroleum argued that this was an illegal maximum RPM scheme whereby the competition that would otherwise exist among ARCO-brand dealers was eliminated by agreement. As a result, the retail price of ARCO-brand gasoline was maintained at artificially low and uncompetitive levels. This allegedly drove many independents in California out of business.

The U.S. Supreme Court held that USA Petroleum could not recover damages for ARCO's RPM because there was no showing of predatory pricing, that is, pricing below cost designed to drive competitors out of the market.⁷⁴ The Court reasoned that when the prices under an RPM program are set at nonpredatory levels, there is generally no anticompetitive effect, even though such pricing may reduce the market share of competitors or the price that they may charge consumers. Without doubt, those competitors are injured as a result of the practice, but there is nothing anticompetitive about that in and of itself. Indeed, such a result benefits the consumer. In such a case, the Court held, the competitor may not recover damages under the antitrust laws. (The *ARCO* case was decided seven years before the Court's decision

in *State Oil Co. v. Khan*⁷⁵ eliminating *per se* treatment of maximum RPM and in many ways laid the groundwork for that decision.)

LIMITATIONS ON ANTITRUST ENFORCEMENT

The courts have limited the private enforcement rights of individual citizens and states by invoking the doctrine of standing. They have also limited the liability of state governments by applying state-action exemptions.

STANDING

To prevent private parties from jumping on the treble-damages bandwagon, the U.S. Supreme Court requires that a private plaintiff have *standing* to sue; that is, the plaintiff must have suffered an injury from the defendant's violation of the antitrust law. For example, a consumer buying goods from an innocent middleman does not have standing to recover from the manufacturer who was a member of a price-fixing cartel.

STATE-ACTION EXEMPTION

More than sixty years ago, the Supreme Court declared that the antitrust laws apply to anticompetitive actions by private parties, not to anticompetitive actions by state legislatures or administrative bodies. Thus, state action is exempt as long as (1) there is a clear state purpose to displace competition and (2) the state provides adequate public supervision. For example, the California legislature passed a law designed to limit the production, and consequently raise the price, of raisins. Given that California produced nearly one-half of the world's raisins, the effect of this statute on interstate commerce was substantial. Nevertheless, the Supreme Court enunciated and applied the state-action exemption in this case.⁷⁶

The courts have refused to extend the exemption to local municipalities except in certain limited circumstances. The Local Government Antitrust Act of 1984, enacted to allay municipalities' fears of treble damages, eliminated local governments' liability for antitrust damages but preserved equitable remedies, such as injunctions. The act extended immunity from damages to all officials or employees acting in an official capacity.

INTERNATIONAL SNAPSHOT

After ten years of drafting, China's Anti-Monopoly Law became effective on August 1, 2008. Loosely based on European and U.S. antitrust laws, the law includes four substantive sections that (1) prohibit certain types of agreements unless they fall within exemptions set forth in the law, (2) prohibit behavior classified as abuse of dominant market position, (3) establish a broad scheme for reviewing mergers (as well as a procedure for national security review of transactions),^a and (4) prohibit abuse of government administrative powers for compliance. The law also contains certain miscellaneous provisions, including a provision that prohibits undefined "abuses" of intellectual property rights. Although the law is largely neutral on its face, it includes some unique Chinese considerations, in particular by evidencing China's socialist heritage. For example, the declared purpose of the law is to protect the public interest and to promote the socialist market economy. The law recognizes that many key industries are controlled by large state-owned enterprises and prohibits these enterprises from abusing their dominant positions or legal monopolies to the detriment of consumers. The law also refers to trade associations, which often control the behavior of Chinese industries, by prohibiting such associations from organizing business operations to engage in monopolistic conduct. At the same time, however, the law provides that trade associations "shall strengthen self-discipline of the industries, provide guidance for enterprises in their industries to compete lawfully, and protect the order of market competition."^b A number of aspects of the law remain to be clarified by implementing regulations or guidelines and by actual enforcement experience in the administrative agencies and courts. The American Chamber of Commerce and the EU Chamber of Commerce in China welcomed the law, but the American Chamber of Commerce noted that it hoped that China would clarify its rules against anticompetitive conduct, its procedures for reviewing deals, its enforcement mechanisms, and the way it defines abuses of intellectual property rights.^c

THE EXTRATERRITORIAL REACH OF U.S. ANTITRUST LAW

Sections 1 and 2 of the Sherman Act expressly apply to "trade or commerce . . . with foreign nations," so they clearly have extraterritorial reach. Because Sections 2 and 3 of the Clayton Act apply to price discrimination, tying arrangements, and exclusive-dealing contracts for commodities sold "for use, consumption, or resale within the United States," they have no extraterritorial reach.

In 1995, the Antitrust Division of the Justice Department and the FTC published a new set of International Guidelines.⁷⁷ They state that, in enforcing the antitrust laws, the agencies will take account of "international comity," defined as "respect among co-equal sovereign nations [that] plays a role in determining the recognition which one nation allows within its territory to the legislative, executive, or judicial acts of another nation." (The comity doctrine is discussed further in Chapter 25.) Section 3 of the guidelines lists the following factors that the agencies will consider: the significance to the violation of conduct within the United States versus conduct outside the United States; the nationality of the parties involved; the presence or absence of an intent to affect U.S. consumers, markets, or exporters; the significance and foreseeability of the effects on the United States versus the effects abroad; the existence of reasonable expectations that would be furthered or defeated by the action; the degree of conflict with foreign law and economic policies; the extent to which the enforcement actions of another country may be affected; and the effectiveness of foreign enforcement versus U.S. enforcement.

To avoid disputes with foreign governments, the U.S. courts apply the *sovereign immunity* doctrine. (This doctrine is discussed further in Chapter 25.) Much litigation turns on whether a foreign firm's anticompetitive activity was directed by the government or was merely tolerated. If the foreign government tolerates but does not require the anticompetitive acts, the U.S. antitrust laws apply.

The basic U.S. rule for evaluating conduct affecting U.S. imports (where the anticompetitive conduct occurs offshore, but the adverse impact is felt in the United States) is the purpose and effects test. The U.S. Supreme Court has held that the Sherman Act will apply to conduct by foreign partners in a foreign nation when (1) the intent of the parties is to affect commerce within the United States and (2) their conduct actually affects commerce in the United States. Defendants

77. FTC & U.S. Dep't of Justice, *Antitrust Enforcement Guidelines for International Operations*, Apr. 1995, available at <http://www.usdoj.gov/atr/public/guidelines/internat.htm/>.

cannot defend such conduct by arguing that applicable foreign law conflicts with U.S. law unless their compliance with the laws of both countries is impossible.⁷⁸

Most claims alleging that foreign conduct by foreign nationals has violated U.S. antitrust laws have arisen in civil lawsuits. In *United States v. Nippon Paper Industries Co.*,⁷⁹ the U.S. Supreme Court held that conduct by a non-U.S. company outside the United States that has an effect on commerce in the United States could form the basis for a criminal antitrust case.

U.S. antitrust enforcement is less aggressive in dealing with conduct affecting U.S. exports where anticompetitive U.S. domestic conduct affects foreign markets. The Foreign Trade Antitrust Improvement Act of 1982 (FTAIA)⁸⁰ expressly provides that Section 1 of the Sherman Act does not apply to conduct involving trade or commerce (other than import trade or commerce) with foreign nations unless:

- (1) such conduct has a direct, substantial, and reasonably foreseeable effect: (A) on trade or commerce which is not trade or commerce with foreign nations, or on import trade or import commerce with foreign nations; or (B) on export trade or export commerce with foreign nations, of a person engaged in such trade or commerce in the United States; and (2) such effect gives rise to a claim under the provisions of [the Sherman Act], other than this section.⁸¹

The language of the FTAIA that is critical to coverage of U.S. exports is Subsection 1(b), which provides that anti-

trust conduct (whether by U.S. or foreign firms and whether occurring in the United States or elsewhere) can be regulated under the Sherman or FTC Act if it has a “direct, substantial and reasonably foreseeable effect of restraining U.S. exports.”

Section 4 of the Export Trading Act (also known as the Webb–Pomerene Export Act)⁸² exempts conduct affecting the export of goods by an association of U.S.-based firms that would otherwise violate the Sherman Act if the conduct does not (1) have an anticompetitive effect in the United States, (2) injure domestic competitors of the association members, or (3) “artificially or intentionally enhance or depress prices within” the United States. To gain and maintain this exemption, the association must file its articles of agreement and annual reports with the FTC.

Many countries do not accept treble damages as a remedy. For example, the United Kingdom does not allow any recovery in excess of single damages. Suppose a U.S. court awards a U.S. corporation (USCO) \$15 million in damages, after trebling, in a suit against a U.K. corporation (UKCO). When USCO attempts to collect \$15 million of UKCO’s assets, the U.K. court will treat two-thirds of the \$15 million award, or \$10 million, as an illegal treble-damages award. Thus, USCO will be able to recover only \$5 million in the U.K. court. Even when a U.S. court finds a foreign corporation in violation of the antitrust laws, any award of damages is meaningless without foreign enforcement of the award, unless the foreign corporation has assets in the United States that can be attached to satisfy the judgment.

In the following case, the U.S. Supreme Court considered whether foreign plaintiffs who suffered an antitrust injury as a result of conduct that occurred outside the United States should be entitled to sue the defendants in U.S. courts.

A CASE IN POINT

SUMMARY

CASE 17.5

F. HOFFMAN-LAROCHE LTD. V. EMPAGRAN

SUPREME COURT OF THE
UNITED STATES
542 U.S. 155 (2004).

FACTS The plaintiffs, representing U.S. and foreign purchasers of vitamins, filed a class-action lawsuit alleging that the defendants, U.S. and foreign vitamin manufacturers and distributors, had engaged in a price-fixing conspiracy that had raised the price of vitamin products to customers. The defendants moved to dismiss the suit as to the five foreign vitamin distributors located in Ukraine, Australia, Ecuador, and Panama (the “foreign plaintiffs”), each of which bought vitamins from the defendants for delivery outside the United States. The foreign plaintiffs did not assert that they purchased any vitamins in the United States or in transactions in U.S. commerce.

The district court dismissed the foreign plaintiffs’ claims, and thereafter the domestic purchasers transferred their claims to another pending lawsuit and did not take part in the appeal of this case. The U.S. Court of Appeals for the District of Columbia Circuit reversed. The appellate court concluded that the general exclusionary rule of the Foreign Trade Antitrust Improvements Act of 1982 (FTAIA), which excludes from the Sherman Act much anticompetitive conduct that causes

CONTINUED

only foreign injury, applied, but that its domestic-injury exception also applied. The court read the foreign plaintiffs' complaint to allege that the vitamin manufacturers' price-fixing conspiracy (1) had "a discrete, substantial, and reasonably foreseeable effect" on ordinary domestic trade or commerce in that it brought about higher domestic vitamin prices; and (2) this effect gave rise to a Sherman Act claim. The court assumed that the foreign effect (higher prices in Ukraine, Panama, Australia, and Ecuador) was independent of the domestic effect, but it concluded that this lack of connection did not matter in light of the FTAIA's language and legislative history, and the policy goal of deterring harmful price-fixing activity.

ISSUE PRESENTED May foreign plaintiffs who suffered an antitrust injury as a result of conduct that occurred outside the United States sue the defendants in U.S. courts?

SUMMARY OF OPINION The Court began its analysis by noting that the FTAIA seeks to make clear that the Sherman Act does not prevent American exporters and firms doing business abroad from entering into business arrangements, however anticompetitive, as long as those arrangements adversely affect only foreign markets. It does so by removing export activities and other commercial activities that take place abroad from the Sherman Act's reach, unless those activities adversely affect domestic commerce, imports to the United States, or exporting activities of one engaged in such activities within the United States.

The Court noted that it ordinarily construes ambiguous statutes to avoid unreasonable interference with the sovereign authority of other nations, although "[n]o one denies that America's antitrust laws, when applied to foreign conduct, can interfere with a foreign nation's ability independently to regulate its own commercial affairs." However, the Court found it was unreasonable to apply these laws to conduct that is significantly foreign "insofar as that conduct causes independent foreign harm and that foreign harm alone gives rise to the plaintiff's claim."

The Court also found that the FTAIA's language and history suggested that Congress designed the FTAIA "to clarify, perhaps to limit, but not to expand in any significant way," the Sherman Act's geographic reach.

RESULT The Court found that the price-fixing conduct in this case significantly and adversely affected both customers outside the United States and customers within the United States, but that the adverse foreign effect was independent of any adverse domestic effect and therefore the FTAIA exception (and thus the Sherman Act) did not apply. The Court vacated the judgment of the appellate court and remanded the case for proceedings consistent with its opinion.

U.S. CONTROL OVER OFFSHORE MERGERS AND OTHER CONSOLIDATIONS

The Justice Department and the FTC have generally required HSR reports for (1) U.S. acquisitions of foreign-based assets or securities and (2) foreign acquisitions of U.S.-based assets or securities that meet the size of persons and size of transaction tests. These requirements are actively enforced. For example, in 1997, the FTC fined German auto-parts maker Mahle GmbH \$5.1 million for failing to alert the agencies to its \$40 million purchase of 40.1 percent of a Brazilian rival's voting stock. The FTC found that it had authority to intervene because both companies had U.S. subsidiaries. In 1996, U.S.-based Sara Lee Corporation paid a fine of \$3.1 million after the FTC challenged its failure to

notify authorities in 1991 of its purchase of \$26 million of assets from a company in the United Kingdom. Sara Lee had counted the deal as two transactions that were each separately exempt from the prenotification requirements as a result of their small size: \$13.1 million for the company's U.S. assets and \$12.7 million for its U.K. assets. The FTC determined that the transactions should have been aggregated and, in addition to imposing the fine, forced Sara Lee to sell one of the brands it had acquired from the U.K. company and another brand it had acquired previously.⁸³

In April 2002, certain amendments to the Hart–Scott–Rodino Act became effective that relaxed the premerger

83. John R. Wilke & Bryan Gruley, *Fines Grow for Evading Antitrust Review*, WALL ST. J., Feb. 28, 1997, at A2.

filings requirements for foreign acquisitions by expanding the exemptions available to buyers of foreign assets and securities. However, these amendments also extended the scope of the Act to include some acquisitions of foreign assets by foreign companies for the first time, eliminating what had previously been an absolute exemption. Under the amendments, no HSR notification is required (1) if a U.S. or foreign person acquires foreign assets, unless those assets generated sales in or into the United States in excess of \$50 million during the most recent fiscal year; (2) if a U.S. person acquires voting securities of a foreign issuer unless the issuer either (a) holds assets in the United States with an aggregate value in excess of \$50 million or (b) made aggregate sales in or into the United States in excess of \$50 million during the most recent fiscal year; or (3) if a foreign person acquires voting securities of a foreign issuer unless (a) the sale confers control of the issuer to the buyer and (b) the issuer

either (i) holds assets in the United States with an aggregate value in excess of \$50 million or (ii) made aggregate sales in or into the United States in excess of \$50 million during the most recent fiscal year. Although the absolute exemption for foreign acquisitions of foreign assets has been eliminated, the amendments further provide that these transactions are still exempt if the size of the transaction is less than \$200 million and (1) the aggregate sales of the acquirer and acquired person in or into the United States are less than \$110 million, (2) the aggregate assets of the acquirer and acquired person located in the United States are less than \$110 million, and (3) the size of persons test is not exceeded. This exemption protects small acquisitions by foreign buyers of foreign persons doing business with the United States.⁸⁴

Antitrust Laws in the European Union

In the European Union, the principal rules of competition law are set forth in Articles 81 and 82 of the Treaty of Amsterdam and the Merger Control Regulation.⁸⁵ Firms doing business in the EU must also comply with the various antitrust laws of member nations. However, to the extent EU law applies and conflicts with the laws of a member nation, EU law will prevail.

Article 81, which aims at conduct similar to that addressed in Section 1 of the Sherman Act ("concerted practices which have the object or effect of preventing, restraining or distorting competition with the Common Market"), includes a nonexclusive list of prohibited activities, which include price-fixing, output restrictions, market allocations, discriminatory practices, and tying arrangements. However, the European Commission has issued a number of "block" or group exemptions, which exempt whole categories of agreements. Even if a block exemption is not available, individual exemptions can be granted for specific agreements although the process for obtaining them is long and complex. Exemptions are binding on the EU, as well as on national authorities and the courts of member nations.

One of the major differences between U.S. and EU competition laws is the EU's approach to vertical territorial restraints. Although the EU generally prohibits horizontal agreements between competitors in the same way as U.S. antitrust laws, the EU takes a stricter view of vertical arrangements because of their tendency to impede continent-wide market integration. As a result, while U.S. manufacturers are free to appoint exclusive distributors in each state, similar exclusive arrangements are suspect in the EU unless made pursuant to applicable block exemptions.

Article 82, which prohibits abuse of an entity's dominant position, is in some ways stricter than Section 2 of the Sherman Act, because the definition of the relevant market is narrower and the degree of market power that makes a company dominant is less. The concept of what constitutes "abuse" is also broader than the U.S. concept of "monopolization." Unlike the broad language in Section 2 of the Sherman Act, Article 86 lists four types of conduct that constitute abuse of dominant position: imposing unfair pricing, limiting production, employing discriminatory trade practices, and imposing a tying arrangement.⁸⁶

85. See *Rules of Application and Procedure for Articles 81 and 82 of the EC Treaty*, updated July 7, 2005, available at <http://europa.eu/scadplus/leg/en/lvb/l26042.htm>.

86. MARK R. SANDSTROM & DAVID N. GOLDSWIEIG, NEGOTIATING AND STRUCTURING INTERNATIONAL COMMERCIAL TRANSACTIONS 421 (2003).

The question of what constitutes a dominant position is complex and depends on a number of factors, such as the firm's market share in the relevant market, the competitive pressures it faces, its ability to control price, and barriers to entry to its market.

Although EU competition law shares the U.S. antitrust goal of preventing abuse of market power, there are substantive differences between the two laws. EU law is concerned with the effects of anticompetitive actions on competitors as well as consumers, whereas U.S. law focuses primarily on consumers. There are also material differences in enforcement. The European Commission has the primary responsibility for enforcing EU competition laws. Unlike U.S. law, EU law does not include a private right of action,⁸⁷ there is no criminal enforcement authority, and treble damages are not available.

Extraterritorial Reach of EU Antitrust Law

EU competition law has an international component similar to the U.S. law announced in *Hartford Fire Insurance Co. v. California*.⁸⁸ To date, antitrust enforcement in the EU has been predominantly government initiated, and private enforcement has been very limited, so the problems associated with U.S. private enforcement do not arise in the EU. If U.S. or other firms engage in conduct outside the EU that, had it occurred within the EU, would have violated the antitrust laws of the Treaty of Amsterdam, and that conduct has the purpose and effect of distorting competition within the EU, then the conduct violates the Treaty, and those provisions are enforceable against the violators, whether foreign or domestic. On the export side (that is, can EU antitrust laws be used to protect U.S. markets?), there is no EU legislation that is equivalent to the Webb-Pomerene Export Act, but the language of the Treaty of Amsterdam does not appear to put EU export cartels in jeopardy unless they have impacts within the EU.

The EU and its predecessors have enforced its laws against U.S. companies doing business in Europe for many years. For example, in 1980, the European Commission opened a proceeding against IBM, the world's largest computer manufacturer. The Commission claimed that IBM had abused its dominant position in the supply of two key products—the central processing unit (CPU) and

87. Although EU competition law does not include a private right of action, many member states have a private right of action for violation of their local competition laws. Elizabeth Morony & Ingrid Cope, *Private Antitrust Remedies: Latest Developments*, GLOBAL COUNS. (Mar. 2003), at 32.

88. 509 U.S. 764 (1993).

the operating system—for its most powerful range of computers, System/370, in an effort to control the markets for the supply of all products compatible with System/370. The alleged abuses included (1) failing to supply other manufacturers in sufficient time with the technical interface information needed to permit competitive products to be used with System/370, (2) not offering System/370 CPUs without main memory included in the price, (3) not offering System/370 CPUs without the basic software included in the price, and (4) refusing to supply certain software installation services to users of non-IBM CPUs.

In 1984, IBM agreed to offer its System/370 CPUs either without main memory or with only such capacity as was strictly required for testing and to disclose, in a timely manner, sufficient interface information to enable competitors to attach both their hardware and software products to System/370. IBM had previously advised the European Commission that it had taken steps to make installation services available to all users of its software and was in the course of unbundling all software.⁸⁹

More recently, in 2007 the EU issued a "statement of objections" alleging that Intel violated EU law "with the aim of excluding its main rival, AMD," from the market for the widely used x86 computer chip. The charges allege three types of antitrust violations: (1) offering substantial rebates to computer makers if they agreed to obtain most of their CPU chips from Intel, (2) making payments to induce computer makers to delay or cancel the launch of products that used AMD chips, and (3) providing strategic customers with below-cost CPU chips in an attempt to outbid AMD. Intel faces fines of up to 10 percent of its total annual sales, which were \$35.4 billion in 2006, if the EU prevails.⁹⁰ The EU case is only one of a series of global investigations into Intel's business practices. In March 2005, Japan's Fair Trade Commission found that Intel had violated Japan's antimonopoly laws by illegally forcing full or partial exclusivity with five Japanese computer companies, and in July 2008, South Korea's antitrust regulator announced that it would order Intel to pay \$25.4 million for violating its fair trade rules by offering rebates to South Korea computer manufacturers and undercutting AMD.⁹¹ AMD has also sued Intel

in Japan and the United States for antitrust violations, and a U.S. class action filed by Dell stockholders claims Intel illegally paid Dell more than \$1 billion per year to not purchase microprocessors from its competitors.⁹²

EU Control over Offshore Mergers and Other Consolidations

Although Articles 81 and 82 of the Treaty of Amsterdam appear to confer ample authority for the EU to control anticompetitive mergers, for a number of years mergers were not a focus of concern in EU competition law. In late 1989, however, the European Council passed the EC Merger Control Regulation,⁹³ which became effective on September 21, 1990. EU merger control has developed substantially over the past twenty years, both in the volume of cases handled and in the greater substantive rigor with which the reviews are conducted. EU merger analysis is stricter than in the United States because of the EU's greater willingness to consider theories of competitive harm and its greater reliance on input from competitors. In addition, the fact that the EU can prohibit a merger without going to court gives the EU's Merger Task Force power and discretion that exceed that of its U.S. counterparts.

The Merger Control Regulation provides that in determining whether to challenge a merger within its

jurisdiction, the EU must decide whether it is "compatible with the common market." The substantive test applied is whether a concentration will "create or strengthen a dominant position as a result of which effective competition would be significantly impeded in the common market or a substantial part of it." Although the analysis is similar to U.S. law, the outcome can be different. For example, even though the U.S. government had approved General Electric's \$49 billion bid for Honeywell International, the European Commission vetoed the deal in January 2001, on the basis that GE might have been able to drive competitors out of the aerospace market by offering customers a complete package of GE engines, Honeywell avionics, and financing from GE Capital Aviation Services. The EU's decision was criticized in the United States, where regulators are inclined to allow businesses to pursue such synergies.⁹⁴ This was the first all-U.S. merger killed in the EU after having been approved by the U.S. antitrust authorities.

As the global economy becomes more of an economic reality, the antitrust analysis of the relevant market will have to take account of foreign goods produced but not sold in the United States. Another issue that must be resolved in the future is how the antitrust laws will apply to U.S. companies purchasing foreign entities that have potentially valuable national security or technology applications in highly concentrated markets.

THE RESPONSIBLE MANAGER

AVOIDING ANTITRUST VIOLATIONS

Although a manager can never eliminate all possible antitrust violations, implementing a number of steps can help to avoid them. The underlying purpose of the antitrust statutes is to benefit consumers by promoting competition. The economy functions best when firms compete vigorously, but fairly, with one another. In antitrust, however, the line between legal and illegal conduct is often blurry. Consequently, there are few

rules that a manager can give to his or her employees. Rather, the manager must identify the activities or conditions that most often trigger antitrust liability, such as discussions with competitors and activities that may increase concentration in any market that is already highly concentrated.

Discussions among competitors receive the highest degree of antitrust scrutiny. Trade and professional associations are

CONTINUED

particularly vulnerable. If they disseminate information that identifies parties to individual transactions and the prices of even past or current individual transactions, the antitrust laws may be violated. Equally hazardous is the dissemination of information that may result in market division or output restriction. As a general rule, any trade association information concerning prices should be immediately forwarded to in-house or outside counsel to address potential antitrust concerns.

Antitrust scrutiny is also heightened whenever price is discussed, even between manufacturers and retailers. An agreement between a manufacturer and a distributor that sets the minimum price the distributor may charge end consumers will be analyzed under the rule of reason. It may also violate applicable state laws even if it does not violate federal law.

Finally, antitrust scrutiny is heightened where markets are highly concentrated. The fewer the entities that compete in a particular market, the more likely that illegal agreements in restraint of trade among them can be effectuated and that mergers can lead to unlawful monopolies. Consequently, corporations operating in concentrated markets should be particularly cautious. A manager can obtain rough approximations of market concentration from company counsel.

Employees should be encouraged, through an appropriate award system, to inform the manager whenever any of the above "red flags" appear. A manager should not hesitate to seek assistance from counsel in analyzing any activity that might violate the antitrust laws. The manager should also be careful to avoid any situation that could be interpreted as evidence of illegal activity. If a manager attending a trade show, for example, hears competitors discussing price or other terms of sale, the manager should leave the room, preferably in a manner that calls attention to his or her departure, such as by spilling a drink while leaving a group of competitors having drinks at a bar. In the event that a manager learns that his or her company has violated U.S. antitrust laws, the manager should consider the possibility of reporting the violation to the government in exchange for amnesty.

Common sense and education are the keys. Actions that do not seem fair usually are not. Continuing education programs will keep corporate employees aware of potential antitrust problems. A manager should always stress that short-term gains through unethical or illegal behavior are always outweighed by longer-term losses, particularly in the area of antitrust with its treble-damages awards.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

Membership in an SSO Can Be Risky Business

DRAM (dynamic random access memory) is the most common form of computer memory in use today. Another form of memory is known as static random access memory, or SRAM. DRAM is an essential input for various downstream products, including a wide variety of computers, such as personal computers, workstations, and servers, as well as fax machines, printers, digital video recorders, and video game equipment. Rambus was founded in 1990 by two engineers who developed their own proprietary synchronous DRAM (or SDRAM) architecture. On April 18, 1990, Rambus filed its first DRAM-related patent application with the U.S. Patent and Trademark Office (the '898 patent). In March 1992, Rambus broke out portions of its '898 application into ten divisional patent applications. The original '898 application and these ten divisional applications gave rise to numerous other amended, divisional, or continuation patent applications—all technically the "progeny" of the '898

application—and eventually resulted in the issuance of numerous Rambus patents.

The Joint Electron Device Engineering Council (JEDEC) is one of several standard-setting organizations (SSOs) affiliated with the Electronic Industries Alliance (EIA), a trade association representing all segments of the electronics industry. The EIA/JEDEC patent policy required members to disclose patents and patent applications "related to" the standardization work of the committees. During the period from 1992 through 1996, Rambus was a member of JEDEC and attended meetings of the JC-42.3 subcommittee on RAM devices, which was in the process of developing SDRAM standards. In 1993, Rambus disclosed its first issued Rambus DRAM (RDRAM) patent, a divisional application of the '898 application, to JEDEC during a meeting, but it did not disclose any other applications. In June 1996, shortly after the Federal Trade Commission announced

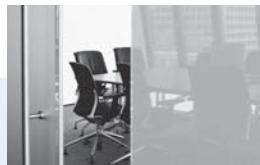

CONTINUED

its consent order in *In re Dell Computer, Inc.* (which involved allegations of anticompetitive unilateral conduct occurring within the context of an industry-wide standard-setting organization), Rambus formally withdrew from the JEDEC and wrote a letter to the council stating its intent to reserve all rights regarding its intellectual property. Rambus attached a list of twenty-three Rambus patents and made a vague reference to additional, unspecified patent applications, but it made no attempt to inform the JEDEC as to how, if at all, the patents or patent applications might relate to the work of the JC-42.3 subcommittee. After leaving the JEDEC, Rambus filed more divisional and continuation applications based on the '898 patent. In late 1999, Rambus began contacting major

DRAM-related technology manufacturers worldwide to assert its patent rights.

In June 2002, the FTC accused Rambus of withholding information—namely, patent applications—that it claimed the company was required to disclose to the JEDEC subcommittee in which Rambus participated during the 1990s. What antitrust laws may have been violated by Rambus? In light of these facts, what are the chances of the FTC prevailing? What relief might the FTC seek? What defenses might be available to Rambus? Was Rambus's conduct ethical? Did it make good business sense?⁹⁵

95. See *Rambus Inc. v. FTC*, 522 F.3d 456 (D.C. Cir. 2008).

INSIDE STORY

AN OPERATING SYSTEM BY ANY OTHER NAME WOULD BROWSE AS SWEETLY

In 1994, the U.S. Department of Justice's Antitrust Division charged Microsoft Corporation, the largest software company in the world, with unlawful monopoly and restraint of trade under Sections 1 and 2 of the Sherman Act. Among other things, the regulators alleged that Microsoft had engaged in anticompetitive marketing practices directed at personal computer (PC) manufacturers that preinstall operating system software on the PCs they produce for retail sale. These practices included charging per-processor royalties, whereby PC manufacturers were offered a discount if they agreed to pay a royalty to Microsoft for each computer processor sold, regardless of whether the unit was shipped with the Microsoft operating system or a competitor's operating system.

The government based its case on the notion of "network economics," a condition in which the value of owning a product rises as other consumers own the same product. Because most PC owners used Microsoft's operating system, the regulators argued, Microsoft could coerce them into buying other products simply by tying the two together. For instance, Microsoft might condition the sale of Windows on the purchase of its word-processing software Word. By tying the products together, Microsoft would force PC users to combine, rather than separate, their choices for operating systems and word processors. As a result, consumers of PCs would end up buying Microsoft's operating system and its word processor even if they would prefer Microsoft's operating system and a non-Microsoft word processor. Of course, consumers could still purchase the non-Microsoft word processor, but the additional purchase price and switching costs would probably deter some.

Microsoft argued, however, that operating systems are dynamic and must respond to consumer demand and technological advances. Microsoft reasoned that although operating systems initially did not include modules for data compression, memory management, file backup, or device driving, these functions were integrated into the operating system over time as consumers began to expect them as standard rather than options.

Meanwhile, the computer world was changing as the worldwide web began to take center stage. In 1994, Microsoft unveiled Internet Explorer (IE) to compete with Netscape Communications Corporation's wildly popular Navigator browser. By 1995 when Microsoft signed a consent decree with the Department of Justice that prohibited it from conditioning the license of its operating system to original equipment manufacturers (OEMs) on their agreement to license other Microsoft products,⁹⁶ Microsoft had already supplied manufacturers with a version of Windows 95 bundled with IE at no additional cost. OEMs were prohibited from disassembling the package. PC operating systems had always served to coordinate a user's access to various sources of information, including internal hard drives, floppy disk drives, random access memory, and CD-ROM drives. With the birth of the Internet, Microsoft reasoned that it was time for operating systems to also provide access to the worldwide web. By this logic, integration of web browsers was the natural next step in operating system evolution.

CONTINUED

96. Microsoft, however, retained the right to develop integrated products.

Within two years, Internet Explorer had garnered more than 40 percent of the web browser market, largely at Netscape's expense. No doubt, IE's rapid success arose in part from Microsoft's bundling of IE with Windows at no additional cost. Its functionality, however, made it a worthy rival to Navigator.

In October 1997, the Justice Department petitioned the U.S. District Court for the District of Columbia to find Microsoft in contempt of court for violating the 1995 consent decree and to fine the company \$1 million per day until it complied by unbundling Windows and IE. The case was assigned to Judge Thomas Penfield Jackson, a pro-business conservative Republican appointed by President Reagan. Although Judge Jackson did not find Microsoft in contempt, he issued a preliminary injunction prohibiting Microsoft from further conditioning its licensing of PC operating system software (including Windows 95 or any successor version) on the licensing of any Microsoft browser pending development of the record.

In May 1998, the U.S. Court of Appeals for the District of Columbia stayed the injunction insofar as it applied to Windows 98 (which further integrated IE into the operating system).⁹⁷ The court held that the United States had presented no evidence suggesting Windows 98 was not an integrated product and thus exempt from the prohibitions of the consent decree. The court ruled that, at least for purposes of deciding whether products were integrated within the meaning of the consent decree, the test was whether the integrated product provided functionalities and advantages that consumers could not themselves achieve by buying both products and using them together. The court also questioned the competency of judges to dictate what features should be included in an operating system.

Faced with the imminent launch of Windows 98 and perhaps believing that it was now or never, the Justice Department filed a wide-ranging complaint against Microsoft in May 1998. The attorneys general of twenty states filed similar suits the same day. The Justice Department alleged that Microsoft's restrictive agreements with Internet and online service providers (such as America Online) and Internet content providers, whereby those companies agreed not to license, distribute, or promote non-Microsoft products (or to do so only on terms that materially disadvantaged such products), and Microsoft's agreements with OEMs restricting modification or customization of the PC boot-up sequence and screen, unreasonably restricted competition in violation of Section 1. The complaint also alleged that Microsoft had engaged in a series of anticompetitive practices (including tying and unreasonably exclusionary agreements) with the purpose and effect of maintaining its PC operating system monopoly and extending that monopoly to the Internet browser market in violation of Section 2. The case was assigned to Judge Jackson.

97. Microsoft Corp. v. United States, 147 F.3d 935 (D.C. Cir. 1998).

In February 1999, after a lengthy trial, the district court issued a 207-page finding of fact that strongly and clearly rejected Microsoft's version of the facts.⁹⁸ The district court entered its conclusions of law in April 2000. The court held that Microsoft had violated Section 1 by tying IE to Windows and had attempted to monopolize the browser market in violation of Section 2, but it rejected the Justice Department's exclusive dealing claim under Section 1 on the basis that Microsoft's agreements for IE did not foreclose enough of the relevant market to constitute a violation.

In June 2000, the district court ordered that Microsoft be split into two companies, with one selling the Windows operating system and the other selling Microsoft's Office suite of word-processing, spreadsheets, and other applications. Microsoft immediately appealed.

After issuing his decision, Judge Jackson agreed to be interviewed, an extremely unusual act by a sitting federal judge. During the interview, he made it clear that Microsoft's lack of credibility undermined its arguments. Quoting the Latin expression "*Falsus in uno, falsus in omnibus,*" which means "Untrue in one thing, untrue in everything," he commented, "I don't subscribe to that as absolutely true. But it does lead one to suspicion. It's a universal human experience. If someone lies to you once, how much else can you credit as the truth?"⁹⁹ The judge also referred to his lack of trust in Microsoft in the written decision explaining his order to break up the company. In its appeal of the district court's decision, Microsoft criticized Judge Jackson's decision to speak to the press about the case and argued that the decision reflected a "profound misunderstanding" of antitrust laws. The company asserted that, contrary to the court's finding, its conduct was procompetitive and helped, rather than harmed, consumers.

In June 2001, the U.S. Court of Appeals for the District of Columbia affirmed in part and reversed in part the district court's judgment that Microsoft had violated Section 2 of the Sherman Act by employing anticompetitive means to maintain a monopoly in the operating system market and reversed the finding that Microsoft had violated Section 2 of the Sherman Act by illegally attempting to monopolize the Internet browser market.¹⁰⁰ Most significantly, the court of appeals vacated the district court's final judgment on remedies and required that

99. John R. Wilke, *For Antitrust Judge, Trust, or Lack of It, Really Was the Issue*, WALL ST. J., June 8, 2000, at A1.

100. The court of appeals also reversed the finding that Microsoft had committed a *per se* violation of Section 1 by unlawfully tying its browser to its operating system and remanded this issue to the trial court for consideration under the rule of reason (the Justice Department subsequently elected not to pursue the tying issue).

the case be assigned to a different trial judge on remand, noting that the judge's actions had "called into question the integrity of the judicial process."¹⁰¹

In November 2001, Microsoft, the Justice Department, and nine of the eighteen states that had joined in the litigation agreed to a settlement. The remaining nine states rejected the settlement and pressed for stiffer penalties in the penalty phase of the litigation, but Judge Colleen Kollar-Kotelly rejected most of the tougher penalties proposed by the states as overbroad and instead relied heavily on the earlier settlement proposal. Key elements of the remedy included the following:

- Microsoft must allow PC makers to add or substitute competitive products to handle popular tasks like web browsing; Microsoft programs will remain on the machine, however, and Microsoft is allowed to offer PC makers discounts if they agree to use all-Microsoft products on their desktop computers.
- There is no restriction on Microsoft's ability to develop and bundle new features into its operating system.
- Microsoft is required to disclose application program interfaces, along with related technical information, which Microsoft Middleware utilizes to interoperate with the Windows platform. In a small concession to the states, Judge Kollar-Kotelly expanded the definition of "Microsoft Middleware" to include server/network computing and interactive television software, although she refused to include handheld devices or web services.
- Microsoft cannot enter into agreements with PC makers, independent service providers, and others to sell only Microsoft products, although Microsoft is allowed to provide financial incentives to them for promoting Microsoft products.
- The plaintiffs are required to appoint a committee to coordinate enforcement of the remedial decree. Plaintiffs may also select a compliance officer who will serve as a high-level Microsoft employee, but retain a significant amount of autonomy and independence from the company.
- Judge Kollar-Kotelly retained jurisdiction over the implementation of the consent decree and asked Microsoft to designate a member of its board of directors to oversee its implementation.

101. United States v. Microsoft Corp., 253 F.3d 34 (D.C. Cir. 2001).

Although the settlement struck by U.S. regulators with Microsoft allowed it to continue to freely bundle new technologies into the operating system in the United States, in 2004 the European Commission ordered Microsoft to offer a version of its Windows operating system with its MediaPlayer software stripped out, in addition to requiring it to license certain of its proprietary tools to its competitors so that their software could communicate more effectively with the Windows operating system. The EU also fined Microsoft more than \$600 million for competing unfairly in the European software market (the EU had never fined a monopolist more than \$75 million before). Microsoft appealed the finding to the European Court of First Instance (CFI), which upheld the Commission's findings, its imposition of the fine, and its order. Experts estimated that Microsoft's total fines, penalties, and costs could reach \$2.777 billion.

In October 2007, Microsoft attempted to close the door on the EU antitrust investigation when it announced that it would not appeal the CFI's decision to the European Court of Justice.¹⁰² Within a year, however, the EU had opened new investigations into Microsoft's practices after receiving complaints that it was competing unfairly in the market for web browsers by using the Internet Explorer software. The EU was also investigating whether Microsoft is making it too hard for its rivals to work with its Office suite applications.¹⁰³

Microsoft's obligations under the agreement, as originally drafted, expired on November 12, 2007. In January 2008, however, Judge Kollar-Kotelly extended the decree until November 2009. She based her decision upon the "extreme and unforeseen delay in the availability of complete, accurate and usable technical documentation" from Microsoft which "prevented the final judgments from achieving their principal objectives." She also stated in her ruling that she might extend the court supervision beyond 2009 depending on the company's compliance: "The door remains open for the court to reassess the need for continued oversight."

102. For a summary of the CFI decision, see generally Constance E. Bagley, *Commission of the European Communities v. Microsoft Corporation* (Yale Sch. of Mgmt. Case No. 07-054, 2007).

QUESTIONS AND CASE PROBLEMS

1. Gerber, Heinz, and Beech-Nut, manufacturers of baby food, account for essentially the entire market in the United States. A number of retail stores filed an antitrust class action against the companies alleging that they violated Section 1 of the Sherman Act by engaging in an unlawful conspiracy to fix prices. The class presented evidence that sales representatives employed by the three companies exchanged price information about their products, including, on occasion, sending each other advance notice of price increases. The class of store owners also introduced evidence of e-mails indicating that the companies were aware of anticipated price increases before they were announced in the market. One memo stated that Heinz would not try to secure a majority base of distribution in a sales area because it had agreed to a “truce” with Gerber. Did the companies violate the antitrust laws? Would you need any additional evidence to make this determination? [*In re Baby Food Antitrust Litigation*, 166 F.3d 112 (3d Cir. 1999).]
2. Since the early 1980s, there have been a number of manufacturers of in-board and stern-drive marine engines for motorboats. Stern-drive engines are used primarily in

recreational powerboats known as runabouts and in cruising boats, which together make up about 40 percent of all recreational powerboats. The manufacturers start with standard automobile engine blocks, “maximize” and equip them with a drive system, and then sell the engines to boat builders for installation in brand-name boats that are sold to dealers. In 1983, Brunswick Corporation had a 75 percent share of the stern-drive engine market. In 1984, Brunswick and several of its competitors began to offer market share discounts to boat builders and dealers. From 1984 to 1994, Brunswick offered a 3 percent discount to boat builders who bought 80 percent of their engines from it; a 2 percent discount for 70 percent of all purchases; and a 1 percent discount for 60 percent. From 1995 to 1997, Brunswick reduced the market share requirements so that the maximum 3 percent discount could be earned by buying 70 percent; 2 percent for 65 percent; and 1 percent for 60 percent. In 1989, Brunswick also offered long-term discounts of an additional 1 to 2 percent to anyone who signed a market share agreement for two or three years. The market share discounts were discontinued in 1997.

In 1986, Brunswick bought two of the largest boat builders based on its hope that the vertical integration would allow it to synergize engine manufacturing and boat building, resulting in a higher quality, less expensive product. From 1986 to 1997, the price of Brunswick's engine increased from \$4,775 to \$4,985, fluctuating both upward and downward in the interim. In 1995, a number of boat builders filed an antitrust action against Brunswick. Did Brunswick's cost discounting and vertical integration violate any antitrust laws? How should Brunswick defend against these charges? [*Concord Boat Corp. v. Brunswick Corp.*, 207 F.3d 1039 (8th Cir. 2000).]

3. U.S. manufacturers want to bring a suit against Japanese manufacturers, alleging a conspiracy to take over the U.S. automobile industry by exporting low-priced products to the United States while keeping the prices artificially high in Japan. The U.S. manufacturers tell you, their attorney, that the Japanese manufacturers have formed an association in which they discuss market conditions in the United States, potential or actual import restrictions, surcharges, and simplification of export procedures, as well as other topics.
 - a. In light of these facts, what are the chances of successfully bringing an antitrust suit against these manufacturers? Assume that there are no conflict-of-law or other procedural problems due to the manufacturers being in another country.
 - b. What if, instead of discussing the topics listed above, the manufacturers discussed the details of individual sales, production, inventories, current price lists, and future price trends?
 - c. What if they discussed average costs, freight rates, and terms of past transactions without identifying buyers or sellers? [*Matsushita Electric Industrial Co. v. Zenith Radio Corp.*, 475 U.S. 574 (1986).]
4. Visa U.S.A., MasterCard, Discover, and American Express (Amex) are the four major network systems in the U.S. payment card industry. Visa and MasterCard are organized as open joint membership associations, owned by numerous banks and other financial institutions ("banks") that are members of the networks; MasterCard is owned by approximately 20,000 member banks, and Visa is owned by approximately 14,000 member banks. Because MasterCard and Visa each allow their members to issue the other's cards, many banks are members of both networks. While the member banks engage in the card business for profit, MasterCard and Visa operate as nonprofit organizations and are largely funded through service and transaction fees paid by their members. Both make a "profit" on those fees, but their business model does not strive to maximize

earnings at the "network" level. Instead, the two organizations' capital surpluses are held as security accounts to pay merchants in the event that a member defaults on a payment obligation. Member banks function as "issuers" or "acquirers" or both. An "issuer" bank issues cards to cardholders and serves as the liaison between the network and the individual cardholder. An "acquirer" bank acquires the card-paid transactions of a merchant and acts as a liaison between the network and those merchants. When a consumer uses a Visa card or a MasterCard to pay for goods or services, the accepting merchant relays the transaction information to the acquirer bank with which it has contracted. The acquirer bank processes and packages that information and transmits it to the network (Visa or MasterCard). The network then relays the transaction information to the cardholder's issuing bank, which approves the transaction if the cardholder has a sufficient credit line. Approval is sent by the issuer to the acquirer, which relays it to the merchant.

American Express and Discover are not joint membership associations; each is a vertically integrated, for-profit entity that combines issuing, acquiring, and network functions. Amex and Discover deal directly with consumers (by issuing cards) and with merchants (by acquiring and processing transactions). When a consumer makes a purchase with an Amex card, for example, the merchant contacts Amex directly, and if the customer has sufficient credit available, Amex approves the sale. Amex then pays the merchant directly while retaining a percentage—usually 2.73 percent.

Competition in the payment card industry takes place at the "network" level, as well as at the "issuing" and "acquiring" levels. At the network level, the four brands compete with each other to establish brand loyalty in favor of Visa, MasterCard, Amex, or Discover. At the issuing level, approximately 20,000 banks that issue Visa and MasterCard cards to customers compete with each other and with Amex and Discover. Unlike the network services market, which has only four major participants, approximately 20,000 entities compete for customers in the issuing market, and no single participant is dominant, although Amex is the largest single card issuer, and Discover is the fifth largest card issuer in the United States, measured by transaction volume. The other large issuers are member banks in the Visa and MasterCard networks.

Beginning in 1995, Amex sought to change its structure by soliciting banks to issue American Express cards. This effort was successful outside the continental United States and abroad, where banks such as Puerto Rico's Banco Popular began issuing Amex-branded cards. In the continental United States, however, Amex was unsuccessful

because of MasterCard and Visa “exclusivity” rules that prohibited their members from issuing American Express or Discover cards. Do these exclusivity rules violate antitrust law? Assuming the answer is yes, what entities could file an antitrust action against Visa and MasterCard? Would the exclusivity rules be analyzed under the *per se* rule or the rule of reason? Assuming that the rule of reason applies, what arguments could Visa and MasterCard make that the rules are procompetitive? What arguments can the plaintiff make that the rules are anticompetitive? [*United States v. Visa U.S.A., Inc.*, 344 F.3d 229 (2d Cir. 2003), cert. denied, 543 U.S. 811 (2004).]

5. Dentsply International, Inc. is one of thirteen manufacturers of artificial teeth for use in dentures and other restorative appliances, which it sells to dental products dealers. The dealers then supply the teeth and various other materials to dental laboratories, which fabricate dentures for sale to dentists. Dentsply enjoys a 75 to 80 percent market share on a revenue basis, has a 67 percent share on a unit basis, and is about fifteen times larger than its next largest competitor. There are hundreds of dealers who compete on the basis of price and service among themselves, as well as with manufacturers that sell directly to laboratories. There are 16,000 dental laboratories that fabricate restorations, of which 7,000 provide dentures. These laboratories also compete with each other on the basis of price and service. When laboratories cannot supply the necessary teeth, dealers may fill orders for walk-ins or use overnight express mail, as does Dentsply.

In 1993, Dentsply adopted Dealer Criterion 6, which provides that in order to effectively promote Dentsply–York products, authorized dealers “may not add further tooth lines to their product offering.” Dentsply operates on a purchase order basis with its distributors and enforces Dealer Criterion 6 by terminating dealers who purchase from manufacturers (other than those “grandfathered” in pursuant to the policy). The U.S. Government alleged that Dentsply had acted unlawfully to maintain a monopoly in violation of Section 2 of the Sherman Act. How would the Government define the relevant market? How would Dentsply define the relevant market? What other arguments might Dentsply assert in its defense? Which party should prevail? [*United States v. Dentsply International, Inc.*, 399 F.3d 181 (3d Cir. 2005), cert. denied, 546 U.S. 1089 (2006).]

6. You are the vice president for marketing at Lucky Liquor, a manufacturer of liquor. During a meeting with your staff, several pricing proposals are made with strong arguments to support each proposal.
- Lucky Liquor should set a minimum price per ounce that the wholesalers can charge.

- Lucky Liquor should set a maximum price per ounce that the wholesalers can charge.
- The wholesalers can charge any price they want within a certain range; if they charge a higher price, they must give the customer a rebate coupon for the differential.
- The wholesalers can charge any price they want, but if they advertise a price that is less than Lucky Liquor’s specified minimum advertised price, the wholesalers are not entitled to receive the marketing funds that Lucky Liquor provides to wholesalers that do not advertise prices that are less than the specified minimum advertised price.

After the meeting, you are considering the pros and cons of each plan so that you can make a recommendation to the president. Although each plan has different marketing advantages, your staff estimates that each will result in approximately the same level of sales. What other factors should you consider before making your recommendation? What are the legal pros and cons of each proposal? What else do you need to know before calculating the legal tradeoffs among the proposals?

7. In many regions, because of the development of the telecommunications industry and the costs of building the necessary infrastructure, regional telephone companies, known as incumbent local exchange carriers (ILECs), have developed. These ILECs own and control the lines necessary for the delivery of telecommunication services. ILECs tend to own the local telephone network as well as the telephone lines—known as the “last-mile”—that connect each individual consumer to the network. Because any company that seeks to connect with users at the end of these last-mile connections must interconnect with the ILEC, the ILEC’s facilities are commonly referred to as “bottleneck” facilities.

linkLine Communications, Inc. and several other Internet service providers (ISPs) who sell DSL access to the Internet to retail customers filed an action against one of these ILECs, SBC California, a subsidiary of SBC Communications, Inc. SBC California, through various related entities (the SBC Entities), sold wholesale DSL access to independent ISPs, as well as retail DSL access to individual consumers. linkLine’s complaint alleged, among other things, that the SBC Entities, acting as a single entity, monopolized and attempted to monopolize the regional DSL market in violation of Section 2 of the Sherman Act. linkLine asserted that the SBC Entities created a price squeeze by charging ISPs a high wholesale price in relation to the price at which defendants were providing retail services. On appeal, the U.S. Court of Appeals for

the Ninth Circuit considered whether the Supreme Court's previous decision in *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko, LLP*¹⁰⁴ barred a plaintiff from claiming a Section 2 violation by virtue of an alleged price squeeze perpetrated by a competitor who also serves as the plaintiff's supplier at the wholesale level, but who has no duty to deal with the plaintiff absent a statutory compulsion. The Ninth Circuit concluded that it did not, found that the SBC Entities' price to the ISPs was too high, and ruled against the SBC Entities on their motion for judgment on the pleadings. The SBC Entities appealed to the U.S. Supreme Court, and the Supreme Court accepted certiorari. What arguments will the SBC Entities make in support of their claim that there is no Section 2 violation? What arguments should linkLine make? Should this type of dispute, in a regulated industry, be covered by antitrust law? Could the SBC Entities violate antitrust law without setting their retail prices below their own cost? How do you think the Supreme Court will rule? [*linkLine Communications, Inc. v. SBC California, Inc.*, 503 F.3d 876 (9th Cir. 2007), cert. granted, 128 S. Ct. 2957 (2008).]

8. The two largest newspapers in Chicago are the *Chicago Tribune* and the *Sun Times*, and the two largest supplemental news providers are the New York Times News

104. 540 U.S. 398 (2004).

Service and the Los Angeles Times/Washington News Service. In addition to printing the work of its own staff, the *Tribune* has a contract with the New York Times News Service pursuant to which the Service provides news and other material of interest to the *Tribune* on an exclusive basis in the Chicago area. The *Sun Times* has a similar exclusive arrangement with the Los Angeles Times/Washington News Service. As a result of these exclusive contracts, Chicago's third largest newspaper, the *Daily Herald*, could not obtain newsfeed from either service, and it was also unable to obtain newsfeed from the third most popular provider because it was owned by the *Tribune*, which refused to license its stories to a competitor in its home market. The *Daily Herald* challenged this pattern of exclusive distributorships as a violation of Section 1 of the Sherman Act on the basis that it effectively denied the *Herald* the opportunity to subscribe to the best supplemental news services. Does a pattern of exclusive distributorships in a market violate the Sherman Act? In what way could the news services' practices harm consumers? What if the *Herald* could show that it had tried to outbid the *Tribune* or the *Sun Times* for their supplemental news service subscriptions? Would the *Herald*'s argument be stronger if the exclusive agreements were long-term agreements? [*Paddock Publications, Inc. v. Chicago Tribune Co.*, 103 F.3d 42 (7th Cir. 1996), cert. denied, 520 U.S. 1265 (1997).]

CHAPTER 18

CONSUMER PROTECTION

INTRODUCTION

Role of Consumer Protection Law in Business

Historically, consumers had little recourse in the event of a dispute with a vendor, manufacturer, producer, service provider, or creditor. Consumer transactions were commonly governed by the concept of *caveat emptor* ("let the buyer beware"). Today, the standard has shifted closer to *venditur emptor* ("let the seller beware"). Federal and state laws protect consumers from unsafe or harmful consumer products, unfair and deceptive trade practices, fraud, and misleading or discriminatory credit requirements. Managers must, of course, comply with the law. In addition, by being proactive, working with administrative agencies, and promoting industry self-regulation, managers may be able to both protect brand equity and forestall burdensome new regulatory restrictions.

CHAPTER OVERVIEW

This chapter examines three primary areas of consumer protection law and the agencies, departments, and commissions that administer and enforce them: (1) consumer health and safety (including the regulation of food, drugs, medical devices, automobiles, broadcasting, and the Internet); (2) unfairness, deception, and fraud (including the regulation of advertising, packaging and labeling, pricing, warranties, and certain sales practices); and (3) consumer credit. The discussion focuses primarily on federal legislation, although numerous state law topics are also discussed. In general, consumer protection law at the state level is more stringent than federal law and, as discussed in the

"Global View," product safety and environmental standards in the European Union are higher than those in the United States. We discussed privacy protection in Chapter 9 and will discuss consumer bankruptcy under Chapter 13 of the Bankruptcy Code in Chapter 24.

COMMISSIONS AND AGENCIES

Federal regulatory agencies involved in consumer protection are either independent commissions or executive branch agencies. Independent commissions include the Federal Trade Commission, the Federal Communications Commission, the Securities and Exchange Commission, the Federal Reserve Board, and the Consumer Product Safety Commission. The Federal Trade Commission, for example, has five commissioners appointed by the president and confirmed by the Senate for seven-year terms. No more than three of them can be from the same political party. The commissioners make decisions by majority vote and issue rules.

Executive branch regulatory agencies are located in cabinet departments. Examples include the Food and Drug Administration (located within the U.S. Department of Health and Human Services), the Office of Interstate Land Sales Registration (U.S. Department of Housing and Urban Development), and the National Highway Traffic Safety Administration (U.S. Department of Transportation).

CONSUMER HEALTH AND SAFETY

A number of federal, state, and local regulatory agencies protect consumers' health and safety, including the Food and Drug Administration (FDA), the Department of

Agriculture, the Department of Transportation's National Highway Traffic Safety Administration, and the Consumer Product Safety Commission. For example, under the Food, Drug and Cosmetic Act,¹ the FDA monitors the production and sale of more than \$1 trillion of food and medical products each year. In addition to specifying the proper labeling of food, drugs, medical devices, and cosmetics to prevent *misbranding*, the FDA also regulates the new-drug approval process.

The Federal Trade Commission also regulates the packaging and labeling of certain products. Numerous state laws cover such items as food, drugs, medical devices, cosmetics, clothing, tobacco, and alcohol.

1. 21 U.S.C. § 321 *et seq.*

Consumer protection law should not be confused with product liability law, discussed in Chapter 10. Product liability law provides a common law remedy enforced by private action, whereas consumer protection law provides a statutory remedy enforced by the government (and, in some cases, also by private parties).

At the state level, consumer health and safety laws cover a wide variety of areas, such as the availability of alcohol, tobacco, and gambling. State and local laws also address prohibitions against smoking, restaurant inspections, and the competency of professional workers through the granting of various occupational licenses.

The “In Brief” identifies the key federal commissions and agencies charged with administering major consumer protection laws.

IN BRIEF

Consumer Protection Laws and Their Administration

Agency, Department, or Commission	Consumer Credit	Unfairness, Deception, and Fraud	Consumer Health and Safety
Federal Trade Commission Established: 1914 Commissioners: 5	Credit advertising; Fair Credit Reporting Act; Fair Debt Collection Practices Act	Advertising; sales practices	Labeling of food (except meat, poultry, and eggs), drugs, and cosmetics; adulterated food and cosmetics; approval of drugs and medical devices
Food and Drug Administration (U.S. Department of Health and Human Services) Established: 1930 Commissioner: 1			Labeling of meat, poultry, and eggs; inspection of meat, poultry, and egg processing facilities
U.S. Department of Agriculture Established: 1862			Automobile safety standards; driver safety
National Highway Traffic Safety Administration (NHTSA) (U.S. Department of Transportation) Established: 1970 Administrator: 1			Consumer Product Safety Act (CPSA)
Consumer Product Safety Commission Established: 1972 Commissioners: 3			Telemarketing
Federal Communications Commission Established: 1934 Commissioners: 5			Broadcast standards

FOOD SAFETY AND LABELING

The Food and Drug Administration and the Department of Agriculture have the primary responsibility for food safety and labeling.

PRODUCT DEFINITION: FOOD OR DRUG?

Because the distinction between drugs and food is important in the application of both the mislabeling and the adulteration provisions of the Food, Drug and Cosmetic Act, as well as in the drug-approval process, the FDA must categorize each product. *Drugs*, as defined by the Act, include (1) articles intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease; and (2) articles (other than food) intended to affect the structure or any function of the body. Thus, many things that are, in fact, food may fit this definition. For example, orange juice might be used to prevent disease. Under the Act, *food* is defined as (1) articles used for food or drink, (2) chewing gum, and (3) articles used for components of either.

In general, the FDA looks at the intended use of a product in determining how to categorize it. Intent may be apparent

from the manufacturer's purpose or from consumers' reasons for using the product, or it may be inferred from labels, promotional material, or advertisements.

FDA STANDARDS FOR FOOD CONDEMNATION

The FDA protects consumer health and safety through the confiscation of contaminated or adulterated foods. Tainted food causes more than 5,000 deaths annually in the United States and millions of illnesses.²

The standards for condemnation differ depending on whether the product is a natural food or contains additives. An *additive* is anything not inherent in the food product, including pesticide residue, unintended environmental contaminants, and substances unavoidably added from packaging. If an additive (in the quantity present in the food product) is injurious to any group in the general population, then the product will be deemed adulterated. A natural food is *adulterated* if it "consist[s] in whole or in

2. Greg Winter, *Contaminated Food Makes Millions Ill Despite Advances*, N.Y. TIMES, Mar. 18, 2001, available at <http://query.nytimes.com/gst/fullpage.html?res=9900E3D8123DF93BA25750C0A9679C8B63>.

part of any filthy, putrid or decomposed substance, or if it is otherwise unfit for food.” All foods contain some level of unavoidable natural defects, so the FDA sets minimum tolerance standards for defects that will be tolerated. Articles that exceed those minimum levels are deemed adulterated and seized by the FDA. In some cases, a seized product may be rehabilitated by a manufacturer and released by the FDA for sale.

In a hotly debated decision, the FDA allowed U.S. meat providers to sell “downed” cattle and other livestock.³ Opponents claimed that these cattle, which were either too weak to walk or had collapsed entirely before slaughter, had a much greater chance of carrying a potentially fatal disease, known as mad cow disease. Nonetheless, the FDA concluded that as long as a postmortem inspection was performed by an official veterinarian, this food was safe for human consumption.

A chief executive officer of a food company was held vicariously and strictly criminally liable for introducing adulterated articles into interstate commerce.⁴ A CEO should require top managers to have adequate policies and checks in place to ensure the proper handling and storage of food. If a problem is brought to a manager’s attention, he or she should immediately report it to a supervisor and personally ensure that it is remedied.

ROLE OF THE U.S. DEPARTMENT OF AGRICULTURE

The U.S. Department of Agriculture (USDA) also plays a major role in food safety. The USDA’s primary consumer protection activities all involve food. They include inspecting facilities engaged in the slaughtering or processing of meat, poultry, and egg products; preventing the sale of mislabeled meat or poultry products; and offering producers a voluntary grading program for various agricultural products. In February 2008, the USDA ordered the largest meat recall in its history: 143 million pounds of beef produced by a California meatpacker that failed to prevent ailing animals from entering the U.S. food supply were recalled.⁵

PESTICIDES AND HUMAN-MADE BUGS

Under the Food, Drug and Cosmetic Act, the FDA shares with the Environmental Protection Agency (EPA) the

INTERNATIONAL SNAPSHOT

Free trade treaties have made the U.S. food market one of the most open in the world. Yet problems with imported food, such as the salmonella outbreak in the summer of 2008 caused by tomatoes and peppers grown in Mexico, present challenges for regulators. Effective September 30, 2008, the U.S. Department of Agriculture requires all stores to label unprocessed beef, pork, lamb, veal, chicken and nuts with the country of origin.

The USDA estimates that labeling will cost \$2.5 billion in the first year and \$500 million annually thereafter; these costs will be borne mainly by supermarkets. Many retailers and meat producers see little benefit for the consumer, particularly because the law does not cover processed foods. Mark Dopp, a senior vice president for the American Meat Institute, asked, “What can they learn from seeing the country? This tells nothing about safety.”^a Ultimately, the burden of ensuring safe food may fall on the globalized food industry.

a. Bob Lamendola, *Do You Know Where Your Beef Comes From? New Labels Soon Will Tell You Nations of Origin of More Foods*, S. FL. SUN-SENTINEL, Sept. 23, 2008.

responsibility for regulating pesticide residues on food. The EPA regulates pesticides and establishes tolerances under the Act. The FDA enforces the tolerance levels and deems a food to be adulterated if its residues exceed those levels.

Scientists are creating genetically engineered insects and microbes to fight pests, such as the glassy-winged sharpshooter, which has already destroyed \$14 billion worth of grapes and other crops in California. In the absence of a clear framework for regulating bioengineered insects and pathogens, scientists are seeking approvals from the EPA. According to the executive director of the nonprofit Pew Initiative on Food and Biotechnology, “The regulatory system is lagging well behind the science.”⁶

GENETICALLY MODIFIED FOOD AND CLONED MEAT AND MILK

The FDA authorized the sale of genetically modified food in 1992 but did not require that it be labeled as such. At the state level, Vermont requires the labeling of genetically modified seeds, and Alaska requires the labeling of transgenic fish.⁷ In April 2000, the National Academy of Science issued a

6. Catherine Arnst, *Panacea—Or Pandora’s Box?*, BUS. WK., May 3, 2004, at 75.

7. Pallavi Gogoi, *States Move to Label Cloned Food*, BUS. WK., Mar. 4, 2008.

report advising the federal government to increase its regulation of genetically modified foods. Although the report did not find that genetically modified food was unsafe, it urged scientists to develop better methods for identifying potential allergens and called on regulatory agencies to monitor the environmental impact of genetically modified organisms (GMOs).⁸ The report also concluded that the EPA, USDA, and FDA should do a better job of coordinating their work and informing the public about GMOs.⁹

European consumers have vehemently opposed the sale of genetically modified foods and launched a major campaign against efforts to market GMOs in Europe. In 2001, the European Parliament approved legislation that requires continuous monitoring of GMOs. The law calls for labeling and monitoring of genetically modified foods, seeds, feeds, and pharmaceuticals, and it requires governments to maintain a registry of where such plants are being grown.¹⁰ Australia and New Zealand also require labeling of genetically modified food.

Opposition to GMOs has spread to the United States where consumers have protested GMOs because of both health safety and environmental concerns. In July 2003, the “Genetically Engineered Food Right to Know Act” was proposed in Congress.¹¹ As of 2008, it had not been enacted. Given the potentially enormous benefits of genetically modified foods, particularly for developing countries, the debate over regulating genetically engineered crops is far from over.

In 2008, the FDA authorized the sale of food from cloned animals and decided not to require labels for cloned food after concluding that meat and milk from cloned animals were “as safe to eat as food from conventionally bred animals.”¹² In response, state legislators introduced mandatory labeling bills in thirteen states, including California, New Jersey and Kentucky.¹³ The California House and Senate passed a mandatory labeling and tracking bill in 2007, but it was vetoed by Governor Arnold Schwarzenegger on the grounds that it was “unworkable, costly, and unenforceable.”¹⁴ The Cloned Food Labeling Act, which Senator Barbara Mikulski (D.-Md.) first introduced in 2007, would require that food from cloned animals bear the label: “This product is from a

cloned animal or its progeny.” Senator Mikulski explained the bill’s rationale: “Labeling does two things. It gives consumers the right to know and allows scientists to monitor.”¹⁵

IRRADIATED FOODS

In December 1997, the FDA authorized the irradiation of fresh and frozen red meat as a means of killing foodborne bacteria (including *E. coli*) and lengthening shelf life. During irradiation, food is passed through a sealed chamber, where it is exposed to gamma ray radiation from cobalt 60 or cesium 137 or to an electron beam. FDA regulations require irradiated foods to be prominently and conspicuously labeled with the radura symbol (a stylized green flower) and the words “Treated with Radiation” or “Treated by Irradiation.”

For many consumers, irradiation conjures up images of mushroom clouds and the nuclear reactor meltdown in 1986 at Chernobyl in Ukraine.¹⁶ Nonetheless, experts predicted that consumers will be won over by irradiation’s safety and effectiveness in protecting consumers from bacteria and other microbes. Former FDA commissioner Dr. David Kessler drew parallels to the public’s shunning of pasteurized milk in the early twentieth century and the initial distrust of microwave ovens in the 1970s.¹⁷

ORGANIC FOODS

Sales of organic products in the United States amounted to approximately \$17 billion in 2006.¹⁸ Uniform standards promulgated by the USDA for organic food ban the use of pesticides, genetic engineering, growth hormones, and irradiation. They also require dairy cattle to have access to pasture. Foods grown and processed according to the standards may bear the seal “USDA Organic.”¹⁹

FOOD LABELING

The FDA has primary responsibility for regulating the packaging and labeling of food (except meat, poultry, and eggs, which are under the jurisdiction of the USDA), drugs, medical devices, and cosmetics. The Fair Packaging and

Labeling Act²⁰ requires prepackaged foods to bear labels containing the name and address of the manufacturer, packer, or distributor; the net quantity, placed in a uniform location on the front panel; the quantity in servings, with the net quantity of each serving stated; and the quantity listed in certain other ways, depending on how the product is classified. This last provision requires dual declarations of sizes (for example, one quart and thirty-two ounces) and forbids the use of terms such as “jumbo quart” and “super ounce.” Many supermarkets now provide unit-pricing information so that consumers can more easily compare the prices of competing products. Manufacturers of goods that are to be exported also need to consider foreign labeling requirements, such as language translations, country of origin disclosures, and weight conversions.

Nutrition Facts

The Nutrition Labeling and Education Act of 1990²¹ (1) requires nutrition labeling of almost all foods through a nutrition panel entitled “Nutrition Facts,” (2) requires expanded ingredient labeling, and (3) restricts nutrient content claims and health claims. The FDA has also issued regulations governing the use of nutrient claims, such as “light,” “fat free,” and “low calorie,” and providing uniform definitions so that these terms mean the same for any product on which they appear.

Approximately 90 percent of processed food must carry nutrition information. Exceptions include plain coffee and tea, delicatessen items, and bulk food. The Nutrition Facts panel must include the amount per serving of saturated fat, cholesterol, dietary fiber, sodium, and other nutrients. These panels also provide information on how the food fits into an overall daily diet. Point-of-purchase nutrition information is voluntary under the Act for many raw foods, including meat, poultry, raw fish, and fresh produce. The information may be shown in a poster or chart at a butcher’s counter or a produce stand.

Effective 2006, the FDA required labels to list “trans fat,” a form of partially hydrogenated oil that improves the shelf life and taste of products but contributes to fatal and nonfatal coronary heart disease.²² PepsiCo’s Frito-Lay division was the first major food company to eliminate trans fats from its potato chips and other products. It then obtained approval from the FDA to label its products “0 trans fats” before the FDA labeling requirement went into effect, thereby gaining a marketing edge.

22. 64 Fed. Reg. 62,772 (Nov. 17, 1999).

Public health officials have increasingly put pressure on chain restaurants to display the number of calories their offerings contain next to each item on the menu. In January 2008, New York City began to require chain restaurants to post calorie information on their menus. As of 2008, more than a dozen state and local governments were considering imposing a similar requirement. These initiatives have met strong opposition from the food industry, with organizations like the National Restaurant Association claiming that calorie counts would confuse consumers and lead patrons to base food choices on the number of calories alone.²³

Health Claims

The Nutrition Labeling and Education Act of 1990 permits manufacturers to make health claims for foods on labels without FDA approval as a new drug, or the risk of sanctions for issuing a “misbranded” product, as long as the claim has been certified by the FDA as being supported by significant scientific agreement. The FDA has approved several health claims on foods, including the relationship between calcium and osteoporosis, fiber-containing products and cancer, fruits and vegetables and cancer, folate and neural tube defects, and soluble fiber and coronary heart disease.

DRUGS AND MEDICAL DEVICES

Drugs and medical devices, as well as drug advertising, are regulated by the FDA.

FDA STANDARDS FOR DRUG APPROVAL

The FDA has the authority to require that certain drugs be available only by prescription. If a drug authorized only for prescription use is sold over-the-counter, then it is misbranded, and the FDA will halt its sale. In general, the FDA will require prescription use only when a drug is toxic, requires a physician’s supervision for safe use, or is addictive.

The first step in the approval process for new drugs is their classification by the Drug Enforcement Administration (DEA) into one of five schedules based on potential for abuse and currently accepted medical use. Only Schedule I drugs, those with the highest potential for abuse and no currently accepted medical use, cannot be approved by the FDA.

The drug-approval process for non-Schedule I drugs begins with preclinical research (which includes animal testing) aimed at the discovery and identification of drugs

23. Michael Orey, *A Food Fight Over Calorie Counts: Public Health Officials Want Caloric Content Listed On Menus.*, BUS. Wk., Feb. 11, 2008.

that are sufficiently promising to study in humans. The drugmaker then submits this preclinical research, along with a document called “Claimed Exemption for Investigational New Drug,” to the FDA. The FDA can then permit or deny continued research. If approved for investigational purposes, a drug will be tested in humans in three separate phases, with FDA review at the end of each phase. This framework is designed to protect the safety of the human subjects used in the study, to develop necessary data on the drug, and to ensure that all studies are done properly. Once all of the testing data are assembled, they are submitted to the FDA, which may approve or deny the application. Approval is based on a drug’s safety and effectiveness. The approval may require marketing restrictions, and it can be contested by anyone. The FDA must also approve the description of a drug (for example, labels and package inserts).

Drugs with a high potential for therapeutic gain and no satisfactory alternative may be given priority (expedited) review by the FDA. In addition, through open protocols, such drugs may be available during the investigational stage to people not within the clinical test group. For example, people with AIDS may have access to new drugs under investigation if studies yield preliminary evidence of effectiveness.

Congress passed the Food and Drug Administration Modernization Act of 1997²⁴ to speed up the approval of new drugs and medical devices and to make it easier for seriously ill patients to obtain experimental drugs. The Act permits the FDA to use outside reviewers to evaluate certain drugs and medical devices. This Act also includes a safe harbor for the distribution by drug manufacturers of certain third-party materials concerning “off-label” uses of their drugs.²⁵ “Off-label” uses are uses of a drug other than those for which it was approved. A physician can prescribe a drug to serve any purpose that he or she thinks is appropriate regardless of whether the drug was initially approved for that use, but the FDA restricts companies’ ability to promote off-label uses.²⁶

24. 21 U.S.C. § 353a.

25. 21 U.S.C. § 360aaa *et seq.*

26. See 65 Fed. Reg. 14,286 (Mar. 16, 2000).

In *Thompson v. Western States Medical Center*,²⁷ the U.S. Supreme Court struck down the provisions of the Food and Drug Administration Modernization Act that exempted compounded drugs from the FDA’s approval requirements only if the compounding pharmacy refrained from advertising particular compounded drugs. Compounding is a process whereby a pharmacist, pursuant to a physician’s prescription, mixes ingredients to create a medication for a particular patient, usually because the patient is allergic to an ingredient in a mass-produced product. The Court held that the ban violated the Free Speech Clause of the First Amendment, as construed by the U.S. Supreme Court in *Central Hudson Gas & Electric Corp. v. Public Service Commission*.²⁸ The Act prohibited commercial speech that was neither unlawful nor misleading. The Court recognized the importance of the government’s interests in preserving the effectiveness and integrity of the FDA’s new-drug approval process while also permitting compounding to create drugs produced on such a small scale that it would be prohibitively expensive to require them to undergo safety and efficiency testing. Nonetheless, the Court concluded that the speech restrictions were more extensive than necessary to serve these interests. The Court identified several non-speech-related means of drawing a line between compounding and large-scale manufacturing that the government never even considered. The Court admonished Congress that “[i]f the First Amendment means anything, it means that regulating speech must be a last—not first—resort.”

As discussed in Chapter 10, Merck & Co issued a voluntary recall of the popular anti-inflammatory drug Vioxx in 2004 after finding that the drug increased the risk of heart attacks and strokes. The FDA had approved Vioxx in 1999 to treat pain and inflammation caused by osteoarthritis and rheumatoid arthritis. In June 2000, Merck submitted to the FDA a safety study that found an increased risk of heart attacks and strokes in patients taking the drug. Nearly two years later, the FDA implemented labeling changes to reflect the study’s findings, but did not issue a public health advisory until the fall of 2004, *after* Merck had voluntarily withdrawn Vioxx from the market.

The FDA’s failure to respond to evidence that Vioxx was a potentially dangerous substance sparked criticism of the agency, including allegations that the FDA is too closely aligned with the commercial interests of the pharmaceutical producers that it is tasked to regulate.²⁹ Hardly the agency’s only misstep in recent years, the Vioxx scandal was one in

27. 535 U.S. 357 (2002).

28. 447 U.S. 557 (1980).

29. Alicia Mundy, *Congress Moves to Beef Up FDA as Crisis Mounts*, WALL ST. J., July 30, 2008, at A4.

► ETHICAL CONSIDERATION

Drug companies provide financial support to academic researchers in the form of employment or consulting fees, research funds, money to attend symposiums, and speaking honoraria. Should scientists disclose their ties to drug companies when publishing articles about their research? Should drug companies disclose these financial ties?

a string of drug-safety controversies that spurred congressional hearings on FDA regulatory procedure.

In the summer of 2008, Representative John Dingell (D.-Mich.) and Senator Chuck Grassley (R.-Iowa) led the drive to remake the FDA by giving it broader powers while monitoring its relationship with the drug companies.³⁰ Although Congress was unable to pass legislation during the brief fall session before the November 2008 elections, experts predicted that 2009 might bring the most significant overhaul of the FDA in a generation. Advocates of reform asserted that the FDA should be restructured to give the agency the authority to recall drugs and to impose significant fines on drug companies for safety violations.³¹ Having an independent and effective FDA is particularly important in light of the U.S. Supreme Court's decision holding that FDA approval of a medical device preempts state law product liability claims.³²

LABELING OF MEDICAL DEVICES

The labeling of medical devices is also under the jurisdiction of the FDA. As noted in Chapter 10, if a medical device has undergone full premarket FDA review and the manufacturer provides the FDA-mandated warnings, then state law failure-to-warn-claims are preempted. If, however, the device was exempt from full review, then the manufacturer could still be found liable under state product liability law for failure to warn if reasonable manufacturers would have done more.³³ For example, the U.S. Court of Appeals for the Tenth Circuit upheld a \$10 million punitive damages award against International Playtex for failure to adequately warn users about the risk of fatal toxic shock syndrome from use of high-absorbing tampons.³⁴ The court concluded that Playtex had shown reckless indifference to consumer safety by deliberately disregarding studies and medical reports linking high-absorbency tampon fibers with increased risk of toxic shock at a time when other tampon manufacturers were responding to this information by modifying or withdrawing their high-absorbency products.

DRUG ADVERTISING

In 1997, the FDA eased the restrictions on the advertising of prescription drugs on television and radio. Drug companies

can tout a drug's benefits without listing all of the side effects and explaining how to properly use the drug. Television ads must, however, warn of major risks and provide a quick way (such as a toll-free telephone number, Web address, or magazine advertisement) for consumers to obtain full information about the drug. Merck's recall of its heavily advertised drug Vioxx in 2004 sparked further debate on the proper use of drug advertising.³⁵

HEALTH CLAIMS AND LABELING OF DIETARY SUPPLEMENTS

Under the Dietary Supplement Health and Education Act of 1994,³⁶ the sale of dietary supplements is regulated only when the supplement contains a new dietary ingredient or poses a safety risk. Dietary supplements include products such as vitamins, minerals, herbs, and amino acids. As with foods, however, health claims on dietary supplements can cause them to be characterized as drugs. The Nutrition Labeling and Education Act created a safe harbor for health claims on dietary supplements akin to that provided for food but delegated to the FDA the task of establishing a procedure and standard governing the validity of health claims.

The FDA issued regulations providing that it would authorize a health claim only if there was substantial scientific agreement among experts that the claim was supported by the totality of publicly available scientific evidence.³⁷ In 1999, however, the U.S. Court of Appeals for the District of Columbia curtailed the FDA's right to ban health-related claims made by sellers of nutritional supplements.³⁸ The FDA published a final rule in 2000 clarifying the types of claims that manufacturers of dietary supplements may make without prior review by the FDA and identifying those that require prior authorization.³⁹

In early 2003, the FDA came under heavy fire when Steve Bechler, a twenty-three-year-old pitcher for the Baltimore Orioles baseball team, died suddenly during spring training workouts in Florida. Initially, Bechler's death was attributed to heat stroke, but a further medical examination revealed that

34. Ogilvie v. Int'l Playtex, Inc., 821 F.2d 1438 (10th Cir. 1987), *cert. denied*, 486 U.S. 1032 (1988).

Bechler had been taking Xenadrine, a legal over-the-counter drug containing a weight-loss supplement known as ephedra. The drug, which its makers liken to caffeine, was said to have strongly contributed to Bechler's death. Shortly thereafter, a young football player's sudden death was also linked to ephedra. Its makers claimed that improper use of the drug may have contributed to the deaths, but the FDA was blasted for allowing the drug to be marketed over-the-counter without significant warnings. In response, the FDA banned the use of ephedra in any dietary supplements and advised consumers to stop using any products containing ephedra.⁴⁰

LABELING OF OTHER PRODUCTS

The Federal Trade Commission (FTC) has the primary responsibility for regulating the packaging and labeling of commodities other than food, drugs, medical devices, and cosmetics.

CLOTHING

Numerous federal laws regulate the labeling of clothing. Among these are the Wool Products Labeling Act,⁴¹ the Fur Products Labeling Act,⁴² the Flammable Fabrics Act,⁴³ and the Textile Fiber Products Identification Act.⁴⁴ Each of these acts is intended to protect distributors and consumers against misbranding and false advertising.

ALCOHOL

The Bureau of Alcohol and Tobacco Tax and Trade, a branch of the Treasury Department, regulates everything that appears on packages of alcoholic beverages and bottles of wine. The Bureau's regulations attach legal meanings to various statements made on wine labels, including the vintage year, grape variety, producer, and alcohol content. Warnings are also required to alert those who are allergic to sulfites that wine contains trace amounts of the substances, which may be used as a preservative and are also produced naturally during fermentation. Bottles, cans, and packages of wine, beer, and spirits are required to carry a congressionally mandated warning label, which states that alcohol

consumption increases the risks of birth defects, warns that consuming alcoholic beverages can impair one's ability to drive a car, and cautions against the use of alcohol when operating machinery.⁴⁵

"MADE IN USA"

The FTC has adopted guidelines specifying when manufacturers and marketers can label their products "Made in USA." Under the FTC's Made in USA policy, "all or virtually all" of the product must be made in the fifty states, the District of Columbia, or the U.S. territories and possessions. "All or virtually all" means that all significant parts and processing that go into the product must be of U.S. origin. A manufacturer or marketer must have a reasonable basis, based on competent and reliable evidence, to support its claim that the product was made in the USA.⁴⁶

STATE LABELING LAWS

Many states have enacted labeling laws aimed at protecting consumers from dangerous products. Historically, these laws have sought to protect consumers from risks that involved the danger of imminent bodily harm. Of particular note is California's Safe Drinking Water and Toxic Enforcement Act of 1986, better known as Proposition 65. Proposition 65 provides that "no person . . . shall knowingly and intentionally expose any individual to a chemical known to the state to cause cancer or reproductive toxicity without first giving clear and reasonable warning to such individual."⁴⁷ The law requires the governor to compile a list of the chemicals requiring warnings and to update the list annually. The current list includes ingredients such as alcohol and saccharin, as well as potential contaminants such as lead and mercury. The labeling requirements apply to manufacturers, producers, packagers, and retail sellers, and the warnings may be in the form of product labels, signs at retail outlets, or public advertising. An example of a Proposition 65 warning is: "Warning: This product contains a chemical known to the State of California to cause birth defects or other reproductive harm." The FDA has the authority to issue regulations that would preempt state labeling requirements, such as Proposition 65, but so far it has chosen not to do so.

47. CAL. HEALTH & SAFETY CODE § 25,249.6.

BROADCASTING AND THE INTERNET

The Federal Communications Commission (FCC) has the authority to regulate broadcasting and aspects of the Internet.

BROADCASTING

The FCC is charged with ensuring that broadcast media are competitive and operate for the public's benefit and use. During the 2004 Super Bowl half-time performance, a "wardrobe malfunction" caused Janet Jackson's breast to be exposed on national television for nine-sixteenths of a second. Many viewers were outraged, and the National Football League and MTV (the group that sponsored and prepared the show) were embarrassed. The incident

prompted regulators to propose sharply higher penalties for indecent broadcasts. In response, the FCC assessed \$550,000 in fines against twenty CBS affiliates for violating its indecency requirements. In 2008, the U.S. Court of Appeals for the Third Circuit overturned the FCC's fine, reasoning that it was arbitrary and capricious and in violation of the Administrative Procedure Act.⁴⁸

As explained in Chapter 4, FCC regulation of the content of broadcast programming raises First Amendment issues. Controversial radio personalities like Howard Stern and Rush Limbaugh, called "shock jocks," have often been involved in First Amendment battles with the FCC over their right to say things that many Americans find offensive. In the following case, the U.S. Court of Appeals for the Second Circuit considered whether the FCC had the authority to ban broadcasts with " fleeting expletives."

48. CBS Corp. v. FCC, 535 F.3d 167 (3d Cir. 2008).

A CASE IN POINT

CASE 18.1

FEDERAL COMMUNICATIONS COMMISSION V. FOX TELEVISION STATIONS INC.

UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT
489 F.3d. 444 (2d Cir. 2007),
CERT. GRANTED,
128 S. CT. 1647 (2008).

IN THE LANGUAGE OF THE COURT

FACTS The Federal Communications Commission levied an indecency fine against Fox Television Stations, Inc. for the single use of expletives in two of its broadcasts. Fox protested the fine and filed a petition for review of the FCC's Remand Order.⁴⁹ The FCC had acted pursuant to its *Golden Globes* decision, in which it greatly expanded the scope of what constitutes indecency in response to Bono's use of the "F-Word" in his acceptance speech at the 2003 Golden Globes Awards.⁵⁰

ISSUE PRESENTED Did the FCC correctly determine that the broadcast of vulgar expletives may violate federal restrictions on the broadcast of "any obscene, indecent, or profane language" when the expletives are used only once in a single broadcast?

OPINION POOLER, J., writing on behalf of the U.S. Court of Appeals for the Second Circuit:

The FCC's policy of "indecent" speech stems from 18 U.S.C. § 1464, which provides that "[w]hoever utters any obscene, indecent, or profane language by means of radio communication shall be fined under this title or imprisoned not more than two years, or both." The FCC's authority to regulate the broadcast medium is expressly limited by Section 326 of the Communications Act, which prohibits the FCC from engaging in censorship.

....

.... [The FCC] explained that an indecency finding involves the following two determinations: (1) whether the material falls within the "subject matter scope of [the] indecency definition—that is, the material must describe or depict sexual or excretory organs or activities"; and (2) whether the broadcast is "*patently offensive* as measured by contemporary community standards for the broadcast medium" The FCC considers the following three factors in determining whether the material is patently offensive: "(1) the explicitness or graphic nature of the description or depiction

CONTINUED

49. FCC 06-166 (Nov. 6, 2006).

50. *Complaints Against Various Broadcast Licenses Regarding the Airing of the "Golden Globes Awards" Program* (Memorandum Opinion & Order), 19 F.C.C.R. 4985 (Mar. 18, 2004).

of sexual or excretory organs or activities; (2) whether the material *dwells on or repeats at length* descriptions of sexual or excretory organs or activities; (3) *whether the material appears to pander or is used to titillate, or whether the material appears to have been presented for its shock value.*"

....

The factual situations at issue are as follows:

- **2002 Billboard Music Awards:** In her acceptance speech, Cher stated: "People have been telling me I'm on the way out every year, right? So fuck 'em."
- **2002 Billboard Music Awards:** Nicole Richie, a presenter on the show, stated: "Have you ever tried to get cow shit out of a Prada purse? It's not so fucking simple."

....

.... [T]here is no question that the FCC has changed its policy. Prior to the *Golden Globes* decision the FCC has consistently taken the view that isolated, non-literal, fleeting expletives did not run afoul of its indecency regime. The FCC now concedes that *Golden Globes* changed the landscape with regard to the treatment of fleeting expletives.

....

.... [T]he Commission provides no reasonable explanation for why it has changed its perception that a fleeting expletive was not a harmful "first blow" for the nearly thirty years between *Pacifica*⁵¹ and *Golden Globes*. More problematic, however, is that the "first blow" theory bears no rational connection to the Commission's actual policy regarding fleeting expletives. As the FCC itself stressed during oral argument in this case, the Commission does not take the position that *any* occurrence of an expletive is indecent or profane under its rules.

....

The Remand Order makes passing reference to reasons that purportedly support [the FCC's] change in policy, none of which we find sufficient. For instance, the Commission states that even non-literal uses of expletives fall within its indecency definition because it is "difficult" (if not impossible) to distinguish whether a word is being used as an expletive or as a literal description of sexual or excretory functions." This defies any commonsense understanding of these words, which, as the general public well knows, are often used in everyday conversation without any "sexual or excretory" meaning. Bono's explanation that his victory at the Golden Globe Awards was "really, really fucking brilliant" is a prime example of a non-literal use of the "F-Word" that has no sexual connotation. In recent times even the top leaders of our government have used variants of these expletives in a manner that no reasonable person would believe references "sexual or excretory organs or activities." See Brief of Intervenor NBC at 31–32 & n. 3 (citing President Bush's remarks to British Prime Minister Tony Blair that the United Nations needed to "get Syria to get Hezbollah to stop doing this shit" and Vice President Cheney's widely-reported "Fuck yourself" comment to Senator Patrick Leahy on the floor of the U.S. Senate).

....

While the FCC is free to change its previously settled view on this issue, it must provide a reasoned basis for that change. The FCC's decision, however, is devoid of any evidence that suggests a fleeting expletive is harmful, let alone establishes that this harm is serious enough to warrant government regulation. Such evidence would seem to be particularly relevant today when children likely hear this language far more often from other sources than they did in the 1970s when the Commission first began sanctioning indecent speech. Yet the Remand Order provides no reasoned

CONTINUED

51. *Citizen's Complaint Against Pacifica Foundation Station WBAI (FM), New York, N.Y.* (Declaratory Order), 56 F.C.C.2d 94 (Feb. 12, 1975).

analysis of the purported “problem” it is seeking to address with its new indecency policy from which this court can conclude that such regulation of speech is reasonable.

Accordingly, we find that the FCC’s new policy regarding “ fleeting expletives” fails to provide a reasoned analysis justifying its departure from the agency’s established practice. For this reason, Fox’s petition for review is granted, the Remand Order is vacated, and the matter is remanded to the FCC for further proceedings consistent with this opinion. Because we have found that the FCC’s new indecency regime, announced in *Golden Globes* and applied in the Remand Order, is invalid under the Administrative Procedure Act, the stay of enforcement previously granted by this court in our September 6th order is vacated as moot.

RESULT The court found in favor of Fox and invalidated the FCC’s new policy on “fleeting expletives” as arbitrary and capricious under the Administrative Procedure Act. Fox was not required to pay a fine for either broadcast.

COMMENTS The FCC had issued the contested indecency fines against Fox after receiving tens of thousands of complaints from members of the Parents Television Council, a nonprofit organization founded by conservative activist L. Brent Bozell III in 1995 that has the stated goal to “promote and restore responsibility to the entertainment industry.”

CRITICAL THINKING QUESTIONS

1. Is a court qualified to make inferences about how public attitudes toward indecent language have changed since the FCC began levying sanctions in the 1970s?
2. Would the court have reached the same decision if it had been unable to cite instances in which both the president and the vice president of the United States used “fleeting expletives”?

Licenses cannot be transferred or assigned without the permission of the FCC and a finding that such a transfer will serve the public interest. In 2003, Congress invalidated FCC regulations that would have relaxed the limits on concentrated media ownership in the United States.⁵² Enforcement of many of the FCC’s policies is achieved primarily through its ability to withhold license renewals.

INTERNET

The Internet also raises free speech issues, as discussed in Chapter 4. As explained in Chapters 9 and 23, the Internet has spawned new types of fraudulent schemes, such as online auction fraud, pyramid schemes, and securities fraud. The FTC, the U.S. Department of Justice, and the Securities and Exchange Commission are active in prosecuting offenders.

In August 2008, the FCC took action against Comcast, the country’s second-largest Internet provider, after concluding that Comcast had violated the federal *net neutrality policy* by hindering transfers of large data files by

customers who use peer-to-peer file-sharing programs, such as BitTorrent, to share music and video.⁵³ The FCC based its order on a 2005 policy statement outlining principles designed to ensure that broadband networks are open, affordable, and accessible to all consumers. The FCC found that Comcast had a convincing motive for interference: peer-to-peer applications are used to load video that could pose a competitive threat to Comcast’s video-on-demand service.

The FCC ordered Comcast to disclose the details of its “unreasonable network management practices” within thirty days and to submit a compliance plan to implement protocol-agnostic network congestion management practices by the end of 2008.⁵⁴ Republican FCC Chair Kevin J. Martin wrote the enforcement decision with support from the FCC’s two Democratic Commissioners. Martin was opposed by members of his own party in a divided three-to-two vote. Although Comcast stated that it would comply fully with the ruling, the cable giant filed a petition for

► ETHICAL CONSIDERATION

On average, an American child sees about 8,000 murders on television before reaching high school. How should programming managers respond to scientific evidence that television violence leads to more violent behavior by children? What additional precautions (such as time, place, and manner restrictions), if any, should they take to protect children?

review with the U.S. Court of Appeals for the D.C. Circuit in Washington.⁵⁵

THE CONSUMER PRODUCT SAFETY COMMISSION

Congress created the Consumer Product Safety Commission (CPSC), an independent regulatory agency, in 1972. The Consumer Product Safety Act⁵⁶ and related legislation⁵⁷ gave the CPSC the authority to set consumer product safety standards, such as performance or product-labeling specifications. The CPSC is charged with protecting the public against unreasonable risks of injury associated with consumer products and assisting consumers in evaluating the comparative safety of such products. The CPSC has no jurisdiction over tobacco products, firearms, pesticides, motor vehicles, food, drugs, medical devices, or cosmetics. These matters are regulated by other entities, such as the FDA, or are unregulated.

Before implementing a mandatory safety standard, the CPSC must find that voluntary standards are inadequate. Any standards that the CPSC issues must also be reasonably necessary to eliminate an unreasonable risk of injury that the regulated product presents. To determine whether a standard is reasonably necessary, the Commission weighs the standard's effectiveness in preventing injury against its effect on the cost of the product. The CPSC maintains an Injury Information Clearinghouse to collect and analyze information relating to the causes and prevention of death, injury, and illness associated with consumer products.

The statute provides a detailed scheme governing the adoption of a mandatory standard. Any interested person may petition the CPSC to adopt a standard and may resort to judicial remedies if the CPSC denies the petition. One obvious concern for the Commission is that producers motivated solely by short-term profits may not be willing or able to self-regulate. The CPSC can itself begin a proceeding to develop a standard by publishing a notice in the *Federal Register* inviting any person to submit an offer to do the development. Within a specified time limit, the CPSC can then accept such an offer, evaluate the suggestions submitted, and publish a proposed rule. The issuance of the final standard is subject to notice and comment by interested persons.

The penalty provisions of the Act make it unlawful to manufacture for sale, offer for sale, distribute in commerce, or import into the United States a consumer product that does not conform to an applicable standard. Violators are subject to civil penalties, criminal penalties, injunctive enforcement and seizure, private suits for damages, and private suits for injunctive relief. This means that if a product cannot be made free of unreasonable risk of personal injury, the CPSC may ban its manufacture, sale, or importation altogether. The supplier of any already-distributed products that pose a substantial risk of injury may be compelled by the CPSC to repair, modify, or replace the products, or refund the purchase price.

In addition to the Federal Consumer Product Safety Act, several states have enacted laws to protect children from dangerous products. Two University of Chicago professors, whose son died when his Playskool Travel-Lite portable crib collapsed while he was napping, initiated Illinois's Children's Product Safety Act, which was signed into law in August 1999. Michigan followed suit and enacted the same law in June 2000.⁵⁸

CONSUMER PRODUCT SAFETY IMPROVEMENT ACT OF 2008

On August 14, 2008, President George W. Bush signed the Consumer Product Safety Improvement Act of 2008.⁵⁹ Characterized by *The Wall Street Journal* as "the biggest overhaul of U.S. product-safety rules in a generation,"⁶⁰ this Act sought to strengthen consumer product safety standards and modernize and re-energize the CPSC. Sponsored by U.S. Representative

Bobby Rush (D-Ill.), the bill was first introduced on the House floor on November 1, 2007, in the wake of a media onslaught that dubbed 2007 “The Year of the Recall.”

In that year, there were 472 voluntary recalls involving nearly 110 million products. As discussed in this chapter’s “Inside Story,” most of the recalls involved lead paint and other hazards in imported children’s toys. The scandals damaged the performance of major U.S. importers and retailers, including Mattel, Inc. and Wal-Mart Stores, Inc.

Mattel alone executed three major recalls in the summer of 2007 for products including the Barbie Living Room Play Set, Fisher-Price Bongo Band Toys, and “Sarge” toy cars from the Walt Disney movie *Cars*, all of which were believed to contain lead-contaminated paint. Four other items from the Barbie, Batman, Doggie Day Care, and Polly Pocket toy lines were also recalled when it was discovered that they included tiny magnets that could injure children if swallowed. Worldwide, Mattel recalled about 2.8 million toys due to lead paint and 18.2 million toys due to a design flaw. All of the recalled toys were made in China. In light of the summer recalls, Mattel’s stock fell more than 25 percent from its fifty-two-week high in April 2007.⁶¹ These recalls spurred public outrage and weakened consumer confidence in manufacturers and retailers selling products made outside the United States.

Although passage of the law was largely motivated by widespread concern over children’s toys, the Act affects virtually all manufacturers, importers, distributors, and retailers of consumer products. Some of the most significant provisions of the Act include (1) widespread bans on lead and phthalates (a material used in some plastics), (2) new safety standards and test procedures, (3) mandatory third-party testing and certification for imported children’s products, (4) mandatory product tracking labels and product registration, and (5) new warnings in advertising and on websites for toys and games. It also banned most shipments of faulty products to other nations, from which they had historically found their way back onto U.S. store shelves.

The Act placed more inspectors at U.S. ports to examine imported products. Before this law was passed, CPSC officials relied mostly on agents from Customs and Border Protection to investigate products at the borders. Hardly optimal partners, these agencies tended to look for counterfeit products, rather than goods that might not comply with safety standards.

Perhaps the most significant aspect of the Act is its effort to institutionally strengthen the CPSC, which was

overwhelmed, underfunded, and ill-equipped to manage the recall crisis. The agency’s budget in 2007 was only \$62 million, one-seventh the size of the Food and Drug Administration’s budget for food safety alone.⁶² The CPSC, which once boasted 1,000 federal employees, had shrunk to a low of 420 employees under President George W. Bush and had the capability to investigate only 10 to 15 percent of the reported injuries or deaths linked to consumer goods.

The 2008 Act increased the CPSC staff to 500 and will increase its budget by more than 50 percent by 2013. To give the Commission real teeth, civil fines on violators were increased from \$5,000 to \$100,000 per offense, with each day of violation of the Act constituting a separate offense. The maximum civil penalty for a related series of violations was increased more than tenfold, from \$1.25 million to \$15 million. Additionally, employees who blow the whistle on manufacturers, private labelers, retailers, or distributors to expose violations of any CPSC-enforced product safety requirements will now be protected from retaliation under federal law.

The Act allows the CPSC to exempt state statutes from federal preemption if the state’s standards or regulations provide more protection and do not unduly burden interstate commerce. Therefore, states can continue to enforce many of the safety requirements that were in effect before enactment of the Act. In the absence of comprehensive federal oversight and congressional action, at least sixteen states have adopted product-safety laws in recent years. The Act explicitly prohibits the CPSC from preempting any cause of action under state or local common law or state statutory law regarding damage claims, and it grants authority to state attorneys general to enforce CPSC regulations.

Although many manufacturers criticized the bill and warned that it will threaten their international competitiveness, for some the bill may offer a potential competitive advantage. For example, the bill sets tougher standards for makers of all-terrain vehicles, which could work to the advantage of U.S. producers hit hard by cheaper vehicles produced in China. Although imports currently account for 44 percent of consumer products sold in the United States, they account for more than 75 percent of CPSC product recalls, suggesting that the Act will affect foreign producers more than domestic manufacturers.⁶³

61. Nicholas Casey, *Mattel Issues Third Major Recall: Top Toy Brands Barbie, Fisher-Price Are Latest Facing Lead-Paint Issues*, WALL ST. J., Sept. 5, 2008, at A3.

In the first four months of 2008 alone, the CPSC initiated 121 recalls of unsafe products, totaling nearly 10 million products. In August 2008, the CPSC initiated legal action against SFCA, Inc., a Pennsylvania-based designer, distributor, and importer of cribs, toddler beds, and bassinets. SFCA had acquired the assets of Simplicity, Inc., another bassinet manufacturer whose products were found to be responsible for two infant deaths by strangulation. The products in question had been on the market since 2001. The CPSC began investigating the products after learning about the first death in September 2007, but the Commission did not have the authority to bring legal action against Simplicity at that time. At the time of the second death, CPSC used its new authority under the 2008 Act to take action against SFCA. After the CPSC issued a public warning urging consumers to stop using certain Simplicity-brand bassinets, seven major retailers, including Toys "R" Us, J.C. Penney, and Wal-Mart, agreed to take back the hazardous products.⁶⁴

Due to SFCA's lack of cooperation and claims that it was not liable for products sold by Simplicity before it acquired Simplicity's assets in May 2008, the CPSC stopped short of requiring a product recall. As discussed in Chapter 10, the purchaser of another firm's assets generally does not have liability for defective products sold before the date of purchase unless the acquirer agreed to assume those liabilities or effects a de facto merger. As of September 2008, the CPSC was seeking access to SFCA's financial records in order to determine the terms of the acquisition and thereby ascertain SFCA's potential liability. The Commission's decision to stop short of a full product recall suggests that even the CPSC's new powers may prove inadequate to protect consumers from unsafe products.⁶⁵

AUTOMOBILES

Automobile safety has seen enormous gains since Ralph Nader first brought the issue to the nation's attention in the 1960s.⁶⁶ Air bags (for the driver and front passenger) and antilock brakes have become popular safety features.

The National Highway Traffic Safety Administration (NHTSA), created in 1970, is an agency of the U.S. Department of Transportation. By law, the NHTSA has

► ETHICAL CONSIDERATION

Adding new safety requirements for automobiles can increase product cost and shut some consumers out of the market. Should governments coerce individuals into paying for unwanted safety features, or should individual consumers be allowed to choose which features they are willing to pay for?

the power to establish motor vehicle safety standards,⁶⁷ establish a National Motor Vehicle Safety Advisory Council, engage in testing and development of motor vehicle safety, prohibit manufacture or importation of substandard vehicles, and develop tire safety.⁶⁸ In addition, the NHTSA is charged with developing national standards for driver safety performance, accident reporting, and vehicle registration and inspection. States refusing to comply with established federal standards are denied federal highway funds.⁶⁹

PRIVACY PROTECTIONS

As discussed in Chapter 9, technological developments, especially the Internet, have made it possible to amass large amounts of detailed personal information, causing Scott McNealy, CEO of Sun Microsystems, to quip, "You have zero privacy. . . . Get over it."⁷⁰ In response to public concerns about identity theft and other violations of privacy, state and federal governments have enacted a variety of laws dealing with the collection and transmission of private data and the transmission of unsolicited e-mail (*spam*). These laws, which are discussed in detail in Chapter 9, include the Controlling the Assault of Non-Solicited Pornography Act of 2003 (the CAN-SPAM Act).⁷¹ In 2008, "Spam King" Robert Soloway, the second person charged under CAN-SPAM, pleaded guilty to several charges, including e-mail fraud, and was sentenced to four years in prison.⁷² Soloway used unprotected computer networks to send out millions of e-mails and employed misleading e-mail header information to evade e-mail filters. During

one three-month period, Soloway sent 90 million spam e-mails. The presiding judge compared Soloway's spam to pollution on the Internet.

UNFAIRNESS, DECEPTION, AND FRAUD

A number of regulatory agencies, both federal and state, are involved in the area of unfair and deceptive trade practices and consumer fraud. They include the Federal Trade Commission, the Food and Drug Administration, the Federal Communications Commission, the U.S. Postal Service, the U.S. Department of Housing and Urban Development, and the Securities and Exchange Commission. (Securities fraud is discussed in Chapter 23.) These federal agencies regulate advertising, packaging and labeling, pricing, warranties, and numerous sales practices. State attorneys general and state departments of consumer affairs are also involved on the state level in protecting consumers through their administration of various state labeling laws, state warranty provisions (such as "lemon laws"), state deceptive sales practices statutes, and state privacy laws.

DECEPTIVE ADVERTISING AND WARRANTIES

Consumers are bombarded daily with the competing claims of various advertisers trying to generate new sales. From billboards to television to banner ads on websites and even

the back of grocery receipts, advertisers vie for the consumer's attention. In this competitive environment, companies sometimes make claims that are deceptive or false. Legal solutions to this problem have historically involved three separate approaches: the common law, statutory law, and regulatory law. Regulatory law, enacted and enforced through the Federal Trade Commission, has proved to be the most effective vehicle for combating false advertisements.

Common Law

A traditional common law approach provides two remedies for a consumer who has been misled by false advertising. First, a consumer can sue for breach of contract. In this instance, however, it may be difficult to prove the existence of a contract because the courts usually consider advertisements to be only an offer to deal. A consumer might also sue for the tort of deceit. *Deceit* requires the proof of several elements, including knowledge by the seller that the misrepresentation is false. In addition, the misrepresentation must be one of fact and not opinion, a difficult distinction to make in the context of advertising. (Deceit, also called fraudulent misrepresentation, is discussed in Chapter 9.)

Statutory Law

The Uniform Commercial Code (UCC) and the Lanham Trademark Act are two statutes that may protect consumers from false advertising. As noted in Chapter 8, under Section 2-313 of the UCC, any statement, sample, or model may constitute an *express warranty* if it is part of the basis of the bargain. Thus, an advertising term may be construed as an express warranty for a product. If the product does not conform to the representation made, the warranty is breached.

The Lanham Trademark Act forbids the use of any false "description or representation" in connection with any goods or services and provides a private cause of action for any competitor injured by any other competitor's false claims. The purpose of the Act is to ensure truthfulness in advertising and to eliminate misrepresentations of quality regarding one's own product or the product of a competitor. Neither consumers nor retailers have standing to sue for violations of the Lanham Act. Only direct commercial competitors or surrogates for direct commercial competitors have standing to pursue claims under the Lanham Act.⁷³

► ETHICAL CONSIDERATION

Procter & Gamble Company recruited 600,000 moms for Vocalpoint, a word-of-mouth marketing program it developed to pitch its own and other companies' products. P&G gives these moms talking points, samples, and coupons in an attempt to enhance its customer base through personal endorsements.^a Is this an acceptable form of marketing or a dangerous commercialization of human relations? Should the person spreading the product message be required to disclose her affiliation with P&G?

a. *I Sold It Through the Grapevine*, Bus. Wk., May 29, 2006, available at http://www.businessweek.com/magazine/content/06_22/b3986060.htm.

73. Conte Bros. Auto., Inc. v. Quaker State, Inc., 165 F.3d 221 (3d Cir. 1998).

For example, the Coca-Cola Company, maker of Minute Maid orange juice, successfully sued Tropicana Products, Inc. in the early 1980s under the Lanham Trademark Act. At issue was a television commercial in which athlete Bruce Jenner squeezed an orange while saying, “It’s pure, pasteurized juice as it comes from the orange,” and then poured the juice into a Tropicana carton. Coca-Cola claimed that the commercial was false because it represented that Tropicana contains unprocessed, fresh-squeezed juice when in fact the juice is heated (pasteurized) and sometimes frozen before packaging. The court agreed that the representation was false because it suggested that pasteurized juice comes directly from oranges. The court enjoined Tropicana from continuing to use the advertisement.⁷⁴

FTC Regulatory Law

The Federal Trade Commission is charged with preventing unfair and deceptive trade practices, including false advertising. Among the areas that the FTC has addressed under

Section 5 of the Federal Trade Commission Act are deceptive price and quality claims and false testimonials and mock-ups.⁷⁵ If the FTC believes a violation of Section 5 exists, it will attempt to negotiate a consent order with the alleged violator. A *consent order* is an agreement to stop the activity that the FTC has found illegal. If an agreement cannot be reached, the matter will be heard by an administrative law judge. The judge’s decision can be appealed to the full commission, and the full commission’s decision can be appealed to a U.S. court of appeals. Exhibit 18.1 lists the top twenty consumer fraud complaints that the FTC received in 2007.

FTC remedies include civil damages, affirmative advertising (the advertiser is required to include specific information), counter or corrective advertising, and cease and desist orders. A *cease and desist order* instructs advertisers to stop using the methods deemed unfair or deceptive. In one case, the FTC required the maker of Listerine to cease and desist from making the claim that Listerine prevented colds and sore throats or lessened their severity. Tests performed by the FTC revealed that this claim, which the

company had made for more than fifty years, was false. To counteract years of false claims, the FTC required the company to disclose in any future advertisements for Listerine that, contrary to prior advertising, Listerine did not help prevent colds or sore throats or lessen their severity. The order applied to the next \$10 million of Listerine advertising.⁷⁶

Deceptive Price One example of deceptive pricing practices involves the sale of advertised items at higher prices to customers unaware of the advertised price. In one case, a person purchased a blue 1986 Chevrolet Celebrity with 29,000 miles from an automobile dealer for \$8,524.⁷⁷ The buyer did not know that the dealership was currently advertising a blue 1986 Celebrity with 29,000 miles for \$6,995 in a local newspaper. When he returned home, the buyer saw the ad and telephoned the dealership to demand that the deal be renegotiated. The salesman refused, claiming that the advertised car had been sent to auction. The customer sued under the Illinois Consumer Fraud Act, which forbids false misrepresentations as well as omission of material facts. The trial court held that the dealership had a duty to inform the customer of the advertised price and awarded him the difference in prices, plus costs.

Deceptive pricing practices also include offers of free merchandise with a purchase and two-for-one deals when the advertiser recovers the cost of the free merchandise by

76. Warner-Lambert Co. v. FTC, 562 F.2d 749 (D.C. Cir. 1977), *cert. denied*, 435 U.S. 950 (1978).

77. Affranti v. Vill. Ford Sales, Inc., 597 N.E.2d 1242 (Ill. App. Ct. 1992).

► ETHICAL CONSIDERATION

Should free-market, competitive forces determine the price of “essential” goods such as pharmaceuticals, or should their prices be regulated? What constitutes “reasonable” profits on a product such as AZT and the cocktail of protease inhibitors recommended for people with HIV or AIDS?^a Is the answer the same for drugs sold in Africa as for drugs sold in the United States?

a. For a complete discussion of the AZT controversy, see *Ethics, Pricing and the Pharmaceutical Industry*, J. Bus. ETHICS, Aug. 1992, at 617. See also Brian O'Reilly, *The Inside Story of the AIDS Drug*, FORTUNE, Nov. 5, 1990, at 112.

► ETHICAL CONSIDERATION

A newspaper's publication of an article entitled "A Car Buyer's Guide to Sanity," which taught consumers how to negotiate lower prices, so angered car dealers that they pulled at least \$1 million worth of advertising from the newspaper. The FTC challenged the dealers' actions under the antitrust laws, claiming that they had deprived consumers of essential price information in the form of newspaper advertising and had chilled the newspaper from publishing similar stories in the future.^a Should the government become embroiled in an advertiser's decision to pull advertising from a news publication? Was the advertisers' conduct ethical?

a. Anthony Ramirez, *Car Dealers to Stop Ad Threat*, S.F. CHRON., Aug. 2, 1995, at B3.

charging more than the regular price for the merchandise bought. Another example of deceptive pricing is bait and switch advertising. An advertiser violates the FTC *bait and switch advertising* rules if it refuses to show an advertised item, fails to have a reasonable quantity of the item in stock, fails to promise to deliver the item within a reasonable time, or discourages employees from selling the advertised item.

Quality Claims Advertisements often include quality claims. To determine whether an advertiser has made a deceptive quality claim, the FTC must first identify the claim and then determine whether the claim is substantiated. Quality claims made without any substantiation are considered deceptive. For example, the FTC concluded that the marketers of Doan's pills had disseminated false and deceptive statements when they claimed the pills were more effective at relieving back pain than other over-the-counter pain relievers without any reasonable basis for substantiating the representations.⁷⁸ In contrast, obvious exaggerations and vague generalities are considered *puffing* and are not deemed deceptive because they are unlikely to mislead consumers. (Puffing is also discussed in Chapter 8.)

In the following case, a purchaser of the over-the-counter painkiller Aleve sued its distributor for false advertising in violation of California's Unfair Competition Law (UCL), which has been interpreted in accordance with the FTC Act.

78. Novartis Corp. v. FTC, 223 F.3d 783 (D.C. Cir. 2000).

A CASE IN POINT**CASE 18.2****LAVIE V. PROCTER & GAMBLE CO.**

CALIFORNIA COURT OF APPEAL

129 CAL. Rptr. 2d 486
(CAL. APP. 2003).**IN THE LANGUAGE OF THE COURT**

FACTS Zion Lavie developed a stomach ulcer after using Aleve, an over-the-counter drug distributed by Procter & Gamble Company. He sued P&G, alleging that the company had engaged in false advertising. Aleve's advertising campaign explicitly claimed that Aleve was gentler on the stomach than aspirin. The plaintiff claimed that this implied that Aleve would not cause any stomach upset. The trial court granted summary judgment for P&G and dismissed all claims. Lavie appealed.

ISSUE PRESENTED Should false advertising claims be based on what a reasonable consumer would understand, or should they be based on what the "least sophisticated consumer" would think about a product and its corresponding advertising?

OPINION KLINE, J., writing on behalf of the California Court of Appeal:

The standard to be used in evaluating whether an advertisement is deceptive under the UCL is purely a question of law and certainly has important public policy implications for California consumers and businesses. Moreover, the Attorney General has a particular interest in the interpretation of [the provisions of the California Unfair Competition Law because they] are the basic tools of the Attorney General and the district attorneys in combating consumer fraud. . . . The Attorney General and district attorneys have an independent role in the enforcement of this state's false advertising laws. They are authorized to prosecute violations of the UCL criminally and may also seek redress through the bringing of civil law enforcement cases seeking equitable relief and civil penalties beyond those available to private parties. . . .

Asserting that an advertisement violates the law if it is false or if it has the capacity to mislead unwary, unsophisticated or the most gullible consumers, the Attorney General maintains, the "trial court's failure to apply the 'least sophisticated consumer' standard as the measure of deception and the court's imposition of responsibility on consumers to investigate the merits of advertising claims were error."

We disagree. California and federal courts applying the UCL have never applied a "least sophisticated consumer standard," absent evidence that the ad targeted particularly vulnerable customers. Rather, they have consistently applied a standard closer to an ordinary or "reasonable consumer" standard to evaluate unfair advertising claims. Nor do we view the court's application of the "reasonable consumer" standard as requiring consumers to investigate the merits of advertising claims.

. . . .

As a necessary corollary to his argument, the Attorney General urges that we reject *Freeman v. Time, Inc.*⁷⁹ and *Haskell v. Time, Inc.*⁸⁰ as well as other federal decisions which have concluded that California employs the reasonable person or reasonable consumer standard in evaluating deceptive advertising. In *Freeman*, the Ninth Circuit agreed with the district court in *Haskell* that the "reasonable consumer" standard was the appropriate test for a violation of the UCL.

. . . .

As *Haskell* observed, "[T]he reasonable person standard is well ensconced in the law in a variety of legal contexts in which a claim of deception is brought. It is the standard for false advertising and unfair competition under the Lanham Act; for securities fraud, for deceit and misrepresentation and for common law unfair competition."

CONTINUED

79. 68 F.3d 285 (9th Cir. 1995).

80. 857 F. Supp. 1392 (E.D. Cal. 1994).

....
Haskell also relied upon the FTC's interpretation of the Federal Trade Commission Act because of the relationship between the UCL and the federal act. "[T]he Unfair Business Practices Act is one 'of the so-called "little FTC Acts" of the 1930's, enacted by many states in the wake of amendments to the Federal Trade Commission Act enlarging the commission's regulatory jurisdiction to include unfair business practices that harmed, not merely the interests of business competitors, but of the general public as well.' Because of this relationship between the [UCL] and the Federal Trade Commission Act, judicial interpretations of the federal act have persuasive force. Since 1982 the FTC has interpreted 'deception' in Section 5 of the Federal Trade Commission Act to require a showing of 'potential deception of "consumers acting reasonably in the circumstances," not just any consumers.'"
....

Unless the advertisement targets a particular disadvantaged or vulnerable group, it is judged by the effect it would have on a reasonable consumer. As noted by the FTC many years ago: "Perhaps a few misguided souls believe, for example, that all 'Danish pastry' is made in Denmark. Is it, therefore, an actionable deception to advertise 'Danish pastry' when it is made in this country? Of course not. A representation does not become 'false and deceptive' merely because it will be unreasonably misunderstood by an insignificant and unrepresentative segment of the class of persons to whom the representation is addressed."

RESULT The appeals court affirmed the dismissal of the complaint. P&G's ads were not misleading.

CRITICAL THINKING QUESTIONS

1. Would you interpret the statement that Aleve is gentler on the stomach than aspirin to mean that it will not cause an ulcer?
2. Why shouldn't advertisers be required to ensure that their ads do not mislead the most gullible consumers?

Testimonials and Mock-ups Testimonials and endorsements in which the person endorsing a product does not, in fact, use or prefer it are considered to be deceptive and therefore in violation of the FTC Act. It is also deceptive for the endorser to imply falsely that he or she has superior knowledge or experience.

In the mid-1960s, the FTC successfully challenged a series of three television commercials for Colgate-Palmolive Company's Rapid Shave shaving cream. Each commercial featured a sandpaper test, in which Rapid Shave was applied to a substance that appeared to be sandpaper, and immediately thereafter a razor was shown shaving the substance clean. Meanwhile, an announcer informed the audience that "[t]o prove Rapid Shave's super-moisturizing power, we put it right from the can onto this tough, dry sandpaper. It was apply . . . soak . . . and off in a stroke." The FTC charged that the commercials were false and deceptive. Evidence disclosed that sandpaper of the type depicted in

the commercials could not be shaved immediately following the application of Rapid Shave but required a soaking period of approximately eighty minutes. The evidence also showed that the substance resembling sandpaper was in fact a simulated prop, or "mock-up," made of plexiglass to which sand had been applied. Ultimately, the U.S. Supreme Court agreed with the FTC and decided that the commercials were unlawfully deceptive.⁸¹

Infomercials

Infomercials, also known as long-form marketing programs or direct response television, are advertisements generally presented in the format of half-hour television talk shows or news programs. Their very format, however, may present problems by blurring the line between advertising

81. *FTC v. Colgate-Palmolive Co.*, 380 U.S. 374 (1965).

and regular television programming.⁸² The next trend in infomercials was the “sitcommercial,” a full-length show resembling a family sitcom. For example, Bell Atlantic filmed “The Ringers,” a sitcom intended to show off and sell telephone equipment.

In response to numerous complaints alleging deceptive advertising in infomercials, the infomercial industry established an internal watchdog agency, the National Infomercial Merchandising Association, in 1990. The association offers guidelines to combat deceptive practices, endorses legitimate infomercial producers, and reports violations to the FTC.

Magnuson–Moss Warranty Act

As noted earlier, an advertisement may create an express warranty. Article 2 provides a buyer of goods with a remedy for a seller’s breach of an express or implied warranty. UCC warranties are discussed in Chapter 8.

In addition to the statutory protections provided by the UCC, the federal government has passed a law that is designed to inform consumers about the products they buy. This law, which applies only when a seller offers a written warranty, is the Magnuson–Moss Warranty Act.⁸³ The Act does not require any seller to provide a written warranty, but if a seller does offer one, the Act requires certain disclosures. In addition, it restricts disclaimers for implied warranties and permits consumers to sue violators of the Act and to recover damages plus costs, including reasonable attorneys’ fees.

A manufacturer or seller offering a written warranty on consumer goods costing more than \$15 must “fully and conspicuously disclose in simple and understandable language the terms and conditions of the warranty.” The FTC has issued various rules relating to this provision, including one that requires consumer notification that some states do not allow certain manufacturer exclusions or limitations. A manufacturer or seller that offers a written warranty on consumer goods costing more than \$10 must also state whether the warranty is full or limited.

Under the Act, for a warranty to be “full,” it must meet the following minimum federal standards. First, a full warranty must give the consumer the right to free repair of the product within a reasonable time or, after a reasonable number of failed attempts to fix the product, permit the customer to elect a full refund or replacement. Second, the warrantor

may not impose any time limit on the warranty’s duration. Lastly, the warrantor may not exclude or limit damages for breach of warranty unless such exclusions are conspicuous on the face of the warranty. Any warranty that does not meet these minimum federal standards must be designated as “limited.”

The Act prohibits sellers offering a written warranty from disclaiming *implied warranties*, such as the implied warranty of merchantability. These implied warranties may be limited to the duration of the written warranty, but then the written warranty must be designated as “limited.” A seller is permitted to disclaim all implied warranties but only if it does not offer any written warranty or service contract at all and sells a product “as is.”

FTC rules allow a seller to establish an informal dispute resolution procedure and to require consumers to use this procedure before filing a lawsuit under the Act. Magnuson–Moss also requires that the warrantor be given an opportunity to remedy its noncompliance before a lawsuit is filed. In *Borowiec v. Gateway 2000, Inc.*, the Illinois Supreme Court held that the Magnuson–Moss Warranty Act does not invalidate arbitration provisions in a written warranty.⁸⁴ A Virginia federal court reached the opposite conclusion.⁸⁵

State Lemon Laws

A majority of states have laws dealing with warranties on new cars and new mobile homes. These *lemon laws* are designed to protect consumers from defective products that cannot be adequately fixed. The statutes vary considerably from state to state, but there are several common features. In general, a new vehicle must conform to the warranty given by the manufacturer. This means that if, after a reasonable number of attempts (usually four), the manufacturer or dealer is unable to remedy a defect that substantially impairs the value of the vehicle, the vehicle must be replaced or the purchase price refunded. Lemon laws also typically require replacement or refund if a new vehicle has been out of service (“in the shop”) for thirty days during the statutory warranty period.

In addition to permitting the revocation of a sales contract, state lemon laws are designed to encourage informal resolution of disputes concerning defective new vehicles. They do this by requiring that a consumer use a manufacturer’s arbitration program before litigating, as long as the manufacturer has established an informal dispute resolution program that complies with FTC regulations. Some states,

85. Browne v. Kline Tysons Imports, Inc., 190 F. Supp. 2d 827 (E.D. Va. 2002).

including New York, have adopted their own standards for these dispute resolution programs.

SALES PRACTICES

A number of state and federal agencies currently regulate sales practices, including the FTC, the FCC, the Postal Service, and the Department of Housing and Urban Development. Their regulations may apply to all industries or be industry specific, such as the FTC's rules for sellers of used cars or state insurance regulations. For example, Prudential Insurance Company of America paid more than \$2.7 billion to settle claims that its agents had engaged in illegal sales tactics, including tricking policyholders into cashing in old policies with accrued cash-surrender value to purchase new expensive ones with no surrender value, making false promises that dividends would build up quickly enough to pay for premiums, and disguising insurance policies as retirement programs.

Sometimes laws of general application can be invoked to protect consumers. For example, a lawyer in Washington, D.C., won two state court judgments totaling \$11.6 million against affiliates of Tele-Communications, Inc. for charging excessive late fees on monthly cable television bills.⁸⁶ He successfully argued that the fees violated the general principle of contract law that damages assessed for breach of contract cannot be disproportionate to the actual harm caused by the breach.

State Deceptive Practices Statutes

Most state consumer protection laws are directed at deceptive trade practices and prohibit sellers from providing false or misleading information to consumers. Although there is considerable variation among state laws, they often provide more stringent protections than federal laws.

UCC Unconscionability Principle

Also on the state level, the Uniform Commercial Code protects consumers from unfair sales practices through the unconscionability principle contained in Section 2-302 of the UCC, as discussed in Chapter 8. This section prohibits the enforcement of any contracts, or contract provisions, for the sale of goods that are so unfair and one-sided that they shock the conscience of the court.

Door-to-Door Sales

Door-to-door sales are initiated and concluded at a buyer's home. They pose special risks because individuals may feel more pressure to buy something from someone standing at

their door, or they may make a purchase just to get rid of a persistent salesperson. As a result, the FTC has mandated a three-day cooling-off period during which a consumer may rescind a door-to-door purchase. Under FTC rules, the seller must also notify a buyer of the right to cancel. Laws in some states provide longer periods during which consumers can cancel a sale.

Referral Sales and Pyramid Sales

A number of states have enacted legislation restricting referral and pyramid sales. In a *referral sale*, the seller offers the buyer a commission, rebate, or discount for furnishing the seller with a list of additional prospective customers. The discount, however, is usually contingent on the seller actually making later sales to the prospects provided by the original customer. In a *pyramid selling* scheme, a consumer is recruited as a product "distributor" and receives commissions based on the products he or she sells and on the recruitment of additional sellers (or even receives commissions on the sales of the recruits). The problem with both referral and pyramid sales is that unless the buyer or "distributor" becomes involved early in the chain, the supply of prospective recruits is quickly exhausted.

Telemarketing

As discussed in Chapter 9, aggressive telemarketing sales practices, particularly the use of autodialers and "900" telephone numbers, have prompted congressional intervention. In addition, state securities commissioners and the FTC continue to fight investment-related telemarketing fraud ranging from ostrich ranching in Idaho to digital fingerprint identification in Indiana and worthless oil and gas programs in Kentucky.

Mail-Order Sales

Unscrupulous mail-order sales practices have led to a high incidence of consumer complaints with resultant state and federal regulation. Sellers must respond to consumer mail orders by shipping merchandise or offering refunds within a reasonable time. Unsolicited or unordered merchandise sent by U.S. mail may be kept or disposed of by the recipient without incurring any obligation to the sender. Book and record clubs are generally legal as long as they comply with state law provisions requiring sellers to provide consumers with forms or announcement cards that the consumer may use to instruct the seller not to send the offered merchandise. The U.S. Postal Service has authority to assess criminal and civil penalties for fraudulent mail schemes that injure consumers.

86. Eben Shapiro, *Attorney Finds a Way to Battle Bills' Late Fees*, WALL ST. J., Oct. 6, 1997, at B1.

Industry-Specific Sales Practices

Since the early 1980s, the FTC has become more involved in regulating the sales practices of specific industries. For example, in 1985 the FTC began to require used-car sellers to affix a Buyer's Guide label to the cars that they sell.⁸⁷ The Buyer's Guide is intended to disclose to potential buyers information about the car's warranty and any service contract provided by the dealer. If the car is sold without a warranty, the label must state that the car is being sold "as is."

A related and well-developed area of state and federal consumer law concerns restrictions on tampering with car odometers. Consumers purchasing a motor vehicle rely heavily on odometer readings as an indication of a car's safety and reliability. The Motor Vehicle Information and Cost Savings Act⁸⁸ makes it a crime to change car odometers.

On the state level, industry-specific regulation covers the insurance industry. State insurance commissioners both establish regulations regarding the disclosure of information to prospective policyholders and set maximum rates within a state.

Real Estate Sales

A number of state and federal laws, including the Federal Real Estate Settlement Procedures Act⁸⁹ and the Interstate Land Sales Full Disclosure Act,⁹⁰ protect consumers in real estate transactions. Certain disclosure requirements of the Truth-in-Lending Act apply to real estate credit transactions as well. In some transactions, real estate buyers have the right to cancel the purchase contract if certain information is not disclosed to them or if other procedures are not properly followed.

The Real Estate Settlement Procedures Act and revisions made to it in 1976 are designed to assist home buyers by requiring disclosure of any requirements for settlement proceedings, which may include title insurance, taxes, and fees for attorneys, appraisers, and brokers. In general, lenders must give an estimate of settlement costs, identify service providers the applicant is required to use, and provide a statement showing the annual percentage rate for the mortgage.

In response to fraudulent practices used in the sale of subdivided land for investment purposes or for second or retirement homes, Congress passed the Interstate Land Sales Full Disclosure Act in 1968. It is administered by the secretary of the Department of Housing and Urban

Development (HUD). Under the Act, the secretary created the Office of Interstate Land Sales Registration and imposed federal disclosure requirements on the sale of 100 or more lots of undeveloped subdivided land akin to those required for the offer of securities under the Securities Act of 1933. The Act gives the secretary of HUD the power to bring suit in federal district court to enjoin sales by developers who have not registered in accordance with the Act. Purchasers affected by a promoter's wrongdoing have a private cause of action and may cancel the purchase contract.

STATE OCCUPATIONAL LICENSING

State departments of consumer affairs protect the public by examining and licensing firms and individuals who possess the necessary education and demonstrated skills to perform their services competently. Among the occupations generally regulated are accountants, architects, barbers, contractors, cosmetologists, dentists, dry cleaners, marriage counselors, nurses, pharmacists, physical therapists, physicians, and social workers. Attorneys are regulated by state bar associations and the courts. As noted in Chapter 7, any person required to be licensed who is in fact not licensed cannot enforce a promise to pay for unlicensed work. State departments of consumer affairs also investigate and resolve consumer complaints and hold public hearings involving consumer matters.

CONSUMER CREDIT AND THE CONSUMER CREDIT PROTECTION ACT

Because credit plays an important role in many consumer transactions, a number of consumer protection laws address this area. Federal consumer credit law can be confusing because many of the acts have similar names. These complex acts and regulations are all part of the lengthy Consumer Credit Protection Act (CCPA),⁹¹ which was initially passed by Congress in 1968. Since 1968, several additional acts (or titles) have been added to the original legislation. Exhibit 18.2 provides an overview of the CCPA and indicates the provisions that are omitted from the discussion in this chapter.

Consumer Credit Protection Act (CCPA)

Title	Consumer Credit Protection Act
I.	Truth-in-Lending Act (TILA) Chapter 1: General Provisions [omitted] Chapter 2: Credit Transactions Chapter 3: Credit Advertising Chapter 4: Fair Credit Billing Act Chapter 5: Consumer Leasing Act [omitted]
II.	Extortionate Credit Transactions
III.	Restrictions on Garnishment
IV.	National Commission on Consumer Finance [omitted]
V.	General Provisions [omitted]
VI.	Fair Credit Reporting Act
VII.	Equal Credit Opportunity Act
VIII.	Fair Debt Collection Practices Act
IX.	Electronic Fund Transfer Act

TRUTH-IN-LENDING ACT

Title I, the Truth-in-Lending Act (TILA), is intended “to assure a meaningful disclosure of credit terms so that the consumer will be able to compare more readily the various credit terms available and avoid the uninformed use of credit, and to protect the consumer against inaccurate and unfair credit billing and credit card practices.”⁹² In particular, the Act makes uniform the actuarial method for determining the rate of charge for consumer credit and requires certain disclosures. It is not a *usury statute*, however, and does not set maximum interest rates. TILA applies only to credit transactions between creditors and individual consumers, not to credit transactions between two consumers. Typical transactions covered by TILA include car loans, student loans, and home improvement loans; credit cards (such as Visa and MasterCard), which permit deferred payment over a period of time; charge cards (such as American Express), which require payment of the full balance upon receipt of the bill; and certain real estate loans in which the amount financed is less than \$25,000.

Congress directed the Federal Reserve Board to issue regulations for the enforcement and interpretation of TILA. To that end, the Federal Reserve has produced model disclosure forms for use with credit sales and loans. The two most important terms in a TILA disclosure statement are the *finance charge* (interest over the life of the loan expressed as a dollar amount) and the annual percentage rate (interest

expressed as a percentage), which are both defined in the Federal Reserve Board’s *Regulation Z*.⁹³ Regulation Z also contains provisions dealing with disclosure of the terms of any credit or mortgage insurance offered in connection with a loan.

Regulation Z requires marketing materials for credit cards to prominently display a table that clearly states the annual percentage rate and other critical information (including the annual fee). The annual percentage rate for purchases and the variable rate information, grace period, minimum finance charge, method of computing the balance, cash advance fees, and over-limit fees, as well as any other fees that vary by state, must be printed in a box in at least eighteen-point type to prevent information from being hidden in the “fine print.” In addition, the overall disclosure statement must be printed in at least twelve-point type and be in a reasonably understandable form.⁹⁴

TILA draws a distinction between open-end credit and closed-end credit. *Open-end credit* occurs when the parties intend the creditor to make repeated extensions of credit (for example, Visa or MasterCard); *closed-end credit* involves only one transaction (for example, a car or house loan). Open-end consumer credit plans must make certain disclosures at three separate times: (1) in an initial disclosure statement when the account is opened, (2) in subsequent periodic billing statements, and (3) annually when a consumer must be notified of his or her rights under the Fair Credit Billing Act. In general, the required information includes finance and other charges, security interests (collateral), previous balance and credits, identification of transactions, closing date and new balance, and annual percentage rates and period rates.

Closed-end credit plans require disclosure of at least the following for each transaction: identity of creditor, amount financed, finance charge, annual percentage rate, variable rate, payment schedule, total of payments, total sale price, prepayment provisions, late payment fee, security interest, credit insurance, loan assumption policy, and required deposit. Special rules apply for certain residential mortgages and adjustable rate transactions.

In 2000, the FTC settled a claim against providers of short-term, high-interest-rate “payday loans” for alleged violations of TILA and the FTC’s Telemarketing Sales Rule.⁹⁵ Two companies used direct mail and telemarketing to market the MoneyMarketCard. They offered consumers,

94. *Fed Issues Final Regulation Under TILA Requiring New Clarity for Card Disclosures*, 69 U.S.L.W. 2200 (2000).

95. FTC v. Consumer Money Mkts., Inc., No. CVS001071 (D. Nev. Sept. 6, 2000).

regardless of their credit history, a credit line of \$5,500 at a 14.99 percent interest rate. After consumers paid \$149 to \$169 to receive the MoneyMarketCard, they discovered that they could use the credit only to buy items from one of the company's catalogs and that the cash advance privileges were short-term payday loans of \$20 to \$40 with annual interest rates of 360 percent or more. The FTC alleged that although the companies collected membership fees of more than \$12 million between 1996 and 1999, less than 8 percent of the customers ever purchased even one catalog product or took out a cash loan. The settlement required the companies to stop their deceptive practices, disgorge \$350,000 received from consumers, and forgive \$1.6 million in outstanding consumer debts.

Consumers can be required to arbitrate their claims if they agreed to do so when applying for or procuring credit and are not forced to relinquish statutorily protected rights. For example, in 2000, a federal district court in Illinois ruled that a claim that a lender's consumer loan agreement violated TILA for failing to disclose the annual percentage rate, finance charge, and financing costs for rollover loans was subject to mandatory arbitration.⁹⁶ The loan agreement stated that any dispute regarding the loan was subject to arbitration. The court rejected the borrowers' argument that TILA gave them a statutory right to seek relief through a class action.⁹⁷

TILA limits the liability of credit cardholders to \$50 per card for unauthorized charges made before a card issuer is notified that the card has been lost or stolen. Once a card issuer has been notified, a cardholder incurs no liability from unauthorized use. In addition, a credit or charge card company cannot bill a consumer for unauthorized charges if the card was improperly issued by the card company.

Home Equity Lending Plans, Subprime Mortgages, and Predatory Lending

TILA provides specific protections for consumers who use their home as collateral for a second mortgage or an open-end line of credit. Because losing one's home has such significant consequences, Congress felt special disclosure requirements were in order. TILA provides consumers a *right of rescission* (that is, a right to cancel the contract) whenever their home is used as collateral except for original construction or acquisition. These cancellation rights

96. Thompson v. Ill. Title Loans, Inc., 2000 U.S. Dist. LEXIS 232 (N.D. Ill. Jan. 6, 2000).

97. *Contra Lozada v. Dale Baker Oldsmobile*, 91 F. Supp. 2d 1087 (W.D. Mich. 2000) (refusing to enforce a mandatory arbitration clause in a car purchasing agreement that required the purchaser to waive TILA's right to bring a class action).

are generally available for three days if all procedures are properly followed by the lender, three years if they are not. TILA also mandates disclosure of up-front costs, repayment schedules, and the annual percentage rate and its method of calculation.

Predatory lending involves mortgage loans secured by the borrower's house that are made at subprime interest rates to borrowers who often lack the ability to repay them. These loans tend to be concentrated in low-income communities and to be used for consumer debt rather than housing purposes. Because the loans are often based solely on the homeowner's equity in the home, without regard to the borrower's income and thus his or her ability to repay the loan, foreclosures are common. Although subprime lending has enabled many Americans with modest incomes and poor credit histories to buy homes, these loans have cost thousands of borrowers their homes and brought others near the brink of financial ruin. In 2004, the Federal Reserve Board fined Citigroup a record \$75 million for violating regulations against predatory lending practices.

A 2007 study by researchers at New York University found that home buyers in predominantly black and Hispanic neighborhoods in New York City were more likely to get their mortgages from a subprime lender than home buyers in white neighborhoods. According to NYU's Furman Center for Real Estate and Urban Policy, this disparity held true even when median income levels were comparable.⁹⁸ This study confirmed the suspicion that certain mortgage brokers offering subprime mortgages worked only in certain neighborhoods or tended to offer white borrowers better rates than equally qualified African American or Hispanic customers.

The NAACP (National Association for the Advancement of Colored People) filed a lawsuit in federal court in Los Angeles in 2007 against twelve major mortgage lenders, accusing the companies of targeting African American

98. Manny Fernandez, *Study Finds Disparities in Mortgages by Race*, N.Y. TIMES, Oct. 15, 2007.

► ETHICAL CONSIDERATION

Should businesses serving communities with a large non-English-speaking population provide written translations of written documents? Should businesses provide oral translations, perhaps on voice recording cassettes, of important terms in consumer transactions, such as home equity loans and door-to-door sales, so that consumers who have difficulty reading English can understand what the transaction entails?

borrowers for subprime loans. In July 2008, the Federal Reserve Board revised Regulation Z to add rules designed to protect mortgage customers from predatory lending practices and “higher-priced” mortgages and to discourage pre-payment penalties. These rules were due to take effect on October 1, 2009.

Credit Advertising

TILA includes specific provisions that regulate credit advertising. The idea behind these provisions is that consumers equipped with complete and accurate credit information will be able to find the best terms. Regulation Z requires that any advertised specific credit terms actually be available and that any credit terms (for example, the finance charge or annual percentage rate) mentioned in the advertisement be explained fully. The FTC enforces the advertising provisions of Regulation Z. For example, all credit card advertising must have a “Schumer Box” (named after the New York Senator who championed the regulation) that contains all basic credit card information. Unlike the other sections of TILA, this provision does not give consumers a private cause of action to sue credit advertisers directly. On September 14, 2004, the Office of the Comptroller of the Currency issued an advisory letter to national banks, which warned against (1) increasing the cost of credit to the cardholder without disclosing fully and prominently in promotional materials the circumstances under which the credit card agreement permits the bank to increase the consumer’s annual percentage rate (APR), increase fees, or otherwise increase the cost of credit; (2) failing to disclose fully and prominently the bank’s unilateral right to change the APR, fees, or other terms; (3) promoting credit limits up to a maximum amount that is seldom extended; or (4) advertising possible uses of the card when the initial available credit line is unlikely to cover such purchases.⁹⁹

Credit Billing

The Fair Credit Billing Act requires creditors, such as credit card companies, to respond to consumer complaints with an acknowledgment of the complaint, followed by a reasonable investigation to determine whether the complaint is justified. Companies cannot evade this requirement by canceling a cardholder’s account.

For example, in 1982, American Express Company canceled a cardholder’s account during a dispute about incorrect billings. American Express argued that its contract with the cardholder allowed it to revoke a credit card at any time

99. The OCC Advisory Letter (AL 2004-10) is available at <http://www.occ.treas.gov/ftp/advisory/2004-10.txt>.

for any reason, but the U.S. Court of Appeals for the District of Columbia ruled that the Fair Credit Billing Act’s protections could not be waived.¹⁰⁰ As the court explained:

The rationale of consumer protection legislation is to even out the inequalities that consumers normally bring to the bargain. To allow such protection to be waived by boiler plate language of the contract puts the legislative process to a foolish and unproductive task. A court ought not impute such nonsense to a Congress intent on correcting abuses in the market place.

Hence, the Fair Credit Billing Act protected the cardmember from the revocation of his account despite the provisions of the Cardmember Agreement purporting to permit American Express to cancel the account at any time.

EXTORTIONATE CREDIT TRANSACTIONS

The CCPA prohibits any *extortionate extension of credit*, that is, the extension of credit where the parties expect non-payment to result in bodily harm.

RESTRICTIONS ON GARNISHMENT

Garnishment is the legal procedure by which a creditor may collect a debt by attaching a portion of the debtor’s weekly wages. The CCPA restricts the amount of a debtor’s wages that is available for garnishment to the lesser of (1) 25 percent of the “disposable earnings” for that week (defined by the Act as the amount remaining after deductions required by law) or (2) the amount by which “disposable earnings” for that week exceed thirty times the current federal minimum hourly wage. The secretary of labor enforces the provisions of this title. Some states prohibit garnishment of wages altogether.

FAIR CREDIT REPORTING ACT

Almost everyone over the age of eighteen has a credit report on file somewhere. Lenders look to these various reporting agencies for information on an individual’s creditworthiness. Because negative information in a credit report can make obtaining credit considerably more difficult, it is important for consumers to be able to access these credit reports and to correct any false information before it is reported to lenders or shared with another reporting agency’s computer.

Under the Fair Credit Reporting Act of 1970 (FCRA), as amended by the Fair and Accurate Credit Transactions Act of 2003 (FACT Act), consumers can request all information

100. *Gray v. Am. Express Co.*, 743 F.2d 10 (D.C. Cir. 1984).

(except medical information) on themselves, the source of the information, and any recent recipients of a report. The FCRA also gives consumers a right to have corrected copies of their credit reports sent to creditors. The FTC has the primary responsibility for the enforcement of the FCRA.

Credit bureaus must investigate disputed information in credit reports and resolve consumer complaints within thirty days. They must give consumers written notice of the results of the investigation within five days after it is completed. The credit-reporting agency must go beyond the original source of information to determine whether it is accurate. Thus, when a consumer notified the agency that she had never held the credit cards her report showed as being delinquent, the agency could not just rely on the credit card companies' statements that the applications for the cards had the correct information. Instead, the agency should have checked the handwriting on the credit applications and determined whether the applications were obtained by fraud.¹⁰¹

When a consumer tells a credit-reporting agency that he or she disputes a charge, the agency is required to notify the furnisher of the information that the information provided is in dispute. The creditor must then conduct a "reasonable" investigation and review all relevant information to determine whether it is accurate.¹⁰² Any finding that information is inaccurate or incomplete must be reported to all national credit bureaus. Under certain circumstances, consumers can require the firm that furnished disputed information to the credit bureau to reinvestigate the accuracy of the information it passed on to the bureau. A furnisher is liable for providing inaccurate information if it "knows or has reasonable cause to believe that the information is inaccurate."¹⁰³

As noted in Chapter 9, the FACT Act gave consumers new tools to fight identity theft and to correct erroneous information resulting from the fraudulent use of credit cards and accounts. The FACT Act does not, however, contain an express private cause of action for consumers harmed by erroneous credit reports.

The FCRA also contains restrictions on *investigative consumer reporting*, that is, reports that contain information on character and reputation, not just credit history. In most cases, a consumer must be notified in writing that such a report may be made. This requirement applies to potential or current employers as well.

Before asking a credit bureau or private investigator for a report on a credit applicant or employee, the lender or employer must notify the individual in writing that a report

may be used and obtain the individual's consent. Neither a lender nor an employer may rely on a credit or investigative consumer report to take adverse action (including denying credit or denying a job applicant a position, reassigning or terminating an employee, or denying a promotion), unless it first provides the individual with a "pre-adverse action disclosure," which includes a copy of the report and the FTC's "A Summary of Your Rights Under the Fair Credit Reporting Act." Lenders and employers who fail to obtain permission before requesting a credit or investigative report or to provide the pre-adverse action disclosures are subject to suits for damages (including punitive damages for deliberate violations) by individuals and civil penalties by the FTC.

After a lender or an employer has taken adverse action, it must give the individual notice—orally, in writing, or electronically—that the action has been taken. The notice must include (1) the name, address, and phone number of the credit bureau or private investigator that supplied the report; (2) a statement that the credit bureau or investigator did not make the decision to take adverse action and cannot give specific reasons for it; and (3) a notice of the individual's right to dispute the accuracy or completeness of any information the bureau or investigator furnished and the individual's right upon request to an additional free report from the credit bureau or investigator within sixty days.

Lenders that use risk-based pricing must provide notices to consumers who receive loans on "material terms that are materially less favorable than the most favorable terms available to a substantial portion of consumers . . . based in whole or in part on a consumer report."¹⁰⁴

EQUAL CREDIT OPPORTUNITY ACT

The Equal Credit Opportunity Act was originally intended to address the difficulty many women faced in obtaining credit, but it has since been expanded to prohibit discrimination against credit applicants on many other grounds. The current list of protected categories includes gender, marital status, race, color, religion, national origin, and age (except that older applicants may be given favorable treatment). The Act also prohibits discrimination against applicants who derive their income from public assistance or have exercised in good faith any right under the CCPA. The FACT Act generally prohibits lenders from using medical information about a consumer as a factor in decisions about credit eligibility.

Unlike most of the other lending acts discussed in this chapter, the Equal Credit Opportunity Act applies to business credit as well as consumer credit. In general, the rejection of

102. Johnson v. MBNA Am. Bank NA, 357 F.3d 426 (4th Cir. 2004).

103. FACT Act § 312 (b).

104. FACT Act § 311.

► ETHICAL CONSIDERATION

Is it ethical for a lender to call a friend in the police department to see whether a loan applicant has a criminal record? Should the applicant be notified of that investigation?

an application for credit triggers the Act and various compliance steps, which include written notification of the reasons for denial. The regulations also establish methods for evaluating the creditworthiness of an applicant.

FAIR DEBT COLLECTION PRACTICES ACT

The Fair Debt Collection Practices Act (FDCPA), which is enforced by the FTC, regulates debt collectors and debt collection practices and provides a civil remedy for anyone injured by a violation of the statute. In general, FTC guidelines require collectors to tell the truth and not to use any deceptive means to collect a debt or locate a debtor. For example, a collector sending a dunning letter must state very clearly and explicitly the amount owed.

The Act covers only third-party debt collectors (for example, collection agencies) or someone pretending to be a third-party collector. First-party debt collectors (for example, retail store collection departments) are not covered, although the FTC can reach these collectors under its duty to address “unfair and deceptive trade practices” under Section 5 of the Federal Trade Commission Act. The U.S. Court of Appeals for the Second Circuit held that a letter from an attorney for a landlord demanding that a tenant pay back rent within three days or face eviction was

► ETHICAL CONSIDERATION

The FDCPA specifically forbids a debt collector to engage in certain practices, including contacting a debtor directly at any time if that debtor is represented by an attorney. What self-imposed limits, if any, might a debt collector adopt, and what role should a debtor's personal circumstances (for example, unemployment or terminal illness) play in how aggressive a debt collector chooses to be?

subject to the FDCPA.¹⁰⁵ The court held that past due rent is a debt and that the lawyer's letter was a debt collection “communication” within the meaning of the statute.

People who write bad checks for goods and services are also protected from abusive debt collection practices by the FDCPA. The U.S. Courts of Appeals for the Seventh,¹⁰⁶ Eighth,¹⁰⁷ and Ninth Circuits¹⁰⁸ have each held that the payment obligation that arises from a bounced check is a “debt” within the meaning of the Act even though the transaction did not involve an offer or extension of credit.

As the following case illustrates, debt collectors have serious obligations when attempting to collect a debt.

A CASE IN POINT

CASE 18.3

CHUWAY V. NATIONAL ACTION FINANCIAL SERVICES INC.

UNITED STATES COURT OF APPEALS
FOR THE SEVENTH CIRCUIT
362 F.3d 944
(7TH CIR. 2004).

IN THE LANGUAGE OF THE COURT

FACTS Caldean Chuway received a letter from National Action Financial Services (NAFS), on behalf of a credit card company, stating that Chuway owed \$367.42 to the card company. The letter notified Chuway that the account had been “assigned to our agency for collection.” It went on to instruct the debtor, “Please remit the balance listed above in the return envelope provided.” The letter further stated, “[T]o obtain your most current balance information, please call 1-800-916-9006. Our friendly and experienced representatives will be glad to assist you and answer any questions you may have.” Chuway found the letter confusing. She was not sure whether the amount stated in the letter (\$367.42) was the actual amount being sought or whether she needed to call NAFS for current balance information. She claimed that the letter violated the Fair Debt Collection Practices Act.

ISSUE PRESENTED Does a dunning letter violate the FDCPA by stating an exact amount of debt owed, when that statement is followed by a message calling into question the current debt owed?

CONTINUED

OPINION POSNER, C.J., writing for the U.S. Court of Appeals for the Seventh Circuit:

The Fair Debt Collection Practices Act requires that any dunning letter by a debt collector as defined by the Act state "the amount of the debt" that the debt collector is trying to collect.

[I]f the letter had stopped after the "Please remit" sentence, the defendant would be in the clear. But the letter didn't stop there. It went on to instruct the recipient on how to obtain "your most current balance information." If this means that the defendant was dunning her for something more than \$367.42, it's in trouble because the "something more" is not quantified.

It is not enough that the dunning letter state the amount of the debt that is due. It must state it clearly enough that the recipient is likely to understand it. Otherwise the collection agency could write the letter in Hittite and have a secure defense. The defendant concedes the principle but insists that to withstand summary judgment the plaintiff must always submit a survey or some other form of systematic empirical evidence demonstrating the propensity of the letter to confuse. There is no basis for so flat a rule. If it is apparent just from reading the letter that it is unclear . . . and the plaintiff testifies credibly that she was indeed confused and that . . . she is representative of the type of people who received that or a similar letter, no further evidence is necessary to create a triable issue.

No survey was conducted here, but the entire bench was confused about the meaning of the letter until the defendant's lawyer explained it to us at the oral argument, and our confusion, coupled with the plaintiff's affidavit in which she plausibly attested that she had been confused by the letter, is enough to satisfy her burden of proof.

Our conclusion does not place debt collectors on a razor's edge, where if they say too little they violate the Act by failing to disclose the amount of the debt they are trying to collect and if they say too much they violate the Act by confusing the consumer. If the debt collector is trying to collect only the amount due on the date the letter is sent, then he complies with the Act by stating the "balance" due, stating that the creditor "has assigned your delinquent account to our agency for collection," and asking the recipient to remit the balance listed—and stopping there, without talk of the "current" balance. If, instead, the debt collector is trying to collect the listed balance plus the interest running on it or other charges, he should use the safe-harbor language of *Miller*:¹⁰⁹ "As of the date of this letter, you owe \$____ [the exact amount due]. Because of interest, late charges, and other charges that may vary from day to day, the amount due on the day you pay may be greater. Hence, if you pay the amount shown above, an adjustment may be necessary after we receive your check, in which event we will inform you before depositing the check for collection. For further information, write the undersigned or call 1-800-[phone number]."

RESULT The appeals court ordered judgment for the plaintiff and remanded the case to the trial court for the computation of statutory damages, costs, and attorneys' fees.

CRITICAL THINKING QUESTIONS

1. Would you have understood the meaning of the dunning letter?
2. Does Chief Judge Posner have the requisite knowledge to explain to NAFS, a business designed specifically to collect debts, how to do so?

109. *Miller v. McCalla, Raymer, Padrick, Cobb, Nicholas & Clark, L.L.C.*, 214 F.3d 872, 875 (7th Cir. 2000).

ELECTRONIC FUND TRANSFER ACT: DEBIT CARDS AND PREAUTHORIZED FUND TRANSFERS

The Electronic Fund Transfer Act, passed by Congress in 1978, covers online debit cards issued by banks for use with automatic teller machines (ATMs) and point-of-sale transactions, as well as preauthorized electronic fund transfers or automatic payments from a consumer's account. As with credit cards, banks are prohibited from sending out debit cards except in response to a consumer's request.

The Federal Reserve Board has issued regulations and model forms for banks to use to satisfy disclosure requirements under the Act. In general, the Federal Reserve forms ensure disclosure of contract terms, potential customer liability for unauthorized use (as with credit cards, customer liability is usually limited to no more than \$50), and consumer complaint procedures. Banks are also required to issue receipts with every ATM transaction and to mail periodic statements showing electronic fund transfer activity on a consumer's account during the period. For preauthorized transfers or automatic payments, banks are required to provide either (1) written or oral notice within two days of the scheduled transaction date that the transaction did or did not occur or (2) a telephone line for consumers to call and ascertain whether the transfer occurred. Most financial institutions have adopted the latter approach.

Online debit cards are usually PIN-protected; that is, cash cannot be withdrawn from an ATM and a deduction cannot be made at a point-of-sale terminal unless the holder uses a personal identification number (PIN). In contrast, off-line debit cards (which may bear the Visa or MasterCard logo) have the characteristics of both an ATM card and a credit card, and they can be used without a PIN. For example, the holder of an off-line debit card

can authorize a deduction from his or her bank account by signing a charge slip at a restaurant. Visa and MasterCard voluntarily agreed to impose a \$50 cap on liability for their off-line debit cards.

STATE LAWS REGULATING CONSUMER CREDIT

All states have statutes regulating consumer credit. Two types of consumer credit transactions are addressed primarily at the state level: installment sales and loans to consumers. State statutes vary widely, and an attempt to create uniform state laws on consumer credit through adoption of the Uniform Consumer Credit Code (UCCC, called the U-Triple C) has been largely unsuccessful. The UCCC is intended to replace a state's consumer credit laws, including those that regulate usury, installment sales, consumer loans, truth in lending, and garnishment. The UCCC has been adopted by only a handful of states, and in each of those it has been so significantly altered that little uniformity remains. Exhibit 18.3 summarizes common provisions in state credit laws.

Credit card companies have found a way around particularly stringent state credit card fee limits and usury laws by moving their operations to states with more lax laws. The Supreme Court ruled that the usury laws of the state in which the card company is located apply.¹¹⁰ Thus, a bank with credit card operations in a state that permits high rates, such as South Dakota or Delaware, can charge a resident of Massachusetts the high rates of interest and fees permitted in the state of operation even though they are in excess of the Massachusetts limits.

110. *Marquette Nat'l Bank of Minneapolis v. First of Omaha Serv. Corp.*, 439 U.S. 299 (1978).

EXHIBIT 18.3

State Credit Laws

Area Law Covers	Examples	Primary Goals
Installment sales	Legal interest rates, late charges, deferral charges, and other permissible charges	Place caps on late charges and limit remedies, attorney's fees, and rights to assign sales contract
Consumer loans	Mortgages and private loans	Set maximum permissible interest rate, with exceptions available for special license holders
Credit cards	Credit card repayment rates, credit card fees	Stop exploitation by credit card companies

International Recycling and Chemical Safety Standards

Although the United States initially set the standard for consumer and environmental protection, the European Union (EU) is increasingly replacing America as the leader in environmental and chemical policy development.¹¹¹ Three recent environmental policies, including two directives and one regulation, are being implemented in the twenty-seven member states that comprise the European Union.

The first directive, WEEE,¹¹² is intended to increase the recovery and recycling of electrical and electronic equipment. The second, RoHS,¹¹³ outlines restrictions on the use of certain hazardous substances in the production of such equipment. These measures, adopted in February 2003, require manufacturers to dispose of consumers' used electronic equipment free of charge and prohibit the export of hazardous waste to developing countries outside the EU for disposal.

Unlike American policy, these measures demand significant producer accountability, placing the burden of environmental responsibility entirely on the manufacturer. European producers are now required to finance the recycling, reprocessing, and safe disposal of regulated equipment and its components. Advocates of the policies hope that these requirements will provide substantial incentives for producers to design environmentally friendly electrical and electronic equipment and to consider waste management while designing new products. In the past, public authorities, not private manufacturers, were responsible for both waste management and the risk assessment of chemicals.

The WEEE directive regulates the production of products in ten different categories, including large household appliances, small household appliances, information

technology and telecommunications equipment, consumer equipment, lighting equipment, electrical and electronic tools, toys and leisure and sports equipment, medical devices, monitoring and control instruments, and automatic dispensers. The RoHS directive overlaps and supplements the WEEE directive, limiting the use of six toxic substances in eight of the ten product categories addressed by WEEE. These substances include four heavy metals (lead, mercury, cadmium, and hexavalent chromium) and two chemicals (PBB and PBDE), all of which are common in electrical and electronic goods produced in Europe and around the world. Each EU state is expected to design its own implementation system to enforce these directives.

In January 2007, the European Union adopted a third chemical regulation, REACH (registration, evaluation, and authorization of chemicals). Perhaps the world's most strict and rigorous policy on potentially hazardous chemical substances, this initiative requires registration and evaluation of more than 30,000 existing chemical substances and of any new ones that may be developed. At present, there is little information available on most of the tens of thousands of chemicals used in existing products. REACH is designed to yield data on these chemicals, particularly in the areas of emissions, toxicity, the ecosystem, and effect on human health. For the first time, producers will be required to present risk assessment data for every new substance before introducing it to the market. The technical, scientific, and administrative aspects of REACH are to be managed by the recently established European Chemicals Agency located in Helsinki, Finland.¹¹⁴

Extensive negotiations among the European Commission, the European Council, and the European Parliament led to the development of these three policy initiatives. These governmental entities developed these policies with input from concerned lobbyists representing private-sector and civil society groups, and the EU adopted the three initiatives notwithstanding significant resistance from organized industry in Europe and abroad.

CONTINUED

Since the adoption of these regulations, the member states of the EU have attempted to translate the broad directives into concrete national legislation. A number of EU countries had adopted domestic electronics waste legislation before 2003 and needed only to make limited additions. Germany, the Netherlands, Denmark, and Sweden pioneered much of the EU's policy on substantial producer responsibility; officials in these countries labored to "trade up" their strict regulations to the EU level. For many other countries, however, the implementation of these directives required a massive overhaul of domestic legislation. Certain countries, including the United Kingdom, have been slower than others in translating the new EU legislation into domestic law.¹¹⁵

Opponents of the new legislation expressed concerns about the economic costs to individual firms and consumers as well as potentially adverse implications for international trade and jobs. The European Commission estimated that REACH alone would cost the chemical industry 2.1 billion euros over eleven years.¹¹⁶ Industry-commissioned studies predicted more than two million lost jobs and a 6 percent reduction in German GDP alone.

Major chemical companies, including Bayer and Shell Chemicals, argued that the economic burden of enforcement would threaten their competitiveness. According to the Environmental Data Services (ENDS), REACH "attracted more hostility from industry than any other item of EU environmental legislation in 30 years."¹¹⁷

Roughly one in fourteen people in the world lives in the European Union, which boasts an economy of \$11 trillion and a population of 485 million.¹¹⁸ Given that

almost all multinational companies operate or sell their products in the EU, these new regulatory standards will almost certainly have significant implications for international trade. Firms operating in the United States and in Asia must comply with EU product rules and standards in order to sell their products in Europe.

In recent years, Asian countries have responded favorably to the new European policies. China and South Korea are already developing legislation inspired by WEEE and RoHS. Japanese environmental legislation tends to follow Europe's lead, so Japan is also likely to look to the EU for further policy guidance on effective chemical waste management.

Substantial opposition to these regulations continues to come from the United States, however. Many American companies criticized the EU's invocation of the precautionary principle to justify its identification and assessment of risks. The *precautionary principle* provides guidance for protecting public health and the environment in the face of uncertain risks and stipulates that the absence of full scientific certainty shall not be used as a reason to postpone measures where there is a risk of serious or irreversible harm to public health or the environment.¹¹⁹ Critics argue that the EU has stifled scientific and industrial innovation and ignored the basic reality that a certain amount of risk is unavoidable in industry and in everyday life. Many in the U.S. government and industry have also expressed concern about the potential costs (estimated to be in the billions of dollars) and jobs lost as a result of compliance with these strict regulations.

It is too early to tell whether the concept of extended producer responsibility will spread beyond the borders of the European Union. Nevertheless, these standards are certainly drawing attention from policymakers, regulators, industry leaders, and environmentalists around the globe. In an increasingly interdependent world, it is likely that the EU's new policies will push many global standards upward.

THE RESPONSIBLE MANAGER

COMPLYING WITH CONSUMER PROTECTION LAWS

Managers have a responsibility to make sure that current and potential customers are treated fairly and in a manner that will not subject them to economic or physical injury. Supervisors must take steps to ensure that employees are aware of, and in compliance with, various federal and state consumer protection regulations. Because both managers and employees can be held legally accountable for their actions (and criminally liable in some cases), specific procedures should be in place to educate employees about important consumer law topics.

In a competitive marketplace, managers often feel the need to be aggressive in their advertising of products or services. Nonetheless, managers must refrain from making claims that may be deceptive or false. The FTC and state attorneys general aggressively pursue companies that make false advertising claims. Remedies can include civil damages and corrective advertising campaigns, which can cost millions of dollars.

Consider Volvo's ill-fated "Bear Foot" advertising campaign in 1990, which almost destroyed thirty years of consistent brand messaging that equated Volvo with safety. The ad showed a Volvo suffering no damage after being driven over by a monster truck. The ad failed to disclose, however, that the internal structure of the Volvo had been reinforced and that the pillars in competing cars had been weakened for the commercial. According to five-time Clio award winner Mike Moser, "When people found out that the demonstration was rigged, the credibility of the brand was suddenly on shaky ground. People had bought into safety's being a core value of Volvo. . . . These same people didn't want to hear that Volvo didn't believe its own demonstration."¹²⁰

The attorney general of Texas called the Volvo ads "a hoax and a sham"¹²¹ and fined Volvo and its ad agency,

Scali, McCabe, Sloves, \$150,000 each for deceptive advertising. Volvo withdrew the spots and ran corrective ads in nineteen Texas newspapers, *USA Today*, and *The Wall Street Journal*. One month later, Scali, McCabe, Sloves resigned from the Volvo account. The incident cost the agency \$40 million in annual revenues and the jobs of thirty-five to fifty staffers.¹²²

Business leaders should not be satisfied merely to meet minimum government standards. Mere compliance may not be sufficient to release a manager or his or her company from liability when the manager has superior product information and should have taken additional precautions. Managers whose companies extend credit to customers need to be aware that many discriminatory practices in the extension of credit are illegal under the Equal Credit Opportunity Act. Some states also prohibit discrimination in credit based on sexual orientation.

Legally astute managers embrace the opportunity to self-regulate or, at least, work closely with a regulatory agency to establish industry standards that meet the concerns of both the agency and the company. A good example of a self-regulating industry is the infomercial industry. Faced with possible government regulation, the industry established its own watchdog agency. In doing so, it was able to avert government involvement and the possibility of more restrictive regulation. The Consumer Product Safety Improvement Act of 2008 and the new Federal Reserve rules governing "high-priced" mortgages are just two examples of the tougher regulation that results when firms fail to meet society's expectations of appropriate behavior.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE

Downplaying Hazards and Keeping Product Liability Settlements Confidential

Frequently, companies are reluctant to generate negative publicity about their product, so they try to negotiate with the CPSC to issue a press release that uses language that minimizes the hazards. For example, the company may issue a press release announcing a "recall for repair" rather than a straight recall. Is this ethical? Good business practice?

Suppose that you are the product manager for your company's portable infant playpen. Two infants suffocate after their caregivers fail to properly latch the sides open, permitting the unit to collapse. The CPSC orders a recall

of the playpens but requires only minimal publicity about the recall. Should you do more than the CPSC requires to publicize the recall? What would you do if you knew that another three infants would die the same way if you did not publicize the recall? Suppose the parents of the third infant to die sue your company. Is it ethical to settle the case on the condition that the settlement be kept confidential?¹²³ Is it good business practice?

123. Felcher, *supra* note 58.

INSIDE STORY

TOXIC TOYS

In 2007, tests of a children's backpack made in China revealed lead levels as high as 4,600 parts per million, almost eight times the 600 parts per million standard for lead paint set by the CPSC.¹²⁴ Of the 40 million children's toys and accessories recalled for safety reasons in the United States in 2007, 30 million were manufactured in China. They included backpacks, vinyl baby bibs, pencil cases, an infant wrist rattle, and a toy bear.¹²⁵

According to the Toy Industry Association, 70 to 80 percent of the toys sold in the United States are made in China,¹²⁶ earning China the nickname of the "world's toy chest." With increased production, however, have come increased recalls. China was responsible for 60 percent of all product recalls in 2007, compared with 36 percent in 2000.

Exposure to lead, by children chewing on lead toys or repeatedly playing with toys containing lead, has been proved

to cause severe neurological and behavioral problems.¹²⁷ Toys and other products made for children containing lead paint were banned in the United States in the 1970s, but items made in China were not subject to the same regulations that applied to toys manufactured in the United States.

Children's products also often contain phthalates, a family of chemicals that make plastics softer. A study conducted by the Center for Reproductive Epidemiology at the University of Rochester Medical School found that infants exposed to phthalate levels were more likely to have liver and kidney cancer later in life.¹²⁸

As the recalls mounted, the CPSC acknowledged that more needed to be done to protect U.S. consumers, but it lacked the resources to act.¹²⁹ For example, the CPSC stated in a 2007 budget report that "because of resource limitations," it would be curtailing efforts aimed at preventing children from drowning in swimming pools and bathtubs.¹³⁰

In an attempt to cut the problem off at the source, Nancy A. Nord, the acting head of the CPSC, traveled to China in

September 2007 to ask Chinese officials to stop using lead paint on export toys.¹³¹ As a result of these talks, China agreed to stop the use of lead paint on toys exported to the United States, to hold regular product safety talks with American regulators, to help the United States trace products to their source when problems arise, and to cooperate on improving the overall safety of toy exports.

Although Chinese toys accounted for many of the toys recalled, Chinese manufacturing methods were not always at fault. In September 2007, after the largest single recall, involving 18 million toys, Mattel Inc. issued a public apology to China for causing damage to the country's reputation.¹³² According to Mattel, the recall had nothing to do with Chinese manufacturing problems and actually resulted from Mattel's own "design flaw," namely, using tiny magnets that could fall off the toys and become deadly if swallowed.

In July 2007, U.S. lawmakers took matters into their own hands by passing the Consumer Product Safety Improvement Act of 2008, which, among other things, banned lead in chil-

dren's products and gave consumers access to a new database of complaints or accident reports for goods. As noted earlier, the measure also provided stiffer fines for violations and enhanced enforcement of consumer safety laws.¹³³

ExxonMobil, a manufacturer of phthalates used in children's toys, strongly opposed the measure, spending a large piece of its \$22 million lobbying budget in an effort to prevent any ban on use of the chemical. Exxon argued that banning the compounds could force toymakers to use a substitute chemical that might pose an even greater health risk.¹³⁴ The United States is one of the last industrialized countries to outlaw phthalates in children's toys. The European Union banned them in 1999. Diana Zickerman, president of the National Research Center for Women and Families, strongly supported a ban on phthalates for all product use: "Everybody in Congress is now well aware that phthalates are ubiquitous and exposure is coming from many different products . . . And children's toys are probably not the main culprit. Clearly the next step is personal care products."¹³⁵

QUESTIONS AND CASE PROBLEMS

1. Ravlona, a cosmetic company, has developed an innovative makeup that holds fast on the skin for thirty-six hours. The makeup uses a new chemical dye recently developed by the in-house research team at Ravlona. The dye is manufactured from commonly used dyes that are converted to different forms with a platinum catalyst. The catalyst must be present in order to retard the natural fading of the dye, but when the makeup is applied, some of the catalyst leaches into the skin. Preliminary research has shown that this leaching may cause long-term damage but the effects would not be noticeable for ten to twenty years. Assume that there are no federal rules regulating the presence of platinum in cosmetics. If you were the marketing director at Ravlona, would you feel comfortable introducing this product to the market even though problems may emerge ten or twenty years down the line? Is Ravlona obligated to disclose the findings of its study to the FDA?
2. Gulender Ozkaya wrote a check for \$1,041.55 to pay an automobile dealership for repairs to her car. When she realized that her car had not been properly repaired, Ozkaya stopped payment on the check. The canceled check was then purchased by Telecheck Services, Inc., which sent Ozkaya a form dunning letter attempting to collect payment. In the letter, Telecheck said, "Until this is resolved, we may not approve your checks or the opening of a checking account at over 90,000 merchants and banks who use Telecheck nationally." It also warned, "We have assigned your file to our Recovery Department where it will be given to a professional collection agent. Please be aware that we may take reasonable steps to contact you and secure payment of the balance in full." To resolve the issue and update her record quickly, Ozkaya was instructed to send a cashier's check or money order for the amount due in a return envelope that was provided. Telecheck added a \$25 service charge, listed as a "fee" at the top of the letter, to the amount of the original check. Finally, it cautioned that "[a]ny delay, or attempt to avoid this debt, may affect your ability to use checks."
3. Virginia passed a statute that made it a crime to falsify the transmission information in any unsolicited e-mail message. The only way to send an anonymous e-mail message is to employ false routing information, such as the sender's domain name or Internet service provider address. Virginia construed the law as a prohibition on lying to commit trespass, that is, the unauthorized use of e-mail servers. Is the Virginia statute a valid exercise of state power? [*Jaynes v. Virginia*, 666 S.E.2d 303 (Va. 2008).]
4. In 1989, John M. Stevenson began receiving phone calls from bill collectors regarding overdue accounts that were not his. After Stevenson obtained a copy of his credit report from TRW, Inc., a credit-reporting agency, he discovered numerous errors in the report. The report included information on accounts that belonged to another John Stevenson; it also included accounts belonging to his estranged son, John Stevenson, Jr., who had fraudulently obtained some of the disputed accounts by using the senior Stevenson's Social Security number. In all, Stevenson disputed sixteen accounts, seven inquiries, and much of the identifying information.

TRW investigated the complaint. On February 9, 1990, it told Stevenson that all disputed accounts containing negative credit information had been removed. Inaccurate information, however, either continued to appear on Stevenson's reports or was reentered after TRW had deleted it. Stevenson then filed suit, alleging both common law libel and violations of the Fair Credit Reporting Act. Did TRW violate the Fair Credit Reporting Act in its handling of Stevenson's dispute? [*Stevenson v. TRW, Inc.*, 987 F.2d 288 (5th Cir. 1993).]

5. Fleet Bank advertised a credit card with no annual fees. Within the Schumer Box for Fleet's card, the column entitled "Annual Fee" contained only the word "None." On Fleet's "Consumer Information" enclosure, but outside the Schumer Box, Fleet listed other fees. Also in that location was the statement, "We reserve the right to change the benefit features associated with your Card at any time." Paula Rossman obtained a Fleet credit card, but within a few months after issuing her the card, Fleet sent her a letter stating that the Federal Reserve had raised interest rates and that Fleet would begin charging a \$35 annual fee. Did Fleet violate any laws? Did Fleet act ethically? Did it exercise sound business judgment? Would the answer be the same if Fleet had included an asterisk next to "none" in the Schumer box and added a note within the box stating, "Subject to change at Fleet's discretion"? [*Rossman v. Fleet Bank (R.I.) National Ass'n*, 280 F.3d 384 (3d Cir. 2002).]

Ozkaya filed suit against Telecheck. What claims could she make against the company? What are Telecheck's strongest defenses? [*Ozkaya v. Telecheck Services, Inc.*, 982 F. Supp. 578 (N.D. Ill. 1997).]

6. From 1934 to 1939, Charles of the Ritz Distributors sold more than \$1 million worth of its “Rejuvenescence Cream.” Advertisements for the cosmetic product typically referred to “a vital organic ingredient” and certain “essences and compounds” that the cream allegedly contained. Users were promised that the cream would restore their youthful appearance, regardless of the condition of their skin. How might the FTC analyze the representations made by Charles of the Ritz? What evidence might the FTC consider to determine whether the advertisements are deceptive? Is it important that consumers actually believe that the product will make them look younger? How might the product’s name affect the FTC’s analysis? [*Charles of the Ritz Distributors Corp. v. FTC*, 143 F.2d 676 (2d Cir. 1944).]
7. In a 1991 attempt to persuade soft drink bottlers to switch from 7UP to Sprite, Coca-Cola Company, the distributor of Sprite, developed a promotional campaign entitled “The Future Belongs to Sprite.” In its presentation, Coca-Cola used charts and graphs to compare the two drinks’ relative sales and market share during the previous decade. The campaign was especially targeted at seventy-four “cross-franchise” bottlers, which distribute 7UP along with Coca-Cola products other than Sprite. After Coca-Cola made the presentation to eleven of these cross-franchise bottlers, five decided to switch from 7UP to Sprite. In response, Seven-Up Company filed suit against Coca-Cola, alleging that the presentation violated the Lanham Act’s prohibition on misrepresentations “in commercial advertising or promotion.” Coca-Cola argued that its presentation was not sufficiently disseminated to the public to constitute advertising under the statute. Was Coca-Cola’s presentation “advertising” and therefore subject to the Lanham Act? [*Seven-Up Co. v. Coca-Cola Co.*, 86 F.3d 1379 (5th Cir. 1996).]
8. Mr. Begala obtained a sixty-month car loan from PNC Bank, which provided the disclosures required under the Truth-in-Lending Act. On nine occasions during the life of the loan, the bank sent him a letter offering him a payment holiday. During this holiday, he could pay a small fee, skip his monthly payment, and add that month onto the rest of the loan. The letters did not state that additional finance charges would be added to the loan as a result of his deferral of monthly payments. Begala took advantage of each of these payment holidays. When he made his final payment on the loan, PNC told him that he owed an additional \$1,000 due to his deferrals of the monthly payments. He filed a class action, alleging that the bank violated its duty under TILA to disclose the additional finance charges assessed on his loan due to the payment holidays. How should the court rule? Did PNC act ethically? [*Begala v. PNC Bank*, 163 F.3d 948 (6th Cir. 1998), cert. denied, 528 U.S. 868 (1999).]

CHAPTER 19

REAL PROPERTY AND LAND USE

INTRODUCTION

Importance

It is difficult to imagine any business enterprise that does not involve real property in some way. From the global company with factories and retail outlets on several continents to a mail-order business operated out of a rented apartment, real estate is important to the successful functioning of most businesses. In the past two decades, there has been an explosion in the real estate field due to the securitization of mortgages and the public marketing of interests in commercial real estate and home mortgages through real estate investment trusts and other vehicles. The subprime mortgage crisis that commenced in 2007 (which is the subject of the "Inside Story" in Chapter 24) underscores the impact that a decline in the real estate sector can have on the global economy.

Real estate law has its roots in both English common law and Spanish civil law. Many of the laws are determined by municipalities, others by the state. In recent years, the federal government has played an increasingly active role through tax policy and environmental regulations. The federal government is also interested in the safety of real estate (through the Occupational Safety and Health Administration), physical access to commercial facilities (under the Americans with Disabilities Act), foreign investment in U.S. real estate, and the preservation of parklands.

CHAPTER OVERVIEW

This chapter discusses the forms of real estate ownership and the transfer of ownership, including the different types of deeds and the effect of recording statutes. It explains the role of brokers and the effect of express and implied

warranties concerning the condition of real property. The chapter outlines the alternatives to acquiring real property for cash, including tax-deferred exchanges, sales and leasebacks, and real estate investment trusts. We then describe certain types of preliminary agreements, including option contracts, rights of first refusal, and letters of intent. Methods of financing are also addressed, as are leasing and lease terms. Finally, we discuss governmental regulation of the use of real property by the exercise of police and condemnation powers and the circumstances in which government restrictions on land use are deemed "takings," requiring compensation of the owner under the U.S. Constitution.

FORMS OF OWNERSHIP

Real property can be held in a variety of ways. A business will normally own real estate in the name of the firm. Whether the firm is organized as a partnership (general or limited), a corporation, or a limited liability company will depend on tax, financial, securities, and liability factors. The choice of the proper entity for owning real estate is particularly important at the beginning of an investment or development. It may be difficult to make a change at a later date without adverse tax consequences. The issue of choice of entity is discussed further in Chapter 20.

INDIVIDUAL

In the simplest type of ownership, property is owned by a single individual. From a business perspective, individual ownership is often undesirable because the individual

owner may be liable in tort for any accidents occurring on the property. The risk of unlimited personal liability can, however, be reduced by obtaining liability insurance.

Ownership rights can also be shared by two or more individuals. Forms of co-ownership include tenancy in common, joint tenancy, tenancy by the entirety, and community property. Though not a form of co-ownership, a trust also involves more than one person.

Tenancy in Common

Tenants in common each own an undivided fractional interest in a parcel of real property. Two or more persons can hold property as tenants in common. For example, one tenant in common may have a two-thirds interest and another a one-third interest. Regardless of the percentage ownership interest, each tenant in common has an equal right to possession of the property, and no co-tenant has the right of exclusive possession of the property against any other co-tenant. But a co-tenant does have the right to exclude any third party. Co-tenants share the income and burdens of ownership. The interest of a tenant in common is assignable and inheritable without the consent of any other co-tenant.

Joint Tenancy

In a *joint tenancy*, property is owned in equal shares by two or more individuals. The key characteristic of a joint tenancy is the right of survivorship. If a joint tenant dies, his or her interest passes automatically to the remaining joint tenant or tenants. However, an attempt by a single joint tenant to convey separately his or her interest in the property will destroy the joint tenancy and convert it to a tenancy in common. Use of joint tenancy property in a business may also terminate the joint tenancy.¹

Tenancy by the Entirety

Historically, English common law recognized a special type of co-ownership of real property between husband and wife called *tenancy by the entirety*. Like joint tenancy, tenancy by the entirety includes a right of survivorship. Unlike a joint tenancy, however, neither spouse can convey an individual interest to a third party and thereby terminate the right of survivorship. Additionally, unlike joint tenancy, where joint tenants have equal rights to possession of the property, tenancy by the entirety entitled only the husband to the possession, use, and enjoyment of the property. In effect, he acted as a guardian over the wife's interest.

About one-half of the states recognize tenancy by the entirety. Most states have retained the indestructible right

of survivorship, but they give the husband and wife equal rights to the possession, use, and revenues of the property. Additionally, the modern view is that divorce converts a tenancy by the entirety to a tenancy in common.²

Community Property

In Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Texas, Washington, and Wisconsin, property acquired by either spouse during marriage (other than separate property, as defined below) is considered to be *community property*; that is, each spouse owns an undivided one-half interest in the property. Property acquired prior to the marriage or by gift or inheritance or with separate property during the marriage is *separate property*, belonging solely to the spouse who acquired it before marriage or used separate property to buy it or received it by gift or inheritance, unless the spouse owning the property has converted it to community property. Separate property is converted into community property when (1) one spouse gifts the separate property to the other spouse, (2) the parties treat the separate property in such a manner that a presumption of a gift arises, or (3) the separate and common property have been commingled, or mixed together.

Conveyance Community property cannot be conveyed unless both spouses execute the instrument by which the conveyance is effected; provided, however, that when one spouse does not sign the instrument, but both spouses were present during negotiations and were fully aware of the terms and conditions, the nonsigning spouse may not claim that the transaction is void due to the absence of his or her signature.³

The community-property interest of a spouse may be separately willed upon death. In the absence of a will, community property passes to the other spouse.

Effect of Divorce Most of the cases interpreting what is or is not community property arise in the divorce context. Community-property laws vary from state to state. Complicated issues can arise, for example, when one spouse inherits land from his or her family (which is separate property at the date of inheritance), but subsequently one or both spouses improve or develop the property. In this case, some or all of the inherited property may turn into community property. Similarly, if one spouse uses separate property as seed capital for a business that he or she operates during the marriage, then part of the value of the business will be separate property and part will be community property.

2. *Markland v. Markland*, 21 So. 2d 145 (Fla. 1945).

3. *Calvin v. Salmon River Sheep Ranch*, 658 P.2d 972 (Idaho 1983).

1. *Williams v. Dovell*, 96 A.2d 484 (Md. 1953).

Trust

Property may be held in a *trust*, whereby the property is owned and controlled by one person, the *trustee*, for the benefit of another, the *beneficiary*. The duration of the trust, the powers of the trustee and the trustor (the person creating the trust), and the express rights of the beneficiary are set forth in a trust agreement.

GENERAL PARTNERSHIP

When property is held in a general partnership, the partners have rights similar to those of co-tenants, and each partner is liable for any debts of the partnership remaining after the partnership assets are exhausted. A general partner has no right to possess partnership property for other than partnership purposes. In addition, a general partner may not assign his or her individual interest in specific partnership property. On the other hand, a general partner can effectively convey the entire partnership property to a bona fide purchaser who has no knowledge of any restriction that might exist on the general partner's authority to convey partnership property.

LIMITED PARTNERSHIP

Real property may be held in a limited partnership, consisting of one or more general partners, who manage the property, and one or more limited partners. The liability of a limited partner is usually restricted to the amount of capital the limited partner has contributed or agreed to contribute to the partnership. Typically, limited partners will indemnify the general partners with the indemnity secured by the value of the real estate assets. The authority of the general partner to convey the property is determined by the limited partnership agreement and the jurisdiction's limited partnership law.

CORPORATION

A corporation may own real property. Corporate authority to convey the property is governed by the corporation's certificate of incorporation and bylaws, as well as the jurisdiction's corporate law. The board of directors must authorize most transfers of real property.

LIMITED LIABILITY COMPANY

Generally, the preferred form of ownership for real property is now the limited liability company or LLC (previously, limited partnerships were more popular). Authority to convey property is governed by the operating agreement as well as the jurisdiction's LLC law. The board of managers must authorize most transfers of real property.

TRANSFER OF OWNERSHIP

Ownership of land is normally transferred by a document known as a *deed*, which is recorded at a public office, typically the office of the county recorder in the county where the real property is located. Any document transferring an interest in real estate, such as a deed or a lease, is called a *conveyance*. The person conveying the property is the *grantor*, and the person to whom the property is conveyed is the *grantee*. Occasionally, though seldom in business, ownership is obtained through an installment sales contract, with the deed to follow when payment for the real estate has been completed. Ownership of property subject to probate is transferred by a court order from the probate court.

In most purchases of real estate, the interest conveyed is a *fee simple* interest, that is, absolute ownership of the property. However, many other transactions, such as a lease, convey less than an absolute ownership interest in the property.

TITLE

A seller of real estate is generally required to convey *marketable title*, that is, an interest in the property free from defects. Defects that make a title unmarketable include any cloud on the title that would cause the buyer to receive less than a fee simple interest. For example, the existence of a lien on the property would constitute a defect of title sufficient to make the title unmarketable. In contrast, a fifty-year-old easement allowing neighbors to use a five-inch strip of the property for a fence probably is not sufficiently burdensome to render a title defective. If the title is found to be unmarketable prior to closing, the buyer may agree to purchase the property anyway or can elect to cancel the deal entirely.

The type of interest (usually fee simple) and the quality of title (that is, whether it is marketable) are set forth in a deed executed by the party conveying the property. The type of deed determines the scope of the warranties granted.

TYPES OF DEEDS

An interest in real property can be conveyed only by a signed deed that specifically describes that interest and is delivered to and accepted by a named grantee. There are three basic types of deeds: quitclaim deeds, grant deeds, and warranty deeds. These differ in the specific express warranties they contain.

Quitclaim Deed

A *quitclaim deed* contains no warranties, and the grantor conveys only whatever right, title, and interest, if any, the grantor holds at the time of execution. A quitclaim deed

does not convey *after-acquired title*, that is, title acquired by the grantor after the deed is executed.

Grant Deed

A *grant deed* contains implied warranties that (1) the grantor has not previously conveyed the same property or any interest in it to another person, and (2) the title is marketable. A grant deed also conveys after-acquired title. This means that if at the date the deed is executed the grantor does not have title to the real property referred to in the grant deed, but subsequently acquires it, the title will be automatically transferred to the grantee.

Warranty Deed

A *warranty deed* contains the implied warranties of a grant deed; in addition, the grantor expressly warrants the title to and the quiet possession of the property. Warranty deeds may also contain other express warranties as well.

ADVERSE POSSESSION

In unusual circumstances, a person can acquire legal ownership of a piece of property by adverse possession. To acquire a parcel of land by *adverse possession*, (1) a person must possess the land for the period of time specified by the state statute (usually between fifteen and twenty-two years); (2) the current owner of the land must have actual constructive notice of the adverse possession; (3) the possession must continue uninterrupted for the specified period; (4) the person possessing the property must not have a legal right to be there (thus, the possession must be "adverse" to the current owner's rights); and (5) the possession must not be shared with another, such as the current owner or the general public. At first blush, adverse possession appears to reward illegal possession, but the doctrine is designed to ensure that land is used in the most efficient, publicly beneficial manner. Landowners who have no use for their land are forced to give it to those who will put it to a more economic use. The grace period of fifteen-plus

VIEW FROM CYBERSPACE

Electronic Closings and Recordings

At one time, in the not so distant past, the typical real estate closing required lawyers and principals to sit down together in a conference room to sign and exchange all the documents necessary to complete the transfer. This was followed by a trip to the county recorder, so the whole process usually took an entire workday.

The Internet and e-mail have made the exchange of documents much easier, allowing for quicker, less expensive document revisions. Many large lenders, such as GMAC and Morgan Stanley, are now requesting an electronic copy, or e-copy, of all the closing documents, known as a *closing package*, in addition to a hard copy. Even though the final documents are

often still hand signed by both parties at the closing or mailed to the necessary parties who countersign and return them, the parties often scan the executed documents into a computer file to create a digital snapshot of each page. In contrast to the several inches of multiple volumes that make up a closing package, these e-copies take almost no storage space. They require almost no maintenance and can easily be retrieved when necessary. It is not hard to imagine a day when only the public recording office will have a hard copy of these documents.

The Uniform Real Property Electronic Recordation Act, enacted by twenty-two states as of 2008, standardizes the execution and recording

of electronic real estate documents.^a The Act makes it possible to "sign," deliver, and record documents electronically over the Internet, making the expensive, time-consuming "sit-down" closing and trip to the recording office a thing of the past. There are still some practical barriers to overcome, however, including the inability of many town recording offices to accept electronically signed documents and the lack of standardized regulations and procedures.^b

a. The final version of the Act is available at http://www.law.upenn.edu/bll/archives/ulc/urpera/URPERA_Final_apr05-1.pdf.

b. Scott Brede, *An Idea Before Its Time*, CONN. L. TRIB., Feb. 26, 2002.

years offers ample time for a conscientious landowner to commence eviction proceedings, which would destroy the adverse possession.

REPRESENTATIONS, WARRANTIES, AND THE DUTY TO DISCLOSE

In the past, real estate transactions were governed by the traditional rule of *caveat emptor* (“let the buyer beware”). Under this rule, the seller of a house or other property made no warranties to the buyer other than those expressly included in the deed or written contract of sale. Current law is more protective of the buyer, especially when a person is buying a house.

Implied Warranty of Habitability

A majority of the states impose an implied warranty of habitability on commercial builders of houses. As with the Uniform Commercial Code’s implied warranty of merchantability for sales of goods (discussed in Chapter 8), under the *implied warranty of habitability* builders warrant that the house is in reasonable working order and is

of reasonably sound construction. Because builders have a major hand in determining the overall fitness of a building, courts have deemed it appropriate to hold them responsible for its initial condition. This warranty applies only to the original builders, *not* to subsequent sellers. Thus, secondary sellers are not burdened by an implied warranty of habitability.

A number of courts have extended the warranty of habitability to protect individual lessees of residential property. The warranty of habitability has not yet been extended to commercial leases such as office space.

Seller’s Duty to Disclose

The traditional rule of *caveat emptor* is also giving way to a duty on sellers to disclose defects in real property. In most states, sellers have an obligation to disclose any known defect that (1) materially affects the value of the property and (2) could not reasonably be discovered by the buyer. As the following case illustrates, sellers—and their brokers—can be held liable for the nondisclosure of certain off-site conditions that materially affect the value of the property.

A CASE IN POINT

CASE 19.1

STRAWN v. CANUSO

SUPREME COURT OF NEW JERSEY
657 A.2d 420 (N.J. 1995).

IN THE LANGUAGE OF THE COURT

FACTS The plaintiffs comprised more than 150 families who purchased new homes in Voorhees Township. The homes were developed and marketed by companies controlled by the Canuso family. The home buyers sought damages against the Canusos and their companies because—unbeknownst to the buyers—the new homes they purchased had been constructed near the Buzby Landfill.

Between 1966 and 1978, large amounts of hazardous materials and chemicals were dumped at the Buzby Landfill. Toxic materials escaped, contaminating the groundwater and air. The federal Environmental Protection Agency recommended that the site be considered for a Superfund cleanup.

The home buyers alleged that the developers and brokers knew of the Buzby Landfill and its environmental hazards before they considered the site for residential development but failed to disclose those facts to the families when they purchased their homes. The representatives of the Canuso brokerage and development companies were instructed never to disclose the existence of the Buzby Landfill, even when asked about such conditions. The lower court found in favor of the home buyers.

ISSUE PRESENTED Do the developers of new homes and the real estate brokers marketing those homes have a duty to disclose to prospective buyers that the homes were constructed near an abandoned hazardous-waste dump?

OPINION O’HERN, J., writing for the New Jersey Supreme Court:

[A] seller of real estate or a broker representing the seller would be liable for nondisclosure of on-site defective conditions if those conditions were known to them and unknown and not readily observable by the buyer. Such conditions, for example, would include radon contamination and a polluted water supply. . . .

. . . [T]he principal factors shaping the duty to disclose have been the difference in bargaining power between the professional seller of residential real estate and the purchaser of such housing,

CONTINUED

and the difference in access to information between the seller and the buyer. Those principles guide our decision in this case.

The first factor causes us to limit our holding to professional sellers of residential housing (persons engaged in the business of building or developing residential housing) and the brokers representing them. . . . Hence, we believe that it is reasonable to extend to such professionals a similar duty to disclose off-site conditions that materially affect the value or desirability of the property.

. . . Defendants used sales-promotion brochures, newspaper advertisements, and a fact sheet to sell the homes in the development. That material portrayed the development as located in a peaceful, bucolic setting with an abundance of fresh air and clean lake waters. Although the literature mentioned how far the property was from malls, country clubs, and train stations, "neither the brochures, the newspaper advertisements nor any sales personnel mentioned that a landfill [was] located within half a mile of some of the homes." . . .

. . .

We hold that a builder-developer of residential real estate or a broker representing it is not only liable to a purchaser for affirmative and intentional misrepresentation, but is also liable for non-disclosure of off-site physical conditions known to it and unknown and not readily observable by the buyer if the existence of those conditions is of sufficient materiality to affect the habitability, use, or enjoyment of the property and, therefore, render the property substantially less desirable or valuable to the objectively reasonable buyer.

RESULT The verdict in favor of the home buyers was affirmed. The defendants had violated their duty to disclose the existence of the landfill.

COMMENTS The New Jersey legislature subsequently limited sellers' obligations in the New Residential Construction Off-Site Conditions Disclosure Act, N. J. S. A. §46: 3C-1 *et seq.*

CRITICAL THINKING QUESTIONS

1. Would the court have reached a different result if the sellers had not touted the development's bucolic setting, fresh air, and clean lake waters?
2. Why should a seller of commercial property have a lesser obligation to disclose adverse off-site conditions than a seller of houses?

Contractual Protections and Due Diligence

A skillful buyer will request express contractual representations and warranties from the seller as to the condition of the property. This is particularly important in commercial transactions, because courts are less willing to impose implied warranties and a duty to disclose when the buyer is a commercial entity, rather than an individual. From the seller's perspective, the representations and warranties are a potential source of liability. From the buyer's perspective, the representations and warranties provide some assurance that the buyer is getting what it expected. If nothing else, the negotiation of representations and warranties frequently leads to additional disclosures regarding the physical condition of the property.

The buyer should not rely on representations and warranties as an alternative to its own careful investigation of the condition of the property, however. Although the seller

is generally required to indemnify the buyer against liability arising from the inaccuracy of any of its representations and warranties, the right to indemnification is not worth much if the seller does not have the resources to back it up. Perhaps more important, defects in the property can seriously disrupt the buyer's operations and business.

RECORDING STATUTES

Deeds and other instruments of conveyance must be recorded with a government official in a public office, where copies will be available to anyone. The documents must be in *recordable form*. The requirements vary from state to state, but they typically include legibility and some type of notarization by a notary public. The record in the public office is the principal basis for determining the state of title of real estate.

Recording statutes establish an orderly process by which claims to interests in real property can be resolved. There are three types of recording statutes: (1) race statutes, (2) pure notice statutes, and (3) race–notice statutes.⁴ The law of the state where the real property is located should always be checked before closing a transaction.

Under *race statutes*, recording is a race—the rule is “first in time is first in right.” The first to record a deed has superior rights, even if he or she knew that someone else had already bought the property but had failed to record the deed.

Under *pure notice statutes*, a person who has notice that someone else has already bought the property cannot validate his or her deed by recording it first. Notice may be actual or constructive. Courts may find *constructive notice* if a reasonable inquiry (for instance, inspection of the property) would have disclosed the prior interest. A pure notice statute protects good faith subsequent purchasers. A *good faith subsequent purchaser* is one who purchases for value, in good faith, without knowledge of a prior outstanding interest. Thus, if a subsequent purchaser acquires a deed and has no notice (actual or constructive) of a prior deed at that time, then he or she will have superior rights. *Race-notice statutes* protect only those good faith subsequent purchasers who record their deed before the prior purchaser records its deed.

TITLE INSURANCE

Despite the existence of recording statutes, the condition of title to a specific property and the priority of any claims against the property are often difficult to ascertain. In some states, title is searched by attorneys, in others by title abstract companies on which attorneys rely, and in still others by title insurance companies. Title insurance companies may also insure the condition of title or the priority of one’s interest. In some states, lawyers’ opinions are still used rather than title insurance. Blindly relying on any title company’s title abstract can be dangerous, however. The New Hampshire Supreme Court ruled that attorneys are not vicariously liable for relying on a faulty title report, unless they were negligent in choosing or supervising the title abstractor.⁵ Thus, the buyer should make sure that the title company or the attorney issuing title insurance is reputable and competent.

4. Only two states (Delaware and North Carolina) use race statutes. The other states are split about evenly between pure notice statutes and race–notice statutes.

5. Lawyers Title Ins. Corp. v. Groff, 808 A.2d 44 (N.H. 2002).

EXTENT OF COVERAGE

A title insurance policy insures against loss as a result of (1) undisclosed liens or defects in title to the property or (2) errors in the abstraction of the title, that is, the summary of the relevant recorded deeds and liens. Generally, the policy limit is the purchase price of the property or the amount of the *encumbrance*, that is, the claim against the property.

It is important to review a title report or insurance policy carefully before acquiring title to property. The exceptions listed in the report may be defects in title.

ESCROW

In addition to issuing title insurance policies, title companies often hold the purchase money in *escrow*, that is, in a special account, until the conditions for the sale have all been met. The money is then paid to the seller. If the sale does not go through, the money is returned to the would-be purchaser. Banks also perform this service, and in some jurisdictions there are separate escrow companies.

The *escrow agent* acts as a neutral stakeholder, allowing the parties to close the transaction without the physical difficulties of passing instruments and funds between the parties. Additionally, it is the duty of the escrow agent to coordinate the closing with the recording of documents, the issuance of title insurance, and other activities that take place concurrently with the closing.

Neutral Party

As a neutral party, the escrow agent is an agent of all parties to the transaction and must follow their specific instructions. Because an escrow agent has a fiduciary duty to all of the parties, it cannot act when the parties have submitted conflicting instructions. Generally, if the parties fail to resolve conflicts between instructions, the escrow agent will go to court for a resolution of the conflict.

BROKERS

The market for real estate is imperfect, and brokers facilitate its operation by bringing buyers and sellers together.

COMPENSATION

A broker is customarily retained by the seller through a listing agreement, which must be in writing to be enforceable. Generally, the broker receives a percentage of the

gross selling price (or aggregate rental income) as compensation. To the extent that the buyer's or lessee's broker is compensated, it is usually by sharing the commission paid by the seller.

LISTING AGREEMENTS

There are several types of listing agreements: open, exclusive, and net.

Open Listing

In an *open listing*, the listing broker will receive a commission only if he or she procures a ready, willing, and able buyer. It is understood that the seller will be contracting with more than one broker, so the first broker to procure a buyer will receive the commission. Because of the uncertainty of earning a commission even if a buyer is found, it is hard to get a broker to work diligently to sell a commercial property with an open listing.

Exclusive Listing

An *exclusive listing* grants the broker the right to sell the property for a specified period of time; any sale of the property during the term of the listing will entitle the broker to a commission. If a seller has dealt with particular potential buyers before signing an exclusive listing agreement, he or she may wish to exclude them from the agreement.

Net Listing

A *net listing* involves a completely different compensation scheme: the broker will receive any sales proceeds in excess of the net listing amount specified by the seller. Net listings are uncommon.

REGULATION OF BROKERS

In most states, real estate brokers are heavily regulated.

Licensing

Real estate brokers are generally required to have a license to perform brokerage activities. Anyone who engages in brokerage activities without a license will not be able to sue successfully to recover his or her fee. Brokerage activities are broadly defined to include effecting or negotiating (1) any sale or offer to sell, or purchase or offer to purchase, real property or a business opportunity and (2) any leases, loans secured by real property, or real property sales contracts. A mere finder, who does nothing more than introduce two parties for a fee, does not need a broker's license.

In many states, real estate brokers must report and keep records of their transactions. Brokers may also be required to meet continuing education requirements and maintain up-to-date knowledge regarding the particulars of real estate loans.

Agency Relationship

Brokers may also be subject to regulations concerning the disclosure of the agency relationship between the broker and the parties to the transaction. Brokers are fiduciaries. As a general rule, a broker may not act for more than one person in a transaction without the knowledge and consent of all parties to the transaction. When a broker acts for both the buyer and the seller, the relationship is characterized as a *dual agency*. In most instances, a dual agent is prohibited from disclosing to the buyer, without the consent of the seller, that the seller is willing to sell the property for less than the listing price. Similarly, a dual agent may not disclose to the seller that the buyer is willing to pay a price higher than the listing price. Agency issues are discussed further in Chapter 5.

ACQUISITIONS AND DISPOSITIONS

Acquisitions and dispositions of real estate interests are contracted for in the same manner as most commercial transactions. Although standardized contracts are often used in relatively simple transactions (such as the conveyance of a single-family residence or a small commercial property), most large transactions require custom-drafted contracts.

SALES

Generally, contracts for the sale of an interest in real property are the result of protracted negotiations between the parties. In addition to essential terms such as price, time, and method of payment, common areas of negotiation include types of acceptable financing, the condition of title, the allocation of closing costs and taxes, and compliance with zoning laws, building codes, and environmental regulations. In many purchase and sale agreements, the most heavily negotiated provisions are the seller's representations and warranties concerning the condition of the property.

TAX-DEFERRED EXCHANGES

An alternative to acquiring real property for cash is a *tax-deferred exchange*, whereby the seller exchanges its property for another piece of property. Such transactions can

have favorable tax consequences. In particular, the capital gains tax owed by the seller may be deferred if the seller (1) is disposing of a property held for investment or for productive use in a trade or business and (2) is acquiring a property that qualifies under the Internal Revenue Code. Tax-deferred exchanges take many forms. The most common is the three-party exchange, in which the buyer purchases a piece of property designated by the seller and exchanges it for the seller's property. Because these exchanges can be complex, it is prudent to consult an attorney specializing in tax and real estate issues when acquiring real property through a tax-deferred exchange.

SALES AND LEASEBACKS

A *sale and leaseback* arrangement involves a simultaneous two-step transaction. In the first step, an institutional lender with funds to invest, such as a life insurance company or a pension fund, purchases real property from a corporation. In the second step, or often simultaneously, the property is leased back to the corporation for its use. The term of the lease is long, often ranging from twenty to forty years. The length of the term influences how the lease will be accounted for on the balance sheet. A longer-term lease may be capitalized as an asset on the balance sheet, whereas an *operating lease* (typically with a shorter term) will not appear on the balance sheet at all. The tenant may have the option of repurchasing the property on or before the termination date of the lease.

The amount of rent payable is structured so that during the term of the lease, the lessor will recoup the purchase price of the property and realize an acceptable return on its investment. The lessee pays all taxes and maintenance and operating costs.

SYNTHETIC LEASES

Today, synthetic leases are commonly used to take advantage of the differences between the tax and accounting rules governing leases. In a *synthetic lease*, the transaction is treated as a conventional operating lease for accounting purposes, so it does not appear on the balance sheet. Payments under the lease are treated merely as rent. At the same time, for tax purposes, the lessee of the property treats the transaction as though it had purchased the property and obtained a loan from the seller. Thus, payments under the lease are treated as debt service on the loan, and the lessee may take favorable interest payment deductions as well as depreciation write-offs.⁶

6. Gerard R. Boyce, *Synthetic Leases: The Hard Facts*, N.Y. L.J., Jan. 13, 2000.

REAL ESTATE INVESTMENT TRUSTS (REITs)

Real estate investment trusts, commonly referred to as *REITs*, can provide a good tax vehicle for investors seeking to invest in a portfolio of real property. REITs sell beneficial shares that are traded in the stock markets, and they permit small investors to invest in a diversified portfolio of real estate, similar to an investment in common stocks through a mutual fund.

As long as at least 95 percent of a REIT's net income is distributed to shareholder-beneficiaries, the REIT itself pays no income tax; taxes are paid at the shareholder-beneficiary level only. REITs are limited in the types of operations they may conduct. Ownership concentration is also limited: no five persons may own more than 50 percent of the REIT's beneficial interests; often the number of shares any shareholder may own is limited to 9.8 percent or less.⁷

TRANSACTIONS WITH FOREIGNERS

Sales of real property interests in the United States to non-resident aliens are regulated by the federal government. Under the Foreign Investment in Real Property Tax Act (FIRPTA), the purchaser of a U.S. real property interest from a foreign person is required to withhold 10 percent of the purchase price to ensure that U.S. capital gains tax is paid on the sale. Additionally, the Agricultural Foreign Investment Disclosure Act requires foreign acquirers of U.S. agricultural land to file an informational report with the U.S. Secretary of Agriculture.

ENVIRONMENTAL DUE DILIGENCE

Due diligence before buying or leasing property is particularly necessary with respect to environmental issues (discussed more fully in Chapter 16). Because liability under federal and state environmental laws and regulations can be so large as to overshadow any other economic aspect of the property, the buyer should diligently investigate whether there are toxic or hazardous substances on or under the property.

Under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the current owner or operator of a contaminated facility is potentially jointly and severally liable with the prior owner or the operator of the facility at the time of waste disposal for the costs associated with cleaning up the facility. If the prior owner is insolvent or nonexistent, the current owner may be responsible for the entire cleanup. (The "Inside Story" in this chapter discusses legislation designed to promote the reclaiming of

7. David M. Einhorn et al., *REIT M&A Transactions—Peculiarities and Complications*, BUS. LAW., Feb. 2000.

brownfields—underutilized property with actual or suspected contaminants.) This liability attaches even if the current owner purchased the property with no knowledge of the prior contamination, unless it can show that it made all due inquiry and still had no reason to know about the contamination.

In addition, office workers and other tenants have successfully sued building owners and construction contractors for injury or fear of future injury due to asbestos on the premises.⁸ Litigation related to potentially toxic mold is also increasing, causing some to call toxic mold “the new asbestos.”⁹

PRELIMINARY AGREEMENTS

Often the parties to a real estate transaction are able to reach a general agreement on terms and conditions but need more time to negotiate specific representations and warranties or to investigate the property further. A number of alternatives to the traditional contract for the sale of real property have been developed. These include option contracts, rights of first refusal, and letters of intent.

OPTION CONTRACT

In an *option contract*, the potential buyer pays the seller for the right, but not the obligation, to purchase the property during a given time period. The option gives the buyer time to conduct investigations, determine whether the purchase of the property is economically feasible, and obtain financing. The seller receives payment for taking the property off the market for a specified period of time.

To be enforceable, an option contract must be in writing, and consideration must be paid to the seller. Additionally, the option contract must state the major terms of the proposed purchase agreement and must specify the manner in which the option may be exercised. It is also advisable to record the option to provide constructive notice to third parties and thereby prevent the sale of the property to a third party before the option has expired.

RIGHT OF FIRST REFUSAL

A *right of first refusal* is the right, conferred by a written contract, to purchase the property on the same terms offered by or to a third party. Perhaps its most frequent use is with a tenant of a leasehold interest. The holder of the right of first refusal should require that it be recorded.

8. Susan Warren, *Asbestos Quagmire*, WALL ST. J., Jan. 27, 2003, at B1.
9. John M. Simon & Thomas J. Trautner Jr., *Mold: Should Your Client Be Worried?* 13 BUS. L. TODAY 36–39 (2004).

A right of first refusal can chill the owner’s ability to sell the property. Few buyers will want to start investigations and negotiations knowing that they could lose the deal if the party with the right of first refusal exercises its right. Consequently, the owner will often want to modify the right of first refusal to give the holder only the right to negotiate the purchase of the property before the seller enters negotiations with another party. This is sometimes called a *right of first negotiation*. Another method of accommodating the needs of the seller is to provide for a very short time, such as seventy-two hours, for the holder to exercise its right of first refusal.

LETTER OF INTENT

A letter of intent may create the right to acquire an interest in a specific property. A *letter of intent* sets forth the general terms and conditions of a proposed purchase until a formal acquisition agreement can be signed. Although the parties often view letters of intent as unenforceable, courts have increasingly treated them as enforceable contracts. In one case, the court focused on the conduct of the parties to determine whether an enforceable agreement was intended despite express written statements to the contrary in the letter of intent.¹⁰ Consequently, if the parties do not wish to be bound by their letters of intent, they must ensure that the terms and conditions are not set forth so specifically that a binding legal obligation is created; they must also conduct themselves consistently with the absence of a binding contract.

When properly utilized, letters of intent allow the parties to investigate the proposed transaction to determine whether it is worth pursuing. Although letters of intent are generally not as effective as options or rights of first refusal in removing property from the market, they can create an ethical commitment to consummate the transaction. In some states, the execution of a letter of intent creates an implied covenant of good faith and fair dealing between the parties, requiring good faith negotiation of a formal acquisition agreement.

FINANCING

Financing the purchase of real estate may involve borrowing funds for a long or short term. The loan is usually secured by a lien on the property, known as a *mortgage* or a *deed of trust*. Although these two documents are virtually the same, the name varies from state to state. Generally, in the northeastern and southern states, the document conferring

10. Computer Sys. of Am. v. Int’l Bus. Machs. Corp., 795 F.2d 1086 (1st Cir. 1986).

a security interest in real property is called a mortgage, whereas in the Midwest and on the West Coast, it is known as a deed of trust. Conceptually, a mortgage and a deed of trust secure a lien in different ways, but they operate to create the same end result. The party granting the mortgage is the *mortgagor*; the recipient of the mortgage, usually the lender, is called the *mortgagee*.

Most large lenders use standard documents for loan agreements, although changes are sometimes made. In substantial transactions, it is essential that all documents be reviewed and negotiated by all parties to the transaction and their counsel.

The availability of financing depends on the intrinsic value of the property or on both its value and its potential for the production of income. The types of financing available are almost unlimited. Some of the more common forms are discussed in this section.

PERMANENT LOANS

The most common type of real estate loan is the *permanent loan*. This is usually a long-term loan, repaid over five, ten, or sometimes up to twenty years.

Fixed-Rate Loans

Traditionally, permanent loans have had a fixed interest rate, that is, the rate of interest does not change over the term of the loan. The lender assumes the risk of losing the benefit of any increase in interest rates, and the borrower assumes the risk of losing the benefit of any decrease.

In order to benefit from any increases in market interest rates, many lenders reserve the right to *call* (that is, demand repayment of) fixed-rate loans after a specified period, often after five, ten, or fifteen years. Conversely, to prevent borrowers from refinancing their obligation when market interest rates fall below the fixed interest rate of the loan, some lenders insert a lock-in clause to prohibit prepayments of principal or impose a penalty, called a *prepayment penalty*, if the loan is paid off early. Usually, the penalty declines with time.

Adjustable-Rate Loans

Adjustable-rate loans allow lenders to avoid the risk of fluctuating interest rates. In an *adjustable-rate loan*, the rate of interest is often set at a fixed number of percentage points over a specified standard or benchmark rate (often the six-month London Interbank Offered Rate, known as LIBOR, or the *prime rate*, which is the rate at which major financial institutions offer to lend to their most creditworthy customers). Over the term of the loan, the interest rate fluctuates

with changes in the benchmark rate or index. The interest rate is usually adjusted annually or semiannually. The total amount of the change over the term of the loan is generally subject to some cap or maximum top rate. A floor may also be established to ensure that the interest rate does not fall below a specified percentage.

Subprime Mortgages As discussed more fully in the “Inside Story” in Chapter 24, there was a surge in the number of subprime *adjustable-rate mortgages (ARMs)* in the period from 2002 to 2007. The Department of Housing and Urban Development (HUD) characterizes a lender as *subprime* if (1) most of its business involves refinancing rather than purchasing loans and (2) the lender does not sell a significant portion of its portfolio to the two government-sponsored housing agencies, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac).¹¹

The most common type of subprime mortgage originated in this period was a “2/28” hybrid ARM, with the interest rate fixed for the loan’s first two years and then adjustable every six months for the remaining twenty-eight years (or until the loan was paid off).¹² Although many borrowers with “good” credit (that is, a FICO® score above 620, the number generally considered the cutoff for prime borrowers) took out subprime mortgages, especially during the height of the housing boom in the early 2000s, many subprime borrowers had FICO scores below 620. In addition, regardless of their credit scores, most subprime borrowers (1) had high loan-to-value ratios (the ratio of the loan to the value of the house ranged from an average of 85 percent for the lowest-score borrowers to 95 percent for the highest-score borrowers in 2005–2006); (2) high debt-to-income ratios (often in excess of 40 percent); and (3) were unwilling (or unable) to fully document their income and assets. By the end of the housing boom in 2004, the fraction of fully documented loans had dropped below 70 percent for borrowers with FICO scores less than 620 and below 40 percent for borrowers with FICO scores above 660. Only about 10 percent of the borrowers with outstanding subprime loans in the mid-2000s would have qualified for prime loans.¹³

When housing prices fell, many subprime borrowers had *negative equity*, that is, an outstanding mortgage balance in excess of the value of the house. Researchers calculated

11. Christopher L. Foote, Kristopher Gerardi, Lorenz Goette & Paul S. Willen, *Subprime Facts: What (We Think) We Know About the Subprime Mortgage Crisis and What We Don't* (Fed. Reserve Bank of Boston, Working Paper No. 08-2, May 30, 2008).

12. *Id.*

13. *Id.*

that a borrower whose property value had fallen by more than 20 percent since the initial purchase was more than fifteen times more likely to lose his or her house to foreclosure than a homeowner whose property had appreciated by 20 percent.¹⁴

Points

In addition to interest, real estate lenders often charge a loan fee, called *points*. The fee is the amount funded, multiplied by a fixed percentage. Each 1 percent is a point. For example, a $2\frac{1}{2}$ -point fee on a \$100,000 loan would be \$2,500. Points are usually paid up front at the time the loan is made.

CONSTRUCTION LOANS

Construction loans generally have a term slightly longer than the estimated construction period. Upon completion of construction, the developer obtains either permanent (take-out) financing or interim (gap) financing and repays the construction lender. If the construction loan comes due before the permanent financing is available, the developer obtains *interim* or *gap financing* to pay off the loan. This financing is provided by someone other than the construction lender and is for a longer term. A *take-out commitment* is an agreement by a lender to replace the construction loan with a permanent loan, usually after certain conditions, such as the timely completion of the project, have been met.

DEVELOPMENT LOANS

Developers use construction loans for the acquisition and improvement of commercial properties and *development loans* for the acquisition, subdivision, improvement, and sale of residential properties. Funds are advanced by the lender as development progresses. The lender normally requires that the developer obtain performance bonds and personal guaranties by its principals. From the lender's perspective, development loans are riskier than construction loans because repayment of a development loan depends on the developer's ability to sell parcels of the development.

EQUITY PARTICIPATION BY LENDER

Many lenders attempt to increase their yield from real estate projects by participating in the *equity*, or ownership, of the property. The developers can benefit from the higher loan-to-value ratio, lower interest rates, and slower repayment terms that a participating lender will accept.

Equity participation by lenders is a relatively recent phenomenon. Historically, federal and state statutes prohibited banks and other lenders from owning real estate. In recent years, however, these statutory restraints have been substantially relaxed. Lenders need to ensure that their equity participation does not result in an effective interest rate that is in excess of state usury limits.

WRAPAROUND FINANCING

Occasionally, an owner will require financing in addition to an existing loan secured by a deed of trust or mortgage on the property. Unless the second lender is willing to take a position subordinate to the holder of the first loan with respect to rights to the property, the owner will need to obtain a second loan sufficient to satisfy (pay off) the first loan and still provide sufficient funds to meet its financing requirements.

Paying off the first loan may not be economically attractive, however, because of prepayment penalties or because the interest rate on the first loan may be lower than the rate available on a new loan. In such instances, wraparound financing can provide additional funds without requiring the owner to first pay off the original loan.

In a *wraparound financing* transaction, the second lender lends the owner the additional funds and agrees to take over the servicing of the first loan. In exchange, the owner executes a deed of trust or mortgage and an all-inclusive note, covering the combined amount of the first and second loans. The new lender benefits because the rate charged on the all-inclusive note is higher than the weighted-average interest rates of the first and second loans. The owner benefits because the interest rate on the all-inclusive note is lower than the rate it would have to pay if it paid off the first loan and took out a new loan to cover the entire amount.

FORECLOSURE AND RIGHTS OF REDEMPTION

If the mortgagor fails to repay the loan, then the mortgagee may resort to foreclosure. *Foreclosure* is the legal process by which a mortgagee puts a piece of property up for sale in the public arena to raise cash in order to pay off a debt owed by the mortgagor to the mortgagee. The property is sold to the highest bidder; the proceeds are then first used to satisfy the debt obligation (plus interest) of the unpaid first mortgage and court costs. The proceeds are then used to pay any other secured creditors holding a mortgage or deed of trust on the property. The remainder, if any, is distributed to the mortgagor. The exact details of the foreclosure process differ from state to state. Generally, creditors receive payment

14. *Id.*

in the order in which they secured their debts. However, secondary creditors may condition a second mortgage or loan on the mortgagor getting prior creditors to waive their rights to first payment in the event of a foreclosure. The mortgagor receives nothing until all creditors with a security interest in the property are paid in full.

In some states, the lender can bid the amount of the outstanding indebtedness in the foreclosure sale. If the lender is the highest bidder, it acquires the property, and the debt is extinguished. Some states provide *rights of redemption*, which give the mortgagor and certain other categories of interested persons the right to redeem (reacquire) the property within a statutory limited period, ranging from two months to two years after the sale. If the foreclosure amount plus interest is not paid by the expiration of the redemption period, the purchaser at the foreclosure sale receives the deed and clear ownership of the land.

APPRAISAL METHODS

The value of an income-producing property may be appraised by (1) the cost approach, which adds the cost of constructing a given improvement on the property to the value of the unimproved land; (2) the market approach, which looks at the selling prices in recent sales of properties with similar income-producing characteristics; or (3) the income approach, which establishes the present value of the estimated annual cash flow over the anticipated holding period. The income approach is generally favored because it provides a basis for comparison; the cost approach is rarely used.

The appraisal of property is an inexact science and is relatively unregulated by state governments. Because the funds available to a developer, and the financial institution's loan fees, are based upon the property's appraised value, the appraiser may be pressured to inflate the appraisal. Although increased loan fees and increased funds for development may provide short-term benefits, inflated appraisals can have disastrous long-term effects. For example, the savings and loan crisis in the 1980s (which cost taxpayers in excess of \$300 billion) was in part caused by inflated appraisals that induced savings and loan associations to make reckless loans. The housing mortgage crisis that commenced in 2007 has also been attributed in part to inflated appraisals, triggering calls for greater oversight of state appraisal boards by the Appraisal Subcommittee, an independent federal agency established by Congress in 1989 in the wake of the savings and loan crisis.¹⁵

15. Mitch Weiss, *Following AP Report, Appraisers Call for Reform*, WASH. POST, Aug. 20, 2008.

PROTECTIVE LAWS FOR BORROWERS

Every jurisdiction has laws that regulate the conduct of lenders and protect borrowers, especially the interest rate that can be charged (*usury laws*) and the remedies available if a borrower fails to pay on time or is otherwise in default. Both sets of laws are designed primarily to protect individuals, not businesses. Many of the default laws originated during the Great Depression to protect farmers. Such laws include the rights of redemption discussed earlier.

In recent years, usury laws have tended to disappear because an out-of-date usury law (e.g., limiting the interest rate to 8 percent when the prevailing rate is 12 percent) will simply cause loan money to go to a more liberal jurisdiction. In some states, however, the usury laws still apply unless a corporation holds the title to the property. In other states, equity participation by a lender may result in an illegally high interest rate. The penalties for violating the usury laws can be severe, and treble damages are sometimes available. A borrower cannot effectively agree to waive the benefits of a usury law; such a waiver is considered contrary to public policy.

Fair lending laws prohibit racial discrimination in lending practices. The Department of Housing and Urban Development (HUD) is responsible for enforcing these laws.

COMMERCIAL LEASING

A *commercial lease* is both (1) a conveyance of an interest in real property from the landlord (also called the *lessor*) to the tenant (also called the *lessee*) and (2) a contract that governs the respective rights and obligations of the parties during the lease term. Because most firms do not own the premises in which their business operations are conducted, the availability and the terms and conditions of commercial leasing can be crucial to the success or failure of the business.

TYPES OF LEASES

There are four types of commercial leases: office leases, retail leases, industrial leases, and ground leases.

Office Leases

Most tenants occupy only a portion of an office building. Unless the tenant is to occupy a substantial portion of the building, the lessor will ordinarily present a standard lease form used for all of the tenants of the building. Because the lessor is more interested in having occupants than in obtaining any particular tenant as an occupant, it is often unwilling to negotiate each lease provision separately or to

permit the tenant to prepare the lease. In a tight market for tenants, however, there is more room for negotiation.

Retail Leases

In the negotiation of retail leases, the focus is on the operation of the tenant's business. Retail leases frequently contain a *percentage rent clause* that requires the tenant to pay the lessor a percentage of its gross sales, in addition to a base monthly rent.

Environmental issues can be a significant concern in retail leases. Having a paint store or a dry cleaner as a tenant can impose liability upon the landlord under federal and state environmental laws and regulations.

Industrial Leases

Industrial leases tend to have a five-year term with renewal options. They usually contemplate substantial capital improvements by the tenant in the form of plant and equipment. Industrial leases are almost always *triple net*, which means that the tenant pays all taxes, insurance, and operating maintenance expenses. Additionally, because the industrial use tends to be very site-specific, assignments of industrial leases are usually allowed only upon the sale of the tenant's business; subleasing is usually strictly prohibited.

Ground Leases

A *ground lease* is a very long-term lease, sometimes as long as ninety-nine years. Ground leases are used when a landowner desires to obtain a steady return of income from undeveloped commercial property without the expense of improving or managing the property. Alternatively, a ground lease may be proposed by a tenant that does not wish to invest its own funds in the land but is willing to erect improvements for its own use and at its own risk.

ASSIGNMENTS AND SUBLICENSES

If the premises fail to meet the tenant's needs, or if the tenant can no longer afford the lease, it may wish to assign or sublease the property. An *assignment* of a lease is a permanent transfer of the lease to a third party. The third party acquires the tenant's rights under the lease; however, the tenant remains liable for the rent if the third party defaults unless the lessor has agreed to look only to the third party. A *sublicense* is a temporary transfer of the lease to a third party.

Landlords may be hesitant to grant the tenant the right to assign or sublease to a stranger, however. Moreover, landlords are often concerned about the financial wherewithal of any assignees or sublessees. Therefore, most leases require

the landlord's written consent for an assignment or a sublease. Most landlords are willing to provide in the lease that they will not withhold consent unreasonably, and some leases allow for assignment without the landlord's consent if the assignee has the same credit rating as the assignor. In an escalating market, a lease may develop a substantial bonus value if market rents exceed the rent due under the lease. Therefore, the landlord may condition the assignment or sublease on the tenant's paying over any bonus value or splitting it with the landlord.

HIDDEN ISSUES

Leases, especially commercial and retail leases, invariably contain a dizzying number of provisions and terms. Most of these terms are straightforward, but they should *always* be reviewed carefully to find any possible out clauses, also known as *early termination clauses*. Any provision that would allow the lessor or lessee to cancel the lease without completing the full term or paying the complete value of the lease is considered an *out clause*. Most leases contain a few standard out clauses involving complete destruction of the property, and all leases are subject to implied out clauses such as frustration of purpose.¹⁶ Some leases, however, contain terms that ordinarily would not be grounds for invalidating the entire lease. For example, an owner of a mall may guarantee that it will maintain a certain percentage of occupancy. If occupancy drops below that percentage, the tenant may have the right to opt out of the lease. These clauses can easily be overlooked in a lease of twenty-five pages or more but can become very important if such circumstances ever come to pass.

GOVERNMENT REGULATION OF LAND USE

Land use is most heavily regulated at the local level, although several states regulate at least some aspects of land use on a regional or statewide level. For example, the state of Florida has preempted the authority of local jurisdictions to regulate land use. Federal and state laws concerning environmental matters, such as air and water quality and the protection of

16. If a lessee enters into a lease with a lessor for a very specific purpose that is frustrated by events over which the party wishing to terminate the lease had no control (for example, a reporter rents a room in London to see a coronation procession that is postponed because the would-be king gets appendicitis), then a court may void the lease and release the lessee from the obligation to pay any further rent because the purpose of the lease (to see the coronation) has been frustrated. See *Krell v. Henry*, 2 K.B. 740 (C.A. 1903).

wetlands and endangered species, can also affect the permitted uses of property.

The discussion that follows first outlines federal and state regulations, then explains general principles of local land-use regulation. Each state has its own scheme for land-use regulation at the local level. Local regulatory systems operating under a state's scheme may vary from city to city, although some states require more uniformity than others ("city" is used here to refer to both cities and counties unless otherwise noted). The specific laws and regulations applicable in each state and local jurisdiction must be consulted to understand how land use in that jurisdiction is regulated.

THE NATIONAL ENVIRONMENTAL POLICY ACT AND STATE COUNTERPARTS

The National Environmental Policy Act (NEPA)¹⁷ requires all federal agencies to preserve and enhance the environment so that "man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans." To implement this goal, NEPA requires all agencies of the federal government to consider the environmental consequences of their actions. Most states have adopted environmental quality laws similar to NEPA, which require state and local agencies to consider the environmental impact of their decisions.

EIS Requirement

As part of any proposal for legislation or other major governmental action that may significantly affect the quality of the environment, the government must generally include an *environmental impact statement (EIS)*. The EIS considers (1) the environmental impact of the proposed action, (2) any adverse environmental effects that the proposed action would unavoidably have, (3) alternatives to the proposed action, (4) the relationship between the short-term uses of the environment and the maintenance and enhancement of long-term productivity, and (5) any irretrievable commitments of resources that the proposed action would involve.

Some actions are categorically exempt from the EIS requirement because they do not have any environmental impact. If an action is not categorically exempt, the agency involved prepares an *environmental assessment (EA)*, which identifies any significant impact on the environment. If the EA indicates that the action will not have a significant impact on the environment, no EIS is prepared. If there may be a significant impact, an EIS is required. In some cases, courts

have determined that an EIS may not be required when the agency proposing the action performs an environmental review substantially equivalent to an EIS.

Enforcement

NEPA and its state law counterparts are enforced mainly through litigation by persons who wish to challenge a governmental agency's decision. NEPA and state law complaints have been used extensively by groups opposing real estate developments and federal leases of public lands for private use. Such litigation can delay projects for many years.

Planning

Planning for compliance with NEPA or its state law counterparts is an important part of planning for any business project that requires state or federal decisions, approvals, or permits. This means not only preparing an EIS, if required, but also planning the project to minimize adverse effects on the environment.

THE POLICE POWER

The legal basis for land-use planning and regulation is the *police power*; that is, the inherent authority of a city or county to protect the health, safety, and welfare of its residents. The courts have been interpreting the police power to give it a wider and wider scope. Its exercise is no longer limited to addressing immediate threats to the public health and safety, such as fires or unsanitary conditions. The U.S. Supreme Court explained:

The concept of the public welfare is broad and inclusive. . . . The values it represents are spiritual as well as physical, aesthetic as well as monetary. It is within the power of the Legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well-balanced as well as carefully patrolled.¹⁸

Under this broad reading of public welfare, regulations as varied as architectural review, rent control, limitations on condominium conversions, and restrictions on off-site advertising signs have all been upheld as being appropriate uses of a city's police power.

RENT CONTROL

In 1999, the California Supreme Court upheld the City of Santa Monica's rent control law, which, among other things, established maximum allowable rents, provided for adjustments of allowable rents, and prohibited evictions except

17. 42 U.S.C. § 4321 *et seq.*

18. *Berman v. Parker*, 348 U.S. 26 (1954).

in specified circumstances.¹⁹ The law's stated purpose was to prevent owners from exploiting a growing shortage of affordable housing units by charging unreasonably high rents. A landlord challenged the rent control law, arguing that it did not accomplish its stated purpose but rather caused "gentrification" in Santa Monica.

The California Supreme Court "recogniz[ed] the well-established case law of the United States Supreme Court and of this court holding that ordinary rent control statutes are generally constitutionally permissible exercises of governmental authority," but the court also noted that particular decisions of public agencies charged with administering rent control may be deemed to be unconstitutional if they deprive landlords of a fair rate of return. In addition, rent control laws must possess certain structural features that safeguard against confiscatory results. The Fifth Amendment is violated when a land-use regulation "does not substantially advance legitimate state interests." In this instance, the court concluded that Santa Monica's interest in preventing "excessive and unreasonable rent increases" was a legitimate government interest, regardless of whether the primary beneficiaries

of this protection were tenants with low income or merely moderate income. The court noted that "with rent control, as with most other such social and economic legislation, we leave to legislative bodies rather than the courts to evaluate whether the legislation has fallen so far short of its goals as to warrant repeal or amendment."

EMINENT DOMAIN

Federal, state, and local governments have the power to acquire private property needed for a public purpose through *eminent domain*. The government is required by the Fifth Amendment to the U.S. Constitution (made applicable to the states by the Fourteenth Amendment) to pay just compensation for property acquired by eminent domain. As the U.S. Supreme Court explained, the "paradigmatic taking requiring just compensation is a direct government appropriation or physical invasion of private property," however minor.²⁰ In the following case, the U.S. Supreme Court considered whether a town could use eminent domain to require private landowners to sell their houses and other property to a private developer.

19. SMB, Ltd. v. Superior Court of Los Angeles County, 968 P.2d 993 (Cal. 1999), *cert. denied*, 526 U.S. 1131 (1999).

A CASE IN POINT

CASE 19.2

KELO V. CITY OF NEW LONDON

SUPREME COURT OF THE
UNITED STATES
545 U.S. 469 (2005).

SUMMARY

FACTS The City of New London, Connecticut, wanted to develop a nonblighted residential area in order to revitalize its ailing economy. In particular, the city had approved a development plan that called for construction of a waterfront hotel, restaurants, retail stores, residences, office space, and marinas. Instead of developing the property itself, the city proposed to have it developed by a private developer. Nine land owners refused to sell to the private development agent, so the city initiated condemnation proceedings.

ISSUE PRESENTED Does a redevelopment plan designed to spur economic growth by transferring nonblighted private residential property to a private developer constitute a public use?

SUMMARY OF OPINION The U.S. Supreme Court began by explaining:

Two polar propositions are perfectly clear. On the one hand, it has long been accepted that the sovereign may not take the property of A for the sole purpose of transferring it to another private property owner B, even though A is paid just compensation. On the other hand, it is equally clear that a State may transfer property from one private party to another if future "use by the public" is the purpose of the taking.

The Court propounded a broad definition of public use: "For more than a century, our public use jurisprudence has wisely eschewed rigid formulas and intrusive scrutiny in favor of affording legislatures broad latitude in determining what public needs justify the use of the takings power." The takings in this case advanced a public purpose, namely, economic development: "Promoting economic development is a traditional and long accepted function of government." The Court refused to adopt a rule requiring that the city establish to a "reasonable certainty" that the expected public benefits, such as new jobs and

CONTINUED

increased taxes, would actually accrue from the development plan. It also declined to second-guess the city's determinations as to what lands it needed to acquire in order to effectuate the project.

RESULT The city could use its power of eminent domain to force private owners to sell their houses and other property to the private development agent.

COMMENTS In a sharply worded dissent joined by Chief Justice Rehnquist and Justices Scalia and Thomas, Justice O'Connor accused the majority of washing out any distinction between private and public use of property and cautioned:

Under the banner of economic development, all private property is now vulnerable to being taken and transferred to another private owner, so long as it might be upgraded—i.e., given to an owner who will use it in a way that the legislature deems more beneficial to the public—in the process.

She predicted:

[The beneficiaries of this decision] are likely to be those citizens with the disproportionate influence and power in the judicial process, including large corporations and development firms. As for the victims, the government now has license to transfer property from those with fewer resources to those with more. The Framers cannot have intended this perverse result.

In response to this decision, a number of states adopted laws prohibiting the taking of private property for purposes of private redevelopment. Instead, eminent domain was limited to traditional public purposes, such as building schools, roads, or public parks.

REGULATORY TAKINGS

Although the range of activities a city can engage in is broad, there are limitations on the police power. A city may not act arbitrarily or capriciously in enacting or applying land-use regulations. In addition, land-use regulations are sometimes challenged on the ground that they amount to an unconstitutional taking of the property without just compensation.

Regulation that completely deprives an owner of all economically beneficial use of his or her property (a *regulatory taking* or *inverse condemnation*) constitutes a taking requiring just compensation. But a regulation may not require compensation if it merely limits the owner's ability to realize the highest economic value for the property. For example, in *Penn Central Transportation Co. v. City of New York*,²¹ the U.S. Supreme Court held that the City of New York did not effect a taking requiring just compensation when it denied Penn Central permission to build a fifty-story office building over Grand Central Terminal. New York City had designated Grand Central a landmark under the Landmarks Preservation Law, which restricted the owner's right to substantially alter the building. Although the application for the construction of the building met all local zoning requirements, Penn Central was denied permission under the landmarks law. Rejecting Penn Central's claim that the application of the landmarks

law had deprived it of its property without just compensation, the Supreme Court emphasized that application of the law did not interfere with "Penn Central's primary expectation concerning the use of the parcel" or prevent Penn Central from earning a "reasonable return" on its investment.

In *Lucas v. South Carolina Coastal Council*,²² the U.S. Supreme Court considered whether South Carolina's desire to prevent harmful or noxious uses justified its Beachfront Management Act, which effectively barred Lucas, the owner of two residential lots purchased in 1986 for \$975,000, from erecting any permanent structure on his parcels. The Supreme Court held that if the Act did no more than duplicate the result under the state's common law nuisance law, then no compensation would be required. But, if the Act prohibited an activity not prohibited by common law nuisance and denied the owner all economically viable use of his land, then compensation may be required. The Court put the burden of proof on the state to show that its regulation was not a taking.

In *Palazzolo v. Rhode Island*,²³ the U.S. Supreme Court ruled that landowners may challenge regulations they consider to be takings requiring compensation even if the regulations were already in place at the time the person challenging the regulations purchased the property. In the past, it was assumed that anyone purchasing property with

21. 438 U.S. 104 (1978).

22. 505 U.S. 1003 (1992).

23. 533 U.S. 606 (2001).

regulatory restrictions on it was paying a lower price and purchasing the property with the understanding that its use was restricted. *Palazzolo* represented a major extension of the rights that theretofore were generally reserved for owners whose property was later burdened by new regulations.

In *Tahoe-Sierra Preservation Council Inc. v. Tahoe Regional Planning Agency*,²⁴ the U.S. Supreme Court ruled that a five-year moratorium on development in the Lake Tahoe Basin imposed by the Tahoe Regional Planning Agency did not constitute a taking requiring compensation. Unlike a physical taking of property for public use, which requires compensation, a regulatory taking limiting the private use of land automatically entitles the owner to compensation only when the regulation removes all the economic value of a piece of property. In all other cases, courts must look to see whether the “regulatory taking went too far,” based on “essentially ad hoc, factual inquiries.” In this case, the temporary nature of the regulations weighed against a finding of a taking. In addition, the Court reasoned, imposing strict compensation rules on future decision-making bodies might cause them to be less likely to make fair and just decisions out of fear that the costs might be prohibitive. The need to keep these bodies objective and focused on making the most socially beneficial decisions, despite the costs, was a major factor in the Court’s decision.

The Court had held in *Agins v. Tiburon*²⁵ that a regulatory taking also occurs if the regulation does not substantially advance legitimate state interests, but ruled fifteen years later in *Lingle v. Chevron U.S.A.*²⁶ that “the ‘substantially advances’ formula is not a valid method of identifying compensable regulatory takings” and accordingly “has no proper place in our takings jurisprudence.” The Court explained that the “substantially advances” inquiry reveals nothing about the magnitude or character of the burden a particular regulation imposes upon private property rights. Nor does it provide any information about how any regulatory burden is distributed among property owners. As a result, “this test does not help to identify those regulations whose effects are functionally comparable to government appropriation or invasion of private property.” While acknowledging that its language in *Agins* was “regrettably imprecise,” the Court pointed out that the decision in *Lingle v. Chevron* “does not require us to disturb any of our prior holdings,” because “in no case have we found a compensable taking based on such an inquiry.”

Takings questions also arise when a regulatory agency imposes a condition that must be satisfied before a building

permit or other land-use approval is granted. This is addressed as part of the discussion of regulatory schemes that follows.

REGULATORY SCHEMES

The fundamental components of most land-use regulatory schemes are a general plan, a zoning ordinance, and a subdivision ordinance. Some jurisdictions also employ more specialized planning documents, often called *specific plans* or *community plans*, that function somewhere between the general plan and the zoning ordinances.

THE GENERAL PLAN AND OTHER PLANNING DOCUMENTS

Many cities have a general development plan, known variously as the general plan, *city plan*, *master plan*, or *comprehensive plan*. (All such plans are referred to in this chapter as the general plan.) A *general plan* is a long-range planning document that addresses the physical development and redevelopment of a city. It is comprehensive in that it addresses the entire city and a wide range of concerns, such as housing, natural resources, public facilities, transportation, and the permitted locations for various land uses. It includes goals, objectives, policies, and programs related to these concerns.

The practical effect of the general plan varies from state to state. In some states, a general plan is not required at all. In certain states, the general plan is strictly an advisory document that need not be adhered to when planning decisions are made. In other states, the plan functions as the “constitution” for development, and by law, planning decisions (such as zoning, subdivision approval, and road and sewer construction) must be consistent with it. When the general plan has this significance, anyone contemplating development of a specific piece of property should determine what the general plan says about the allowed uses for that property. The general plan may also provide important information about the city’s policies regarding growth, where and when public services and facilities will be provided, and whether developers will be expected to provide or pay for needed infrastructure.

If development of the type contemplated is not authorized by the general plan, a general plan amendment will be required. The general plan may also be amended to preclude a contemplated development. Authorization of a type of development in the general plan is not, however, a guarantee that a specific development will be permitted. The development must also be authorized by the zoning ordinance, and other land-use approvals could be required.

Some jurisdictions employ other planning documents in addition to the general plan. Called *specific plans*, *special*

26. 544 U.S. 528 (2005).

plans, community plans, area plans, and a number of other names, these plans usually encompass just a portion of the city's geographic area. They may focus on areas in particular need of planning, such as a downtown area slated for redevelopment, an environmentally sensitive area, a transportation corridor, or an area facing unusual development pressure. Typically, these plans are more detailed than the general plan.

ZONING REGULATIONS

Zoning is the division of a city into districts and the application of specific land-use regulations in each district. Zoning regulations are divided into two classes: (1) regulations regarding the structural and architectural design of buildings (such as height or bulk limitations), and (2) regulations regarding the uses, such as commercial or residential, to which buildings within a particular district may be put. These types of regulations are employed both in traditional zoning systems and in more recently developed approaches to zoning.

Traditional Zoning

Traditional zoning separates different land uses. For example, residential areas are separate from commercial and industrial areas, and residential areas of varying densities are separate. This approach to zoning finds its roots in the earliest land-use regulations, which promoted health and safety by separating residences from certain types of manufacturing and service industries. Early zoning also protected property values by preventing apartments from being built near more desirable single-family dwellings.

Planned Unit Development

Although many cities still employ some form of traditional zoning, others have adopted different approaches. For example, under *planned unit development (PUD)* zoning, the land-use regulations for a given piece of property reflect the proposed development plans for that property. These plans may include a mixture of uses, such as residential, office, and retail commercial, which could not be accommodated under the separation of uses required by traditional zoning. Residential development may be clustered on a portion of the property, creating densities higher than those permitted under traditional zoning but also providing larger areas of open space. Planned offices or industrial parks may be subject to covenants and restrictions such as regulated setbacks or signage. Many feel that this more flexible approach to zoning allows more creativity and shows greater sensitivity to environmental and aesthetic concerns.

Zoning Relief

Variances and conditional-use permits may create exceptions to a zoning ordinance. A *variance* allows a landowner to construct a structure or to carry on an activity not otherwise permitted under the zoning regulations. It allows the property owner to use the property in a manner basically consistent with the established regulations, with such minor variations as are necessary to avoid inflicting a unique hardship on that property owner. In some states, variances may be granted to allow uses not authorized by the zoning regulations. In other states, variances are limited to sanctioning deviations from regulations governing physical standards, such as minimum lot size, the maximum number of square feet that may be developed, and off-street parking requirements.

A *conditional-use permit* allows uses that are not permitted as a matter of right under the zoning ordinance. The permit imposes conditions to ensure that the use will be appropriate for the particular situation.

Nonconforming Uses

A *nonconforming use* is an existing use that was originally lawful but does not comply with a later-enacted zoning ordinance. A zoning ordinance may not compel immediate discontinuance of a nonconforming use (unless it constitutes a public nuisance). A city can, however, require that nonconforming uses be eliminated within a reasonable time or upon application for a building permit to modify the premises.

SUBDIVISION PROCESS

Frequently, development requires the division of land into separate parcels. This process is known as *subdivision*. It is a necessary step in residential development and often in industrial or commercial development.

The subdivision process allows the city to regulate new development and to limit harm, deterioration of water quality, soil erosion, and building in areas subject to earth movement. The subdivider may also be required to address, for example, the impact of the subdivision on views and other aesthetic concerns or on traffic circulation.

CONDITIONS AND UNCONSTITUTIONAL TAKINGS

Frequently, to win approval for a subdivision (or other land-use permit), the subdivider or land owner must provide streets, utilities, sewers, drainage facilities, and other infrastructure to serve the subdivision or other development. It may also be required to dedicate land for parks, schools, libraries, and

fire stations and to pay impact fees to offset the increased burden on public facilities and services resulting from the development. The conditions may include constructing on-site or off-site facilities or paying fees for purposes as varied as acquiring parkland or providing day-care centers, public art, or low-income housing.

Conditions to a land-use approval will be upheld if they are reasonably related to the burdens on the community created by the development being approved. Thus, if the development will result in an influx of residents or employees, a fee to fund traffic improvements made necessary by that influx will be upheld. In the absence of the legally required relationship between a condition to an approval and the impacts of the development being approved (the *nexus*), however, the condition may be struck down as an unconstitutional taking.

For example, in the case of *Nollan v. California Coastal Commission*,²⁷ James and Marilyn Nollan sought a permit from the California Coastal Commission to demolish their existing single-story beachfront house and replace it with a two-story, three-bedroom house approximately three times larger than the existing structure. Public beaches were located within one-half mile to the north and south of the Nollans' property. Finding that the new house would further obstruct the ocean view, increase private use of the beach, and establish a "psychological barrier" to access to the nearby public beaches, the commission approved the construction subject to the condition that the Nollans dedicate an easement for public access across the portion of their property lying between the high-water mark and a seawall approximately ten feet inland. The Nollans successfully challenged this condition. The U.S. Supreme Court held that the dedication condition amounted to an unconstitutional taking because there was no nexus between the requirement of an easement for public access and the stated interest of reducing obstacles to the ocean view as well as "psychological barriers" to using the beach. The Court concluded by saying that if the government wanted an easement across the Nollans' property, "it must pay for it."

In *Dolan v. City of Tigard*,²⁸ the Supreme Court held that there has to be a showing of "rough proportionality" between the conditions imposed on a permit and the nature and extent of the proposed development's impact. The Court ruled that a city could not require Dolan to dedicate a portion of her property to a pedestrian/bicycle pathway as a condition to permitting the expansion of her retail sales facility. The Court acknowledged that the enlarged retail sales facility would increase traffic on the streets of the central business district by roughly 435 additional trips per day. The Court also noted

IN BRIEF

Limits on Land-Use Regulation

1. Any direct government appropriation or physical invasion of private property, however minor, requires just compensation.
2. Government takings and regulations must be reasonably related to the public welfare.
3. Regulations cannot deny the owner all economically beneficial use of its land.
4. Conditions to a land-use approval must be reasonably related to the burdens on the community created by the development being approved (*nexus*).
5. There must be rough proportionality between the conditions imposed and the nature and extent of the proposed development's impact.

that dedications for streets, sidewalks, and other public ways are generally reasonable exactions to avoid excessive congestion for a proposed property use. The Court concluded, however, that the city had not met its burden of demonstrating that the additional number of vehicle and bicycle trips generated by Dolan's development was reasonably related to the city's requirement for dedication of the pedestrian/bicycle easement. Thus, the exaction amounted to an unconstitutional taking.

In *Monterey v. Del Monte Dunes at Monterey, Ltd.*,²⁹ the U.S. Supreme Court held that *Dolan*'s rough proportionality test applies only to exactions and not to outright denials of permission to develop. The Court explained:

Although in a general sense concerns for proportionality animate the Takings Clause, we have not extended the rough proportionality test of *Dolan* beyond the special context of exactions—land-use decisions conditioning approval of development on the dedication of property to public use. The rule applied in *Dolan* considers whether dedications demanded as conditions of development are proportional to the development's anticipated impacts. It was not designed to address, and is not readily applicable to, the much different questions arising where, as here, the landowner's challenge is based not on excessive exactions but on denial of development. We believe, accordingly, that the rough proportionality test of *Dolan* is inapposite to a case such as this one.

Political PERSPECTIVE

The Oregon Land-Use Referendum: A State Divided

Oregon, a state that has defined itself by its open land and celebrated landscapes, has become divided in a neighbor-versus-neighbor legal battle over what Oregonians can actually do with their land. Historically, Oregon residents lived in shoulder-to-shoulder suburban housing developments with small yards but near farmland and "greener" communities. As the years passed, however, those who owned the open land became increasingly frustrated with their inability to use their property as they saw fit.^a Property owners in rural areas were particularly critical of "urban policy makers and the urban elite," who established urban growth boundaries around cities and tried to keep development within them.^b Houses could be built on farmland only under strict conditions; nonfarm dwellings were allowed only in areas with poor soil. Farmers complained that Oregon's thirty-one-year-old land-use regulations left them with insignificant funds for retirement and unfairly forced property owners, rather than taxpayers, to pay the cost of socially imposed goals.^c

On November 2, 2004, voters in Oregon passed by a 60-to-40 percent margin Measure 37, a ballot measure that required fair compensation to landowners when environmental or zoning regulations reduced the value of their property. Four other states—Florida, Texas, Louisiana, and Mississippi—enacted similar laws in the wake of the 1994 Republican "Contract with America," but these laws required compensation for property owners only if newly enacted land-use

regulations reduced the property value by at least 25 percent. In contrast, Measure 37 required cities and counties either (1) to pay fair market compensation for *any* diminution in value due to land-use regulations enacted after the purchase of the property or (2) to exempt the property owner from the regulation. Rules enacted to meet federal requirements or to protect the community from public nuisances and safety hazards did not trigger a right to compensation.

Prior to the 2004 election, the *Oregonian*, the state's largest newspaper, cautioned that cash-strapped local governments would not be able to afford to pay compensation, so "most cities and counties would fold quickly [and waive the restrictions], and Oregon's land-use laws would crumble with them."^d Others warned that the measure would result in "a blanket of subdivisions, 'ranchettes' and shopping centers sprawling over what was once Western Oregon's beautiful and fertile Willamette Valley."^e Robert Liberty, a former president of 1,000 Friends of Oregon, an avid pro-planning group, and member of the Portland regional planning agency board, argued: "Quality of life is something that is shared. A golf course is not. A four-car garage is not. One of the best things about the planning process is that it makes a better community for everyone, regardless of income."^f

After landowners took advantage of the new development freedom provided by Measure 37 and proposed constructing homes, subdivisions, and office buildings on their open land,

those against the new expansion began to see Measure 37 as a hazard to the state's farming industry and quality of life. In particular, the Oregon Department of Agriculture warned residents that claims filed under the new law would threaten 132,000 acres of prime farmland.^g Oregon governor Ted Kulongoski urged the state legislature to change the law or at least to delay its enforcement and warned residents that Measure 37 was setting back efforts to fight global warming and paralyzing Oregon's long-term push for mass transit.^h

As opinion polls and newspaper pundits revealed that many Oregonians were suffering from "voter's remorse" after passing Measure 37, Measure 49 was introduced and passed with 62 percent of the vote on November 6, 2007.ⁱ Measure 49 rescinded Measure 37 and significantly scaled back the property rights it had granted. Measure 49 provides that claimants may build up to three houses on their property if such construction was allowed when they acquired the property. That number is increased to ten if (1) ten houses were permitted when the owners acquired their property and (2) the owners have suffered reductions in property values that justify additional home sites. Measure 49 protects farmlands, forestlands, and lands with groundwater shortages by prohibiting subdivisions on these lands and prevents claimants from using Measure 49 to override current zoning laws prohibiting commercial and industrial developments on restricted lands.

CONTINUED

With the enactment of Measure 49, the state projected that Oregonians will see only about 13,000 new houses built in the countryside, a fraction of the 100,000-plus new houses expected to be built after Measure 37 was passed. Richard Whitman, the director of the Department of Land Conservation and Development, indicated that Measure 49 had calmed the waters: "We had 300 court cases pending, and now it's down to under 80 and the number is dropping fast. The main thing is that

Measure 49 is a lot clearer in terms of what is and isn't allowed."^j

A city's imposition of a condition on the grant of a permit can also be challenged under the Equal Protection Clause. For example, the U.S. Supreme Court recognized that a valid claim for relief existed when a village "intentionally demanded a 33-foot easement as a condition to connecting [one property owner's] property to the municipal water supply where the village required only a 15-foot easement from similarly situated property owners."³⁰

ENVIRONMENTAL ASSESSMENT

Certain states require a detailed evaluation of the effects of a proposed development project on the environment before they will approve it. The state may also require the developer to discuss alternatives to the proposed project and to identify measures that would mitigate adverse environmental effects.

VESTED DEVELOPMENT RIGHTS

Until a developer obtains a *vested right*—that is, a fully guaranteed right—to develop a property, the regulations governing that property may be changed. In other words, a developer has no claim to the land-use regulations in effect when the property was acquired, when preliminary steps to development were taken, or at any other time prior to the vesting of the right to develop. A change in the land-use regulations prior to vesting may, therefore, preclude a development that would have been permissible under the regulations in force at the time the property was acquired.

In some states, the right to develop vests when substantial work is done and substantial liabilities are incurred in reliance on a building permit. In other states, vesting is tied to obtaining the "last discretionary approval" required for development. States differ on what constitutes the last discretionary approval.

Early Vesting

Mechanisms to allow early vesting are available in certain states. One such mechanism is a development agreement, which is authorized in Arizona, California, Colorado, Florida, Hawaii, and Nevada. In those states, the development project is governed by the land-use regulations in effect at the time the development agreement is entered into, and the project is immune from subsequent changes in the regulations.

PHYSICAL ACCESSIBILITY TO COMMERCIAL FACILITIES AND PLACES OF PUBLIC ACCOMMODATION

Under the Americans with Disabilities Act (ADA),³¹ any new renovations or alterations to commercial facilities must be accessible to persons with disabilities, including those in wheelchairs. The Act defines *commercial facilities* as all structures except those intended for residential use. This accessibility rule applies only to the areas being renovated, and it requires compliance only to the extent feasible.

30. Village of Willowbrook v. Olech, 528 U.S. 562 (2000).

31. 42 U.S.C. § 12101 *et seq.*

New construction, on the other hand, is subject to more complex accessibility rules. In building new structures, architects and builders must comply with regulations established by the U.S. Attorney General regarding accessibility. In general, new structures must be designed and constructed so that they are “readily accessible to and usable by individuals with disabilities,” unless it is structurally impossible to do so.

Violation of the physical-accessibility rules for renovations and new construction can result in a private lawsuit or action by the U.S. Attorney General. Violators may be required to pay damages as well as civil penalties of up to \$50,000 for a first violation and \$100,000 for subsequent violations.

The ADA also requires minor physical changes to existing workplaces to accommodate workers with disabilities. For example, the ADA mandates removal of architectural barriers in existing stores, offices, and firms where the removal is “readily achievable.” Modifications are readily achievable if they are easy to accomplish and can be done without significant expense. Readily achievable changes might include ramping a few steps or lowering a public telephone for wheelchair users, installing grab bars in restrooms, putting raised Braille symbols on elevator controls, and rearranging office furniture to provide increased accessibility.

In addition, the ADA requires that individuals with disabilities have access to “the full and equal enjoyment of the goods, services, facilities, privileges, advantages, or accommodations of any place of public accommodation.” *Public accommodation* is defined to include, among other things, a restaurant, place of lodging, place of entertainment, place of public gathering, and place of exercise or recreation. The prohibited discrimination need not be at a physical location; screening or eligibility requirements imposed from a central location that the disabled person may never actually visit also qualifies under the ADA.³² Similarly, some experts believe that the ADA will be applied to require certain websites to adopt special coding or features to provide access to individuals with disabilities.³³

In *Stevens v. Premier Cruises*,³⁴ a plaintiff confined to a wheelchair sued Premier Cruises for failing to make all areas of its cruise ship wheelchair accessible. The U.S. Court of Appeals for the Eleventh Circuit ruled that “those portions of the cruise ship that come within the statutory definition of ‘public accommodation’ are subject to the public accommodation provisions” of the ADA. The Third

Circuit ruled that arenas subject to the ADA do not have to provide spectators in wheelchairs sight lines over standing spectators, however.³⁵

In contrast, Oregon Paralyzed Veterans of America and three of its members successfully sued two movie theater companies that did not provide wheelchair-bound patrons with “lines of sight” comparable to those provided to the general public who did not use wheelchairs.³⁶ The theaters located all of the wheelchair-accessible seating in the first few rows, forcing wheelchair-bound patrons to “sit in seats that are objectively uncomfortable, requiring them to crane their necks and twist their bodies in order to see the screen, while non-disabled patrons have a wide range of comfortable viewing locations from which to choose.” The court found it “simply inconceivable that this arrangement could constitute ‘full and equal enjoyment’ of movie theater services by disabled patrons.”

The ADA also prohibits discrimination on the basis of disability by public entities unless the discrimination is necessary to avoid substantial risk to the disabled person or others.³⁷ One case involved the city of Covington, Kentucky, which had refused to grant a permit to a group that sought to establish a methadone clinic for recovering drug addicts. The city expressed concerns about a possible increase in crime and drug use if the clinic were located in the area. MX Group, Inc. successfully brought an action on behalf of heroin addicts under the ADA and the Vocational Rehabilitation Act to require the city to grant the permit. The U.S. Court of Appeals for the Sixth Circuit first held that the ADA’s prohibitions against discrimination on the basis of disability apply to zoning and permits. It then explained that the goal of the ADA is to protect disabled individuals from deprivations based on prejudice, stereotypes, or unfounded fears. Accordingly, the determination of whether a development would pose a significant risk turns on an individualized assessment of the nature, duration, and severity of the risk and the probability that the potential injury will actually occur. If a significant risk is present, then the challenging party must show that the risk can be ameliorated by reasonable modifications. If it cannot be ameliorated, ADA protections are unavailable. Because Covington’s denial of the permit was based on stereotypes, prejudice, and unfounded fears, it violated the ADA.

Foreign Ownership and Expropriation

Many countries do not permit foreigners to own land. Therefore, in these countries, a foreigner must obtain a long-term lease on the property.

Mexico's laws restricting foreign ownership offer a complex example. Foreigners cannot obtain title to any property within thirty-one miles of the ocean or within sixty-two miles of the U.S. or Guatemalan borders. All a foreigner can legally acquire near a beach or border is the right to use the land for up to fifty years. This is obtained through a Mexican bank trust called a *fideicomiso translativo de dominio*.³⁸ Even these trusts can be invalidated if the title to the land is not clear. Unfortunately, Mexican title records are not thorough. Public notaries in Mexico can search for liens against property title, but they rarely search back farther than a decade.³⁹ Title insurance is rarely available.

In any country where foreign ownership is permitted, an investor should be cautious when purchasing property.

38. See Bob Ortega, *Quirky Laws for Americans Buying Mexican Property*, WALL ST. J., Oct. 17, 1997, at B1.

39. See *id.*

Many countries, such as Mexico, do not have adequate means for searching the title of property. In addition, many countries allow for *squatter's rights*, whereby ownership of property that is not occupied by its owner for a certain period of time will be transferred to those who have been unlawfully occupying it. Such a transfer is usually not reflected in the official land records.

Nation-states have the right to expropriate or nationalize foreign property under the power of eminent domain. Western countries tend to consider expropriation or nationalization proper as long as (1) it is for a legitimate public purpose, (2) it does not discriminate against a particular class of foreigners, and (3) the state promptly pays fair compensation. Many emerging countries object to having to pay fair market value for expropriated property, however, citing, among other things, the history of European imperialism and colonialism. The expropriation of oil fields owned by foreign companies operating in Venezuela, discussed in the "Inside Story" in Chapter 20, offers a vivid and current example of the perils of foreign ownership.

THE RESPONSIBLE MANAGER

BUYING AND USING REAL ESTATE

The typical manager who does not deal with real estate full-time will probably find that there are more laws, administrative regulations, and governmental practices associated with real estate than with many other management activities. The manager will not always be able to rely on common sense in managing real estate because the laws and administrative practices related to real property can have surprising effects.

Before acquiring real estate, legally astute managers (1) determine whether the property is properly located for the company's operations; (2) determine whether the improvements, if already built, comply with appli-

cable building codes and are suitable for the company; (3) determine whether the facility complies with physical-accessibility regulations under the Americans with Disabilities Act; (4) determine whether previous owners have fully complied with federal, state, and local environmental and hazardous-waste laws and confirm that the company will not be liable under any of those laws; (5) decide whether the company should lease or buy the property; (6) decide, if the property is rental property, for how long and under what terms it should be leased; (7) decide, if the property is for sale, how best to negotiate the purchase contract and finance the purchase; and

CONTINUED

(8) keep senior executives and/or the board of directors informed about the manager's actions and decisions throughout the process.

The magnitude of the investment and the permanence of the acquisition render these decisions some of the most important that a manager will make. Although large corporations generally have a department for facilities management, smaller organizations often do not. The manager will need to have access to responsible professionals, including knowledgeable commercial/industrial real estate brokers, attorneys who specialize in real estate and environmental law, and environmental consultants. If the company is acquiring bare land and building its own improvements, the manager will also need to have available expertise in planning and land use. With the heavy use of outside consultants comes the responsibility of managing the consultants and controlling the costs.

Similar responsibilities accompany the occupancy of real estate. If a company occupies premises under a *full-service lease*, which requires the lessor to maintain the property, the tenant's responsibilities may be limited to seeing that the services provided by the lessor are adequate. Most manufacturing companies do not occupy

leased premises on a full-service basis, however. Thus, the managers may be responsible for continuing maintenance, repairs, and compliance with laws, including environmental laws. In any type of occupancy, management must always plan ahead to ensure that the facilities will continue to be adequate for present and future operations. It is often difficult to anticipate future needs, and it is easy to overspend or, conversely, to fail to anticipate a new demand.

Finally, managers are likely to find that they have less control than desired over real estate decisions. For example, building or other occupancy permits may need to be obtained from several agencies, such as building departments and fire departments. Those agencies may not be responsive to a company's urgent demands, and the officials involved may have a great deal of discretion in both the timing of the approval and the interpretation of the applicable laws. Delays beyond the company's control frequently try managers' patience and cause inconvenience and downtime. In both the acquisition or the disposition phase, legally astute managers allow considerable extra time for delay.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE A Multiplicity of Interests

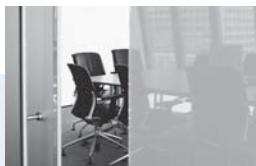

In 1986, Triple Five of Minnesota, Inc. secured the development rights for the land on which the Mall of America in Bloomington, Minnesota, was built. Teachers Insurance and Annuity Association provided \$650 million in construction financing, which was converted into an equity interest in Mall of America Company LP (MOAC LP). MOAC LP was the managing partner and owner of 99 percent of the Mall of America Company (MOAC), which owned the Mall. MOAC LP was a partnership between Teachers, which owned 55 percent of MOAC LP, and Mall of America Associates (MOAA), which owned 45 percent. MOAA was a 50/50 partnership between Triple Five and a limited partnership controlled by the Melvin and Herbert Simon family (Si-Minn LP). Si-Minn LP became the managing partner of MOAA in 1987.

Teachers had always received the entire income generated by the Mall, but MOAA was paid a management fee of 5 percent

of the Mall's gross income per year. Si-Minn LP, the actual manager of the Mall, received 80 percent of this fee, and Triple Five, which had no day-to-day responsibility for managing the Mall, received 20 percent. In March of 1998, both Triple Five and Si-Minn LP became aware that Teachers was considering selling all or part of its interests in the Mall, which it had the right to do.

A company controlled by the Simon family is considering acquiring 50 percent of Teachers' interests in the Mall. Are there any legal or ethical constraints on their ability to acquire Teachers' interests?⁴⁰

40. See *Triple Five of Minn., Inc. v. Simon* 404 F.3d 1088 (8th Cir. 2005).

INSIDE STORY

RECLAIMING BROWNFIELDS

For decades, so-called *brownfields*—such as dumps, landfills, and abandoned factory lots with actual or suspected hazardous contamination—have gone unused even though they are often in exceptional locations. In large part because of their often unique locations, many of these long neglected eyesores are now being reclaimed and are once again thriving.⁴¹

For example, a group of investors was willing to invest \$30 million in the twenty-year-old town dump in Carteret, New Jersey.⁴² It may seem odd that anyone would be willing to invest millions simply to clean up an old dump, but when one considers that Carteret is within ten minutes of Newark Liberty International Airport and fifteen minutes from New York City, has an exit on the most traveled road in the country, and is in the middle of the most densely populated state in America, then the venerable real estate mantra of “location, location, location” takes on a new meaning.

In the last several decades, regulations aimed at curbing suburban sprawl have severely limited new commercial development, making brownfields some of the last suburban and urban land that can be developed into lucrative commercial complexes. Success stories include the Jersey Gardens Mall, which was built on a former city dump in Elizabeth, New Jersey, just to the north of Carteret. As of 2008, the New Jersey Brownfield Reimbursement Program had disbursed \$19 million generated by taxes on the new brownfield projects.⁴³

A key incentive for investors is the limited cleanup responsibility provided by the Small Business Liability Relief and Brownfields Revitalization Act of 2002⁴⁴ and its state counterparts. CERCLA generally holds current owners, as well as the owners who polluted the property originally, jointly and severally liable for the costs of remediation. Thus, if developers buy a piece of property that requires cleanup, they stand a good chance of having to pay the entire cleanup cost even if it is so prohibitive as to make their original investment a loss.

The Brownfields Revitalization Act and related state legislation have changed that. The Act encourages private groups to

attempt to clean up brownfields by letting them off the hook for the entire cleanup cost. If the buyer is a “*bona fide prospective purchaser*,” as defined in the Act, then it can avoid liability for so-called legacy contamination, that is, waste disposed of on the site prior to the acquisition. To qualify as a *bona fide prospective purchaser* (BFPP), the buyer cannot have contributed to the contamination of the brownfield in the first place. In addition, the buyer must (1) conduct a diligent investigation of the property and report any contamination to the appropriate governmental authorities; (2) exercise appropriate care concerning the contamination to stop future or continuing release of contaminants; (3) cooperate with any authorized group, including the federal government, to conduct a cleanup of the property; and (4) obey any land-use restrictions on the property.⁴⁵

In contrast to New Jersey’s success in developing brownfields, New York’s program has drawn harsh criticism. Under the original New York brownfields law, which was passed in 2003, there was no cap on the amount of tax credits that might accrue to a project. In addition, New York offered developers tax breaks for both cleanup and redevelopment costs. These credits were based on the total price of the final development, not just the cost of cleaning up existing environmental hazards.⁴⁶ The New York state comptroller’s office estimated that the 200 projects already in the program would eventually qualify for as much as \$3.1 billion in tax credits unless the original New York brownfields law was amended.⁴⁷ The new brownfields law, signed by Governor David A. Paterson on July 23, 2008, pegs the redevelopment tax credits to the actual cost of the cleanups for the first time. It also caps the redevelopment tax credits for most projects at \$35 million, or three times the cost of the environmental cleanup, whichever is lower (a higher cap will apply to sites previously used as manufacturing facilities).⁴⁸

QUESTIONS AND CASE PROBLEMS

1. John Hardy, the general manager of a large retail home improvement chain, was seeking to expand into new locations. When Hardy learned that a large plot of land near a residential development was available for sale to commercial entities, he entered into negotiations with the property owner to purchase a majority of the land. Eventually, a letter of intent was signed, which set forth the general terms and conditions of the negotiated purchase. Although both parties intended to sign a formal acquisition agreement at the closing, neither expressed any doubt that the purchase would be successfully concluded. Moreover, it was well known that Hardy's company had the necessary financial backing to complete the transaction.

A few days later, however, Hardy heard a rumor that the City Planning Commission was discussing the possible adoption of a new zoning ordinance that would reserve certain open lands for residential development. If passed, the ordinance would prevent Hardy from building a retail store on the tract of land that was the subject of the signed letter of intent. The proposed zoning ordinance had many opponents, but it was unclear how the Commission would ultimately resolve the issue. What should Hardy do?

2. Ace owns Blueacre, a forty-acre parcel of unimproved real estate on the outskirts of a burgeoning city in the state of Calvada. In June 1996, the legislature of Calvada approved the construction of a freeway adjacent to Blueacre. Shortly after the completion of the freeway in 2003, Ace was approached by Greenhorn, who desired to construct an apartment building on Blueacre. Greenhorn is a licensed general contractor previously employed by several large apartment building developers. Although Greenhorn could not arrange financing to purchase Blueacre outright, he was able to negotiate a sixty-year ground lease from Ace on the express condition that Greenhorn complete construction of the apartment building before July 1, 2008. The lease was duly executed by both Ace and Greenhorn, and a memorandum of the lease was legally recorded.

Greenhorn obtained a \$10 million loan at 9 percent interest that was due and payable on or before July 1, 2008, from Construction Lender. To secure repayment of the construction loan, Greenhorn executed a leasehold mortgage in favor of Construction Lender and legally recorded it.

Concurrently with the funding of the construction loan, Greenhorn obtained a standby commitment from Permanent Lender to advance \$10 million at 7 percent interest contingent on (1) the issuance of certificates of occupancy for 80 percent of the apartment building and (2) the leasing of 60 percent of the total rentable space of

the apartment building to tenants acceptable to Permanent Lender. Greenhorn contracted with various subcontractors for the construction of the apartment building. Certificates of occupancy for 80 percent of the apartment building were issued on or before May 31, 2008. Certificates of occupancy for the remaining units were not obtained until July 3, 2008. The leasing of units was hampered by the availability of apartments at a lower cost in competing complexes. As of May 31, 2008, Permanent Lender had approved leases for only 45 percent of the rentable space.

Fearful of defaulting on the construction loan, Greenhorn approached both Construction Lender and Permanent Lender and was successful in negotiating a letter of intent involving Greenhorn, Construction Lender, and Permanent Lender, whereby it was agreed in principle that the term of the construction note would be extended to December 31, 2008, subject to approval by counsel for both Construction Lender and Permanent Lender. Upon the execution of the letter of intent, the officer of Construction Lender negotiating it exclaimed that he was glad that an agreement had been reached to extend the construction loan. The officer representing Permanent Lender replied that he should receive a memento to mark the importance of the occasion.

Subsequently, Permanent Lender suffered record defaults in its mortgage business, its lending policies were scrutinized by the federal regulatory authorities, and its reserve requirements were substantially increased. Unbeknownst to Greenhorn and Construction Lender, Permanent Lender was no longer in a position to fund the permanent loan because of its increased reserve requirements.

Prior to December 31, 2008, Greenhorn submitted executed leases to Permanent Lender sufficient to meet the 60 percent lease contingency. The financial condition of the tenants who signed these leases was equal to or greater than that of the tenants previously approved by Permanent Lender. Recognizing the tight position that Permanent Lender was in, its attorneys uncovered an ancient deed restriction that precluded the sale or lease of Blueacre or any portion thereof to any person of Chinese descent. Based on this restriction, Permanent Lender refused to approve several leases to individuals with Chinese surnames. As a result, Greenhorn was unable to fulfill the 60 percent lease contingency prior to December 31, 2008, and Permanent Lender refused to fund the permanent loan.

On January 5, 2009, Construction Lender sent a notice of default to Greenhorn and announced its intent to foreclose the leasehold mortgage. What are the legal rights

and obligations of Ace, Greenhorn, Construction Lender, and Permanent Lender? Has each of the parties acted ethically?

3. Patricia and Bobby Star were married in New Mexico in July 2000. They had been living together since 1997. In July 2007, they separated. They had purchased a residence as joint tenants in April 1999. Bobby made the down payment from his separate funds. The mortgage payments were made out of commingled funds before and after marriage.

In August 2001, Patricia founded BioGene Corporation, a biotechnology firm, with \$20,000 that she received as an inheritance from her grandmother. All of the stock of BioGene was issued in Patricia's name, and Patricia worked full-time for BioGene. Bobby retained his job with another employer and was not involved in the operations of BioGene. Due to limited financial resources, Patricia did not draw a salary from BioGene until August 2007. In September 2007, BioGene's first product was approved by the Food and Drug Administration. Shortly thereafter, Patricia sold all of her BioGene stock to a large pharmaceutical concern for \$30 million. Two days after the sale of the stock, Patricia filed for dissolution of the marriage.

Is the residence that Patricia and Bobby acquired community property or property held in joint tenancy? Would it matter if after marriage they had written a document stating that they wanted to hold the property as community property? In joint tenancy? Does Bobby have any interest in the proceeds from the sale of the BioGene stock?

4. The Blixseths entered into a purchase agreement with American Capital Corp. (ACC) for three parcels of real estate in Newport, Rhode Island. One was vacant; the second parcel had a mansion on it; the third, had a carriage house. Although ACC knew that all three parcels were located within the Newport Historic District and subject to the rules and regulations of the Newport Historic District Commission, it did not disclose that fact to the Blixseths. A Rhode Island statute provides that a buyer may terminate a sale if an undisclosed condition is a "materially deficient condition." Will the Blixseths be able to void the purchase and sale agreement? [American Capital Corp. v. Blixseth, 563 F. Supp. 2d 316 (D.R.I. 2008).]
5. Plaintiff owns a 150-acre tract of land in the town of Mamaroneck, which has been leased by a private country club since 1921. In 1922, the area where the country club was located became the subject of a zoning ordinance and was rezoned for residential use. The area around the private golf course has been subject to similar zoning rules.

In 1994, the town of Mamaroneck enacted a local law that rezoned the area where the country club was located so that it could be developed only for recreational use. The purpose of the law was to slow down the process of urbanization, preserve recreational opportunities for the town, and prevent increased flooding in the area due to residential development. Just months prior to the passage of this law, plaintiff had submitted a plan for the property to be developed into 71 residential lots leaving 112 acres of standing open space. Because of the plan to rezone the area, the town denied plaintiff's development proposal. Did the local law effect an unconstitutional taking of plaintiff's property without just compensation? [Bonnie Briar Syndicate, Inc. v. Town of Mamaroneck, 721 N.E.2d 971 (N.Y. 1999).]

6. In 1978, California voters staged what has been described as a "property tax revolt" when they approved Proposition 13. This statewide ballot initiative amended the California state constitution and limited the rate at which real property was taxed within the state and the rate at which real property assessments were increased. Proposition 13 raised questions of equity and fairness because two very similar pieces of property could have dramatically different tax consequences depending on when the property was last transferred. Property was reassessed when it was sold, so a new buyer often paid substantially more property tax than a neighbor with a comparable house who had owned the property for a number of years. Is Proposition 13's acquisition-value scheme for assessing property tax a violation of the Equal Protection Clause of the Fourteenth Amendment? [Nordlinger v. Hahn, 505 U.S. 1 (1992).]
7. Lucy Dunworth, developer of a shopping mall, entered into an easement and operating agreement with three major department stores. One of the covenants in the agreement was that each occupant promised to operate its store area as a first-class department store under its trade name for a twenty-year period. The occupants each purchased their commercial space in fee (that is, they actually purchased the land) from the developer. Kaufman-Straus Company, one of the tenants, sold its place to a discount store two years later. The other two first-class department stores brought an action against the discount store because it was not a first-class operation. What is the result? [Net Realty Holding Trust v. Franconia Properties, Inc., 544 F. Supp. 759 (E.D. Va. 1982).]
8. In an effort to minimize the adverse effects on the supply of housing for low-income, elderly, and disabled persons caused by the conversion or demolition of hotel rooms,

San Francisco passed the Residential Hotel Unit Conversion and Demolition Ordinance, which made it unlawful to eliminate a residential hotel without first obtaining a conversion permit.

To obtain a permit, applicants were required to (1) construct new residential units comparable to the converted ones; (2) construct or rehabilitate housing for low-income, disabled, or elderly persons; or (3) pay an “in lieu fee” equal to the replacement site acquisition and construction costs.

Owners of the San Remo Hotel sought to convert the hotel from mixed residential-tourist use to all tourist use. They paid an in lieu fee of \$567,000 in return for the permit, then sued to recover the fee. They argued that the ordinance violated the California Constitution, which provides: “Private property may be taken or damaged for public use only when just compensation, ascertained by a jury unless waived, has first been paid to, or into court for, the owner.” Was the conversion fee a compensable taking? [*San Remo Hotel LP v. San Francisco*, 41 P.3d 87 (Cal. 2002).]

CHAPTER 20

FORMS OF BUSINESS ORGANIZATIONS

INTRODUCTION

Choosing the Proper Form of Business Entity

One of the first questions facing any entrepreneur wishing to start a business is which form of business organization will best suit the enterprise. In weighing the advantages and disadvantages associated with the various forms, four considerations take on primary importance. First, to what extent will the personal assets of the founders and investors be exposed to the liabilities of the business? Second, which format will make the business most attractive to potential investors, lenders, and employees? Third, what costs are associated with creating and maintaining the organization? Finally, how can taxes be minimized?

Founders enjoy a broad range of options. The decision on the entity form comes in the earliest stages in the life of a business, but it is nonetheless a crucial one. Changing the form of organization can be very costly. Not only will administrative and legal fees be incurred, but a change may also give rise to tax liability or cause a business opportunity to be lost. Thus, at the outset of their venture, entrepreneurs should carefully consider its expected evolution and choose the form of organization accordingly. In addition, once the form of entity is chosen, its managers must be diligent in complying with all statutory requirements.

CHAPTER OVERVIEW

This chapter begins with an examination of the advantages and disadvantages of the most frequently used forms of business organizations: sole proprietorships, general and limited partnerships, limited liability partnerships, corporations

(including S corporations), and limited liability companies. Next, we summarize the basic tax treatment of these different entities. The remainder of the chapter offers a more detailed discussion of how partnerships and corporations are structured and operated and how power is allocated between the shareholders and the directors of a corporation.

SOLE PROPRIETORSHIP

The sole proprietorship is the simplest and most prevalent form of business enterprise in the United States. In a *sole proprietorship*, one individual owns all of the assets of the business and is solely and personally liable for all of its debts, contract obligations, and tort liabilities. In other words, the sole proprietor is the business. Any individual who conducts business without creating a separate organization is operating as a sole proprietorship.

There are no formal requirements for forming a sole proprietorship. However, if the business operates under a *fictitious business name*—that is, a name other than the name of the owner—that name must be registered with the state. A sole proprietorship ends upon the discontinuation of the business or the death of the proprietor, whichever is earlier.

Advantages of a sole proprietorship include the flexibility afforded by having one person in complete control of the business. Also, because a sole proprietorship can be created without formal agreements or state filings, it is the easiest and least costly form of business organization to set up. Sole proprietorships pay only one level of income tax—the proprietor reports income and losses from the business on his or her personal tax returns. Finally, the proprietor receives all of the profits generated by the business.

If the business loses money, however, the proprietor alone bears liability for the losses. This element of risk is the major disadvantage of the sole proprietorship. In addition, it is more difficult for sole proprietorships to raise capital. A sole proprietor can only tap personal funds and borrow money.

GENERAL PARTNERSHIP

A *general partnership* is created when two or more persons agree to place their money, efforts, labor, or skills in a business and to share the profits and losses.¹ Their agreement can be express or implied, but they must share in real profits, not just receive wages or compensation.

Absent an express agreement to the contrary, each partner has some control over the business, and each may have the authority to bind the partnership with respect to third parties. In some respects, a partnership is like a marriage or a family. Its members share not only the benefits of the relationship but the burdens as well.

A partnership is treated as an entity separate from its partners and can acquire property in its own name. Property that is not acquired in the name of the partnership is nonetheless partnership property if the instrument transferring title refers to (1) the person taking title as a partner or (2) the existence of the partnership.

One of the key advantages of a partnership is that it allows for a wide variety of operational and profit-sharing arrangements. In essence, partners may agree to any terms in forming a partnership as long as they are not illegal or contrary to public policy. An example of this flexibility is that partners may contribute either capital or services to the partnership. Suppose Pro and Ron decide to form a partnership, called Rad Waves, to manufacture windsurfing equipment. Ron contributes the start-up and operating capital, and Pro contributes only his management services. Even though Pro has not contributed capital to the partnership, he is (unless agreed otherwise) an equal partner with Ron in Rad Waves.

Like a sole proprietorship, a partnership has the advantage of being subject to only one level of tax. Though it must file an informational return with the Internal Revenue Service (IRS), a partnership does not pay income taxes as a separate entity. Instead, the profit earned (or loss incurred) by the partnership (whether distributed or not) “passes through” to the individual partners, who report it as income (or loss) on their individual returns. Thus, a partnership is a *pass-through entity*.

1. The Revised Uniform Partnership Act (RUPA) (1997) defines a partnership as “an association of two or more persons to carry on as co-owners a business for profit.” This discussion is based on the RUPA, which has been adopted by a majority of the states.

Unlike a sole proprietorship, which terminates upon the death of the owner, a partnership is not automatically dissolved upon a partner’s death, bankruptcy, or withdrawal. Instead, the partners holding a majority of the partnership interests may elect to continue the general partnership within ninety days after the occurrence of such an event.

General partnerships face a disadvantage similar to sole proprietorships in that individual partners are subject to personal liability for the obligations of the partnership. Thus, if the partnership is unable to pay its debts, honor its contracts, or satisfy its tort liabilities, then creditors of the partnership have claims against the assets of individual partners.

JOINT VENTURE

A *joint venture* is a one-time partnership of two or more persons for a specific purpose, such as the construction of a hydroelectric dam or a cogeneration plant. Like a general partnership, a joint venture requires that the parties (1) share a community of interest; (2) have the mutual right to direct and govern; (3) share the partnership’s profits and losses; and (4) combine their property, money, efforts, skill, or knowledge in the undertaking. Unlike a general partnership, a joint venture is not a continuing relationship; it terminates when the project is completed.

In a joint venture, the authority of one member to bind the partnership is more limited than in a general partnership. To avoid inadvertently conferring apparent authority to bind the other members, a joint venture should make it clear in its dealings with third parties that it is a joint venture and not a partnership. This distinction should be reflected in the entity’s name and in the recitation of its legal status in its contracts. Issues associated with international joint ventures are addressed in the “Global View” in this chapter.

LIMITED LIABILITY PARTNERSHIPS

The *limited liability partnership (LLP)* is designed primarily for groups of professionals, such as law firms and accounting firms. LLPs are created by filing the appropriate forms with a central state agency. A major advantage of the LLP form for existing partnerships, such as law firms and accounting firms, is that they can attain LLP status without significant modification of the business’s partnership agreement. Like other forms of partnerships, LLPs retain pass-through taxation treatment.

The main function of an LLP is to insulate its partners from *vicarious liability* for certain partnership obligations, such as liability arising from the *malpractice*, or negligent

or wrongful conduct, of another partner. Partners in an LLP usually have unlimited liability for their own malpractice.

State LLP statutes are not uniform, however. Most statutes provide that liability will be limited at least for debts and obligations arising from the malpractice of other partners. However, a few states, such as Minnesota and New York, protect partners from commercial liabilities (such as trade debt) as well.² The trend in LLP statutes enacted since 1995 has been to provide the broader liability protection exemplified by Minnesota and New York.³ This expanded protection further narrows the distinction between an LLP and a limited liability company.

LIMITED PARTNERSHIP

A *limited partnership* is a special type of partnership consisting of general partners and limited partners. *General partners* of a limited partnership remain jointly and severally liable for partnership obligations (just like partners in a general partnership), and they are responsible for the management of the partnership. In contrast, *limited partners* assume no liability for partnership debts beyond the amount of capital they have contributed, and they have no right to participate in the management of the partnership.

Limited partnerships are often used to raise capital—the limited liability for limited partners makes them attractive to investors. Returning to the Rad Waves example, suppose the general partners desire to raise capital to finance a sportswear line to promote their other products. To do so, they restructure their partnership as a limited partnership with Ron and Pro remaining as general partners. They can now offer an investor a limited partnership interest in the business, renamed Rad Waves, L.P. If Olivia contributes \$1,000 to the partnership, she becomes a limited partner in Rad Waves (assuming compliance with the relevant state statute), and her personal liability for Rad Waves' obligations is limited to her \$1,000 investment.

This ability to attract investors with the assurance of limited liability is the main advantage of a limited partnership. A limited partnership is more difficult to create than a general partnership. Unlike a general partnership, a limited partnership does not come into existence until a certificate of limited partnership has been filed with the appropriate state agency. Moreover, courts generally take a strict approach to the formal requirements of limited partnership status. If a partnership runs afoul of those requirements, courts will treat it as a general partnership instead.

CORPORATIONS

A *corporation* is an organization authorized by state law to act as a legal entity distinct from its owners. As a separate legal entity, the corporation has its own name and operates with specified powers to achieve the specific purposes set out in its *corporate charter* (also called its *articles of incorporation* or *certificate of incorporation*). Most charters give corporations the broad power to engage in any lawful business. Corporations are owned by *shareholders* (also called *stockholders*), who have purchased an ownership stake in the business. The *board of directors*, which is elected by the shareholders, has central decision-making authority. The board of directors typically employs officers to manage the day-to-day operations of the business.

One of the most attractive features of the corporation is that the liability of its shareholders is limited to their investments. Only the corporation itself is responsible for its liabilities. (An important exception to this general rule, the *piercing the corporate veil* theory, is discussed later in this chapter.) This cap on liability permits entrepreneurs and investors to undertake risky ventures without the worry that they will lose personal assets if things go badly.

Another benefit of a corporation is its ability to raise significant capital by selling transferable ownership shares of corporate stock (also known as *equity*) to investors. Finally, corporations have the advantage of perpetual life. Thus, if a key investor dies or decides to sell his or her interest in the business, the corporation as an entity continues to exist and to conduct business.

C CORPORATIONS

The main disadvantage of the corporate form of organization is that it is usually subject to two levels of taxation: both corporate and shareholder unless it is eligible for and elects S corporation status (discussed below). Any corporation not meeting the requirements for an S corporation is automatically a *C corporation* (so-named because it is taxed in accordance with the rules set forth in Subchapter C of the Internal Revenue Code). A C corporation pays tax on the income generated by the business, and the shareholders pay tax on that same income when it is distributed as dividends.

S CORPORATIONS

Some closely held corporations can avoid this double taxation by electing to be treated as S corporations under Subchapter S of the Internal Revenue Code. An *S corporation* is taxed as a pass-through entity. In other words, the corporation itself is not taxed on its income; rather, the shareholders pay tax

on their pro rata shares of the corporation's income. An election to be taxed under Subchapter S does not affect the status of the organization as a corporation for state corporate law purposes. Any corporation that has not elected to be an S corporation or that fails to continue to meet the requirements for an S corporation is automatically a C corporation.

To qualify for S corporation status, a corporation must satisfy the following requirements:

1. The corporation must have no more than 100 shareholders, all of whom must be individuals who are citizens of the United States or U.S. resident aliens, or certain types of tax-exempt organizations, trusts, or estates.
2. The corporation must have only one class of stock.
3. The corporation generally may not own 80 percent or more of any other corporation.
4. The corporation must file a timely election to be treated as an S corporation.

CLOSE CORPORATIONS

Some states have enacted laws that give close corporations extra operating flexibility. A *close corporation* is a corporation that (1) has elected in its charter to be treated as a close corporation and (2) has a "small" number of shareholders, typically no more than thirty. A corporation must elect to become a close corporation by stating in its certificate of incorporation that it is a close corporation; otherwise, regardless of the number of shareholders, the corporation will not be treated as a close corporation.

State close corporation laws permit significant departures from the formalities required of traditional corporations.⁴ Under some state statutes, if a close corporation's shareholders agree not to observe corporate formalities relating to meetings of directors or shareholders in connection with the management of its affairs, then the bypassing of these formalities may not be considered a factor in deciding whether to pierce the corporate veil and hold the shareholders personally liable. In addition, many statutes permit the shareholders of a close corporation to manage the corporation directly—instead of delegating that responsibility to the directors or officers—as long as a certain percentage of the shareholders agree to this in writing.

CLOSELY HELD CORPORATIONS

It is important to distinguish between a close corporation—one that conforms to the rules set forth by the state of incorporation to legally qualify as such—and a closely held

corporation. A *closely held corporation* may have any number of shareholders, but it is characterized by the absence of a market for its stock.⁵ If a court characterizes a corporation as closely held, it will often impose a greater duty of loyalty and care upon the corporation's directors and majority shareholders. These impositions are *not* codified, however, and exist only in common law and traditional business practices.⁶

LIMITED LIABILITY COMPANIES

A *limited liability company (LLC)* combines the tax advantages of a pass-through entity with the limited liability advantages of a corporation. Like corporations and limited partnerships, the LLC is a creature of state law. However, as discussed below, many LLC statutes give the founders and investors flexibility to shape their duties and responsibilities by contract. To form an LLC, a charter document must be filed with the appropriate state agency (usually the office of the secretary of state). This LLC charter document is typically called the *articles of organization* (as in California) or the *certificate of formation* (as in Delaware). The name of the business must include the initials L.L.C. or the words Limited Liability Company.

The owners of an LLC are called *members*. The rights, obligations, and powers of the members, managers, and officers are set forth in an *operating agreement*. The members elect the *managers* who, like a board of directors, are responsible for managing the business, property, and affairs of the company. The managers appoint the officers of the company.

Unless a business is organized as a corporation under state law or is publicly held, the IRS's "check the box" regulations permit the founders to decide whether the entity is to be taxed as a corporation or a pass-through entity. State law corporations and publicly traded entities are always taxed as corporations. Accordingly, LLCs are not taxed at the firm level unless they elect to be taxed as corporations.

The LLC form of business organization offers the advantages of both the limited partnership and the S corporation without their respective drawbacks. Properly formed LLCs are taxed as partnerships, but unlike the general partners in limited partnerships, even the controlling persons in LLCs can limit their liability to the amount invested. Moreover, all owners of an LLC can participate fully in the management of the business. Like a partnership, an LLC can have

4. For an example of one such law, see CAL. GEN. CORP. § 300(e).

5. Donahue v. Rodd Electrototype Co., 328 N.E.2d 505 (Mass. 1975).

6. For more on closely held corporations and how they are operated, see American Bar Association Committee on Corporate Laws, *Managing Closely Held Corporations: A Legal Guidebook*, 58 BUS. LAW. 1077–126 (2003).

flexible allocations of profits and losses. The main advantage of the LLC form over the S corporation is the lack of restrictions on shareholders and the ability to have more than one class of securities. Specifically, in contrast to an S corporation, there is no limit on the number of members an LLC can have, and its investors can be corporations, partnerships, and foreigners.

One disadvantage of the LLC form of business organization is the cost of preparing a customized operating agreement. Although standardized forms⁷ provide a good starting point for drafting, they must be tailored to the individual company and the needs of its members. The courts have made it clear that it is the operating agreement that “defines the scope, structure, and personality of limited liability companies.”⁸

For example, the Delaware Limited Liability Company Act provides, “It is the policy of this chapter to give the maximum effect to the principle of freedom of contract and to the enforceability of limited liability company agreements.”⁹

-
- 7. For example, see GUIDE TO ORGANIZING AND OPERATING A LIMITED LIABILITY COMPANY IN CALIFORNIA (Allan B. Dubott ed., 1995), published by the Partnerships and Unincorporated Business Organizations Committee of the Business Law Section of the State Bar of California. This guide includes annotated sample short-form and long-form operating agreements and other useful exemplars.
 - 8. R&R Capital, LLC v. Buck & Doe Run Valley Farms, LLC, 2008 Del. Ch. LEXIS 115 (Aug. 19, 2008).
 - 9. 6 DEL. C. § 18-1101 (b).

As Chancellor Chandler explained, “The allure of the limited liability company . . . would be eviscerated if the parties could simply petition this court to renegotiate their agreements when relationships sour.”¹⁰

The members may not enter into an agreement that contravenes any mandatory provisions of the LLC Act, but the mandatory provisions are generally intended to protect third parties, not necessarily the contracting members. Although the LLC Act explicitly bars members from “eliminat[ing] the implied contractual covenant of good faith and fair dealing,”¹¹ courts are loathe to interject duties not required by the Act or to invalidate waivers of obligation set forth in the operating agreement, especially when the members are all sophisticated parties. Thus, the Delaware Court of Chancery upheld provisions in an operating agreement whereby the members waived their right to seek dissolution of the LLC or to appoint a receiver.¹²

In the following case, the Delaware Court of Chancery considered whether one class of members violated its duties to the founder when it exercised the veto and put rights set forth in the operating agreement.

A CASE IN POINT

CASE 20.1

FISK VENTURES, LLC v. SEGAL

COURT OF CHANCERY OF DELAWARE
2008 WL 1961156
(DEL. CH. MAY 7, 2008).

SUMMARY

FACTS Dr. Andrew Segal founded Genitrix, LLC, a Delaware limited liability company, in 1996 to develop and market biomedical technology. Equity in Genitrix was divided into three classes of membership. In exchange for the patent rights Segal transferred to the LLC, Segal’s capital account was credited with \$500,000, and he retained approximately 55 percent of the Class A membership interest. The remainder of the Class A interest was granted to other individuals not involved in this suit. Segal originally served as both president and chief executive officer of Genitrix.

In the initial round of financing, H. Fisk Johnson contributed \$843,000 in return for a sizable portion of the Class B membership interest. The remainder of the Class B interest was owned by Fisk Ventures, LLC and Stephen Rose. The Class B investors were granted a put right whereby they could require the company to purchase any or all of their Class B membership interest at any time at a price determined by an independent appraisal. Various other investors contributed more than \$1 million for the Class C membership. The Class C investors were mostly passive, leaving the power in the LLC essentially divided between the Class A and Class B members.

The agreement provided that the board of member representatives was responsible for managing the business and affairs of the company and required a 75 percent vote of the board for most decisions. The board initially consisted of four members, two appointed by Johnson and two appointed by Segal.

CONTINUED

From its inception, Genitrix was strapped for cash. After Segal told the board that the company would require \$2.6 million for human trials, Johnson stated that he was unwilling to be the sole financier of the company. Johnson and Fisk Ventures offered to contribute another \$2 million in convertible debt if the company agreed to try to raise an additional \$5 million from other investors over the following two years. During the course of negotiating the terms of the Fisk Ventures note, Segal proposed that the Class B put right be suspended. The Class B members refused to suspend or relinquish this right, although they did indicate that they had no immediate or foreseeable intention of exercising it. Segal's efforts to raise the additional \$5 million ultimately failed. The balance of power then shifted, and the board was expanded to five seats. The Class B members were given the right to appoint a representative to the newly created seat, and Segal was replaced as CEO by Chris Pugh, another employee of Genitrix. In August 2006, Pugh left Genitrix to work for another firm, leaving just Segal and another employee. The other employee left in May 2007, leaving the company with no office, no capital funds, no grant funds, and no revenue. Although the Class B members invited Segal to propose terms under which they might purchase his interest in the company, the Class B members rejected those terms in June 2007. Fisk Ventures subsequently sued to dissolve Genitrix. Segal counterclaimed against Fisk Ventures and Johnson, arguing that they had breached the LLC agreement, the implied covenant of good faith and fair dealing implicit in the agreement, and their fiduciary duty to the company. The case against Johnson was dismissed on procedural grounds.

ISSUE PRESENTED Under what circumstances will a member's exercise of its negotiated veto and put rights constitute a breach of the operating agreement, the implied covenant of good faith and fair dealing, or the member's fiduciary duty to the founder?

SUMMARY OF OPINION The Delaware Court of Chancery dismissed the breach-of-contract claims because Segal had failed to allege breaches of any duties set forth in the operating agreement. The court noted that the agreement gave both the Class A and Class B members specified rights and protections and in no way did it

oblige one class to acquiesce to the wishes of the other simply because the other believes its approach is superior or in the interest of the Company. To find otherwise—that is to find that the court must decide whose business judgment was more in keeping with the LLC's best interest—would cripple the policy underlying the LLC Act promoting freedom of contract.

The court found no evidence that any of the Class B board representatives had acted with gross negligence or willful misconduct, in bad faith, or in knowing violation of the law. The court recognized that perhaps Genitrix would have been able to obtain financing if the Class B members had been willing to relinquish their put right, but it stated that their refusal to do so was not in bad faith.

The court also rejected the argument that Fisk had violated the implied covenant of good faith and fair dealing that "requires a 'party in a contractual relationship to refrain from arbitrary or unreasonable conduct which has the effect of preventing the other party to the contract from receiving the fruits' of the bargain."¹³ The court explained that the implied covenant "is not a panacea for the disgruntled litigant" and should not be used "to fill a gap in a contract with an implied term unless it was clear from the contract that the parties would have agreed to that term had they thought to negotiate the matter." Because the agreement expressly addressed the subject of financing and specifically required the approval of 75 percent of the board, the Class B board representatives had the right to disapprove of and therefore block Segal's proposals. The court explained that the mere exercise of contractual rights, without more, cannot constitute a breach of the implied covenant of good faith and fair dealing.

The court also rejected Segal's claim that Fisk had violated fiduciary duties to him. The operating agreement eliminated fiduciary duties to the maximum extent permitted by law when it flatly

CONTINUED

13. Dunlap v. State Farm Fire & Cas. Co., 878A.2d. 434, 443 (Del. 2005).

stated that members had no duties other than those expressly articulated in the agreement. Section 18-1101(c) of the Delaware Limited Liability Company Act specifically provides that "to the extent that a member or manager has duties, including fiduciary duties, to a limited liability company or to another member or manager, the members' or managers' duties may be expanded or restricted or eliminated by provisions in the limited liability company agreement"

RESULT Segal's claims for breach of contract, breach of the implied covenant of good faith and fair dealing, and breach of fiduciary duty against Fisk were dismissed.

COMMENTS The court observed:

[A]nyone in Dr. Segal's position would be understandably frustrated by the demise of Genitrix, a company in which he has invested monetary, temporal, intellectual, and emotional resources. Nevertheless, such frustration cannot justify the *post hoc* refashioning of the bargain he struck with Johnson and the Class B investors in the Class B agreement.

INCOME TAX CONSIDERATIONS

The analysis that follows is concerned solely with federal income tax consequences under the Internal Revenue Code of 1986, as amended and in force as of July 1, 2008. Many state income tax provisions follow the federal rules. Because provisions in the tax laws change often, it is more important to understand the general issues than to strive for a detailed knowledge of the tax laws for any given year.

COMPARING TAXABLE ENTITIES WITH PASS-THROUGH ENTITIES

The tax treatment of C corporations is different from that of pass-through entities (such as partnerships, S corporations, and LLCs) in several respects. Each may have favorable or unfavorable tax consequences, depending on the circumstances.

Property Transfers

Because a C corporation is a separate taxable entity, a transfer of cash or any other kind of property between the corporation and its owners is a taxable transaction unless it comes within one of the statutory exceptions in Subchapter C. It is easier to transfer property to and from a partnership or an LLC on a tax-free basis than it is with either a C corporation or an S corporation. For example, a transfer of property to either type of corporation in exchange for stock is tax-free only if the persons transferring the property own, immediately after the transaction, 80 percent or more of the stock of the corporation to which the property is transferred. In contrast, an exchange of property for a share in a partnership is tax-free regardless of the transferor's percentage share in the partnership.

Similarly, property that has appreciated in value may be more easily distributed tax-free from a partnership or an LLC than from a corporation. Neither the partnership nor the LLC is subject to tax on the appreciated property, and the partner receiving the property is not taxed until he or she subsequently sells it. This can be particularly important for venture capital funds, which often make distributions of illiquid stock in the portfolio companies in which the fund has invested. If the fund is organized as a partnership or LLC, these securities can be distributed to the partners or members tax-free, with no tax due until the partner or member sells the securities. In contrast, a corporation will be taxed on the appreciation in value at the time of the transfer just as if it had sold the property for cash, and the shareholders will be taxed on the fair market value of the property they have received. Thus, with a C corporation, there will be both a corporate-level tax and a shareholder-level tax on the distribution. For an S corporation, the taxable income is passed through and will be taxed only at the shareholder level.

Cash Distributions

The income of a C corporation is taxed at the corporate level when earned, and it is taxed again at the individual level when it is distributed. This double taxation does not occur with the other forms of business organizations. This difference alone may make a pass-through entity preferable to a C corporation as the chosen form of business organization. Although qualified dividends are currently taxed at a lower rate than ordinary income, this preferential treatment is scheduled to expire in 2010.

Double taxation can be reduced in two ways. First, the tax liability of the corporation can be reduced to the extent that corporate income can be offset by tax-deductible

payments to shareholders. For example, if personal services are a major source of the corporation's income, payment of employee compensation to shareholders active in the business will reduce the corporation's taxable income. If capital investment is a major source of income, payment of interest or rent to shareholders may provide similar relief. Second, the tax liability of the shareholders can be reduced to the extent that the business income is retained by the corporation and not distributed to shareholders. However, the accumulated earnings of a corporation may be taxed if they are not being retained for a legitimate corporate business purpose.

Cash distributions from partnerships and S corporations are tax-free to the recipients, up to the amount of their previous capital contributions less any income previously passed through to them. Distributions from C corporations, on the other hand, generally result in taxable dividend income to the shareholders.

Operating Losses

If the business operations of a C corporation produce a loss, as is frequently the case with start-up companies and real estate investments in their early years, the operating loss will be recognized at the corporate level. This means that the shareholders receive no tax benefits from the operating loss, and the corporation receives no benefit until it has operating income against which its prior losses can be deducted.

In contrast, if the same business is operated by a partnership, LLC, or S corporation, then the operating loss each year will be passed through to the individual partners or shareholders. They may, if certain tax law requirements are satisfied, deduct the operating loss from their other income. Under the limits on passive losses, only owners who materially participate in the business may deduct its losses from their other ordinary income (such as wages or interest). Passive investors may not deduct such losses from ordinary income, but they can use passive losses to offset passive gains (such as capital gains on the sale of stock).

Capitalization

The tax laws impose no restrictions on a C corporation's capitalization. As business needs require, the corporation may issue common stock, preferred stock, bonds, notes, warrants, options, and other instruments. These instruments may confer the right to varying degrees of control and varying shares of earnings and may be convertible, redeemable, or callable. The tax treatment of each type of capital instrument may differ from its classification by the corporation,

however. For example, shareholder debt may be treated as stock if the corporation has too little *equity capital*, that is, capital received in exchange for shares in the ownership of the corporation. As a consequence, tax-deductible "interest" payments may be recast as nondeductible "dividends" that are taxable to the shareholders.

Allocation of Losses

Items of partnership (or LLC) income or loss generally can be allocated to specific partners (or members) at specific times as long as these allocations have a substantial economic effect apart from tax considerations. Thus, an LLC can allocate a disproportionate amount of losses or depreciation to a particular member in the early years and allocate a disproportionate amount of later income to the same member until the loss is recovered. This form of allocation may generate a valuable tax deferral for that member.

No comparable allocation can be made by a C corporation, except to a limited extent by capitalizing the corporation with different classes of stock and debt. An S corporation is even more limited in this respect. It may have only one class of stock, and all income and losses must be allocated strictly in proportion to stock ownership.

ABILITY TO RAISE VENTURE CAPITAL

Although pass-through entities (such as partnerships, LLCs, and S corporations) offer many tax advantages, they are rarely used for a business that intends to raise money from venture capitalists. Instead, the C corporation is usually used for two reasons. First, most venture capital firms raise money from large institutional investors, such as pension funds, university endowments, and the like. Nonprofit entities such as these can invest in securities and receive their income and capital gains tax-free only if the issuer of the securities is not a pass-through entity. Otherwise, the nonprofits will be deemed to have received unrelated business income, which is fully taxable. Second, most start-ups want the ability to sell securities to outside investors at a significantly higher price than was paid by the founders at the outset. To justify the price differential, and avoid having some of the value of the founders' shares treated as employee compensation, companies issue two classes of stock: common stock to the founders and preferred stock to the outside investors. Because an S corporation cannot have more than one class of stock, the C corporation is usually the easiest vehicle to use.

IN BRIEF**Choice of Business Entity: Pros and Cons**

The following chart lists the principal considerations in selecting the form of business entity and applies them to the C corporation, S corporation, general partnership, limited partnership, limited liability company, and limited liability partnership. The considerations are listed in no particular order, in part because their importance will vary depending on the nature of the business, its sources of financing, and the plan for providing financial returns to the owners (for example, distributions of operating income, a public offering, or a sale of the business). Other factors that are not listed will also influence the choice of entity. In addition, the "yes" or "no" format oversimplifies the applicability of certain attributes.

	C Corporation	S Corporation	General Partnership	Limited Partnership	Limited Liability Company	Limited Liability Partnership
Limited liability	Yes	Yes	No	Yes ^a	Yes	Yes ^b
Flow-through taxation	No	Yes	Yes	Yes	Yes	Yes
Simplicity/low cost	Yes	Yes	No	No	No	No

Tax-free in-kind distributions	No	No	Yes	Yes	Yes	Yes

- a. Limited liability for limited partners only; a limited partnership must have at least one general partner with unlimited liability.
- b. Partners in LLPs generally are protected from liability for malpractice and other wrongful conduct of fellow partners; states are split on whether LLP partners can be held individually liable for other partnership liabilities, such as commercial debt.
- c. An S corporation would convert to a C corporation upon a public offering because of the number of shareholders.
- d. Although the public markets are generally not available for partnership offerings, partnerships (including LLPs) and LLCs can be incorporated without tax and then taken public.
- e. Although an S corporation can issue incentive stock options, the inability to have two classes of stock limits favorable pricing of the common stock offered to employees.
- f. Although partnership and LLC interests can be provided to employees, they are poorly understood by most employees. Moreover, tax-favored incentive stock options are not available.
- g. A special low capital gains rate is available for stock of U.S. C corporations with not more than \$50 million in gross assets at the time the stock is issued if the corporation is engaged in an active business and the taxpayer holds the stock for at least five years.

AGENCY LAW AND LIMITED LIABILITY

It is critical for individuals acting on behalf of any business entity to make it clear whether they are acting on their own or as agents of a separate legal entity. Failure to do this can result in personal liability for the manager involved. For example, if a person signs a contract in his or her own

name, without indicating the name of the business entity on behalf of which he or she is acting, then the person is personally liable if the undisclosed principal fails to perform its obligations.

In addition, if the owners of a limited liability entity are active in the operation of the business, they can be held directly liable for their own tortious acts. This happened in the following case.

A CASE IN POINT

CASE 20.2

ESTATE OF COUNTRYMAN v. FARMERS COOPERATIVE ASSOCIATION OF KEOTA

SUPREME COURT OF IOWA
679 N.W.2d 598 (IOWA 2004).

IN THE LANGUAGE OF THE COURT

FACTS On Labor Day in 1999, an explosion caused by stray propane gas destroyed the home of Jerry Usovsky, killing seven people and seriously injuring several others. The survivors and the estates of the deceased filed a lawsuit based on several tort theories. Among those named in the complaint were Double Circle and Farmers Cooperative Association of Keota (Keota).

Double Circle, which delivered the propane prior to the accident, was a limited liability company, and Keota was its 95 percent owner. Keota's executive board also served as Double Circle's executive board. An agreement between Double Circle and Keota stated that Keota was responsible for Double Circle's "human resource and management safety" activities.

The complaint alleged that Keota was personally liable for the accident. Keota moved for summary judgment, arguing that the structure of Double Circle as an LLC protected Keota from personal liability as long as Keota operated within its prescribed duties as a limited liability manager of Double Circle. The trial court granted summary judgment, and the plaintiffs appealed.

ISSUE PRESENTED Can a member of an LLC be held personally liable in tort for its actions as a manager of the LLC?

OPINION CADY, J., writing on behalf of the Iowa Supreme Court:

The limited liability company, "LLC" as it is now known, is a hybrid business entity that is considered to have the attributes of a partnership for federal income tax purposes and the limited liability protections of a corporation. As such, it provides for the operational advantages of a partnership by allowing the owners, called members, to participate in the management of the business. Yet, the members and managers are protected from liability in the same manner shareholders, officers, and directors of a corporation are protected.

....

Sections 490A.601 and 490A.603 of the [Iowa Limited Liability Company] Act generally provide that a member or manager of a limited liability company is not personally liable for acts or debts of the company solely by reason of being a member or manager, except in the following situations: (1) the ILLCA expressly provides for the person's liability; (2) the articles of organization provide for the person's liability; (3) the person has agreed in writing to be personally liable; (4) the person participates in tortious conduct; or (5) a shareholder of a corporation would be personally liable in the same situation, except that the failure to hold meetings and related formalities shall not be considered.

While liability of members and managers is limited, the statute clearly imposes liability when they participate in tortious conduct. This approach is compatible with the longstanding approach to liability in corporate settings, where, under general agency principles, corporate officers and directors can be liable for their torts even when committed in their capacity as an officer. This approach has

CONTINUED

been explained as follows: Agency law generally, and Iowa law in particular, has long recognized that if a person commits a tort while acting for another person, the tortfeasor is personally liable for the tort, even if the person for whom he is acting is also vicariously liable for the same wrong. In other words, a person's status as an agent confers no immunity with respect to the person's own tort liability. Thus, if a member of a limited liability company injures another person while working in the course of the firm's business, the member is personally liable for that harm along with the company, just as the member would be if he worked for a firm organized as a corporation, a partnership, or any other business form.

Keota suggests that liability of an LLC member or manager for tortious conduct is limited to conduct committed outside the member or manager role. Yet, this approach is contrary to the corporate model and agency principles upon which the liability of LLC members and managers is based, and cannot be found in the language of the statute. We acknowledge that the "participation in tortious conduct" standard would not impose tort liability on a manager for merely performing a general administrative duty.

....

It is also important to recognize that this case is not about holding an officer, director, or shareholder of Keota personally liable for participating in tortious conduct. Plaintiffs have not sued individual members of Keota. Instead, the lawsuit filed by the plaintiffs seeks to hold Keota liable for participating in certain torts as the designated manager of an LLC. While members and managers of an LLC are generally not personally liable for the acts of an LLC, Keota must also be viewed as a separate "legal" person.

....

We conclude that Keota is not protected from liability if it participated in tortious conduct in performing its duties as manager of Double Circle.

RESULT The court found that Keota could potentially be liable and remanded the case back to the trial court.

Critical Thinking Questions

1. If Keota were owned in part by another LLC, Company X, could the plaintiffs also hold Company X liable for the accident?
2. Under what circumstances would the members of the Keota executive board who also sat on the Double Circle executive board be personally liable to the members of Double Circle? To third parties injured by the tortious conduct of Double Circle?

PARTNERSHIP MECHANICS

This section describes in more detail how partnerships are formed, operated, and terminated.

FORMATION OF A GENERAL PARTNERSHIP

A general partnership can be created with nothing more than a handshake and a general understanding between the partners. For example, students agree to work together

on a business plan; a baker and a chef agree to open a restaurant together; an engineer and a mechanic agree to design bicycles together—in each case, a partnership is formed. The intention of one party alone, however, cannot create a partnership. There must be a meeting of the minds. Hence, in the Rad Waves example, if Ron viewed his agreement with Pro as forming a partnership, but Pro contemplated a mere employee–employer relationship, then there is no partnership.

A partnership does not require a minimum amount of capital in order to be formed. Partners usually contribute

cash or property, or agree to provide personal services, to the partnership. In some instances, a partnership interest may be received as a gift. The partnership need not be given a name. There may or may not be a written partnership agreement.

Without a Written Agreement

If there is no written partnership agreement, the laws of the state where the parties are doing business will determine whether the relationship will be treated as a partnership or some other relationship, such as an agency. If the relationship is recognized as a partnership, state partnership laws will govern the partnership and prescribe the rights of the partners if there is no written agreement. Some provisions of those laws could lead to undesirable business results.

In the Rad Waves example, Pro and Ron could form a partnership with a simple oral agreement. Under state partnership law, however, Pro and Ron will be required to share the profits and losses equally. Furthermore, until the partnership is terminated, neither partner may withdraw capital without the consent of the other. If there were a third partner, his or her death could terminate the partnership even if Pro and Ron preferred to continue it. These are just a few examples of the dangers of forming a partnership without a written partnership agreement.

In the following case, the Court of Appeal of California considered whether a partnership existed between two women who had discussed a business idea but never drafted documents expressly creating a partnership.

A CASE IN POINT

CASE 20.3

HOLMES V. LERNER

COURT OF APPEAL OF CALIFORNIA

88 CAL. Rptr. 2d 130

(Cal. App. 1999).

IN THE LANGUAGE OF THE COURT

FACTS Sandra Lerner was a successful entrepreneur and an experienced businessperson. She and her husband were the original founders of Cisco Systems. When Lerner sold her interest in Cisco, she received a substantial amount of money, which she invested, in part, in a venture capital limited partnership called "& Capital Partners."

Patricia Holmes met Lerner in late 1993, when Lerner visited Holmes's horse training facility to arrange for the training and boarding of two horses that Lerner was importing from England. In 1995, Lerner and Holmes traveled to England to attend a horse show and to make arrangements to ship the horses to the United States. On this trip, Lerner decided that she wanted to celebrate her fortieth birthday by going pub crawling in Dublin. Lerner was wearing what Holmes termed "alternative clothes" and black nail polish, and she encouraged Holmes to do the same. Holmes did not like black nail polish, however, and was unable to find a suitable color in the English stores. At Lerner's mansion outside London, Lerner gave Holmes a manicure kit, telling her to see if she could find a color she would like to wear. Holmes looked through the kit, tried different colors, and eventually developed her own purple color by layering a raspberry color over black nail polish. Lerner also found the color attractive.

On July 31, 1995, the two women returned from England and stayed at Lerner's West Hollywood condominium while they waited for the horses to clear quarantine. While sitting at the kitchen table, they discussed nail polish colors. Len Bosack, Lerner's husband, was in and out of the room during the conversations. For approximately an hour and a half, Lerner and Holmes worked with the colors in a nail kit to try to re-create the purple color Holmes had made in England so that they could have the color in a liquid form, rather than having to layer two colors.

Lerner said to Holmes: "This seems like a good [thing], it's something that we both like, and isn't out there. Do you think we should start a company?" Holmes responded: "Yes, I think it's a great idea." Lerner told Holmes that they would have to do market research and determine how to have the polishes produced, and that there were many things they would have to do. Lerner said: "We will hire people to work for us. We will do everything we can to get the company going, and then we'll be creative, and other people will do the work, so we'll have time to continue riding the horses." Holmes agreed that they would do those things. They did not separate out which tasks each of them would do, but planned to do it all together.

Lerner then called David Soward, the general partner of & Capital and her personal business consultant. Holmes heard her say, "Please check for the name, Urban Decay, to see if it's available and if

CONTINUED

it is, get it for us." Holmes knew that Lerner did not joke about business and was certain, from the tone of her voice, that Lerner was serious about the new business. The telephone call to secure the trademark for Urban Decay confirmed in Holmes's mind that they were forming a business based on the concepts they had originated in England and at the kitchen table that day.

Holmes knew that she would be taking the risk of sharing in losses as well as potential success, but the two friends did not discuss the details at that time. Lerner's housekeeper heard Lerner tell Holmes: "It's going to be our baby, and we're going to work on it together." After Holmes left, the housekeeper asked Lerner what gave her the idea to go into the cosmetics business, given that her background was in computers. Lerner replied: "It was all Pat's idea over in England, but I've got the money to make it work." Lerner told her housekeeper that she hoped to sell Urban Decay to Estee Lauder for \$50 million.

Although neither Lerner nor Holmes had any experience in the cosmetics business, they began work on their idea immediately. They met frequently in August and September at Lerner's home and experimented with nail colors.

Prior to the first scheduled August meeting, Holmes told Lerner she was concerned about financing the venture. Lerner told her not to worry because Lerner thought they could convince Soward that the nail polish business would be a good investment. Holmes and Lerner discussed their plans for the company and agreed that they would attempt to build it up and then sell it. Lerner and Holmes discussed the need to visit chemical companies and hire people to handle the daily operations of the company. However, the creative aspect, ideas, inspiration, and impetus for the company came from Holmes and Lerner.

The participants in these meetings referred to them as "board meetings," even though there was no formal organizational structure and, technically, no board. They discussed financing, and Soward reluctantly agreed to commit \$500,000 toward the project. Urban Decay was financed entirely by & Capital, the venture capital partnership composed of Soward as general partner and Lerner and her husband as the only limited partners. Neither Lerner nor Holmes invested any of their individual funds.

Lerner and Soward went to Kirker Chemical Company later in August 1995 and learned about mixing and manufacturing nail polish colors. Lerner discouraged Holmes from accompanying them. At the second board meeting, in late August, Soward introduced Wendy Zomnir, a friend of his former fiancée, as an advertising and marketing specialist. Holmes was enthusiastic about Zomnir, and they decided to hire her. At the conclusion of the September board meeting, after Holmes had left, Lerner and Soward secretly made Zomnir an offer of employment, which included a percentage ownership interest in Urban Decay. Holmes did not learn of the terms of the offer until a couple of meetings later, when Lerner or Soward referred to Zomnir as the "chief operating officer" of Urban Decay.

In early October, after Holmes learned of the secret offer to Zomnir, she asked Lerner to define her role at Urban Decay. Lerner responded, "Your role is anything you want it to be." When Holmes asked to discuss the issue in more detail, Lerner turned and walked away.

In December 1995, Urban Decay Cosmetics LLC was organized. Holmes asked for a copy of the articles of incorporation but was given only two pages showing the name and address of the company. On December 31, Holmes sent a fax to Lerner stating that it had been difficult to discuss her position in Urban Decay with Lerner. Holmes asked Lerner: "What are my responsibilities and obligations, and what are my rights or entitlements?" and "What are my current and potential liabilities and assets?" She requested that Lerner provide the information in writing. Soward intercepted the fax and called Holmes, asking: "What's going on?" Holmes explained that she wanted a written agreement, and Soward apologized, telling her that Lerner had asked him to get "something . . . in writing" to Holmes. Soward told Holmes that *no one* in the company had a written statement of

CONTINUED

their percentage interest in the company yet. Soward asked: "What do you want, 1 percent, 2 percent?" When Holmes did not respond, he told her that 5 percent was high for an idea. Holmes told him: "I'm not selling an idea. I'm a founder of this company." Soward exclaimed: "Surely you don't think you have 50 percent of this company?" Holmes told him that it was a matter between her and Lerner and that Soward should speak to Lerner. Soward agreed to talk to Lerner.

During January and February, an early press release stated: "The idea for Urban Decay was born after Lerner and her horse trainer, Pat Holmes, were sitting around in the English countryside." Lerner approved the press release. In February 1996, an article was printed in the *San Francisco Examiner* containing the following quote from Lerner: "Since we couldn't find good nail polish, in cool colors there must be a business opportunity here. Pat had the original idea. Urban Decay was my spin."

In March 1996, Holmes received a document from Soward offering her a 1 percent ownership interest in Urban Decay. Soward explained that Urban Decay had been formed as a limited liability company, which was owned by its members. For the first time, Holmes realized that she was now being asked to become a minor partner.

Holmes filed a complaint against Lerner and others claiming the existence of an oral contract making them partners. The trial court found in favor of Holmes, and Lerner appealed.

ISSUE PRESENTED Can a general partnership be created through actions and words without any formal documentation?

OPINION MARCHIANO, J., writing for the Court of Appeal of California:

Holmes testified that she and Lerner did not discuss sharing profits of the business during the July 31 "kitchen table" conversation. Throughout the case, Lerner and Soward have contended that without an agreement to share profits, there can be no partnership. . . .

[The] statutory predecessor of the Uniform Partnership Act (UPA) defined a partnership as: "the association of two or more persons, for the purpose of carrying on business together, and dividing its profits between them."¹⁴

The applicable version of the UPA omitted the language regarding division of profits and defined a partnership as: "an association of two or more persons to carry on as co-owners a business for profit." When the legislature enacts a new statute, replacing an existing one, and omits express language, it indicates an intent to change the original act. We can only conclude that the omission of the language regarding dividing profits from the definition of a partnership was an intentional change in the law.

. . . .

Lerner and Soward argue that the agreement between Lerner and Holmes was too indefinite to be enforced. The cases they rely on do not support the argument. . . . The parties' outward manifestations must show that the parties all agreed "upon the same thing in the same sense." If there is no evidence establishing a manifestation of assent to the "same thing" by both parties, then there is no mutual consent to contract and no contract formation. The terms of a contract are reasonably certain if they provide a basis for determining the existence of a breach and for giving an appropriate remedy. There is no requirement, the intention to form a joint venture being otherwise present, that the parties must agree upon the post-acquisition management and operation of the property. In addition, there is nothing unusual about a partnership in which one party supplies an idea which the other party brings into a substantive form. Many businesses and great industrial organizations have sprouted from the germ of an idea in the mind of some man. When the idea is reduced to

CONTINUED

14. CAL. CORP. CODE § 16001.

concrete form and put into action in the form of a business enterprise, an invention, a book, an opera or a theatrical production, the results of the idea are subject to private ownership. . . . The agreement between Holmes and Lerner was to take Holmes' idea and reduce it to concrete form. They decided to do it together, to form a company, to hire employees, and to engage in the entire process together.

....

[T]he evidence is flatly and irreconcilably conflicting. A finding that no partnership had been formed, had one been made, would have had considerable evidentiary support. As the finding which was made of the formation and the existence of the partnership has ample support in evidence which was accepted by the trial judge as substantial and which was taken as true by him, we cannot disturb the judgment here.

RESULT The Court of Appeal of California affirmed the trial court decision that an express agreement to divide profits is not a prerequisite to proving the existence of a partnership.

CRITICAL THINKING QUESTIONS

1. How could Lerner and Holmes have avoided this dispute?
2. Did Lerner behave ethically?

With a Written Agreement

A written partnership agreement can prevent future misunderstandings. It can also provide for a dispute resolution mechanism, such as arbitration. A written partnership agreement can override many of the provisions of partnership statutes that could turn out to be undesirable to the partners.

A partnership agreement usually includes (1) the term of the partnership's existence, (2) the capital characteristics of the partnership, (3) the division of profits and losses between the partners, (4) partnership salaries or withdrawals, (5) the duties of the partners, and (6) the consequences to the partnership if a partner decides to sell his or her interest in the partnership or becomes incapacitated or dies. Also included are the name of the partnership, the names and addresses of the partners, the type of business to be conducted, and the location of the business.

Drafting a partnership agreement focuses the partners' attention on matters that they might not consider if they made less formal arrangements.¹⁵ For example, will all partners have an equal voice in management? What limits will be placed on the managing partners? How will disputes be settled? May a partner be expelled? May new partners be admitted? If so, by what process?

15. See Eleena de Lisser, *Partnership Prenuptials*, WALL ST. J., Sept. 25, 1999, at 12.

OPERATION OF A GENERAL PARTNERSHIP

Unlike a corporation, which has a centralized board of directors and a staff of hired executives for decision making, a general partnership is characterized by direct owner management and control of the business. Each partner's assets are vulnerable to the poor business decisions of the fellow partners. It is therefore important that each partner have a voice in the business decisions of the partnership.

A partnership may choose to cede managerial control of the business to one or more of its partners. Unless the partners expressly agree otherwise, partnership law requires unanimous agreement of all partners on all but the most ordinary matters. If the partners in an informal partnership cannot agree on a decision, they may disband the partnership, distribute its assets, and terminate it.

Each partner is an agent of the partnership for the purpose of its business unless the partnership has filed with the secretary of state a statement specifying which partners have authority for entering into certain transactions on behalf of the partnership, as specified in Sections 105 and 303 of the Revised Uniform Partnership Act (RUPA) (1997). Each partner in a general partnership is liable for the debts incurred by another partner acting in the name of the partnership if that partner had express authority to incur the debt or was carrying on the business of the partnership in the usual way.

For example, if Pro and Ron form Rad Waves as a general partnership, they will each be responsible for the full amount of any liabilities incurred by the partnership or by either partner acting within the scope of his authority as a partner. Hence, Ron's personal assets can be seized if Rad Waves' partnership assets are insufficient to satisfy a judgment against Rad Waves. Ron's personal assets might also be seized if Rad Waves breaches a contract entered into by Pro on behalf of the partnership.

Fiduciary Duty

Partners owe one another certain fiduciary duties, in particular, a duty of loyalty and a duty of care. Partners must also discharge their duties to the partnership and to one another in accordance with the obligation of good faith and fair dealing.

Among the duty of loyalty obligations listed in the RUPA are (1) accounting to the partnership and holding as trustee for it any property, profit, or benefit; (2) refraining from dealing with the partnership as or on behalf of a party having an interest adverse to the partnership; and (3) refraining from engaging in grossly negligent or reckless conduct, intentional misconduct, or a knowing violation of the law.

Be aware, however, that although some states, such as Delaware, have adopted the RUPA in its entirety, many states have chosen to tailor their own version, creating subtle differences that can be significant. For example, the California Uniform Partnership Act implies a higher fiduciary duty than the RUPA by analogizing partnership law with trust law rather than with corporate law.¹⁶

DISSOLUTION, WINDING UP, AND TERMINATION OF A GENERAL PARTNERSHIP

Dissolution of a general partnership occurs when the partners no longer carry on the business together. A partnership may be dissolved for many reasons. The agreed term for the partnership may expire, or the partners may decide to dissolve the partnership prior to the expiration of the agreed term. A particular undertaking specified in the partnership agreement may be completed. One or more partners may desire to dissolve the partnership. (Unless there is an agreement to the contrary, withdrawal or death of a general partner results in the dissolution of the partnership.) A partner may be expelled, and the remaining partners may thereafter agree to terminate the partnership. A partner may die or go bankrupt, and the agreement may not provide for the partnership's continuation.

16. Al Li, *Taking Care of Your Partners*, GrayCary.

A partnership will also be dissolved if the business for which the partnership was formed becomes unlawful—for example, if there is a war between the countries of two or more of the partners. In such a case, the partnership will be dissolved regardless of the wishes of the partners. In other situations, a court may issue a decree of dissolution if a partner becomes disabled, insane, or otherwise unable to perform as a partner. Courts also have the power to dissolve a partnership when a partner willfully breaches the agreement or performs in such a manner as to make it impractical to carry on the partnership. Because the purpose of partnerships is to make a profit, a partnership may be dissolved by court decree if it becomes apparent that the partnership is unprofitable and lacks any real prospect of success. If the partnership has reasonable prospects of earning money in the future, however, it may not be dissolved by court decree despite recent losses.

Upon dissolution, all of the partners' authority ceases except their authority to complete transactions begun but not yet finished and to wind up the partnership. *Winding up* involves settling the accounts and liquidating the assets of the partnership for the purpose of making distributions and terminating the concern. The liabilities and obligations of the partners do not end at dissolution; the partnership continues throughout the winding-up period.

During the winding-up process, the partners' fiduciary duties to one another continue. The winding-up partners may not run the business for their own benefit but must account as trustees to the withdrawing partners or to the estate of a deceased partner.

Termination occurs when all the partnership affairs are wound up and the partners' authority to act for the partnership is completely extinguished. A dissolved partnership may terminate or may be continued by a new partnership formed by the remaining partners (including perhaps the estate or heirs of a deceased partner).

LIMITED PARTNERSHIP REQUIREMENTS

The basic rules that govern formation, operation, and termination of general partnerships apply to limited partnerships as well. Some additional requirements are placed on limited partnerships, however.

FORMAL REQUIREMENTS

In addition to the requirement that a certificate of limited partnership be filed with the appropriate state authority, most state statutes require that the partnership agreement

clearly designate the limited partners as such. Any partnership that does not substantially meet this and other statutory requirements will be treated as a general partnership, with mutual liability and apparent authority attaching to each partner. A person who intended to be only a limited partner may face unlimited personal liability for all of the partnership's debts if there has not been substantial compliance in good faith with the formal requirements.

The Uniform Limited Partnership Act provides that persons who contributed capital to a business erroneously believing that they were becoming limited partners in a limited partnership will not be liable as general partners if, upon ascertaining the mistake, they promptly renounce their interest in the profits of the business.¹⁷ A person who believed in good faith that he or she had become a limited partner is liable only to third parties that both transacted business with the purported limited partnership before the certificate of limited partnership was filed and reasonably believed that the person was a general partner at the time of the transaction.¹⁸

LIMITED PARTICIPATION

A limited partner's liability is limited unless he or she takes part in the control of the business. Thus, if limited partners have a voice in the business decisions of the partnership, they are opening themselves up to the possibility of liability beyond their original capital investment. Furthermore, limited partners may contribute money or property to the partnership, but generally not services. Hence, in the Rad Waves example, if Olivia assists with the design of the sportswear line, in most states her liability could exceed her original \$1,000 capital contribution. Therefore, limited partners should not take part in any partnership activity beyond monitoring the progress of their investment and exercising such statutory rights as the right to vote on the removal of a general partner. Moreover, the limited partner's name cannot appear in the name of the partnership without incurring unlimited liability.

INCORPORATION

Incorporation is the process by which a corporation is formed. The corporate statutes of each state set forth the steps that must be taken to establish a corporation in that state. Many states' statutes are based in whole or in part on

the Model Business Corporation Act, an annotated uniform statute prepared by academics and practitioners. The state under whose laws a corporation is formed is called the corporation's *corporate domicile*. A corporation is not limited to doing business in its corporate domicile. It can conduct business as a *foreign corporation* in other states. Typically, to do so, it must file a statement of foreign corporation with the appropriate secretary of state and state taxing authority.

WHERE TO INCORPORATE

Corporations may incorporate in any state; it need not be the state in which most of their business is located. Two important factors affect the decision of where to incorporate: (1) the costs of incorporation in a given state, and (2) the relative advantages and disadvantages of that state's corporation laws. If the corporation is privately held and its business will be conducted largely within one state, incorporation in that state is probably the best choice. If the corporation will be large from the outset or will be engaged in substantial interstate business, however, then incorporation in a jurisdiction with the most advantageous corporate statutes and case law should be considered.

Corporation laws may be favorable either to management or to the shareholders. Some states, such as Delaware, are considered to be pro-management because their statutes and court decisions tend to give control on a wide range of issues to the officers and directors. Other states, such as California, make it difficult for corporate managers to do certain things without the approval and participation of the shareholders. These states are regarded as pro-shareholder.

Since the mid-1930s, Delaware has been considered the preeminent state for incorporation. Fifty percent of the companies on the New York and Nasdaq Stock Exchanges are incorporated in Delaware, and more than 65 percent of *Fortune 500* companies are Delaware companies. Consequently, Delaware corporate law is considered the standard in America and much of the world.¹⁹

The Delaware General Corporation Law is a dynamic statute designed to give corporations maximum flexibility in ordering their affairs. The Delaware Court of Chancery, established in 1792, hears (without juries) all cases involving corporate law issues and has rendered thousands of written opinions interpreting virtually every provision of the Delaware General Corporation Law.²⁰

17. If such a renunciation is not effectuated, the putative limited partners face liability in an individual capacity for debts of the partnership. *Reiman v. Int'l Hospitality Group, Inc.*, 614 A.2d 925 (D.C. 1992).

18. See, e.g., Section 15633 of the California Revised Limited Partnership Act.

19. Cynthia Ribas, *California vs. Delaware: A Corporate Law Comparison*, BUS. L. NEWS, 2002, at 17–27.

20. See Lewis S. Black, Jr., *Why Delaware? A Practitioner Gives Reasons for Incorporation*, CORP. COUNS. WKLY., Oct. 20, 1999, at 8.

An examination of the Delaware statute helps highlight some of the key corporate governance choices. The power to elect the board of directors is the primary way in which shareholders exercise control, and all jurisdictions provide for it. Delaware permits, but does not require, cumulative voting (discussed further below), which allows a minority shareholder greater opportunity to elect someone to the board. Delaware also permits a *staggered* (or *classified*) *board*, whereby directors serve for specified terms, usually three years, with only a fraction of them up for reelection at any one time. A classified board makes it more difficult to replace the entire board at once. In Delaware, classified boards are the norm. Delaware prohibits the removal of directors on a classified board without cause, unless the certificate of incorporation provides otherwise. In contrast, all corporations incorporated in California, except publicly traded companies, must have cumulative voting and cannot have a staggered board. In addition, as explained further in Chapter 21, Delaware permits broader limitations on directors' personal monetary liability than California.

The primary reason a company would choose to incorporate in California, or any other state rather than Delaware, would be cost.²¹ When deciding whether to incorporate in the local state or Delaware, entrepreneurs must weigh the advantages Delaware provides for managers against the expense of paying Delaware corporate franchise taxes, the expense of hiring lawyers familiar with Delaware law, and the possibility of having to defend a lawsuit in Delaware. Businesses incorporated in their local state often reincorporate in Delaware once they have grown large enough to justify the effort and expense of reincorporation.

HOW TO INCORPORATE

To create a corporation, one or more incorporators must prepare the certificate or articles of incorporation (or the corporate charter). This document must be filed with the appropriate state governmental agency, usually the secretary of state for the jurisdiction that will become the corporate domicile.

The articles of incorporation are generally quite short. For example, the Pennsylvania Business Corporation Law specifies that the articles need only set forth the name of the corporation, the location and mailing address of the corporation's registered office in Pennsylvania, a brief statement of the purpose of the corporation, the term for which the corporation is to exist (which may be perpetual), the total number of shares that the corporation is authorized to issue, the name and mailing address of each of the incorporators,

INTERNATIONAL SNAPSHOT

Before a business incorporates abroad, its management should consult a lawyer in the country in which the incorporation is to take place to be advised of the country's laws governing tax, labor, and corporate issues. Parties contemplating a partnership or joint venture should note that civil law jurisdictions usually do not recognize common law-style partnerships. Instead, they look through the partnership to the partners and view the partners as the legal owners.

and a statement of the number of shares to be purchased by each.

Section 204 of the Pennsylvania Business Corporation Law, like most modern corporation statutes, goes on to provide that the purpose clause "may consist of or include a statement that the corporation shall have unlimited power to engage in and to do any lawful act concerning any or all lawful business for which corporations may be incorporated under this act." Pennsylvania's corporate law goes on to specify corporate powers, so there is no need to have a long purpose clause in the articles of incorporation. Indeed, to do so invites trouble because one might inadvertently exclude an activity in which the corporation may later want to engage.

After the articles of incorporation are filed, the incorporators adopt the *bylaws*, that is, the rules governing the corporation (including the number of authorized directors), and elect the initial board of directors. This can be done either at an organizational meeting or by unanimous written consent. The incorporators are exclusively empowered to place the directors in office. After electing the board of directors, the incorporators sign a written resignation. The directors then have an organizational meeting at which they (1) ratify the adoption of the bylaws by the incorporators or adopt new bylaws, (2) appoint officers, (3) designate a bank as depository for corporate funds, (4) authorize the sale of stock to the initial shareholders, and (5) determine the consideration to be received in exchange for such shares—cash, other property, or past services rendered to the corporation.

Exhibit 20.1 outlines the steps required to form a corporation.

DEFECTIVE INCORPORATION

Because a corporation exists only by statute, not by common law, any defect in the incorporation process can have the effect of denying corporate status. A business organization

21. Ribas, *supra* note 19.

EXHIBIT 20.1

Steps Required to Form a Corporation

1. Select a corporate name and agent for service of process.
2. File certificate of incorporation (also known as articles of incorporation or charter in some jurisdictions) signed by incorporator(s).
3. Sign action by incorporator(s) that:
 - Adopts bylaws
 - Specifies initial directors.
4. Obtain written resignation of incorporator(s).
5. Hold first directors' meeting or take action by unanimous written consent of the directors to:
 - Ratify the adoption of the bylaws by the incorporator(s) or the adoption of new bylaws.
 - Elect officers.
 - Authorize issuance of stock.
 - Authorize corporate bank account.

that was intended to function as a corporation but has failed to comply with the statutory requirements is in fact a partnership or, if there is only one shareholder, a sole proprietorship. The owners will not enjoy the protection of limited liability and can be held personally responsible for all debts of the enterprise. The courts have, however, developed several doctrines to avoid this result if it would be unfair.

De Jure Corporation

When incorporation has been done correctly, a *de jure corporation* is formed. This means that the entity is a corporation by right and cannot be challenged. Most jurisdictions will find de jure corporate status as long as the incorporators have substantially complied with the incorporation requirements. For example, substantial compliance will be found even if the incorporators failed to obtain a required signature or submitted an improper notarization.

De Facto Corporation

If the incorporators cannot show substantial compliance, a court may treat the entity as a *de facto corporation*, that is, as a corporation in fact even though it is not technically a corporation by law. For the court to find a de facto corporation, the incorporators must demonstrate that they were unaware of the defect and that they made a good faith effort to incorporate correctly. For example, if a clerk for the secretary of state delayed filing the articles, the business would not be a corporation *de jure*, but it would probably be a corporation *de facto*.

Corporation by Estoppel

An entity that is neither a *de jure* nor a *de facto* corporation may be a *corporation by estoppel*. If a third party, in all of its transactions with the enterprise, acts as if it were

doing business with a corporation, the third party is prevented or *estopped* from claiming that the enterprise is not a corporation.²² It is considered unfair to permit the third party to reach shareholders' personal assets when all along it believed it was dealing with a corporation whose shareholders had limited liability.

PIERCING THE CORPORATE VEIL

The corporation is built around the central premise of limited liability. Under certain circumstances, however, courts will deny this central premise and hold the shareholders liable for claims against the corporation. A court will *pierce the corporate veil* in this way if necessary to prevent the evasion of statutes, the perpetration of fraud, or other activities against public policy. The need to pierce arises only if the corporation is unable to pay its own debts.

There are two legal approaches to piercing the corporate veil. The *alter ego theory* applies when the owners of a corporation have so mingled their own affairs with those of the corporation that the corporation does not exist as a distinct entity—instead, it is an alter ego of its owners. The *undercapitalization theory* applies when the corporation is a separate entity, but its deliberate lack of adequate capital allows it to skirt potential liabilities. Such undercapitalization constitutes a fraud upon the public.

Courts usually apply some combination of these theories. If a court suspects wrongdoing or bad faith on the part

22. See, e.g., *Cranson v. Int'l Bus. Machs. Corp.*, 200 A.2d 33 (Md. 1964).

of shareholders, it will be more inclined to pierce the corporate veil. Because a publicly traded corporation generally does not have one controlling shareholder, attempts to pierce the veil of such corporations are rare. Usually, the cases involve small, closely held corporations or subsidiaries of larger corporations.

Courts have used the same approach to decide whether to pierce the veil of a limited liability company and hold its members personally liable. For example, the Court of Appeal of Louisiana held that Insulation Sales and Service, Inc. (ISS), the majority owner of AAI Ventures, L.L.C., was liable for monies owed under a contract between AAI and Patrick Hamilton, an individual hired to provide general management services to AAI in connection with its subcontract to remove asbestos from a casino.²³ AAI, which was formed to do the asbestos removal work at the casino, was undercapitalized; the separate corporate existence of AAI and its affiliated companies was disregarded; individuals associated with the casino project were unsure of coworkers' job titles or the employers of record; employees of one organization were housed at the offices of other organizations; and AAI had no employees—its accounting was handled by employees of ISS.

ALTER EGO THEORY

A court will consider several factors when deciding whether a corporation is merely the alter ego of a shareholder.

Domination by Controlling Shareholder

If an individual or another corporation owning most of the stock of the corporation exerts so much control that the standard corporate decision-making mechanisms are not in operation, the courts may find that the corporation has no separate mind, will, or existence of its own.

For example, following its acquisition of Atlanta-based HBO & Co. (HBOC), McKesson, a California-based health-care company, allowed HBOC to survive as its wholly owned subsidiary. Later that year McKesson announced that for several years prior to the merger HBOC had improperly recorded more than \$50 million in revenue. The announcement caused the value of McKesson's stock to plummet. Following the precipitous drop in value, McKesson brought a suit of unjust enrichment against former HBOC shareholders who had traded in their overvalued stock for equivalently valued McKesson stock. The judge denied the claim, finding it would be an unwarranted piercing of the corporate

veil. Although the companies had not become completely merged, McKesson exercised such control over HBOC that its shareholders were, in effect, merely McKesson shareholders following their final approval of the merger agreement. McKesson argued that it had to sue the shareholders directly because suing its own subsidiary would harm itself, but the judge found that if suing HBOC would amount to suing itself, then the HBOC shareholders, as McKesson shareholders, were protected against such an attack.²⁴

Commingling of Assets

The courts will also examine whether the books and funds of the corporation and of the controlling shareholder have been commingled; for example, whether the shareholder uses company checks to make personal purchases or payments.

Bypassing Formalities

If an action that requires approval by the board proceeds without a board meeting being held, or if other procedural rules (such as the requirement of an annual shareholders' meeting) are consistently broken, the courts will be inclined to view the corporation as the instrument of the controlling shareholder unless the corporation qualifies as a statutory close corporation under the law of the state of incorporation. As noted earlier, the bypassing of these formalities is not a factor in deciding whether to pierce the veil of a close corporation.

UNDERCAPITALIZATION THEORY

In deciding whether a corporation is undercapitalized, a court will consider whether the founders should have reasonably anticipated that the corporation would be unable to pay the debts or liabilities it would incur. (Of course, the amount of capital invested does not have to guarantee business success—if it did, all failed businesses would be deemed undercapitalized.)

For example, assume a new corporation is formed to build airplanes, an activity that requires large expenditures and entails substantial risks of liability for third-party injury. The corporation has raised only \$1,000 in capital. It is obvious that the corporation will run out of funds quickly and be unable to pay its bills. It will not have money to buy adequate product liability insurance or to self-insure against claims for injuries caused by defective airplanes. A court may, because of the undercapitalization, ignore the corporate form and hold the owners of the corporation personally liable for its debts and liabilities.

23. *Hamilton v. AAI Ventures, L.L.C.*, 768 So. 2d 298 (La. Ct. App. 2000). *See also Litchfield Asset Mgmt. v. Howell*, 799 A.2d 298 (Conn. App. 2002).

24. *McKesson HBOC, Inc. v. New York State Common Ret.*, 339 F.3d 1087 (9th Cir. 2003).

The above example is an exaggerated case. In reality, it is often difficult for a court to decide how much capital is enough. Two judges examining the same facts may come to different conclusions as to whether the owner should have reasonably anticipated that the corporation would

need more capital. Judges may also disagree as to whether undercapitalization alone is sufficient grounds to pierce the corporate veil. In the following classic case, the majority opinion and the minority dissent reflect two sides of this issue.

A CASE IN POINT

CASE 20.4

WALKOVSKY V. CARLTON

COURT OF APPEALS OF NEW YORK

223 N.E.2d 6 (N.Y. 1966).

IN THE LANGUAGE OF THE COURT

FACTS The plaintiff was severely injured in New York City when he was run down by a taxicab owned by the defendant, Seon Cab Corporation. The individual defendant, Carlton, was a shareholder of ten corporations, including Seon, each of which had two cabs registered in its name. Each cab was covered by only the minimum \$10,000 per cab automobile liability insurance required by New York law.

Although seemingly independent of one another, these corporations were, according to the plaintiff, "operated . . . as a single entity, unit and enterprise" with regard to financing, supplies, repairs, employees, and garaging, and all were named as defendants. The plaintiff also asserted that the multiple corporate structure constituted an unlawful attempt "to defraud members of the general public" who might be injured by the cabs. He therefore sought to hold their sole shareholder personally liable for his injury.

ISSUE PRESENTED May the corporate veil be pierced solely because the corporation is undercapitalized?

OPINION FULD, J., writing for the New York Court of Appeals:

The law permits the incorporation of a business for the very purpose of enabling its proprietors to escape personal liability but, manifestly, the privilege is not without its limits. Broadly speaking, the courts will disregard the corporate form, or, to use accepted terminology, "pierce the corporate veil," whenever necessary "to prevent fraud or to achieve equity."

....

The individual defendant is charged with having "organized, managed, dominated and controlled" a fragmented corporate entity but there are no allegations that he was conducting business in his individual capacity. . . . The corporate form may not be disregarded merely because the assets of the corporation, together with the mandatory insurance coverage of the vehicle which struck the plaintiff, are insufficient to assure him the recovery sought. . . . [I]f the insurance coverage required by statute "is inadequate for the protection of the public, the remedy lies not with the courts but with the Legislature." It may very well be sound policy to require that certain corporations must take out liability insurance which will afford adequate compensation to their potential tort victims. However, the responsibility for imposing conditions on the privilege of incorporation has been committed by the Constitution to the Legislature and it may not be fairly implied, from any statute, that the Legislature intended, without the slightest discussion or debate, to require of taxi corporations that they carry automobile liability insurance over and above that mandated by the Vehicle and Traffic Law.

DISSENT KEATING, J., dissenting from the majority opinion:

From their inception these corporations were intentionally undercapitalized for the purpose of avoiding responsibility for acts which were bound to arise as a result of the operation of a large taxi fleet having cars out on the street 24 hours a day and engaged in public transportation. And during the course of the corporations' existence all income was continually drained out of the corporations for the same purpose.

CONTINUED

The issue presented by this action is whether the policy of this State, which affords those desiring to engage in a business enterprise the privilege of limited liability through the use of the corporate device, is so strong that it will permit that privilege to continue no matter how much it is abused, no matter how irresponsibly the corporation is operated, no matter what the cost to the public. I do not believe that it is.

[Judge Keating then cited with approval a California Supreme Court case²⁵ holding that the corporate veil could be pierced based on undercapitalization alone.]

....

What I would merely hold is that a participating shareholder of a corporation vested with a public interest, organized with capital insufficient to meet liabilities which are certain to arise in the ordinary course of the corporation's business, may be held personally responsible for such liabilities. Where corporate income is not sufficient to cover the cost of insurance premiums above the statutory minimum or where initially adequate finances dwindle under the pressure of competition, bad times or extraordinary and unexpected liability, obviously the shareholder will not be held liable.

RESULT In New York, the corporate veil may not be pierced solely because the corporation is undercapitalized. Accordingly, plaintiff Walkovszky cannot sue Carlton in his individual capacity unless the complaint is amended to allege alter ego.

COMMENTS In *Walkovszky*, the court rejected the argument that undercapitalization alone constituted fraud. The court suggested, however, that the plaintiff amend the complaint to allege that the individual defendants were "shuttling . . . personal funds in and out of the corporation 'without regard to formality and to suit their immediate convenience,'" thus stating a valid cause of action under the alter ego theory. In *Browning-Ferris Industries v. Ter Maat*,²⁶ the U.S. Court of Appeals for the Seventh Circuit held that undercapitalization alone did not justify piercing the corporate veil of an Illinois corporation operating a garbage dump.

CRITICAL THINKING QUESTIONS

1. From a public policy standpoint, with which opinion do you agree, the majority or the dissent?
2. Would the result have been different if defendant Carlton's name had been conspicuously displayed on the sides of all of the taxis owned by the various corporations of which Carlton was the sole shareholder and if Carlton actually serviced, inspected, repaired, and dispatched the taxis?

25. Minton v. Cavaney, 364 P.2d 473 (Cal. 1961).

26. 195 F.3d 953 (7th Cir. 1999), *cert. denied*, 529 U.S. 1098 (2000).

TORT VERSUS CONTRACT

A tort plaintiff's contact with the corporation (for example, being hit by a taxi) may be completely involuntary. Many courts are therefore more sympathetic to the tort victim who faces an undercapitalized corporate defendant than to a plaintiff seeking to pierce the corporate veil in a breach-of-contract case. Why should someone who voluntarily contracted to provide credit to a weakly capitalized corporation, perhaps charging a premium interest rate in so doing, later be entitled to reach the owner's personal assets? After all, the creditor had, or could have negotiated, access to the corporation's financial statements. The voluntary decision

to do business with the undercapitalized company contrasts quite sharply with the plight of a party who is a victim of a tort committed by an officer or employee of the corporation. If, however, a shareholder misrepresents the financial condition of the corporation when negotiating a contract, then courts will pierce the corporate veil.

REVERSE PIERCING

Under certain circumstances, some jurisdictions will permit *reverse piercing*, whereby a corporation may be held liable for the debts of a shareholder. For example, in what the California Court of Appeal called "[p]erhaps, the oldest

reverse piercing case,”²⁷ *Kingston Dry Dock Co. v. Lake Champlain Transportation Co.*,²⁸ the U.S. Court of Appeals for the Second Circuit held, as a matter of federal law, that a parent corporation may be liable for the acts of its subsidiary when the parent directly intervened in the transaction “ignoring the subsidiary’s paraphernalia of incorporation, directors and officials.”²⁹

MANAGEMENT OF THE CORPORATION

Corporate control is apportioned among the directors, officers, and shareholders. The directors are the overall managers and guardians of the corporation. The officers are the day-to-day managers. The shareholders, as the owners of the corporation, do not participate directly in management, but they elect the directors. The shareholders also must approve certain major transactions.

DIRECTORS

Most state statutes provide that the business and the affairs of the corporation shall be managed, and all corporate powers shall be exercised, by or under the direction of the board of directors. The board typically delegates the management of the day-to-day operations of the business of the corporation to the officers or, less often, to a management company. A member of the board may also serve as an officer. Such a person is called an *inside director*. A director who is not also an officer is called an *outside director*. An understanding of the dynamics between the board and the officers is essential to comprehend the workings of a corporation.

OFFICERS

The officers appointed by the board of directors are agents of the corporation and have the power to act on its behalf. A corporation will normally have a chief executive officer (often called president), a secretary, a chief financial officer, and other officers as designated in the bylaws or determined by the board.

Any number of offices may be held by the same person unless the articles or bylaws provide otherwise. Officers are chosen by the board and serve at the pleasure of the board. If an officer is terminated in violation of a contract

29. *Id.* at 267.

of employment, the officer cannot sue to get his or her job back but can sue for damages. An officer may resign at any time upon written notice to the corporation. The corporation can sue for damages if an officer’s resignation breaches his or her employment contract.

SHAREHOLDERS

Shareholders are virtually never involved in the day-to-day operations of a corporation. As discussed more fully in Chapter 21, shareholders’ main “power” in the corporation is their right to elect directors who will run the company in their stead.

Voting Rights

The shareholders elect the directors. The courts have held that directors have no inherent right to remain in office. In some states, directors can be removed by the shareholders with or without cause at any time. In other states, such as Delaware, a director who is elected to a staggered or classified board (where directors serve for designated multiyear terms, usually not to exceed three years) may not be removed without cause, unless the certificate of incorporation provides otherwise. The shareholders might be able to accomplish the same result by first eliminating the charter or bylaw provision requiring the staggered board and then voting to remove the directors. In addition, certain transactions, such as a merger or the sale of substantially all of the corporation’s assets, can be approved only by a vote of the shareholders.

Shareholders can act by voting at a meeting or by written consent. A shareholder who cannot be present at a meeting can vote by *proxy*, that is, by a written authorization for another person to vote on his or her behalf. Only *shareholders of record*, that is, persons whose names appear on the corporation’s shareholder list on a specified date, are entitled to vote.

No action can be taken at a shareholders’ meeting unless there is a *quorum*; the quorum requirements are set forth in each state’s corporate statute. In most jurisdictions, there is no quorum unless the holders of at least 50 percent of the outstanding shares are present in person or by proxy.

Cumulative Voting Versus Straight Voting in the Election of Directors Some states permit, and some require, *cumulative voting*, whereby each shareholder may cast all of his or her votes for one nominee or allocate them among the nominees as the shareholder sees fit. A shareholder’s total number of votes is thus equal to the number of directors to be elected multiplied by the number of shares

owned by the shareholder. Cumulative voting gives minority shareholders a greater likelihood of electing at least one director.

In an election permitting cumulative voting, the number of shares, x , required to elect a given number of directors, y , may be calculated by the following formula:

$$x = \frac{y \times z}{1 + d} + 1$$

where z is the total number of shares voting, and d is the total number of directors to be elected.³⁰

To illustrate, assume a shareholder wants to elect three directors ($y = 3$) to a board with five members up for election ($d = 5$). The corporation has 100 shares outstanding, and they are all voted ($z = 100$). Then

$$\begin{aligned} x &= \frac{3 \times 100}{1 + 5} + 1 \\ x &= 51 \end{aligned}$$

With cumulative voting, a shareholder would need 51 shares to elect three directors.

In contrast, with *straight voting*, a shareholder can cast one vote for each share the shareholder owns for each nominee. Thus, a shareholder who owns 51 shares can cast 51 votes for each vacant director position. Consequently, a shareholder who controls more than half the voting stock of a corporation can effectively elect the entire board of directors.

Class Voting Class voting occurs when the charter or applicable corporate law requires one class of stock, usually preferred, to approve a given proposal while other classes of stock are excluded from the vote. For example, a charter might require all mergers and sales of substantially all of the assets to be approved by both a majority of the common shares voting as a class and a majority of the preferred shares voting as a class. Class voting is often sought by investors attempting to protect their control of certain key decisions even if they lose majority control of the corporation's voting equity.

Courts generally will enforce class-voting provisions but tend to construe them quite literally. In *Benchmark Capital Partners IV, L.P. v. Vague*,³¹ the Delaware Court of Chancery reaffirmed its position that a class-voting provision should be narrowly construed even if it appears that a majority shareholder has crafted a transaction to avoid triggering the provision. Thus, a group of shareholders who were guaranteed the right to vote as a class on any change in the corporate charter that would dilute their rights or holdings in the

corporation were held to have no right to a class vote on a merger that might dilute their equity interest.

Including Shareholder Proposals in the Company's Proxy Statement

The Securities and Exchange Commission (SEC) requires publicly traded companies to include certain shareholder proposals in the proxy statement the board sends to shareholders to solicit proxies for the election of directors. Shareholder activists have used shareholder proposals extensively to raise social or political issues. Early examples included proposals for companies (1) to stop doing business in South Africa to protest the policy of apartheid (mandated segregation of blacks and whites) and (2) to adopt the CERES Principles, a ten-point code of environmental conduct.

More recently, shareholder proposals have focused more on corporate governance issues, such as eliminating classified boards and giving shareholders a "say or pay,"³² that is, the right to vote on executive compensation. The SEC has advised corporations that proposals involving any of the following cannot be omitted from proxy materials: (1) requests that the board seek shareholder approval prior to adopting a "poison pill" antitakeover device, (2) limits on the compensation of nonemployee directors, (3) schemes for performance-based compensation for executives, (4) equity compensation plans, (5) compensation for senior officers, (6) a reduction in pension benefits, (7) requests that the company dissociate itself from any "offensive" advertising, (8) increased retirement benefits, and (9) a dividend increase.³³ Companies had unsuccessfully sought to exclude these proposals under SEC Rule 14a-8 under the Securities Exchange Act of 1934, which allows companies to exclude proposals that relate to the "ordinary business" of the company.

Shareholders are also increasingly focusing on energy sustainability and the economic and environmental effects of global warming.³⁴ For example, the SEC ruled that (1) ExxonMobil Corporation could not omit a request that the board establish a committee to study and report to shareholders on how the company can become a leader in developing environmentally sustainable technology to make the United States energy independent and (2) General

► ETHICAL CONSIDERATION

Edward Hall and Harry Hall were 50 percent owners of Hall Contractors and the corporation's only directors. Edward died, leaving all of his assets to his widow. Harry (the only surviving director at that point) appointed his own wife to fill the vacancy on the board. Initially, Harry and his wife refused to call a shareholder meeting. Even when one was called, Harry simply did not show up to vote. As a result, Edward's widow could never generate a quorum for a shareholder vote to replace Harry's wife with an impartial director. The corporation never paid dividends to Edward or his widow and did not intend to pay dividends in the future. As a result, Edward's widow's stock in the corporation became worthless. Did Harry and his wife have a legal right to do what they did?^a Were they acting ethically? Would the answer be different if the case involved a corporation like IBM or Google?

a. *Hall v. Hall*, 506 S.W.2d 42 (Mo. Ct. App. 1974).

Electric could not omit a request that the board prepare a global warming report.³⁵

Shareholder Nomination of Directors

As discussed earlier, corporate law proceeds on the assumption that the shareholders will elect the directors who in turn are responsible for overseeing management. In practice, the CEO is often also the chair of the board and significantly influences both the selection of directors and the board's agenda.³⁶ As a result, the board may fail to exercise the necessary oversight.

The corporate excesses of recent years have led to renewed calls for greater director independence. In most public companies, a separate, independent committee of directors is charged with nominating directors for election. In 2003, the SEC adopted rules that require companies to disclose more information about the nomination process.³⁷

35. "Ordinary Business" Is Still Unclear in 2008 Proxy Season, CORP. COUNS. WKLY., July 30, 2008, at 237.

36. See Constance E. Bagley & Richard Koppes, *Leader of the Pack: A Proposal for Disclosure of Board Leadership Structure*, 34 SAN DIEGO L. REV. 1 (1997).

37. Disclosure Regarding Nominating Committee Functions and Communications Between Security Holders and Boards of Directors, Release No. 34-48825, 68 Fed. Reg. 69,204 (Dec. 11, 2003). For a more detailed discussion, see Task Force on Shareholder Proposals of the Committee on Federal Regulation of Securities of the Section of Business Law of the American Bar Association, *Report on Proposed Changes in Proxy Rules and Regulations Regarding Procedures for the Election of Corporate Directors*, 59 BUS. LAW. 109–25 (2003).

A public company must disclose (1) whether the company has a nominating committee at all and, if not, why not; (2) whether members of the committee satisfy independence requirements; (3) whether the company pays a third party to help find suitable directors; and (4) the company's minimum requirements for its director nominees. Commenting on the new rules, SEC Chairman William Donaldson stated:

These rules are an important first step in improving the proxy process as it relates to the nomination and election of directors. The Commission believes that better information about the way board nominees are identified, evaluated and selected is critical for shareholder understanding of the proxy process regarding nomination and election of directors. We also believe that better information about the processes of shareholder communications with boards lies at the foundation of shareholder understanding of how they can interact with directors and director processes. These are vital issues in strengthening the proxy process for the benefit of shareholders.³⁸

In 2003, the SEC also made a highly contentious proposal to permit certain long-term significant shareholders to nominate candidates for the board without having to go through the considerable expense of commencing a proxy contest. Proposed Rule 14a-11 would have required publicly traded corporations to permit direct shareholder nominations of directors upon the occurrence of certain trigger events that suggest that security holders need such access to further an effective proxy process.³⁹ Although SEC Commissioner Roel Campos called the proposal "very, very modest," Martin Lipton of Wachtell, Lipton, Rosen & Katz characterized it as "an extreme overreaction to Enron and WorldCom."⁴⁰ The Business Roundtable, the National Association of Manufacturers, and other key business groups publicly opposed the proposal, but public pension funds representing nearly \$703 billion in assets voiced their support.⁴¹ In 2007, the SEC announced its decision not to require public companies to include shareholder nominations in their proxy statements.⁴² A company can, therefore, exclude shareholder proposals

that would require shareholder nominees to be included in the company's proxy materials, but it may not exclude proposals relating to board structure, voting procedures, nominating procedures, or qualifications of directors.⁴³

Majority Voting

Management proxy statements typically give shareholders two choices when voting for directors: "For" and "Withhold Authority." Until recently, the vast majority of corporations used a *plurality standard*, whereby a director could be elected as long as he or she received a plurality of the votes cast for any nominee, without regard to the number of votes withheld. In 2006, the most frequent shareholder proposals were those to require *majority voting*, whereby a director must receive a majority of the shares voted to be elected. By 2007, 52 percent of the S&P 500 companies had adopted some type of majority voting.⁴⁴ One popular variation—"plurality-plus"—provides that directors who fail to receive a majority of the votes cast must tender their resignations, which the company must then decide whether to accept.⁴⁵ In a true majority voting system, a director must receive a majority of the votes cast to be elected.

Shareholder Inspection Rights and Access to the Shareholder List

Shareholders have a common law right to inspect the corporate books and records, including the stock register and/or shareholder list, the minutes of board meetings and shareholder meetings, the bylaws, and books of account. In making the examination, shareholders are permitted the assistance of an accountant, lawyer, or other expert.

In most states, the right of inspection is limited by the requirement that the inspection be conducted for a "proper purpose." States vary in their interpretation of this limit. Some jurisdictions construe "proper purpose" liberally, leaving shareholder inspection rights virtually unfettered. These states reason that inspection rights should be broad because everything that affects a corporation eventually has an effect on its shareholders. Other states, more concerned with the potential for the inspection right to be an abusive tool, protect against "fishing expeditions" by requiring more than a vague allegation of mismanagement to establish a proper purpose.

In one of the most famous cases in American corporate history, the Minnesota Supreme Court ruled that a shareholder of Honeywell, Inc., who opposed the Vietnam War

and sought to persuade Honeywell to cease producing anti-personnel fragmentation bombs for use in the war, did not have a right to Honeywell's shareholder list or the corporate records dealing with weapons and munitions manufacture.⁴⁶ The court explained: "Considering the huge size of many modern corporations and the necessarily complicated nature of their bookkeeping, it is plain that to permit thousands of stockholders to roam at will through their records would render impossible . . . the proper carrying on of their business." Because "the power to inspect may be the power to destroy," the court ruled that Delaware law (which governed the case because Honeywell was incorporated in Delaware) requires the shareholder to assert some concern with investment return. In this case, the shareholder's avowed purpose in buying Honeywell stock was to place himself in a position to try to impress his social and political opinions upon Honeywell's management and its other shareholders. Such an interest, the court concluded, could hardly be deemed a proper purpose germane to his economic interest as a shareholder.

Many of the most intense shareholder inspection battles involve access to the list of shareholders. Shareholders seeking to change a corporate policy or gain control of the board of directors want to identify and target their message to the holders of large blocks of stock. To do this, the insurgents need a copy of the shareholder list. Precisely because the list is so valuable to management's shareholder critics, incumbent managers are likely to resist efforts to obtain it.

Acknowledging that access to the shareholder list can be vital to a successful corporate power struggle, some jurisdictions allow such access without requiring a proper purpose, provided that the shareholder owns a substantial block of shares. For example, Section 1600(a) of the California Corporations Code provides that any 5 percent shareholder can inspect and copy the record of shareholders' names and addresses and shareholdings during usual business hours upon five business days' written notice.

Proxy contests, whereby insurgents propose their own slate of directors or rally to oppose a board proposal by sending out their own proxy statement and soliciting proxies for their candidates or position, continue to be an important technique for obtaining control of a publicly traded company or opposing a particular transaction proposed by the incumbent board of directors.⁴⁷ Under the SEC's regulation for the solicitation of proxies, publicly traded companies must either mail the proxy materials for the insurgents seeking to elect their own directors or provide a shareholder list.

47. CONSTANCE E. BAGLEY & DAVID BERGER, PROXY CONTESTS: PREPARING FOR THE CAMPAIGN (1998).

► ETHICAL CONSIDERATION

In 2003, Hewlett-Packard (H-P) and Compaq were involved in the largest high-tech merger in history. Walter Hewlett, son of the company's founder and an H-P director, commenced a proxy contest to oppose the merger. On the day the stockholders were to vote, Deutsche Asset Management, a division of Deutsche Bank, suddenly changed most of its votes from against the merger to approval. The investment giant's sudden turnaround accounted for 17 million H-P shares, nearly 1 percent of the company's stock. What Walter Hewlett did not know at the time was that H-P's directors, who were in favor of the merger, had secretly hired Deutsche Bank and agreed to pay it \$1 million to advise H-P concerning the merger. Deutsche Bank was to receive another \$1 million upon the successful completion of the merger.^a The merger was approved by a margin of roughly 2 percent of the company's stock. Was Deutsche Bank's conduct legal? Ethical?

a. *In re Deutsche Asset Mgmt., Inc.*, SEC Admin. Proc. File No. 11226 (Aug. 19, 2003); also see Susan Beck, *Proxy Wars*, AM. LAW. NEWS GROUP, May 2002.

Most companies elect to mail the materials, so insurgents often rely on state inspection statutes to gain access to shareholder lists.⁴⁸

Shareholder Suits

Shareholders generally have a right to sue individually and directly for specific harm done to them. However, shareholders alleging corporate mismanagement leading to harm to the corporation as a whole must usually sue derivatively in the name of the corporation in a shareholder derivative action. In such a case, the recovery is paid to the corporation, not any individual shareholder.

In *Tooley v. Donaldson, Lufkin & Jette, Inc.*,⁴⁹ the Delaware Supreme Court articulated a more straightforward test for determining which type of claims must be brought derivatively. To determine whether a claim is direct or derivative, Delaware courts focus on “(1) who suffered the alleged harm (the corporation or the suing stockholders, individually); and (2) who would receive the benefit of any recovery or other remedy (the corporation or the stockholders, individually).”⁵⁰ Also relevant is whether the plaintiffs

48. See generally CONSTANCE E. BAGLEY & DAVID BERGER, *PROXY CONTESTS: CONDUCTING THE CAMPAIGN* (1998).

49. 845 A.2d 1031 (Del. 2004).

50. *Id.*

have demonstrated that they can prevail without showing an injury to the corporation, which depends in part on the identity of the person or entity to whom a duty was owed. When a group of former shareholders sued the former chair of Syncor International Corporation for alleged misconduct that caused them to receive a lower price for their shares when the company was sold, the Delaware Court of Chancery applied this standard and concluded that the plaintiffs had stated a derivative claim that belonged to the corporation.⁵¹ Because the plaintiffs were no longer Syncor shareholders, they had no standing to pursue the claim on Syncor's behalf. Their case was dismissed.

Before bringing a shareholder derivative action, the plaintiff shareholders must first demand that the directors bring suit on behalf of the corporation or prove that such a demand would be futile. Often companies will set up a special litigation committee to decide whether a suit is warranted. Because the would-be defendants are often fellow directors, the courts will not honor the committee's decision not to sue unless the committee was truly independent.⁵²

STRUCTURAL CHANGES IN A CORPORATION

State laws establish mechanisms by which the fundamental structure of the corporation can be changed. These changes can range from a reorganization of the enterprise to the end of the corporation as a separate entity. Because structural changes have far-reaching consequences, they cannot be made easily.

State corporation law prohibits certain changes, such as a merger or the sale of substantially all of the corporation's assets, unless they are approved by both the board of directors *and* the shareholders. Approval by the shareholders usually means approval by a simple majority of the outstanding shares, but the articles of incorporation may require approval by a larger majority, such as two-thirds of the shareholders. Such a requirement for supermajority approval reflects the importance of structural changes.

MERGER

A *merger* is the combination of two or more corporations into one. The *disappearing corporation* no longer maintains its separate corporate existence but becomes part of the *surviving corporation*. The surviving corporation assumes, that

51. *In re Syncor Int'l Corp. S'holders Litig.*, 857 A.2d 994 (Del. Ch. 2004).

52. *In re Oracle Corp. Derivative Litig.*, 824 A.2d 917 (Del. Ch. 2003).

is, becomes responsible for, all of the liabilities and debts of the disappearing corporation and automatically acquires all of its assets by operation of law. The new corporation may take on the name of one of the parties to the merger, or a new corporate name may be chosen.

An agreement of merger, negotiated between the two companies, will specify such crucial matters as who will comprise the management team of the new enterprise. A merger generally cannot occur unless the boards and the shareholders of both companies approve the transaction. Once the requisite approval is given, the agreement of merger is filed with the secretary of state.

In a noncash merger, the shares in the disappearing corporation are automatically converted into shares in the surviving corporation. Shareholders are required to surrender their old stock certificates for new certificates representing the stock of the surviving corporation. If a shareholder does not surrender the old certificate, it is deemed by operation of law to represent shares of the surviving corporation.

In a cash merger, some shareholders (usually the public shareholders) are required to surrender their shares in the disappearing corporation for cash. They retain no interest in the surviving corporation. Hence, such a merger is also called a *freeze-out merger*.

If a proposed merger meets certain size-of-party and size-of-transaction tests, a premerger notification must be filed with the Federal Trade Commission and the Department of Justice. This notification enables the federal agencies to review the anticompetitive effects of the proposed merger before the combination occurs. (Hart–Scott–Rodino filings and antitrust in general are covered in Chapter 17.)

SALE OF ASSETS

A company may want to acquire the assets of another company but not its liabilities. To achieve this goal, it can purchase all or most of the other company's assets without merging with the other company. The proceeds of the asset sale can be distributed to the selling company's shareholders as part of a dissolution of the corporation. Alternatively, the selling company may choose to continue its corporate existence and invest the proceeds of the asset sale in a new business.

A sale of all or substantially all of the assets of a corporation must be approved by both the board and the shareholders of the selling company. Most states consider a sale of 50 percent or more of the assets of a company to be a sale of substantially all of the assets. On the theory that the acquisition of assets is a routine management decision, in which the shareholders should not be involved, some states do not require that the transaction be approved by the shareholders of the acquiring company.

APPRAISAL RIGHTS

In a merger or a sale of assets, *dissenting shareholders*—those who voted against the transaction—are frequently granted *appraisal rights*, that is, the right to receive in cash the fair value of the shares they were forced to give up as a result of the transaction. This right is available only if the transaction was subject to shareholder approval and if the dissenting shareholder complies with certain statutory procedures.

In *M.P.M. Enterprises Inc. v. Gilbert*,⁵³ the Delaware Supreme Court held that for purposes of calculating the amount due shareholders exercising appraisal rights, “fair value” is “the value of the company to the stockholder as a going concern, rather than its value to a third party as an acquisition.” Using projected revenue growth, terminal value in five years, and an appropriate discount rate, the court determined that the equity value of M.P.M. Enterprises was \$156.33 million, even though Cookson Group PLC had agreed to buy M.P.M. for \$65 million plus up to \$73.6 million in subsequent payments, contingent upon earnings.

TENDER OFFERS AND STOCK REPURCHASES

One company may gain control of another by buying a majority of its voting shares, rather than by merging with it or purchasing its assets.

TENDER OFFERS

A *tender offer* is a public offer to all the shareholders of a corporation to buy their shares at a stated price, usually higher than the market price. The party making the offer is called a *bidder* or sometimes a *raider* because of the hostile nature of the bid. The bidder may offer either cash or other securities in exchange for the stock it seeks to acquire. The bidder is often a new corporation formed for the purpose of making the offer.

The shareholders are free to reject or accept the tender offer without the approval of the board of the target. If shareholders sell sufficient stock to the bidder, it will acquire control of the *target corporation*. Hence, the term *takeover* is commonly used to describe this transaction. Because a takeover is almost certain to result in substantial changes in the corporate structure of the target, tender offers are the subject of much regulation by federal statutes, as well as by the laws of the individual states. (Takeovers and

53. 731 A.2d 790 (Del. 1999).

the defensive tactics that boards can use to thwart them are discussed more fully in Chapter 21.)

An example of a takeover that results in a major change in corporate structure is the *second-step back-end merger*. The bidder first acquires more than 50 percent of the shares of a company through a tender offer and replaces the target company's board of directors with its own people. The new board then approves the merger of the target company into a company owned by the bidder, with the shareholders of the target company receiving cash or securities for their stock. As the majority shareholder of the target company, the bidder can outvote any dissenters and provide the required shareholder approval. The remaining shareholders are thus frozen out of the new company, and the bidder ends up with all the equity.

LEVERAGED BUYOUTS

Any tender offer or other stock purchase can be structured as a *leveraged buyout (LBO)*, that is, a stock purchase financed by debt. In many LBOs, the group of investors seeking to gain control of a corporation includes members of corporate management. The debt financing an LBO is typically secured by the assets of the target company (such as real estate or plant and equipment), and it may take the form

of an issuance of bonds, a commercial bank loan, or a loan from an investment bank. An LBO often results in a high debt load, which requires the company to make a series of substantial interest payments.

SELF-TENDER OFFERS AND GOING-PRIVATE TRANSACTIONS

A corporation can offer to repurchase its own shares, either in a privately negotiated transaction or through a tender offer available to the public shareholders. A large-scale repurchase can result in the corporation's *going private*, that is, having fewer than 300 shareholders and ceasing to be required to file public periodic reports under the Securities Exchange Act of 1934 (discussed further in Chapter 22). A host of SEC rules regulates share repurchases and going-private transactions.⁵⁴ A number of small public companies have elected to go private to avoid the expense of complying with the record-keeping and certification requirements imposed by the Sarbanes-Oxley Act of 2002.

International Joint Ventures

In theory, international joint ventures allow each partner to benefit from the comparative advantages of the other, generating a healthy profit for both. Even when the parties clearly specify management and ownership rights in the joint venture agreement, however, the risk of nationalization and expropriation is a constant hazard, particularly in developing or politically unstable countries. As evidenced by Big Oil's experience in the early twenty-first century in Venezuela and Russia, rules on foreign investment may change at any time—often without warning—putting a joint venturer's capital, resources, technologies, and profits at risk.

Venezuela

In the early 1990s, Venezuela reopened its oil fields to foreign investors after the unsuccessful nationalizations of the 1970s. Lured by generous tax concessions

and eager to profit from what would become the fifth largest oil export market in the world,⁵⁵ foreign firms invested more than \$20 billion in so-called strategic associations to develop Venezuela's oil fields. Then, in 1998, after seven years of soaring profits for oil companies, the political climate changed dramatically. Hugo Chávez was elected president of Venezuela on a platform that called for the creation of a National Constituent Assembly to write a new Venezuelan constitution. Chávez had strong support from the poorest classes, who had seen their living standards decline significantly over the previous decade.

As part of his "Bolivarian Revolution," Chávez moved Venezuela abruptly toward socialism and promised to

CONTINUED

55. *US Energy Security Plans Threatened by Militant Venezuela*, OIL & ENERGY TRENDS, Sept. 16, 2005, at 3.

redistribute the oil wealth to the country's poor. Venezuela began insisting on strict compliance with OPEC's production quotas in order to raise oil prices. Severe political turmoil and instability ensued. In 2001, Chávez bypassed the Venezuelan Congress and promulgated a new Hydrocarbons Law, which went into effect in 2002. The new law provided that all oil production and distribution were the domain of the Venezuelan state and required that the state-owned oil company, Petróleos de Venezuela SA (PdVSA), be given at least 51 percent of the capital stock in all future joint ventures.⁵⁶ The law also raised royalty rates (with the exception of high-risk joint ventures targeting extra-heavy crude oil production) from 16.7 to 30 percent—making them the highest in the world.⁵⁷

Shortly after the passage of the Hydrocarbons Law, business leaders led a two-month national strike and shut down economic activity. Chávez responded by declaring that Venezuela's oil reserves were of "strategic importance" to Venezuela and must be kept under state control. Petroleum production and refining by PdVSA ceased almost entirely during this period. Chávez used this as an opportunity to fire 19,000 of the company's experienced employees—more than half of the workforce—and to replace them with workers loyal to him.

In 2004, the oil industry was again hit hard when Chávez unilaterally increased the royalty rate on oil production from the Orinoco heavy crude strategic associations from 1 to 16.6 percent. The world's largest oil companies, including Chevron, ExxonMobil, ConocoPhillips, and British Petroleum (BP), felt the brunt of the change.⁵⁸ Less than a year later, Chávez targeted foreign oil investors directly and announced that all international strategic associations must comply with the Hydrocarbons Law, convert to joint ventures, and relinquish majority control of their investments to the state. The firms faced a sharp deadline to sign the new joint venture agreements, which mandated up to 80 percent ownership by PdVSA. Chávez threatened that if the oil companies refused to comply, he would seize their oil fields for the state. Before the joint ventures could be formed, the foreign companies were required to pay \$3 billion in back tax claims.⁵⁹

Chevron, Statoil, Total, and BP signed the agreements, giving PdVSA an average of 78 percent equity participation in the former strategic associations. After ExxonMobil and ConocoPhillips refused to hand over their 60 to 80 percent ownership interests to PdVSA,⁶⁰ the Venezuelan government promptly seized their lucrative oil fields and refused to pay cash compensation.⁶¹ ExxonMobil moved straight to international arbitration with the International Centre for Settlement of Investment Disputes (ICSID) on September 6, 2007, and requested courts in the United States, Britain, and the Netherlands to freeze more than \$12 billion of PdVSA assets in those countries to guarantee payment of its claim.⁶²

Chávez responded by banning ExxonMobil from ever doing business in Venezuela and proclaiming in his weekly radio and TV broadcast that "they will never steal from us again, the ExxonMobil bandits, imperialist white-collar thieves who corrupt and oust governments and supported the invasion of Iraq . . ."⁶³ ConocoPhillips entered into negotiations for compensation and then requested international arbitration to determine the value of its operations, amid worries that Chávez was moving to skew the value of its assets. As of late 2008, ConocoPhillips stood to lose more than \$4.5 billion in the dispute.⁶⁴

Russia

BP was deemed a trailblazer in 2003 when it secured access to Russia's enormous and largely untapped oil and gas reserves in Siberia with the formation of the TNK-BP joint venture. The \$6.15 billion deal combined BP's existing Russian projects in a 50–50 international joint venture with Tyumen Oil (TNK), a major Russian oil producer owned by Alfa, Access/Renova (AAR)—a consortium of four Russian billionaires. BP's investment made Britain the largest source

of foreign investment in Russia.⁶⁵ The deal combined more than a dozen large oil fields, with BP contributing its stake in Sidanko, RUSIA Petroleum, and its shares in its Moscow filling station network. AAR contributed its interest in TNK International and all its subsidiaries, Sidanko, including the Sakhalin-6 project, and RUSIA Petroleum.⁶⁶

Russia's ambiguous legislation, shifting political climate, and turbulent entry into the world of capitalism made most firms wary of such large investments. BP was aware that its oil fields in the North Sea and Alaska were aging, however, and needed to find new sources of oil. While the Middle East was largely closed to new deals, Russia was just beginning to open up to foreign investment. Additionally, several of Russia's proven reserves were near the border with China—only a pipeline away from a huge, burgeoning energy market. BP was attracted by the potential for huge profits from a deal that would give it an unrivaled position in the development of an important oil-producing country at a time when world oil prices were skyrocketing.

The relationship between the two groups was marked by suspicion and mistrust from the start. Five years earlier, BP's then CEO Lord John Browne and AAR had clashed over allegations that AAR had illegally appropriated assets belonging to Sidanko, the first Russian firm in which BP had invested. BP had paid \$480 million for a 10 percent stake in Sidanko in 1997, but almost lost its investment when TNK (owned by AAR) siphoned off assets, acquiring Sidanko's best oil fields for a pittance, and ruthlessly exploited Russia's bankruptcy laws in a bitter battle for control. It was not until 2001, after years of delicate negotiating, that BP was able to win back its share of the Sidanko assets.⁶⁷ When asked to assess BP's relationship with AAR after the new alliance, Lord Browne replied, "In business, trust is never 100 percent."⁶⁸

For AAR, the joint venture came at a time of political change. Vladimir Putin had just been elected president of Russia, and the freewheeling economy of the 1990s was coming to an end. Putin made it known that the state would not inquire too deeply into the legality of acquisitions made during the mass privatizations of the last decade, as long as the new business elite started reinvesting their profits in Russia. The Russian oligarchs now

needed BP's skills and managerial experience to repair the fields that had been damaged by years of irresponsible drilling, as well as access to the large amounts of capital that were necessary to develop Russia's huge reserves and bring the resources to market.⁶⁹

The difficulties of merging the two sides were daunting. Corporate governance and accounting transparency were major issues, and both sides were playing hardball. Mikhail Fridman, the cofounder and head of AAR, made it clear that the Russians viewed themselves as a "separate player" and would continue to pursue their own agenda despite their partnership with BP.⁷⁰

Even though TNK-BP met with substantial initial financial success, the partners were repeatedly unable to come to agreement. Part of the trouble was the structure of the partnership. Under the terms of the deal, both sides had equal representation on TNK-BP's eight-person board. The Russian oligarchs chose Mikhail Fridman as board chair. BP selected Robert Dudley, who had close ties to Lord Browne, as CEO.⁷¹ This structure meant that neither side had operational control and left them deadlocked over important issues.

For example, the joint venturers disagreed over the payment of dividends. Dudley argued for cutting dividends and reinvesting earnings into new projects and equipment while the Russians lobbied for increased payouts⁷² and accused BP of treating TNK-BP as a subsidiary, not an independent competitor. When their complaints remained unanswered, the Russian partners campaigned to have Dudley replaced as CEO.⁷³

BP and TNK-BP found themselves subjected to inquiries, investigations, and raids by Russian authorities. Given that TNK-BP was the only large oil and gas group in Russia with no state involvement, it initially was not clear whether the trouble was coming from the Kremlin or AAR.⁷⁴ Soon after TNK-BP was formed in 2003, the Russian government had initiated a campaign to regain state control of all large

energy assets in the country.⁷⁵ Through charges of tax or regulatory violations, the Kremlin moved to force the sale of some of the richest fields.

Yukos, the largest Russian oil producer at the time, was the first to come under attack. In late 2003, it was bankrupted by a flood of claims for back taxes, and two of its directors were imprisoned. Its assets were then sold at cut-rate prices to state-controlled companies, primarily Rosneft and Gazprom. In 2006, Gazprom used allegations of environmental wrongdoing to seize control of Royal Dutch Shell's majority share in Sakhalin II, the world's largest combined oil and gas development.⁷⁶ Environmental regulators threatened to freeze all work on the pipeline, claiming that Shell was allowing runoff from the pipeline construction to contaminate salmon streams. Such tactics enabled Gazprom to become the majority shareholder at "below market rate" prices. Conveniently, the threat to suspend construction was dropped after Gazprom entered the project. Barely a year later, TNK-BP was coerced into selling its lucrative oil fields northwest of Irkutsk to Gazprom after the Russian Natural Resources Ministry threatened to revoke its development license for developing the field too slowly, and it was widely suspected that the state-controlled oil company was also eyeing TNK-BP's giant Kovykta field in Siberia.⁷⁷

To complicate matters, all four of the Russian partners had close ties to the Kremlin. Victor Vekselberg had paid almost \$90 million to the Forbes family to secure the

return of a collection of Fabergé Easter eggs to the state.⁷⁸ TNK-BP's offices were raided twice by the FSB (formerly known as the KGB), and the Ministry of Labor inspected the firm four times. After the Russian government refused to renew visas and work permits for BP engineers and technical specialists, half of the specialists had to return home. Following months of harassment and repeated interrogations, CEO Robert Dudley left the country and attempted to run the company from an undisclosed location. The risks to BP's \$25 billion stake in the joint venture mounted. TNK-BP contributed approximately one-quarter of BP's oil production and represented one-fifth of its reserves.⁷⁹

After months of bitterness, threats, and the fear of a forced sale to Gazprom, BP announced on September 4, 2008, that it had reached an agreement with its Russian partners. In exchange for relinquishing a degree of control to the Russians, BP retained its nominal 50–50 stake in TNK-BP and access to the vast oil fields in Siberia. Dudley was slated to resign as CEO before the end of 2008 and be replaced by a director approved by a newly constituted board. The joint venturers agreed to add three independent seats to the board in an effort to prevent future deadlocks. BP also agreed that TNK-BP would sell 20 percent of its equity in an initial public offering of stock. BP's stock price rose more than 3 percent on news of the agreement, but the ultimate fate of BP's investment remained clouded, especially after the Russian invasion of Georgia strained Russia's relations with Europe and the United States.⁸⁰

THE RESPONSIBLE MANAGER

CHOOSING THE APPROPRIATE BUSINESS ORGANIZATION

The individuals who participate in the creation of a business organization will often go on to become its managers. These managers have a strong incentive to maximize

the new enterprise's potential for success. To do this, several concerns must be addressed during the entity-selection process.

CONTINUED

First, a founder should define and clarify the business goals of the enterprise in a business plan. For example, if the enterprise will need capital from a large number of individuals, it will be necessary to ensure limited liability for some or all of these investors. A general partnership would not be suitable, as there would be no limited liability for passive investors.

If several persons work together on an informal basis with a common business objective, and then one leaves, the *forgotten founder* problem can arise. The person who left may have ownership rights in the enterprise. Such rights can be based on the laws of intellectual property if the person leaving created a protectable piece of property, such as a patentable invention or computer software that is protected by copyright law. (Intellectual property is discussed in Chapter 11.) Even if a founder created no protectable intellectual property before leaving, he or she may have been a partner in an informal oral general partnership if the parties were sharing profits and losses. As such, that founder would be entitled to a share of the partnership assets.

One way to mitigate the forgotten founder problem is to incorporate early and issue shares that are subject to vesting over time. A common vesting schedule provides that if a person leaves in the first year, he or she forfeits all rights to any stock. Under this approach, called *cliff vesting*, one-quarter of the stock is often vested at the end of the first year. The remainder is vested monthly over the next three to four years.

If early incorporation is not feasible or is otherwise undesirable, it is important to spell out in writing at the

beginning of a joint project what will happen if someone leaves. Otherwise, those who remain could find themselves sued years down the road for a share of the company that finally is formed, a partnership interest, or royalties for use of intellectual property.

If a general partnership is chosen, there are additional concerns. For example, it is important to put the partnership agreement in writing. As we have seen, a written partnership agreement is not always absolutely necessary to form a partnership, but creating one forces people to think through their business objectives and relationships before they begin working together.

Once an entity has been established, the founders will oversee the process of capitalization. To decide what percentages of debt and equity are to be used in financing the operation, managers should have a realistic idea of the existing demand and the distinct markets for both types of financing. In addition, managers must be aware of the rates at which the corporation can borrow money and the terms that debt and equity holders will require. Tax considerations are crucial to this process.

The final capital structure can take a variety of forms, and much creativity can be employed in this area. Entrepreneurs and investors will often seek assistance from attorneys specializing in finance and tax law, as well as from accountants and investment bankers. The more a manager understands about capitalization, however, the better the manager can utilize the information provided by lawyers, bankers, and accountants to achieve a suitable capital structure.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE When Is a Partner Not a Partner?

In February 1990, Collette Bohatch was named a partner in the Washington, D.C. office of Butler & Binion, a Houston-based law firm. John McDonald was then the managing partner of the firm's D.C. office, which worked almost exclusively for Pennzoil. Bohatch soon became privy to internal firm reports showing the number of hours each attorney worked, billed, and collected. After reviewing such reports, she became concerned that McDonald was overbilling Pennzoil.

On July 15, 1990, Bohatch met with Louis Paine, Butler & Binion's managing partner, to report her concerns about

McDonald's billing practices. Paine told Bohatch he would investigate. The following day, McDonald met with Bohatch and told her that Pennzoil was not satisfied with her work and wanted her work to be supervised. Bohatch later testified that this was the first time she had ever heard criticism of her work for Pennzoil.

After looking into Bohatch's complaint and discussing the allegations with Pennzoil's in-house counsel, who said that Pennzoil believed the firm's bills were reasonable, Paine informed Bohatch in August that he found no basis for her contentions. Paine also told her she should begin to look for

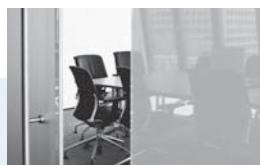

CONTINUED

other employment. In June 1991, she was informed that that month's partnership distribution would be her last. She was asked to leave by November.

Bohatch filed suit for breach of fiduciary duty and other claims in October 1991. The firm voted to expel her three days later. At trial, a jury found that the firm had breached its fiduciary duty to Bohatch. The court of appeals reversed,

holding that the firm's only duty to Bohatch was not to expel her in bad faith. Bohatch appealed. Did Butler & Binion fulfill its legal obligations to Bohatch? Did it act ethically? Should it matter whether Bohatch was correct about the overbilling?⁸¹

INSIDE STORY

FOCUS ON FRANCHISES

Although franchises are not a separate form of business entity in the traditional sense, they are a common business arrangement that is subject to regulation by both the Federal Trade Commission (FTC) and a number of states. Well-known franchisors include McDonald's, Century 21, Avis Rent-a-Car, Realty World America, and Dunkin' Donuts.

The word *franchising* is commonly understood to refer to an arrangement whereby the franchisor receives cash up front, followed by monthly payments based on a reseller's gross receipts, in exchange for granting the franchisee the right to use the franchisor's trademarks and marketing plan. Some state statutes define the term far more broadly, however, and may bring within their ambit product distribution arrangements between manufacturers and dealers that many managers would not have considered to be franchises.⁸² Because franchise laws can override the parties' contractual arrangements (for example, by prohibiting termination of the relationship without good cause), manufacturers may find themselves constrained in their ability to alter their supply chains to take advantage of new distribution channels, such as the Internet.

Advantages and Disadvantages of Franchising

A franchise offers individuals the opportunity to own their own business without having to start from scratch. Furthermore, a new franchisee can capitalize on the enormous capital inherent in large, established franchises. For example, a company like Best Buy can sell electronics at a considerably lower price because of the company's ability, in the

aggregate, to stock expensive items that tend to become outdated quickly.⁸³

On the other hand, the quality of customer service and the level of individual attention sometimes deteriorate as a result of the less flexible business plan imposed by the franchisor. Although there is a trend toward larger franchises, some franchisees are finding niches by encouraging their employees to spend more time with customers, responding more promptly to problems, and empowering sales representatives to make decisions on the spot.⁸⁴

Definition of "Franchise"

State franchise statutes tend to use either a marketing plan or a community of interest definition, with the marketing plan definition being more prevalent. The definition of "franchise" used by the FTC is broad enough to encompass relationships that would be included under either state definition.

Marketing Plan Definition

The California Business and Professions Code, which is representative, defines a *franchise* as a contract or agreement, either expressed or implied, whether oral or written, between two or more persons by which:

- (a) A franchisee is granted the right to engage in the business of offering, selling, or distributing goods or services under a marketing plan or system prescribed in substantial part by a franchisor; and
- (b) The operation of the franchisee's business pursuant to that plan or system is substantially associated with the franchisor's trademark, service mark, trade name, logotype, advertising, or other commercial symbol designating the franchisor or its affiliate; and

84. Michael Selz, *Caring for Profits*, WALL ST. J., Sept. 25, 2000, at 8.

(c) The franchisee is required to pay, directly or indirectly, a franchise fee.⁸⁵

The courts have construed the requirement for a marketing plan very liberally. It can be as little as a quota of copiers to sell in a specific territory, coupled with a requirement that the distributor's personnel participate in mandatory product training,⁸⁶ or an agreement with a boat manufacturer specifying that the dealer was to advertise intensively, conduct a variety of promotions, and carry the boat manufacturer's array of accessory sales devices.⁸⁷

Similarly, it takes very little to satisfy the requirement for a franchise fee. Although many states exclude payments for goods at a bona fide wholesale price, payments for videocassettes, posters, and brochures to promote the manufacturer's product have been viewed as franchise fees when they were required by the manufacturer or recommended as essential for the successful operation of the business.

Community of Interest Definition

The New Jersey definition of "franchise" is representative of state statutes using the community of interest definition:

"Franchise" means a written arrangement for a definite or indefinite period, in which a person grants to another person a license to use a trade name, trade mark, service mark, or related characteristics, and in which there is a community of interest in the marketing of goods or services at wholesale, retail, by lease, agreement, or otherwise.⁸⁸

Some states, including Hawaii and Minnesota, also require payment of a franchise fee.

The supplier is deemed to have given the requisite license if the distributor has the right to identify itself as an authorized dealer even if the distributor does not have the right to use the supplier's name as part of its own business name. A community of interest in the marketing of goods is also easily shown, and it is present in most supplier-dealer arrangements. For example, courts have found that a community of interest existed when (1) a "consultant" was required to pay an information services firm 1 percent of the proceeds received from each loan placed by the consultant using the information, and (2) a dealer made significant investments that were specific to the supplier's goods or services and therefore were not fully recoverable upon termination of the relationship.⁸⁹

Venue for Resolving Disagreements

One major difficulty inherent to franchises is determining where they actually are located and therefore where disputes should be resolved. Should a single Wendy's restaurant in Jersey City be considered to be located in New Jersey for purposes of lawsuits against the Wendy's Corporation? To decide where a franchise is located, the Wisconsin Supreme Court has developed a nine-point, nonexclusive test that concentrates on the "substance" rather than the physical "location" of the franchise, in this case, a dealership.⁹⁰ State public policy leans toward forcing franchisors to settle disputes that arise in the state's territory under the state's laws. In 2000, California invalidated all clauses in franchise agreements that mandated non-California venues for dispute resolution.⁹¹ If states did not force franchises to obey their laws, franchisors could simply pick and choose which states to be "from" so as to take advantage of franchisor-friendly legislation.

State Registration and Disclosure Requirements

Thirteen states (including California, Illinois, Indiana, New York, Virginia, and Wisconsin) require franchisors to register before they can sell franchises in that state and to provide presale disclosure to prospective franchisees in the form of a Uniform Franchise Offering Circular (UFOC). Two additional states (Michigan and Oregon) do not require registration or the filing of offering circulars but do require franchisors to provide presale disclosures.⁹² All fifteen states also have broad antifraud provisions, prohibiting any person from making any untrue statement of material fact, or a material omission, in connection with the offer or sale of a franchise in the state.

State Franchise Laws: No Termination Without Good Cause

In the 1960s and early 1970s, a number of state legislatures adopted laws to protect local businesses investing in franchises from the superior bargaining power of large franchisors. These statutes typically prohibit termination or nonrenewal except where there is good cause, such as (1) failure by the franchisee to comply with any material and reasonable obligation under the franchise agreement or (2) conduct by the franchisee that substantially impairs the franchisor's trademark or trade name.

92. Federal Trade Commission, *State Offices Administering Franchise Disclosure Laws*, available at <http://www.ftc.gov/bcp/franchise/netdiscl.shtm> (last visited Sept. 2, 2008).

Although manufacturers may feel justified in terminating a distribution arrangement if the franchisee's performance is "sub-par," according to Thomas J. Collin of Thompson Hine LLP, "Cases finding that sub-par performance constitutes good cause for termination are scarcer than hen's teeth . . ."⁹³ As a result, a franchisor who seeks to terminate a dealer for lack of market penetration or performance "faces a steep uphill climb."⁹⁴ In some states, such as New Jersey and Indiana, the franchisor cannot terminate the franchise even if it has bona fide business reasons for doing so, such as a desire to eliminate distributors' exclusive territories or to terminate distributors in order to sell directly to end users.

FTC's Franchise Rule

The Federal Trade Commission's Franchise Rule, as amended effective July 1, 2008,⁹⁵ requires franchisors to provide a prospective franchisee with a UFOC at least fourteen calendar days before the franchisee signs the contract with the franchisor or pays any money to the franchisor. The amended Franchise Rule adopted, for the most part, the UFOC guidelines developed and administered by the North American Securities Administrators Association, thereby harmonizing to a large extent the federal rule with state franchise disclosure laws. Unlike the state rules, however, the Franchise Rule does not require disclosure of risk factors.

The Franchise Rule requires a franchisor to make material disclosures in five general categories: (1) the nature of the franchisor and the franchise system, (2) the franchisor's financial viability, (3) the costs involved in purchasing and operating a franchised outlet, (4) the terms and conditions that govern the franchise relationship, and (5) the names and addresses of current franchisees who can share their experiences within the franchise system and thus help the prospective franchisee to verify independently the franchisor's claims. In addition, franchisors must have a reasonable basis and substantiation for any earnings claims made to prospective franchisees and must disclose the basis and assumptions underlying any such earnings claims.

Presale disclosure is intended to enable prospective franchisees to conduct their own due diligence investigations and to ensure that franchisees understand the relationships they are entering into, including any product source restrictions and any right to protected territories. The FTC enforces the

Franchise Rule, and there is no implied private right of action for its violation.

Franchise Relationship Issues

Many franchisees have criticized the FTC for not addressing what they consider to be the greatest problem in franchising today: postsale "abusive franchise relationships." They have urged the FTC to use its power under Section 5 of the Federal Trade Commission Act to ban as unfair practices postcontract covenants not to compete, obligations to purchase supplies or inventory from specified providers when comparable items are available at cheaper prices from alternative suppliers, and encroachment on a franchisee's market territory. *Encroachment* occurs "when a franchisor sells a franchisee an outlet in a certain location, and then a few months later, sells another outlet a few blocks away to someone else."⁹⁶ The new establishment diverts customers and revenues away from the original franchisee, but the franchisor is often still better off because it is receiving its percentage royalty from two stores. According to Susan Kezios, president and founder of the American Franchise Association, "McDonald's wants to have a Big Mac five minutes away from every man, woman, and child. . . . They don't give a rat's ass if they devalue your asset [in the process]."⁹⁷

The FTC has argued that it has no authority to address these so-called abuses because (1) there is insufficient evidence to show that the various alleged franchisor abuses are prevalent or result in substantial injury when viewed from the standpoint of the franchising industry as a whole; (2) the benefits to consumers and existing franchisees flowing from the franchisor's contractual terms outweigh complaints or allegations of "oppression" by individual franchisees; and (3) the contractual provisions that prospective franchisees voluntarily read, agree to, and sign are "reasonably avoidable."⁹⁸ The 2007 amendments do, however, require (1) disclosure in the UFOC of whether the franchisor or an affiliate (a) has the right to make sales within the franchisee's territory or (b) has used, or has the right to use, other channels of distribution, such as the Internet, catalog sales, or telemarketing; (2) a breakdown in the UFOC of how many company-owned outlets were acquired from franchisees or sold to franchisors during the preceding three years; (3) a warning in the UFOC when the franchisee is

not granted an exclusive territory; (4) disclosure in the UFOC of all material lawsuits involving the franchise relationship in the last fiscal year filed by or against a franchisor; and (5) disclosure of a franchisor's use of confidentiality clauses that prohibit or restrict existing or former franchisees from discussing their experiences with prospective franchisees.

Matthew Shay, vice president and chief counsel of the International Franchise Association (which counts McDonald's and KFC among its members), sharply criticized proposed federal legislation—the Small Business Franchise Act of 1999—that would have required good cause for termination, given franchisees more freedom in choosing where they buy their supplies, and prohibited encroachment.⁹⁹ Shay claimed that the bill would "rewrite every condition and every term in a

QUESTIONS AND CASE PROBLEMS

1. Amy Rockwell was a brilliant but penniless electrical engineer. She had designed a new type of cogeneration plant that she believed had great commercial potential. On January 15, she approached Benjamin Furst, a successful and experienced manager in the energy field, with the idea of starting Cogen, Inc., a corporation devoted to building a plant based on this new design. Furst was enthusiastic. On January 28, he enlisted the support of Clyde Pfeffer, a well-known venture capitalist who had retired from venture capital work but was looking to invest the proceeds of his past endeavors. On February 16, Pfeffer gave the green light to establish the new enterprise.

Furst retained the law firm of Wilson Scott Associates to handle the details of incorporation. Andrea Scott, one of the partners, drafted the articles of incorporation, signed them as the incorporator, and filed them with the secretary of state on February 28. She then advised her clients that the articles had been filed. Because of a typographical error, the articles of incorporation filed with the secretary of state referred to the company as Cogene, not Cogen.

Rockwell, Furst, and Pfeffer decided that they would save further expense by completing the incorporation process without any more assistance from Wilson Scott. On March 3, they held what they called the meeting of incorporators to elect the directors and proceeded to elect themselves to the board. As board members, they appointed themselves as the company's officers. They typed up the minutes of this meeting.

On March 4, the daily operations of Cogen, Inc. commenced. In all of their transactions with third parties, the officers represented themselves as doing business for the corporation. One of these transactions was with Firstloan Bank, which lent the company \$5 million. The representations in the loan agreement stated that the corporation had been duly formed, that it existed as a valid corporation under Texas law, and that the shares of stock owned by the various shareholders had been duly authorized and were fully paid.

On May 5, the corporation began building its cogeneration plant. Three months later, energy prices dropped drastically, and there was no longer a need for a cogeneration facility in that location. The corporation was forced to default on the bank loan. The lawyers for the bank, upon being informed that it would not receive any more loan payments, reviewed the original loan documents, the articles of incorporation, and the minutes of the first meeting of the incorporators. Upon reviewing these documents, they initiated an action directly against the three founders in their individual capacity for liability on the bank loan.

- a. Should the founders have done anything differently?
- b. Are the founders personally liable for the bank loan?

2. Roberto Martinez was the sole force behind In Over Our Heads, Inc., a corporation designed to run a year-round community swimming pool. The enterprise was incorporated in the correct manner in January, with Martinez as the sole director and shareholder. Martinez contributed \$100,000 of starting capital, which was just enough to purchase the pool, finance initial advertising, and leave a reserve of \$10,000. The corporation had no liability insurance.

On March 10, the pool opened for business. The corporation operated with a profit over the next few months. In June, Martinez took a two-week vacation in Europe and used a check from the company bank account to purchase his airline ticket. In November, he decided to have the pool repainted. Because business had slowed and the corporation's bank account did not have sufficient funds, Martinez wrote a personal check for this job.

Martinez feared he would not make enough money through the winter to turn a profit, so he decided to take a part-time job as a telephone salesperson for a real estate company. He used the swimming pool's office phone to make his calls and made a substantial profit.

On February 11, a child drowned in the pool. The parents brought a suit for wrongful death against the

corporation and against Martinez in his individual capacity as owner. At the time of the suit, the corporation had the \$10,000 reserve and less than \$1,000 in its bank account. Because of these limited funds, the child's parents hoped to recover most of their damages directly from Martinez.

What arguments can be made to hold Martinez liable for any debt of the corporation arising from this death? Should they prevail? How could Martinez have protected himself against such potential liability? Can an owner-manager of a small corporation guarantee that he or she will not be held liable for the corporation's debts?

3. Shahid Rangoonwala and Syed Saeed Ahmed purchased a Postal Instant Press (PIP) franchise in 1998. In May 1998, they formed Kaswa Corporation, a California corporation, and capitalized it with \$40,000. In 2001, Rangoonwala asked PIP whether Kaswa could replace him as the franchisee, but PIP refused. Ahmed sold his equity interest to Rangoonwala in 2001 for \$10,000. In 2004, PIP and Rangoonwala became engaged in a dispute, which resulted in an award of \$79,810 in PIP's favor and against Rangoonwala. In 2007, the trial court granted PIP's motion to add Kaswa as a judgment debtor after concluding that Rangoonwala and Kaswa were alter egos of each other. The court found that Kaswa was undercapitalized and that the corporate assets were commingled with shareholder assets. Should the trial court's verdict be upheld on appeal? What public policies are implicated? [*Postal Instant Press, Inc. v. Kaswa Corp.*, 77 Cal. Rptr. 3d 96 (Cal. App. 2008).]
4. Albatrans, Inc. entered into an agreement to purchase all the assets of Chase-Leavitt, a shipping company. In connection with the acquisition, Chase-Leavitt, which held a federal customs brokerage license allowing it to perform customs services for clients, agreed to provide its customs brokerage services exclusively to Albatrans until Albatrans (or one of its subsidiaries) acquired such a license. Chase-Leavitt was to operate as a distinct profit center within Albatrans during this interim period and use the assets it had sold to Albatrans for that purpose. Chase-Leavitt was also required to "accept the advice and direction" of managers hired by Albatrans in this arrangement.

The acquisition agreement also required Chase-Leavitt's sole shareholder, Alison Leavitt, to continue in Chase-Leavitt's employ until Albatrans obtained its license and gave Albatrans the option of continuing her employment for an additional five years on specified terms. Alison Leavitt agreed to indemnify Albatrans for any breach by Chase-Leavitt of its obligations under the agreement and for any liabilities Chase-Leavitt incurred before the agreement's execution. Her obligation was secured with a mortgage on her personal residence. In exchange, Chase-

Leavitt was to be paid a declining percentage of profits generated by the "profit center" over the ensuing five years, with \$250,000 paid in advance immediately upon the close of the transaction.

Before Albatrans and Chase-Leavitt entered into negotiations, Chase-Leavitt had incurred a debt to Cargo Partner AG for \$240,000. Cargo Partner sued Albatrans, demanding that Albatrans pay Chase-Leavitt's debt on the theory that there had been a *de facto merger* of Albatrans and Chase-Leavitt. Can Cargo Partner recover from Albatrans? What public policies are implicated by the different approaches to successor liability? [*Cargo Partner AG v. Albatrans Inc.*, 352 F.3d 41 (2d Cir. 2003).]

5. Francis McQuade was the manager of the New York Giants baseball team. Charles Stoneham (father of Horace Stoneham, who acquired the baseball franchise in 1936 and moved it from New York to San Francisco in 1958) owned a majority of the stock of the company that owned the Giants and sold shares in that company to McQuade and John McGraw. As part of this transaction, these three shareholders each agreed to use his best efforts to continue to keep each of the others as directors and officers of the company at their present salaries. Stoneham and McGraw subsequently failed to use their best efforts to continue to keep McQuade as a director and treasurer of the company. McQuade sued for specific performance of the agreement. What result? [*McQuade v. Stoneham*, 189 N.E. 234 (N.Y. 1934).]
6. Water, Waste & Land, Inc. was a land development and engineering company doing business under the name "Westec." Donald Lanham and Larry Clark were managers and also members of Preferred Income Investors, L.L.C. (P.I.I.), a limited liability company organized under the Colorado Limited Liability Company Act (the LLC Act).

In March 1995, Clark contacted Westec about the possibility of hiring Westec to perform engineering work in connection with the construction of a fast-food restaurant known as Taco Cabana. In the course of preliminary discussions, Clark gave his business card to representatives of Westec. The business card included Lanham's address, which was also the address listed as P.I.I.'s principal office and place of business in its articles of organization filed with the secretary of state. Section 7-80-208 of the LLC Act provides that the filing of the articles of organization serves as constructive notice of a company's status as an LLC.

Although the name Preferred Income Investors, L.L.C. was not on the business card, the letters "P.I.I." appeared above the address on the card. There was, however, no

indication as to what the acronym meant or that P.I.I. was an LLC.

Although Westec never received a signed contract from Lanham, in mid-August it did receive verbal authorization from Clark to begin work. Westec completed the engineering work and sent a bill for \$9,183.40 to Lanham. No payments were made on the bill. Westec filed a claim in county court against Clark and Lanham individually as well as against P.I.I. Are Clark and Lanham personally liable to Westec? How might Clark, Lanham, and Westec have avoided this dispute? [Water, Waste & Land, Inc. v. Lanham, 955 P.2d 997 (Colo. 1998) (en banc).]

7. Ernie Jameson is a design engineer with a proven track record in the field of electronic musical instruments. He recently designed a new VLSI (very large scale integrated) chip. This chip is meant to be the heart and soul of a digital sampling keyboard to be called Echo. Jameson believes the Echo will set a new industry standard. He wishes to organize a business enterprise to build and market it. He has a meeting with his lawyer and conveys to her the following bits of information:
 - a. It will take approximately two years to turn the VLSI chip into a marketable product.
 - b. Jameson has more than \$200,000 in savings from previous ventures. He does not want any of that money at risk in this new venture. However, he wants a part of the ownership; he is unsure what percentage he wants.
 - c. Currently, five private investors are willing to put money into this venture. Only two of the five want to play an active role in the enterprise. Jameson is willing to give these two some limited control.
 - d. Jameson knows that he is not qualified to manage the new endeavor. Nonetheless, he wants a significant say in how it proceeds.
 - e. Five more investors could be attracted to this project, but only if they could be guaranteed some fixed return on their money or could realize immediate tax benefits from investing.

- f. Jameson would like Bernie Lord, a manager much in demand in the electronics field, to be his CEO. It would take significant incentives to attract him to the enterprise.

Jameson is not committed to using any particular type of business organization; he is interested in weighing the alternatives. What possible types of business organizations could accommodate the needs of the various players? What are the advantages and disadvantages of each alternative? Which one should Jameson choose?

8. William Ayres and Douglas Pickering entered into an operating agreement with AG Processing, Inc. to form AG Environmental Products, L.L.C. (AEP LLC), a Nebraska limited liability company formed to market methyl esters supplied by AG Processing. AG Processing owned 99 percent of AEP LLC, and Ayres and Pickering each owned one-half percent. Ayres and Pickering served as managers of the LLC along with three other managers—Reagan, Hoover, and Campbell—who were also corporate officers of AG Processing. The operating agreement provided that the business and affairs of the LLC would be managed by its designated managers, acting as a group, with a majority vote required to take action.

At some point Ayres and Pickering became concerned about certain actions taken by Reagan, Hoover, and Campbell, including investing in unsecured business investments, using AEP LLC funds for political lobbying, failing to hold annual meetings and to provide year-end financial disclosures on a timely basis, and failing to distribute equity bonuses to Ayres and Pickering. After Ayres and Pickering protested these actions and demanded that the operating agreement be followed and the unrelated business activities cease, they were terminated as managers, employees, and members of AEP LLC. Did Reagan, Hoover, and Campbell act ethically? Do Ayres and Pickering have any valid legal claims against them? [Ayres v. AG Processing, Inc., 345 F. Supp. 2d 1200 (D. Kan. 2004).]

CHAPTER 21

DIRECTORS, OFFICERS, AND CONTROLLING SHAREHOLDERS

INTRODUCTION

Fiduciary Duties

Directors and officers are agents of the corporation and owe a fiduciary duty to the corporation they serve. Under certain circumstances, a controlling shareholder owes a fiduciary duty to other shareholders as well.

These duties take two basic forms: a duty of care and a duty of loyalty. Generally, the *duty of care* requires fiduciaries to make informed and reasonable decisions and to exercise reasonable supervision of the business. The *duty of loyalty* mandates that fiduciaries act in good faith and in what they believe to be the best interest of the corporation, subordinating their personal interests to the welfare of the corporation. As then Judge Benjamin Cardozo stated, many forms of conduct permissible in the business world for those acting at arm's length are forbidden to those bound by fiduciary ties. A trustee, he said, is held to something stricter than the morals of the marketplace. Not mere honesty, but a "punctilio of honor the most sensitive" is the standard of behavior with which fiduciaries must comply.¹

As discussed further below, in certain cases, the courts have tended to treat directors' duty to act in good faith as an independent duty, rather than subsuming it within the duties of care and loyalty. For example, in *McMullin v. Beran*,² the Delaware Supreme Court referred to the directors' "triad of fiduciary duties, loyalty, good faith, due care."³ (As explained

in Chapter 20, Delaware law is particularly important because so many large public companies are incorporated there.)

CHAPTER OVERVIEW

This chapter outlines the duties of directors, officers, and controlling shareholders. First, it analyzes the duty of care in terms of the most applicable judicial doctrine, the business judgment rule. Next, the chapter analyzes the duty of good faith and addresses issues arising under the duty of loyalty, including corporate opportunities. We then discuss the fiduciary duties of directors that arise when the directors must decide whether to sell the company or resist a corporate takeover bid. Legislative responses to these issues are also described. Finally, we address the duties of controlling shareholders in connection with sales of corporate control and squeeze-out mergers.

THE BUSINESS JUDGMENT RULE AND THE DUTY OF CARE

In cases challenging board decisions for breach of the duty of care, the courts generally defer to the business judgment of the directors, acknowledging that courts are ill equipped to second-guess directors' decisions at a later date. Thus, under the *business judgment rule*, as long as certain standards are met, a court will presume that the directors have acted in good faith and in the honest belief that the action taken was in the best interest of the company. The court will not question

1. *Meinhard v. Salmon*, 164 N.E. 545, 546 (N.Y. 1928) (Case 5.1).

2. 765 A.2d 910, 917 (Del. 2000).

3. For a discussion of the fiduciary duties of directors of a corporation near insolvency or in bankruptcy, see Myron M. Sheinfeld & Judy Harris Pippitt, *Fiduciary Duties of Directors of a Corporation in the Vicinity of Insolvency and After Initiation of a Bankruptcy Case*, 60 BUS. LAW. 79 (2004).

whether the action was wise or whether the directors made an error of judgment or a business mistake.

To take advantage of the rule, the directors must have made an informed decision with no conflict between their personal interests and the interests of the corporation and its shareholders. Courts will not respect directors' business judgment if the directors (1) were interested in the transaction, (2) did not act in good faith, (3) acted in a manner that cannot be attributed to a rational purpose, or (4) reached their decision by a grossly negligent process.⁴ If the business judgment rule does not apply to a transaction, courts

4. Brehm v. Eisner, 746 A.2d 244 (Del. 2000).

generally shift to directors the burden of proving that their acts were not grossly negligent (or in cases involving transactions in which the directors are interested, that the transaction was fair and reasonable).

INFORMED DECISION

The business judgment rule is applicable only if the directors make an informed decision. The general corporation law of most jurisdictions authorizes directors to rely on the reports of officers and certain outside experts. However, passive reliance on such reports may result in an insufficiently informed decision, as in the following landmark case.

A CASE IN POINT

CASE 21.1

SMITH V. VAN GORKOM

SUPREME COURT OF DELAWARE
488 A.2d 858 (DEL. 1985).

SUMMARY

FACTS Trans Union Corporation was a publicly traded, diversified holding company engaged in the railcar-leasing business. Its stock was undervalued, largely due to accumulated investment tax credits. Jerome W. Van Gorkom, the chairman of the board of Trans Union, was reaching retirement age. He asked the chief financial officer, Donald Romans, to work out the per-share price at which a leveraged buyout could be done, given current cash flow. Romans came up with \$55, based on debt-servicing requirements. He did not attempt to determine the intrinsic value of the company. Van Gorkom later met with Jay Pritzker and worked out a merger at \$55 per share. Trans Union stock was then trading at about \$37 per share.

Van Gorkom called a board meeting for September 20, 1980, on one day's notice, to approve the merger. All of the directors were familiar with the company's operations as a going concern, but they were not apprised of the merger negotiations before the board meeting on September 20. They were also familiar with the current financial status of the company; a month earlier they had discussed a Boston Consulting Group strategy study. The ten-member board included five outside directors who were CEOs or board members of publicly held companies, as well as a former dean of the University of Chicago Business School.

Copies of the merger agreement were delivered to the directors, but too late for study before or during the meeting. The meeting began with a twenty-minute oral presentation by chairman Van Gorkom. The chief financial officer then described how he had arrived at the \$55 figure. He stated that it was only a workable number, not an indication of a fair price. Trans Union's president stated that he thought the proposed merger was a good deal.

The board approved the merger after a two-hour meeting. Board members later testified that they had insisted that the merger agreement be amended to ensure that the company was free to consider other bids before the closing; however, neither the board minutes nor the merger documents clearly reflected this.

Plaintiff Smith sued to challenge the board's action, arguing that the merger price was too low. The Delaware Court of Chancery held that, given the premium over the market value of Trans Union stock, the business acumen of the board members, and the effect on the merger price of the prospect of other bids, the board was adequately informed and did not act recklessly in approving the Pritzker deal. In making its findings, the court relied in part upon actions taken by the board after the meeting on September 20, 1980, that were intended to cure defects in the directors' initial level of knowledge. Smith appealed.

CONTINUED

ISSUE PRESENTED Were directors who accepted and submitted to the shareholders a proposed cash merger at a premium over market without determining the intrinsic value of the company grossly negligent in failing to inform themselves adequately before making their decision?

SUMMARY OF OPINION The Delaware Supreme Court reversed the lower court and held that the directors were grossly negligent in failing to reach a properly informed decision. They were not protected by the business judgment rule even though there were no allegations of bad faith, fraud, or conflict of interest. The court found that the directors could not reasonably base their decision on the inadequate information presented to the board. They should have independently valued the company.

The court found that the directors had inadequate information as to (1) the role of Van Gorkom, Trans Union's chairman and chief executive officer, in initiating the transaction; (2) the basis for the proposed purchase price of \$55 per share; and, most important, (3) the intrinsic value of Trans Union, as opposed to its current and historical stock price. The court held that in the absence of any apparent crisis or emergency, it was grossly negligent for the directors to approve the merger after a two-hour meeting, with eight of the ten directors having received no prior notice of the proposed merger.

The court stated:

None of the directors, management or outside, were investment bankers or financial analysts. Yet the board did not consider recessing the meeting until a later hour that day (or requesting an extension of Pritzker's Sunday evening deadline) to give it time to elicit more information as to the sufficiency of the offer, either from inside management (in particular Romans) or from Trans Union's own investment banker, Salomon Brothers, whose Chicago specialist in mergers and acquisitions was known to the Board and familiar with Trans Union's affairs. Thus, the record compels the conclusion that on September 20 the Board lacked valuation information adequate to reach an informed business judgment as to the fairness of \$55 per share for sale of the Company.

The court additionally held that the directors' subsequent efforts to find a bidder willing to pay more than Pritzker were inadequate to cure the infirmities of their uninformed exercise of judgment.

The court rejected the directors' argument that they properly relied on the officers' reports presented at the board meeting. A pertinent report may be relied on in good faith, but not blindly. The directors were duty bound to make reasonable inquiry of Van Gorkom (the chief executive officer) and Romans (the chief financial officer). If they had done so, the inadequacy of those officers' reports would have been apparent. Van Gorkom's summary of the terms of the deal was inadequate because he had not reviewed the merger documents and was basically uninformed as to the essential terms. (Indeed, he had signed the merger agreement without reading it while at the opening of the Chicago Lyric Opera.) Romans's report on price was inadequate because it was just a cash flow feasibility study, not a valuation study.

The court also held that the mere fact that a substantial premium over the market price was being offered did not justify board approval of the merger. A premium may be one reason to approve a merger, but sound information as to the company's intrinsic value is required to assess the fairness of an offer. In this case, there was no attempt to determine the company's intrinsic value.

RESULT The Delaware Supreme Court held that the Trans Union directors were grossly negligent in making an uninformed decision regarding the proposed merger agreement. Their decision was not protected by the business judgment rule. The case was remanded to the Delaware Court of Chancery for an evidentiary hearing to determine the fair value of the shares based on Trans Union's intrinsic value on September 20, 1980, the day when the board met to consider Pritzker's

offer. If the chancellor found that value to be higher than \$55 per share, the directors would be liable for the difference.

COMMENTS The case was settled for \$23.5 million—\$13.5 million in excess of the directors' liability insurance coverage. Although the purchasers, the Pritzker family, ultimately paid the amount by which the settlement exceeded the directors' coverage, they were not legally obligated to do so.

Smith v. Van Gorkom is one of the most debated corporate law cases ever decided. Three years after the decision, one of the key defendants—Trans Union's CEO, Jerome W. Van Gorkom—wrote an article giving the defendants' side of the story. The article makes it clear that the defendants and the Delaware Supreme Court had very different views about what the directors actually did and what their options really were.

In his article, Van Gorkom stated that at the September 20 meeting:

The directors, all broadly experienced executives, realized that an all-cash offer with a premium of almost 50 percent represented an unusual opportunity for the shareholders. They also knew, however, that \$55 might not be the highest price obtainable. At the meeting, therefore, there was considerable discussion about seeking an outside "fairness opinion" that might shed further light on the ultimate value of the company.⁵

Furthermore, Van Gorkom explained:

Acceptance of the offer was not a decision by the directors that the company should be sold for \$55 a share. The acceptance was the only mechanism by which the offer could be preserved for the shareholders. *They* would make the ultimate decision as to the fairness of the price and they would do so only after the free market had had ample time in which to determine if \$55 was the top value obtainable. The market's opinion would be definitive and worth infinitely more to the shareholders than any theoretical evaluation opinion that the directors could obtain in 39 hours or even longer. On this reasoning the offer was accepted.⁶

Following the meeting, the Trans Union directors hired Salomon Brothers to conduct an intensive search for a higher bidder. In addition, Van Gorkom stated that once the \$55 offer became a matter of public knowledge, an auction occurred in the market with Trans Union's stock sometimes selling above \$56 on the New York Stock Exchange. After three months of the intensive search and the public auction, no higher bid was ever received. "[T]he market had proven beyond a shadow of a doubt that \$55 was the highest price obtainable."⁷

Van Gorkom believed that he and the other Trans Union directors wholeheartedly fulfilled their fiduciary obligations. He concluded that their actions clearly should have been protected under the business judgment rule.

Reliability of Officers' Reports

As *Van Gorkom* underscores, not every statement of an officer can be relied on in good faith, and no statement is entitled to blind reliance. The passivity of the Trans Union

directors in *Van Gorkom* unquestionably influenced the court's finding of gross negligence:

When the chief financial officer, Romans, told the board that the \$55 figure was within a "fair price range" for a

leveraged buyout, no director sought any further information from Romans. No director asked him why he put \$55 at the bottom of his range. No director asked Romans for any details as to his study, the reason why it had been undertaken or its depth. No director asked to see the study; and no director asked Romans whether Trans Union's finance department could do a fairness study within the remaining 36-hour period available under the Pritzker offer. . . . [If he had been asked,] Romans would have presumably . . . informed the Board of his view, and the widespread view of Senior Management, that the timing of the offer was wrong and the offer inadequate.⁸

When the CEO, Van Gorkom, told the board that \$55 per share was fair, no questions were asked:

The Board thereby failed to discover that Van Gorkom had suggested the \$55 price to [the bidder] Pritzker and, most crucially, that Van Gorkom had arrived at the \$55 figure based on calculations designed solely to determine the feasibility of a leveraged buy-out. No questions were raised either as to the tax implications of a cash-out merger or how the price for the one million share option granted Pritzker was calculated.⁹

Reliability of Experts' Reports

Two principles regarding the use of experts' reports emerge from the cases. First, a board should engage a reputable investment banking firm, aided if necessary by an outside appraiser, (1) to prepare a valuation study and (2) to give a written opinion as to the financial fairness of the transaction and of any related purchase of assets or options.

Second, directors have a duty to pursue reasonable inquiry and to exercise reasonable oversight in connection with their engagement of investment bankers and other advisers. A conclusory fairness opinion (that is, an opinion that merely states a conclusion without giving the factual grounds for that conclusion) of an investment banker, however expert, is not a sufficient basis for a board decision, particularly if the investment banker's conclusion is questionable in light of other information known to the directors. As the directors of SCM Corporation learned in *Hanson Trust PLC v. ML SCM*

Acquisition, Inc.,¹⁰ an expert's opinion must be in writing and be reasoned.

SCM was the target of a hostile tender offer by a British conglomerate, Hanson Trust PLC. SCM's board negotiated a friendly management leveraged buyout led by "white knight" Merrill Lynch. As part of this agreement, SCM granted Merrill Lynch an *asset lock-up option* to purchase two of SCM's divisions, considered to be SCM's key assets or *crown jewels*. The option was exercisable if Merrill Lynch was not successful in acquiring control of SCM. A lock-up option is a kind of consolation prize for the loser in a bidding war; depending on how it is priced, a lock-up option can have the effect of deterring other bids. Merrill Lynch represented in negotiations that it would not proceed with its leveraged buyout offer without the lock-up.

SCM's investment banker, Goldman Sachs, issued a written fairness opinion on the overall deal, stating that the sale of SCM to Merrill Lynch was fair to the shareholders of SCM from a financial point of view. A partner at Goldman Sachs also orally advised SCM's directors that the option prices were "within the range of fair value." However, the directors did not inquire what the range of fair value was or how it was calculated. Unfortunately for the directors, the banker had not in fact calculated the fair value of the two divisions. Although the directors knew that the two divisions generated more than two-thirds of SCM's earnings, they never asked the investment banker why the divisions were being sold for less than half the total purchase price. The U.S. Court of Appeals for the Second Circuit held that the SCM directors' "paucity of information" and "their swiftness of decision-making" strongly suggested a breach of the duty of care. The asset lock-up was struck down. As in the case of officers' reports, blind reliance on the reports of experts creates a risk that the directors will not receive the protection of the business judgment rule.

REASONABLE SUPERVISION

As fiduciaries, directors have a responsibility to exercise reasonable supervision over corporate operations. Because the prescribed role of the corporate directors is to establish broad policies and then rely on managers to implement them, the question of what constitutes reasonable supervision is necessarily one of degree. The outcome in reasonable supervision cases depends heavily on particular facts. The Delaware Court of Chancery refined and clarified the reasonable supervision doctrine in the following leading case.

A CASE IN POINT**CASE 21.2*****IN RE CAREMARK INTERNATIONAL DERIVATIVE LITIGATION***

COURT OF CHANCERY OF DELAWARE
698 A.2d 959 (Del. Ch. 1996).

SUMMARY

FACTS After the Department of Health and Human Services and the Department of Justice conducted an extensive four-year investigation of alleged violations by Caremark employees of federal and state laws and regulations applicable to health-care providers, Caremark was charged with multiple felonies. It thereafter entered into a number of plea agreements in which it agreed to pay civil and criminal fines and to make payments to various private and public parties. In all, Caremark agreed to pay approximately \$250 million.

A shareholder derivative suit was filed in 1994, in which the plaintiff initially sought to recover these losses from the individual members of Caremark's board of directors. The complaint charged that the directors had allowed a situation to develop and continue that exposed the corporation to enormous legal liability and that, in so doing, they had violated a duty to be active monitors of corporate performance. The complaint did not charge the directors with either self-dealing or a breach of the duty of loyalty. The parties sought court approval of a proposed settlement that did not include any payment by individual board members; instead, it outlined a series of procedures the company would implement to promote future compliance with applicable laws and regulations.

ISSUE PRESENTED What is the scope of a director's duty to exercise reasonable supervision over corporate operations?

SUMMARY OF OPINION The Delaware Chancery Court began by noting that director liability for a breach of the duty to exercise appropriate attention may, in theory, arise in two distinct contexts. First, such liability may follow from a board decision that results in a loss because that decision was ill advised or negligent. Second, liability may arise from an unconsidered failure of the board to act in circumstances in which due attention would, arguably, have prevented a loss to the corporation.

Most of the decisions that a corporation, acting through its human agents, makes are not the subject of director attention. Legally, the board itself will be required only to authorize the most significant corporate acts or transactions: mergers, changes in capital structure, fundamental changes in business, appointment and compensation of the CEO, and the like. However, ordinary business decisions that are made by officers and employees deeper in the interior of the organization can vitally affect the welfare of the corporation and its ability to achieve its various strategic and financial goals. This raises the question: What is the board's responsibility with respect to the organization and monitoring of the enterprise to ensure that the corporation functions within the law to achieve its purposes?

The court noted an increasing tendency, especially under federal law, to employ the criminal law to ensure corporate compliance with external legal requirements, including environmental, financial, employee, and product safety regulations, as well as assorted other health and safety regulations. The federal Organizational Sentencing Guidelines¹¹ offer powerful incentives for corporations to have in place compliance programs to detect violations of law, to promptly report violations to appropriate public officials when discovered, and to take prompt, voluntary remedial efforts.

In light of these developments, the court held that directors cannot satisfy their obligation to be reasonably informed concerning the corporation unless they assure themselves that appropriate information and reporting systems exist in the organization. These systems must be reasonably designed to provide senior management and the board itself with timely and accurate information sufficient to allow management and the board to reach informed judgments concerning both the corporation's compliance with the law and its business performance.

CONTINUED

11. These are discussed in Chapter 15.

The level of detail that is appropriate for such an information system is a question of business judgment. The court acknowledged that no rationally designed information and reporting system will eliminate the possibility that the corporation will violate laws or regulations. But the board is required to exercise a good faith judgment that the corporation's information and reporting system is in concept and design adequate to assure the board that appropriate information will come to its attention in a timely manner as a matter of ordinary operations, so that it may satisfy its responsibility.

Thus, the court ruled that a director's obligation includes a duty to attempt in good faith to ensure that there is a corporate information and reporting system that the board concludes is adequate. Failure to do so under certain circumstances may, in theory at least, render a director liable for losses caused by noncompliance with applicable legal standards.

RESULT The court concluded that the settlement was fair and reasonable and, therefore, approved it.

COMMENTS The court noted that if the shareholders are not satisfied with the informed good faith judgment of the directors, their recourse is to elect different directors.

In 1997, the Securities and Exchange Commission (SEC) issued a release emphasizing the affirmative responsibility of officers and directors under the federal securities laws to ensure the accuracy and completeness of public company filings with the SEC, such as annual and quarterly reports and proxy statements.¹² In addition, as discussed further in Chapter 22, the Sarbanes–Oxley Act of 2002 requires the chief executive officer and the chief financial officer to certify the accuracy of public companies' SEC filings.

Officers and directors are required to conduct a full and informed review of the information contained in the final draft of the filings. If an officer or director knows or should have known about an inaccuracy in a proposed filing, he or she has an obligation to correct it. An officer or director may rely on the company's procedures for determining what disclosure is required only if he or she has a reasonable basis for believing that those procedures are effective and have resulted in full consideration of those issues.

If a director or officer is aware of facts that might have to be disclosed, he or she must go beyond the established procedures to inquire into the reasons for nondisclosure. Officers and directors cannot blindly rely on legal counsel's conclusions about the need for disclosure if they are aware of facts that seem to suggest that disclosure is required. They must raise the issue specifically with disclosure counsel, telling counsel exactly what they know and asking specifically whether disclosure is required. If they are not satisfied

with the answers provided, they should insist that the documents be revised before they are filed with the SEC.

DISINTERESTED DECISION

Even when the board makes an informed decision, the business judgment rule is not applicable if the directors have a financial or other personal interest in the transaction at issue. For example, if a board dominated by *inside directors* (that is, directors who are also officers of the corporation) sets executive compensation, they can be required to prove to a court that the transaction was fair and reasonable. To be disinterested in the transaction normally means that the directors can neither have an interest on either side of the transaction nor expect to derive any personal financial benefit from the transaction (other than benefits that accrue to all shareholders of the corporation, which are not considered self-dealing).

Even if one or more individual directors have an interest in the transaction, the board's decision may still be entitled to the protection of the business judgment rule if the transaction is approved by a majority of the disinterested directors. If the board delegates too much of its authority or is too much influenced by an interested party, however, then the entire board may be tainted with that individual's personal motivations and lose the protection of the business judgment rule.

In some jurisdictions, a relevant factor in determining whether a board is disinterested is whether the majority of the board consists of outside directors. The fact that outside directors receive directors' fees but not salaries is viewed as heightening the likelihood that the directors were not

12. Report of Investigation Pursuant to Section 21(a) of the Securities Exchange Act of 1934 Concerning the Conduct of Certain Former Officers and Directors of W.R. Grace & Co., Exchange Act Release No. 39, 157 (Sept. 30, 1997).

VIEW FROM CYBERSPACE

Shareholder Meetings in Cyberspace

Section 228(d) of the Delaware General Corporation Law permits a shareholder's written consent to be effected by electronic transmission (including e-mail), facsimile (fax), or other reliable methods of reproducing a consent. Section 212(c) authorizes electronic transmission of proxies and the use of copies and faxes. Section 232 permits the electronic delivery of notice to a shareholder if the shareholder has consented to delivery of notice in such

form. Section 211(a) gives directors the power to authorize shareholders who are not physically present at a meeting to participate by means of remote communication, such as a conference call. Indeed, directors are given sole discretion to hold meetings either partially or totally by remote communication, without any physical location.

Section 141 permits director action by unanimous consent to be effected by electronic transmission. Although

the drafters considered authorizing board meetings by remote communication, they determined that "considerations of collegiality precluded 'chat room' or similar formats, and that the current practice of holding meetings by telephone conference calls provided sufficient flexibility."^a

^a. Frederick H. Alexander, *Amendments to Delaware Corporation Law Allow for Evolving Technology*, 69 U.S.L.W. 2051, 2052 (2000).

motivated by personal interest. Application of these rules in the context of takeovers, mergers, and acquisitions is discussed later in this chapter.

STATUTORY LIMITATIONS ON DIRECTORS' LIABILITY FOR BREACH OF DUTY OF CARE

Cases such as *Van Gorkom* had a devastating impact on the market for directors' and officers' liability insurance and on the availability of qualified outside directors. In response, Delaware adopted legislation in 1986 to allow shareholders to limit the monetary liability of directors for breaches of the duty of care (but not the duty of loyalty or good faith) in any suit brought by the corporation or in a *shareholder derivative suit*, that is, a suit by a shareholder on behalf of the corporation. Most other states followed suit. Delaware and most other states require that the limitation be contained in the original certificate of incorporation or in an amendment approved by a majority of the shareholders. The statutes do not affect directors' liability for suits brought by third parties; they merely allow the shareholders to agree that, under certain circumstances, they will not seek monetary recovery against the directors. The directors' liability for breach of the duty of loyalty may not be limited. Also, most states do not allow officers to be exonerated from liability for breach of the duty of care or the duty of loyalty.

DELAWARE'S STATUTE

Section 102(b)(7) of the Delaware Corporation Code permits the certificate of incorporation to include a provision limiting or eliminating the personal liability of directors to the corporation or to its shareholders for monetary damages for breach of fiduciary duty. Such a provision cannot, however, eliminate or limit the liability of a director for (1) any breach of the director's duty of loyalty to the corporation or its shareholders, (2) acts or omissions that are not in good faith or that involve intentional misconduct or knowing violation of law, (3) unlawful payments of dividends or stock purchases, or (4) any transaction from which the director derived an improper personal benefit.

CALIFORNIA'S STATUTE

Section 204(a)(10) of the California Corporation Code, which applies to corporations organized under California law, is more restrictive. In addition to the four exceptions contained in the Delaware statute, California prohibits the elimination or limitation of director liability for (1) acts or omissions that show a reckless disregard for the director's duty to the corporation or its shareholders in circumstances in which the director was aware, or should have been aware, of a risk of serious injury to the corporation or its shareholders; and (2) an unexcused pattern of inattention that amounts to an abdication of the director's duties to the corporation or its shareholders.

Although other states apply their corporate governance rules only to corporations incorporated there, California imposes

its pro-shareholder provisions on so-called privately held *quasi-foreign corporations*. Such corporations are incorporated elsewhere but (1) have more than 50 percent of their stock owned by California residents and (2) derive more than 50 percent of their sales, payroll, and property tax from activities in California. As a result, a privately held quasi-foreign corporation will be subject to California's more restrictive limits on monetary liability even though the state of incorporation (e.g., Delaware) is more permissive.

DUTY OF GOOD FAITH

Allegations of failure to act in good faith take on special significance in cases involving corporations that have eliminated directors' personal liability for breaches of the duty of care. Because the statutes authorizing such limitations list failures to act in good faith separately from breaches of the duty of loyalty, courts have started to focus more directly on good faith, especially when the directors had no personal interest in the transaction at hand.

In certain cases, the duty of good faith may be subsumed within the duty of loyalty. As the Delaware Supreme Court explained, ““[a] director cannot act loyally towards the corporation unless she acts in the good faith belief that her actions are in the corporation’s best interest.””¹³

But, as Chancellor Chandler explained in the litigation discussed in Chapter 14 arising out of Walt Disney Company's termination payments to Michael Ovitz, in certain instances:

The fiduciary duties of care and loyalty, as traditionally defined, may not be aggressive enough to protect shareholder interests when the board is well advised, is not legally beholden to the management or a controlling shareholder and when the board does not suffer from other disabling conflicts of interest, such as a patently self-dealing transaction. Good faith may serve to fill this gap and ensure that the persons entrusted by shareholders to govern Delaware corporations do so with an honesty of purpose and with an understanding of whose interests they are there to protect.¹⁴

On appeal, the Delaware Supreme Court stated:

'[I]ssues of good faith are (to a certain degree) inseparably and necessarily intertwined with the duties of care and loyalty... . But, in the pragmatic, conduct-regulating legal realm which calls for more precise conceptual line

drawing, the answer is that grossly negligent conduct, without more, does not and cannot constitute a breach of the fiduciary duty to act in good faith. The conduct that is the subject of due care may overlap with the conduct that comes within the rubric of good faith in a psychological sense, but from a legal standpoint those duties are and must remain quite distinct. Both our legislative history and our common law jurisprudence distinguish sharply between the duties to exercise due care and to act in good faith, and highly significant consequences flow from that distinction.¹⁵

As a result, mere gross negligence was not enough to constitute the lack of good faith that would have subjected the disinterested directors to personal monetary liability. To invoke an exception to a Section 102(b)(7) exculpatory provision, the plaintiff must make “a strong showing of misconduct,”¹⁶ such as “intentionally acting ‘with a purpose other than that of advancing the best interests of the corporation,’ acting ‘with the intent to violate applicable positive law,’ or ‘intentionally failing to act in the face of a known duty to act.’”¹⁷

In *Stone v. Ritter*,¹⁸ the Delaware Supreme Court recognized that “good faith may be described colloquially as part of a ‘triad’ of fiduciary duties,” but ruled that the obligation to act in good faith does not establish an independent fiduciary duty that stands on the same footing as the duties of care and loyalty. Only the latter two duties, where violated, “may directly result in liability, whereas a failure to act in good faith may do so, but indirectly.”¹⁹ As a result, in Delaware, a failure to act in good faith, taken alone, does not appear to give rise to liability.

Nonetheless, as seen in the following case, directors who consciously ignore known risks of noncompliance risk losing the protection of both the business judgment rule and any exculpatory provisions in their corporate charter. As the Delaware Court of Chancery stated, the duty of loyalty is breached when the directors “utterly fail to exercise oversight of the corporation” or “were conscious of the fact that they were not doing their job [as monitors].”²⁰

A CASE IN POINT**CASE 21.3*****In re Abbott Laboratories
Derivative Shareholders
Litigation***

UNITED STATES COURT OF APPEALS
FOR THE SEVENTH CIRCUIT
325 F.3d 795 (7th Cir. 2003).

IN THE LANGUAGE OF THE COURT

FACTS In 1999, Abbott Laboratories, an Illinois corporation, entered into a consent decree that required it to pay a \$100 million fine, at the time the largest penalty ever imposed for a civil violation of Food and Drug Administration (FDA) regulations. The FDA also required Abbott to withdraw 125 types of medical diagnostic test kits, destroy certain inventory, and make a number of corrective changes in its manufacturing procedures after six years of quality control violations. Abbott shareholders brought a shareholder derivative suit alleging that the directors breached their fiduciary duties when they failed to take necessary action to correct repeated noncompliance problems brought to Abbott's attention by the FDA in the period from 1993 until 1999.

Not only had the FDA sent Abbott a Form 483 noting deviations from the requirements set forth in the FDA's "Current Good Manufacturing Practice" after each of its thirteen inspections of Abbott's Abbott Park and North Chicago facilities, but the FDA had also sent four formal certified Warning Letters to Abbott. The first was sent to David Thompson, president of Abbott's Diagnostics Division (ADD), on October 20, 1993. The letter stated that the FDA had found adulterated in vitro diagnostic products and warned: "Failure to correct these deviations may result in regulatory action being initiated by the Food and Drug Administration without further notice. These actions include, but are not limited to, seizure, injunction, and/or civil penalties." A second Warning Letter was sent to Thompson on March 28, 1994, with a copy to Duane Burnham, Abbott's CEO and board chair.

On January 11, 1995, the *Wall Street Journal* reported that the FDA had uncovered a wide range of flaws in Abbott's quality assurance procedures used in assembling its diagnostic products. In July 1995, the FDA and Abbott entered into a Voluntary Compliance Plan to work together to correct Abbott's deficiencies. In February 1998, after finding continued deviations from the regulations, the FDA sent Abbott the equivalent of a Warning Letter closing out the plan. In 1999, the FDA sent the fourth and final Warning Letter to Miles White, a member of Abbott's board and the current CEO. White had replaced Burnham as CEO in April 1999.

The plaintiffs did not demand that the members of Abbott's board institute an action against themselves for breach of their fiduciary duties, arguing that such a demand would be futile. Under applicable law, such a demand is not required if the plaintiffs plead facts showing that the directors faced a substantial likelihood of liability for their actions. In particular, "demand can only be excused where facts are alleged with particularity which create a reasonable doubt that the directors' action was entitled to the protections of the business judgment rule."²¹ The district court dismissed the complaint, and the plaintiffs appealed.

ISSUE PRESENTED Is it a breach of directors' duty of good faith for them to fail to follow up on repeated notices of regulatory noncompliance?

OPINION WOOD, J., writing on behalf of the U.S. Court of Appeals for the Seventh Circuit:

Plaintiffs in *Abbott* allege facts that the directors were aware of known violations, providing evidence that there was direct knowledge through the Warning Letters and as members of the Audit Committee. Under proper corporate governance procedures—the existence of which is not contested by either party in *Abbott*—information of the violations would have been shared at the board meetings. In addition, plaintiffs have alleged that, as fiduciaries, the directors all signed the annual SEC forms which specifically addressed government regulation of Abbott's products. The *Abbott* case is clearly distinguished from the "unconsidered" inaction in *In re Caremark*.²²

CONTINUED

21. Aronson v. Lewis, 473 A.2d 805 (Del. 1984), *overruled on other grounds by* Brehm v. Eisner, 746 A.2d 244 (Del. 2000).

22. 698 A.2d 959, 967 (Del. Ch. 1996) (Case 21.2).

....
The district court noted, correctly, that the plaintiffs did not allege that Abbott's reporting system was inadequate. . . . Where there is a corporate governance structure in place, we must then assume the corporate governance procedures were followed and that the board knew of the problems and decided no action was required. . . .

....
Delaware law states that director liability may arise from the breach of the duty to exercise appropriate attention to potentially illegal corporate activities or from "an *unconsidered failure of the board to act* in circumstances in which due attention would, arguably, have prevented the loss." *In re Caremark*. The court held that "a sustained or systematic failure of the board to exercise oversight . . . will establish the lack of good faith that is a necessary condition to [director] liability." . . .

Given the extensive paper trail in *Abbott* concerning the violations and the inferred awareness of the problems, the facts support a reasonable assumption that there was a "sustained and systematic failure of the board to exercise oversight," in this case intentional in that the directors knew of the violations of law, took no steps in an effort to prevent or remedy the situation, and that failure to take any action for such an inordinate amount of time resulted in substantial corporate losses, establishing a lack of good faith. We find that six years of noncompliance, inspections, 483s, Warning Letters, and notice in the press, all of which then resulted in the largest civil fine ever imposed by the FDA and the destruction and suspension of products which accounted for approximately \$250 million in corporate assets, indicate that the directors' decision to not act was not made in good faith and was contrary to the best interests of the company.

With respect to demand futility based on the directors' conscious inaction, we find that the plaintiffs have sufficiently pleaded allegations, if true, of a breach of the duty of good faith to reasonably conclude that the directors' actions fell outside the protection of the business judgment rule. . . .

The directors contend that they are not liable under Abbott's certificate of incorporation provision which exempts the directors from liability [for breach of the duty of care]. Directors are not protected by that provision when a complaint alleges facts that infer a breach of loyalty or good faith. [Eds.: The court stated that the burden of establishing good faith rests with the director seeking protection under the exculpatory provision.]

Plaintiffs in *Abbott* accused the directors not only of gross negligence, but of intentional conduct in failing to address the federal violation problems, alleging "a conscious disregard of known risks, which conduct, if proven, cannot have been undertaken in good faith."

RESULT The plaintiffs pleaded sufficient facts to prove that the directors were not entitled to the protection of the business judgment rule. The plaintiffs' claims were also not precluded by Abbott's charter provision. The trial court's dismissal of the complaint was reversed. The plaintiffs could proceed with the derivative action.

COMMENTS The directors were potentially liable even though a majority of the board was independent and there were no allegations of self-dealing.

CRITICAL THINKING QUESTIONS

1. Would the independent directors have been liable if the CEO and board chair had not given them copies of the FDA Warning Letters?
2. If you had been an independent director on Abbott's board, how would you have responded upon receiving notice of the second FDA Warning Letter?

DUTY OF LOYALTY

To comply with their duty of loyalty, directors and managers must act in good faith and subordinate their own interests to those of the corporation and its shareholders. As a result, when a shareholder attacks a transaction in which managers or directors are engaged in self-dealing or have a self-interest other than that of a corporate fiduciary, courts will closely review the merits of the deal. Traditionally, such a transaction has been voidable unless its proponents could show that it was fair and reasonable to the corporation.

CORPORATE OPPORTUNITIES

One central corollary of the fiduciary duty of loyalty is that officers and directors may not take personal advantage of a business opportunity that rightfully belongs to the corporation. This is known as the *corporate opportunity doctrine*. For example, suppose that a copper-mining corporation is actively looking for mining sites. If an officer of the corporation learns of an attractive site in the course of his or her business for the corporation, the officer may not buy it for himself or herself. If the officer attempts to do so, a shareholder can block the sale or impose a *constructive trust* on any profits the officer makes from the acquisition, that is, force the officer to hold such profits for the benefit of the corporation and pay them over to the corporation on request.

The courts have devised several tests for determining whether an opportunity belongs to a corporation. Perhaps the most widely used is the *line-of-business test*. Under this test, if an officer, director, or controlling shareholder learns of an opportunity in the course of his or her business for the corporation and the opportunity is in the corporation's line of business, a court will not permit the officer, director, or controlling shareholder to keep the opportunity for himself or herself.

For example, the Delaware Supreme Court ruled in a classic case that the president and director of Loft, Inc., a company engaged in the manufacturing of candies, syrups, beverages, and foodstuffs, could not set up a new corporation to acquire the secret formula and trademarks of Pepsi Cola.²³ He had unsuccessfully sought a volume discount for Loft's purchases of syrup from the Coca-Cola Company and was contemplating substituting Pepsi for Coke.

If an officer or director develops an idea on company time using company resources, a court will be more likely

to find a breach of fiduciary duty if the officer or director then leaves to pursue the idea. If the officer or director has signed an assignment of inventions, then the idea will usually belong to the company under the terms of that agreement. Even without such an agreement, use of company time or resources may restrict the ability of the officer or director to define the line of business narrowly.

Other courts have considered whether (1) it would be fair for the fiduciary to keep the opportunity, (2) the corporation has an expectancy or interest growing out of an existing right in the opportunity, or (3) the interference by the fiduciary will hinder the corporation's purposes. Because different states apply different tests, a corporate fiduciary should always consult local counsel if there is any question of the fiduciary's usurpation of a corporate opportunity.

An officer or director presented with a corporate opportunity is required to disclose it to the disinterested directors, who may then accept or reject the opportunity. Disclosure is required even when the officers or directors taking advantage of the opportunity, acting in their capacity as controlling shareholders, could have prevented the corporation from pursuing it. For example, *Thorpe v. CERBCO Inc.*²⁴ involved two brothers who were officers, directors, and controlling shareholders of CERBCO. When a potential acquirer brought up the possibility of buying one of CERBCO's subsidiaries, the brothers instead proposed to sell their own shares to the acquirer. Because the brothers (in their capacity as shareholders) could have blocked every viable sale of the subsidiary, CERBCO was not in fact able to take advantage of the opportunity. Thus, CERBCO suffered no damages as a result of this lost opportunity because there was zero probability of the sale occurring (due to the brothers' lawful right to vote against it). Nevertheless, the brothers were fiduciaries of CERBCO and, as such, had the duty to present the sale opportunity to CERBCO. The court held that the brothers were not entitled to the profit gained by their breach of this duty. As a result, they were not entitled to keep the profit they had made on the sale of their stock to the potential acquirer of CERBCO's subsidiary and had to disgorge all of their gains to the corporation.

DUTY OF CANDOR

When requesting shareholder action, directors have a duty to disclose all material facts. In *Malone v. Brincat*,²⁵ the Delaware Supreme Court went a step further and held that

23. *Guth v. Loft, Inc.*, 5 A.2d 503 (Del. 1939).

24. 703 A.2d 645 (Del. 1997).

25. 722 A.2d 5 (Del. 1998).

whenever directors disseminate information to shareholders, the fiduciary duties of care, loyalty, and good faith apply, even if no shareholder action is sought. As a result, the court held that “directors who knowingly disseminate false information that results in corporate injury or damage to an individual stockholder violate their fiduciary duty, and may be held accountable in a manner appropriate to the circumstances.”

DUTIES IN THE CONTEXT OF TAKEOVERS, MERGERS, AND ACQUISITIONS

In deciding whether to sell a company, directors should consider seven key factors: (1) the company’s intrinsic value, (2) the appropriateness of delegating negotiating authority to management, (3) nonprice considerations, (4) the reliability of officers’ reports to the board, (5) the reliability of experts’ reports, (6) the investment banker’s fee structure, and (7) the reasonableness of any defensive tactics. As explained earlier, the directors must act in good faith and be adequately informed.

THE COMPANY’S INTRINSIC VALUE

The ability to make an informed decision as to the acceptability of a proposed buyout price requires knowledge of the company’s intrinsic value. Determining intrinsic value entails more than an assessment of the premium of the offering price over the market price per share of the company’s stock. When, as in *Van Gorkom*, it is believed that the market has consistently undervalued the company’s stock, evaluating the offered price by comparing it with the market price is, according to the Delaware Supreme Court, “faulty, indeed fallacious.”

Thus, the directors must do more than assess the adequacy of the premium and compare it with the premiums paid in other takeovers in the same or similar industries. They must also assess the intrinsic or fair value of the company (or division) as a going concern and on a liquidation basis.

Practitioners have read *Van Gorkom* as virtually mandating participation by an investment banker if directors are to avoid personal liability. However, the *Van Gorkom* court expressly disclaimed such an intention:

We do not imply that an outside valuation study is essential to support an informed business judgment; nor do we state that fairness opinions by independent

investment bankers are required as a matter of law. Often insiders familiar with the business of a going concern are in a better position than are outsiders to gather relevant information; and under appropriate circumstances, such directors may be fully protected in relying in good faith upon the valuation reports of their management.²⁶

For all practical purposes, however, directors should look to both internal and external sources for guidance. The most reliable valuation information will consist of financial data supplied by management and evaluated by investment bankers knowledgeable about the industry and recent merger and acquisition activity.

The *Hanson Trust* decision makes it clear, however, that the mere presence of investment bankers in the target’s boardroom will not shield its directors from personal liability. In that case, the Goldman Sachs partner’s oral opinion that the option prices were “within the range of fair value” did not withstand the scrutiny of the Second Circuit on appeal.

DELEGATION OF NEGOTIATING AUTHORITY

If members of management are financial participants in the proposed transaction, the delegation of negotiation responsibilities to management or inside directors will expose the board to greater risks of liability. The Second Circuit observed in *Hanson Trust*:

SCM’s board delegated to management broad authority to work directly with Merrill to structure an LBO proposal, and then appears to have swiftly approved management’s proposals. Such broad delegations of authority are not uncommon and generally are quite proper as conforming to the way that a Board acts in generating proposals for its own consideration. However, when management has a self-interest in consummating an LBO, standard post hoc review procedures may be insufficient. SCM’s management and the Board’s advisers presented the various agreements to the SCM directors more or less as *faits accompli*, which the Board quite hastily approved. In short, the Board appears to have failed to ensure that negotiations for alternative bids were conducted by those whose only loyalty was to the shareholders.²⁷

26. Smith v. Van Gorkom, 488 A.2d 858, 876 (Del. 1985) (Case 21.1).

27. *Hanson Trust PLC v. ML SCM Acquisition, Inc.*, 781 F.2d 264, 277 (2d Cir. 1986).

NONPRICE CONSIDERATIONS

In evaluating a buyout proposal, directors have a fiduciary duty to familiarize themselves with any material nonprice provisions of the proposed agreement. Directors are duty bound to consider separately whether such provisions are in the best interest of the company and its shareholders or, if not, whether the proposal as a whole, notwithstanding such provisions, is in the best interest of their constituencies.

In *Van Gorkom*, for example, several outside directors maintained that Pritzker's merger proposal was approved with the understanding that "if we got a better deal, we had a right to take it." The directors also asserted that they had "insisted" upon an amendment reserving to Trans Union the right to disclose proprietary information to competing bidders. However, the court found that the merger agreement reserved neither of these rights to Trans Union. In the court's view, the directors had "no rational basis" for asserting that their acceptance of Pritzker's offer was conditioned upon a market test of the offer or that Trans Union had a right to withdraw from the agreement in order to accept a higher bid.

Directors should therefore ensure not only that they correctly understand the nonprice provisions of a proposed merger agreement but also that the provisions find their way into the definitive agreement. They should verify this by reading the documents prior to execution.

TAKEOVER DEFENSES

The business judgment rule creates a powerful presumption in favor of actions taken by the directors of a corporation. As noted earlier, the business judgment rule does not apply if the directors have an interest in the transaction being acted upon. If a hostile raider is successful, it is probably going to replace the company's management and board of directors as its first step after assuming control. A successful defense against the takeover has the effect of preserving the positions of current management and directors. Thus, the directors arguably have a personal interest whenever a board opposes a hostile takeover.

Unocal Proportionality Test

*Unocal Corp. v. Mesa Petroleum Co.*²⁸ established the principle that the business judgment rule applies to takeover defenses, provided that the directors can show that they had reasonable grounds for believing that the unwelcome suitor

posed a threat to corporate policy and effectiveness and that the defense was a reasonable response to that threat. This enhanced judicial scrutiny is designed to guard against "the omnipresent specter that a board may be acting primarily in its own interests, rather than those of the corporation and its shareholders."

The Delaware Supreme Court further explained:

If a defensive measure is to come within the ambit of the business judgment rule, it must be reasonable in relation to the threat posed. This entails an analysis by the directors of the nature of the takeover bid and its effect on the corporate enterprise. Examples of such concerns may include: inadequacy of the price offered, nature and timing of the offer, questions of illegality, the impact on "constituencies" other than shareholders (that is, creditors, customers, employees, and perhaps even the community generally), the risk of nonconsummation, and the quality of securities being offered in the exchange. While not a controlling factor, it also seems to us that a board may reasonably consider the basic stockholder interests at stake, including those of short term speculators, whose actions may have fueled the coercive aspect of the offer at the expense of the long term investor.

If the directors succeed in making this initial showing, then they are entitled to the protection of the business judgment rule. Under those circumstances, the Delaware Supreme Court stated:

[U]nless it is shown by a preponderance of the evidence that the directors' decisions were primarily based on perpetuating themselves in office, or some other breach of fiduciary duty such as fraud, overreaching, lack of good faith, or being uninformed, a court will not substitute its judgment for that of the board.

Applying these standards to the hostile bid for Unocal by Mesa Petroleum and its CEO, T. Boone Pickens, the court upheld a discriminatory *self-tender* by Unocal for its own stock, whereby all of the shareholders, except Mesa Petroleum, Pickens, and their affiliates, could exchange their Unocal stock for debt securities worth \$18 more per share than the \$54 per share offered by Pickens in the first stage of his two-tier front-loaded tender offer. Pickens's offer was deemed coercive because he was acquiring just enough shares in the first stage to get control. Hence, even if shareholders considered the price inadequate, they might well feel coerced into tendering in the first stage for fear of receiving securities of even less value in the second stage, when Unocal was merged with

28. 493 A.2d 946 (Del. 1985).

a Mesa-controlled corporation. The Unocal board viewed the threat as a grossly inadequate two-tier coercive tender offer coupled with the threat of greenmail. (*Greenmail* occurs when a raider acquires stock in a target company and then threatens to commence a hostile takeover unless its stock is repurchased by the target at a premium over the market price.)

The strategy used in *Unocal* is no longer available because of the SEC's "all holders rule." According to the rule, a selective stock repurchase plan is deemed a tender offer in which all holders of securities of the same class must be allowed to participate. Nonetheless, this case remains a key Delaware precedent for the analysis of defensive tactics, including shareholder rights plans (also called poison pills), which can have much the same effect as a discriminatory self-tender.

Duty to Maximize Shareholder Value Under *Revlon*

Once the judgment is made that a sale or breakup of the corporation is in the best interests of the shareholders or is inevitable, directors have a fiduciary duty to obtain the best available price for the shareholders. This rule was first articulated in a case involving a hostile takeover bid for Revlon, Inc. by Pantry Pride.²⁹

After initially resisting the takeover attempt, the Revlon board elected to go forward with a friendly buyout from another company at a lower price than that offered by the hostile bidder. The Revlon board sought to justify the lower price by pointing out the benefits of the friendly buyout for other corporate constituencies, such as the Revlon noteholders. The hostile bidder sued to enjoin the friendly buyout.

The Delaware Supreme Court required the Revlon board to seek the highest price for the shareholders. The court defined the duty of the directors as follows:

The Revlon board's authorization permitting management to negotiate a merger or buyout with a third party was a recognition that the company was for sale. The duty of the board had thus changed from the preservation of Revlon as a corporate entity to the maximization of the company's value at a sale for the stockholders' benefit. . . . The directors' role changed from defenders of the corporate bastion to auctioneers charged with getting the best price for the stockholders at a sale of the company.

In *Barkan v. Amsted Industries*,³⁰ the Delaware Supreme Court held that the basic teaching of cases such as *Revlon* is simply that directors of corporations must act in accordance with their fundamental duties of care and loyalty. The court ruled, however, that acting in accordance with these duties does not mean that every change of corporate control necessitates an auction. If fairness to shareholders and the minimizing of conflicts of interest can be demonstrated, the added burden of having an auction may not be necessary. The court in *Barkan* declined to make a specific rule for determining when a market test (or "market check") is required. The court simply stated: "[I]t must be clear that the board had sufficient knowledge of relevant markets to form the basis for its belief that it acted in the best interests of the shareholders."³¹

It is doubtful that a failure of directors to consider every conceivable alternative would in itself amount to a breach of fiduciary duty. Such a rule would be unduly harsh. In hindsight, a complaining shareholder could almost always conjure up at least one alternative that the directors failed to consider. On the other hand, the failure of a board to consider any alternatives at all, or the unwillingness of a board to negotiate with anyone other than its chosen white knight (or with the initial offeror), would be a breach of fiduciary duty unless there were special circumstances.

When Is a Company in *Revlon* Mode? The case of *Paramount Communications, Inc. v. Time Inc.*³² examined the question of what constitutes an event triggering the *Revlon* duty to maximize shareholder value. (A company with such an obligation is deemed to be in *Revlon mode*.) Time had entered into a friendly stock-for-stock merger agreement with Warner Communications. Under that agreement, roughly 60 percent of the stock of the new combined entity Time–Warner would be held by former public shareholders of Warner. The merger agreement was subject to the approval of Time's shareholders.

Shortly before the Time shareholder vote was to take place, Paramount Communications made a hostile, unsolicited cash tender offer for all Time shares. In response, Time proceeded with its own highly leveraged cash tender offer to acquire 51 percent of Warner, to be followed by a back-end, second-step merger of the two companies. This tender offer, which would preclude acceptance of the Paramount tender offer, did not require approval by the Time

29. *Revlon, Inc. v. MacAndrews & Forbes Holdings, Inc.*, 506 A.2d 173 (Del. 1986).

30. 567 A.2d 1279 (Del. 1989).

31. *Id.* at 1288.

32. 571 A.2d 1140 (Del. 1990).

shareholders. Paramount challenged the actions of Time's directors in opposing its offer, arguing that the Time board had put Time in the *Revlon* mode when it agreed to the stock merger with Warner.

The Delaware Supreme Court held that this transaction did not trigger *Revlon* duties because there was no change in control. Majority control shifted from one "fluid aggregation of unaffiliated shareholders" to another and remained in the hands of the public. As a result, the Time board could properly take into account such intangibles as the desire to preserve the Time culture and journalistic integrity in deciding to reject Paramount's hostile tender offer, which was arguably worth more to shareholders than the Time–Warner combination. The court considered this to be a strategic alliance, not a sale of Time to Warner, which would have triggered the *Revlon* duty to maximize shareholder value.

Relying heavily on the precedent established by the *Time–Warner* case, Paramount entered into a friendly merger agreement with Viacom, Inc. in September 1993. At the time Paramount agreed to merge with Viacom, control of Paramount was vested in the "fluid aggregation of unaffiliated stockholders," and not in a single person, entity, or group. Sumner Redstone was the CEO, chair, and majority shareholder of Viacom. After the proposed merger, he would be the controlling shareholder of the combined Paramount–Viacom entity. When QVC Network, Inc. made a hostile unsolicited offer for Paramount that was worth \$1.3 billion more than Viacom's offer, the Paramount board refused to negotiate with QVC and instead stood by its merger agreement with Viacom.

QVC then sued the Paramount directors, arguing that the Paramount board had put Paramount in the *Revlon* mode when it committed to a transaction that would shift control of Paramount from the public shareholders to Redstone. The Paramount board argued that it had no duty to maximize shareholder value because it was pursuing a strategic alliance with Viacom, not a breakup of the company. The Delaware Supreme Court rejected this argument and ruled that the Paramount directors had an obligation to continue their search for the best value reasonably available to the stockholders.³³

The court ruled:

[W]hen a corporation undertakes a transaction which will cause: (a) a change in corporate control; or (b) a break-up of the corporate entity, the directors' obligation is to seek the best value reasonably available to the

stockholders. This obligation arises because the effect of the Viacom–Paramount transaction, if consummated, is to shift control of Paramount from the public stockholders to a controlling stockholder, Viacom.

Regardless of the present Paramount board's vision of a long-term strategic alliance with Viacom, once the Paramount–Viacom deal was consummated, Redstone would have the power to alter that vision. Furthermore, once control shifted, the current Paramount stockholders would have no leverage to demand another control premium in the future.

The Delaware Supreme Court was highly critical of the process the Paramount board followed:

The directors' initial hope and expectation for a strategic alliance with Viacom was allowed to dominate their decisionmaking process to the point where the arsenal of defensive measures established at the outset was perpetuated (not modified or eliminated) when the situation was dramatically altered. QVC's unsolicited bid presented the opportunity for significantly greater value for the stockholders and enhanced negotiating leverage for the directors. Rather than seizing those opportunities, the Paramount directors chose to wall themselves off from material information which was reasonably available and to hide behind the defensive measures as a rationalization for refusing to negotiate with QVC or seeking other alternatives.

In *In re Lukens Inc. Shareholders Litigation*,³⁴ the Delaware Court of Chancery concluded that a merger of Lukens with Bethlehem Steel triggered *Revlon* duties even though more than 30 percent of the merger consideration consisted of shares of common stock of Bethlehem, a widely held company with no controlling stockholder. Because 62 percent of the consideration was cash, the court concluded that "for a substantial majority of the then-current shareholders, 'there is no long run.'"

The "In Brief" provides a decision tree for analyzing when the business judgment rule will apply to board decisions.

DEAL PROTECTION DEVICES

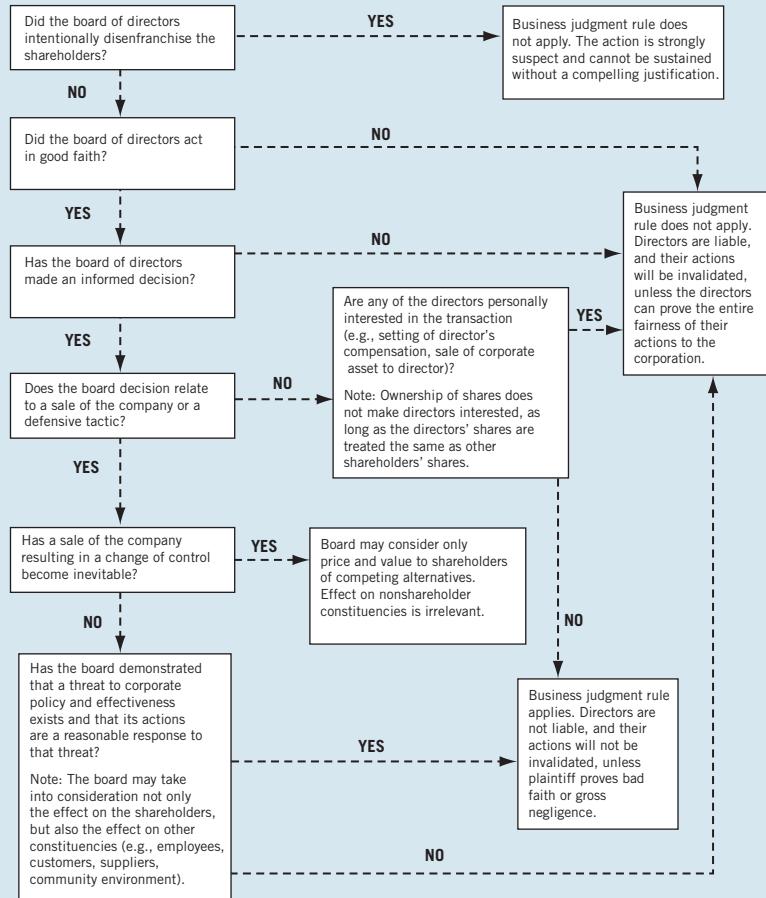

Often the parties to a friendly merger will use *deal protection devices*, such as no-talk provisions, to dissuade other bidders and thereby protect the consummation of the friendly merger transaction. Defensive devices can be economic, structural, or both.

33. *Paramount Commc'ns, Inc., v. QVC Network, Inc.*, 637 A.2d 34 (Del. 1994).

34. 757 A.2d 720 (Del. Ch. 1999), *aff'd*, 757 A.2d 1278 (Del. 2000).

IN BRIEF

Application of the Business Judgment Rule

No-Talk Provisions

Delaware courts are highly skeptical of agreements that purport to limit directors' ability to fulfill what they in good faith perceive their fiduciary duties to be. For example, the Court of Chancery refused to enforce a no-talk clause in a stock-for-stock merger agreement between Capital Re Corporation and Ace Limited. The *no-talk clause* permitted Capital Re to engage in discussions with and provide information to other bidders only if the board concluded, based on the written opinion of outside legal counsel, that engaging in discussions or providing information was required to prevent the board from breaching its fiduciary duties to its stockholders.³⁵ Although Capital Re's counsel

opined that negotiating with other bidders was consistent with the board's fiduciary duties, counsel did not state that the board was *required* to discuss an offer by another bidder. The court indicated that a provision that purports to prevent a board from talking with other bidders, even if the directors determine that they have a fiduciary duty to do so, is "particularly suspect when a failure to consider other offers guarantees the consummation of the original transaction, however more valuable an alternate transaction may be and however less valuable the original transaction might have become since the merger agreement was signed."

The court did suggest that a no-talk clause with no *fiduciary out* (a clause allowing the board of directors to negotiate with other bidders or to terminate a merger agreement) might be permissible if (1) the stockholders could

³⁵ Ace Ltd. v. Capital Re Corp., 747 A.2d 95 (Del. Ch. 1999).

freely vote for or against the existing merger agreement and choose among the present merger, a subsequent merger, or no merger at all; or (2) the board agreed to the provision as a way to end an auction for sale of a company after a thorough canvass of the market. While acknowledging the tension between a vested contract right and the board's duty to determine what its own fiduciary duties require, the court concluded that a contract right must give way when (1) "the acquirer knew, or should have known, of the target board's breach of fiduciary duty"; (2) the "transaction remains pending"; and (3) "the board's violation of fiduciary duty relates to policy concerns that are especially significant."

On the other hand, courts are more likely to permit *no-shop agreements*, whereby the target agrees not to actively solicit other bidders but retains the right to negotiate with parties who submit unsolicited bids to the target. Once again, such devices are more likely to withstand attack when they are put into place after a canvass of the market and as a condition to a bidder's willingness to make a favorable bid.

Breakup Fees

In exchange for providing a fiduciary out, a bidder will usually demand that some predetermined amount of money be paid to it if the deal fails to close because the target terminates the agreement. *Termination* or *breakup fees* are sometimes characterized as liquidated damages provisions, and they are often 2 to 3 percent of the value of the deal. They are usually intended to help make the bidder whole for its out-of-pocket expenses (for attorneys, investment bankers, and the like) and lost opportunity costs.

For example, in 2000, American Home Products Corporation received a termination fee of \$1.8 billion when its merger partner, Warner-Lambert Company, walked away from their \$72 billion deal and agreed to be acquired by Pfizer Inc. In mergers of equals, where there is no clear buyer or seller, there are often reciprocal termination fee provisions. For example, the agreement for the \$131.49 billion

merger of America Online, Inc. and Time-Warner, Inc. provided that if AOL backed out of the deal under certain conditions, it would have to pay Time-Warner a \$5.37 billion breakup fee (2.75 percent of AOL's market capitalization); if Time-Warner walked away, it would have to pay AOL \$3.9 billion.³⁶ Although courts in Delaware and elsewhere have upheld termination fees in the 1 to 3 percent range under either the business judgment rule or the standard of reasonableness applied to liquidated damages provisions, fees that are so large as to constitute "showstoppers" are much more likely to be struck down.³⁷

Options

The Delaware Supreme Court struck down a put option Paramount had granted to Viacom, which would have given Viacom an additional \$1 billion if its deal with Paramount fell through.³⁸ The court upheld the 1.5 percent breakup fee as a valid liquidated damages provision, however.

Other Devices

In the following case, the Delaware Supreme Court considered whether the directors of an insolvent publicly traded corporation breached their fiduciary duty when they agreed to submit a merger agreement to a stockholder vote, knowing that the stockholders with a majority of the voting power had agreed unconditionally to vote all of their shares in favor of the inferior offer.

A CASE IN POINT

CASE 21.4

OMNICARE, INC. v. NCS HEALTHCARE, INC.

SUPREME COURT OF DELAWARE
818 A.2d 914 (Del. 2003).

SUMMARY

FACTS NCS Healthcare, Inc., a leading independent provider of pharmacy services to skilled nursing facilities and other long-term care institutions, became insolvent after changes in the timing and level of reimbursements by government and third-party payors adversely affected market conditions in the health-care industry. The price of its common stock dropped from about \$20 in January 1999 to a range of \$0.09 to \$0.50 per share by early 2002 when Omnicare, Inc. offered to pay \$313,750,000 for NCS's assets in a proposed asset sale in bankruptcy. Omnicare's offer was less than the amount of NCS's outstanding debt and would have resulted in no recovery for NCS's stockholders.

CONTINUED

NCS's operating performance was improving by early 2002, when NCS contacted Genesis Health Ventures, Inc. in hopes of negotiating a transaction that would provide some recovery for NCS's stockholders. An independent committee of NCS board members, who were neither NCS employees nor major NCS stockholders, negotiated a transaction whereby Genesis agreed to repay the NCS senior debt in full, assume the trade debt, purchase the NCS notes or exchange them for cash and stock, and provide \$24 million in value for the NCS common stock.

Genesis had previously lost a bidding war for another company when Omnicare made a last-minute overbid. Genesis told NCS that it was unwilling to be a stalking horse for a higher Omnicare bid and insisted on an exclusivity agreement that prevented NCS from negotiating with other bidders for a short period of time.

After NCS entered into the agreement, Omnicare concluded that NCS was negotiating a transaction with a competitor that would potentially present a competitive threat. In light of a run-up in the price of the NCS common stock, Omnicare also came to believe that whatever transaction NCS was negotiating probably included a payment for its stock. Omnicare then proposed a transaction that included \$3 cash for the common shares but was conditioned on negotiating a merger agreement, obtaining certain third-party consents, and completing its due diligence. Although Omnicare's economic terms were attractive, the due diligence condition weakened its offer.

Genesis agreed to improve its offer by, among other things, increasing the payment to the stockholders by 80 percent but stipulated that the transaction had to be approved by midnight the next day or else it would terminate the discussions and withdraw its offer. After "balancing the potential loss of the Genesis deal against the uncertainty of Omnicare's letter," the NCS special committee and full board concluded that the only reasonable alternative was to approve the Genesis transaction. The NCS board authorized the voting agreements with the two majority stockholders, whereby they agreed to vote for the Genesis deal, and agreed to submit the merger agreement to the NCS stockholders regardless of whether the board continued to recommend the merger under Section 251(c) of the Delaware General Corporation Law.

Shortly thereafter Omnicare made an irrevocable offer to acquire the NCS stock for \$3.50 per share in cash. The NCS board then withdrew its recommendation that the stockholders vote in favor of the NCS–Genesis merger agreement, and NCS's financial adviser withdrew its fairness opinion. Nonetheless, the stockholder agreement ensured NCS stockholder approval of the Genesis merger. Omnicare then sued to prevent the consummation of the inferior Genesis transaction.

ISSUE PRESENTED Did the directors of an insolvent publicly traded company violate their fiduciary duty when they entered into an agreement for a "bullet-proof" sale of the company to the "only game in town"?

SUMMARY OF OPINION The Delaware Supreme Court began by explaining that a board's management decision to enter into and recommend a merger transaction can become final only when ownership action is taken by a vote of the stockholders. As a result, "a board of directors' decision to adopt defensive devices to protect a merger agreement may implicate the stockholders' right to effectively vote contrary to the initial recommendation of the board in favor of the transaction."

The court then reasoned that there is an "omnipresent specter" of conflicts of interest when a board of directors acts to prevent stockholders from effectively exercising their right to vote contrary to the will of the board. To be protected under the business judgment rule, defensive devices adopted by the board to protect the original merger transaction must withstand enhanced judicial scrutiny under the *Unocal* standard applied to antitakeover devices. The court explained that the board "does not have unbridled discretion to defeat perceived threats by any draconian means available." Defensive measures that are either preclusive or coercive are, by definition, considered draconian and invalid.

Enhanced judicial scrutiny requires (1) a “judicial determination regarding the adequacy of the decisionmaking process employed by the directors, including the information on which the directors based their decision,” and (2) “a judicial examination of the reasonableness of the directors’ action in light of the circumstances then existing.” The directors have the burden of proving that they were adequately informed and acted reasonably. As long as the deal protection devices are not draconian and are within a range of reasonableness, a court will not substitute its judgment for that of the board.

The court first considered whether the NCS directors had demonstrated that they had reasonable grounds for believing that a danger to corporate policy and effectiveness existed. The threat identified by the NCS board was the possibility of losing the Genesis offer and being left with no comparable alternative transaction.

The court then applied the second stage of the *Unocal* test, which required the NCS directors to demonstrate that their defensive response was reasonable in relation to the threat posed. The court explained that this inquiry involves a two-step analysis. First, the NCS directors were required to establish that the merger deal protection devices adopted in response to the threat were not “coercive” or “preclusive.” Second, they had to demonstrate that their response was within a “range of reasonable responses” to the threat perceived.

In this case, the court concluded that the deal protection devices the NCS board agreed to were *both* preclusive and coercive. The tripartite defensive measures—the Section 251(c) provision, the voting agreements, and the absence of an effective fiduciary out clause—made it “mathematically impossible” and “realistically unattainable” for the Omnicare transaction or any other proposal to succeed, no matter how superior the proposal. Although the minority stockholders were not forced to vote for the Genesis merger, they were required to accept it because it was a *fait accompli*. The court concluded that the NCS directors’ defensive devices were not within a reasonable range of responses to the perceived threat of losing the Genesis offer because they were preclusive and coercive. As a result, the devices were unenforceable.

The court went on to hold that the deal protection devices were unenforceable for a second independent reason. Taken together, they completely prevented the board from discharging its fiduciary responsibilities to the minority stockholders.

Although the NCS board was seeking to ensure that the NCS creditors were paid in full and that the NCS stockholders received the highest value available for their stock, the NCS board did not have authority to accede to the Genesis demand for an absolute “lock-up.” Because the directors of a Delaware corporation have a continuing obligation to discharge their fiduciary responsibilities, as future circumstances develop, after approving the merger with Genesis, the NCS board was required to negotiate a fiduciary out clause to protect the NCS stockholders if the Genesis transaction became an inferior offer. “By acceding to Genesis’ ultimatum for complete protection in futuro, the NCS board disabled itself from exercising its own fiduciary obligations at a time when the board’s own judgment is most important, i.e., receipt of a subsequent superior offer.” Although the stockholders with majority voting power “had an absolute right to sell or exchange their shares with a third party at any price,” the NCS directors had a supervening responsibility to discharge their fiduciary duties on a continuing basis.

The court explained:

Any board has authority to give the proponent of a recommended merger agreement reasonable structural and economic defenses, incentives, and fair compensation if the transaction is not completed. To the extent that defensive measures are economic and reasonable, they may have become an increased cost to the proponent of any subsequent transaction. Just as defensive measures cannot be draconian, however, they cannot limit or circumscribe the directors’ fiduciary duties.

CONTINUED

RESULT The provisions in the merger agreement requiring a stockholder vote on the Genesis deal were invalid, so the NCS board was not required to put the Genesis deal to a stockholder vote.

COMMENTS This case resulted in a rare three–two split decision of the Delaware Supreme Court. The dissenting opinion by Chief Justice Veasey, with whom Justice Steele joined, pointed out that the merger agreement and the voting commitments of the majority stockholders concluded a lengthy search and intense negotiation process in the context of insolvency and creditor pressure where no other viable bid had emerged:

Going into negotiations with Genesis, the NCS directors knew that, up until that time, NCS had found only one potential bidder, Omnicare. Omnicare had refused to buy NCS except at a fire sale price through an asset sale in bankruptcy. Omnicare’s best proposal at that stage would not have paid off all creditors and would have provided nothing for stockholders. Genesis expressed interest that became increasingly attractive. Negotiations with Genesis led to an offer paying creditors off and conferring on NCS stockholders \$24 million—an amount infinitely superior to the prior Omnicare proposals.

But there was, understandably, a sine qua non. In exchange for offering the NCS stockholders a return on their equity and creditor payment, Genesis demanded certainty that the merger would close. If the NCS board would not have acceded to the Section 251(c) provision, if [the majority shareholders] had not agreed to voting agreements and if NCS had insisted on a fiduciary out, there would have been no Genesis deal! Thus, the only value-enhancing transaction available would have disappeared.

The Majority invalidates the NCS board’s action by announcing a new rule that represents an extension of our jurisprudence. That new rule can be narrowly stated as follows: A merger agreement entered into after a market search, before any prospect of a topping bid has emerged, which locks up stockholder approval and does not contain a “fiduciary out” provision, is *per se* invalid when a later significant topping bid emerges. As we have noted, this bright-line, *per se* rule would apply regardless of (1) the circumstances leading up to the agreement and (2) the fact that stockholders who control voting power had irrevocably committed themselves, *as stockholders*, to vote for the merger. Narrowly stated, this new rule is a judicially-created “third rail” that now becomes one of the given “rules of the game,” to be taken into account by the negotiators and drafters of the given “rules of the game,” to be taken into account by the negotiators and drafters of merger agreements. In our view, this new rule is an unwise extension of existing precedent.

The NCS board’s actions—as the Vice Chancellor correctly held—were reasonable in relation to the threat because the Genesis deal was the “only game in town,” the NCS directors got the best deal they could from Genesis and—but for the emergence of Genesis on the scene—there would have been no viable deal.

Because the deal protection measures were not adopted unilaterally by the board to fend off an existing hostile offer, the dissent argued that the majority’s reliance on the discussion in an earlier case of “draconian” antitakeover devices measures was misplaced.

In a second dissenting opinion, Justice Steele chided the majority:

In effect, the majority has adopted the “duck” theory of contract interpretation. In my view, just as all ducks have their season and the wary hunter carefully scans the air to determine which duck may and which may not be shot at a given time on a certain day, the same holds true for distinguishing between contract provisions that could in another context be deemed truly defensive measures demanding enhanced scrutiny by a court. When certain, or when in doubt that the “duck” is not in season, courts, like prudent waterfowls, should defer.

ALLOCATION OF POWER BETWEEN THE DIRECTORS AND THE SHAREHOLDERS

A key issue that emerges from cases involving hostile takeovers and defensive tactics is who gets to decide whether the corporation should be sold—the board of directors or the shareholders. Theoretically, the board of directors is the guardian of the shareholders' interests, but the interests and obligations of the two groups sometimes conflict.

Frequently, a hostile takeover attempt presents such a conflict. Sometimes the proposed terms are attractive to the shareholders because the acquiring corporation offers to pay a substantial premium for their stock. The board of directors, however, may believe that the acquiring company's plans for the corporation are ultimately destructive, as in the case of a *bust-up takeover*, in which the acquired corporation is taken apart and its assets sold piecemeal. The directors may have legitimate concerns about the effect of such a takeover on the company's employees or on the community where the corporation is located. Or the directors might believe that the long-term value of the company is greater than the price being offered. Of course, directors might oppose a transaction just so they can remain on the corporation's board in violation of their legal obligation to put the corporation's interests before their own.

POISON PILLS

In one of the first cases addressing the allocation of power between the directors and the shareholders in deciding whether the corporation should be sold, a board of directors, without shareholder approval, had adopted a *poison pill* or *shareholder rights plan*, that is, a plan that would make any takeover not approved by the directors prohibitively expensive.³⁹ In 1984, the directors of Household International, fearing that Household might be taken over and busted up, adopted a poison pill in the form of a Preferred Share Purchase Rights Plan. This plan provided that, under certain triggering circumstances, common shareholders would receive a "right" for every common share of Household. In the event of a merger in which Household was not the surviving corporation, the holder of each common share of Household would have the right to purchase \$200 of the common stock of the acquiring company for only \$100. If these rights were triggered and exercised, they would dilute

the value of the stock of the acquiring company, making a takeover prohibitively expensive for the acquirer.

The Delaware Supreme Court upheld the board's power to adopt the plan. The court found that the plan did not usurp the shareholders' ability to receive tender offers and to sell their shares to a bidder without board approval of the sale. Household's poison pill left "numerous methods to successfully launch a takeover." For example, a bidder could make a tender offer on the condition that the board redeem the rights, that is, buy them back for a nominal sum before they were triggered. A bidder could set a high minimum of shares and rights to be tendered; it could solicit consents to remove the board and replace it with one that would redeem the rights; or it could acquire 50 percent of the shares and cause Household to self-tender for the rights. In a self-tender, the company would agree to buy back the shareholders' rights for a fair price.

The court also found that the plan did not fundamentally restrict the shareholders' right to conduct a proxy contest. In a *proxy contest*, someone wishing to replace the board with his or her own candidates must acquire a sufficient number of shareholder votes to do so. Such votes are usually represented by *proxies*, or limited written powers of attorney entitling the proxy holder to vote the shares owned by the person giving the proxy. The court found that a proxy contest could be won with an insurgent ownership of less than 20 percent (the threshold for triggering distribution of the rights) and that the key to success in a proxy contest is the merit of the insurgent's arguments, not the size of his or her holdings.

The court concluded that the decision to adopt the poison-pill plan was within the board's authority. Moreover, because the directors "reasonably believed Household was vulnerable to coercive acquisition techniques and adopted a reasonable defensive mechanism to protect itself," the court held that the board had discharged its fiduciary duty appropriately under the business judgment rule.

Although the Delaware Supreme Court upheld the adoption of a poison-pill plan in *Moran*, it reserved judgment on how such a plan would operate in practice. In particular, it left open the question of when directors must redeem the poison-pill rights to permit shareholders to tender their shares to a bidder.

The question of whether a board must redeem a pill is fact-specific—a court will look at all of the circumstances in making its decision. Certain factors will favor keeping the pill in place. These include (1) a tender offer that is only slightly above the market price of the stock; (2) a tender offer for less than all of the shares; (3) an active attempt by the board to solicit other offers; (4) a conscious effort by the board to allow its outside directors, deemed

39. *Moran v. Household Int'l, Inc.*, 500 A.2d 1346 (Del. 1985).

more disinterested, to make the decisions in this area; and (5) the fact that the tender offer is only in its early stages. The *Time–Warner* case made it clear that, under certain circumstances, a board faced with a hostile takeover bid can “just say no.” Yet, in recent years, shareholder activists have pressured companies to submit their poison pills to a shareholder vote. In addition, as happened when PeopleSoft rejected Oracle’s hostile takeover offer and when Yahoo! rebuffed Microsoft’s takeover bid, disgruntled shareholders may commence a proxy contest to try to replace directors who block an offer favored by a large number of shareholders.

The Delaware Court of Chancery struck down a so-called *dead-hand pill*, which could be redeemed only by the directors in office before the hostile bidder gained control or their designated successors.⁴⁰ The court held that the dead-hand provision violated the requirement under Section 141 of the Delaware General Corporation Law that the directors manage the business and affairs of the corporation because it gave one category of directors distinctive voting rights that were not shared by the other directors. Although the Delaware statute permits different directors to be given distinctive voting rights, those rights must be set forth in the certificate of incorporation, which was not the case here.

The court also held that the dead-hand feature violated the directors’ duty of loyalty for two reasons. First, the provision failed to meet the more exacting *Blasius*⁴¹ standard (after the case of the same name in which the Delaware Court of Chancery first articulated this standard) applicable to defensive tactics touching upon issues of control because it purposefully disenfranchised the company’s shareholders without any compelling justification. In particular, “even in an election contest fought over the issue of the hostile bid, the shareholders will be powerless to elect a board that is both willing and able to accept the bid.” Instead, the shareholders “may be forced to vote for [incumbent] directors whose policies they reject because only those directors have the power to change them.” Second, the dead-hand provision failed to satisfy *Unocal*’s requirement that the defense be proportionate to the threat because it was preclusive: it eliminated the use of a proxy contest as a possible means to gain control.

The Delaware Supreme Court also struck down a so-called *no-hand pill*, which could not be redeemed for six months even if the insurgent’s slate of directors was elected and wanted to redeem it.⁴² The delayed redemption provision in the plan would have prevented a new board of directors from redeeming the plan in order to facilitate a transaction that would serve the stockholders’

best interests, even under circumstances where the board would be required to do so because of its fiduciary duty to the stockholders. Because the delayed redemption provision impermissibly circumscribed the board’s statutory power under Section 141(a) to manage the business and affairs of the company and the directors’ ability to fulfill their concomitant fiduciary duties, the delayed redemption provision was invalid.

PROTECTING THE SHAREHOLDER FRANCHISE AND THE *BLASIUS* STANDARD OF REVIEW

A number of takeover cases have drawn a distinction between the exercise of two types of corporate power: (1) the power over the assets of the corporation, and (2) the power relationship between the board and the shareholders.⁴³ As explained earlier, directors have broad power over the assets of the corporation. Such decisions are generally protected by the business judgment rule or subjected to *Unocal*’s proportionality analysis if they relate to defensive tactics. As Delaware Chancellor William Allen explained in *Paramount Communications, Inc. v. Time Inc.*, “The corporation law does not operate on the theory that directors, in exercising their powers to manage the firm, are obligated to follow the wishes of a majority of shares.”⁴⁴ Thus, the Time directors had the power to acquire Warner Communications even though the holders of a majority of Time’s stock would have preferred to take Paramount’s offer. Or, as the Delaware Court of Chancery put it, “Directors are not thermometers, existing to register the ever-changing sentiments of stockholders.”⁴⁵

If a board’s unilateral decision to adopt a defensive measure touches on issues of voting control, however, then further judicial scrutiny is required to protect the shareholder franchise essential for corporate democracy. In particular, the court must decide whether the board purposefully disenfranchised its shareholders (that is, interfered with their right to elect the directors). If so, then under the *Blasius* standard, the action is strongly suspect and cannot be sustained without a compelling justification.⁴⁶

42. *Quickturn Design Sys., Inc. v. Shapiro*, 721 A.2d 1281 (Del. 1998).

Protecting the shareholder franchise is critical because the business judgment rule provides the directors and officers with great latitude in managing the day-to-day affairs of the corporation. As a result, shareholders who are displeased with the business performance generally have only two options: sell their shares or vote to replace the incumbent board members. The corporate governance system loses a key control if unhappy shareholders cannot vote the directors out of office.

For example, in *Chesapeake Corp. v. Shore*,⁴⁷ the Delaware Court of Chancery held that a supermajority bylaw provision adopted by the board of Shorewood Packing Corporation to thwart a hostile bid by Chesapeake Corporation was “a preclusive, unjustified impairment of the Shorewood stockholders’ right to influence their company’s policies through the ballot box.” The provision increased the number of Shorewood shares needed to amend the bylaws from a simple majority to 60 percent. Because Shorewood’s management controlled almost 24 percent of its stock, the supermajority provision made it virtually impossible for Chesapeake to garner enough votes to amend the bylaws to eliminate the classified board so that it could unseat the current directors and install a new board amenable to its offer.

The Shorewood board claimed that Chesapeake’s offer posed two threats: (1) the price was grossly inadequate, so Shorewood stockholders faced great harm if they sold their stock at that price; and (2) “there was a danger that Shorewood stockholders would be confused about the intrinsic value of the company, fail to understand management’s explanation as to why the market was undervaluing their stock, and mistakenly tender consents to Chesapeake to facilitate its unfair offer.” The court found the threat of confusion “at best quite a weak one” in light of (1) the fact that more than 80 percent of Shorewood’s shares were held by management and institutional holders, (2) the ability of the board to engage in a more vigorous communications campaign, and (3) the fact that reputable analysts were already tracking the stock. Although the court acknowledged that the price offered might be inadequate, it held that the supermajority bylaw was “an extremely aggressive and overreaching response to a very mild threat.” Instead, if the board truly believed that price inadequacy was the problem, it could have taken Chesapeake up on its offer to negotiate price and structure.

The court acknowledged that several cases have stated that a corporate board may consider a fully financed all-cash, all-shares, premium-to-market tender offer a threat

to stockholders when “the board believes that the company’s present strategic plan will deliver more value than the premium offer, the stock market has not yet bought that rationale, the board may be correct, and therefore there is a risk that ‘stockholders might tender . . . in ignorance or based upon a mistaken belief.’” Yet the court noted that this threat of *substantive coercion*⁴⁸ can be invoked in almost every situation, seeing as how “[t]here is virtually no CEO in America who does not believe that the market is not valuing [his or] her company properly,” so it called on courts to ensure that the threat is real and that the board is not imagining or exaggerating it.

The court also pointed out:

[O]ne of corporate management’s functions is to ensure that the market recognizes the value of the company and that the stockholders are apprised of relevant information about the company. This informational responsibility would include, one would think, the duty to communicate the company’s strategic plans and prospects to stockholders as clearly and understandably as possible.

DUTY OF DIRECTORS TO DISCLOSE PRELIMINARY MERGER NEGOTIATIONS

Directors can face a difficult decision when deciding whether they must disclose an offer to buy the company or the company’s participation in merger negotiations. As is discussed more fully in Chapter 23, disclosure can be required even if the parties have not reached an agreement in principle on the price and structure of the transaction. The Supreme Court held in *Basic, Inc. v. Levinson*⁴⁹ that such “soft information” can be material.

Managers planning a management buyout (MBO) of a company face a real conflict of interest in deciding whether to disclose their offer to the public because disclosure will often bring forth competing bidders. Prudent directors, like the independent directors of RJR Nabisco when faced with CEO Ross Johnson’s bid, will often require public announcement of the bid even if it puts the company “in play.”

Political PERSPECTIVE

The Pennsylvania Antitakeover Statute

The nation's toughest state antitakeover statute, Pennsylvania Senate bill 1310, also known as Act 36, was signed into law by Governor Bob Casey (a Democrat) on April 27, 1990.^a An examination of the events surrounding the enactment of this controversial statute highlights the ever-changing battle over defining, shaping, and reshaping the law in this area, as well as the role that politics can play in that process.

Background

The impetus for drafting the statute came from the Belzberg family's hostile takeover bid for Armstrong World Industries, Inc., a *Fortune* 500 company specializing in flooring and furnishings, headquartered in Lancaster, Pennsylvania. After Armstrong's board rejected the Belzbergs' offer to buy the company, the Belzbergs' holding company, First City Financial Corporation, initiated a proxy fight for control of four directors' seats on the board. The shareholders' meeting, at which the results of the proxy fight were to be announced, was scheduled for April 30, 1990.

Noah W. Wenger (a Republican), the state senator from the Lancaster district, introduced a comprehensive antitakeover bill while the Belzbergs and Armstrong were in the midst of their conflict. The bill, drafted in part by the Pennsylvania Chamber of Business and Industry, was designed not only to throw a wrench into the plans of corporate raiders in general but perhaps also to impede the Belzberg bid in particular.

The Statute

Pennsylvania's antitakeover statute attacks hostile bids for corporate control on three major fronts. First, it requires controlling persons (defined as those who own, or control proxies for, 20 percent of a company's stock) to disgorge—that is, give back to the company—any profits they make by selling stock of the company within eighteen months after becoming a controlling person. Such disgorgement is required if stock acquired within twenty-four months before or within eighteen months after becoming a controlling person is sold by the controlling person within eighteen months after becoming a controlling person.

This provision is aimed at those who, after failed takeover attempts, try to reap short-term profits by selling acquired stock at a premium. Institutional investors and other shareholders who launch proxy fights for purposes other than gaining control of a majority of the board are exempted from the disgorgement provision.

Second, the statute expands the directors' ability to consider other constituencies when making change-of-control decisions. Subsection (d) of Section 511 provides an expansive list of constituencies that a director may consider when exercising his or her duty to the corporation:

In discharging the duties of their respective positions . . . directors may, in considering the best interests of the corporation, consider to the extent they deem appropriate:

(1) The effects of any action upon *any or all groups affected by such action*, including shareholders, employees, suppliers, customers and creditors of the corporation, and upon communities in which offices or other establishments of the corporation are located.

(2) The short-term and long-term interests of the corporation, including benefits which may accrue to the corporation from its long-term plans and the *possibility that these interests may be best served by the continued independence of the corporation*.

(3) The resources, intent and conduct (past, stated and potential) of the person seeking to acquire control of the corporation.

(4) *All other pertinent factors.* (Emphasis added.)

In addition, the directors are not required to regard any particular corporate interest or the interest of any group as "a dominant or controlling interest or factor." The implication is clear. A director's duty when considering a proposal for a change of control is not simply to maximize shareholder value.

Third, like some other states' antitakeover statutes, the Pennsylvania law deprives a shareholder of its voting rights when it crosses certain ownership lines, placed at 20 percent, 33 percent, and 50 percent of the company's stock. The voting rights can be regained only if the holders of a majority of the shares—excluding holders of shares acquired in the previous twelve months—give their approval at a special shareholders' meeting.

CONTINUED

The statute also protects the employees of a company that is taken over. Existing labor contracts must be honored, and a successful bidder must pay severance benefits to employees who lose their jobs within two years of the takeover.

Corporations are allowed to opt out of various provisions of the antitakeover statute. As of 1992, more than 66 corporations (including Westinghouse Electric) of the estimated 200 corporations affected by the statute had opted out of at least one of its subchapters.^b

In 1998, the Pennsylvania statute proved important in the successful

effort by Mellon Bank (a Pennsylvania corporation) to thwart a hostile bid by the Bank of New York.^c In rejecting Bank of New York's \$23.6 billion offer (which represented a premium of 28 percent over Mellon's closing stock price the day before the offer was announced and a premium of 34 percent over Mellon's average closing stock price over the last thirty trading days), the chairman of Mellon's board seemed to be invoking the Pennsylvania statute when he criticized the proposed merger as not benefiting "our shareholders, employees, customers and—in particular—the communities we serve."^d

DUTIES OF CONTROLLING SHAREHOLDERS

A shareholder who owns sufficient shares to outvote the other shareholders, or to otherwise set corporate policy, and thus to control the corporation is known as a *controlling shareholder*. A person owning a majority of the outstanding shares is almost always a controlling shareholder, but persons owning a lower percentage (30 percent, for example) may still be deemed controlling if the shares are widely dispersed and there are no other large holders. In certain situations, controlling shareholders owe a fiduciary duty to the corporation and to its other shareholders. Generally, controlling shareholders have a responsibility to minority shareholders to control the corporation in a fair, just, and equitable manner. They may not engage in a bad faith scheme to drain off the corporation's earnings, thereby ensuring that minority shareholders are frozen out of all financial benefits.⁵⁰

SALE OF CONTROL

The obligation not to exercise control in a manner that intentionally harms the corporation and minority shareholders spills over into a sale of control. For instance, if a

controlling shareholder knows or has reason to believe that the purchaser of its shares intends to use controlling power to the detriment of the corporation, the controlling shareholder has a duty not to transfer the power of management to such a purchaser.

A controlling interest in a corporation usually commands a higher price per share than a minority interest. Does this control premium belong to the corporation or to the majority shareholder? The widely accepted rule is that controlling shareholders normally have a right to derive a premium from the sale of a controlling block of stock.⁵¹ For instance, in *Zetlin v. Hanson Holdings, Inc.*,⁵² the New York Court of Appeals commented:

In this action plaintiff Zetlin contends that minority stockholders are entitled to an opportunity to share equally in any premium paid for a controlling interest in the corporation. This rule would profoundly affect the manner in which controlling stock interests are now transferred. It would require, essentially, that a controlling interest be transferred only by means of an offer to all stockholders, that is, a tender offer. This would be contrary to existing law and if so radical a change is to be effected it would be best done by the Legislature.

50. *Sugarman v. Sugarman*, 797 F.2d 3 (1st Cir. 1986).

51. *See, e.g.*, *Essex Universal Corp. v. Yates*, 305 F.2d 572 (2d Cir. 1962).

52. 397 N.E.2d 387 (N.Y. 1979).

In extreme circumstances, however, courts may be willing to characterize the control premium as a corporate asset, thus entitling minority shareholders to a portion. The U.S. Court of Appeals for the Second Circuit took such an approach in *Perlman v. Feldmann*.⁵³ *Perlman* involved Newport Steel Corporation, whose mills produced steel sheets for sale to manufacturers of steel products. C. Russell Feldmann was the chairman of the board of directors and president of the corporation; he was also the controlling shareholder. In August 1950, when the supply of steel was tight due to the Korean War, Feldmann and some other shareholders sold their stock to a syndicate of end users of steel who were interested in securing a source of supply.

Minority shareholders brought a shareholder derivative suit to compel the controlling shareholders to account for, and make restitution of, their gains from the sale. The court held that the consideration received by the defendants included compensation for the sale of a corporate asset, namely the ability of the board to control the allocation of the corporation's product in a time of short supply.

53. 219 F.2d 173 (2d Cir. 1955), *cert. denied*, 349 U.S. 952 (1955).

Note that the court did not seek to prohibit majority shareholders from ever selling their shares at a premium; it was careful to circumscribe its holding with an emphasis on the extreme market conditions:

We do not mean to suggest that a majority stockholder cannot dispose of his controlling block of stock to outsiders without having to account to his corporation for profits or even never do this with impunity when the buyer is an interested customer, actual or potential, for the corporation's product. But when the sale necessarily results in a sacrifice of this element of corporate good will and consequent unusual profit to the fiduciary who has caused the sacrifice, he should account for his gains. So when in a time of market shortage, where a call on a corporation's product commands an unusually large premium, in one form or another, we think it sound law that a fiduciary may not appropriate to himself the value of this premium.

The following classic case involved elements of abuse of control and sale of control. The dominant shareholders took a series of steps to ensure that they would participate in the financial benefits of the company without letting the minority shareholders also participate.

A CASE IN POINT

CASE 21.5

JONES V. H.F. AHMANSON & Co.

SUPREME COURT OF CALIFORNIA
460 P.2d 464 (CAL. 1969).

SUMMARY

FACTS The shares of the United Savings and Loan Association were not actively traded due to their high book value, the closely held nature of the association, and the failure of its management to provide information to shareholders, brokers, or the public.

In 1958, investor interest in shares of savings and loan associations and holding companies increased. Savings and loan stocks that were publicly marketed enjoyed a steady increase in market price. The controlling shareholders of the United Savings and Loan Association decided to create a mechanism by which the association, too, could attract investor interest. They did not, however, attempt to render the association's shares more readily marketable.

Instead, a holding company, the United Financial Corporation of California, was incorporated in Delaware on May 8, 1959. On May 14, pursuant to a prior agreement, certain association shareholders owning a majority of the association's stock exchanged their shares for those of United Financial. After the exchange, United Financial held 85 percent of the association's outstanding stock. The former majority shareholders of the association had become the majority shareholders of United Financial and continued to control the association through the holding company. They did not offer the minority shareholders of the association an opportunity to exchange their shares.

The first public offering of United Financial stock was made in June 1960. An additional public offering in February 1961 included a secondary offering (that is, an offering by selling shareholders) of 600,000 shares. There was active trading in the United Financial shares. Sales of the association shares, however, decreased from 170 shares per year before the formation of United Financial to half that number by 1961. United Financial acquired 90 percent of the association's shares that were sold.

CONTINUED

A shareholder of the association brought suit, on behalf of herself and all other similarly situated minority shareholders, against United Financial and the individuals and corporations that had set up the holding company. The plaintiff contended that the defendants' course of conduct constituted a breach of fiduciary duty owed by the majority shareholders to the minority. She alleged that they had used their control of the association for their own advantage and to the detriment of the minority when they created United Financial, made a public market for its shares that rendered the association's stock unmarketable except to United Financial, and then refused either to purchase the minority's association stock at a fair price or to exchange the stock on the same terms afforded to the majority. She further alleged that they had created a conflict of interest that might have been avoided had they offered all association shareholders the opportunity to participate in the initial exchange of shares.

ISSUE PRESENTED Did the majority shareholders who transferred their shares to a holding corporation, then took it public without allowing the minority to exchange their shares, breach their fiduciary duty to the minority shareholders?

SUMMARY OF OPINION The California Supreme Court began its analysis by stating that the majority shareholders, acting either singly or in concert, have a fiduciary responsibility to the minority and to the corporation. They must use their ability to control the corporation fairly. They may not use it to benefit themselves alone or in a manner detrimental to the minority. Any use to which they put their power to control the corporation must benefit all shareholders proportionately and must not conflict with the proper conduct of the corporation's business. The court summarized the rule as one of "inherent fairness from the viewpoint of the corporation or those interested therein."

The court noted that the controlling shareholders of the association could have taken advantage of the bull market in savings and loan stock in two other ways. They could have caused the association to effect a stock split, thereby increasing the number of outstanding shares, or they could have created a holding company and permitted all shareholders to exchange their shares before offering the holding company's shares to the public. Either course would have benefited all of the shareholders alike, although the majority shareholders would have had to relinquish some of their control shares. Instead, the defendants chose to set up a holding company that they controlled and did not allow the minority shareholders to exchange their association shares for shares of the holding company. Moreover, the market created by the defendants for United Financial shares would have been available for association shares had the defendants chosen a stock split of the association's shares.

The court stated that when a controlling shareholder sells or exchanges its shares, the transaction is subject to close scrutiny, particularly if the majority receives a premium over market value for its shares. If the premium constitutes payment for what is properly a corporate asset, all shareholders are entitled to a proportionate share of the premium (citing *Perlman v. Feldmann*). The defendants' exchange of association stock for United Financial stock was an integral part of a scheme that the defendants could have reasonably foreseen would destroy the potential public market for association stock. The remaining association shareholders would thus be deprived of the opportunity to realize a profit from those intangible characteristics that attach to publicly marketed stock.

RESULT The majority shareholders who transferred their shares to a holding corporation, then took it public without allowing the minority to exchange their shares, breached their fiduciary duty to the minority shareholders. The minority shareholders were awarded damages that would place them in a position at least as favorable as the majority shareholders had created for themselves.

FREEZE-OUTS

The Delaware Supreme Court has held that a majority shareholder may *freeze out* the minority, that is, force the minority shareholders to convert their shares into cash, as long as the transaction is fair.⁵⁴ Sometimes a freeze-out is effected by merging a subsidiary into its parent, as in *Rosenblatt v. Getty Oil Co.*⁵⁵ In this case, Skelly Oil Company and Mission Corporation merged into Getty Oil Company, which was indirectly the majority shareholder of both Skelly and Mission. All three corporations were in the oil business. At issue was the fairness of the exchange ratio in the merger, that is, the ratio that would be used to convert the minority shareholders' stock into cash.

The Delaware Supreme Court stated that the concept of fairness in parent–subsidiary mergers has two aspects: fair dealing and fair price. Both must be examined together in resolving the ultimate question of entire fairness.

As to fair dealing, a court will look at the timing of the transaction; how it was initiated, structured, negotiated, and disclosed to the board; and how director and shareholder approval was obtained. The court cited a number of factors leading to a conclusion of fair dealing by Getty, including the adversarial nature of the negotiations between the parties to the merger.

Regarding fair price, a court will look at such economic factors as asset value, market value, earnings, and future prospects, and at any other elements that affect the intrinsic value of a company's stock. Both Getty and Skelly believed that the real worth of an oil company is centered in its reserves. Therefore, the court was especially impressed with the fact that they had employed D & M, a petroleum consulting engineering firm with a worldwide reputation and with nearly thirty-seven years of experience, to estimate Getty's and Skelly's respective oil and natural gas reserves.

54. *Weinberger v. UOP, Inc.*, 457 A.2d 701 (Del. 1983).

55. 493 A.2d 929 (Del. 1985).

The court concluded that Getty had dealt fairly with the Skelly minority shareholders in the merger.

Although the controlling shareholder may be permitted to negotiate a deal for the sale of the entire company, the board of directors of the target must still determine the intrinsic value of the company and the maximum shareholder value reasonably attainable so that it has an informed basis for recommending the proposed deal to the minority stockholders or for suggesting that the minority stockholders vote against the deal and exercise their appraisal rights.⁵⁶ The representatives of the controlling shareholder on the target board owe the target's minority shareholders "an uncompromising duty of loyalty."⁵⁷ This includes an obligation to provide the minority full and accurate information about the company even if the minority has no right to vote on the deal.

GREENMAIL

Delaware courts analyze the payment of greenmail in the same way they analyze other defensive tactics under *Unocal*. Greenmail is a purchase of a dissident shareholder's stock by the issuer at a premium over market, often in exchange for a *standstill agreement*, whereby the shareholder agrees not to commence a tender offer or proxy contest or to buy additional shares of the issuer for a period of time, often ten years. If the board demonstrates that the shareholder to be bought out poses a threat to corporate policy and effectiveness and the repurchase of shares at a premium is a reasonable response to that threat, then the payment will be protected by the business judgment rule.⁵⁸

Hostile Takeovers Come of Age in Germany

The laws of Germany and several Scandinavian countries require union and employee representation on the boards of directors of most public corporations. These representatives participate in all of the basic decisions related to investment policy, choice of product and technology, marketing, employee relations, and other matters

of managerial concern. For example, when Germany's Daimler-Benz AG merged with Chrysler Corporation in 1998, the combined entity, DaimlerChrysler, was organized under German law. As required by Germany's codetermination laws, half of the members of the supervisory board were elected by the employees and union

CONTINUED

leaders; half were elected by the shareholders. (Chrysler was subsequently sold to a U.S. private equity firm.) Under Germany's two-tier board system, the supervisory board consists solely of nonemployee directors, and it is often chaired by a representative of the corporation's main bank. The supervisory board appoints the management board, which consists solely of inside directors and reports to the supervisory board.⁵⁹ French law gives firms the option of having a two-tiered board or a unitary board elected by shareholders.

Schaeffler's Hostile Takeover of Continental

Schaeffler's hostile takeover of German tire giant Continental AG in 2008 made it clear that codetermination and Germany's efforts to protect German firms from hostile takeovers are inadequate to immunize German corporations from corporate raiders. Although German law generally requires any person who acquires more than 5 percent of the voting securities of a target company to disclose its purchases and intentions to the target management and investors, Schaeffler eluded this requirement by entering into a series of cash-settled stock swap contracts with its ally Merrill Lynch that ultimately gave it control over more than one-third of Continental's stock. Continental cried foul, but the German Financial Supervisory Authority (BaFin) upheld the tactic after finding no side agreement that required Merrill Lynch to hold the shares on Schaeffler's behalf, to sell them to Schaeffler, or to jointly share voting rights.⁶⁰ Banks entering into stock swaps usually buy the underlying shares or find a third party to do so. When the contracts are unwound, the block becomes available for purchase. According to an unnamed senior German mergers and acquisitions lawyer, "There will always be vague agreements that are not legally binding and therefore there will always be sneak attacks by shareholders via swaps."⁶¹ Porsche had used a similar sneak attack to acquire automaker Volkswagen, its much larger rival. When asked whether Daimler AG was vulnerable to a similar attack, CEO Dieter Zetsche stated, "If I would tell you that any activity of that kind is absolutely impossible, I

would have to lie."⁶² Reuters reported that Daimler was considering its defensive options.

A German statute that goes into effect on March 1, 2009, will require the disclosure of both shareholdings and options but not of swaps. Although the United Kingdom's Financial Services Authority has recommended rules that would require disclosure of contracts for difference, which give investors an economic interest in the underlying shares, it also does not require the disclosure of swaps. As explained in Chapter 22, a case on appeal to the U.S. Court of Appeals for the Second Circuit in 2008 turns on whether stock swaps must be disclosed under U.S. law on Schedule 13D.⁶³

EU Takeover Directive

Takeovers in Germany and the rest of the European Union (EU) are governed by the European Union Directive on Takeover Bids (DTB), one of the most ambitious and highly contested pieces of legislation to pass the European Parliament. Adopted in April 2004, after thirty years of political wrangling among the EU member states, its aim was to open up European markets; harmonize the conflicting laws that regulate the economies of individual member states; and create clarity, transparency, and legal certainty through a set of common, universal rules governing shareholders' rights and defensive mechanisms in the event of takeover bids. Originally intended as a major step toward an integrated European capital market, the legislation foundered over sharp differences between the competitive, liberal, "Anglo-Saxon" version of shareholder rights and the coordinated, protectionist, "Rhenish" model.⁶⁴

The United Kingdom and Ireland supported provisions that would ease takeover restrictions across Europe, arguing that takeovers would facilitate restructuring and prepare companies for tougher competition in the global market. Germany, Sweden, and Norway, however, pressed for the protection of their national antitakeover defenses. In an effort to reach a consensus, the European Parliament ultimately left adoption of the two key articles that would have sharply limited the ability of target firms to adopt takeover defenses (Articles 9 and 11) to the discretion of individual member states. The result

64. SIMON HIX, ABDOUL G. NOURY & GERARD ROLAND, DEMOCRATIC POLITICS IN THE EUROPEAN PARLIAMENT 200 (2007).

was a gutted and largely symbolic bill that left national antitakeover statutes mostly intact.⁶⁵

As passed, the DTB consists of twenty-three articles, which together stipulate greater transparency, a mandatory bid rule, and an optional British-style "neutrality rule." The Directive applies to takeover bids for securities of an EU company whose securities are admitted to trading on a regulated market in at least one member state, but it specifically excludes takeover bids for securities issued by member states' central banks.⁶⁶

Article 9, the contentious *neutrality rule*, generally requires the target's board of directors to remain neutral when faced with a hostile takeover bid and stipulates that once a takeover bid has been launched, the target's board cannot adopt any antitakeover devices, such as poison pills, without first obtaining the specific approval of shareholders.⁶⁷ The *mandatory bid provision* prohibits coercive two-tier offers by requiring any person who acquires 30 percent or more of a target company's stock to offer to buy all remaining shares at the highest price paid to acquire the 30 percent block.⁶⁸

The *breakthrough rule* in Article 11 was designed to weaken the differential voting structures common in German and Nordic companies. It enables the hostile bidder to break through prebid defenses, such as multiple

voting rights and other measures that distribute control rights in a manner that is disproportionate to the cash flow rights, thereby ensuring that a bidder that acquires a majority of the equity can successfully mount a takeover. Germany, France, and the Scandinavian countries bitterly resisted the rule's adoption.⁶⁹

To break the deadlock, the drafters added Article 12, which allows the member states to opt out of the neutrality rule and breakthrough rule altogether. As a result, firms in each member state can retain the anti-takeover defenses legal under existing national laws. Fritz Bolkestein, the EU Commissioner responsible for the Directive, was so angry at the extent of the compromise that he threatened to withdraw the Directive entirely, but he could not gain sufficient support from the other Commissioners.⁷⁰ According to an EU Commission report, only 1 percent of listed companies in the EU will apply the breakthrough rule on a mandatory basis.⁷¹

The Future

Even though Germany succeeded in retaining its existing antitakeover legislation, the corporate culture in the EU is changing, and German companies are increasingly vulnerable to hostile takeovers. With decreased state ownership since the 1980s and 1990s, and an increasing number of European firms being managed by CEOs with American MBAs, firms are finding new ways around the laws. The hostile takeover of Continental by Schaeffler may spawn new German antitakeover legislation or the adoption of stronger takeover defenses or both.

THE RESPONSIBLE MANAGER

CARRYING OUT FIDUCIARY DUTIES

Officers, directors, and controlling shareholders are fiduciaries. They owe their principal (the corporation and its shareholders) undivided loyalty. They must act in good faith. They

may not put their own interests before those of the corporation and its shareholders. They cannot, for example, fight off a hostile takeover just to keep their jobs. They cannot

CONTINUED

use the company's confidential information for their personal gain.

Officers and directors also owe the corporation and its shareholders a duty of care. They should act with the care reasonable persons would use in the management of their own property. They have a duty to make only informed decisions. They cannot rely blindly on the advice of other people, even experts.

The duty to make informed decisions, which is a part of the duty of care, takes various forms. In the context of takeovers, board members cannot reject an offer without taking sufficient time to analyze its merit. Managers must be able to demonstrate that they made their decisions only after sufficient deliberation and after review of all relevant information. They should consider the possible effects of both the monetary and the nonmonetary aspects of the transaction.

A manager should never sign a document without reading it first. Ideally, each director should read the document the board is asked to approve. If that is not practical, the directors should demand and read a written summary prepared by counsel. They should also make sure that the officers who are authorized to sign the agreement have read it before signing it.

A manager should be informed as to the rules regarding the duty of care in the company's state of incorporation. Some jurisdictions permit the shareholders to amend the articles of incorporation to relieve directors of any financial liability for violations of the duty of care. But even with such provisions in place, directors must still act in good faith and in what they honestly believe is the best interest of the corporation. Otherwise, they will breach their duty of loyalty. Such a breach can not only result in monetary liability but can also demoralize the shareholders and employees of the corporation, making it difficult to maintain a high level of ethical behavior among them.

In a situation involving a potential conflict of interest, a manager should excuse himself or herself and leave the decision to others who do not have a conflict. It is common, for example, to establish special independent committees of the board of directors, either to examine the fairness of a management offer to acquire the company or to review the merits of shareholder litigation against the directors or officers.

A repurchase of stock at a premium from a dissident (or unhappy) shareholder may violate both the directors' duty to the corporation and the shareholder's duty to the other shareholders. Different courts view such repurchases differently, and local counsel should always be consulted. It is often appropriate for the board not only to obtain a written opinion from counsel that such a repurchase is permissible

but also to convene a special independent committee of directors to decide whether the consideration that will be paid for the stock is fair.

Any controlling shareholder engaging in a transaction such as a merger with the company it controls must be able to prove that the transaction is fair both procedurally and substantively. The use of independent committees, advised by independent financial consultants and counsel, helps show procedural fairness, as does a willingness to negotiate the proposed transaction with such a committee on an arm's length basis. Paying a fair price for corporate assets or for shares of a corporation shows substantive fairness. The fairness of a price can be demonstrated by evidence of competing offers or independent appraisals or evaluations. The form of compensation of the appraiser or investment banker should not give that person an interest in the outcome of the appraisal or of the transaction. It is often preferable to pay the appraiser or investment banker a flat fee regardless of whether the deal goes through, rather than an incentive fee based on the value of the deal struck.

Certain acts of directors, officers, and controlling shareholders are both illegal and unethical, such as the seizing of a corporate opportunity by an officer. Other conduct may be legal yet ethically questionable, such as the payment of greenmail.

Some situations present conflicting ethical concerns. The Delaware Supreme Court has held that the directors must maximize shareholder value, that is, get the best price available, if they decide to sell control of the corporation. Yet a sale to a bust-up artist who will sell the company's assets, or to a union buster, might adversely affect the corporation's other constituencies, such as employees, suppliers, and the community in which the corporation does business.⁷² A manager should try to select a course of action that protects the corporation's constituencies without sacrificing the shareholders' right to the best price. If the management team itself bids for the company, the board may find itself forced to become an auctioneer whose sole goal is to get the best price for the shareholders.

A board of directors can use various defensive measures to prevent a hostile takeover, provided that the measures are reasonable in relation to the threat posed and that the board considers it in the best interests of the company and its

REV. 4 (1999), for a discussion of the legal, economic, and organizational behavioral aspects of directors' consideration of factors other than simply shareholder return when acting on behalf of the corporation.

constituencies for the company to remain independent. Any measures designed to interfere with the shareholder franchise require proof by the directors of a compelling justification.

Similarly, if the board adopts a strategy resulting in a change of control of a corporation, it cannot use defensive tactics such as no-shop provisions (whereby the board agrees not to consider other offers) or large asset or stock

lock-ups to deter competing bidders. In short, if the board agrees to a change of control, it breaches its fiduciary duties if it makes competing offers impossible by adopting a scorched-earth policy that leaves the successful bidder with a depleted target. Although legal counsel will advise managers and directors in this area, a knowledge of the rules of the game is essential to good management.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE Should Mickey Pay Greenmail?

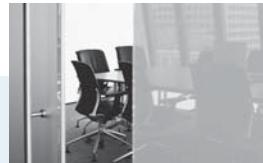

In March 1984, a group headed by Saul Steinberg purchased more than two million shares of stock of Walt Disney Productions, the owner of Disneyland. Disney responded by announcing that it would acquire the Arvida Corporation for \$200 million in newly issued Disney stock and would assume Arvida's \$190 million debt. The Steinberg group countered with a shareholder derivative suit in federal court, seeking to block the Arvida transaction. A shareholder derivative suit is a suit brought on behalf of the corporation by one or more of its shareholders. All of the proceeds of such a suit (less expenses) go to the corporation for the benefit of all of its shareholders.

While the shareholder derivative suit was pending, the Steinberg group proceeded to acquire two million additional shares of Disney stock, increasing its ownership position to approximately 12 percent of the outstanding Disney shares.

On June 8, 1984, the Steinberg group advised Disney's directors of its intention to make a tender offer for 49 percent of the outstanding shares at \$67.50 a share and its intention to later tender for the balance at \$72.50 a share.

Should the Disney directors offer to repurchase all the Disney stock held by the Steinberg group at a premium and to reimburse the estimated cost incurred in preparing the tender offer in return for the Steinberg group's agreement not to purchase any more Disney stock and to drop the Arvida litigation? Is it legal or ethical for the Steinberg group to agree not to oppose a motion to dismiss the Arvida litigation? To sell its shares at a premium not offered to other Disney shareholders?⁷³

INSIDE STORY

THE LONG TWILIGHT OF IMPERIAL CEOs

As a scandal involving the insurance industry unfolded in the fall of 2004, an article in the *Wall Street Journal* commented: "The long twilight of imperial CEOs—who run opaque giants that are granted unquestioning trust from shareholders—finally is coming to an end. True, the imperial CEO is harder to get rid of than Rasputin. But this seems to be it."⁷⁴

On October 14, 2004, New York Attorney General Eliot Spitzer announced a civil suit against Marsh & McLennan

Companies, the largest insurance brokerage firm in the United States. Spitzer charged the company with accepting kickbacks, price-fixing, and bid-rigging that forced corporate clients to pay higher prices for insurance coverage. The company practiced bid-rigging by prompting insurers to submit phony "B" quotes—bids that were too high to win but gave the appearance of competition.⁷⁵ In this way, executives at Marsh ensured that preferred insurers, the ones who paid the highest

commissions, would win lucrative bids from corporate clients. An e-mail written by a Marsh executive to Ace Ltd., an insurer, was indicative of the coercive bid-rigging practice: "I do not want to hear that you are not doing 'B' quotes or we will not bind anything."⁷⁶

Brokers who met volume or profitability targets on business they brought to the insurer were rewarded with contingent commissions, giving the brokers a financial incentive to place a client's business with insurers paying the most generous bonuses.⁷⁷ American International Group (AIG) was one of several firms facing investigation into its potential collaboration with Marsh. Two AIG executives pleaded guilty to illegal activities and agreed to cooperate with investigators against Marsh.

As the charges became public, Marsh's stock price halved, and its directors hastened to respond.⁷⁸ Board directors cooperated fully with the investigation to avoid Spitzer's biggest threat: a criminal indictment against the corporation itself.⁷⁹ Five executives implicated in the wrongdoing, including the chairman and CEO Jeffrey Greenberg, were dismissed. Upon Greenberg's departure, Spitzer announced he would not indict the company but would seek criminal charges against individuals. Michael G. Cherkasky, Marsh's new CEO and Spitzer's former boss, moved to implement a compliance program at Marsh. As part of its compliance effort, the board agreed to waive attorney-client privilege and submit the results of internal investigations to investigators. Cherkasky also ended the practice of offering contingent commissions, which comprised \$843 million or 12 percent of the company's revenue in 2003.⁸⁰

Roughly one year before the Marsh investigation, in August 2003, former SEC Commissioner Richard C. Breeden, corporate monitor of WorldCom during its bankruptcy proceedings, had proposed a series of corporate governance measures designed to prevent a recurrence of the massive fraud that destroyed roughly \$200 billion in shareholder value, put tens of thousands of employees out of work, and wiped out the entire value of stock held in employee retirement accounts as well as the value of accumulated equity-based compensation.⁸¹ According to Breeden, WorldCom's CEO Bernard J. Ebbers "was allowed nearly imperial reign over the affairs of the Company, without the board of directors exercising any apparent restraint on his

actions, even though he did not appear to possess the experience or training to be remotely qualified for his position."⁸² The board allowed "lavish compensation," including more than \$400 million in "loans" to Ebbers, which were unlikely ever to be repaid. It also approved a \$238 million "compensation slush fund" that Ebbers could allocate to favored executives or employees with no standards or supervision. Citing Lord Acton's remark in 1887 that, "power tends to corrupt and absolute power corrupts absolutely," Breeden said that "'backbone' and 'fortitude' may be the most important qualities needed by a director of a public company."

As a condition to emerging from bankruptcy, WorldCom, which is now known as MCI, Inc., was required to convert its articles of incorporation into a governance constitution, which could be changed only with prior shareholder consent. MCI was required to:

- Give a group of shareholders the power to nominate their own candidates for inclusion in the management proxy statement if the group did not agree with the board's proposed candidates.
- Create the position of nonexecutive chair of the board.
- Ban the issuance of stock options without prior shareholder approval.
- Expense both stock options and restricted stock grants on its financial statements.
- Ban a staggered board, set ten-year term limits for directors, and restrict independent directors to a maximum of three boards, including the MCI board.
- Prohibit related-party transactions involving board members.
- Compensate directors solely with cash and require them to utilize not less than 25 percent of those fees to purchase MCI stock, which had to be held until they left the board.
- Have the board of directors meet at least eight times a year, hold an annual strategic review, and attend annual refresher training on topics relating to board responsibilities.
- Limit change-in-control devices, such as poison pills.

As the "Inside Story" in Chapter 14 concerning the lavish compensation given the former CEO of the failing subprime mortgage firm Countryside Mortgage makes clear, it appears that the reports of the demise of the imperial CEO were premature. Congressional Democrats pressed for caps on executive pay as a condition to voting in favor of the Bush administration's \$700 billion bailout of the mortgage-backed securities market. (The bailout and associated regulatory reforms are discussed in more detail in the "Inside Story" in Chapter 22.)

QUESTIONS AND CASE PROBLEMS

1. On September 29, 2008, Citigroup entered into an agreement in principle whereby it agreed to acquire Wachovia's banking subsidiaries for \$2 billion in a deal that would have netted Wachovia's shareholders \$1 per share. The agreement provided that Wachovia's brokerage and asset management businesses would be sold separately and that the federal government would guarantee up to \$35 billion in Wachovia losses. Although Wells Fargo had considered making a bid for Wachovia, it had walked away, leaving Citigroup as the sole bidder. According to Citigroup, "Had an agreement between Citigroup and Wachovia not been reached on September 29, Wachovia would have failed the following day and the debt issued by its holding company would have collapsed with potentially devastating implications for the stability and security of the financial markets." After Congress passed the \$700 billion bailout bill and while Citigroup was finalizing the agreements required to consummate its government-brokered deal, Wachovia announced that it had agreed to sell all of its assets to Wells Fargo for \$15 billion in Wells Fargo stock, netting the Wachovia shareholders \$7 per share. The Wachovia-Wells Fargo deal included a share exchange agreement whereby Wachovia issued preferred stock to Wells Fargo that voted as a single class with Wachovia's common stock and represented 39.9 percent of total voting power. In response, Citigroup sued Wachovia and Wells Fargo for \$20 billion in compensatory and \$40 billion in punitive damages, alleging that Wachovia had breached the exclusivity provision in its agreement with Citigroup and that Wells Fargo had tortiously interfered with Citigroup's contract. Who should prevail? Did Wells Fargo and Wachovia act ethically? [See Steven M. Davidoff, *Wachovia and the Uncertainty Principle*, N. Y. TIMES, Oct. 3, 2008.]
2. Lee Gray was a director, president, and treasurer of HMG/Courtland Properties, Inc. (HMG), a publicly held real estate investment trust, and of its investment adviser Courtland Group, Inc. As such, he negotiated the terms of a joint venture with Norman Fieber, another HMG director, for the development of a portfolio of properties located in the northeastern United States. During the course of the negotiations, Gray told Fieber that Martine Avenue Associates, a general partnership controlled by Gray and his sister, would be interested in co-investing with Fieber as a buyer of an interest in the properties. Neither Gray nor Fieber disclosed that possibility to HMG, but all parties agreed that the negotiated price was fair and reasonable. Martine did ultimately join a group of investors on Fieber's side of the transaction in May 1986, but HMG did not learn of Gray's economic interest in Martine until October 1996. Did either Gray or Fieber violate their fiduciary duties to HMG? [HMG/Courtland Properties, Inc. v. Gray, 749 A.2d 94 (Del. Ch. 1999).]

3. In 1997, General Cigar Holdings Inc., a family-owned business since 1906, went public at an offering price of \$18 per share of class A stock. The founding Cullman family retained control with super-voting class B shares that were entitled to ten votes per share. Share prices for the class A stock rose as high as \$33, but by 1999, they had sunk to \$5.

In 1999, tobacco giant Swedish Match AB offered to discuss acquiring a “significant stake” in General Cigar but indicated that it wanted Edgar Cullman Sr. and Edgar Cullman Jr. to remain in charge. General Cigar’s board of directors formed a special committee of independent directors, which hired legal counsel and an investment bank to conduct a fairness review of any resulting offer. Swedish Match proposed a transaction whereby the public shareholders would be cashed out at \$15.25 per share, Swedish Match would buy one-third of the Cullman family’s equity interest at \$15 per share, and General Cigar would be merged into a Swedish Match subsidiary. As a condition to continuing negotiations, Swedish Match required the Cullmans to enter into a lock-up arrangement or stockholders’ voting agreement providing that if the proposed merger of Swedish Match and General Cigar failed, the Cullmans would not sell their shares in any other merger and would vote against any other merger for the next eighteen months. What legal and ethical considerations should the Cullmans take into account when deciding whether to sign such an agreement? Would it be enforceable if a higher bidder surfaced later?

If the Cullmans did sign such an agreement and the independent committee decided in good faith, after informing itself about the value of General Cigar and unsuccessfully seeking higher bidders, that it was in the best interests of the public shareholders to enter into a merger agreement with Swedish Match, what, if any, nonprice terms would you recommend the board insist on including in the merger agreement? Should the General Cigar board agree to recommend the Swedish Match deal, to put it to a vote of the shareholders, or to use best efforts to consummate it? [*Orman v. Cullman*, 2004 Del. Ch. LEXIS 150 (Del. Ch. Oct. 20, 2004).]

4. Missouri Fidelity Union Trust Life Insurance Company stock was trading at \$2.63 per share. Eight directors sold their shares for \$7.00 per share, conditioned on the resignation of eleven of the fifteen directors of the corporation and the provision that five nominees of the buyer be elected as a majority of the executive and investment committees. Did the directors violate their fiduciary duty? Would the answer be different if the directors had controlled a majority of the voting stock? [*Snyder v. Epstein*, 290 F. Supp. 652 (E.D. Wis. 1968).]

5. The After-School Care Corporation owned more than forty day-care centers specializing in providing care to elementary-school-aged children in the afternoons. The president of the company, Clark Holmes, received a phone call at work one day from Marney Stein, the owner and sole proprietor of Pro Providers, a firm that owned six nursery schools for children aged two to four. Stein indicated that she wanted to sell Pro Providers for \$1 million and asked if After-School was interested. Holmes proposed the sale to the After-School board of directors. The directors were divided on the issue because they were not certain whether branching out into nursery care would be a smart move. As funds were not available, however, they saw no need to vote on the issue at that time.

Holmes decided that he would try to purchase Pro Providers on his own. After securing a loan, Holmes entered into negotiations with Stein. They agreed on a price of \$900,000, and the sale went through. Holmes did not inform the board of his activity until after the sale was completed.

A shareholder is considering suing Holmes for breach of fiduciary duty. Does she have a valid claim? Should it matter whether Holmes plans to expand one of the Pro Provider nursery schools into a nursery/after-school center?

6. The Engulf Corporation is a large media and entertainment conglomerate with its stock trading on the New York Stock Exchange. Engulf is a major producer of films and videos and also publishes several magazines. The company has a shareholder rights plan (that is, a poison pill), which would make any hostile takeover financially prohibitive unless the pill is redeemed by Engulf’s board of directors. On January 10, the Megaclout Corporation, in a move designed to gain control of Engulf, announced a tender offer for 51 percent of Engulf’s shares at \$140, an \$11 premium over the market price.

On January 14, in a meeting that lasted more than thirteen hours, the Engulf board of directors met to consider Megaclout’s offer. Engulf’s lawyers and investment bankers attended and made detailed presentations on the adequacy of the offer. The next day, the directors officially announced that they believed the Megaclout offer was unacceptable for two reasons: (1) the long-term value of the Engulf stock ranged from \$160 to \$170, so \$140 was financially inadequate; and (2) Engulf had a distinct corporate culture that included special ways of doing business, an outstanding record of management–employee relations, and strong support of community projects in the towns in which Engulf businesses were located. Acceptance of Megaclout’s tender offer would pose a direct threat to this corporate culture. For these reasons, the board refused to redeem the poison pill.

- Megacloud brought suit as an Engulf shareholder against the Engulf board of directors, demanding that the board redeem the poison pill, which would allow all the shareholders to decide whether they wanted to accept the offer by tendering their shares.
- a. Must the Engulf board of directors redeem the poison pill at this time?
 - b. The board argues that the offer, which is \$11 over the market price of the stock, is financially inadequate. Is the argument convincing? Why or why not?
 - c. Should managers be concerned about corporate constituencies other than shareholders, such as employees or communities in which businesses are located? What if these different concerns conflict?

7. Shlensky was a minority shareholder of Chicago National League Ball Club, Inc., which owned and operated the Chicago Cubs baseball team. The defendants were directors of the club. Shlensky alleged that since night baseball was first played in 1935, every major league team except the Cubs has scheduled most of its home games at night. This has allegedly been done for the specific purpose of maximizing attendance, thereby maximizing revenue and income.

The Cubs have sustained losses from their direct baseball operations. Shlensky attributed the losses to inadequate attendance at the Cubs' home games, which are played at Wrigley Field. He feels that if the directors continue to refuse to install lights at Wrigley Field and schedule night baseball games, the Cubs will continue to sustain similar losses.

Shlensky further alleged that Philip Wrigley, the president of the corporation, refused to install lights not, as Wrigley claims, for the welfare of the corporation, but because of his personal opinion that "baseball is a daytime

sport." Shlensky charged the other directors with acquiescing in Wrigley's policy.

In his complaint, Shlensky claimed that the directors were acting for reasons contrary to the business interests of the corporation and wasting corporate assets. Have the directors failed to exercise reasonable care in the management of the corporation's affairs? Does the directors' decision fall within the scope of their business judgment? [*Shlensky v. Wrigley*, 237 N.E.2d 776 (Ill. App. Ct. 1968).]

8. McDonald, a potential buyer of financial institutions, visited Halbert at the Tulane Savings and Loan Association. Halbert was president, manager, and chairman of the board, and, along with his wife, the owner of 53 percent of the stock of the association. McDonald asked if the association was for sale. Halbert replied that it was not for sale but that he and his wife would sell their controlling stock for \$1,548 per share. Halbert did not tell the association's board of directors or its shareholders about McDonald's interest in acquiring the association.

In addition to agreeing to sell his stock, Halbert also agreed to cause the association to withhold the payment of dividends. After Halbert's shares were purchased, Halbert, who had not yet relinquished his corporate offices, helped McDonald solicit the minority shareholders' shares and even advised them that, because McDonald was going to withhold dividends for ten to twenty years, they ought to take his offer of \$300 per share. McDonald bought some of the minority shares at \$300 and others for between \$611 and \$650.

Did Halbert owe the minority shareholders a fiduciary duty? If so, what was his duty in selling his minority stock position? Was his conduct ethical? [*Brown v. Halbert*, 76 Cal. Rptr. 781 (Cal. App. Ct. 1969).]

CHAPTER 22

PUBLIC AND PRIVATE OFFERINGS OF SECURITIES

INTRODUCTION

Raising Capital Through Securities Offerings

Most businesses reach a certain point at which the founders' initial capital investment and ongoing bank loans are insufficient for continued growth. At this juncture, the directors and managers of the company must decide whether to rein in the company's growth consistent with its existing capital asset base or to sell an interest in the company to raise capital for continued expansion. Although entrepreneurs often turn first to family, friends, and wealthy individual investors (*angels*), and then to venture capitalists, many companies will eventually seek to raise capital through an initial public offering of the company's shares. Even those companies that can internally generate the cash flow for growth may decide to sell securities to spread the concentration of risk in the business venture and to give the founders, early investors, and venture capitalists liquidity and an exit vehicle.

Because registered public offerings are very expensive (usually costing more than \$1 million in out-of-pocket expenses alone), sales of securities to private investors or venture capitalists are almost always structured to be exempt from the federal registration requirements. Whether the directors and managers of a company seek an exemption or go through the public offering process, they must understand and comply with federal and state securities laws. Ignorance of these laws is no excuse. As Judge Frank Easterbrook put it, "No one with half a brain can offer an opportunity to invest in our company without knowing that there is a regulatory jungle out there."¹

1. Mueller v. Sullivan, 141 F.3d 1232 (7th Cir. 1998).

CHAPTER OVERVIEW

This chapter first provides an overview of the federal and state statutory schemes that regulate the offer and sale of securities. It then defines the key terms "security," "offer," and "sale" under the Securities Act of 1933 (the 1933 Act). Next, we describe the public offering process, including the registration of securities, the role of an underwriter, the importance of due diligence, and the preparation of the registration statement. The chapter then discusses several of the most relied-on exemptions from registration for offerings by the issuer, including the private offering and exemptions under SEC Regulation D.

We go on to outline the exemptions for secondary offerings by shareholders, the restrictions on the resale of registered and unregistered securities, offerings outside the United States under Regulation S, and sales to qualified institutional buyers under Rule 144A. The periodic reporting and certain other requirements under the Securities Exchange Act of 1934 (the 1934 Act) are also identified. We look at liability for failure to meet the registration and prospectus-delivery requirements under Section 12(a)(1) of the 1933 Act and then discuss liability for misstatements or omissions in the registration statement. Our discussion focuses first on Section 11 of the 1933 Act, under which issuers are strictly liable for misstatements or omissions in a registration statement and certain officers, all directors, accountants, and underwriters are liable if they fail to act with due diligence. We then turn to Section 12(a)(2) of the 1933 Act, which provides a remedy for any person who purchases a security in a registered or

unregistered public offering by means of a misleading prospectus or oral communication. The broader antifraud provisions contained in Section 10(b) of the 1934 Act and Rule 10b-5 (which apply to both registered and exempt offerings of securities) and the prohibitions against selective disclosure in Regulation FD are discussed in Chapter 23. This chapter concludes with a description of the Emergency Economic Stabilization Act of 2008.

THE FEDERAL STATUTORY SCHEME

The two principal federal acts that regulate securities transactions and issuers, the Securities Act of 1933 and the Securities Exchange Act of 1934, were adopted during the depths of the Great Depression. Both acts have been amended numerous times since their adoption. The federal securities laws embody three beliefs: (1) investors should be provided with all essential information prior to investing in speculative ventures, (2) corporate insiders should not be allowed to abuse their position and use nonpublic information concerning their companies to their own financial advantage, and (3) misled investors should receive adequate relief even in the absence

of common law fraud. As discussed in the “Inside Story” in this chapter, the market turmoil in 2008 that led to the most extensive federal intervention in the financial markets since the Great Depression prompted renewed calls for a major overhaul of the federal regulations governing the securities, banking, and insurance industries.²

THE 1933 ACT

In adopting the 1933 Act, the U.S. Congress sought to ensure that investors would receive adequate disclosure of material information about the issuer and its business and the offering. The Act requires that promoters of securities offerings register them with the Securities and Exchange Commission (SEC), an agency of the U.S. government, and provide prospective purchasers with a prospectus containing material information about the issuer and the offering, unless the security or the type of transaction is exempt from registration.

Congress rejected suggestions that it also regulate the terms or quality of securities offerings. As a result, investors are not protected from making highly speculative or foolish investments. The 1933 Act requires only that they be advised of all material facts before they invest their money.

2. Nick Timiraos, Elizabeth Holmes & Michael M. Phillips, *Candidates Promise Broad Changes for Wall Street*, WALL ST. J., Sept. 17, 2008, at A4.

Historical PERSPECTIVE

Genesis of the 1933 Act

After the stock market crash of 1929, distrust of the nation's financial markets was widespread. Regulations governing securities offerings in the United States stem from the public and governmental outrage at the markets' excesses. According to Representative (later Speaker of the House) Sam Rayburn:

Millions of citizens have been swindled into exchanging their savings for worthless stocks. The fraudulent promoter has taken an incredible toll from confiding people....

These hired officials of our great corporations who permitted, who promoted, who achieved the extravagant expansion of the financial structure of their respective companies today present a pitiable spectacle. Five years ago they arrogated to themselves the greatest privileges. They scorned the interference of the Government. They dealt with their stockholders in the most arbitrary fashion. They called upon the people to bow down to them as the real rulers of the country. Safe from the pitiless publicity of Government supervision, unrestrained by Federal statute, free from any

formal control, these few men, proud, arrogant, and blind, drove the country to financial ruin. Some of them are fugitives from justice in foreign lands; some of them have committed suicide; some of them are under indictment; some of them are in prison; all of them are in terror of the consequences of their own deeds.^a

a. House Consideration, Amendment and Passage of H.R. 5480, May 5, 1932, 77 CONG. REC. 2910, 2918 (1933), reprinted in 1 FEDERAL SECURITIES LAWS: LEGISLATIVE HISTORY, 1933–1982, at 2948 (1983).

EXHIBIT 22.1

Selected Sections of the 1933 and 1934 Acts

1933 Act

- *Section 2*—defines terms, including security, offer, sale, and underwriter.
- *Sections 3 and 4*—list exempt securities and describe exempt transactions.
- *Section 5*—requires the registration of all securities offered and sold in the United States (unless an exemption from registration is available) and the delivery of a prospectus.
- *Sections 6–8 and 10*—outline the general procedures of the registration process and detail the guidelines for the registration statement and the accompanying prospectus.
- *Sections 11 and 12*—describe the penalties, elements of liability, damages, and parties held liable for violation of the 1933 Act.

1934 Act

- *Section 10*—prohibits the use of manipulative and deceptive devices in connection with the purchase or sale of registered or unregistered securities.
- *Section 12*—lists the reporting requirements for registered public companies.
- *Section 16*—provides the reporting requirements for insiders (including directors, officers, and principal shareholders) and limits certain insider transactions.

In addition to requiring registration, the 1933 Act expressly creates private rights of action for certain violations of its provisions. This means that in addition to public enforcement by the SEC or criminal proceedings by the U.S. Attorney's Office, any investor can bring a private suit for damages.

THE 1934 ACT

The 1934 Act sought to build upon the 1933 Act by implementing a policy of continuous disclosure. Companies of a certain size and with a certain number of shareholders or whose stock is traded on a national securities exchange are required to file periodic reports with the SEC. The 1934 Act also contains stringent antifraud provisions and implements filing requirements for insiders dealing in their own company's stock. In addition, the 1934 Act established a framework for the self-regulation of the securities industry under the ultimate supervision of the SEC.

Exhibit 22.1 briefly describes the main sections of the 1933 and 1934 Acts. More detailed excerpts from both acts and the SEC regulations adopted thereunder can be found in Appendices G and H of this book.

PRIVATE SECURITIES LITIGATION REFORM ACT OF 1995

As discussed in more detail in Chapter 23, the Private Securities Litigation Reform Act of 1995 (the Litigation Reform Act)³ amended the 1933 and 1934 Acts to add a variety of

procedural provisions designed to correct perceived abuses in private securities litigation that increased the cost of raising capital and chilled corporate disclosure to investors. To prevent "fishing expedition" lawsuits, the Act provides that, except in extraordinary circumstances, courts must stay discovery pending a ruling on a motion to dismiss the complaint.⁴ To reduce the number of frivolous suits, the Act imposed stricter and uniform pleading requirements that require investors to specify in the complaint each statement alleged to be misleading and the reason or reasons the statement is misleading. The plaintiffs also must plead and then prove that the misstatement or omission alleged in the complaint actually caused their loss. They must also specifically allege facts giving rise to a "strong inference" that the defendant acted with the required state of mind. The combination of the stricter pleading requirements and the staying of discovery pending a decision on a motion to dismiss makes it more likely that defendants will be able to resolve frivolous claims more quickly and cheaply by winning motions to dismiss before incurring the time and expense of extensive discovery.

Rule 11 of the Federal Rules of Civil Procedure, which is designed to deter bad faith claims, provides for sanctions against an attorney who signs a complaint that the attorney does not reasonably believe has merit. The Litigation Reform Act gave Rule 11 new teeth by requiring courts to

4. The Delaware Court of Chancery permitted a shareholder of a company defending a federal securities lawsuit to obtain access to corporate records and documents pursuant to Section 220 of the Delaware Corporation Law even though the shareholder might be part of the class ultimately certified to sue the corporation. *Romero v. Career Educ. Corp.*, 2005 Del. Ch. LEXIS 112 (Del. Ch. July 19, 2005).

3. Pub. L. No. 104-67, 109 Stat. 737 (1995) (codified in scattered sections of 15 U.S.C.).

include in the record, at the conclusion of the action, specific findings as to whether all parties and all attorneys complied with each requirement of Rule 11(b). If the action was brought for an improper purpose, was not warranted by existing law, was legally frivolous, or was not supported by facts, then the Act creates a presumption that the appropriate sanction is an award to the prevailing party of all attorneys' fees and costs incurred in the case.

The Act also introduced the idea that the "most adequate plaintiff" should be the lead plaintiff and select counsel to represent the class. There is a rebuttable presumption that the plaintiff with the largest financial interest in the relief being sought by the class is the most adequate.

SECURITIES LITIGATION UNIFORM STANDARDS ACT OF 1998

The Securities Litigation Uniform Standards Act of 1998⁵ requires the removal of securities fraud cases from state to federal court in many circumstances. Parallel proceedings had become more prevalent after the passage of the Litigation Reform Act because most state laws do not provide companies and their officers and directors the protections afforded by that act. Only state securities cases that are not class actions and do not involve more than fifty plaintiffs can be tried in state court. Congress's goal was to create national standards for fraud cases brought against companies traded on the national securities exchanges (such as the New York Stock Exchange and the Nasdaq stock market). The so-called *Delaware carve-out* permits shareholders to bring a state law class-action suit against a corporation and its directors for breach of preexisting common law fiduciary disclosure obligations.

SARBANES-OXLEY ACT OF 2002

In the wake of Enron's collapse, Congress hastily, and by an impressive margin (99–0 in the Senate and 423–3 in the House), passed the most sweeping securities legislation since the 1934 Act. The Sarbanes–Oxley Act of 2002⁶ (SOX) contains eleven titles, which attempt to eradicate specific problems that Congress believed caused numerous corporate debacles around the turn of the millennium.

SOX created the Public Company Accounting Oversight Board (PCAOB) to regulate and inspect the public accounting firms that provide audit reports for publicly traded companies that are (1) registered under Section 12 of the 1934 Act, (2) required to file reports under Section 15(d) of that

act, or (3) have filed a registration statement under the 1933 Act. The PCAOB also has the authority to set auditing standards for public company audits and to adjudicate issues related thereto.

In an attempt to mitigate the conflicts of interest present when accounting firms provide auditing services to corporate clients for whom they also do consulting, tax planning, or other accounting work, SOX prohibits the provision of nonaudit services to audit clients in all but very limited circumstances (see Appendix K). It also makes it illegal for any person to attempt to improperly influence the auditors.

In the most sweeping federal regulation of corporate governance to date, SOX and the regulations adopted by the SEC thereunder:

- Mandated the composition and authority of audit committees at public companies.
- Required corporations to disclose whether they have a financial expert on their audit committee.
- Prohibited personal loans to executives and members of the board of directors.
- Gave the SEC the authority to order CEOs and CFOs to forfeit certain bonuses and profits if their employer is required to restate its financial statements due to material noncompliance with securities laws.
- Generally prohibited insiders from trading during pension fund blackout periods.
- Required corporations to disclose whether they have a code of ethics applicable to senior financial officers and, if not, to disclose why not.
- Empowers the SEC to indefinitely restrict "unfit" persons from serving as officers or directors of a public company.
- Required management to maintain internal controls to facilitate accurate financial reporting and disclosure and to have the adequacy of those controls certified by the auditors.

Sarbanes–Oxley also:

- Mandated enhanced financial disclosures in periodic reports.
- Provided for enhanced SEC review of periodic reports.
- Mandated additional disclosures of transactions involving directors, officers, and principal stockholders.
- Required more rapid disclosure of material changes in a reporting company's financial conditions or operations on Form 8-K.
- Required CEOs and CFOs to certify the accuracy and completeness of SEC periodic reports, including the financial statements contained therein.

5. 15 U.S.C. § 77p(d).

6. Pub. L. No. 107-204, 116 Stat. 745 (codified in scattered sections of 15, 18, 28 & 29 U.S.C.).

In an effort to reduce securities analysts' conflicts of interest, SOX created new, severe criminal penalties for those who defraud shareholders of publicly held corporations. It extended the statute of limitations on certain actions brought by defrauded investors, and it provided that debts incurred from judgments or settlements relating to securities fraud are nondischargeable in bankruptcy. SOX also required that auditors retain records relevant to financial audits for seven years after the completion of the audit.

SOX increased maximum fines for securities and mail and wire fraud by tens of millions of dollars and increased the maximum duration of imprisonment by as much as ten-fold. SOX created stiff criminal penalties (as much as twenty years' imprisonment and a \$5 million fine) for officers who certify noncompliant financial reports, with similarly severe penalties for tampering with records relevant to an official proceeding or otherwise impeding such a proceeding. The Act strongly urged CEOs to sign federal income tax returns.

As noted in Chapter 12, two sections of SOX protect whistleblowers and informants. Discriminating against or discharging an informant was made a criminal offense punishable by a substantial fine or imprisonment for as long as ten years, or both.

SEC RULES AND REGULATIONS

Since Congress enacted the 1934 Act, the SEC has used its power as an administrative agency to adopt a number of rules and regulations. The SEC uses these rules and regulations to address some of the ambiguity of the securities acts, make case-specific exemptions, carry out informal discretionary actions, and conduct investigations regarding compliance with the securities acts.

For instance, in 1972, the SEC adopted Rule 144 to clarify when investors can sell stock not acquired in a registered offering (*restricted stock*) without being deemed an "underwriter." In 1982, the SEC adopted Regulation D with rules that outlined the requirements and limitations for exempt private offerings and offerings by small businesses. Subsequently, it adopted Rule 701 to exempt offers and sales of securities pursuant to employee benefit plans. Regulation A was revised to make it easier for small businesses to raise capital without going through a registered offering.

INTERNATIONAL SNAPSHOT

On most U.S. stock exchanges, foreign securities are traded in the form of American Depository Receipts (ADRs). The securities themselves are held by a financial institution called a depository, which issues the ADRs traded by foreign investors and handles any foreign-exchange transactions. This structure allows the foreign securities to trade at a per-share price level customary in the U.S. market. In addition, it allows investors to trade interests in foreign securities in compliance with U.S. clearance and settlement requirements.

lots in the blue sky in fee simple.”⁷ An issuer selling securities must comply not only with the federal securities laws but also with the securities laws of all of the states in which the securities are offered or sold. This usually includes the state where the issuer is headquartered, the state from which any offering materials are dispatched or where any oral offers are made, the state where the offerees have their domicile, and the state to which offering materials are sent.

Fortunately, many states, the District of Columbia, and Puerto Rico have adopted the Uniform Securities Act, so there is some consistency among state laws. Other states, including New York and California, have retained their own versions of securities regulatory schemes. As explained in Chapter 15, in some respects the state laws are stricter than their federal counterparts.

Like the federal statutes, the Uniform Securities Act emphasizes disclosure as the primary means of protecting investors. Some states, however, authorize the securities administrator to deny a securities selling permit unless he or she finds that the issuer's plan of business and the proposed issuance of securities are fair, just, and equitable. Even if the state statute does not specifically include this provision, a state securities commissioner can usually deny registration or qualification to sell in that state until he or she is satisfied that the offering is fair. This process is referred to as *merit review*.

Congress passed the Capital Markets Efficiency Act of 1996⁸ in part to provide more uniformity between federal and state securities regulation. The Act precludes states from requiring pre-offer and pre-sale notice filings and from imposing merit review requirements in connection with offerings pursuant to Rule 506 under Regulation D. States may require only the type of filing required by the SEC (including any amendments), a consent to service of process, and a filing fee. The law similarly preempted state

7. SEC v. Edwards, 540 U.S. 389 (2004).

8. Pub. L. No. 104-290, 110 Stat. 3416 (1996).

STATE BLUE SKY LAWS

In addition to the federal securities laws, state statutes called *blue sky laws* also regulate offerings and sales of securities. These laws were the precursors to federal securities regulation and were "aimed at promoters who 'would sell building

registration requirements and merit review in connection with most initial public offerings registered with the SEC. It also provided federal preemption for the issuance of securities to “qualified purchasers.” The SEC has proposed that the definition of “qualified purchasers” be the same as the one for “accredited investors” under Regulation D.

DEFINITION OF TERMS

It is necessary to define three basic terms used in the 1933 Act—security, offer, and sale. Their meanings in a securities law context may be different from their everyday meanings.

SECURITY

The term *security* for purposes of the 1933 Act—and most other securities statutes—is much broader than the common conception of the term. Section 2(1) of the 1933 Act defines a security as:

any note, stock, treasury stock, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, collateral-trust certificate, pre-organization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, fractional undivided interest in oil, gas, or other mineral rights, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or, in general, any interest or instrument commonly known as a “security,” or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing.

Because “security” is defined so broadly, the circumstances of a particular transaction must be analyzed to

determine whether it does, in fact, involve a security and is subject to regulation. Certain investments that are commonly agreed to be securities include the stock and bonds of public and private companies. In *Landreth Timber Co. v. Landreth*,⁹ the U.S. Supreme Court held that the sale of a business through a stock transaction is a securities transaction if the stock sold possesses all of the characteristics traditionally associated with common stock. This is the case even though the success of the venture going forward depends on the efforts of the buyer, not the seller.

Yet some investments, which by their name fall into the definition of securities, are not necessarily considered securities. An example is the stock in a cooperative association owning an apartment building; an occupant of the building owns shares of stock that are inextricably linked to the lease of a particular unit of the building. In *United Housing Foundation v. Forman*,¹⁰ the U.S. Supreme Court held that because the dwelling was used as a place of habitation, the inducement to purchase was solely to acquire living space and not to invest for profit. Consequently, the Court ruled that the shares of stock were not securities under the 1933 Act.

Investment Contract

An investment may be characterized as a security even if it involves the transfer of an interest in real property or another physical asset. Any transaction that involves an investment of money in a common enterprise with profits to come solely from the efforts of others is deemed to be an *investment contract* and thus a security. This test was first enunciated in *SEC v. W.J. Howey Co.*¹¹ The U.S. Supreme Court held that the offer and sale of parcels of land bearing citrus trees, coupled with optional management contracts pursuant to which the promoter cared for the trees, constituted an investment contract and hence a security under Section 2(1) of the 1933 Act. The following case further elaborated on this test.

9. 471 U.S. 681 (1985).

10. 421 U.S. 837 (1975).

11. 328 U.S. 293 (1946).

A CASE IN POINT

CASE 22.1

SEC v. EDWARDS

SUPREME COURT OF THE
UNITED STATES
540 U.S. 389 (2004).

IN THE LANGUAGE OF THE COURT

FACTS Charles Edwards was the chair, CEO, and sole shareholder of ETS Payphones, Inc. Acting partly through a subsidiary also controlled by Edwards, ETS sold payphones to the public. The payphones were offered in a variety of packages, but virtually all purchasers chose a package that included a site lease, a five-year leaseback and management agreement, and a buyback agreement, at a total cost of around \$7,000. ETS guaranteed \$82 per month (a 14 percent annual return) to purchasers under the leaseback and management agreement. ETS also promised to refund the

CONTINUED

full purchase price of the package at the end of the lease or within 180 days of the purchaser's request.

ETS boasted in its brochure that "[v]ery few business opportunities can offer the potential for ongoing revenue generation that is available in today's pay telephone industry." Unfortunately, the payphones did not generate enough revenue for ETS to make its payments to purchasers under the leaseback agreements. ETS was forced to rely on funds from new investors to meet its obligations, and in 2000, the company filed for bankruptcy.

The SEC brought an action alleging that Edwards and ETS had sold securities in violation of various provisions of the 1933 and 1934 Acts. Edwards argued that schemes offering a fixed rate of return are not investment contracts because (1) they do not give the purchasers capital appreciation or the earnings of the enterprise and (2) the return is not "derived solely from the efforts of others," because the purchasers have a contractual entitlement to the return.

ISSUE PRESENTED For purposes of the federal securities laws, does a moneymaking scheme fall outside the definition of an investment contract simply because the promised rate of return is fixed rather than variable?

OPINION O'CONNOR, J., writing on behalf of a unanimous U.S. Supreme Court:

"Congress' purpose in enacting the securities laws was to regulate investments, in whatever form they are made and by whatever name they are called." To that end, it enacted a broad definition of "security," sufficient "to encompass virtually any instrument that might be sold as an investment."

...

The test for whether a particular scheme is an investment contract was established in our decision in *SEC v. W.J. Howey Co.* We look to "whether the scheme involves an investment of money in a common enterprise with profits to come solely from the efforts of others." This definition "embodies a flexible rather than a static principle, one that is capable of adaptation to meet the countless and variable schemes devised by those who seek the use of the money of others on the promise of profits."

In reaching that result, we first observed that when Congress included "investment contract" in the definition of security, it "was using a term the meaning of which had been crystallized" by state courts' interpretation of their "blue sky" laws. . . . Thus, when we held that "profits" must "come solely from the efforts of others," we were speaking of the profits that investors seek on their investment, not the profits of the scheme in which they invest. We used "profits" in the sense of income or return, to include, for example, dividends, other periodic payments, or the increased value of the investment.

There is no reason to distinguish between promises of fixed returns and promises of variable returns for purposes of the test, so understood. In both cases, the investing public is attracted by representations of investment income, as purchasers were in this case by ETS' invitation to "watch the profits add up." Moreover, investments pitched as low-risk (such as those offering a "guaranteed" fixed return) are particularly attractive to individuals more vulnerable to investment fraud, including older and less sophisticated investors. Under the reading respondent advances, unscrupulous investments could evade the securities laws by picking a rate of return to promise. We will not read into the securities laws a limitation not compelled by the language that would so undermine the laws' purposes.

...

The Eleventh Circuit's perfunctory alternative holding, that respondent's scheme falls outside the definition because purchasers had a contractual entitlement to a return, is incorrect and

CONTINUED

inconsistent with our precedent. We are considering investment contracts. The fact that investors have bargained for a return on their investment does not mean that the return is not also expected to come solely from the efforts of others.

RESULT Edwards and ETS had offered and sold securities.

CRITICAL THINKING QUESTIONS

1. Why was the Supreme Court unwilling to exclude contracts guaranteeing a fixed rate of return from the definition of security?
2. Are mortgage notes, sold with a package of management services and a promise to repurchase the notes in the event of default, securities?

There is a split in the circuits as to whether the “common enterprise” element of the *Howey* test can be met simply by showing “vertical commonality” between the promoter and the investor or whether there must be “horizontal commonality,” that is, multiple investors who pool their funds and receive a pro rata share of the profits or buy very similar assets that are managed jointly.¹² The majority view is that horizontal commonality is required. A number of states, for purposes of their blue sky laws, define the term “investment contract” more broadly than the federal definition¹³ and do not require commonality or sole reliance on the efforts of others.

Federal courts have also relaxed the sole reliance requirement. Although the *Howey* test required that the investor rely solely on the efforts of others for the expectation of profits, subsequent federal decisions have established that, under certain circumstances, there can be an investment contract, and thus a security, even if the investor participates in the generation of profits.¹⁴ For example, an interest in a general partnership is generally held not to be a security because each partner by law has the right to exercise control in the operation of the partnership. But the courts have found a general partnership interest to be a security if it meets any of the following three tests:

1. **The partnership agreement leaves so little power to the partners that the arrangement is tantamount to a limited partnership.**
2. **The investor is so inexperienced in business affairs that he or she is incapable of intelligently exercising his or her partnership powers.**

3. **The investor is so dependent on the unique management ability of the promoter or manager that he or she cannot replace the manager or exercise meaningful partnership powers.¹⁵**

A limited partnership interest is almost always held to constitute a security because the limited partners, to protect their limited liability, are prohibited by law from taking part in the control of the partnership business. An interest in real estate is not in itself considered a security, though it may be a security if it is combined with a management contract, as in *Howey*.

The SEC and at least thirty-five state securities regulators have taken the position that interests in a limited liability company (LLC) are securities. Regulators base their conclusion on either of two theories: LLC interests constitute an investment contract under *Howey*, or they have all the characteristics of stock. Nonetheless, the U.S. Court of Appeals for the Fourth Circuit ruled that an equity interest in an LLC was not a security.¹⁶ The court reasoned that the interest held by Robinson, a member of the LLC, was not an investment contract because he held 33,333 of the company’s 133,333 shares, was treasurer of the company, took a seat on the board of managers, had the right to appoint two of the seven members of the board of managers, and was a member of the company’s executive committee. As a result, Robinson was able to exercise control over his investment. The Fourth Circuit also rejected Robinson’s argument that the membership certificates had all the characteristics of stock. The LLC members did not have a right to receive dividends based on their equity percentage

12. See SEC v. Unique Fin. Concepts, Inc., 196 F.3d 1195 (11th Cir. 1999) (vertical commonality sufficient) and the cases cited therein.

13. See, e.g., King v. Pope, 91 S.W.3d 314, 321 (Tenn. 2002).

14. SEC v. Glenn W. Turner Enters., Inc., 474 F.2d 476 (9th Cir. 1973), cert. denied, 414 U.S. 821 (1973).

15. The test to determine whether a general partnership constitutes a security was set forth in *Williamson v. Tucker*, 645 F.2d 404 (5th Cir. 1981), cert. denied, 454 U.S. 897 (1981), and later applied in *Holden v. Hagopian*, 978 F.2d 1115 (9th Cir. 1992).

16. *Robinson v. Glynn*, 349 F.3d 166 (4th Cir. 2003).

as common shareholders typically do. Instead, Robinson received 100 percent of the LLC's net profits up to a certain amount, after which the funds were distributed pro rata to all equityholders. Common stock is typically negotiable, but Robinson's interest was not. Apparently, there was also some dispute as to whether Robinson's interest retained any voting rights if transferred. Because it was not an investment contract and did not have all the characteristics of stock, Robinson's LLC interest did not qualify as a security. As of 2008, the U.S. Supreme Court had not ruled on this issue.

Family Resemblance Test

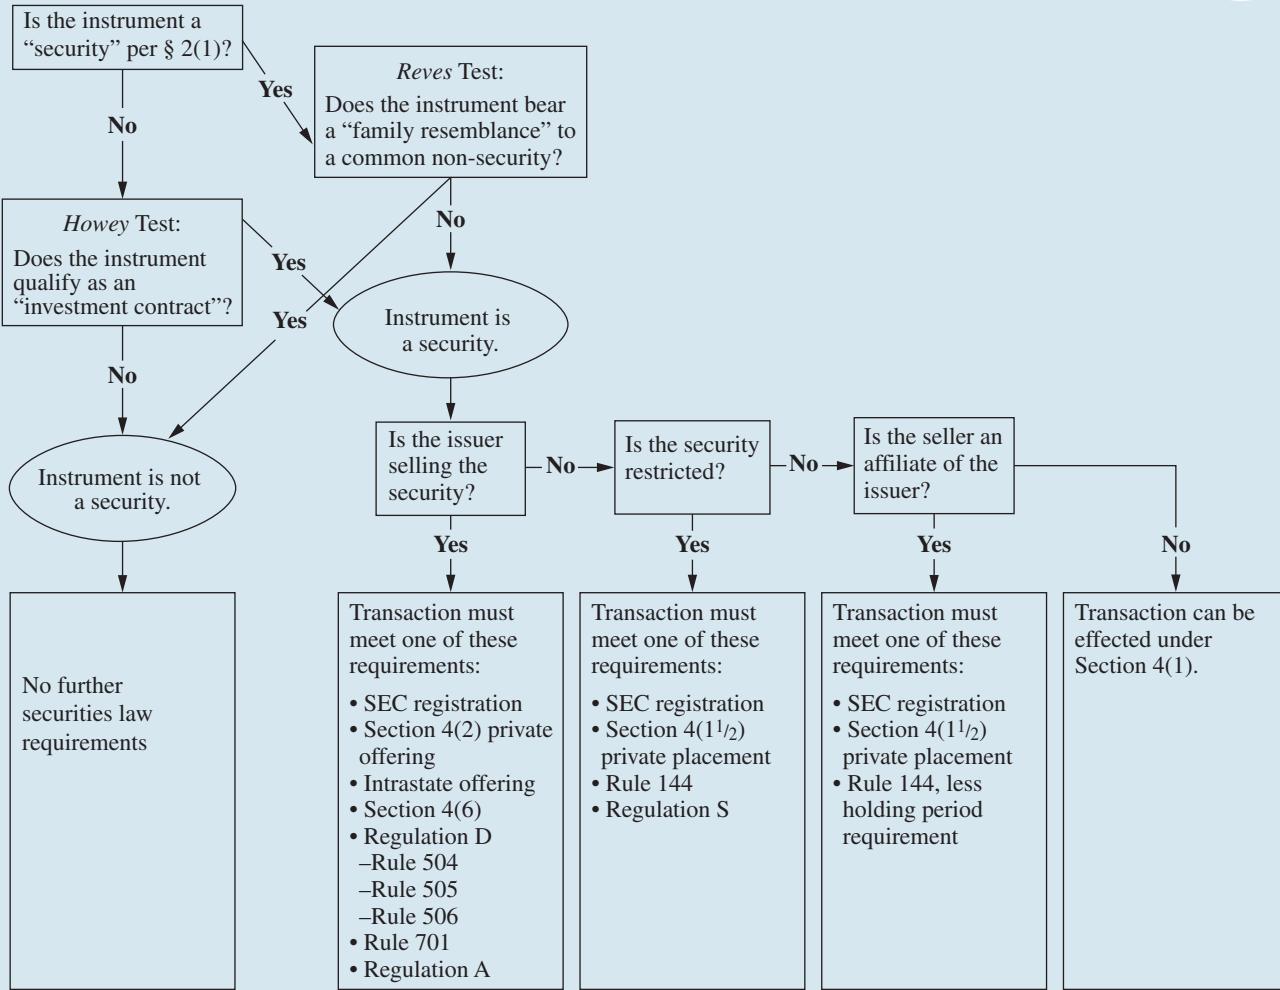

Promissory notes and other evidences of indebtedness may or may not constitute a security, depending on the factual context. In *Reves v. Ernst & Young*,¹⁷ the U.S. Supreme Court set forth the *family resemblance test* for determining which types of notes are securities. Under this test, a promissory note is initially presumed to be a security based upon the literal language of the securities acts ("The

17. 494 U.S. 56 (1990).

IN BRIEF

Decision Tree Analysis of Securities Registration Requirements

Source: This decision tree was created by John Lee based on information provided by Constance E. Bagley.

term ‘security’ means any note . . .”). This presumption may be rebutted, however, by a showing that the note bears a “strong resemblance” (in terms of four specific factors) to an enumerated category of instruments commonly held not to constitute securities, such as notes delivered in connection with consumer financing, notes secured by a home mortgage, and short-term notes secured by accounts receivable. The four specific factors used in evaluating an instrument are:

1. The motivations that would prompt a reasonable seller and buyer to enter into the transaction.
2. The plan of distribution of the instrument.
3. The reasonable expectations of the investing public.
4. Whether some factor, such as the existence of another regulatory scheme, significantly reduces the risk of the instrument, thereby rendering application of the federal securities laws unnecessary.

The “In Brief” on the previous page provides a decision tree for determining whether an instrument is a security and for analyzing the securities registration requirements.

OFFER

Section 2(3) of the 1933 Act defines an *offer* as “every attempt or offer to dispose of, or solicitation of an offer to buy, a security or interest in a security, for value.” This definition is much broader than that in contract law. An offer that is unacceptably vague for contract law purposes may still constitute an offer for federal securities law purposes. Section 2(3) expressly provides, however, that preliminary negotiations or agreements between an issuer and an underwriter or among underwriters do not constitute an offer to sell.

SALE

A *sale* is defined by Section 2(3) to include “every contract of sale or disposition of a security or interest in a security, for value.” The crucial term in this definition is *value*. The courts have defined “value” very broadly—more broadly, for example, than in state corporation statutes, which require that stock can be issued only for “value” in the form of cash, property, or compensation for past services.

REGISTERED OFFERINGS

Once it is determined that an investment offering does, in fact, involve a security, the issue of registration must be addressed.

REGISTRATION OF SECURITIES OFFERINGS

Section 5 of the 1933 Act requires the registration of all offers and sales of securities in the United States, unless an exemption from registration is available. Section 5 can be summarized as follows.

1. Section 5(a) prohibits the sale of a nonexempt security before a registration statement has been filed with the SEC except pursuant to an applicable exemption. The *registration statement* consists of filing forms, the *prospectus*—the disclosure document that an issuer of securities provides to prospective purchasers—and certain exhibits. Except in the case of certain seasoned public companies (as defined below), Section 5(c) prohibits any offer to sell or buy a nonexempt security before the registration statement is filed.
2. During the waiting period between the filing of the registration statement and the date the registration statement becomes effective with the SEC, written and oral offers to sell the security may be made, but all written offers (except those made by certain large publicly traded companies, as discussed below) must either be made pursuant to a prospectus meeting the requirements of Section 10 (a *statutory prospectus*) or be accompanied or preceded by a statutory prospectus.
3. Once the registration statement becomes effective with the SEC (referred to as *going effective*), sales of securities may be consummated, but (again, except in the case of certain large issuers) any written offer or sale of a security made within forty days after the registration statement is declared effective must be preceded or accompanied by a statutory prospectus.

In general, every public offering of nonexempt securities must be registered with the SEC. The registration requirement is designed to ensure that certain information is filed with the SEC and distributed to potential investors by means of a prospectus. Unlike certain state securities authorities, the SEC does not have the statutory authority to approve or disapprove an offering on its merits. Instead, the registration process is designed to ensure that the information provided to investors is accurate and complete. The general procedures to be followed in the registration process are found in Sections 6 and 8 of the 1933 Act.

An initial public offering (IPO) is an expensive and time-consuming effort that typically takes at least twelve to sixteen weeks from start to finish.¹⁸ Securities lawyers,

18. The process of doing an initial public offering is discussed in detail in CONSTANCE E. BAGLEY & CRAIG E. DAUCHY, THE ENTREPRENEUR’S GUIDE TO BUSINESS LAW 660–728 (3d ed. 2008).

independent accountants, investment bankers, and a printer all become involved in the process.

A principal advantage of registering a securities offering with the SEC is that the registered securities are non-restricted and may be traded relatively freely in a *secondary offering*, that is, a subsequent offering by a person other than the issuer. Secondary offerings must either be registered with the SEC or be exempt from registration. As discussed further below, Section 4(1), the most frequently used exemption for secondary offerings, permits nonaffiliates to sell nonrestricted securities without registration, regardless of the size of the offering or the number of offerees. (*Affiliates* include officers, directors, and controlling shareholders. The SEC has a rebuttable presumption that any shareholder owning 10 percent or more of the issuer's stock is an affiliate.)

THE ROLE OF THE UNDERWRITERS

A public offering of securities is typically, though not necessarily, underwritten by one or more investment banking firms.

Firm Commitment Underwriting

In a *firm commitment underwriting*, the underwriters agree to purchase the entire offering, thus effectively shifting the risk of the offering from the issuer to the underwriters. The lead underwriter is responsible for negotiating with the issuer the terms of the offering and compensation and for putting together an underwriting group (the *syndicate*). Each member of the underwriting group agrees to purchase a certain number of securities once the offering is declared effective by the SEC.

In theory, such a commitment places the underwriters in a risky position. In practice, the lead underwriters will not go forward with the offering unless they have tentative offers from buyers for as much as five to ten times the number of shares being offered. Accordingly, the underwriting agreement between the issuer and the lead underwriter (as the representative of the underwriting group) and the agreements among the members of the underwriting group are typically not signed until immediately before the offering is declared effective by the SEC. The price at which the securities will be offered and the underwriters' commission are usually not formally determined until the evening before the offering goes effective.

Once the offering becomes effective, the underwriters attempt to sell the securities that they are obligated to purchase. Most firm underwriting agreements are of short duration. Usually, the sale closes within two business days

after the agreement is signed. As of the closing date, the underwriters are obligated to purchase any securities that remain unsold.

Because a firm commitment underwriting will provide the issuer with a predetermined amount of money within a specified period, it is attractive to issuers. A firm commitment underwriting is also attractive to investors because it implies that the underwriters themselves are willing to take a risk on the offering. Because it places the members of the underwriting group at risk for the amount of the offering, broker-dealers and investment bankers will usually agree to a firm underwriting only if they are certain that they will be able to sell the offered securities quickly. Such certainty will depend upon a variety of factors, including the amount of money being sought, the performance and prospects of the company, whether the company is seasoned or relatively new, and the condition of the public securities market.

Best-Efforts Underwriting

In a *best-efforts underwriting*, the underwriters do not agree to purchase the securities being offered. Instead, they agree to use their best efforts to find buyers at an agreed-on price. Best-efforts underwritings are often used for IPOs or for companies that are unseasoned.

A best-efforts offering leaves the risks of the offering entirely with the issuer. Nevertheless, some established, successful companies may prefer a best-efforts offering because the cost of distribution is lower than for a firm commitment underwriting.

THE REGISTRATION STATEMENT

Sections 7 and 10 of the 1933 Act, and the rules promulgated by the SEC under the Act, contain detailed guidelines as to what must be included in the registration statement and the accompanying prospectus. Regulations C and S-K, adopted by the SEC pursuant to the 1933 Act, list the general information required in connection with most public registrations.¹⁹ In addition, the SEC has issued a variety of forms that list the information required in connection with particular types of transactions.

Companies planning to list their securities on a national exchange, such as the Nasdaq stock market or the New York Stock Exchange, must satisfy that exchange's listing requirements and register the company under the 1934 Act. Registration under the 1934 Act subjects the company and its officers and directors to additional securities law requirements (discussed later in this chapter) and typically takes

19. 17 C.F.R. pt. 230.400 *et seq.*; 17 C.F.R. pt. 229.

effect simultaneously with the effectiveness of the registration statement filed under the 1933 Act.

Forms

Securities offered in an IPO are registered in a registration statement meeting the requirements of *Form S-1*. The registration statement must include a complete description of the securities being offered, the business of the issuer, the risk factors, the management, and the major shareholders. It must also include audited financial statements.

Form S-3 is used by a category of companies that have timely filed periodic reports under the 1934 Act for at least twelve months and have a widespread following in the marketplace. An issuer can use *Form S-3* for an offering of common stock only if the aggregate market value of the voting and nonvoting stock held by nonaffiliates is \$175 million or more.

For companies filing on *Form S-3*, information about the registrant that has been reported in annual and quarterly reports filed under the 1934 Act need not be provided to investors in the prospectus, unless there has been a material change in the registrant's affairs or financial statements. Such reports are incorporated by reference and are deemed a part of the prospectus for liability purposes.

Prospectus

The tone of a prospectus frequently strikes nonlawyers as dry, bleak, and confusing. Such a perception arises out of the conflicting purposes of the prospectus. On the one hand, it is a selling document, designed to present the best possible view of the investment and the issuing company. On the other hand, it is a disclosure document, an insurance policy against claims of securities fraud. This second function usually predominates. The prospectus usually contains only provable statements of fact, with numerous disclaimers regarding the future success of the issuer. Businesspeople, accustomed to presenting their company in the best possible light, frequently have difficulty adjusting to the somber tone of the prospectus.

Companies are required to use plain English in the design and language of the cover page, summary, and risk factors sections of the prospectus.²⁰ In these sections, companies must (1) use short sentences with everyday words, (2) avoid legal jargon and highly technical business terms, (3) use the active voice, (4) not use multiple negatives, and (5) use bulleted lists for complex information, if possible.

20. On January 24, 2000, as part of Regulation M-A, the SEC extended the plain English requirements to the summary sheet for tender offers, mergers, and going-private transactions.

Companies are encouraged, but not required, to use plain English throughout the prospectus.

A sample cover page of a prospectus appears as Exhibit 22.2.

DUE DILIGENCE

A key step in preparing the registration statement is the process of *due diligence*, whereby the company, the underwriters, and their respective counsel assemble and review the information about the company in the registration statement. The company must be prepared to back up every claim it makes in the prospectus. Even if the claim is stated as an opinion (such as "The company believes that it is the industry leader"), the company must be able to demonstrate the reasonableness of its belief. Underwriters cannot simply rely on the representations of the issuer or the issuer's officers but must perform their own independent due diligence investigation. They should go beyond the corporate documents provided by the issuer and examine information in press releases and news reports concerning key competitors and others important to the issuer's business. Underwriters should also monitor relevant websites and public agency filings. Exhibit 22.3 provides a long but useful list of tasks that should be undertaken by officers, directors, underwriters, and counsel engaged in the public offering of securities.

REGISTRATION PROCEDURE

The registration statement must be filed with the SEC. Section 8 of the 1933 Act provides that the registration statement automatically becomes effective on the twentieth day after filing, unless the SEC fixes an earlier date. Virtually all registrants file their registration statement with language stating that it will not become effective until declared effective by the SEC; this ensures that the SEC staff will have the necessary time (which usually exceeds the statutory twenty-day period) to review the filing. Each amendment to the registration statement filed prior to the effective date starts the twenty-day period running again. If the SEC has consented to the amendment, the waiting period may be accelerated. If, however, the SEC finds that the registration statement is materially defective in some respect, it may, after notice and a hearing, issue a stop order suspending the effectiveness of the offering.

Review

Registration statements received by the SEC are subject to review by the SEC staff, which typically takes about thirty days from the date of filing. The extent of the review is

EXHIBIT 22.2

Sample Prospectus Cover Page

Prospectus
August 18, 2004

19,605,052 Shares

Class A Common Stock

Google Inc. is offering 14,142,135 shares of Class A common stock and the selling stockholders are offering 5,462,917 shares of Class A common stock. We will not receive any proceeds from the sale of shares by the selling stockholders. This is our initial public offering and no public market currently exists for our shares. The initial public offering price is \$85.00 per share.

Following this offering, we will have two classes of authorized common stock, Class A common stock and Class B common stock. The rights of the holders of Class A common stock and Class B common stock are identical, except with respect to voting and conversion. Each share of Class A common stock is entitled to one vote per share. Each share of Class B common stock is entitled to ten votes per share and is convertible at any time into one share of Class A common stock.

Our Class A common stock will be quoted on The Nasdaq National Market under the symbol "GOOG."

Investing in our Class A common stock involves risks. See "Risk Factors" beginning on page 4.

Price \$85.00 A Share

	Price to Public	Underwriting Discounts and Commissions	Proceeds to Google	Proceeds to Selling Stockholders
Per Share	\$ 85.00	\$ 2.3839	\$ 82,6161	\$ 82,6161
Total	\$1,666,429,420	\$46,736,483	\$1,168,368,039	\$451,324,897

The selling stockholders have granted the underwriters the right to purchase up to an additional 2,940,757 shares to cover over-allotments.

The price to the public and allocation of shares were determined by an auction process. The minimum size for a bid in the auction was five shares of our Class A common stock. The method for submitting bids and a more detailed description of this auction process are included in "Auction Process" beginning on page 34. As part of this auction process, we attempted to assess the market demand for our Class A common stock and to set the size and price to the public of this offering to meet that demand. As a result, buyers should not expect to be able to sell their shares for a profit shortly after our Class A common stock begins trading. We determined the method for allocating shares to bidders who submitted successful bids following the closing of the auction.

The Securities and Exchange Commission and state securities regulators have not approved or disapproved of these securities, or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

It is expected that the shares will be delivered to purchasers on or about August 24, 2004.

E X H I B I T 2 2 . 3**Due Diligence Checklist****The Product**

1. Examine and operate each product, particularly new products, to assess appearance, function, design, and the like.
2. Assess the threat of obsolescence for each significant product line.
3. Review new product and service plans and development progress.
4. Compare the product with those of competitors and assess the threat from new competitors.
5. Perform an analysis of unproven technology, using experts if necessary.

The Industry

1. Estimate the size of the industry, present and projected, in each significant product line and compare company growth projections with anticipated market size for consistency.
2. Review government and trade reports and trade literature regarding the company's market segments to check for consistency with the representations and unstated premises in the prospectus.
3. Analyze competitors' SEC filings and websites for unanticipated trends or developments.
4. Evaluate the importance of proprietary products, copyrights, and trademarks within the industry.
5. Interview trade association personnel concerning trends of relevance to the prospectus.
6. Assess the effect of macroeconomic trends (for example, interest rate fluctuations, inflation rates, and economic growth rates) on the issuer's prospects for success.
7. Assess the comparative strengths and weaknesses of competitors in terms of the dominant competitive factors in the industry (price, service, performance, and so on).
8. Compare the company's financial performance with that of its competitors.
9. Determine whether research and development (R&D) expenditures are consistent with industry practice.

Marketing and Distribution

1. Evaluate the importance of original equipment manufacturers (OEMs), present and future.
2. Interview principal customers regarding the company's products and services, complaints, anticipated future needs, and so on.
3. Analyze each significant contract regarding contingencies, extent of warranties and other service obligations, rights of cancellation, and the like. Check contracts with customers for completeness and to determine the existence of side written or oral commitments or other terms that materially vary company contracts. Evaluate the quality of the backlog.
4. Evaluate the adequacy of the distribution network, the degree of control over distribution, and the like.
5. Evaluate the effectiveness of marketing personnel.
6. For new products, estimate the cost of introduction, and determine whether the cost is adequately reflected in cash-flow projections.
7. Assess the likelihood of discontinuation of products or services and whether the prospectus should disclose this information.

Technology

1. Review the company's R&D plans to determine whether any radical changes in product direction are anticipated and what cost burden will be imposed on the company in coming years.
2. Evaluate the effectiveness of R&D personnel and organization to assess the company's capacity for technological innovation.
3. Evaluate the company's patent position and the enforceability of its technology licenses.
4. Analyze any litigation regarding technology rights.
5. Review royalty contracts for contingencies and the like, and contact the licensees to determine the existence of any agreement or understanding that varies the terms of the contract.
6. With regard to government contracts, determine what interest, if any, the government asserts or may assert in company technology.
7. Review employee and independent contractor nondisclosure agreements, assignments of inventions, and noncompete agreements.
8. Evaluate other professional affiliations of management or R&D personnel (such as academic affiliations) to assess the likelihood of competing claims on company technology.
9. Evaluate the effectiveness of the company's efforts to police its patents, preserve its trade secrets, and maintain its copyrights, marks, and other intellectual property; assess the company's resources to perform these tasks.

CONTINUED

E X H I B I T 2 2 . 3**Due Diligence Checklist (*Continued*)**

10. Evaluate the company's compliance with technology licenses, including those applicable to any open-source software used by the company or embedded in any of its products.
11. Determine whether the company's exports are consistent with export-control laws.

Management

1. Investigate the prior experience of management and directors in the same industry and the same size company, their experience with large firms, and so on. Also, investigate backgrounds of officers and directors (including any criminal complaints or lawsuits), standing in the community, reputation in the industry, and the like.
2. Evaluate the responsiveness of management to previous auditors' management letters.
3. Assess the effectiveness of management through interviews with outside customers and suppliers, bankers, auditors, and so on.
4. Review prior transactions between the company and insiders for fairness, propriety, full disclosure, and the like.
5. Assess the effectiveness of the board of directors and identify any gaps in expertise or independence.
6. Determine whether any significant defections from management or the board are imminent, and assess the effect on company competitiveness.

Employees

1. Compare the company's stock option plans, pension plans, salaries, and other executive compensation and benefit plans with those of competitors to assess the company's ability to attract and retain skilled employees.
2. Consider whether the public offering is likely to result in the loss of key employees to retirement.
3. Review employee contracts for terms, unrecorded benefit obligations, contingencies, and the like. Interview key employees to determine whether unrecorded written or oral commitments have been made to them.
4. Determine whether compensation obligations have been properly accounted for in the company's books.
5. Assess the adequacy of the labor supply for each operating division.
6. Evaluate the company's labor relations history, union contracts, prospects of union activity, and so on.

Production

1. Assess the ability of production facilities to handle anticipated volumes and whether the cost of new plant and equipment is consistent with anticipated cash flow.
2. Evaluate product and process obsolescence, and compare production facilities with those of industry competitors to determine future competitiveness, both technical and economic.
3. Inquire into anticipated plant closings as well as plans for new facilities, and consider whether disclosure in the prospectus would be advisable.
4. Evaluate the adequacy of management information systems and inventory-control programs.
5. Assess the exposure to single-source suppliers, and evaluate the company's contingency plan for responding to an interruption in supplies.
6. Contact major suppliers to determine their satisfaction with the company and their plans to retire, reduce, or raise the price of key supplies and components.

Accounting

1. Determine whether intangible expenses, such as R&D expenditures, are being or should be expensed.
2. Analyze company finances, including supporting work papers where necessary, for prior years.
3. Review budgets and projections in order to determine material changes in the company's financial position, and compare past budgets and projections with actual experience in order to assess the accuracy of management's estimates.
4. Compare the company's revenue-recognition policy and other accounting conventions with those of the industry.
5. Evaluate the effect of customer financing practices on present and future revenues.
6. Evaluate the effect of changes in tax laws and the company's position with respect to open tax years.
7. Verify that the use of proceeds matches financial needs quantitatively and qualitatively.

CONTINUED

EXHIBIT 22.3

Due Diligence Checklist (*Continued*)

8. Determine whether inventory turns are consistent with industry ratios.
9. Assess the accuracy of the inventory reported and the adequacy of the inventory obsolescence reserve, and determine the suitability of the mix of materials in inventory.
10. Review aging receivables for consideration of reserve or write-off, and assess the adequacy of the bad-debt reserve and other reserves against income.
11. Obtain a report as to the adequacy of the company's accounting controls.
12. Ascertain that the preeffective auditor's "cold comfort" letter is complete.

Legal

1. Identify and assess the effect of new and proposed governmental regulations on operations, expenses, and the like.
2. Check title, title insurance, encumbrances, liens, and the like on company property and equipment.
3. Review incorporation documents, bylaws, and minutes of all shareholder, board, and board committee meetings for several years, both to confirm regularity and to identify events that might require further investigation.
4. Review stock transfer records for regularity, and check for agreements affecting ownership or control of shares.
5. Evaluate pending litigation, review the terms of significant concluded litigation, and investigate the existence of threatened claims or future exposure for statutory or regulatory violations.
6. Determine whether any acquisitions, mergers, reorganizations, and the like are pending or likely and what effect they will have on the company.
7. Review all press releases, promotional literature, company reports, news accounts, websites, and the like for consistency with the prospectus.
8. Review company banking, leasing, factoring arrangements, and the like, and assess the likelihood and effect of disruption or termination.
9. Determine that all insurable risks have been adequately insured against and that policies do not have material adverse exclusions or omissions.

usually affected by the nature of the offering and the number of filings that the SEC must review. In general, all first-time registrants will receive a complete review. Most repeat registrants will receive a more limited review, and some will receive no review.

Comments of the SEC staff are conveyed through a letter of comment, which is generally mailed to the issuer's counsel. Members of the SEC staff are usually available to discuss these letters of comment either by telephone or in person. Although the comment letters contain only suggestions without force of law, they generally result in the filing of an amendment to the registration statement. Acceding to the staff's reasonable suggestions is less expensive and less time-consuming than fighting an issue in an administrative hearing and in court. The amended registration statement is usually filed with a letter from counsel answering, item by item, the issues raised by the staff.

SEC review includes staff analysis of the text of the prospectus, the financial statements, and the exhibits to the registration statement. For example, in 2000, the SEC staff

required several companies seeking to go public to reduce their revenues by the value of warrants or cheap stock issued to customers that had placed large orders for the start-up's products. Dubbed a "unique marriage of convenience" by the *Wall Street Journal*,²¹ the practice was particularly prevalent in the highly competitive telecommunications industry, where new companies sought an edge when battling industry giants such as Nortel Networks, Lucent Technologies, and Cisco Systems. In turn, the network operators had an incentive to buy the products because their firms could make far more on their investments in the start-up after it went public than they spent on the equipment. The practice of issuing cheap stock or warrants in exchange for orders also raised the specter of a pyramid-type scheme. Purchasers were buying new equipment not because of their faith in the product but as a way to inflate the value of the start-up so that it could go public at an unrealistically high valuation.

21. Scott Thurm, *SEC Questions Start-Ups' Cheap Stock Sales to Customers*, WALL ST. J., Sept. 26, 2000, at C1.

Public investors stood to get hurt when sales to nonaffiliated purchasers (i.e., purchasers that received neither the cheap stock nor warrants) failed to materialize.

Waiting Period

The time between the filing of the registration statement and its becoming effective is called the *waiting period* or the *quiet period* because the law severely limits what the issuer and underwriters may say or publish during this time. No sale of securities can occur prior to the effectiveness of the registration statement; however, the underwriters may assemble selling groups, distribute copies of the preliminary prospectus, and even solicit (but not accept) offers to buy the securities.

The preliminary prospectus—sometimes referred to as a *red-herring prospectus* because a notice on the cover states in red ink that it is not final and is subject to revision—is an incomplete version of the final prospectus. It sets forth the proposed range for the selling price and omits the names of the underwriters except for the lead underwriters, whose names appear on the cover page. The preliminary prospectus usually is not distributed until all changes needed to respond to SEC staff comments are incorporated.

Selling efforts during the waiting period must be done in strict compliance with the securities laws. They usually include distribution of the preliminary prospectus and *roadshows*, that is, oral presentations to large institutional investors in key cities in the United States, Europe, and Asia. The roadshow often includes an Internet component as well. The material presented in the roadshow must be consistent with, and cannot go beyond, the information contained in the preliminary prospectus. In the case of IPOs at least, no written materials other than the preliminary prospectus are typically distributed to the potential investors.

The SEC calls sales literature and other written communications that offer securities but do not meet the statutory requirements for a prospectus a *free writing prospectus*. All methods of communication, other than oral communications, are deemed written communications.²² Thus, any communication that is written, printed, broadcast, or embodied in any form of electronic media (such as audiotapes, videotapes, facsimiles, CD-ROMs, electronic mail, Internet websites, computer networks, and other forms of computer data compilation) is treated as a written communication. A live telephone call is not deemed a written communication even if it is carried over the Internet, but “blast” voice-mail messages are.

In an IPO, the issuer cannot use written sales literature or other free writing prospectuses unless they are accompanied or preceded by the preliminary prospectus filed with the SEC. A prospectus is deemed to accompany an electronic free writing prospectus if the free writing prospectus contains a hyperlink to the statutory prospectus. Live roadshows are deemed oral communications, but an electronic roadshow is considered a free writing prospectus. As such, it must be filed with the SEC and made available electronically to unrestricted audiences. The SEC reasoned that this treatment of electronic roadshows strikes “the appropriate balance between the need to market an issuer’s securities to institutional investors and the desires of retail and other investors to have access to issuer information, such as management presentations, that are normally available only at roadshows that often have not been open to retail investors generally.”²³

Issuers are required to file all free writing prospectuses with the SEC when they are first used. They are not deemed part of the registration statement, however, and therefore do not subject the issuer or underwriters to potential Section 11 liability, unless the issuer elects to include them in the registration statement. Both oral communications and free writing prospectuses do, however, subject the issuer and underwriters to potential liability under Section 12(a)(2). (Liability under Sections 11 and 12(a)(2) is discussed later in this chapter.)

The issuing company and its lead underwriter must be careful about the information they release to the public during the waiting period. Conditioning the market with a news article or press release about the company and its upcoming offering is referred to as *gun-jumping*. Gun-jumping may violate the 1933 Act, and the SEC may require the issuer to postpone the offering. For example, the SEC required Web Van, the Internet grocer, to postpone its IPO after it released significant information not contained in its prospectus during a conference call as part of its roadshow.

The SEC has established a bright-line period ending thirty days prior to the filing of a registration statement, during which issuers may communicate (orally or in writing) without risk of violating the gun-jumping provisions as long as (1) the communication does not reference a securities offering, (2) the communication is made “by or on behalf of the issuer,” and (3) the issuer takes reasonable steps within its control to prevent further distribution or publication of the information during the thirty-day period immediately before the issuer files the registration statement. The safe harbor is not available to offerings by a blank check

22. Securities Offering Reform, 69 Fed. Reg. 67,392 (Nov. 17, 2004).

23. *Id.*

company, a shell company, an issuer offering penny stock, a registered investment company, or a business development company. (A *blank check company* is a development-stage company that has no specific business plan or has a business plan to acquire a currently unknown business.) Offerings in connection with business combinations and exchange offers are also excluded.

Special Rules for Well-Known Seasoned Issuers So-called *well-known seasoned issuers*, defined generally as firms eligible to use Form S-3 with \$700 million of public common equity float, are permitted to make unrestricted oral and written offers before the registration statement is filed without violating the gun-jumping provisions. As a result, well-known seasoned issuers may use a free writing prospectus at any time.

Eligible seasoned issuers and eligible well-known seasoned issuers are also not required to deliver a copy of the preliminary prospectus before using a free writing prospectus. Instead, they are required only to notify the recipient of the free writing prospectus, through a required legend, of where the recipient can access or hyperlink to the preliminary or base prospectus by using the URL provided for the prospectus.

Going Effective and Delivery of the Final Prospectus

Once a registration statement has been informally cleared by the SEC staff or the registrant has received notice that the registration statement will not be reviewed, the company files a pre-effective amendment with the SEC. This is typically accompanied by a request that the waiting period be accelerated so that the registration statement will become effective at a particular date and time. Without the request for acceleration, the registration statement would not become effective until the expiration of an additional twenty-day period.

Offers to buy can be accepted only after the registration statement is declared effective by the SEC. Information concerning the price of the securities and underwriting arrangements is filed with the SEC as part of the final prospectus. Before consummating sales of registered securities, the issuer must give each purchaser a copy of the final prospectus. Supplemental sales literature, which in most cases need not be reviewed by the SEC, may be provided to prospective purchasers. Any sales literature distributed within forty days after the date of effectiveness must be preceded or accompanied by the final prospectus. Often the underwriters will run a *tombstone ad* to publicize their involvement in the offering.

► ETHICAL CONSIDERATION

During the dot.com boom of the 1990s, shares of IPOs—*hot issues*—were in incredibly high demand and were often allocated by underwriters to corporate executives in hopes of securing more investment banking business from the executives' firms. Asked about this practice of *spinning*, Cristina Morgan, former managing director of investment banking at Hambrecht & Quist, remarked, “Is it appropriate? Well, yeah.” She reasoned: “If you sell doughnuts, you do everything you can to enhance the image and service of your doughnut shop to customers. You’re just doing your job. That’s what we all are doing.”^a Morgan asserted that the amounts involved, often 500 to 1,000 shares, were so small compared to the net worth of her clients that the IPO allocations could not have influenced the corporate decisions made by the executives who received them. Is spinning legal? Ethical?

^a Morgan is quoted in Michael Siconolfi, *Hambrecht & Quist Goes on Offensive on “Spinning,”* WALL ST. J., Nov. 26, 1997, at C1, C20. See also Michael Siconolfi, *SEC, NASD Begin Probes of IPO “Spin” Accounts,* WALL ST. J., Nov. 13, 1997, at A3; New York v. McLeod, 2007 N.Y. App. Div. LEXIS 11031 (N.Y. App. Div. Nov. 1, 2007).

SHELF REGISTRATION

Rule 415 under the 1933 Act provides for the *shelf registration* of securities, that is, the registration of a number of securities at one time for issuance later. The securities can then be issued over a period of time, for example, in connection with continuous acquisition programs or employee stock-benefit plans, or they can be issued at a later date, for example, when interest rates or market conditions are more favorable. Shelf registration can result in reduced legal, accounting, and printing expenses and increased competition among potential underwriters. Moreover, the issuer can respond more flexibly to rapidly changing market conditions by varying the structure and terms of the securities on short notice.

Registration is intended to ensure that current information is available to prospective underwriters and purchasers of securities. Accordingly, shelf registration is restricted to offerings in which the information contained in the registration statement will not become stale or inaccurate after some months or years.

Rule 415 limits the availability of shelf registration to ten types of offerings, which can be broken down into two basic categories: (1) traditional shelf offerings, and (2) offerings of securities of certain large, publicly traded companies that are eligible to use short-form registration procedures such as Form S-3.

Traditional shelf offerings include (1) securities offered pursuant to employee benefit plans; (2) securities offered or sold pursuant to dividend or interest reinvestment plans; (3) warrants, rights, or securities to be issued upon conversion of other outstanding securities; (4) mortgage-related securities; and (5) securities issued in connection with business combination transactions. With respect to offerings by certain large, publicly traded companies, the SEC has decided that because the market receives a steady stream of high-quality information concerning these issuers, the risks of stale information are minimal.

Seasoned issuers may make *automatic shelf registration offerings*, which are effective immediately upon filing a registration statement with the SEC. The special rules for such issuers reflect the SEC's belief that the ongoing information required by the 1934 Act is widely followed by investment professionals and provides adequate ongoing and current information about these firms.

REORGANIZATIONS AND COMBINATIONS

When securities holders are asked to approve a corporate reorganization or combination—such as a reclassification of securities, a merger involving an exchange of securities, or a transfer of assets of one corporation in exchange for the securities of another—they are in effect faced with an investment decision. In recognition of this fact, the SEC adopted Rule 145, which expressly provides that the protections provided by the 1933 Act's registration requirements are applicable to certain types of business reorganizations and combinations. An offer, offer to sell, or sale of securities occurs when a plan of reorganization is submitted to the shareholders for approval. Transactions that fall within the guidelines specified in Rule 145 must be registered with the SEC in a combined registration statement and proxy statement on *Form S-4*, unless an exemption from registration is available. Because shareholder approval of mergers and other combinations necessarily involves communications between a corporation and its shareholders, Rule 145 also contains specific provisions concerning when such communications will be deemed to be a prospectus or an offer to sell for purposes of the 1933 Act.

EXEMPTIONS FOR OFFERINGS BY THE ISSUER

In adopting the 1933 Act registration provisions, Congress provided exemptions from registration when there is no practical need for it or the costs would outweigh the public benefits. Exemptions from registration fall into two categories: exempt securities and exempt transactions.

Exempt securities, listed in Section 3 of the 1933 Act, include the following:

1. Any security issued or guaranteed by the United States or any state of the United States.
2. Any security issued or guaranteed by any national bank.
3. Any security issued by a charitable organization.
4. Any security that is part of an issue offered and sold only to persons residing within a single state or territory, if the issuer is a resident of the same state or territory.
(Note: Even though the intrastate offering exemption is listed under Section 3, the SEC treats it as a transactional exemption under Section 4.)

Exempt transactions are described in Section 4 of the 1933 Act. They include the following:

1. "Transactions by any person other than an issuer, underwriter or dealer" (Section 4(1)).
2. "Transactions by an issuer not involving any public offering" (Section 4(2), the private-offering exemption).
3. Offers and sales solely to "accredited investors" (Section 4(6)).

Exemptions for offshore offerings are discussed later in this chapter. Most state blue sky laws have exemptions from registration that roughly correspond to the federal exemptions.

PRIVATE OFFERINGS UNDER SECTION 4(2)

Because of the expense and burdens of public offerings, companies trying to raise money usually attempt to qualify for an exemption from registration. They most frequently rely on the exemption for private offerings. A *private offering*, often called a *private placement*, is directed to selected qualified investors, rather than to the public. In 2000 alone, \$400 billion was raised in private offerings in the United States—nearly a third of all funds raised in the U.S. capital markets that year.²⁴ A private offering can be consummated more quickly and with far less expense than a registered public offering.

Under Section 4(2), an offering is exempt from registration if it does not involve a "public offering."²⁵ The SEC originally took the position that "under ordinary circumstances an offering to not more than twenty-five persons is not an offering to a substantial number and presumably does not involve a public offering." This guideline was rejected by the Supreme Court in the following landmark case.

24. *Panel Seeks to Revamp Offering, Placement Processes*, CORP. COUNS. WKLY., Sept. 12, 2001, at 275.

25. Securities Act Release No. 285 (1935).

A CASE IN POINT**CASE 22.2****SEC v. RALSTON PURINA Co.**

SUPREME COURT OF THE
UNITED STATES
346 U.S. 119 (1953).

SUMMARY

FACTS Ralston Purina, a feed and cereal company, offered common stock at market prices to its employees. Among those employees responding to the offer were artists, bake-shop foremen, chow-loading foremen, clerical assistants, clerks, stenographers, and at least one veterinarian. Between 1947 and 1951, the company sold a total of \$2 million worth of stock to 2,000 of its employees. The employees lived in various locations throughout the United States. Ralston Purina took the position that because the stock was offered only to "key employees" of the company, it was a private offering exempt from registration under the 1933 Act.

ISSUE PRESENTED Does the determination of whether a transaction is a public or private offering depend primarily on the number of offerees or the sophistication of the offerees?

SUMMARY OF OPINION The U.S. Supreme Court held that the offering was not exempt from registration. The Court stated that absent a showing of special circumstances, employees are indistinguishable from other members of the investing public as far as the securities laws are concerned.

The Supreme Court also rejected a strict numerical test. Instead, the Court held that the critical consideration is whether the class of persons offered the securities needs the protection of the 1933 Act: "An offering to those who are shown to be able to fend for themselves is a transaction not involving any public offering." If, as in the present case, an offering is made to those who are not able to fend for themselves, the transaction is a public offering. The Court noted that an important factor affecting this determination is whether the offerees have access to the same kind of information that the 1933 Act would make available through a registration statement.

RESULT Ralston Purina's offer of stock to its employees was not exempt from registration.

COMMENTS The Supreme Court's ruling in *Ralston Purina* refocused attention under Section 4(2) from a strict numerical test to the sophistication of the offerees. The ruling did little to clarify the private-offering exemption, however, and reliance on Section 4(2) therefore remained an uncertain and somewhat risky proposition.

REGULATION D: SAFE-HARBOR EXEMPTIONS

Regulation D offers a safe harbor for those seeking exemption from registration: An issuer that does not comply with all of the requirements of the applicable rule will not necessarily fail to have an exemption because the transaction may still meet the more general conditions of Section 4(2).

Regulation D contains three separate exemptions from registration, defined by Rules 504, 505, and 506. Rules 501–503 define terms and concepts applicable to one or more of the exemptions.

Accredited Investors

The concept of an accredited investor, derived from earlier federal regulations and state securities laws, is based on the idea that certain investors are so financially sophisticated that they do not need all the protections afforded by the

securities laws. Rule 501 defines an *accredited investor* as any one of the following:

1. Any national bank.
2. Any corporation, business trust, or charitable organization with total assets in excess of \$5 million.
3. Any director, executive officer, or general partner of the issuer.
4. Any natural person who had individual income in excess of \$200,000 in each of the two most recent years, or joint income with that person's spouse in excess of \$300,000 in each of those years, with a reasonable expectation of reaching the same income level in the current year.
5. Any natural person whose individual net worth, or joint net worth with that person's spouse, exceeds \$1 million at the time of the purchase.
6. Any trust with assets greater than \$5 million with the purchase directed by a sophisticated investor.

7. Any private development company.
8. Any entity in which all of the equity owners are accredited investors.

Rule 504

Rule 504 exempts offerings of up to \$1 million within a twelve-month period. There may be an unlimited number of purchasers under Rule 504. Rule 504 is not available to issuers registered under the 1934 Act—known as public companies—or to investment companies such as mutual funds. It is also not available to blank check companies. The issuer must file a notice on Form D with the SEC within fifteen days after the first sale of securities. Some relatively minor changes were made to Rule 504(b)(1) in 1999 with the intent of reducing the possibility of abuse in microcap and Internet offerings.

Rule 505

Rule 505 exempts offerings of up to \$5 million within a twelve-month period. General solicitations and advertising are not permitted in connection with a Rule 505 offering, and the issuer must reasonably believe that there are not more than thirty-five unaccredited investors. Rule 505 is not available to investment companies. Rule 505 requires that certain specified information be provided to purchasers (unless all are accredited investors). This information is generally compiled in a private-placement memorandum (described later) or offering circular. Rule 505 also requires that purchasers have the opportunity to ask questions and receive answers concerning the terms of the offering. A notice on Form D must be filed with the SEC within fifteen days of the first sale of securities.

Rule 506

Rule 506, adopted by the SEC under Section 4(2), exempts offerings that in the issuer's reasonable belief are limited to no more than thirty-five unaccredited investors, provided that the issuer reasonably believes immediately prior to making any sale that each unaccredited investor, either alone or with his or her purchaser representative, has enough business and financial experience to evaluate the merits and risks of the prospective investment. There can be an unlimited number of accredited investors. General solicitations and advertising are not permitted, however.

Like Rule 505, Rule 506 requires that certain specified information be provided to purchasers (unless all purchasers are accredited investors) and that purchasers have the opportunity to ask questions and receive answers concerning the

terms of the offering. Unlike Rule 505, Rule 506 does not limit the aggregate offering price of the offering. A notice on Form D must be filed with the SEC within fifteen days of the first sale of securities.

Integration of Sales

If an issuer makes successive sales within a limited period of time, the SEC may *integrate* the successive sales; that is, it may deem them to be part of a single sale. Integrating two or more offerings may increase the number of unaccredited investors beyond acceptable limits, resulting in the loss of a private-offering exemption. To determine whether offerings should be integrated, the SEC and the courts consider whether the offerings (1) are part of a single plan of financing, (2) involve the issuance of the same class of securities, (3) are made at or about the same time, (4) involve the same type of consideration, and (5) are made for the same general purpose.

Rule 502(a) provides an integration safe harbor for Regulation D offerings. Under Rule 502(a), offers and sales made more than six months before the start of a Regulation D offering or more than six months after its completion will almost never be considered part of the Regulation D offering, provided that the same issuer makes no offers or sales of a similar class of securities during those six-month periods.

If a company decides to abandon a proposed public offering due, for example, to a lack of investor interest, Rule 155(c) provides a way to shift to a private offering without having to wait the six months normally required to avoid integration of the two offerings. To qualify, issuers (1) may not sell any securities in the abandoned offering, (2) must wait thirty calendar days after withdrawal of the registration statement, and (3) must disclose to each offeree in the subsequent offering specific information related to the abandoned offering. There is also a private-to-registered safe harbor that permits a similar shift from a private offering to a registered public offering.

SECTION 4(6) EXEMPTION

Section 4(6) of the 1933 Act exempts offers and sales by any issuer to an unlimited number of accredited investors, provided that no offers or sales are made to any nonaccredited investors, the aggregate offering price does not exceed \$5 million, and there is no public solicitation or advertising in connection with the offering. The Section 4(6) definition of "accredited investor" includes banks, insurance companies, and employee benefit plans for which the investment decision is made by a bank, insurance company, or registered adviser.

VIEW FROM CYBERSPACE

Offerings on the Internet and Issuer Websites

In 1995, Spring Street Brewing Company became the first company to conduct an initial public offering over the Internet.^a Spring Street raised \$1.6 million in an offering exempt under Regulation A. The securities were qualified under the blue sky laws of eighteen states, on the assumption that the majority of potential purchasers resided in those states.

Other small companies have done offerings of up to \$1 million under Rule 504 of Regulation D, which does not prohibit general solicitation for offerings of up to \$1 million. Rule 505 (with its \$5 million limit) and Rule 506 (with no dollar limit) do prohibit general solicitation. The SEC has taken the position that offerings on the Internet violate that ban unless access to offering materials is restricted to prequalified, accredited investors. This is normally done by making the sites offering the securities accessible only by password and only by investors shown by questionnaire to be accredited.^b

Companies doing registered offerings can post the registration statement on their website. In addition, NETRoadshow and other firms make audiovisual transmissions of live investor roadshows available via the Internet. The transmission is not edited for content and contains the oral presentations by management, questions and answers, and charts and graphics presented at the roadshow.^c As noted earlier, electronic roadshows must be made available to unrestricted audiences.

In 2000, the SEC issued an interpretive release providing guidance on the electronic delivery of documents,

website content, and online offerings.^d The release made it clear that a hyperlink embedded within a prospectus causes the hyperlinked information to be treated as part of the prospectus. In 2008, the SEC provided additional guidance, which made it clear that a company is liable for hyperlinks to third-party information that the issuer was involved in preparing (*entanglement*) or explicitly or implicitly endorsed or approved (*adoption*).^e To determine whether the issuer has adopted the hyperlinked information, the key consideration is whether the context of the hyperlink creates a reasonable inference that the issuer has approved or enclosed it. "Exit notices" and "intermediate screens" can help clarify the source of the information. Although not determinative, a prominently displayed statement that the issuer is not responsible for third-party information and does not endorse it can help avoid confusion. A disclaimer will not protect an issuer from liability, however, if the issuer knew or was reckless in not knowing that the hyperlinked information was materially false or misleading.

A company is not required to update archived information available on its site as long as it makes it clear that the information is historical and speaks only as of the date of initial publication. To avoid confusion, experts recommend that the issuer prominently indicate the release date on all posted materials and put archived materials in a separate part of the website.^f

But the fact that information on a website is close to the prospectus does not, by itself, make the information

an offer within the meaning of the securities laws. For issuers in the process of registering, however, website contents qualify as written communications subject to Section 5 of the 1933 Act and so can constitute gun-jumping if they condition the market.

All companies and individuals offering to sell or selling securities online must be registered brokers in accordance with Section 15(b) of the 1934 Act. As long as a broker solicits investors, the broker must be registered, even if the broker merely owns the required software and equipment and leases it to the issuer for purposes of an IPO.^g

Sometimes graphics, images, or audio material in a document cannot be easily reproduced in electronic form. According to Rule 304, electronic versions of the documents must include a fair and accurate narrative description, tabular representation, or transcript of the omitted material. Any graphic, image, or audio material in the version delivered to investors is deemed part of the electronic version delivered to the SEC. Thus, plaintiffs cannot seek rescissionary damages under Section 12(a) on the theory that they purchased securities relying on the printed prospectus and only the securities described in the electronic version (the one delivered to the SEC) were registered.^h Plaintiffs can, however, seek relief under Section 11, alleging either that one version of the prospectus was misleading or that the different versions of the prospectus, taken together, were misleading.ⁱ

The SEC provides an Internet-based system called Electronic Data

CONTINUED

Gathering, Analysis, and Retrieval (EDGAR). EDGAR provides companies that are required to file documents with the SEC an efficient and fair way to publicly present those documents. Collection, validation, indexing, acceptance, and forwarding are automated on the site. In 2008, the SEC announced its intention to replace EDGAR with IDEA, a fully interactive database, by 2012.

REGULATION A

Under *Regulation A*, U.S. and Canadian companies that are not required to report under the 1934 Act may offer and sell up to \$5 million of securities in a twelve-month period, of which up to \$1.5 million may be sold by the selling security holders. Regulation A is not available to investment companies, companies issuing oil and gas rights, or blank check companies.

Under Rule 262, the “bad boy” provision, Regulation A is unavailable if the issuer or its officers, directors, principal shareholders, or affiliates have been subject to specified proceedings, convictions, injunctions, or disciplinary orders from the SEC or other regulatory agencies arising from the securities business or postal fraud. To disqualify the company from using Regulation A, the misconduct must have occurred within five years preceding the filing, or within ten years for officers, directors, and principal shareholders.

Testing the Waters

Regulation A issuers can determine interest in a proposed offering prior to filing an offering statement with the SEC. The issuer need only file a solicitation-of-interest document with the SEC, along with copies of any written or broadcast media ads. There is no prohibition on general solicitation or advertising. Radio and television broadcasts and newspaper ads are permitted to determine investor interest in the offering.

No sales may be made or payment received during the testing-the-waters period. To move forward, the company must file Form 1-A with the SEC, and the Regulation A offering statement must be qualified by the SEC. Once the offering statement is filed, testing-the-waters activity ceases. Sales can be made only after the passage of a required waiting period, usually twenty days from the time of the last solicitation of interest.

OFFERINGS TO EMPLOYEES, DIRECTORS, CONSULTANTS, AND ADVISERS

As explained in Chapter 14, Rule 701 exempts certain offers and sales of unregistered securities made pursuant to (1) written compensatory benefit plans for employees, directors, general partners, trustees (if the issuer is a business trust), officers, consultants, or advisers; or (2) a written contract relating to the compensation of such persons. As noted in Chapter 14, if the benefit plan is for consultants or advisers, they must render bona fide services not connected with the offer and sale of securities in a capital-raising transaction.

Exhibit 22.4 summarizes the key elements of certain exemptions from registration for offerings by the issuer.

THE PRIVATE-PLACEMENT MEMORANDUM

The *private-placement memorandum* (also called an *offering circular*) is the private offering counterpart to the prospectus. Like the prospectus, the private-placement memorandum is both a selling document and a disclosure document. The disclosure function is usually primary, so the memorandum may not be as upbeat as the issuer might like.

The content of the private-placement memorandum is determined by the exemption on which the issuer relies. For example, Rule 502(b) under Regulation D provides that if an issuer is selling securities under Rule 505 or 506 to any purchaser that is not an accredited investor, certain specified information must be provided to the purchaser, including audited financial statements. On the other hand, if the issuer is offering securities under Rule 504 or only to accredited investors, or in reliance upon the general Section 4(2) exemption, then the issuer is not required to provide any specific information. State blue sky laws may also

EXHIBIT 22.4

Key Elements of Certain Federal Exemptions from Registration

TYPE OF EXEMPTION	DOLLAR LIMIT OF THE OFFERING	LIMITS ON THE PURCHASERS	PURCHASER QUALIFICATIONS	ISSUER QUALIFICATIONS
Section 4(2)	No limit	Generally limited to a small number of offerees able to understand and bear risk	Offerees and purchasers must have access to information and be sophisticated investors.	No limitations
Regulation D^a				
Rule 504 ^b	Up to \$1 million in 12 months	No limit	No requirements	Not a 1934 Act public reporting company, an investment company, or a blank check company
Rule 505 ^c	\$5 million in 12 months	No limit on the number of accredited investors but limited to 35 unaccredited investors	No requirements for unaccredited investors	Not an investment company
Rule 506 ^c	No limit	No limit on the number of accredited investors but limited to 35 unaccredited investors	Unaccredited investors must be sophisticated, that is, have sufficient knowledge and experience in financial matters to evaluate the investment.	No limitations
Regulation A^d	\$5 million in 12 months, with a maximum \$1.5 million sold by selling security holders	No limit	No requirements	A U.S. or Canadian company, but not a 1934 Act public reporting company, an investment company, a blank check company, a company issuing oil/gas/mineral rights, or a company disqualified under "bad boy" provisions of Rule 262
Rule 701 ^{e,f}	The greater of \$1million or 15% of the total assets of the issuer or 15% of the outstanding securities of the same class	No limit on the number of employees, directors, general partners, officers, advisers, and consultants	Advisory and consulting services must not be connected with the offer and sale of securities in a capital-raising transaction.	Not a 1934 Act public reporting company or an investment company

^aAll issuers relying on these exemptions are required to file a notice on Form D with the SEC within fifteen days after the first sale of securities.^bThis exemption does not depend on the use of any type of disclosure document.^cA disclosure document meeting the specified SEC requirements is mandatory if there are any unaccredited investors.^dThe issuer must file a disclosure document with the SEC and have it qualified before securities are sold. Testing the waters is permitted after a solicitation-of-interest document is filed with the SEC.^eDisclosure is required if sales exceed \$5 million in a twelve-month period.^fMust be pursuant to written compensatory benefit plans or written contracts relating to compensation.

► ETHICAL CONSIDERATION

Because federal law requires only disclosure of all material information, who bears the responsibility for ensuring the quality and fairness of an offering? The managers and directors of the issuing company? The investment bankers? The securities lawyers?

influence the content and format of a private-placement memorandum.

In many circumstances, no private-placement memorandum is technically required. Nonetheless, an issuer is usually well advised to create such a document in order to clearly demonstrate the disclosure made to prospective investors. Such disclosure is important to rebut claims of securities fraud, a topic discussed in Chapter 23.

EXEMPTIONS FOR SECONDARY OFFERINGS

A principal advantage of registering a securities offering with the SEC and the appropriate state securities authorities is that the securities may be traded relatively freely following the IPO. In contrast, securities issued in a private placement cannot be sold in a secondary offering, that is, a subsequent offering by a person other than the issuer, unless

they are either registered or exempt from registration. Securities issued in a private placement are thus called *restricted securities*.

Because securities offered in private offerings are unregistered, their subsequent transfer is restricted, and their price will be discounted accordingly. In addition, purchasers of privately offered securities may demand a greater voice in the operation of the business or sweeteners such as dividend preferences or mandatory redemption privileges, which force the company to repurchase the stock upon the occurrence of certain events.

Exhibit 22.5 summarizes certain key definitions and terms related to the resale of equity securities.

SECTION 4(1) EXEMPTION

Section 4(1) of the 1933 Act provides that “transactions by any person other than an issuer, underwriter, or dealer” are exempt from registration. Section 2 of the 1933 Act defines an *issuer* as any person “who issues or proposes to issue any security.” A *dealer* is defined as “any person who engages either for all or part of his time, directly or indirectly, as agent, broker, or principal, in the business of offering, buying, selling, or otherwise dealing or trading in securities issued by another person.”

An *underwriter* is defined as “any person who has purchased from an issuer with a view to, or offers or sells for an issuer in connection with, the distribution of any security.” As used in the definition of an underwriter, the term “*issuer*”

EXHIBIT 22.5

Key Definitions and Terms Related to the Resale of Equity Securities

- **Restricted securities** “Securities issued in a transaction not involving a public offering.” [Rule 144]
- **Issuer** “Every person who issues or proposes to issue any security.” [Section 2(4)]
- **Affiliate** Any officer, director, or major shareholder (generally presumed to include a person owning at least 10 percent of the issuer’s stock). Someone who controls, or is controlled by, or co-controls the issuer. [Rule 144]
- **Underwriter** “Any person who has purchased from an issuer with a view to, or offers or sells for an issuer in connection with, the distribution of any security.” For purposes of this definition, “*issuer*” includes “any person directly or indirectly controlling or controlled by the issuer, or any person under direct or indirect common control with the issuer.” [Section 2(11)]
- **“Not an underwriter”** A person who meets the safe-harbor requirements of Rule 144:
 1. Adequate public information available
 2. Six-month holding period for reporting issuers and one year for nonreporting issuers (unless affiliate sells unrestricted securities)
 3. Sales limitations for any three-month period: the greater of 1 percent of the outstanding securities of the class and the average weekly trading volume for the preceding four weeks
 4. Must sell through a broker or directly to a market maker
 5. Form 144 filing if more than 5,000 shares or greater than \$50,000 aggregate price in three months
 6. Must have bona fide intention to sell within a reasonable amount of time after filing Form 144
- **Rule 144A** A nonaffiliate may resell without restriction to a “qualified institutional buyer.”

includes “any person directly or indirectly controlling or controlled by the issuer, or any person under direct or indirect common control with the issuer.” For example, the sale of securities to the public by a controlling shareholder or other affiliate of the issuer (so called *control securities*) is a transaction involving an underwriter. *Affiliates* include officers, directors, and major shareholders. The SEC has a rebuttable presumption that anyone owning at least 10 percent of the issuer’s stock is an affiliate. Thus, the Section 4(1) exemption is generally unavailable, for resales by affiliates.

If the person desiring to sell unrestricted securities is not an issuer, underwriter, or dealer, he or she may sell the securities without registration under Section 4(1). There is no limit on the size of the offering or the number of offerees. Section 4(1) is the exemption most often relied on by persons who sell securities in the secondary market in an ordinary transaction involving a broker.

RULE 144

The SEC adopted *Rule 144* in 1972 to reduce the uncertainty associated with the definition of the term “underwriter.” If the requirements of Rule 144 are met, then restricted and control securities may be sold publicly without registration. Rule 144 is intended merely to provide objective criteria for deciding whether a person is an underwriter; it is not meant to be the exclusive means through which restricted or control securities may be sold. Exhibit 22.6 depicts the alternatives available for resales of equity securities pursuant to Rule 144 by affiliates and nonaffiliates.

Equity Securities

Under Rule 144, a person selling equity securities is *not an underwriter* if the following conditions are met:

1. Adequate current public information must be available concerning the issuer. This requirement effectively means that the issuer must be a publicly traded company that has complied with the periodic reporting requirements imposed by the 1934 Act (discussed later in this chapter).
2. Securities issued by a *reporting issuer* (that is an issuer that has been subject to the reporting requirements of Section 13 or 15(d) of the 1934 Act for at least ninety days before the Rule 144 sale) must have been beneficially owned—with all economic rights belonging to the owner—and fully paid for at least six months prior to the date of sale. The holding period is one year in the case of securities issued by a non-reporting issuer.

3. In any three-month period, the seller must not sell more than the greater of (a) 1 percent of the outstanding securities of the class and (b) the average weekly trading volume in the securities during the four calendar weeks preceding the filing of the notice of sale on Form 144.
4. The securities must be sold in “broker’s transactions” or “riskless principal transactions,” as defined in the 1933 Act, or directly to a “market maker,” as defined in the 1934 Act. Solicitation of offers to buy is not permitted, and no commissions for the sale may be paid to any person other than the broker who executes the order of sale.
5. If the amount of the securities sold during any three-month period will exceed 5,000 shares or have an aggregate sale price in excess of \$50,000, a notice on Form 144 must be filed with the SEC and with the principal stock exchange (if any) on which the securities are traded.
6. The person filing the Form 144 must have a bona fide intention to sell the securities within a reasonable time after the filing of the notice.

A person who is not an affiliate of the issuer, and has not been an affiliate for three months preceding the sale (1) may sell restricted securities issued by a reporting or a non-reporting issuer without regard to items 1, 3, 4, and 5 above if he or she has owned the securities for at least one year prior to their sale; and (2) may sell restricted securities issued by a reporting issuer without regard to items 1, 3, 4, and 5 if he or she has owned the securities for at least six months prior to their sale. This is of particular importance for shareholders of privately held companies that do not file 1934 Act reports.

Usually, restricted securities are identified as such by legends appearing on the face or back of their stock certificates. Accordingly, an opinion from the issuer’s attorney may be required before a broker-dealer or transfer agent is willing to consummate a transaction involving restricted securities. Certificates issued following a sale pursuant to Rule 144 may be issued without restrictive legends.

If an affiliate of the issuer wants to sell control securities, then he or she must sell in accordance with Rule 144 (except for the six-month holding period requirement, which is inapplicable if the securities being sold were acquired in a registered offering) or use another available exemption. One alternative is the *Section 4(1½) exemption* for private offerings by an affiliate. These offerings would qualify as private placements under Section 4(2) if made by the issuer. Thus, the securities can be offered only to persons who are capable of bearing and understanding the risk of the investment and who acquire the securities for investment purposes only and not with a view to distribution.

Debt Securities

The manner-of-sale restrictions set forth in item 4 above do not apply to resales of debt securities (including non-participatory preferred stock and certain asset-backed securities). The volume limitations (item 3) for the resale of debt securities are the greatest of (1) 1 percent of the shares or other units of the class of debt securities outstanding, (2) the average trading volume in such securities, and (3) 10 percent of the tranche or class of non-participatory preferred stock being sold.

RULE 144A

Rule 144A permits the resale of unregistered securities to *qualified institutional buyers*—that is, institutional investors holding and managing \$100 million or more of securities—if the securities are not of the same class as any securities of the issuer listed on a U.S. securities exchange or quoted on an automated interdealer quotation system (such as the Nasdaq stock market). The rule creates a safe harbor for trading unregistered securities that are often issued to institutional investors in private placements and are generally subject to Rule 144's holding periods. The creation of a secondary market for

eligible unregistered securities has increased their liquidity and value and reduced the private offering discount for them.

If a transaction meets the terms of Rule 144A, it is deemed not to be a distribution. Therefore, the seller is not an underwriter as defined in the 1933 Act. If the seller is also not an issuer or dealer, it may rely on the Section 4(1) exemption for transactions by persons who are not issuers, underwriters, or dealers, as long as it resells only to other qualified institutional buyers.

Dealers may also take advantage of Rule 144A. Under Section 4(3) of the 1933 Act, dealers are entitled to an exemption from registration, unless they are participants in a distribution or in a transaction taking place within a specified period after securities have been offered to the public. If a transaction complies with Rule 144A, the dealer will be deemed not to be a participant in a distribution, and the securities will be deemed not to have been offered to the public. Accordingly, the transaction will be exempt from registration.

Rule 144A is a nonexclusive exemption. If the requirements of Rule 144A cannot be met, the parties to the transaction may still rely on the facts-and-circumstances analysis commonly associated with nonpublic transfers of

unregistered stock. For example, the so-called Section 4(1½) exemption for private resales of restricted securities may apply. In general, a Section 4(1½) offering is an offering by a person other than the issuer (usually either a control person or the holder of restricted unregistered stocks) that would, if it had been done by the issuer, be eligible for the Section 4(2) private offering exemption.

OFFERINGS OFFSHORE AND REGULATION S

Regulation S clarified the general rule that any offer or sale outside the United States is not subject to the federal registration requirements. The SEC had long taken the position that the Section 5 registration requirements do not apply to offers and sales effected in a manner that would result in the securities coming to rest abroad. Transactions meeting the requirements of certain safe harbors for the issuance and resale of securities set forth in Regulation S are deemed to occur outside the United States.

All offers and sales of any security under Regulation S must be made in *offshore transactions*, defined as transactions in which no offer is made to a person in the United States and either (1) the buyer is outside the United States at the time the buy order is originated; or (2) the transaction is one executed in, on, or through the facilities of a designated offshore securities market. No directed selling efforts may be made in the United States.

Regulation S has enabled U.S. companies to offer securities abroad with greater certainty that such securities are exempt from registration. Additionally, the combination of Rule 144A and Regulation S has expanded the private-placement market by increasing the liquidity of privately placed securities.

Exhibit 22.7 provides a flow chart of the registration and exemption requirements applicable to primary and secondary offerings of securities.

REPORTING REQUIREMENTS OF PUBLIC COMPANIES

The completion of a public offering does not terminate the issuer's relationship with the SEC. Under Section 15(d) of the 1934 Act, a company with registered securities in a public offering must file periodic reports. Usually, the company must also register the class of equity securities offered to the public with the SEC under Section 12 of the 1934 Act. Whereas the 1933 Act requires the registration of specific offerings of securities, the 1934 Act requires the registration of specific *classes* of securities.

SECTION 12 REPORTS

Under Section 12 of the 1934 Act, an issuer engaged in interstate commerce and having total assets exceeding \$5 million must register with the SEC each nonexempt class of security that (1) is listed on a national stock exchange or (2) is an equity security held of record by at least 500 persons. Registration subjects the issuer to various reporting requirements and to certain rules and regulations concerning proxies, tender offers, insider trading, and the like. A company registered under Section 12 is commonly referred to as a public or *reporting company*. Registration under the 1934 Act is intended to supplement the 1933 Act registration and to ensure that current information concerning the issuer is available to the public, enabling investors to make informed decisions about securities purchases and sales.

The following are some of the significant requirements associated with becoming a registered company under Section 12 of the 1934 Act:

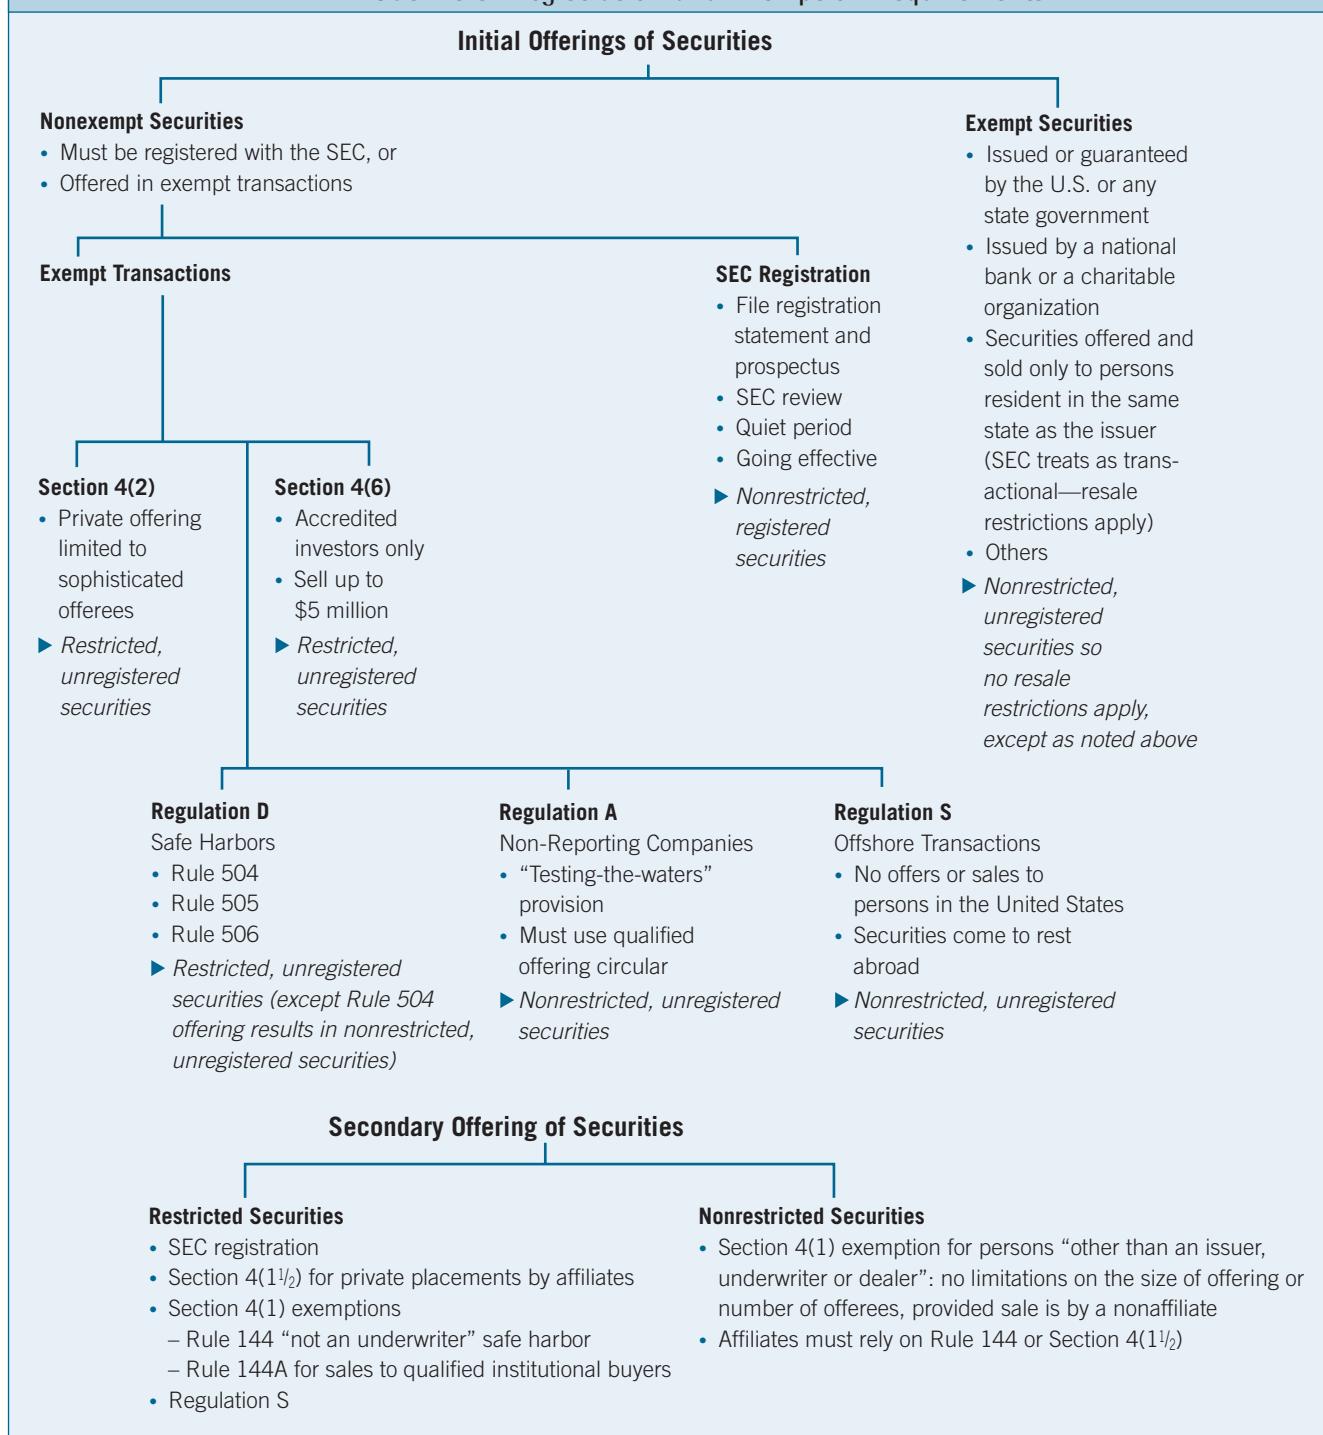

- *Quarterly report on Form 10-Q* An unaudited quarterly statement of operations and financial condition must be filed with the SEC on Form 10-Q within forty days after the end of each fiscal quarter.
- *Annual report on Form 10-K* An annual audited report must be filed with the SEC on Form 10-K within sixty, seventy-five, or ninety days (depending on the type of issuer) after the end of the issuer's fiscal year.
- *Special report on Form 8-K* A special report on Form 8-K must be filed with the SEC within four business days after certain events, including changes in control; acquisitions or dispositions of key assets; resignation of directors or auditors; entry into or termination of material agreements that are not made in the ordinary course of business; material impairments; specific issues affecting listing; determinations that past financial statements can no longer be relied on; temporary suspension of trading under employee pension plans; waiver of a provision of the company's code of ethics; creation of, or triggering events that accelerate or increase, obligations under off-balance-sheet arrangements; and costs associated with exit or disposal activities.

The periodic reports must include in narrative form Management's Discussion & Analysis of Financial Condition and Results of Operations (MD&A). The SEC has identified three principal objectives of the MD&A:

- To provide a narrative explanation of a company's financial statements that enables investors to see the company through the eyes of management.

EXHIBIT 22.7

An Outline of Registration and Exemption Requirements

- To enhance the overall financial disclosure and provide the context within which financial information should be analyzed.
- To provide information about the quality of, and potential variability of, a company's earnings and cash flow so that investors can ascertain the likelihood that past performance is indicative of future performance.²⁶

Among the topics requiring disclosure within the MD&A are certain off-balance-sheet arrangements of the sort created by Enron, discussed further in Chapter 2.

OTHER SECTIONS OF THE 1934 ACT

Other sections of the 1934 Act regulate such activities as proxy solicitations, insider trading, and tender offers.

Proxy Solicitations

The proxy regulation provisions of Section 14 of the 1934 Act apply to all public companies. They govern the solicitation of written powers of attorney, or *proxies*, that give the proxy holder the right to vote the shares owned by the person who signs the proxy card. As explained in Chapter 20, proxy solicitations relate to management and shareholder proposals as well as to the election of the board of directors.

Insider Trading Reports

Section 16 of the 1934 Act requires executive officers, directors, and persons holding more than 10 percent of the equity securities of a public company to file ownership reports on Forms 4 and 5 with the SEC initially, when they acquire or dispose of securities, and on an annual basis. (These reports are described more fully in Chapter 23.) Purchases and sales of the public issuer's equity securities (including sales back

26. Interpretation: Commission Guidance Regarding MD&A, SEC Release Nos. 33-8350, 34-48960, 17 C.F.R. pts. 211, 231, 241 (Dec. 29, 2003).

to the issuer) must be reported within two business days. Insiders of companies not registered under the 1934 Act are not required to file regular reports with the SEC. Trading by insiders is also subject to Section 16(b)'s short-swing trading restrictions and Section 10(b)'s antifraud provisions, which are discussed in Chapter 23.

Tender Offers

Any person making a *tender offer* to shareholders, whereby shareholders are asked to sell their shares to that person for a stated price, must comply with the tender offer rules found in Section 14 of the 1934 Act. Some rules, such as the requirement that a tender offer be left open for at least twenty business days, apply even if the company is not registered under the 1934 Act if it has a significant number of shareholders. Other rules, such as the rule giving shareholders the right to withdraw their shares once they are tendered and the rule requiring proration if the offer is oversubscribed, apply only if the company is registered under the 1934 Act.

Schedule 13D

Under Section 13, any person acquiring beneficial ownership of more than 5 percent of the equity shares of a reporting company must file a Schedule 13D within ten days after crossing the 5 percent mark. The Schedule 13D must disclose the number of shares acquired and the intentions of the person acquiring them. Often the person acquiring the shares will state that it is buying the shares for investment purposes only. Sometimes, however, the company suspects an ulterior motive, such as preparation for a hostile takeover attempt.

Although it is clear that a person who buys voting equity securities has beneficial ownership of them, questions may arise when a person engages in derivative transactions, such as equity swaps, as seen in the following hotly contested case.

A CASE IN POINT

CASE 22.3

CSX CORPORATION V. THE CHILDREN'S INVESTMENT FUND MANAGEMENT (UK) LLP

UNITED STATES DISTRICT COURT FOR THE SOUTHERN DISTRICT OF NEW YORK
562 F. SUPP. 2d 511 (S.D.N.Y. 2008).

SUMMARY

FACTS: The Children's Investment Fund Management (TCI) and 3G Fund, the two defendant hedge funds, acquired large economic positions in CSX Corporation, one of the largest railroads in the United States, through the use of total return equity swaps (TRSs). TCI was widely regarded as an "activist" hedge fund, and it made its initial investment in TRSs referenced with CSX stock in October 2006. When TCI's efforts to force CSX to go private in a leveraged buyout or change its operations were largely rebuffed, TCI began contacting other hedge funds, including 3G, and encouraged them to acquire CSX shares or swaps referenced to those shares. 3G bought its first shares of CSX common stock in February 2007. By November 2007, 3G owned shares and swaps that gave it an aggregate economic exposure of 4.9 percent of the company. TCI and 3G did not

CONTINUED

disclose their interest in CSX until December 2007 on the theory that prior to that date they did not beneficially own the shares referenced by the swaps.

In mid-December 2007, TCI and 3G filed a Schedule 13D disclosing that at that time they collectively owned 8.3 percent of CSX shares outstanding. The Schedule 13D also disclosed that TCI had cash-settled equity swap arrangements with eight counterparties that gave it economic exposure to approximately 11 percent of CSX's shares outstanding, but TCI disclaimed beneficial ownership of the underlying shares referenced by the TRSs.

TCI and 3G commenced a proxy fight in which they sought to elect their nominees to five of the twelve seats on the CSX board of directors at the annual meeting scheduled to take place on June 25, 2008. CSX sued, alleging that the defendants had failed to file a Schedule 13D on a timely basis and that the Schedule 13D and the proxy statement they eventually filed were false and misleading. CSX sought, among other things, an order precluding the defendants from voting their shares (that is, *share sterilization*).

A *total return equity swap* is a type of derivative security whereby two counterparties agree to exchange cash flows on two financial instruments over a specific period of time. Counterparty A (the "short" party) agrees to pay Counterparty B (the "long" party) cash flows equal to the sum of (1) any cash distributions, such as interest or dividends, that Counterparty A would have received had it held the referenced security and (2) either (a) an amount equal to the market appreciation of the value of the referenced security over the term of the swap (if the TRS is cash-settled) or, what is economically the same thing, (b) the security in exchange for its value on the last re-fixing date prior to the winding up of the transaction (if the TRS is settled in kind). In turn, Counterparty A is entitled to receive (1) an amount equal to the interest at the negotiated rate that would have been payable had Counterparty B actually loaned Counterparty A the purchase price of the referenced security, plus (2) any decrease in the market value of the referenced security.

In this case, the short counterparties, which included Deutsche Bank, Citigroup Global Markets, and Morgan Stanley, hedged their short exposures by purchasing a number of CSX shares roughly equal to the shares referenced in the swaps. Although the hedging institutions had no economic interest in the CSX stock, they were the beneficial owners of the CSX shares because they had the right to vote them.

ISSUE PRESENTED Does an investor who has entered into total return swaps for more than 5 percent of a public company's common stock have an obligation to file a Schedule 13D?

SUMMARY OF OPINION The U.S. District Court for the Southern District of New York began by stating:

Some people deliberately go close to the line dividing legal from illegal if they see a sufficient opportunity for profit in doing so. A few cross that line and, if caught, seek to justify their actions on the basis of formalistic arguments, even when it is apparent that they have defeated the purpose of the law.

This is such a case.

The court explained the economic effect of swaps:

In practical economic terms, a TRS referenced to stock places the long party in substantially the same economic position that it would occupy if it owned the referenced stock or security. There are two notable exceptions. First, since it does not have record ownership of the referenced shares, it does not have the right to vote them. Second, the long party looks to the short party, rather than to the issuer of the referenced security, for distributions and the marketplace for any appreciation in value.

CONTINUED

From the point of view of the short party, it is entitled to have the long party place it in the same economic position it would have been in had it advanced the long party an amount equal to the market value of the referenced security (the notional amount).

Although some institutions will not vote shares held to hedge TRS risk, others will tend to vote as the counterparty desires. Others claim to vote as they determine in their sole discretion. Skeptical of this claim, the court noted that "one may suppose that banks seeking to attract swap business will understand that activist investors will consider them to be more attractive counterparties if they vote in favor of the positions that their client indicates."

The court explained that by using swaps to conceal its activities, the long party can avoid having other investors bid up the referenced stock in anticipation of a tender offer or other change of control contest, thereby maximizing the long party's potential profit. The use of swaps also permits a long party that is interested in persuading an issuer to alter its policies, but is not willing to commence an all-out battle for control, to wait to announce its emergence as a powerful player until a moment of its choosing. In other words, the court stated, "it permits a long party to ambush an issuer with a holding far greater than five percent."

The court further noted that TRS transactions are privately negotiated and their terms may be varied at any time, as long as the counterparties agree. As a result, a TRS that at its inception required cash settlement may be settled in kind—that is, by delivery of the referenced shares of the long party—as long as the parties consent. This makes it possible for the long party either to unwind the swaps by acquiring the referenced shares in swiftly consummated private transactions or to prompt the short counterparty to dispose of the shares to raise the cash necessary to unwind the swaps, thereby releasing a ready supply of shares to the market at times and in circumstances effectively chosen and known principally by the long party.

Quoting the U.S. Court of Appeals for the Second Circuit in *GAF Corp. v. Millstein*,²⁷ the court stated that the Schedule 13D filing requirements were adopted "to alert the marketplace to every large, rapid accumulation of securities, regardless of technique employed, which might represent a potential shift in corporate control." Under Rule 13d-3(a), a person is deemed to have beneficial ownership of a security if that person has the power to vote, or to direct the voting of, the security or has the power to dispose of, or to direct the disposition of, the security. Rule 13d-3(b) goes on to provide that any person who, directly or indirectly, uses any arrangement with the purpose or effect of divesting that person of beneficial ownership as part of a plan or scheme to evade the reporting requirements is deemed to be the beneficial owner of that security.

The court acknowledged that the TCI swap agreements did not give TCI any legal rights with respect to the voting or disposition of the CSX shares referenced therein. Nor did they require the short counterparties to acquire CSX shares to hedge their positions. There was also no evidence that TCI and any of its counterparties had explicit agreements that the banks would vote their hedge shares in a certain way. Nonetheless, the court found the evidence overwhelming that the counterparties did in fact hedge their short positions by purchasing shares of CSX common stock on virtually a share-for-share basis either on the day of or the day following the commencement of the swap. The court characterized this as "precisely what TCI contemplated and, indeed, intended." Similarly, with minor exceptions, whenever TCI terminated a swap, the counterparty sold the same number of physical shares that were referenced in the unwound swap and did so on the same date that the swap was terminated to avoid the risk that holding the physical shares would have entailed once the downside protection of the swap had been removed. Although the court found

CONTINUED

27. 453 F.2d 709, 717 (2d Cir. 1971), cert. denied, 406 U.S. 910 (1972).

no evidence that TCI had explicitly directed the banks to purchase the hedge shares upon entering into the swaps or to sell them upon termination, the court stated:

On this record, it is quite clear that TCI significantly influenced the banks to purchase the CSX shares that constituted their hedges because the banks, as a practical matter and as TCI both knew and desired, were compelled to do so. It significantly influenced the banks to sell the hedge shares when the swaps were unwound for the same reasons.

In summary, the court concluded that there were substantial reasons for finding that TCI was the beneficial owner under Rule 13d-3(a) of the CSX shares held as hedges by its short counterparties. First, "TCI manifestly had the economic ability to cause its short counterparties to buy and sell the CSX shares." Second, although the court found the voting situation "a bit murkier," it concluded that TCI was in a position to influence the counterparties, especially Deutsche Bank, with respect to the exercise of their voting rights. The court reasoned that focusing just on TCI's legal rights based on its swap contracts elevated form over substance, noting: "The securities markets operate in the real world, not in a law school contracts classroom. Any determination of beneficial ownership that failed to take account of the practical realities of that world would be open to the gravest abuse."

Interestingly, having gone through this detailed analysis under Rule 13d-3(a), the court ultimately punted on the legal question of whether TCI was the beneficial owner of the referenced CSX shares under that section. Instead, the court based its holding on Rule 13d-3(b) and ruled that "the evidence that TCI created and used TRSs, at least in major part, for the purpose of preventing the vesting of beneficial ownership of CSX shares in TCI and as part of a plan or scheme to evade the reporting requirements of Section 13(d) is overwhelming." The court also upheld the trier of facts's conclusion that TCI had formed a group that beneficially owned more than 5 percent of CSX's stock no later than February 13, 2007, and granted CSX's motion for a permanent injunction restraining the defendants from further violations of Section 13(d) of the 1934 Act. The court, however, rejected CSX's assertion that the Schedule 13D and the proxy statements issued by TCI and 3G were materially misleading.

The court also rejected CSX's request for share sterilization after concluding that it was constrained by precedent from ordering sterilization. Although the defendants' actions altered the corporate electorate, they did not give the defendants effective control. The court added, however, that "were the Court free as a matter of law . . . to grant such an injunction, whether on the basis that such relief was warranted to afford deterrence or on another basis, it would do so."

RESULT The court ruled that TCI and 3G had violated the requirement to file the Schedule 13D within ten days following formation of their group on February 13, 2007, and enjoined them from further violations of Section 13(d). It denied CSX's request for an injunction that would have enjoined the defendants from voting the 6.4 percent of CSX shares they had acquired between February 23, 2007, and the date of the trial.

COMMENTS In an *amici curiae* brief filed with the U.S. Court of Appeals for the Second Circuit on July 18, 2008, five former SEC commissioners, including Arthur Levitt, Joseph A. Grundfest, and Roberta S. Karmel, urged the appeals court to affirm the lower court's decision. The securities industry, various financial markets associations, and the International Swaps and Derivatives Association called for a reversal.²⁸ As discussed in the "Global View" in Chapter 20, the European Union is also struggling with how to treat equity swap contracts used to secretly acquire a massive economic interest in a target corporation.

28. *Former SEC Commissioners Filed a Brief Urging the Second Circuit to Affirm "CSX" Decision*, CORP. COUNS. WKLY., July 30, 2008, at 233.

VIOLATION OF THE REGISTRATION AND PROSPECTUS-DELIVERY REQUIREMENTS: SECTION 12(A)(1) OF THE 1933 ACT

As explained above, Section 5 of the 1933 Act provides that, absent an exemption, all securities must be registered and may be sold only after delivery of a prospectus meeting the requirements of the 1933 Act. The penalty for violation of Section 5 is simple and severe. Section 12(a)(1) provides that, absent an exemption, anyone who offers or sells a security without an effective registration statement or by means of a noncomplying prospectus is liable to the purchaser for rescission or damages. In effect, the purchaser is given a put: if the investment proves successful, the investor can keep the shares, but if, within one year from the date of purchase, the investment proves unprofitable, the investor can get his or her money back.

ELEMENTS OF LIABILITY

To establish a Section 12(a)(1) claim, the plaintiff must show that the defendant sold or offered securities without an effective registration statement, or by means of a noncomplying prospectus, through the use of interstate transportation or communication. A plaintiff typically satisfies the interstate transportation or communication requirement by proving that the mails, telephone, or other interstate means were used in the offer or sale to that particular plaintiff. The plaintiff must file suit within one year from the date the securities were offered or sold. Section 12(a)(1) imposes a standard of strict liability. The plaintiff need not show that the defendant acted willfully or negligently, only that the defendant committed the act of selling unregistered and nonexempt securities.

DAMAGES

If the plaintiff still owns the securities, he or she is entitled to rescind the purchase. To rescind, the plaintiff returns the securities, together with any income (such as dividends) he or she received from them, in exchange for the price paid for the securities, plus interest. If the plaintiff has sold the securities, he or she is entitled to recover damages—usually the difference between what was paid and what was received for the securities at sale.

WHO MAY BE SUED

The severity of the remedy under Section 12(a)(1) has led to questions about who may be considered to have offered

or sold securities within the meaning of the statute. It clearly includes the issuer. But what about others involved in an unregistered securities transaction, such as attorneys, accountants, underwriters, and investment bankers?

Section 12(a)(1) provides that “any person who . . . offers or sells a security,” in violation of the registration requirement, “shall be liable to the person purchasing such security from him.” To be considered a seller, a nonowner must successfully solicit the purchase and be motivated at least in part by a desire to serve his or her own financial interests or those of the securities owner.²⁹ Thus, mere promotion of a security does not necessarily make a person a seller under Section 12(a)(1), even if that promotion is a substantial factor in inducing the purchase of the security.

WHO MAY SUE

Anyone who purchases shares issued in violation of the registration requirements may bring suit. If the securities were sold to a number of persons, then a plaintiff may bring a class-action suit, which will be filed on behalf of all persons who purchased the illegally issued securities.

SECTION 11 OF THE 1933 ACT

Section 11 provides a remedy for a person who purchases a security pursuant to a misleading registration statement. Section 11 applies only to registered securities. The section is the longest and most detailed civil liability provision in the 1933 Act. It spells out who may sue, who may be sued, the elements of the offense, the permitted defenses, and the damages that may be awarded. Under Section 11, an issuer of securities is liable for its false statements or misleading omissions even if the issuer had no intent to defraud and was not even negligent in ascertaining the truth.

WHO MAY SUE

Tracing Requirement

Any person who has purchased a registered security may sue under Section 11. But the purchaser must prove that the security at issue was actually one of those sold pursuant to the misleading registration statement.³⁰ Although this

29. *Pinter v. Dahl*, 486 U.S. 622 (1988).

30. See, e.g., *Lee v. Ernst & Young LLP*, 294 F.3d 969, 976–77 (8th Cir. 2002); *De Maria v. Anderson*, 318 F.3d 170 (2d Cir. 2003) (holding that after-market purchasers who can trace their shares to an allegedly misleading registration statement have standing to sue under Section 11).

requirement does not present a problem for direct purchasers of an IPO, open-market purchasers may find it difficult to trace their securities back to a sale made under the defective registration statement.

Class Actions

Plaintiffs in a Section 11 case typically bring a class action, in which the named plaintiffs act on behalf of themselves and “all others similarly situated.” The advantage to the plaintiffs (and their attorneys) of proceeding in this manner is that the individual plaintiffs’ claims, worth only a few hundred or a few thousand dollars, together often amount to millions of dollars.

WHO MAY BE SUED

Section 11 lists, and thereby limits, the entities and persons who may be sued: (1) the issuer offering the security; (2) the underwriters; (3) any member of the board of directors at the time of the offering; (4) persons who gave their consent to be named in the registration statement as future directors; (5) every person who signed the registration statement (under Section 6(a) of the 1933 Act, it must be signed by the issuer, its principal executive officer, its principal financing officer, and its principal accounting officer); and (6) experts who consented to give authority to the “expertized” portion of the registration statement, such as accountants who audited the financial statements contained in it. No person can be named in the registration statement as an expert unless that person has consented in writing to being named.

All defendants in a Section 11 case generally have joint and several liability for violations, meaning that one defendant can be held responsible for all the damages awarded to the plaintiff, even if that defendant was only partially responsible for the violation. The one exception is that outside directors who did not commit knowing violations are generally liable only for the portion of the damages attributable to their percentage of responsibility.

Plaintiffs often allege that persons or entities other than those specified in Section 11 are liable under a theory of secondary liability, such as aiding and abetting or conspiracy. Most (but not all) courts have rejected such attempts to expand liability under Section 11. The U.S. Supreme Court ruled in 1994 that a private plaintiff may not maintain an aiding and abetting suit under Section 10(b),³¹ and it seems unlikely that the Court would extend Section 11 to include aiders and abettors.³²

ELEMENTS OF LIABILITY

The elements of a Section 11 offense are straightforward. The plaintiff must show that, at the time the registration statement became effective, it (1) contained a false or misleading statement of a material fact or (2) omitted to state a material fact required to be stated in the registration statement or necessary to make the statements contained in the registration statement not misleading.

The Supreme Court has defined a *material fact* as one that a reasonable investor would most likely have considered important in deciding whether to buy or sell—that is, what a reasonable hypothetical investor would have considered important, not necessarily what the actual investor considered important. The Supreme Court has held that an omitted fact is material if there is “a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the ‘total mix’ of information made available.”³³ The following case further explored the definition of materiality.

A CASE IN POINT

CASE 22.4

ROSENZWEIG v. AZURIX CORP.

UNITED STATES COURT OF APPEALS
FOR THE FIFTH CIRCUIT

332 F.3d 854 (5th Cir. 2003).

SUMMARY

FACTS In 1999, Enron Corporation formed Azurix, a global water and wastewater company. Azurix planned to take advantage of what appeared to be a trend toward privatization by acquiring and operating government-owned facilities. Azurix did an initial public offering in 1998 after securing a thirty-year concession from the province of Buenos Aires, Argentina. The offering price was around \$20 per share. Enron took Azurix private in 2000 by buying all the public’s shares at \$8 per share.

Shareholders who had purchased Azurix stock in the secondary market brought this action, alleging, among other things, that the defendants had violated the federal securities laws by making

CONTINUED

misrepresentations and omissions in press releases and public filings. In particular, the plaintiffs alleged that the defendants knew that Azurix's business plan was fundamentally flawed and that the Buenos Aires concession was plagued with problems, but they nevertheless fraudulently inflated Azurix's stock price by making misleading optimistic representations and concealing the truth. The defendants challenged the materiality of the alleged misrepresentations and omissions.

ISSUE PRESENTED

What constitutes materiality for purposes of a Section 11 claim?

SUMMARY OF OPINION The U.S. Court of Appeals for the Fifth Circuit declared that "[t]he generalized, positive statements about the company's competitive strengths, experienced management, and future prospects" were not material, noting that "Azurix was under no duty to cast its business in a pejorative, rather than a positive light." More specific remarks were also found to be immaterial. In the prospectus, Azurix had stated, "We anticipate funding capital expenditures [for the Buenos Aires concession] through operating cash flows and long-term debt and equity at the concession level." The court focused on the word "anticipate" and the nine single-spaced pages of risk disclosures and concluded that this specific statement was immaterial.

The plaintiffs also claimed that the investing public was led to believe that the defendants had performed due diligence on the Buenos Aires concession, as well as others, which was either a material misrepresentation or an omission. The court agreed with the trial court that "a rational investor would not have relied on the due diligence statements contained in the prospectus," in light of the risk disclosures. The court described other, allegedly misleading, specific statements as "obviously immaterial puffery."

RESULT The Fifth Circuit affirmed the dismissal of the plaintiffs' claims.

COMMENTS The plaintiffs also brought claims under Section 12, but those claims were dismissed because the plaintiffs lacked standing. Additionally, the court pointed out that the claims were insufficiently particular and that the inferences of intent to deceive were weak.

The plaintiff does not have to establish that he or she read the prospectus or relied upon the misstatement or omission except in the following instance: A plaintiff who purchases a security on the open market after the issuing company has released its income statements for the year following the registration statement must show that the misrepresentation in the prospectus influenced his or her decision to buy.

DEFENSES

Section 11 sets forth several defenses. The defenses of no reliance and no causation focus on the effects of the misstatements on the behavior of investors and the market, while the defense of due diligence looks to the culpability of the defendants.

No Reliance

The defense of no reliance relates to the investor's knowledge. Investors who know that there was a misstatement or omission cannot claim to have relied on it; they are presumed to have acted despite the misstatement or omission. Thus, if the defendant can establish that the plaintiff actually

knew that a statement was false or that there was an omission, there is no liability under Section 11. Again, note that investors need not prove that they actually relied on the misstatement or omission or even read the prospectus.

No Causation

The defense of no causation focuses on the link between the misstatement and the investor's loss. Even if there was a misstatement or omission of a material fact, a defendant will not be liable if it can show that the misstatement or omission did not actually cause the plaintiff to suffer any loss. In other words, the plaintiff may have lost money on a trade, but that loss may not have been due to the defendant's conduct. This showing typically consists of an expert analysis of the various factors that influenced the price movements of the securities in question. Developments in this area are discussed in Chapter 23.

Due Diligence

The defense of due diligence focuses on the behavior of the defendants. It is available to all defendants except the issuing company. A defendant is not liable for a misrepresentation

or omission if it acted with due diligence, meaning that it (1) conducted a reasonable investigation and (2) reasonably believed (a) that the statements made were true and (b) that there were no omissions that made those statements misleading. A reasonable investigation is what a prudent person managing his or her own property would conduct.

The primary wrinkle in the due diligence defense arises in connection with the expertized portions of the registration statement, such as audit reports on the company's financial statements, appraisal reports, or engineering reports. The experts are, of course, responsible for their own reports, provided that the reports are identified as having been prepared by them and that the experts have given their consent to the use of their reports in the registration statement. The experts are generally not responsible under Section 11 for portions of the registration statement other than their reports.

Nonexpert defendants are generally entitled to rely on the experts. They can establish due diligence by showing that they had no reasonable basis to believe that the experts' reports were misleading and, in fact, did not believe them to be misleading. But, as the U.S. District Court for the Southern District of Texas explained in the Enron securities litigation:

[T]here are no rigid or clear standards or rules for measuring what is reasonable, since that determination

varies with the circumstances of each case, but an underwriter's reliance on audited financial statements may not be automatic. What constitutes a "red flag" or "storm warning" in the context of § 11 claims that would demonstrate that a defendant had "no reasonable ground to believe and did not believe" that the expertized portions of a registration statement are true "depends upon the facts and context of a particular case." . . . Where red flags appear, the underwriter must "look deeper and question more" in its due diligence investigation. "The existence of red flags can create a duty to investigate even audited financial statements."³⁴

The case that follows was the first to articulate the due diligence standards applicable to the various participants in the offering process and remains an accurate statement of the law.

A CASE IN POINT

CASE 22.5

ESCOTT V. BARCHRIS CONSTRUCTION CORP.

UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT
OF NEW YORK
283 F. SUPP. 643
(S.D.N.Y. 1968).

SUMMARY

FACTS BarChris was in the business of building bowling alleys. It obtained capital through a public offering in May 1961. Due to financial problems, the company filed for protection under the Bankruptcy Act in October 1962. A class action followed, alleging Section 11 claims against the company, its officers and directors, and its underwriters.

ISSUE PRESENTED When is the due diligence defense available to the principal officers or the inside directors of the issuer? May a chief financial officer rely on the audited financial statements if he had reason to believe those statements were incorrect? Have outside directors and underwriters, who relied on management's statements and made no independent investigation, acted with due diligence?

SUMMARY OF OPINION The U.S. District Court for the Southern District of New York first found that both the expertized and the nonexpertized portions of the registration statement were misleading. Every defendant raised the defense of due diligence except the issuer, to whom the defense was not available.

The court applied the most stringent standards to the company's principal officers and inside directors (that is, the directors who were also officers of the corporation). It first noted that principal officers and inside directors who sign a registration statement have a significant burden. Because of their extensive knowledge of the company's affairs, it is rare that they can successfully establish a due diligence defense. The court held that the chief financial officer was not entitled to rely on the outside auditors as to the accuracy of the financial statements because he had reason to believe that those statements were incorrect. The court concluded that the liability of principal

CONTINUED

officers and inside directors approaches that of the company itself. They cannot escape liability for the nonexpertized portions of the statement even if they did not read the statement, did not understand it, and relied on assistants and lawyers to make adequate disclosures.

The court then considered the liability of two outside directors who had become directors a month before the offering. Neither had read the registration statement in final form, and both had relied on assurances from the officers that everything was in order. The court ruled that Section 11 imposes liability on directors, no matter how new they are. Individuals are presumed to know their responsibility when they become directors. A director can escape liability only by using that degree of reasonable care to investigate the facts that a prudent person would employ in the management of his or her own property. The court concluded that a prudent person would not act in an important matter without any knowledge of the relevant facts, in sole reliance upon representations of persons who were comparative strangers, and upon general information that did not purport to cover the particular case.

The court then considered whether the underwriters had established the due diligence defense. The court concluded that the underwriters had made no effectual attempt at verification. The court ruled that it was not sufficient to ask management questions, obtain answers that, if true, would be thought satisfactory, and let the matter go at that without seeking to ascertain from the records whether the answers were, in fact, true and complete. The court explained:

[I]n a sense, the positions of the underwriter and the company's officers are adverse. It is not unlikely that statements made by company officers to an underwriter to induce him to underwrite may be self-serving. They may be unduly enthusiastic. As in this case, they may, on occasion, be deliberately false.

The underwriters argued that the prospectus is the company's prospectus, not theirs. But the court ruled that the 1933 Act makes no such distinction. Prospective investors rely upon the reputation of the underwriters when deciding whether to purchase the securities. The court explained:

The purpose of Section 11 is to protect investors. To that end the underwriters are made responsible for the truth of the prospectus. If they may escape that responsibility by taking at face value representations made to them by the company's management, then the inclusion of underwriters among those liable under Section 11 affords the investors no additional protection. To effectuate the statute's purpose, the phrase "reasonable investigation" must be construed to require more effort on the part of the underwriters than the mere accurate reporting in the prospectus of "data presented" to them by the company. It should make no difference that this data is elicited by questions addressed to the company officers by the underwriters, or that the underwriters at the time believe that the company's officers are truthful and reliable. In order to make the underwriters' participation in this enterprise of any value to the investors, the underwriters must make some reasonable attempt to verify the data submitted to them. They may not rely solely on the company's officers or on the company's counsel. A prudent man in the management of his own property would not rely on them.

RESULT None of the defendants could rely on the due diligence defense, except the outside directors, who were permitted to rely on the opinion of the auditors as to the audited financial statements.

COMMENTS The degree of reliance a participating underwriter may place on a principal underwriter remains unclear. The court in *BarChris* summarily noted that the participating underwriters who relied solely on the primary underwriters did not establish due diligence. An SEC release has since suggested that a participating underwriter has met its due diligence requirements if it satisfies itself that the managing underwriter has made the kind of investigation the participant would have performed were it the manager.

The incorporation of an issuer's 1934 Act periodic and special reports in short-form registration statements filed on Form S-3 has truncated the time spent by the issuer and underwriters preparing and reviewing the prospectus. Nevertheless, the SEC and the courts have rejected the argument that integrated disclosure relieves an underwriter or directors of the duty they otherwise would have to conduct an adequate due diligence investigation.³⁵ The SEC has called on underwriters to use "anticipatory and continuous due diligence programs," such as designating one law firm to act as underwriters' counsel, holding 1934 Act report drafting sessions, and conducting meetings between management, prospective underwriters, and underwriters' counsel shortly after the release of quarterly earnings.³⁶ Although underwriters "are not being asked to duplicate the work of auditors,"³⁷ they must conduct a reasonable investigation. Moreover:

If their initial investigation leads them to question the accuracy of financial reporting, then the existence of an audit or a *comfort letter* [in which the accountant describes the review it has conducted of unaudited interim financial statements and of certain numbers in the prospectus] will not excuse the failure to follow through with a subsequent investigation of the matter. If red flags arise from a reasonable investigation, underwriters will have to make sufficient inquiry to satisfy themselves as to the accuracy of the financial statements, and if unsatisfied, they must demand disclosure, withdraw from the underwriting process, or bear the risk of liability.³⁸

Directors should also carefully review the 1934 Act reports and conduct a reasonable investigation.³⁹

35. See, e.g., *In re WorldCom Sec. Litig.*, 346 F. Supp. 2d 628, 669 (S.D.N.Y. 2004) (citing the SEC's recommendation that "underwriters concerned about the time pressure created by integrated disclosure . . . 'arrange [their] due diligence procedures over time for the purpose of avoiding last minute delays in an offering environment characterized by rapid market changes.'").

36. SEC Release No. 6499, 1983 WL 408321, at 6.

37. *WorldCom*, 346 F. Supp. 2d at 684.

38. *Id.*

39. See, e.g., *In re Enron Corp. Sec., Derivative & "ERISA" Litig.*, 258 F. Supp. 2d 576 (S.D. Tex. 2003) (refusing to dismiss claims, as invalid as a matter of law, that the Enron directors were liable under Section 11 for misstatements in audited quarterly and annual financial statements incorporated in Enron's registration statement because the reasonableness of the directors' investigation and the reasonable ground for their belief in and reliance on the expertized financial statement or expert opinion were questions of fact that had to be determined by a jury).

Bespakes Caution Doctrine

According to another defense, the judicially created *bespeaks caution doctrine*, a court may determine that the inclusion of sufficient cautionary statements in a prospectus renders immaterial any misrepresentations and omissions contained therein. The doctrine is based on the proposition that a statement or omission must be considered in context, so accompanying statements may render it immaterial as a matter of law. Cautionary language will render an alleged omission or misrepresentation immaterial only if the cautionary statements are substantive and tailored to specific future projections, estimates, or opinions in the prospectus.

Not all courts have adopted the bespeaks caution doctrine. In 1994, the Fifth Circuit stated:

[C]autionary language is not necessarily sufficient, in and of itself, to render predictive statements immaterial as a matter of law. . . . The appropriate inquiry is whether, under all the circumstances, the omitted fact or the prediction without a reasonable basis "is one [that] a reasonable investor would consider significant in [making] the decision to invest, such that it alters the total mix of information available about the proposed investment." Inclusion of cautionary language . . . is, of course, relevant to the materiality inquiry. . . . Nevertheless, cautionary language as such is not dispositive of this inquiry.⁴⁰

40. Rubinstein v. Collins, 20 F.3d 160 (5th Cir. 1994).

Litigation Reform Act Safe Harbor for Forward-Looking Statements

The Litigation Reform Act provides a statutory safe harbor for certain forward-looking statements by issuers subject to the 1934 Act's reporting requirements and persons acting on their behalf. It is not available for IPOs or offerings by a blank check company, a partnership, a limited liability company, or a direct participation investment program, however. The safe harbor also does not apply to any forward-looking statement included in a financial statement prepared in accordance with generally accepted accounting principles.

The safe harbor provides two independent and alternative grounds for precluding liability. Under the first prong, liability for a written or oral forward-looking statement is precluded if it was identified by the speaker as a forward-looking statement and accompanied by meaningful cautionary statements that identify important factors that could cause actual results to differ materially from those in the statement. Even if the statement does not satisfy these criteria, a second prong precludes liability for a forward-looking statement unless the person who made the statement did so with actual knowledge that the statement was false or misleading. A company is not liable for a forward-looking statement it issues unless the plaintiff proves that the statement was made by, or with the approval of, an executive officer who had actual knowledge that the statement was false or misleading. This safe harbor is discussed further in Chapter 23.

DAMAGES

Section 11 sets forth the damages recoverable for violation of its provisions. If the plaintiff has not sold the securities in question, the recoverable damages are the amount paid for each security minus its value at the time the plaintiff brings the claim. The value at the time the plaintiff brings the claim is usually the market price, unless the market price has been affected by the misrepresentation or omission. If the securities have been sold before the plaintiff brings the claim, the recoverable damages are the amount paid for the securities minus the amount received at sale.

SECTION 12(A)(2) OF THE 1933 ACT

Section 12(a)(2) provides a remedy for any person who purchases a security by means of a misleading prospectus (free writing, preliminary, or final) or oral communication. To establish a Section 12(a)(2) claim, the plaintiff must prove that

(1) through the mails or other means of interstate commerce, (2) the defendant offered or sold a security, (3) by means of a prospectus or oral communication, (4) that included a material misrepresentation or omission. Materiality under Section 12(a)(2) is the same as materiality under Section 11. The plaintiff must bring the Section 12(a)(2) action within one year from when he or she discovered or should have discovered the fraud, or three years after the sale, whichever is the shorter.

The purchaser may rescind the purchase unless the defendant proves that the depreciation in the value of the security resulted from factors unrelated to the alleged misstatement or omission. If the purchaser has sold the security, he or she generally may recover damages equal to the difference between what was paid and what was received for the security. If the defendant demonstrates that part or all of the decline in the value of the security was caused by factors other than the misstatement or omission alleged in the complaint, then the plaintiff may not recover damages based on that portion of the decline.

Section 12(a)(2) does not require the plaintiff to prove that he or she relied on the misrepresentation or that the defendant acted with *scienter*, that is, an intent to deceive. On the other hand, Section 12(a)(2) applies only to those who offer or sell a security.

In *Gustafson v. Alloyd Co.*,⁴¹ the Supreme Court limited Section 12(a)(2) to public offerings but did not define the term. The Court held that Section 12(a)(2) did not apply to a private placement exempt under Section 4(2). The Court reasoned that a stock purchase agreement was not a prospectus under Section 10 and thus was not a prospectus for purposes of Section 12(a)(2) either.

Gustafson makes it clear that Section 12(a)(2) liability extends to fraudulent statements or omissions in statutory prospectuses used in a registered public offering, as well as in documents used to sell securities exempt under Section 3. It is not yet clear whether the term "public offering" applies to (1) all offerings not exempted under Section 4(2) or (2) only offerings that must be registered under Section 5 and offerings of securities exempted under Section 3. The latter reading would exclude offerings under Regulation D, Rule 144A, and Regulation S from Section 12(a)(2)'s reach. Several courts have held that Rule 144A or Regulation S offerings could be "public" for purposes of Section 12(a)(2).⁴² Others have reached the opposite result.⁴³

41. 513 U.S. 561 (1995).

42. See, e.g., *Newby v. Enron Corp.*, 310 F. Supp. 2d 819 (S.D. Tex. 2004); *Sloane Overseas Fund v. Sapiens Int'l Corp.*, 941 F. Supp. 1369 (S.D.N.Y. 1996).

43. See, e.g., *In re Hayes Lemmerz Int'l, Inc. Equity Sec. Litig.*, 271 F. Supp. 2d 1007 (E.D. Mich. 2003).

Resales by affiliates under Rule 144 should not fall within the scope of Section 12(a)(2). However, resales by affiliates that would constitute a distribution under traditional Section 2(11) analysis are probably public offerings subject to Section 12(a)(2).⁴⁴

Section 12(a)(2) clearly applies to oral communications made in connection with a registered public offering. It would also appear to extend to selling documents, such as a brochure sent to investors along with the statutory prospectus, used in connection with registered offerings.

WHO MAY BE SUED

Section 12(a)(2)'s language relating to who may be liable is identical to that of Section 12(a)(1): anyone who "offers or sells" a security by means of a misleading prospectus or oral communication. Accordingly, most courts treat Sections 12(a)(1) and 12(a)(2) as the same for the purposes of identifying potential defendants and limit the potential defendants to those in privity with the plaintiff or those who solicited the securities sale for financial gain. Those in privity would include the issuer in direct offerings to the public and underwriters, brokers, and dealers having a direct contractual relationship with the plaintiff in underwritten offerings.

REASONABLE CARE DEFENSE

Section 12(a)(2) provides a defense of reasonable care. A defendant (including the issuer) will not be liable for a Section 12(a)(2) violation if it can prove that it did not know, and in the exercise of reasonable care could not have known, about the misrepresentations or omissions. In contrast to the due diligence defense of Section 11, the defense of reasonable care is not spelled out in detail.

Commentators have suggested that reasonable care may require a defendant to undertake an investigation. In *Sanders v. John Nuveen & Co.*,⁴⁵ the U.S. Court of Appeals for the Seventh Circuit held that there is no difference between the duties imposed on an underwriter by Section 11, which requires a reasonable investigation, and Section 12(a)(2). An underwriter, the Seventh Circuit held, must look beyond published data and undertake some investigation of that part of the data that is verifiable. Because the underwriter in *Sanders* did not examine the issuing company's records, contracts, or tax returns, the underwriter did not act with reasonable care.

45. 619 F.2d 1222 (7th Cir. 1980), cert. denied, 450 U.S. 1005 (1981).

LIABILITY OF CONTROLLING PERSONS

Section 15 of the 1933 Act imposes liability on anyone who "controls any person liable under Section 11 or 12." Section 15 of the 1933 Act deals only with civil liability for false registration statements and information contained in prospectuses and communications. Section 20(a) of the 1934 Act provides for broader *controlling-person liability*, although it does allow for a "good faith defense." Congress did not define the term "control" in either act but left it for the courts to decide:

It was thought undesirable to attempt to define the term. It would be difficult if not impossible to enumerate or to anticipate the many ways in which actual control may be exerted. A few examples of these methods used are stock ownership, lease, contract, and agency. It is well known that actual control sometimes may be exerted through ownership of much less than a majority of the stock of a corporation either by the ownership of such stock alone or through such ownership in combination with other factors.⁴⁶

Unfortunately, the courts do not agree as to when there is controlling-person liability. Some courts will find control if the defendant simply had the power to directly or indirectly control or influence corporate policy or the power to control the general affairs of an entity.⁴⁷ Others require that the defendant actually participated in the securities violation.⁴⁸ The majority of courts will find liability if a person merely possessed the power to control the specific activity that is the basis for the securities violation, regardless of whether that power was exercised, provided that the person did actually exercise some degree of general control or influence over the entity primarily liable.

A controlling person is usually an officer, director, or major shareholder of the company. The U.S. Court of Appeals for the Eleventh Circuit adopted a variation of the majority rule for establishing controlling-person liability in *Brown v. Enstar Group, Inc.*⁴⁹ In that case, Kinder-Care, Inc. (KCI) planned to spin off its wholly owned subsidiary, Kinder-Care Learning Centers, Inc. (KCLC). KCI's chair, Perry Mendel, was also the chair of KCLC. KCLC conducted a public offering, reducing KCI's holdings of KCLC to 87 percent. In preparation for a further restructuring plan that

46. H.R. Rep. No. 1383, 73d Cong., 2d Sess. § 19 at 26 (1934).

47. See, e.g., *Abbott v. Equity Group, Inc.*, 2 F.3d 613 (5th Cir. 1993).

48. See, e.g., *Sharp v. Coopers & Lybrand*, 649 F.2d 175 (3d Cir. 1981) (interpreting identical language in Section 20(a) of the 1934 Act to require culpable participation in the securities violation).

49. 84 F.3d 393 (11th Cir. 1996).

would completely separate the two entities, Mendel resigned as chair of KCI but stayed on as chair of KCLC. Instead of spinning off the subsidiary, KCI decided to offer KCI shareholders rights to purchase the KCI-owned shares of KCLC stock. KCI prepared and issued a prospectus to its shareholders to that end. After the restructuring was complete, KCI changed its name to The Enstar Group, Inc.

The issue in *Brown* was whether Mendel could be held liable as a controlling person of KCI for alleged omissions and fraud in the prospectus. The Eleventh Circuit held that the trial court correctly dismissed the complaints against Mendel because he “neither possessed nor exercised power over the entity primarily liable.”⁵⁰ Mendel failed the first half of the following test:

[A] defendant is liable as a controlling person if he or she had the power to control the general affairs of the entity primarily liable at the time the entity violated the securities laws . . . [and] had the requisite power to directly or indirectly control or influence the specific corporate policy which resulted in the primary liability.⁵¹

Although the majority rule requires actual participation in the operations of the corporation in general, *Brown* requires only that the defendant have power over the corporation in general, whether or not that power is exercised. If Mendel had still been the chair of KCI’s board, he probably would have been liable under the *Brown* rule, but perhaps not under the majority rule, depending on his level of participation in the operations of KCI in general. Notably, in the overwhelming majority of jurisdictions, a high-ranking official who simply signs a fraudulent document will be subject to controlling-person liability.

50. *Id.* at 397 n.6.

51. *Id.* at 396 (internal quotation marks omitted).

Neither Section 15 of the 1933 Act nor Section 20(a) of the 1934 Act imposes strict liability on controlling persons. Controlling persons are not liable under Section 15 if they had no knowledge of the facts giving rise to the controlled person’s alleged liability and had no reasonable ground to believe in the existence of such facts. Controlling persons under Section 20(a) have a defense if they acted in good faith and did not directly or indirectly induce the violation. The majority view is that the defendant bears the burden of establishing the defenses of “no knowledge” and no “reasonable ground to believe,” or “good faith” and lack of inducement. Generally, these defenses are established by proving that the defendant acted in good faith and took reasonable measures, in light of the situation, to prevent the securities violation.⁵²

CRIMINAL PENALTIES

In addition to having to buy back the securities or pay damages, violators of state or federal securities laws also face criminal penalties, including fines and imprisonment. Under Section 24 of the 1933 Act, any person who willfully violates the provisions of the Act shall upon conviction be fined not more than \$10,000 or imprisoned for up to five years, or both. A violation can be willful even if the defendant did not know that the transaction at issue involved securities or that the law was being violated. In cases claiming false statements or omissions of material facts, the government need show only that the defendant knew what investors were and were not being told, accompanied by proof that the statement or omissions were objectively material. Penalties under the 1934 Act are set forth in Chapter 15.

SEC Eases Requirements for Foreign Offerings and Announces Potential Shift to International Accounting Standards

In August 2008, the SEC adopted a series of measures and proposed rules that will make it easier for investors in the United States to invest in foreign issuers and to conform the financial standards for U.S. companies to the emerging global norms embodied in the International Financial

Reporting Standards.⁵³ Noting the increasing globalization of the securities market, SEC Chair Christopher Cox

CONTINUED

53. SEC Release No. 33-8957, 73 Fed. Reg. 60050-01 (Oct. 9, 2008); SEC Release No. 33-8959, 73 Fed. Reg. 58300-01 (Oct. 6, 2008).

observed that "cross-border capital flows can help the citizens of every nation allocate investment resources more wisely, but there remain many unnecessary barriers as well as additional costs and risks that investors must bear when it comes to cross-border investments."⁵⁴ The SEC has indicated its willingness to consider development of neutral recognition arrangements whereby U.S. investors will have access to foreign companies' securities traded on a foreign exchange governed by a home country regulatory regime that offers investor protections comparable to those provided under U.S. securities laws. At least initially, the SEC would not permit foreign issuers to raise capital from offerings in the United States except pursuant to a registration statement under the 1933 Act.⁵⁵

The first set of amendments exempt certain foreign private issuers from having to register a class of equity securities under Rule 12g3-2(b) of the 1934 Act as long as they maintain a listing of their equity securities in their primary trading markets outside the United States and electronically publish, in English, certain disclosure documents. Foreign issuers will, however, still have to register their securities under the 1934 Act to have them listed on a national securities exchange or traded on the over-the-counter markets.

The second set of amendments, known as the Foreign Issuer Reporting Enhancements (FIRE), relate to foreign private issuers who report to the SEC on an ongoing basis. Effective 2011, foreign private issuers will be required to file annual reports within four months (instead of the six months currently required) of the issuer's fiscal year-end.

The third set of amendments is designed to expand the exemptions available for cross-border business

combinations and rights offerings to facilitate the inclusion of U.S. investors in merger and acquisitions transactions involving foreign issuers. The amendments also permit certain foreign institutions to report beneficial ownership on the same short-form Schedule 13G available to their U.S. counterparts.

On August 27, 2008, the SEC also unanimously proposed a procedure that could ultimately result in the abandonment of U.S. generally accepted accounting principles (GAAP) in favor of the International Financial Reporting Standards (IFRS) promulgated by the International Accounting Standards Board. The SEC had voted in November 2007 to eliminate the requirement that foreign companies filing financial statements prepared in accordance with IFRS in the United States reconcile those statements to the U.S. GAAP. The changes proposed in August 2008 could permit the twenty largest U.S. companies by market capitalization in their worldwide industries that already use IFRS globally to voluntarily file under the international standards as early as 2010. The SEC deferred until 2011 making a decision on whether and how to proceed on the mandatory use of IFRS. That decision would be based in part on meeting certain milestones, including improvement in the ability to use active data in IFRS filings, better training in the United States with IFRS, experience with IFRS by early adopters, and further consideration of whether mandatory use of IFRS should be sequenced or staged. Under the proposed timetable, if the SEC elects to require the use of IFRS, then large public companies that file their financial reports on an accelerated basis with the SEC would be required to use IFRS in 2014, medium-sized accelerated filers would be required to do so by 2015, and small, nonaccelerated filers would be required to do so in 2016.⁵⁶

THE RESPONSIBLE MANAGER

COMPLYING WITH REGISTRATION REQUIREMENTS

Promoters, entrepreneurs, and managers should be familiar with the *Howey* test. Certain arrangements that normally are not thought of as securities may run afoul of the requirements set forth in the 1933 and 1934 Acts.

Any person offering securities must comply with the registration requirements of the 1933 Act as well as any applicable blue sky laws. This includes start-up companies, as well as large, publicly traded companies. Failure

CONTINUED

to comply gives the purchaser of the security the right to keep the proceeds if the investment is successful or to return the security to the seller if the investment does not turn out as hoped. Moreover, as explained in Chapter 15, a willful failure to comply is a criminal offense. Even if a security is exempt from registration, it is not exempt from the antifraud provisions of the 1934 Act, as discussed in Chapter 23.

The preparation of a private-placement memorandum is an involved process that requires an intimate knowledge of the statutory requirements. Managers face considerable liability for incorrect or misleading statements, so they should consult experienced counsel when preparing these documents.

Any person involved in a public offering of securities has a legal and ethical duty to ensure that the prospectus contains no misleading statements or omissions. Experts, such as accountants, have a particularly heavy responsibility. The underwriters and outside directors cannot rely passively on the representations of management. Violations of these rules give rise to both civil and criminal liability.

Managers should work closely with counsel during the waiting period to ensure that there are no gun-jumping

problems due to eagerness of the underwriter or the company's public relations department. It is very important that the company not issue an abnormal number of press releases or increase the amount of its advertising prior to the registration going effective. In other words, the manager should make sure that the company remains quiet and does not depart from its ordinary routine.

Securities held by officers, directors, and other affiliates cannot be freely resold even if they were initially issued in a registered offering. They must be sold under Rule 144, subject to its volume and public information requirements, or in a private offering to sophisticated, eligible buyers. Companies must put legends on affiliates' share certificates, issue stop-transfer orders to the transfer agent, or take other such steps as may be reasonable to ensure compliance with these rules.

In addition, managers should ensure that there are no material misstatements or omissions in any other public disclosures (for example, reports on Form 10-K or Form 10-Q or oral statements to the public). Even if there is no legal obligation to disclose a particular fact, once a disclosure is made, the statements contained in it must be truthful and complete.

A MANAGER'S DILEMMA

PUTTING IT INTO PRACTICE To IPO or Not to IPO

Interchange Corporation of Laguna Hills, California, operates a targeted search advertising network. Its primary competitors are Google and Yahoo. Last year, Interchange reported a \$60,000 profit on sales of \$8.7 million. The company's founders want to take Interchange public.

The IPO market is beginning to heat up again, and many companies in competitive industries need both the capital and the perception of credibility offered by being publicly held. A few relatively recent, high-profile offerings may provide ample coattails on which Interchange's stock could ride. On the other hand, the risks of taking a young company, particularly a technology company, public remain high. The demand for technology companies has not fully rebounded, and the prices of the sixty technology companies that offered stock last year suffered an average decline of 5 percent over the same period.

Also, it is particularly difficult for investors to predict the success of young companies with inexperienced management teams.

If there is a market for the offering, should Interchange go ahead with the IPO? Should it matter whether Interchange is operating at a loss? Should companies offer their stock publicly simply because the public is willing to purchase it? What other factors should be taken into consideration? Given that Interchange is short on cash, should it offer its outside counsel a 5 percent equity share in lieu of traditional hourly fees?⁵⁷

INSIDE STORY

THE FUTURE OF U.S. FINANCIAL REGULATION IN THE WAKE OF MASSIVE GOVERNMENT BAILOUTS

After nearly eight years favoring the deregulation of the financial industry, the George W. Bush administration aggressively interceded in the private markets in the fall of 2008 to quell panic and stabilize the nation's leading financial institutions. This dramatic change in regulatory policy began in earnest when the venerable investment bank Bear Stearns, badly damaged by the subprime-mortgage crisis, sold itself to JPMorgan Chase in a fire sale in March 2008. (The subprime-mortgage crisis of 2007–2008 is discussed further in the "Inside Stories" in Chapters 14 and 24.)

On March 31, 2008, U.S. Treasury Secretary Henry Paulson presented a 212-page plan, *Blueprint for a Modernized Financial Regulatory Reform* (the *Blueprint*), which called for a massive overhaul of the regulation of the securities and banking industries in the United States. Paulson had announced many of the proposals in the *Blueprint* in June 2007, and policymakers considered the plan more of an agenda for discussion than a detailed program. Paulson himself stated that it would take as many as eight years for the most important proposals to be implemented and recommended that no changes be implemented as long as the markets were under strain.⁵⁸

Yet, by September 2008, the escalation of the global financial crisis prompted President Bush and Paulson to push for passage of a House bill that authorized the Secretary of the Treasury to spend \$700 billion to buy "toxic" mortgage-backed securities from banks and other financial institutions. The proposed bailout came hard on the heels of the government's decision to bail out and recapitalize Fannie Mae and Freddie Mac, the home mortgage giants devastated by the subprime mortgage crisis, and the de facto nationalization of insurance behemoth American International Group (AIG), which had issued \$440 billion in credit-default swaps insuring the repayment of mortgage-backed securities and other debt. Originally procured by investors to guarantee the repayment of bonds in case the issuer defaulted, *credit-default swaps* became a popular vehicle for hedge funds and other traders betting on how close a firm was to insolvency.⁵⁹

In 1998, Brooksley Born, then chair of the Commodity Futures Trading Commission (CFTC), had warned that the explosion of the financial derivatives market allowed traders

"to take positions that may threaten our regulatory markets or, indeed, our economy, without the knowledge of any federal regulatory authority."⁶⁰ Her colleagues on the Working Group on Financial Markets—Alan Greenspan, chair of the Federal Reserve, SEC chair Arthur Levitt Jr., and U.S. Treasury Secretary Robert Rubin—voiced "grave concerns" about her proposal to regulate the financial derivatives market. Deputy Treasury Secretary Lawrence Summers criticized her for "casting a shadow of regulatory uncertainty over an otherwise thriving market,"⁶¹ and Congress passed a law in 2000 that exempted swaps from oversight by the CFTC and the SEC. As discussed further below, the massive but unregulated swaps markets only aggravated the downward pressure on financial institutions already burdened by subprime mortgage-backed securities.

President Bush attempted to arouse national support for the bailout bill in a televised address on September 24, 2008, warning Americans that the bailout was necessary to prevent a widespread collapse of the national economy. On the same day, presidential candidates Barack Obama and John McCain issued a joint public statement in support of the bailout bill. Despite their efforts, the U.S. House of Representatives initially rejected the proposal 228 to 205 on September 29. One hundred thirty-three Republicans joined with ninety-five Democrats in opposing the original House bailout bill. A number of members of Congress cited significant resistance to the bill from their constituents, who were outraged that the measure appeared to unfairly enrich the same executives who may have caused the financial crisis in the first place.⁶² Bloomberg News reported that the top five Wall Street investment banks paid their senior executives more than \$5 billion in the five years before Lehman Brothers filed for bankruptcy.⁶³ Critics of the bill also claimed that the broad powers it gave the Treasury Secretary created a conflict of interest for Paulson, who had served for seven years as the chair and CEO of Goldman Sachs, then the biggest investment bank on Wall Street.

63. Susan Sward, *Many Pitfalls in CEO Compensation*, S.F. CHRON., Sept. 27, 2008, at C1, C2.

After the bill's defeat in the House, the Dow Jones Industrial Index dropped by nearly 800 points, its largest single-day loss in history. In response, the Senate incorporated the substance of the defeated House bill as an amendment to an existing bill from the House, H.R. 1424, and passed what became the Emergency Economic Stabilization Act⁶⁴ on October 1 by a vote of seventy-four to twenty-five. On Friday, October 3, the House passed the bill 263 to 171; President Bush signed it into law a few hours later.

In his testimony before the U.S. Senate, Paulson claimed that the bill would stabilize the economy, improve liquidity in the credit market, and stimulate investor confidence.⁶⁵ In fact, the Act failed to spark the hoped-for rebound in the stock market; on Monday October 6, the Dow Jones dropped more than 700 points and fell below 10,000 for the first time in four years.

Critics of the Act argued that Congress delegated to the Secretary of the Treasury an unconstitutionally broad amount of power. The statute authorized the Secretary of the Treasury to "immediately provide authority and facilities that the Secretary of the Treasury can use to restore liquidity and stability to the financial system of the United States" and granted the Secretary the power to "purchase . . . troubled assets from any financial institution, on such terms and conditions as determined by the Secretary."⁶⁶ This language implied that the powers granted to the Treasury were discretionary, rather than limited, enumerated powers. Although the Act created the Financial Stability Oversight Board (FSOP) to ensure that all policies implemented under the Act protected taxpayers and were in the nation's economic interest, it only granted the FSOP the power to make recommendations to the Secretary.

Even before the Act was enacted, other regulatory agencies took action to resuscitate ailing companies and to combat the plunging stock market. In September 2008, the SEC banned short selling on 799 financial stocks with exposure to risky mortgage-backed securities and other distressed assets. The temporary ban was passed in response to allegations that traders had illegally spread misinformation in order to drive down the shares of financial firms that they had already sold short. When the thirteen-day ban was lifted on October 9, Morgan Stanley's stock plummeted 26 percent in a day, prompting

many financial sector officials to press the SEC to extend the ban. However, 24 percent of the companies on the SEC's protected list experienced increases after the ban was lifted, and 20 percent saw no change at all.⁶⁷

Meanwhile, the Federal Reserve Board and others worked to create an electronic trading platform for the \$55 trillion credit-default swap market. The value of a swap or other financial derivative contract depends in part on the counter-party's solvency and its ability to honor its obligations. AIG's inability to honor its credit-default swap commitments led to the U.S. government's having to pump more than \$123 billion into AIG in exchange for voting preferred stock. The effort to create an electronic trading market for derivatives rested on the premise that greater transparency around the pricing of derivatives would reduce short selling while bringing structure and stability to this heretofore "dark market."⁶⁸ In October 2008, the Chicago Mercantile Exchange announced its plan to join with hedge fund Citadel Investment Group to establish an electronic trading platform and clearinghouse for credit-default swaps. Meanwhile, the SEC, CFTC, and Federal Reserve Bank of New York fought over who should oversee the swaps market if Congress, as expected, authorized greater regulation of these speculative instruments.⁶⁹

In September 2008, the Federal Reserve, with Paulson's urging and Wall Street's cooperation, waived the normal review process and opportunity for public comment and approved in a matter of days a major overhaul of the structure of two leading investment banks, Goldman Sachs and Morgan Stanley.⁷⁰ Both firms announced on September 21 that they would become commercial bank-holding companies subject to permanent on-site regulation by the Federal Reserve.⁷¹ After Lehman Brothers declared bankruptcy and Bank of America acquired Merrill Lynch, Goldman and Morgan Stanley were the last two major independent investment banks in the United States. Their decision to become regulated commercial banks marked the end of an era and instantly altered the landscape of modern Wall Street.

The Federal Reserve immediately extended credit to the firms' broker-dealer subsidiaries and sent the message that it

would not allow these powerhouses to go under.⁷² As bank-holding companies, Goldman and Morgan Stanley can tap the Fed's so-called discount window, and more of their client accounts are covered by the Federal Deposit Insurance Corporation (FDIC). In exchange, the firms subjected themselves to greater government scrutiny that could limit their ability to engage in potentially risky but lucrative strategies, such as borrowing heavily to make securities trades.⁷³

In early October 2008, the Federal Reserve announced its intention to start lending directly to nonfinancial firms by buying up short-term corporate debt (commercial paper) for the first time since the Great Depression.⁷⁴ On October 14, President Bush announced that the Treasury Department would spend up to \$250 billion of the \$700 billion authorized by the bailout law to buy nonvoting senior preferred shares in the nation's commercial banks.⁷⁵ Secretary Paulson had summoned the CEOs of the nine largest U.S. banks to the Treasury Department on October 13 and told them in no uncertain terms that they had no choice but to accept \$125 billion in government funds in exchange for preferred stock "for their own good and that of the country."⁷⁶ As part of the deal, the banks were required to limit executive compensation and to agree not to increase dividends to their common shareholders. President Bush promised that "government's role will be limited and temporary" and that the partial nationalization of the

nation's banks, which was patterned after Britain's purchase of equity stakes in its major banks, was a short-term move. The FDIC also temporarily guaranteed most new debt issued by insured banks and expanded the government insurance to cover all non-interest-bearing accounts in an effort to staunch cash withdrawals by small businesses.

One apparent loser in all this is the SEC. The *Blueprint* had recommended that many of the SEC's policy-making powers be transferred to a newly created agency and that the SEC be relegated to primarily an enforcement role. Paulson also suggested that the SEC be merged with the CFTC, commenting in a press release that "the realities of the current marketplace . . . make it increasingly difficult to rationalize a separate regulatory regime" for securities and futures products.⁷⁷ At a minimum, transfer of regulatory control over the largest investment banks to the Federal Reserve seemed destined to reducing the power of the SEC to regulate the securities brokerage industry.

In September 2008, John McCain accused SEC Chair Christopher Cox, a fellow Republican who had served in Congress with McCain for seventeen years, of "betray[ing] the public trust" and stated that if "I were president today, I would fire him."⁷⁸ Critics faulted the SEC for reducing investment banks' net capital requirements in 2004 and suggested that this decision had contributed to the subprime-mortgage crisis.⁷⁹ On September 26, 2008, Cox conceded that "the last six months have made it abundantly clear that voluntary regulation does not work."⁸⁰

QUESTIONS AND CASE PROBLEMS

1. Life Partners, Inc. is the leading promoter of interests in viatical settlements, whereby investors purchase at a discount interests in a pool consisting of life insurance benefits of terminal AIDS patients. Is Life Partners engaged in the sale of securities? [*SEC v. Life Partners, Inc.*, 102 F.3d 587 (D.C. Cir. 1996).]

2. Rock Corporation proposes to merge with Quarry, Inc. Quarry will first obtain the approval of its shareholders; then, by operation of law, the Quarry shares will become shares of the survivor corporation, Rock Quarry, Inc. Is it necessary to register the Rock Quarry shares?

Suppose that prior to the merger Felda Flintstone owned 30 percent of Quarry's stock that she had acquired three years before in a private placement. She will own only 2 percent of the Rock Quarry shares and will not be an officer or director of Rock Quarry. May she freely resell her Rock Quarry shares? Would it matter whether they were registered in connection with the merger?

3. LaserVision Technologies, Inc. developed a camera system to create souvenirs for fans at sporting events, then formed SurroundVision Advanced Imaging LLC (SAIL) to finance the marketing of the technology. Adrian Gluck

was LaserVision's president and also served as CEO, president, and a director of SAIL. Donald Williams, a LaserVision director, served as a manager of SAIL, and Raymond Kelly had no connection to SAIL except through his role as a LaserVision outside director. In October 1997, Richmond Dellastatious purchased \$261,000 in SAIL stock, relying at least in part on an offering memorandum provided by SAIL. SAIL ceased operations in 1998, and its shares are now worthless.

Dellastatious and another investor sued SAIL, certain SAIL officers, LaserVision, and two of LaserVision's outside directors—Williams and Kelly. The plaintiffs alleged that the offering memorandum (1) materially misrepresented the closeness of the relationship between SAIL—essentially a shell corporation—and LaserVision and (2) grossly overstated SAIL's projected revenues and misrepresented the nature of its assets. The plaintiffs further alleged that Williams and Kelly were liable as "control persons" under Section 20 of the 1934 Act. The trial court granted Kelly and Williams's summary judgment motion, concluding that neither was a control person of any liable party and that both lacked the requisite culpability for controlling-person liability. What facts do the plaintiffs

have to prove to hold Williams and Kelly liable? [*Dellas-tatius v. Williams*, 242 F.3d 191 (4th Cir. 2001).]
